Policy PS-1.1: **Citywide Safety.** Support projects, programs, policies, and regulations that help to mitigate potential impacts associated with natural and man-made hazards.

Policy PS-1.2: **Critical Facilities.** Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.3: **Emergency Preparedness and Response.** Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

Policy PS-1.4: **Local Hazard Mitigation.** Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.5: **Resources.** Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Policy PS-1.6: **Emergency Access.** Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Policy PS-1.7: **Public Safety Education.** Promote public safety education programs to educate on emergency preparedness, reduce accidents, injuries, and fires, and to train members of the public to respond to emergencies.

Policy PS-1.8: **Cooperation.** Collaborate with the school district, businesses, nonprofit organizations, and community members/groups to maintain safety throughout the City.

Action PS-1a: Regularly review and coordinate emergency response procedures with Los Angeles County and State emergency response procedures.

Action PS-1b: Continue to implement and update (when relevant) the City's Emergency Operations Plan.

Action PS-1c: Continue to implement and update (at least every five years) the City's Local Hazard Mitigation Plan.

Action PS-1d: Coordinate with local agencies and organizations to develop and distribute informational brochures and give presentations to civic groups and local schools to educate residents and businesses about appropriate actions to take during an emergency situation.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

Action PS-1f: Promote after school programs, volunteer programs, and Business and Neighborhood Watch programs to help maintain a safe environment.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HAZ-7: Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Impact Analysis: The potential for wildland fires represents a hazard to people and structures, particularly within areas adjacent to open space or within close proximity to wildland fuels. As described in Section 5.20, *Wildfire*, the Planning Area is not located within a FHSZ in SRA or LRA. The Planning Area is predominantly flat, built-out, and surrounded by highly urbanized development. Urbanized land does not typically facilitate the spread of wildfire in the same manner as vegetated, open space areas.

The General Plan Update Public Safety Element includes goals and policies to address public safety and emergency services, including fire protection services. Proposed Public Safety Element Policy PS-4.1 directs the City to coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards. Action PS-4a requires all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Future development allowed under the General Plan Update would be required to comply with the provisions of Federal, State, and local requirements related to wildland fire hazards, including State fire safety regulations associated with wildland-urban interfaces, fire-safe building standards, and defensible space requirements. As future development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with wildland fire hazards as required under CEQA. Therefore, through compliance with existing Federal, State, and local laws and regulations related to wildland fire hazards and implementation of the General Plan Update goals, policies, and actions, impact regarding the exposure of people or structures to significant loss, injury, or death involving wildland fires would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-4: **Fire Hazards.** A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: **Fire Protection Services.** Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.3: **Emergency Access.** Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

Policy PS-4.4: **Building Fire Codes.** Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Policy PS-4.5: **Hazard Mitigation Plans.** Coordinate with local, State, and Federal agencies to update emergency, evacuation, and hazard mitigation plans, as necessary.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Action PS-4b: Work with LACoFD to disseminate educational programs for residents on fire hazard risks and fire safety measures.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.9.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to hazards and hazardous materials may occur. The geographic setting for hazards and hazardous materials are typically localized and considers development within the City.

Would the project, combined with other related cumulative projects, create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Impact Analysis: Construction activities associated with future development and development associated with the cumulative projects may involve the routine transport, use, or disposal of hazardous materials. However, the construction contractor would be required to use standard construction controls and safety procedures that would avoid and minimize the potential for hazards associated with the transport and use of hazardous materials. Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, State, and Federal law.

Implementation of the Project would result in new development and intensification of existing urban uses along major corridors, including Hawthorne Boulevard. The majority of growth is expected to occur within the Hawthorne Boulevard Specific Plan area, which would accommodate primarily mixed-use

development including residential and commercial uses. The General Plan Update does not introduce new industrial uses or allow for the intensification of existing industrial uses. The land uses anticipated by the Project and cumulative development projects do not typically involve the use or storage of hazardous substances other than limited quantities of hazardous materials such as solvents, fertilizers, pesticides, and other materials used for regular maintenance of buildings and landscaping. The quantities of these materials would not typically be at an amount that would pose a significant hazard to the public or the environment. Adherence to existing regulations would ensure compliance with safety standards related to the use and storage of hazardous materials, and the safety procedures mandated by applicable Federal, State, and local laws and regulations, which would ensure that risks involving the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes would be less than significant. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions described above would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Thus, the Project's incremental effects involving hazards associated with the routine transport, use, or disposal of hazardous materials would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Impact Analysis: Future development sites associated with implementation of the Project and cumulative development sites within the City could create a significant hazard to the public or the environment through upset and accident conditions involving the release of hazardous materials into the environment. Implementation of construction activities associated with Project implementation and cumulative development projects would involve some demolition, mass grading, excavation, and other ground-disturbing activities that could temporarily create a significant hazard to the public or the environment through release of hazardous materials. Future site-specific development would be reviewed at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities that may occur on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the regulatory agencies, such as DTSC and the Los Angeles RWQCB. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions described above would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Thus, the Project's incremental effects

involving hazards associated with the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Impact Analysis Future development sites associated with implementation of the Project and cumulative development sites within the City may emit hazardous emissions or handle hazardous materials within one-quarter mile of an existing or proposed school during construction phases. All future use, storage, transport, and disposal of hazardous materials associated with the proposed Project and cumulative projects within the City and region would be would be governed by existing regulations of several agencies, including DTSC, EPA, U.S. DOT, Cal/OSHA, and the LACoFD Health Hazardous Materials Division. Site-specific development would adhere to standard construction practices to ensure that any hazardous materials released are appropriately contained and remediated as required by local, State, and Federal law. Compliance with applicable laws and regulations governing the use, storage, transportation, and disposal of hazardous materials would ensure all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. All development within the City is required to adhere to existing regulations which ensure compliance with safety standards related to the use and storage of hazardous materials, and the safety procedures mandated by applicable Federal, State, and local laws and regulations would reduce potential impacts to schools within the area. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions described above would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Thus, the Project's incremental effects involving emission of hazardous materials within a one-quarter mile of a school would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Impact Analysis: Future development associated with implementation of the Project and cumulative projects would be evaluated at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities occurring on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of Federal, State, and local regulations, including the DTSC and the Los Angeles RWQCB, prior to construction. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions described above would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Therefore, the Project's incremental effects involving exposure of people and structures to potential substantial adverse effects involving hazardous materials sites would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Impact Analysis: Future development associated with Project implementation and cumulative development could impair implementation of or physically interfere with an adopted emergency response plan. Implementation of construction activities associated with Project implementation and cumulative development projects would involve some land clearing, mass grading, and other construction activities that could temporarily interfere with emergency response plans or emergency evacuation plans. Major arterials within the City generally serve as the primary routes for evacuation. However, evacuation routes would depend upon the emergency event and location. While all residential developments currently meet City evacuation standards, the City would continue to coordinate with LACoFD and the County Sheriff to provide ongoing education to residents about how to safely evacuate in the event of an emergency.

As site-specific development is not currently proposed, it is unknown if implementation of the Project would involve the removal of existing driveways or the construction of new driveways or any associated improvements, such as curb, gutter, and sidewalks. Proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. The proposed development would be required to comply with all applicable Building and Fire Code requirements and would submit construction plans to the Fire Department's Engineering Building Plan Check Unit for review and approval prior to issuance of any building permit. Approval by the LACoFD would ensure that construction and operation would not impair implementation of or physically interfere with the City's EOP or emergency evacuation plan. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to emergency response and evacuation.

Thus, the Project's incremental effects involving interface of emergency plans would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, combined with other related cumulative projects, result in significant cumulative impacts with respect to wildfire?

Impact Analysis: The Project's incremental contribution to cumulative wildfire hazard impacts would not be significant. As previously discussed, the City is highly urbanized and future development and redevelopment activities in the City would occur in areas that have been previously developed. As a result, the degree of wildland fire hazard, including secondary hazards such as post-fire flooding and debris flow, would not substantially change with adoption of the General Plan Update, and current hazards would not significantly increase.

As described previously, there are no SRA or FHSZs mapped within the Planning Area. New development would be required to comply with the Fire Code and would be reviewed by LACoFD to ensure fire safety is addressed. Additionally, the General Plan includes policies and programs to address public safety and emergency services, including fire protection. Accordingly, the Project's incremental contribution to cumulative wildfire impacts would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.9.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Hazards and hazardous materials impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable hazards and hazardous materials impacts would occur as a result of the General Plan Update.

5.10 HYDROLOGY AND WATER QUALITY

5.10.1 PURPOSE

This section provides a discussion of the regional hydrology, flooding, water quality, water purveyors, and water sources in the City of Lawndale and provides an analysis of potential impacts associated with implementation of the General Plan Update.

KEY TERMS

Groundwater: Water that is underground and below the water table, as opposed to surface water, which flows across the ground surface. Water beneath the earth's surface fills the spaces in soil, gravel, or rock formations. Pockets of groundwater are often called "aquifers" and are the source of drinking water for a large percentage of the population in the United States. Groundwater is often extracted using wells which pump the water out of the ground and up to the surface. Groundwater is naturally replenished by surface water from precipitation, streams, and rivers when this recharge reaches the water table.

Surface water: Water collected on the ground or from a stream, river, lake, wetland, or ocean. Surface water is naturally replenished through precipitation, but is naturally lost through evaporation and seepage into soil.

5.10.2 ENVIRONMENTAL SETTING

REGIONAL HYDROLOGY

The City of Lawndale is located within the southwestern portion of Los Angeles County, California. The rivers and streams of the Los Angeles region flow from headwaters in the Transverse and Peninsular Mountain ranges located to the north and east of Lawndale, through urbanized foothill, valley, and coastal areas, and terminate at highly utilized recreational beaches and harbors (Los Angeles Regional Water Quality Control Board 2014). Historically, the Los Angeles region's surface-area hydrology consisted of a network of rivers, ephemeral streams, wetlands, and swamp land; however, the construction of dams, flood control projects, and urbanization have significantly altered the natural hydrology of the region.

The City has a relatively flat topography with an elevation of approximately 59 feet above sea level. Drainages from the City ultimately flow into the Pacific Ocean at the Los Angeles and Long Beach Harbors, located approximately nine miles southeast of the City. Historically, the harbor area consisted of marshes and mudflats with a large marshy area, Dominguez Slough, to the north of the harbors, and flow from the Los Angeles River entered where Dominguez Channel now drains (Los Angeles Regional Water Quality Control Board 2023). During the late 19th and early 20th centuries, the landscape was highly altered; channels were dredged, marshes were filled, wharves were constructed, the Los Angeles River was diverted, and a breakwater was constructed in order to allow deep draft ships to be directly offloaded and products be swiftly moved. The Dominguez Slough was completely channelized and the greater San Pedro Bay was dredged and enclosed by two more breakwaters. The Los Angeles/Long Beach Harbor complex is now one of the largest ports in the country.

WATERSHEDS

A watershed is a region that is bound by a divide that drains to a common watercourse or body of water. Watersheds serve an important biological function, oftentimes supporting an abundance of aquatic and terrestrial wildlife including special status species and anadromous and native local fisheries. Watersheds provide conditions necessary for riparian habitat.

Watersheds are delineated by the United States Geological Survey (USGS) using a nationwide system based on surface hydrologic features (United States Geological Survey 2023). These hydrologic units are classified into four levels (regions, subregions, accounting units, and cataloging units), with each unit being identified by a unique hydrologic unit code (HUC) based on its level within the hierarchical system. This means that boundaries are defined according to size and topography, with multiple sub-watersheds within larger watersheds. The USGS system divides the United States into regions (HUC-2), subregions (HUC-4), basins (HUC-6), subbasins (HUC-8), watersheds (HUC-10), and sub-watersheds (HUC-12).

Level 2 – Subregion (HUC-4)

The City of Lawndale is located within the Southern California Coastal subregion, also known as the South Coast Hydrologic Region, a large coastal watershed in southern California (California Department of Water Resources 2003). The South Coast Hydrologic Region spans approximately 6.78 million acres and is bounded on the west by the Pacific Ocean, on the north by the Transverse Ranges, on the east by the Colorado River Hydrologic Region, and on the south by the international boundary with Mexico.

Level 4 – Subbasin (HUC-8)

Within the South Coast Hydrologic Region, the City is located within the San Gabriel hydrologic subbasin. The Los Angeles Regional Water Quality Control Board (RWQCB) governs basin planning and water quality within the San Gabriel hydrologic subbasin. Figure 5.10-1, *Hydrologic Units: Subbasin*, shows hydrologic subbasins within and surrounding the City.

Level 5 – Watershed (HUC-10)

Within the San Gabriel hydrologic subbasin, the City is located within the Dominguez Channel watershed. Figure 5.10-2, *Hydrologic Units: Watershed*, shows watersheds within and surrounding the Planning Area.

Level 6 – Sub-Watershed (HUC-12)

There are two sub-watersheds within the Dominguez Channel watershed: the Upper Dominguez Channel and Lower Dominguez Channel sub-watersheds. The Planning Area is located entirely in the Lower Dominguez Channel sub-watershed.

SURFACE WATER AND FLOOD CONTROL FACILITIES

The Planning Area lies within the Dominguez Channel Watershed Management Area (WMA), which encompasses approximately 133 square miles of land and water. The Dominguez Channel WMA is comprised of three sub-watershed drainage areas: the Upper Dominguez Channel, Lower Dominguez Channel and Estuary, and the Los Angeles and Long Beach Harbors including Machado Lake (Dominguez Channel Watershed Management Area Group 2014). The sub-watersheds drain primarily via an extensive network of underground storm drains and flood control channels, including the Dominguez Channel, a

15.7-mile-long waterway that begins in Hawthorne and drains into the Los Angeles and Long Beach Harbors (Los Angeles County Flood Control District 2015). The Dominguez Channel WMA is a fully built-out area with a high percentage of impervious area. While the Dominguez Channel does not run through the City of Lawndale, a segment of the lined portion of the Dominguez Channel above Vermont Avenue runs in a southerly direction through the Sphere of Influence (SOI), east of City limits. There are no other surface waterbodies within the Planning Area.

Storm Drain Facilities

Storm drain infrastructure in the City is jointly owned and operated by the City and County. The Los Angeles County Flood Control District (LACFCD) provides flood control services and drainage infrastructure within unincorporated County areas and 86 incorporated cities, including the City of Lawndale (Los Angeles County Flood Control District 2023). LACFCD maintains a network of catch basins, storm drains, laterals, and the Dominguez Channel to convey stormwater out of the Planning Area and eventually discharge to the Pacific Ocean via Los Angeles Harbor. The City owns and maintains a number of smaller catch basins, storm drains, and laterals that directly flow into the LACFCD system, eventually discharging into the Pacific Ocean via Los Angeles Harbor. The existing County and City storm drain infrastructure is discussed further in Section 5.19, *Utilities and Service Systems*.

Surface Water Quality

Surface water quality is affected by point source and non-point source pollutants. Point source pollutants are those emitted at a specific point, such as a pipe, while non-point source pollutants are typically generated by surface runoff from diffuse sources, such as streets, paved areas, and landscaped areas. Point source pollutants are controlled with pollutant discharge regulations or Waste Discharge Requirements (WDRs). Non-point source pollutants are more difficult to monitor and control although they are important contributors to surface water quality in urban areas.

Stormwater runoff pollutants vary based on land use, topography, the amount of impervious surface, and the amount and frequency of rainfall and irrigation practices. Runoff in developed areas typically contains oil, grease, and metals accumulated in streets, driveways, parking lots, and rooftops, as well as pesticides, herbicides, particulate matter, nutrients, animal waste, and other oxygen-demanding substances from landscaped areas. The highest pollutant concentrations usually occur at the beginning of the wet season during the “first flush.”

Water quality in the City is governed by the Los Angeles RWQCB, which sets water quality standards in the Water Quality Control Plan Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan). The Basin Plan identifies beneficial uses for surface water and groundwater and establishes water quality objectives to attain those beneficial uses.

The Clean Water Act (CWA) 303(d) list is a register of impaired and threatened waters which the CWA requires all states to submit for Environmental Protection Agency approval. The list identifies all waters where the required pollution control measures have so far been unsuccessful in reaching or maintaining the required water quality standards. Waters that are listed are known as “impaired.” All waterbodies on the 303(d) list are subject to the development of a total maximum daily load (TMDL). A TMDL is an estimate of the daily load of pollutants that a water body may receive from point sources, non-point

sources, and natural background conditions (including an appropriate margin of safety), without exceeding its water quality standard.

The Planning Area's surface water resources include the Dominguez Channel (lined portion above Vermont Avenue). According to the California State Water Resources Control Board (SWRCB) 303(d) list (Final 2014/2016 list), the Dominguez Channel (lined portion above Vermont Avenue) is listed as a Category 5 water body, meaning that it is a water segment where standards are not met and a TMDL is required, but not yet completed, for at least one of the pollutants being listed for the segment (California State Water Resources Control Board 2023). Impairments for the portion of the Dominguez Channel above Vermont Avenue include the following: Copper, Indicator Bacteria, Lead, Toxicity, and Zinc. According to the Basin Plan, the major point sources of organo-chlorine pesticides, polychlorinated biphenyls (PCBs), and metals into Dominguez Channel are stormwater and urban runoff discharges. Nonpoint sources include atmospheric deposition and fluxes from contaminated sediments into the overlying water (Los Angeles Regional Water Quality Control Board 2019).

According to the Basin Plan, beneficial uses of the Dominguez Channel (Estuary to 135th Street) are municipal and domestic water supply, warm freshwater habitat, and wildlife habitat, and existing beneficial uses are rare, threatened, or endangered species (Los Angeles Regional Water Quality Control Board 2019).

GROUNDWATER

The Planning Area is underlain by the West Coast Subbasin (West Coast Basin) of the Coastal Plain of Los Angeles Basin. The West Coast Basin covers 142 square miles and is bounded on the north by the Ballona Escarpment, an abandoned erosional channel from the Los Angeles River; on the east by the Newport-Inglewood fault zone; and on the south and west by the Pacific Ocean and consolidated rocks of the Palos Verdes Hills (California Department of Water Resources 2003). According to the Golden State Water Company (GSWC) Southwest Service Area 2020 Urban Water Management Plan (UWMP), the most productive aquifers within the West Coast Basin are the Gardena and Gage aquifers in the Lakewood Formation and the Silverado, Lynwood, and the unnamed aquifers in the San Pedro Formation (Golden State Water Company 2021). The Gardena and Gage aquifers are comprised primarily of fine to coarse sand and gravel and have a total maximum thickness of 320 feet. Wells completed in the Gage aquifer typically produce water at rates ranging from 100 to 1,300 gallons per minute (gpm). The aquifers within the San Pedro formation are comprised of coarse sand, gravel, and sandy gravel and have a combined maximum thickness of 1,200 to 1,400 feet. The Silverado aquifer, underlying most of the West Coast Basin, is the most productive aquifer in the West Coast Basin, yielding approximately 80 to 90 percent of the groundwater extracted annually.

Natural recharge to the West Coast Basin's groundwater supply is mostly underflow from the Central Basin, through the Newport-Inglewood fault zone (Golden State Water Company 2021). Injection wells in the West Coast Basin create mounds of freshwater that help protect the West Coast Basin from seawater intrusion. Other minor sources of recharge include percolation of precipitation, irrigation return flow from fields and lawns, and other applied surface waters. The storage capacity of the primary water producing aquifer, the Silverado aquifer, is estimated by the California Department of Water Resources (DWR) to be

about 6,500,000 acre-feet. Groundwater levels have risen approximately thirty feet since the West Coast Basin was adjudicated in 1961.

Although the City overlies the West Coast Basin, water delivered to GSWC's Southwest Service Area is a blend of groundwater pumped from the West Coast Basin and Central Basin groundwater systems, as well as imported water. Groundwater supplies constitute a major component of GSWC Southwest's water supply portfolio. GSWC Southwest uses adjudicated groundwater supplies from both basins for use in its service area. According to GSWC's UWMP, both the Central Basin and West Coast Basin groundwater systems have been thoroughly analyzed and both are meticulously monitored through each adjudication's requirements. As noted above, the West Coast Basin was adjudicated in 1961; the Central Basin was adjudicated in 1965. The West Coast Basin Adjudication and Central Basin Adjudication limit the volumes of water that each party may extract from the respective basin. This limit is referred to as the Allowed Pumping Allocation (APA). The APA is an assigned volume that is less than the historically available volume that was developed to reduce groundwater overdraft and seawater intrusion. The Watermaster is charged with not only developing the APA but also monitoring and reporting the basins' conditions in order to ensure groundwater overdraft and sea water intrusion do not occur.

FLOODPLAIN MAPPING

The Planning Area is built out and fully developed. The Planning Area is largely paved which reduces infiltration and increases surface runoff, and can increase the risk of localized flooding. Localized flooding may occur in low spots or where infrastructure is unable to accommodate peak flows during a storm event. In most cases, localized flooding dissipates quickly after heavy rain ceases.

FEMA Flood Zones

The Federal Emergency Management Agency (FEMA) has a database that maps flood potential across the United States. FEMA mapping provides important guidance for the City in planning for flooding events and regulating development within identified flood hazard areas. FEMA's National Flood Insurance Program (NFIP) is intended to encourage State and local governments to adopt responsible floodplain management programs and flood measures. As part of the program, the NFIP defines floodplain and floodway boundaries that are shown on Flood Insurance Rate Maps (FIRMs). The FEMA FIRM for the Planning Area is shown on Figure 5.10-3, *FEMA Flood Map* (note that for mapping purposes, FEMA flood zones have been categorized into 100- and 500-year flood zones). As shown, there are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard.

Tsunami

A tsunami is a series of waves in a water body caused by the displacement of a large volume of water, generally in an ocean or a large lake due to earthquakes, volcanic eruptions, and other underwater explosions. The City is approximately three miles from the Pacific Ocean and is not located with a mapped Tsunami Hazard Area (California Department of Conservation 2023).

Dam Inundation

Earthquakes centered close to a dam are typically the most likely cause of dam failure. Dam inundation maps have been required in California since 1972, following the 1971 San Fernando Earthquake and near failure of the Lower Van Norman Dam. There are no dams with the potential to inundate portions of the City according to the Division of Safety of Dams Dam Breach Inundation Maps (California Department of Water Resources 2023).

5.10.3 REGULATORY SETTING

There are a number of regulatory agencies whose responsibility includes the oversight of the water resources of the state and nation including the Federal Emergency Management Agency (FEMA), the U.S. Environmental Protection Agency (EPA), the State Water Resources Board, and the Regional Water Quality Control Board (RWQCB). The following is an overview of the Federal, State and local regulations that are applicable to the proposed project.

FEDERAL

Clean Water Act

The Clean Water Act (CWA), initially passed in 1972, regulates the discharge of pollutants into watersheds throughout the nation. Section 402(p) of the act establishes a framework for regulating municipal and industrial stormwater discharges under the National Pollutant Discharge Elimination System (NPDES) Program. Section 402(p) requires that stormwater associated with industrial activity that discharges either directly to surface waters or indirectly through municipal separate storm sewers must be regulated by an NPDES permit.

The CWA establishes the basic structure for regulating the discharges of pollutants into the waters of the United States and gives the Environmental Protection Agency (EPA) the authority to implement pollution control programs. The statute's goal is to regulate all discharges into the nation's waters and to restore, maintain, and preserve the integrity of those waters. The CWA sets water quality standards for all contaminants in surface waters and mandates permits for wastewater and stormwater discharges.

The CWA also requires states to establish site-specific water quality standards for navigable bodies of water and regulates other activities that affect water quality, such as dredging and the filling of wetlands. The following CWA sections assist in ensuring water quality for the water of the United States:

- CWA Section 208 requires the use of best management practices (BMPs) to control the discharge of pollutants in stormwater during construction;
- CWA Section 303(d) requires the creation of a list of impaired water bodies by states, territories, and authorized tribes; evaluation of lawful activities that may impact impaired water bodies; and preparation of plans to improve the quality of these water bodies. CWA Section 303(d) also establishes Total Maximum Daily Loads (TMDLs), which is the maximum amount of a pollutant that a water body can receive and still safely meet water quality standard; and
- CWA Section 404 authorizes the U.S. Army Corps of Engineers to require permits that will discharge dredge or fill materials into waters in the United States, including wetlands.

In California, the EPA has designated the SWRCB and its nine RWQCBs with the authority to identify beneficial uses and adopt applicable water quality objectives.

The SWRCB is responsible for implementing the CWA and does so through issuing NPDES permits to cities and counties through regional water quality control boards. Federal regulations allow two permitting options for storm water discharges (individual permits and general permits).

Federal Emergency Management Agency

FEMA's primary mission is to reduce the loss of life and property and protect from all hazards, including flooding, among others. FEMA advises on building codes and flood plain management; teaches people how to get through a disaster; helps equip local and State emergency preparedness; coordinates the Federal response to a disaster; makes disaster assistance available to states, communities, businesses and individuals; trains emergency managers; supports the nation's fire service; and administers the national flood and crime insurance programs.

Flood is a general and temporary condition of partial or complete inundation of two or more acres of normally dry land area or of two or more properties. The term "100-year flood" is defined by FEMA, as the flood elevation that has a one percent chance of being equaled or exceeded each year. A "500-year flood" is one which has a 0.2 percent chance of occurring each year. A 500-year flood event would be slightly deeper and cover a greater area than a 100-year flood event.

Flood zones are geographic areas that FEMA defines, based on studies of flood risk. The zone boundaries are shown on flood hazard maps, also called Flood Insurance Rate Maps (FIRM). High Risk Zones or Special Flood Hazard Areas (SFHA or Zone A) are high-risk flood areas where special flood, mudflow, or flood-related erosion hazards exist, and flood insurance is mandatory. SFHAs are those areas subject to inundation by a 100-year flood. Low-to-Moderate Risk Zones or Non-Special Flood Hazard Areas (Zones B, C, X) are areas that are not in any immediate danger from flooding caused by overflowing rivers or hard rains. Insurance purchase is not required in these zones.

FEMA is responsible for administering the National Flood Insurance Program (NFIP), which enables property owners in participating communities to purchase insurance as protection against flood losses in exchange for State and community floodplain management regulations that reduce future flood damages. In communities that participate in the NFIP, mandatory flood insurance purchase requirements apply to all Zones A, which are communities subject to a 100-year flood event. In addition to providing flood insurance and reducing flood damages through floodplain management regulations, the NFIP identifies and maps the nation's floodplains on FIRMs.

FEMA is mandated by the Flood Insurance Act of 1968 and the Flood Disaster Protection Act of 1973 to evaluate flood hazards and provide FIRMs for local and regional planners to further promote safe floodplain development. Flood risk data presented on FIRMs are based on historic, hydrologic, hydraulic, and meteorological data, as well as flood control works, open-space conditions, and development. To prepare a FIRM that illustrates the extent of flood hazards in flood-prone communities, FEMA conducts an engineering study referred to as Flood Insurance Study. Using information collected in these studies, FEMA engineers and cartographers delineate SFHAs on FIRMs.

Flood Control Act

The Flood Control Act (1917) established survey and cost estimate requirements for flood hazards in the Sacramento Valley. All levees and structures constructed per the Act were to be maintained locally but controlled Federally. All rights of way necessary for the construction of flood control infrastructure were to be provided to the Federal government at no cost.

Federal involvement in the construction of flood control infrastructure, primarily dams and levees, became more pronounced upon passage of the Flood Control Act of 1936.

Flood Disaster Protection Act

The Flood Disaster Protection Act (FDPA) of 1973 was a response to the shortcomings of the NFIP, which were experienced during the flood season of 1972. The FDPA prohibited Federal assistance, including acquisition, construction, and financial assistance, within delineated floodplains in non-participating NFIP communities. Furthermore, all Federal agencies and/or Federally insured and Federally regulated lenders must require flood insurance for all acquisitions or developments in designated SFHAs in communities that participate in the NFIP.

Improvements, construction, and developments within SFHAs are generally subject to the following standards:

- All new construction and substantial improvements of residential buildings must have the lowest floor (including basement) elevated to or above the base flood elevation (BFE).
- All new construction and substantial improvements of non-residential buildings must either have the lowest floor (including basement) elevated to or above the BFE or dry-floodproofed to the BFE.
- Buildings can be elevated to or above the BFE using fill, or they can be elevated on extended foundation walls or other enclosure walls, on piles, or on columns.
- Extended foundation or other enclosure walls must be designed and constructed to withstand hydrostatic pressure and be constructed with flood-resistant materials and contain openings that will permit the automatic entry and exit of floodwaters. Any enclosed area below the BFE can only be used for the parking of vehicles, building access, or storage.

National Flood Insurance Program (NFIP)

Per the National Flood Insurance Act of 1968, the NFIP has three fundamental purposes: better indemnify individuals for flood losses through insurance; reduce future flood damages through State and community floodplain management regulations; and reduce Federal expenditures for disaster assistance and flood control.

While the Act provided for subsidized flood insurance for existing structures, the provision of flood insurance by FEMA became contingent on the adoption of floodplain regulations at the local level.

National Pollutant Discharge Elimination System (NPDES)

NPDES permits are required for discharges to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, oceans, dry stream beds, wetlands, and

storm sewers that are tributary to any surface water body. NPDES permits are issued under the Federal Clean Water Act, Title IV, Permits and Licenses, Section 402 (33 USC 466 et seq.).

The RWQCB issues these permits in lieu of direct issuance by the EPA, subject to review and approval by the EPA Regional Administrator (EPA Region 9). The terms of these NPDES permits implement pertinent provisions of the CWA and the Act's implementing regulations, including pre-treatment, sludge management, effluent limitations for specific industries, and anti-degradation. In general, the discharge of pollutants is to be eliminated or reduced as much as practicable so as to achieve the CWA's goal of "fishable and swimmable" navigable (surface) waters. Technically, all NPDES permits issued by the RWQCB are also WDRs issued under the authority of the CWA.

NPDES permitting authority is administered by the SWRCB and its nine RWQCBs. The Planning Area is in a watershed administered by the Santa Ana RWQCB.

Individual projects in the City that disturb more than one acre would be required to obtain NPDES coverage under the California General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit). The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP) describing BMPs the discharger would use to prevent and retain storm water runoff. The SWPPP must contain a visual monitoring program; a chemical monitoring program for "non-visible" pollutants to be implemented if there is a failure of BMPs; and a sediment monitoring plan if the site discharges directly to a waterbody listed on the 303(d) list for sediment.

Rivers and Harbors Appropriation Act of 1899

One of the Country's first environmental laws, this Act established a regulatory program to address activities that could affect navigation in Waters of the United States.

Water Pollution Control Act of 1972

The Water Pollution Control Act established a program to regulate activities that result in the discharge of pollutants to waters of the United States.

STATE

California Fish and Wildlife Code

The California Department of Fish and Wildlife (CDFW) protects streams, water bodies, and riparian corridors through the streambed alteration agreement process under Section 1600 to 1616 of the California Fish and Game Code. The California Fish and Game Code establishes that "an entity may not substantially divert or obstruct the natural flow or substantially change the bed, channel or bank of any river, stream or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river stream, or lake" (Fish and Game Code Section 1602(a)) without notifying the CDFW, incorporating necessary mitigation and obtaining a streambed alteration agreement. The CDFWs jurisdiction extends to the top of banks and often includes the outer edge of riparian vegetation canopy cover.

California Code of Regulations

California Code of Regulations (CCR) Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the Department of Health Services. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water, any detected contaminants in the water, the maximum contaminants levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

California Government Code

Relevant sections of the California Government Code are identified below.

Section 65302: Revised safety elements must include maps of any 200-year flood plains and levee protection zones within the Planning Area.

Section 65584.04: Any land having inadequate flood protection, as determined by FEMA or DWR, must be excluded from land identified as suitable for urban development within the Planning Area.

Section 8589.4: California Government Code Section 8589.4, commonly referred to as the Potential Flooding-Dam Inundation Act, requires owners of dams to prepare maps showing potential inundation areas in the event of dam failure. A dam failure inundation zone is different from a flood hazard zone under the NFIP. NFIP flood zones are areas along streams or coasts where storm flooding is possible from a 100-year flood. In contrast, a dam failure inundation zone is the area downstream from a dam that could be flooded in the event of dam failure due to an earthquake or other catastrophe. Dam failure inundation maps are reviewed and approved by the California Office of Emergency Services. Sellers of real estate within inundation zones are required to disclose this information to prospective buyers.

California Department of Health Services

The Department of Health Services, Division of Drinking Water and Environmental Management, oversees the Drinking Water Program. The Drinking Water Program regulates public water systems and certifies drinking water treatment and distribution operators. It provides support for small water systems and for improving their technical, managerial, and financial capacity. It provides subsidized funding for water system improvements under the State Revolving Fund and Proposition 50 programs. The Drinking Water Program also oversees water recycling projects, permits water treatment devices, supports and promotes water system security, and oversees the Drinking Water Treatment and Research Fund for Methyl *tertiary*-butyl ether and other oxygenates.

California Water Code

California's primary statute governing water quality and water pollution issues with respect to both surface waters and groundwater is the Porter-Cologne Water Quality Control Act of 1970 (Division 7 of the California Water Code) (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and each of the RWQCBs power to protect water quality, and is the primary vehicle for implementation of California's responsibilities under the Federal Clean Water Act. The Porter-Cologne Act grants the SWRCB and the RWQCBs authority and responsibility to adopt plans and policies, to regulate discharges to surface and

groundwater, to regulate waste disposal sites, and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, or oil or petroleum product.

Each RWQCB must formulate and adopt a Water Quality Control Plan (Basin Plan) for its region. The regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its State water policy. The Porter-Cologne Act also provides that a RWQCB may include within its regional plan water discharge prohibitions applicable to particular conditions, areas, or types of waste.

State Water Resources Control Board (State Water Board) Storm Water Strategy

The Storm Water Strategy is founded on the results of the Storm Water Strategic Initiative, which served to direct the State Water Board's role in storm water resources management and evolve the Storm Water Program by: a) developing guiding principles to serve as the foundation of the storm water program; b) identifying issues that support or inhibit the program from aligning with the guiding principles; and c) proposing and prioritizing projects that the Water Boards could implement to address those issues.

The State Water Board staff created a strategy-based document called the Strategy to Optimize Management of Storm Water (STORMS). STORMS includes a program vision, missions, goals, objectives, projects, timelines, and consideration of the most effective integration of project outcomes into the Water Board's Storm Water Program.

Sustainable Groundwater Management Act

The Sustainable Groundwater Management Act (SGMA) established a framework for sustainable, local groundwater management. SGMA requires groundwater-dependent regions to halt overdraft and bring basins into balanced levels of pumping and recharge. With passage of the SGMA, the Department of Water Resources (DWR) launched the Sustainable Groundwater Management Program to implement the law and provide ongoing support to local agencies around the State. The SGMA:

- Establishes a definition of "sustainable groundwater management;"
- Requires that a Groundwater Sustainability Plan be adopted for the most important groundwater basins in California;
- Establishes a timetable for adoption of Groundwater Sustainability Plans;
- Empowers local agencies to manage basins sustainably;
- Establishes basic requirements for Groundwater Sustainability Plans; and
- Provides for a limited State role.

SGMA requires local agencies to form groundwater sustainability agencies (GSAs) for the high and medium priority basins. GSAs develop and implement groundwater sustainability plans (GSPs) for non-adjudicated areas; a GSP is not required for adjudicated areas. However, if an adjudicated action has determined the rights to extract groundwater for only a portion of a basin, then the requirement for a GSP applies to the non-adjudicated portion. DWR evaluates GSPs to determine if they comply with SGMA, substantially comply with the GSP Regulations, and whether implementation of the GSP is likely to achieve the sustainability goal for the basin. DWR's evaluation and assessment is based on criteria outlined in the GSP Regulations. For an adjudicated area, or the portion of the basin subject to the adjudication, the

watermaster or a local agency for the adjudicated area, is required to submit to DWR on an annual basis, a report containing information to the extent available regarding groundwater elevation data; groundwater extraction data, surface water used or available for groundwater recharge; total water use; change in groundwater storage; and the annual report submitted to the court.

The West Coast Basin was designated a very low priority basin in DWR's 2019 SGMA Basin Prioritization report (Department of Water Resources 2020).

LOCAL

Water Quality Control Plan (Basin Plan) for the Los Angeles Region

A Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. The Basin Plan is a resource for the Regional Board and others who use water and/or discharge wastewater in the region that the Basin Plan is designed to cover. Other agencies and organizations involved in environmental permitting and resource management activities also use the Basin Plan. Finally, the Basin Plan provides valuable information to the public about local water quality issues.

The Los Angeles Region (Region 4) has jurisdiction over the coastal drainages between Rincon Point (on the coast of western Ventura County) and the eastern Los Angeles County. The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties covers coastal Los Angeles County, including the Planning Area. The Basin Plan designates beneficial uses of water in the region and establishes narrative and numerical water quality objectives. Water quality objectives, as defined by the CWA Section 13050(h), are the "limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses or the prevention of nuisance within a specific area." The State has developed TMDLs that are a calculation of the maximum amount of a pollutant that a water body can have and still meet water quality objectives established by the region.

Municipal NPDES Permit Waste Discharge Requirements

On November 8, 2012, the RWQCB adopted Order R4-2012-0175 (Waste Discharge Requirements for Municipal Separate Storm Sewer System) (MS4) Discharges within Coastal Watersheds of Los Angeles County (MS4 Permit). Order R4-2012-0175 became effective on December 28, 2013 and serves as the NPDES permit for coastal watershed stormwater and non-stormwater discharges originating from the Los Angeles County region. The permit covers the land areas in the Los Angeles County Flood Control jurisdiction, unincorporated areas of Los Angeles County, and 84 cities in the County. The City of Lawndale is included in the MS4 Permit as a permittee under Order R4-2012-0175.

In coordination with permittees under MS4 Permit, RWQCB staff performs annual performance reviews and evaluations of the City's stormwater management program and NPDES compliance activities.

Los Angeles County Department of Public Works Hydrology Manual

The Los Angeles County Department of Public Works Hydrology Manual (2006) contains the Standard Urban Stormwater Mitigation Plan (SUSMP) that applies to development and redevelopment projects in Los Angeles County, as described below. The Hydrology Manual also includes TMDLs for pollutants per

Section 303 of the CWA and BMPs for managing stormwater quality during construction. As the holder of the MS4 Permit, the RWQCB is responsible for enforcing these BMPs.

Los Angeles County Standard Urban Stormwater Mitigation Plan (SUSMP)

The SUSMP is a comprehensive stormwater quality program to manage urban stormwater and minimize pollution of the environment in Los Angeles County. The purpose of the SUSMP is to reduce the discharge of pollutants in stormwater by outlining BMPs that must be incorporated into the design plans of new development and redevelopment. The SUSMP requirements contain a list of minimum BMPs that must be employed to infiltrate or treat stormwater runoff, control peak flow discharge, and reduce the post-Project discharge of pollutants from stormwater conveyance systems. The SUSMP requirements define, based upon land use type, the types of practices that must be included and issues that must be addressed as appropriate to the development type and size. The SUSMP requirements apply to all development and redevelopment projects that fall into one of the following categories:

- Single-family hillside residences
- One acre or more of impervious surface area for industrial/commercial developments
- Automotive service facilities
- Retail gasoline outlets
- Restaurants
- Ten or more residential units
- Parking lots of 5,000 square feet or greater or with 25 or more spaces
- Projects located in or directly discharging to an Ecologically Sensitive Area

The SUSMP requirements are administered, implemented, and enforced through the Community Development Department Building and Safety Division and final review would be conducted by the Chief Building Official. During the review process, individual development project plans are reviewed for compliance with stormwater requirements.

Dominguez Channel Watershed Management Area – Enhanced Watershed Management Program

The Dominguez Channel Watershed Management Area Enhanced Watershed Management Program (EWMP) was developed pursuant to the requirements set forth by Order No. R4-2012-0175, Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollutant Discharge Elimination System (NPDES) Permit (MS4 Permit). The EWMP identifies water quality priorities and watershed control measures for compliance with all Dominguez Channel TMDLs. The EWMP Plan, along with a Coordinated Monitoring Plan, serves as a guiding document for implementing water quality improving infrastructure, policies, and programs. The City of Lawndale is a participating member in the Dominguez Channel Watershed Management Area EWMP.

West Coast Basin Judgment

In 1961, the West Coast Basin was adjudicated in the case *California Water Service Company, et al. vs. City of Compton, et al.* (Superior Court, County of Los Angeles, Case No 506806). The West Coast Basin

Judgment (Judgment) limits the amount of groundwater each party can extract annually from the West Coast Basin. Groundwater producers held by the Judgment have the right to annually pump the volume of water as decided in the adjudication. These limits are monitored by a court-appointed Watermaster. The Watermaster administers and enforces the terms of the Judgment and reports annually to the Court on significant groundwater-related events that occur in the Basin. The court also retained jurisdiction to monitor ongoing management of the West Coast Basin, including the conjunctive use of Basin storage space, to assure the Basin will be capable of supplying sufficient water to meet local needs, including future growth and development. In 2014, an Amended Judgment was accepted by the Court. The Amended Judgment modified the structure of the Watermaster from being administered by DWR to a three-panel structure: an administrative body administering Watermaster accounting and reporting; a water rights panel made up of members of the West Coast Basin Water Association; and a storage panel. The amendment allows storage in the basin by the water right holders. The Court also retained jurisdiction to monitor ongoing management of the West Coast Basin, including the conjunctive use of West Coast Basin storage space, to assure the West Coast Basin will be capable of supplying sufficient water to meet local needs, including future growth and development.

The West Coast Basin adjudication limit for groundwater extraction across the entire West Coast Basin is 64,468 acre-feet per year (AFY). Three agencies, the Los Angeles County Department of Public Works (LACDPW), Water Replenishment District of Southern California (WRDSC), and West Basin Municipal Water District (WBMWD), collaborate with the groundwater producers, such as GSWC, to ensure that the Allowed Pumping Allocation is available to be pumped from wells in the West Coast Basin. LACPW operates and maintains the West Coast Barrier Project and Dominguez Gap Barrier Projects, which maintain groundwater levels at the coast line to prevent seawater intrusion. LACDPW injects a combination of equal parts of treated wastewater from the WBMWD's water recycling plant located in El Segundo and imported water from Metropolitan Water District (MWD). WBMWD is expanding the West Coast Basin recycled water plant to allow up to 100 percent recycled water injection into the West Coast Basin Barrier Project. LACDPW injects imported water from MWD into the Dominguez Gap Barrier Project. The project currently is permitted for up to six million gallons per day of recycled water to be injected into the barrier with a 50 percent blend with potable water over a 60-month running average. By statute, WRDSC is required to determine replenishment requirements annually. WRDSC pays WBMWD for imported and recycled water for recharge into the West Coast Basin.

Central Basin Judgment

In 1965, the Central Basin was adjudicated in the case *Central and West Coast Basin Water Replenishment District vs. Charles E. Adams, et al.* (Superior Court, County of Los Angeles, Case No. 786656). The Central Basin Judgment limits the amount of groundwater each party can extract annually from the adjudicated portion of the Central Basin. This limit is referred to as the Allowed Pumping Allocation (APA), and is an assigned volume that is less than the historically available volume that was developed to reduce groundwater overdraft and seawater intrusion. The Central Basin Watermaster is charged with developing the APA, as well as monitoring and reporting the Central Basin conditions in order to ensure groundwater overdraft and sea water intrusion do not occur. The Watermaster reports annually to the Court on the significant groundwater-related events that occur in the Central Basin. In 2013, the court entered the Third Amended Judgment. The Amended Judgment modified the structure of the Watermaster from being

administered by DWR to a three-panel structure: an administrative body administering Watermaster accounting and reporting; a water rights panel made up of seven members of the Central Basin water rights holders; and a storage panel.

City of Lawndale Municipal Code

The City of Lawndale Municipal Code Chapter 8.40, *Water Conservation*, allows the City Council to declare voluntary and mandatory water restrictions, as appropriate to water supply conditions. The stages include: conservation watch, drought watch, and drought emergency.

Municipal Code Title 13, *Public Services*, addresses wastewater and storm drains within the City. Chapter 13.12, *Storm Water and Urban Runoff Pollution Control*, establishes stormwater runoff controls and BMPs to prevent and/or reduce the quantity of pollutants from being discharged into the MS4. Section 13.12.060, *Best Management Practices Required*, requires the implementation of BMPs during project operation. Section 13.12.070, *Construction Activity Stormwater Measures*, requires applicants for grading or building permits within the City to provide satisfactory proof of compliance with the Construction General Permit, including a Stormwater Pollution Prevention Plan (SWPPP), when applicable. Applicants that are not required to comply with the Construction General Permit are required to implement a grading and construction activity runoff control program. Chapter 3.16, *Standard Urban Stormwater Mitigation Plan and Low Impact Development Implementation*, contains a number of requirements to control stormwater pollution. Subject new development and redevelopment projects are required to comply with standard urban stormwater mitigation program (SUSMP) conditions assigned by the City, consisting of LID structural and non-structural BMPs; source control BMPs; and structural and non-structural BMPs for specific types of uses. Section 13.16.060, *Stormwater Pollution Control and Design Standards for Best Management Practices (BMPs)*, requires applicable development and redevelopment projects to submit a SUSMP for City review and approval, which is required to be incorporated into the applicant's project plans. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Per Section 13.16.110, *Maintenance of Best Management Practices*, applicants for new subject development and redevelopment projects must agree to maintain any structural or treatment control BMPs.

Municipal Code Title 15, *Buildings and Construction*, adopts various uniform building and construction codes and safety precautions, including the California Building Code, the California Residential Code, the California Plumbing Code, the California Electrical Code, the California Mechanical Code, and the California Green Building Standards Code (CALGreen). The California Building Code contains flood resistant construction requirements. CALGreen contains regulations related to water efficiency and conservation.

Municipal Code Section 17.36.190, *Flood Control Easements—Obstruction Prohibited*, prohibits the placement of any structures or materials within the channel or bed of any river, stream, wash, or arroyo, or County flood control easement, which may alter water flow or damage adjacent property downstream.

Municipal Code Chapter 17.88, *Water Efficient Landscape*, promotes water-efficient landscaping by establishing standards for the design, maintenance, and install of water efficient landscapes in new and substantially altered or expanded existing development projects.

5.10.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to hydrology and water quality. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality (refer to Impact Statement HWQ-1);
- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin (refer to Impact Statement HWQ-2);
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would (refer to Impact Statement HWQ-3):
    - result in substantial erosion or siltation on- or off-site;
    - substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
    - create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
    - impede or redirect flood flows.
- In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation (refer to Impact Statement HWQ-4); and/or
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan (refer to Impact Statement HWQ-5).

5.10.5 IMPACTS AND MITIGATION MEASURES

HWQ-1: Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Impact Analysis:

CONSTRUCTION

Grading, excavation, removal of vegetation cover, and loading activities associated with future construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion impacts that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas.

In compliance with NPDES Permit regulations, the State of California requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. Lawndale Municipal Code Chapter 13.12, *Storm Water and Urban Runoff Pollution Control*, establishes stormwater runoff controls and BMPs to prevent and/or reduce the quantity of pollutants from being discharged into the MS4. Section 13.12.070, *Construction Activity Stormwater Measures*, requires applicants for grading or building permits within the City to provide satisfactory proof of compliance with the Construction General Permit, including a SWPPP, when applicable. Applicants that are not required to comply with the Construction General Permit are required to implement a grading and construction activity runoff control program.

The General Plan Update sets policies and actions for buildout of the City, but it does not envision or authorize any specific development project. Because of this, the site-specific details of potential future development projects are currently unknown and analysis of potential impacts of such projects is not feasible and would be speculative. However, each future project must include detailed project specific drainage plans that control storm water runoff and erosion, both during and after construction. The RWQCB would require a project-specific SWPPP to be prepared for each future project that disturbs an area one acre or larger. The SWPPPs would include project-specific best management measures that are designed to control drainage and erosion. For projects disturbing less than one acre, Lawndale Municipal Code Section 13.12.070 would require compliance with minimum BMPs to reduce the discharge of pollutants. Therefore, the proposed Project would not violate any water quality standards or waste discharge requirements, nor would it otherwise substantially degrade surface water or groundwater quality.

OPERATION

The Planning Area is primarily urbanized with limited pervious areas anticipated for development. The Project does not propose site-specific development; however, future development and redevelopment activities within the Planning Area have the potential to increase impervious areas resulting in increased runoff when compared to existing site conditions. Stormwater runoff may include pollutants such as

sediments, nutrients, pesticides, trash, oil and grease, and metals. The MS4 Permit (Order R4-2012-0175) and Lawndale Municipal Code regulate stormwater discharges within the Planning Area, and require the use of BMPs and other control measures to reduce the discharge of pollutants to receiving water bodies.

Future development projects within the Planning Area would be required to be consistent with the MS4 Permit and Lawndale Municipal Code Chapter 3.16, which contains a number of requirements to control stormwater pollution, including post-construction runoff pollution reduction BMPs implemented through the SUSMP, including LID structural and non-structural BMPs to effectively reduce the amount of impervious area of a completed project site and promote the use of infiltration and other controls that reduce runoff; source control BMPs prevent runoff contact with pollutant materials that would otherwise be discharged to the MS4; and structural and non-structural BMPs for specific types of uses. Section 13.16.060 requires applicable development and redevelopment projects to submit a SUSMP for City review and approval, which is required to be incorporated into the applicant's project plans. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110, *Maintenance of Best Management Practices*, requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects. Other existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SWPPPs, and to implement BMPs. Federal, State and local regulations would require individual projects to provide the on-site storm drain infrastructure, including water quality measures, to ensure the stormwater runoff associated with the proposed development would be captured and treated on-site, protecting water quality both on- and off-site.

Waters that are listed under Section 303(d) of the CWA are known as "impaired." The Planning Area includes a portion of the Dominguez Channel (lined portion above Vermont Avenue), which is listed on the Section 303(d) list as a Category 5 water body, meaning that it is a water segment where standards are not met and a TMDL is required, but not yet completed, for at least one of the pollutants being listed for the segment (California State Water Resources Control Board 2023). Continued compliance with the Dominguez Channel Watershed Management Area EWMP, which in part requires the implementation of BMPs to reduce discharge of pollutants in stormwater to the maximum extent practicable, would help address water quality priorities and ensure compliance with the established regulatory framework, including the CWA.

Storm drain infrastructure in the City is jointly owned and operated by the City and County. The provision and maintenance of stormwater detention facilities, as needed, would reduce runoff rates and peak flows. The General Plan Update proposes goals, policies, and actions that aim to enhance stormwater quality and infiltration, as well as ensure development projects are reviewed to identify potential stormwater and drainage impacts and require development to include measures to confirm off-site runoff is not increased beyond pre-development levels. Proposed Resource Management Element Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Policy RM-6.4 directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged

water conservation strategy. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Proposed Community Facilities Element Policy CF-4.1 encourages LACFCD to maintain sufficient levels of storm drainage service and improve flood control facilities and channel segments. Policy CF-4.2 encourages stormwater to be directed towards permeable surfaces to allow for more percolation of stormwater into the ground. Policy CF-4.3 promotes BMPs and LID measures to treat stormwater before discharge from the site. Policy CF-4.4 directs the City to participate in regional programs to implement the NPDES program. Action CF-4a ensures the City continues to implement the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA. Action CF-4b directs the City to work with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Action CF-4d ensures City review of development projects to identify potential storm drain and drainage impacts and requires developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. Existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, WQMPs, SWPPPs, and to implement BMPs. These regulatory requirements are intended to ensure that water quality does not degrade to levels that would violate water quality standards. Through implementation of the General Plan Update policies and actions, implementation of the Municipal Code requirements identified above, compliance with mandatory Federal and State regulations, and compliance with the existing regulations for the Dominguez Channel Watershed, future development projects associated with implementation of the General Plan Update would not violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: **Stormwater.** Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are

implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

COMMUNITY FACILITIES ELEMENT

Policy CF-4.1: **Maintain Capacity.** Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

Policy CF-4.2: **Stormwater Runoff.** Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

Policy CF-4.3: **Stormwater Treatments.** Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

Policy CF-4.4: **National Programs.** Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Action CF-4a: Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

Action CF-4b: Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

Action CF-4c: Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HWQ-2: Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Impact Analysis: The Planning Area is underlain by the West Coast Basin of the Coastal Plain of the Los Angeles Groundwater Basin. The West Coast Basin is an adjudicated basin; groundwater extraction is monitored by the court-appointed Watermaster, who administers and enforces the terms of the West Coast Basin Judgment and reports annually to the Court on significant groundwater-related events that occur in the Basin. As indicated in Section 5.19, *Utilities and Service Systems*, potable water in the Planning Area is provided by the GSWC Southwest System. According to the GSWC Southwest 2020 UWMP, water supply sources include local groundwater and imported water purchased from the MWD. Groundwater that serves the Planning Area is pumped from the Central subbasin (Central Basin) and West Coast subbasin (West Coast Basin) of the Coastal Plain of Los Angeles Groundwater Basin.

Project implementation would provide opportunities for residential and non-residential development and is expected to result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies. As indicated in Section 5.19, the Project would result in a water demand of approximately 8.0 acre-feet per year (AFY) within the Planning Area, which would be a net increase of 1.6 AFY (25 percent) over existing conditions. As discussed, groundwater supplies constitute a major component of GSWC Southwest's water supply portfolio. GSWC Southwest uses adjudicated groundwater supplies from the Central Basin and West Coast Basin for use in its service area. However, the West Coast Basin Adjudication and Central Basin Adjudication limit the volumes of water that each party may extract from the respective basin. The APA is an assigned volume that is less than the historically available volume that was developed to reduce groundwater overdraft and seawater intrusion. The Watermaster is charged with monitoring and reporting the basins' conditions in order to ensure groundwater overdraft and sea water intrusion do not occur. Although Project implementation could result in an increased demand for water supplies, which have not been accounted for in the UWMP, the Project would not cause GSWC to pump additional groundwater supplies beyond its allocation or beyond the APA authorized through the adjudication of each basin. Thus, the Project would not substantially decrease groundwater supplies that would impede sustainable groundwater management of the basin. Refer to Section 5.19, regarding water supplies.

The Planning Area is underlain by the West Coast Basin. Although future development activities have the potential to increase impervious areas, these areas are limited and do not provide for substantial groundwater recharge within the Planning Area. Development activities associated with implementation of the Project would consist of infill and redevelopment on currently urbanized sites. Therefore, the proposed Project would not interfere substantially with groundwater recharge. Further, the West Coast and Central Basins are managed by an adjudication and subject to their respective Judgments managed by a Watermaster. The primary means of ensuring long-term groundwater level maintenance includes careful monitoring to ensure groundwater levels are managed within a safe basin operating range and implementation of water conservation programs. As described above, recharge to the West Coast Basin's groundwater supply is mostly underflow from the Central Basin, through the Newport-Inglewood fault zone, and injection into the West Coast Basin; natural sources of groundwater recharge from percolation of precipitation, irrigation return flow from fields and lawns, and other applied surface waters are relatively minor. Given that future development associated with implementation of the Project would not appreciably add to the volume of imperious surfaces in the Planning Area, potential impacts to groundwater recharge such that the Project may impede sustainable groundwater management of the basin would be less than significant.

The General Plan Update includes policies and actions that support water conservation, groundwater management, and coordination with local water districts when planning for adequate capacity to accommodate future growth. Proposed Resource Management Element Policy RM-6.1 promotes water conservation strategies using innovative strategies and contemporary best practices. Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6b calls for the City to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Under Action RM-6c, the City will work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy CF-2.1 directs City coordination with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. Action CF-2c directs the City to cooperate with the State, regional, and local water agencies and suppliers to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Implementation of the General Plan policies, combined with continued management of the West Coast and Central Basins, would further ensure that future development anticipated by the General Plan Update would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.1: **Conservation.** Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Policy CF-2.1: **Water Supply Needs.** Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: **Use of Recycled Water.** Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: **Climate Change Impacts.** Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HWQ-3: Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

- **result in substantial erosion or siltation on- or off-site;**
- **substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;**
- **create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or**
- **impede or redirect flood flows?**

Impact Analysis:

EROSION AND SILTATION

The Planning Area is primarily urbanized with limited pervious areas anticipated for development. Implementation under the General Plan Update would result in new development and redevelopment projects with the potential to increase the area of impervious surfaces and/or result in alteration of existing drainage patterns. Substantial erosion or siltation is known to result during construction and/or during the post-construction phase if erosion control measures are not used. Erosion or siltation can also occur in the post-construction phase if runoff is not captured and conveyed appropriately.

As stated above, future development under the General Plan Update would be subject to NPDES permit requirements that address the control of erosion and siltation. This includes the Construction General Permit, which requires a SWPPP and the effective implementation of erosion control measures for projects greater than one acre in size (or part of a larger plan of development). The Los Angeles RWQCB conducts inspections and enforces the Construction General Permit at construction sites. Additionally, Lawndale Municipal Code Section 13.12.070, *Construction Activity Stormwater Measures*, requires

applicants for grading or building permits within the City to provide satisfactory proof of compliance with the Construction General Permit, including a SWPPP, when applicable. Applicants that are not required to comply with the Construction General Permit are required to implement a grading and construction activity runoff control program.

Development under the General Plan Update would also be subject to the post-construction requirements of the MS4 NPDES permit. Lawndale Municipal Code Section 13.16.060 requires applicable development and redevelopment projects to submit a SUSMP for City review and approval, which is required to be incorporated into the applicant's project plans. The SUSMP ensures that implementing project designs have incorporated LID BMPs for the effective treatment of pollutants of concern in stormwater runoff from a design storm event. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110, *Maintenance of Best Management Practices*, requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects.

Further, the General Plan Update Public Safety Element and Resource Management Element includes goals, policies, and actions that address erosion and siltation from the addition of impervious surfaces and alteration of existing drainage patterns. Proposed Resource Management Element Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Policy RM-6.4 directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Policy CF-4.3 promotes BMPs and LID measures to treat stormwater before discharge from the site. Policy CF-4.4 directs the City to participate in regional programs to implement the NPDES program. Action CF-4a ensures the City continues to implement the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA. Action CF-4b directs the City to work with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. Through implementation of the General Plan Update policies and existing regulations, erosion/siltation impacts from changes to the existing drainage patterns and increasing impervious surfaces would be less than significant.

SURFACE RUNOFF

As previously described, LACFCD and the City operate and maintain a network of flood control facilities within the Planning Area. Flooding can occur from an increase in impervious surfaces, which increases the volume and speed of runoff. When the volume and speed of runoff are increased, drainage facilities may be unable to handle the flows and capacity could be exceeded. As previously stated, the Planning Area is primarily developed, with limited areas of pervious surfaces. Although future development activities have the potential to slightly increase impervious areas within the Planning Area, the majority of development

activities associated with implementation of the Project would consist of infill and redevelopment on currently urbanized sites. Federal, State, and local regulations would require individual projects to provide the on-site storm drain infrastructure and any off-site infrastructure improvements to ensure stormwater runoff associated with the proposed development would be adequately captured and conveyed into the City's storm drain system and LACFCD facilities. Therefore, implementation of the Project would not substantially increase the rate or amount of surface runoff which would result in flooding on- or offsite or create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems. Impacts would be less than significant in this regard.

The General Plan Update contains policies and actions to provide adequate stormwater infrastructure for flood control and to reduce run-off quantity. Proposed Resource Management Element Policy RM-6.4 directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Proposed Community Facilities Element Policy CF-4.1 encourages LACFCD to maintain sufficient levels of storm drainage service and improve flood control facilities and channel segments. Policy CF-4.2 encourages stormwater to be directed towards permeable surfaces to allow for more percolation of stormwater into the ground. Policy CF-4.3 promotes BMPs and LID measures to treat stormwater before discharge from the site. Policy CF-4.4 directs the City to participate in regional programs to implement the NPDES program. Action CF-4a ensures the City continues to implement the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA. Action CF-4b directs the City to work with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Action CF-4d ensures City review of development projects to identify potential storm drain and drainage impacts and requires developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. Additionally, Lawndale Municipal Code Chapter 17.88, *Water Efficient Landscape*, establishes requirements and standards for water efficient landscapes in new and substantially altered or expanded existing development projects, including the integration of stormwater BMPs into landscape design plans to minimize runoff and to increase on-site rainwater retention and infiltration. Through implementation of the General Plan Update Plan policies and actions and existing Federal, State, and local regulations discussed above, runoff would not exceed the capacity of drainage systems, provide substantial additional sources of polluted runoff, or cause flooding impacts from changes to the existing drainage patterns and increased impervious surfaces. Therefore, impacts would be less than significant.

FLOOD FLOWS

The Planning Area is highly urbanized and primarily developed with residential and non-residential uses. The Dominguez Channel is a channelized watercourse that runs through the eastern portion of the Planning Area. The Project does not propose any changes to the Dominguez Channel and would not result in the alteration of the course of a river or stream. As described above and shown in Figure 5.10-3, there are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard.

The General Plan Update sets policies and actions for buildout of the City, but does not envision or authorize any specific development project. The General Plan Update contains policies and actions designed to reduce runoff flows and flood risk in the City. Proposed Public Safety Element Policy PS-5.1 coordinates with local, State, and Federal agencies so that the City's regulations related to flood control comply with Federal, State, and Local standards. Policy PS-5.3 requires development projects to adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Policy PS-5.6 directs the City to maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property. Action PS-5a directs the City to monitor changes in Federal and State laws and regulations related to local flood protection, including the NFIP, and incorporates necessary changes into the Municipal Code and building codes as required. Action PS-5c directs the City to review County, State, and Federal flood control best practices and incorporates appropriate standards into the Municipal Code. As described above, the City has adopted the California Building Code, which contains flood resistant construction requirements. Future development projects would be required to adhere to applicable Federal, State, and local flood-related regulations. Additionally, construction of storm drainage improvements would occur as part of an overall development or infrastructure project, and would be considered in the environmental review associated with the specific project being proposed. With implementation of General Plan Update goals, policies, and implementation and compliance with existing regulations, the General Plan Update would not impede or redirect flood flows; impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: **Stormwater.** Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that

projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-5.1: **Flood Control Regulations.** Coordinate with local, state, and Federal agencies so that the City's regulations related to flood control are in compliance with Federal, State, and Local standards.

Policy PS-5.3: **Site Design.** Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

Policy PS-5.4: **Best Management Practices.** Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.5: **Changing Conditions.** Coordinate with the Los Angeles County Flood Control and Waterworks Districts on changing flood conditions associated with climate change and extreme weather.

Policy PS-5.6: **Local Storm Drainage Infrastructure.** Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

Action PS-5a: Monitor changes in Federal and State laws and regulations related to local flood protection, including the National Flood Insurance Program and incorporate necessary changes into the Municipal Code and building codes as required.

Action PS-5b: Communicate with FEMA annually regarding updates to Flood Insurance Rate Maps and Letter of Map Revisions.

Action PS-5c: Periodically review County, State, and Federal flood control best practices and incorporate appropriate standards into the Municipal Code.

COMMUNITY FACILITIES ELEMENT

Policy CF-4.1: **Maintain Capacity.** Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

Policy CF-4.2: **Stormwater Runoff.** Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

Policy CF-4.3: **Stormwater Treatments.** Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

Policy CF-4.4: **National Programs.** Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Action CF-4a: Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

Action CF-4b: Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

Action CF-4c: Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HWQ-4: Would the project, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Impact Analysis: As described above and shown in Figure 5.10-3, there are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard. Should future development projects become inundated during a future flood event, there is a risk of pollutants being released inadvertently into the environment. As described above, pursuant to the CWA, each subsequent development project or improvement project that disturbs more than one acre would be required to obtain NPDES coverage under the Construction General Permit, which would require an approved SWPPP that includes BMPs for grading and preservation of topsoil. SWPPPs are designed to control storm water quality degradation to the extent practicable using BMPs during and after

construction. Further, the General Plan Update includes policies and actions to reduce the risk of flooding and ensure compliance with regulatory requirements. Proposed Public Safety Element Policy PS-5.1 coordinates with local, State, and Federal agencies so that the City's regulations related to flood control comply with Federal, State, and Local standards. Policy PS-5.2 coordinates with FEMA so that Federal Insurance Rate Maps correctly depict flood hazards in the City. Policy PS-5.3 requires development projects to adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Policy PS-5.5 coordinates with LACFCD on changing flood conditions associated with climate change and extreme weather. Policy PS-5.6 directs the City to maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property. Action PS-5a directs the City to monitor changes in Federal and State laws and regulations related to local flood protection, including the NFIP, and incorporates necessary changes into the Municipal Code and building codes as required. Action PS-5c directs the City to review County, State, and Federal flood control best practices and incorporates appropriate standards into the Municipal Code. Proposed Resource Management Element Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment.

Tsunamis are a series of waves in a water body caused by the displacement of a large volume of water, generally in an ocean or a large lake due to earthquakes, volcanic eruptions, and other underwater explosions. The Planning Area is approximately three miles inland of the Pacific Ocean and is not located within a mapped Tsunami Hazard Area. Seiches are the oscillation of large bodies of standing water, such as lakes, that can occur in response to ground shaking. Any body of water may experience limited oscillation during storm events or following seismic events, however oscillation in small bodies of water is generally limited. There are no dams with the potential to inundate the Planning Area according to the Division of Safety of Dams Dam Breach Inundation Maps. There is a man-made lake in Alondra Park, within close proximity to the Planning Area; however, due to its size and the flat topography of the area, this lake would not generate a significant seiche risk to the Planning Area. As a result, tsunamis and seiches do not pose hazards to the Planning Area.

With implementation of General Plan Update policies and actions, and implementation and compliance with existing regulations, impacts associated with the risk of pollutants from seiches and flooding that may result from adoption and implementation of the General Plan Update would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: **Stormwater.** Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-5.1: **Flood Control Regulations.** Coordinate with local, state, and Federal agencies so that the City's regulations related to flood control are in compliance with Federal, State, and Local standards.

Policy PS-5.2: **Flood Maps.** Coordinate with Federal Emergency Management Agency (FEMA) so that Federal Insurance Rate Maps correctly depict flood hazards in the City.

Policy PS-5.3: **Site Design.** Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

Policy PS-5.4: **Best Management Practices.** Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.5: **Changing Conditions.** Coordinate with the Los Angeles County Flood Control and Waterworks Districts on changing flood conditions associated with climate change and extreme weather.

Policy PS-5.6: **Local Storm Drainage Infrastructure.** Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

Action PS-5a: Monitor changes in Federal and State laws and regulations related to local flood protection, including the National Flood Insurance Program and incorporate necessary changes into the Municipal Code and building codes as required.

Action PS-5b: Communicate with FEMA annually regarding updates to Flood Insurance Rate Maps and Letter of Map Revisions.

Action PS-5c: Periodically review County, State, and Federal flood control best practices and incorporate appropriate standards into the Municipal Code.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HWQ-5: Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Impact Analysis: As described above, the local water quality control plan (Basin Plan) is maintained by the Los Angeles RWQCB. The Basin Plan specifies the State's water quality standards (i.e., beneficial uses, water quality objectives, and antidegradation policy) and serves as the basis for the RWQCB's regulatory programs. When permittees and projects comply with the provisions of applicable NPDES permits and water quality permitting, they are consistent with the Basin Plan. The General Plan Update includes policies to implement NPDES requirements and enforcement of said regulations, such as: Action RM-6a, which ensures projects of one acre or more complete a SWPPP in compliance with State law and the City's MS4 permit; Action CF-4a, which implements the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA Group; and Action CF-4b, which works with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Through implementation of existing regulations and the General Plan Update policies and actions, implementation of the General Plan Update would not conflict or obstruct a water quality control plan. Therefore, impacts in this regard will be less than significant.

As described above, the Planning Area receives water from the GSWC Southwest System, which receives groundwater from the Central Basin and West Coast Basin. In compliance with the Central Judgment and West Coast Judgment, the Watermasters submit an annual report to the Los Angeles County Superior Court, which has jurisdiction to monitor ongoing management of the basins. The Central and West Coast Basins were designated as very low priority basins in DWR's 2019 SGMA Basin Prioritization report (California Department of Water Resources 2020). SGMA exempts adjudicated groundwater basins from the requirements of designating a Groundwater Sustainability Agency and developing a Groundwater Sustainability Plan. The Central Judgment and West Coast Judgment provide for the legal and practical means of ensuring that the waters of each Basin are sustainably managed and put to maximum beneficial use. The General Plan Update does not propose site-specific development. New development and redevelopment projects accommodated by the General Plan Update would be subject to the Central Basin Judgment West Coast Basin Judgment. Subsequent development projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Therefore, the General Plan Update would not conflict with implementation of a sustainable groundwater management plan.

The General Plan Update includes policies to support water conservation and responsible management of groundwater resources which is consistent with the tasks of the Watermaster. Proposed Resource Management Element Policy RM-6.1 promotes water conservation strategies using innovative strategies and contemporary best practices. Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems,

the selection of appropriate plant materials, and proper soil preparation. Action RM-6b calls for the City to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Under Action RM-6c, the City will work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy directs City coordination with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. Thus, adoption and implementation of the General Plan Update will not conflict or obstruct a sustainable groundwater management plan and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.1: **Conservation.** Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: **Stormwater.** Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Policy CF-2.1: **Water Supply Needs.** Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: **Use of Recycled Water.** Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: **Climate Change Impacts.** Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

Policy CF-4.2: **Stormwater Runoff.** Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

Policy CF-4.3: **Stormwater Treatments.** Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

Policy CF-4.4: **National Programs.** Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Action CF-4a: Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

Action CF-4b: Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

Action CF-4c: Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.10.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis,* identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to hydrology and water quality may occur. The cumulative projects are within the same watershed

as the Planning Area and stormwater would be conveyed by the LACFCD and the City, similar to the Project.

Would the project, combined with other related cumulative projects, violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Impact Analysis: Future development associated with implementation of the Project and cumulative development within the City and surrounding areas may involve future construction activities that could temporarily increase runoff, erosion, and sedimentation. Future development and cumulative development would be required to comply with NPDES Permit regulations, which requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. For projects within the City disturbing less than one acre, Lawndale Municipal Code Section 13.12.070 would require compliance with minimum BMPs to reduce the discharge of pollutants. Regional projects disturbing less than one acre would be required to comply with the SUSMP and/or applicable jurisdictional-level BMPs to reduce the discharge of pollutants.

Additionally, future Project development and cumulative development could increase impervious areas resulting in increased stormwater runoff when compared to existing site conditions. Future development and cumulative development would be required to be consistent with the MS4 Permit and Lawndale Municipal Code Section 13.16.060, which requires post-construction runoff pollution reduction BMPs implemented through the SUSMP, including LID BMPs. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110, *Maintenance of Best Management Practices*, requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects. Other existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SWPPPs, and to implement BMPs.

Future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on hydrology and water quality to a less-than-significant level. Thus, the proposed Project's incremental effects involving a violation of water quality standards or waste discharge requirements, or a substantial degradation of surface water or groundwater quality, would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Impact Analysis: The Project proposes a comprehensive update to the City's existing General Plan, including a revised Land Use Map. The General Plan Update does not include any site-specific development, but would enable future residential and non-residential development and is expected to result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies. The Basin is managed by an adjudication and subject to the Judgment managed by the Watermaster, which ensures ongoing management of the Basin and assures the Basin will be capable of supplying sufficient water to meet local needs, including future growth and development.

The Planning Area and surrounding area is primarily urbanized with limited pervious areas anticipated for development. Although future development and cumulative development have the potential to increase impervious areas, these areas are limited and do not provide for substantial groundwater recharge within the Planning Area and surrounding areas. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including water conservation measures and LID BMPs. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on groundwater to a less than significant level. Therefore, the proposed Project's incremental effects involving a substantial decrease in groundwater supplies or substantial interference with groundwater recharge is not cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

- **Result in substantial erosion or siltation on- or off-site;**
- **Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;**
- **Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or**

- **Impede or redirect flood flows?**

Impact Analysis:

Erosion and Siltation

Future development associated with implementation of the Project and cumulative development within the City and surrounding areas may involve future construction activities that could temporarily increase runoff, erosion, and sedimentation. Future development and cumulative development would be required to comply with NPDES Permit regulations, which requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. For projects disturbing less than one acre, Lawndale Municipal Code Section 13.12.070 would require compliance with minimum BMPs to reduce the discharge of pollutants. Regional projects disturbing less than one acre would be required to comply with the SUSMP and/or applicable jurisdictional-level BMPs to reduce the discharge of pollutants.

Additionally, future development could increase impervious areas resulting in increased stormwater runoff when compared to existing site conditions. Future development and cumulative development would be required to be consistent with the MS4 Permit and Lawndale Municipal Code Section 13.16.060, which requires post-construction runoff pollution reduction BMPs implemented through the SUSMP, including LID BMPs. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110, *Maintenance of Best Management Practices*, requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects. Other existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SWPPPs, and to implement BMPs. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs and implementation of LID BMPs. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on hydrology and water quality to a less-than-significant level. Therefore, the proposed Project's incremental effects involving erosion and siltation is not cumulatively considerable.

Surface Runoff and Water Quality

The Planning Area is primarily urbanized with limited pervious areas anticipated for development. Although future development and cumulative development have the potential to increase impervious areas, Federal, State, and local regulations would require individual projects to provide the on-site storm drain infrastructure and any off-site infrastructure improvements to ensure stormwater runoff associated with future and cumulative development would be adequately captured and conveyed into the City's storm drain system and LACFCD facilities. Therefore, implementation of the Project would not substantially increase the rate or amount of surface runoff which would result in flooding on- or offsite or

create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems. Impacts would be less than significant in this regard. Therefore, the proposed Project's incremental effects involving or contributing runoff water which would exceed the capacity of existing or planned stormwater drainage systems is less than cumulatively considerable.

Future Project development and cumulative development within the City and surrounding areas may involve future construction activities that could temporarily increase runoff, erosion, and sedimentation. Lawndale Municipal Code Chapter 17.88, *Water Efficient Landscape*, promotes establishes requirements and standards for water efficient landscapes in new and substantially altered or expanded existing development projects, including the integration of stormwater BMPs into landscape design plans to minimize runoff and to increase on-site rainwater retention and infiltration. Existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SUSMPs, SWPPPs, and to implement BMPs. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs and implementation of LID BMPs. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on hydrology and water quality to a less-than-significant level. Therefore, the proposed Project's incremental effects involving substantial additional sources of polluted runoff would be less than cumulatively considerable.

Flood Flows

The Planning Area is highly urbanized and primarily developed with residential and non-residential uses. The Project does not propose any changes to the Dominguez Channel and would not result in the alteration of the course of a river or stream. Flood impacts are site specific and generally do not combine to result in cumulative impact. Additionally, there are no mapped flood hazard zones located within the Planning Area. Pursuant to the CWA, each subsequent development project or improvement project that disturbs more than one acre would be required to obtain NPDES coverage under the Construction General Permit, which would require an approved SWPPP that includes BMPs for grading and preservation of topsoil. Additionally, construction of storm drainage improvements would occur as part of an overall development or infrastructure project. Therefore, the proposed Project's incremental effects involving impeding or redirecting flood flows would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Impact Analysis: Flood impacts are site specific and generally do not combine to result in cumulative impacts. There are no mapped flood hazard zones located within the Planning Area. The Planning Area is

approximately three miles inland of the Pacific Ocean and is not located within a mapped Tsunami Hazard Area. There are no dams with the potential to inundate the Planning Area according to the Division of Safety of Dams Dam Breach Inundation Maps. Although there is a man-made lake within close proximity to the Planning Area, the lake does not generate a significant seiche risk to the Planning Area due to its size and the flat topography of the area. As a result, tsunamis and seiches do not pose hazards to the Planning Area. Additionally, construction of storm drainage improvements would occur as part of an overall development or infrastructure projects. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs and implementation of LID BMPs, which would reduce the risk of release of pollutants due to inundation within the Planning Area. Therefore, the proposed Project's incremental effects involving the risk of release of pollutants due to project inundation would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Impact Analysis: As described above, the local water quality control plan (Basin Plan) is maintained by the Los Angeles RWQCB. The Basin Plan specifies the State's water quality standards (i.e., beneficial uses, water quality objectives, and antidegradation policy) and serves as the basis for the RWQCB's regulatory programs. Future development and cumulative development projects would be required to comply with the provisions of applicable NPDES permits and water quality permitting, consistent with the Basin Plan. Therefore, the proposed Project's incremental effects involving implementation of a water quality control plan is less than cumulatively considerable.

As described above, the Planning Area is located entirely within the West Coast Basin and subject to the West Coast Judgment. The West Coast Judgment provides for the legal and practical means of ensuring that the waters of the Basin are sustainably managed and put to maximum beneficial use. The Project does not propose site-specific development. Future development and cumulative development projects would be subject to the West Coast Judgment. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs, implementation of LID BMPs, and water conservation measures. Therefore, the proposed Project's incremental effects involving obstruction of implementation of a sustainable groundwater management plan is less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.10.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Hydrology and water quality impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable hydrology and water quality impacts would occur as a result of the General Plan Update.

5.11 LAND USE AND PLANNING

This section identifies existing land use conditions within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

One comment was received during the NOP comment period regarding land use and planning. The comment was received from the Southern California Association of Governments (SCAG). SCAG provides informational resources and recommendations to ensure consistency of the proposed General Plan Update with Connect SoCal (the adopted 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy).

5.11.1 ENVIRONMENTAL SETTING

A City's limits include the area within the City's corporate boundary, over which the City exercises land use authority and provides public services. A City's Sphere of Influence (SOI) is the probable physical boundary and service area of a local agency, as adopted by a Local Agency Formation Commission (LAFCO). A SOI may include both incorporated and unincorporated areas within which a city or special district will have primary responsibility for the provision of public facilities and services. Lawndale's SOI is contiguous with its City Limits. For the purposes of the Lawndale General Plan Update, the Planning Area is defined as the area within the City's corporate boundary and its SOI. Figure 3-2 in Section 3.0, *Project Description*, shows the Lawndale Planning Area boundary.

LAND USE PATTERNS

When discussing land use, it is important to distinguish between planned land uses and existing land uses. The current General Plan land use designations identify the long-term planned use of land, but do not necessarily present a complete picture of existing land uses. The Los Angeles County Assessor's office maintains a database of existing "on-the-ground" land uses on individual parcels, including the number of dwelling units and related improvements such as non-residential building square footage. However, it should be noted that the Los Angeles County Assessor data does not always accurately reflect existing on-the-ground conditions. The Los Angeles County Assessor's database was used as a starting point for establishing baseline conditions and updated and modified based on City staff knowledge of individual parcels, where possible, to more accurately reflect current conditions.

Figure 5.11-1, *Existing Land Use Map*, shows a map of existing on-the-ground land uses in the City of Lawndale. Existing (on-the-ground) development within the Planning Area are identified in Table 5.11-1, *Existing Land Use Summary*. As evident from the map and summary table, Lawndale is dominated by single-family and duplex housing (e.g., single-family detached, duplex/double unit). Commercial uses are primarily located along major corridors, including Hawthorne Boulevard, Redondo Beach Boulevard, and Manhattan Beach Boulevard.

Table 5.11-1
Existing Land Use Summary

Land Use	City (Acres)	SOI (Acres)	Total (Acres)	% of Total Acres
Single Family Residential	248.83	198.22	447.04	28.7%
Duplex Residential	233.80	3.32	237.12	15.2%
Multi-Family Residential	148.34	0.61	148.95	9.6%
Mobile Home Park	3.94	0	3.94	0.3%
Commercial	110.35	10.00	120.35	7.7%
Industrial	23.16	0	23.16	1.5%
Government – Educational Facilities	93.72	9.47	103.19	6.6%
Government – Public Facilities	35.30	0	35.30	2.3%
Institutional	8.15	0	8.15	0.5%
Open Space and Recreational	0.97	0	0.97	0.1%
Miscellaneous	9.60	7.83	17.42	1.1%
Right-of-Way	324.84	84.55	409.41	26.3%
Total	**1,241**	**314**	**1,555**	**100%**

Notes:
SOI – Sphere of Influence

Residential

Like many cities in Los Angeles County, Lawndale's housing stock is comprised primarily of single-family homes, representing about two-thirds of housing units in the City. Approximately 7,201 single-family dwelling units and 4,262 multi-family units are within the Planning Area. Other residential uses, including mobile home communities, exist in Lawndale but are less prevalent than single-family developments within the City. Approximately 236 mobile home units exist in the Planning Area (Department of Finance 2023).

Commercial

Retail is the predominant commercial real estate product type in the City in terms of square feet accounting for nearly two-thirds of the total commercial space, followed by industrial/flex, office, and hotel. Industrial and flex uses make up just 15 percent of commercial space in Lawndale, and the City has added no new industrial/flex space over the past ten years. The office space inventory in Lawndale is approximately equivalent to its industrial and flex space. The City has about 305 rooms across five hotels.

Government – Educational Facilities

The Planning Area is primarily served by the Lawndale Elementary School District (LESD) and Centinela Valley Union High School District (CVUHSD). Environmental Charter High School leases a site in the City of Lawndale from LESD and provides a grade 9-12 program with emphasis on experiential, project-based learning. Twelve (12) public schools exist in the Planning Area. LESD includes six elementary and two

middle schools; and CVUHSD includes two comprehensive high schools, two alternative high school, and one adult education school.

Government – Public Facilities

The category of Government – Public Facilities includes fire stations, public schools' recreational facilities that are used as public parks, government offices, and public facilities. Approximately two percent, or 35 acres, of land are designated for government facilities in the Planning Area.

Institutional

Institutional uses include churches, care facilities, private schools and other institutions totaling 8.15 acres.

Open Space and Recreational

Open Space and Recreational uses include City-owned parks and clubs, lodge halls and fraternal organizations. The open space designation allows for passive and active recreation sites operated by the City.

Miscellaneous

Miscellaneous uses include utility uses such as pumping stations. Approximately one percent of the Planning Area is designated for miscellaneous uses.

PROJECTS UNDER REVIEW

The projects under review or recently completed in the City are shown in Table 5.11-2, *City of Lawndale Projects Under Review*.

Table 5.11-2
City of Lawndale Projects Under Review

Project Name	Location	Description	Status
Anastasi Development	15122, 15200 and 15206 Grevillea Avenue	33 residential units and 6 commercial suites	Pending
3600 Torrance Management, LLC	15314 Grevillea Avenue	7 apartment units	Building permit in process
Ashook Patel	15223 Hawthorne Boulevard	Multi-story hotel with 197 rooms	Pending
17000 Hawthorne Blvd Opp. Fund LLC	17000 Hawthorne Boulevard	70-unit mixed-use project with retail on first floor	Approved
Konstro Construction	15022 Kingsdale Avenue	8 townhomes-style condominium units	Approved
Alan Nguyen	4208 and 4216 Manhattan Beach Boulevard	8 condominium units	Complete
Amir Sharghi	4578 Manhattan Beach Boulevard	Multi-story residential and commercial mixed-use project	Pending

Table 5.11-2 (continued)
City of Lawndale Projects Under Review

Project Name	Location	Description	Status
Far Field Beer Company	4471 Rosecrans Avenue	Beer manufacturing and distribution tasting room	Completed
3600 Torrance Management, LLC	4440 W. 153rd Street	41-unit mixed-use project with first floor retail	Completed
3600 Torrance Management, LLC	4019 and 4025 W. 169th Street	5 condominium units	Pending
Hamid Pournamdari	4347 W. 171st Street	3 condominium units	Completed
Icon & Ikon	4604 W. 172nd Street	4 townhome-style condominium units	Approved and under construction
Beach Front	16900 Hawthorne Boulevard	25-unit mixed-use project with commercial use	Approved
15801 Hawthorne	15801 Hawthorne Boulevard	50-unit mixed-use project with commercial use	Pending
Source: City of Lawndale, June 2023.			

5.11.2 REGULATORY SETTING

STATE

California General Plan Law

Government Code Section 65300 requires that each county and city adopt a General Plan "for the physical development of the county or city, and any land outside its boundaries which bears relation to its planning."

The General Plan will include a comprehensive set of goals, policies, and actions (implementation measures), as well as a revised Land Use Map. It is a comprehensive long-term plan for the physical development of the county or city and is considered a "blueprint" for development. The General Plan must contain eight state-mandated elements, to the extent that they are relevant locally, which include: Land Use, Open Space, Conservation, Housing, Circulation, Noise, Safety, and Environmental Justice. It may also contain any other elements that the county or city wishes to include. The land use element designates the general location and intensity of designated land uses to accommodate housing, business, industry, open space, education, public buildings and grounds, recreation areas, and other land uses.

The 2017 General Plan Guidelines, established by the Governor's Office of Planning and Research (OPR) to assist local agencies in the preparation of their general plans, further describe the mandatory land use element as a guide to planners, the general public, and decision makers prescribing the ultimate pattern of development for the county or city.

California Housing Element Law

The Housing Element is one of the General Plan Elements that are mandated by the State of California (California Government Code Sections 65580 to 65589.8). California State law requires that the Housing Element consists of, "an identification and analysis of existing and projected housing needs and a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing" (Government Code Section 65580).

State law requires that each city and county identify and analyze existing and projected housing needs within its jurisdiction and prepare goals, policies, and programs to further the development, improvement, and preservation of housing for all economic segments of the community, commensurate with local housing needs.

Subdivision Map Act

A subdivision is any division of land for the purpose of sale, lease or finance. The State of California Subdivision Map Act (Government Code Section 66410) regulates subdivisions throughout the State. The goals of the Subdivision Map Act are as follows:

- To encourage orderly community development by providing for the regulation and control of the design and improvement of a subdivision with proper consideration of its relationship to adjoining areas.

- To ensure that areas within the subdivision that are dedicated for public purposes will be properly improved by the subdivider so that they will not become an undue burden on the community.
- To protect the public and individual transferees from fraud and exploitation.

The Map Act allows cities flexibility in the processing of subdivisions. Lawndale controls this process through the subdivision regulations in the Municipal Code Title 16 (referred to as the Subdivision Ordinance). Regulations ensure that minimum requirements are adopted for the protection of the public health, safety and welfare; and that the subdivision includes adequate community improvements, municipal services, and other public facilities.

LOCAL

Southern California Association of Governments

Regional planning agencies such as the Southern California Association of Governments (SCAG) recognize that planning issues extend beyond the boundaries of individual cities. Efforts to address regional planning issues such as affordable housing, transportation, and air pollution have resulted in the adoption of regional plans that affect the City of Lawndale.

SCAG has evolved as the largest council of governments in the United States, functioning as the Metropolitan Planning Organization (MPO) for six counties (Los Angeles, Orange, San Bernardino, Riverside, Ventura and Imperial) and 191 cities. The region encompasses an area more than 38,000 square miles. As the designated MPO, the Federal government mandates SCAG research and develop plans for transportation, growth management, hazardous waste management, and air quality. As a result, SCAG prepares comprehensive regional plans to address concerns.

SCAG is responsible for the maintenance of a continuous, comprehensive and coordinated planning process resulting in a Regional Transportation Plan (RTP) and a Regional Transportation Improvement Program. SCAG is responsible for development of demographic projections and is also responsible for development of the integrated land use, housing, employment, transportation programs, measures, and strategies for the Air Quality Management Plan.

Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

The passage of California Senate Bill (SB) 375 in 2008 requires that an MPO, such as SCAG, prepare and adopt a Sustainable Communities Strategy (SCS) that sets forth a forecasted regional development pattern which, when integrated with the transportation network, measures, and policies, will reduce greenhouse gas emissions from automobiles and light duty trucks (Government Code Section 65080(b)(2)(B)). The SCS outlines certain land use growth strategies that provide for more integrated land use and transportation planning and maximize transportation investments. The SCS is intended to provide a regional land use policy framework that local governments may consider and build upon.

On September 3, 2020, SCAG's Regional Council approved and fully adopted Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy). Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. Connect

SoCal outlines more than $638 billion in transportation system investments through 2045. It was prepared through a collaborative, continuous, and comprehensive process with input from local governments, county transportation commissions, tribal governments, non-profit organizations, businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino and Ventura.

Growth Forecasts

SCAG's Forecasting Section is responsible for producing socio-economic estimates and projections at multiple geographic levels and in multiple years. The Forecasting Section develops, refines, and maintains SCAG's regional and small area socio-economic forecasting/allocation models. Adopted 2020 RTP/SCS Growth Forecasts provide population, household and employment data for 2045. The socio-economic estimates and projections are used by Federal and State mandated long-range planning efforts such as the RTP, Air Quality Management Plan, Regional Transportation Improvement Program, and the Regional Housing Needs Assessment (RHNA). SCAG's Adopted 2020 RTP/SCS Growth Forecasts are used to assess a project's consistency with adopted plans that have addressed growth management from a local and regional standpoint; refer to Section 6.3, *Growth-Inducing Impacts*.

Intergovernmental Review

SCAG's Intergovernmental Review Section is responsible for performing consistency review of regionally significant local plans, projects, and programs with SCAG's adopted regional plans. The criteria for projects of regional significance are outlined in CEQA Guidelines Sections 15125 and 15206. The proposed Project is considered regionally significant; as such, Project consistency with SCAG's 2020 RTP/SCS policies is analyzed below.

Local Agency Formation Commission of Los Angeles County

In 1963, the State Legislature created a Local Agency Formation Commission (LAFCO) for each county, with the authority to regulate local agency boundary changes. Subsequently, the State has expanded LAFCO authority. The goals of LAFCO include preserving agricultural and open space land resources, and providing for efficient delivery of services. The Los Angeles LAFCO has authority over land use decisions in the County of Los Angeles affecting local agency boundaries. Its authority extends to the incorporated cities, including annexation of County lands into a city, and special districts within the County. The City of Lawndale is adjacent to an unincorporated area of Los Angeles County.

In addition, LAFCO conducts Municipal Service Reviews (MSRs) for services within its jurisdiction. An MSR typically includes a review of existing municipal services provided by a local agency and its infrastructure needs and deficiencies. It also evaluates financing constraints and opportunities, management efficiencies, opportunities for rate restructuring and shared facilities, local accountability and governance, and other issues.

City of Lawndale General Plan

The City's General Plan was last comprehensively updated in 1992, the Housing Element was updated in 2022 (in accordance with state housing law). The 1992 General Plan contains the following State-mandated and optional elements:

- Land Use Element
- Circulation Element
- Safety Element
- Economic Development Element
- Noise Element
- Open Space Element
- Conservation Element
- Air Quality Management Element
- Housing Element

The General Plan is a planning document used to guide City growth and development for the immediate future. The General Plan consists of numerous elements and policies that work to shape the future changes in the City. The Land Use Element in the 1992 General Plan establishes the planned land use pattern for Lawndale based primarily on the community's vision and goals for the future. Decision-makers and community members can look to the Land Use Element to understand the type of development allowed across different locations within Lawndale.

The Land Use Element designates the following land uses for the City; refer to Figure 3-3, *Existing General Plan Land Use Map*.

Single-Family Low Density: Permits a density range of 0-8.9 dwelling units per acre. This category is intended for single-family detached units on a minimum 5,000-square foot lot. Permits single-family detached homes and ancillary uses.

Single-Family Medium Density: Permits a density of 8.9-17.6 dwelling units per acre. This category is only intended to be applied to the areas of Lawndale where the predominate use is existing single-family units on 2,500-square foot lots. Permits single-family detached homes on 2,500-square foot lots and ancillary uses.

Multi-Family Low Density: Permits a density of 8.9 dwelling units per acre to 17.6 dwelling units per acre and allows two units on a minimum 5,000-square foot lot. Permits single-family detached, duplex/double unit, condominiums, townhomes, or any combination of the above and ancillary uses.

Multi-Family Medium Density: Permits a density range of 17.6 dwelling units per acre to 33 dwelling units per acre, on a minimum 5,000-square foot lot. Permits single-family detached, duplex/double unit, condominiums, townhomes, apartments, manufactured housing, or any combination of the above if deemed appropriate and compatible with surrounding land uses, and ancillary uses.

General Commercial: This designation provides the community with a wide variety of retail shops, restaurants, services, and office uses to meet the daily needs of the residents. The permitted floor area ratio, not to exceed 1.0, unless modified by the Hawthorne Boulevard Corridor Specific Plan.

Downtown Commercial: The purpose of this designation is to encourage urban nodes with commercial activity. This designation is applied specifically to the northerly side of the Hawthorne Boulevard and Manhattan Beach Boulevard intersection, and on the southerly side of the Marine Avenue and Hawthorne Boulevard intersection (see Hawthorne Boulevard Corridor Specific Plan).

Specialty Commercial: This designation can apply to sites that are a minimum five (5) acres in size and are located so as to be easily accessible and visible from major transportation corridors. The uses should have

a central theme and attract customers from outside the City as well as within Lawndale. Examples of suitable specialty commercial uses are a complex of stores catering to major household purchases, such as furniture, appliances, carpets, etc.; a variety of factory outlet stores; or assorted entertainment and eating establishments. The floor area ratio shall not exceed 0.3.

Light Industrial: This designation permits light manufacturing, assembly, packaging, fabrication, and processing of materials into finished products rather than the conversion of raw materials. The industrial activity shall be conducted primarily within structures and outside storage areas and assembly activity should be limited. The floor area ratio shall not exceed 0.5.

Open Space: This designation includes public parks, parks that are part of school sites, public and private outdoor recreational facilities, and landscaped open space areas.

Public Facilities: This category includes public school sites; Atchison, Topeka and Santa Fe Railroad right-of-way; civic center; public maintenance yards; utility easements; library; and Prairie Avenue Recreation Center uses.

Public Facilities Overlay: This overlay is intended to identify existing and potential sites that are suitable for a public park, recreational facility, or any other public facility building or use. In the area adjacent to the Lawndale Civic Center, this overlay is intended to identify areas where possible expansion of City Hall and/or future public uses can occur.

2021-2029 Housing Element

The City of Lawndale has updated and adopted their Housing Element for the Sixth Cycle RHNA: 2021-2029 Housing Element. The Lawndale 2021-2029 Housing Element identifies strategies and programs that focus on:

- Ensure that a broad range of housing types are provided to meet the needs of the existing and future residents;
- Ensure that housing is maintained and preserved;
- Increase opportunities for homeownership;
- Ensure the availability of housing-related services for special needs groups; and
- Affirmatively furthering fair housing.

The City introduced two new mechanisms to allow for residential development to be created to implement the Housing Element on sites considered viable for housing development. The first is “Housing Overlay 100”, which will be applied to 16 nonresidential sites outside of the Hawthorne Boulevard Specific Plan area and allow for residential densities of up to 100 dwelling units per acre. The second is “Housing Overlay 150” which will be applied to 68 nonresidential sites inside the Hawthorne Boulevard Specific Plan area, and will allow for residential densities up to 150 dwelling units per acre.

Hawthorne Boulevard Specific Plan

The Hawthorne Boulevard Specific Plan (HBSP) oversees the development of the Hawthorne Boulevard corridor and the north side of both Artesia Boulevard and Redondo Beach Boulevard (see Figure 3-4,

Hawthorne Boulevard Specific Plan Map). The HBSP acts as a tool for implementing the goals and policies of the General Plan through the regulation of use, density, height, and other design standards to achieve the overall vision for the area. The Specific Plan was originally adopted in June 1999 and has undergone various amendments since its adoption. The Specific Plan includes General Commercial, Downtown Commercial, Public Facilities and Multi-Family Medium land use designations.

Hawthorne Boulevard serves as the City's primary transportation route, corridor of economic activity, and the community focal point. It has been, and continues to be, the City's central artery for circulation, commerce, employment, and social activity. Hawthorne Boulevard is oriented in a north-south direction, connecting the City of Lawndale with the cities of Hawthorne in the north and Torrance in the south.

City of Lawndale Zoning Ordinance

The City's Zoning Ordinance is codified as Title 17, *Zoning*, of the Lawndale Municipal Code. The stated purpose of Title 17 is to designate, regulate, and restrict the location and use of buildings, structures, and land for residence, commerce, trade, industry, or other purposes; to regulate and limit the height, number of stories, and size of buildings and other structures hereafter erected or altered; to regulate and determine the size of yards and other open spaces; and to regulate and limit the density of population and, for said purposes, to divide the city into zones of such number, shape, and area as may be deemed best suited to carry out these regulations and to provide for their enforcement, in accordance with the comprehensive general plan.

Chapter 17.28, *Special Use Permit*, regulates the issuance of Special Use Permits (SUP). Land uses that require a SUP generally have a unique and distinct impact on the area in which they are located or are capable of impacts to adjacent properties unless given special review and conditions. SUPs may be approved, conditionally approved, or denied. Before granting a SUP, the approving body must find that the proposed project meets the conditions set forth in Section 17.28.014, *Prerequisite Conditions,* including, but not limited to, the presence of site features required to adjust the proposed use with the land and uses in the neighborhood, and consistency with the General Plan. In addition, all SUPs must meet the standard conditions set forth in Section 17.28.105, *Standard Conditions*, including, but not limited to, the provision of adequate exterior lighting for parking areas, provided such lighting does not disturb surrounding residential or commercial areas.

Chapter 17.30, *Design Review*, establishes a design review evaluation procedure that is intended to support orderly development by ensuring that proposed residential structures meet all aspects of the Zoning Code, are harmonious with the surrounding area within residential zones, and do not pose a threat to the public health, safety and general welfare of the City and its citizens. The design review procedure is decided upon by either the Community Development Director or Planning Commission, depending on the type of development and is decided according to design criteria established in Section 17.30.040, *Design Criteria*, which includes, but is not limited to: building height, bulk and other design features; site layout, orientation and location of structures; illumination and landscaping; respect for natural terrain and landscape; and substantial compliance with adopted design guidelines.

City of Lawndale Residential Development Standards and Design Guidelines

Adopted in 2019, the City of Lawndale Residential Development Standards and Design Guidelines contains both residential development standards and design guidelines intended to improve the quality of life throughout the City's residential neighborhoods; ensure that new development is compatible with surrounding developments; and assists the public in understanding and implementing principles of design.

5.11.3 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions relating to land use and relevant planning. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Physically divide an established community (refer to Impact Statement LU-1); and
- Conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect (refer to Impact Statement LU-2).

5.11.4 IMPACTS AND MITIGATION MEASURES

The General Plan Update is a comprehensive update of all of the Elements of the General Plan. The proposed land use plan identifies the type, location, and density/intensity of future development in the City; refer to Figure 3-4, *General Plan Update Land Use Map*. The proposed land use plan designates all land in the Planning Area to one of the land use designations below.

- Low Density Residential
- Medium Density Residential
- High Density Residential
- Commercial
- Industrial
- Open Space
- Public Facilities
- Hawthorne Boulevard Specific Plan

Based on the proposed land use designations, density and intensity permitted for each parcel, and associated development assumptions, the proposed land plan would provide for increased development over existing (2022) conditions by 3,942 additional dwelling units and 808,864 additional square feet of non-residential uses; refer to Table 3-4.

LU-1: Would the project physically divide an established community?

Impact Analysis: The proposed General Plan Update establishes the City's vision for future growth and development. Goal LU-1 of the General Plan Update aims to achieve "*A community with a fiscally sustainable mix of land uses that meets the diverse needs of Lawndale residents, offers a variety of housing, employment opportunities, and support the provision of public services.*" The land uses allowed under the proposed General Plan (Figure 3-4 in Section 3.0, *Project Description*) provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area, but would not create physical division within the community. Overall, the proposed Project would provide new development opportunities to support the vision for development consistent with the General Plan

Update and the State's Housing Element Law, including accommodating the City's RHNA. This is primarily accommodated through the implementation of the "Housing Opportunity Overlay" on sites currently identified for non-residential development and through the Hawthorne Boulevard Specific Plan.

The Project does not introduce new roadways or new or significantly expanded infrastructure that would divide an established community. The General Plan Update Land Use Element includes policies and actions to support cohesive development that would not physically divide an established community. Specifically, Policy LU-2.1 would encourage the preservation of the basic pattern of existing land uses, preserving residential neighborhoods, while providing for the enhancement of mixed-use corridors. Policy LU-3.1 considers as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area. Action LU-3c, through the development review process, evaluates development proposals for land use and transportation network compatibility with existing surrounding or abutting development or neighborhoods.

The policies and actions listed below would ensure that future development is compatible with adjacent communities and land issues. The proposed General Plan would have a less than significant impact associated with the physical division of an established community.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-2.1 **Existing Land Use Pattern.** Strive to maintain the basic pattern of existing land uses, preserving residential neighborhoods, while providing for enhancement of mixed-use corridors to accommodate desirable redevelopment plans and improve economic sustainability.

Policy LU-3.1 **Surrounding Uses.** Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Action LU-3b Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

Action LU-3c Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Policy LU-4.3: **Site Planning.** Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Action LU-4e: Implement the City's existing development standards, or where not in place, create new standards (either through an update to the Zoning Code or update to the Hawthorne Boulevard Specific Plan or other regulating tool) to regulate new construction and revisions to existing buildings. In particular, new development standards shall be created for higher density stand-alone residential projects and mixed-use projects to ensure that quality infill developments can be created within the areas identified for focused growth.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

LU-2: Would the project conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Impact Analysis:

STATE PLANS

The proposed General Plan Update was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection. Discussion of the proposed General Plan's consistency with State regulations, plans, and policies associated with specific environmental issues (e.g., air quality, transportation, water quality, etc.) is provided in the relevant chapters of this Draft EIR. The State would continue to have authority over any State-owned lands in the vicinity of the City and the proposed General Plan Update would not conflict with continued application of State land use plans, policies, and regulations adopted to avoid or mitigate environmental effects.

REGIONAL PLANS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted 2020 RTP/SCS. SCAG refers to CEQA Guidelines Section 15206, Projects of Statewide, Regional or Areawide Significance, in determining whether a project meets the criteria to be deemed regionally significant. The following criteria is relevant to the Project:

> *Criteria 1: A proposed local general plan, element, or amendment thereof for which an EIR was prepared.*

The proposed Project involves components specified in Criteria 1; the General Plan Update is a comprehensive update of the 1992 General Plan. Therefore, it is concluded that the Project is regionally significant. SCAG's 2020 RTP/SCS provides a framework for regional land use and transportation policy within the SCAG region through the horizon year of 2045. SCAG's 2020 RTP/SCS goals and policies were adopted to help focus future investments on the best-performing projects and strategies to preserve,

maintain and optimize the performance of the existing transportation system. The goals of Connect SoCal fall into four core categories: economy, mobility, environment and healthy/complete communities. An analysis of the proposed Project's consistency with the relevant SCAG 2020 RTP/SCS goals adopted for the purpose of avoiding or mitigating an environmental effect is provided in Section 5.8, *Greenhouse Gas Emissions*, Table 5.8-5, *Project Consistency with the 2020-2045 RTP/SCS*. As demonstrated in Table 5.8-5, the Project would be consistent with SCAG's regional planning efforts and a less than significant impact would occur in this regard.

LOCAL PLANS

As set forth by State law, the General Plan serves as the primary planning document for the City and subordinate documents and plans would be updated to be consistent with the General Plan. Similar to the existing General Plan, the proposed General Plan Update focuses on a balanced land use pattern, creating a community where new development blends with existing neighborhoods, and promoting the City as a desirable place to live and work. The proposed General Plan Update carries forward and enhances policies and measures from the City's existing General Plan that were intended for environmental protection, and would not remove or conflict with City plans, policies, or regulations adopted for environmental protection. The proposed General Plan Update would require modifications to the City's Zoning Code to provide consistency between the General Plan and zoning; however, these modifications will not remove or adversely alter portions of the Lawndale Municipal Code that were adopted to mitigate an environmental effect.

It is noted, the Hawthorne Boulevard Specific Plan (HBSP) applies to 95 acres of the City located along Hawthorne Boulevard. The Specific Plan was originally adopted in June 1999 and has undergone various amendments since its adoption. The Specific Plan includes General Commercial, Downtown Commercial, Public Facilities and Multi-Family Medium land use designations The General Plan Update Land Use Map (Figure 3-4) includes the addition of the land use designation of "Hawthorne Boulevard Specific Plan" for the HBSP. As part of the implementation of the General Plan Update and 2021-2029 Housing Element, the HBSP would be updated. Given the future land use changes expected to be proposed to the HBSP, the General Plan 2045 Buildout (Table 3-3) analyzes the HBSP as developing with an additional 3,540 dwelling units and 310,376 square feet of non-residential development.

Subsequent development and infrastructure projects would be required to be consistent with all applicable policies, standards, and regulations, including those land use plans, policies, and regulations adopted to mitigate environmental effects by the City as well as those adopted by agencies with jurisdiction over components of future development projects. The policies listed below would ensure that the General Plan Update does not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation

options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: **Balance Jobs and Housing.** Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.6: **Uses to Meet Daily Needs.** Encourage uses that meet daily needs, such as grocery stores, local-serving restaurants, and other businesses and activities, within walking distance of residences to reduce the frequency and length of vehicle trips.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.2: **Focused Areas for New Development.** Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-3.1: **Surrounding Uses.** Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Policy LU-4.3: **Site Planning.** Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Policy LU-4.4: **Pedestrian-Scale Amenities.** Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

Policy LU-4.7: **Landscaping.** Encourage, to the maximum extent feasible, project and streetscape landscaping be designed to include drought tolerant, native California plant species and the use of a drip, micro-spray or other low-flow irrigation systems.

Action LU-4e: Continue to implement the City's existing development standards, or create new standards if appropriate, to regulate new construction and revisions to existing buildings. New standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill developments.

Action LU-4f: Seek grant funding ("greening" grants) to help offset the cost of landscape improvements along community corridors, with a focus on Hawthorne Boulevard.

MOBILITY ELEMENT

Policy M-1.7: **Traffic Calming on Local Streets.** Encourage traffic calming strategies, such as diverters, median islands, and speed humps, and incorporation of traffic calming design in residential and school areas to slow traffic and promote safety, while not reducing parking supply.

Action M-1e: Monitor cut-through traffic on local streets, especially along residential areas and schools, and where appropriate evaluate the applicability of traffic calming tools and implement improvements as necessary.

Policy M-2.2: **Agency Coordination.** Coordinate with neighboring cities, telecom companies, and regional agencies such as County of Los Angeles, South Bay Cities Council of Governments, and Metro to meet the mobility needs of people living in, working in, or visiting Lawndale.

Policy M-2.3: **Facility Connections.** Plan and implement vehicular facilities, roadway treatments, active transportation facilities, transit routes, and goods movement network to relate to those in neighboring jurisdictions.

Action M-2a: Participate in regional planning forums to ensure that the City's concerns are considered at the regional level.

Policy M-3.1: **Complete Streets for Roadway Projects.** Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: **Multimodal Connectivity.** Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-3.3: **Streetscape Improvements.** Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

Policy M-3.6: **Safe Routes to School.** Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive

manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.1: **Transit Use.** Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2: **Improve Local Public Transit Service.** Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: **Transit Facilities.** Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Policy M-5.4: **C (Green) Line Service.** Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

Policy M-5.5: **C (Green) Line Stations.** Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

Policy M-5.6: **Effects of New Technologies on Transit Use.** Monitor the development of new mobility technologies and the potential effects on transit demand and how users access public transit.

Action M-5a: Continue on-going coordination with transit authorities toward the expansion of transit facilities.

ActionM-5b: Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

Policy M-6.1: **Bicycle Master Plan.** Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan’s facility recommendations as shown in Figure M-2.

Policy M-6.2: **Local Travel Network.** Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.4: **Sidewalk and Bikeway Gaps.** Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: **Bicycle/Pedestrian Facilities at New Developments.** Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: **Effects of New Technologies on Active Transportation.** Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-7.1: **Local Truck Routes.** Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Policy M-7.2: **Roadway Design.** Maintain roadway design standards to facilitate access to light industrial and manufacturing areas along designated truck routes.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

Policy M-9.2: **Transportation Demand Management.** Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Policy M-9.3: **Regional Coordination.** Encourage regional agencies such as Metro, the South Coast Air Quality Management District (SCAQMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

Policy M-9.4: **New Development.** Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

Action M-9a: Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.

Action M-9b: Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.9: **Active Transportation Trails.** Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

Policy RM-1.10: **Service Area Radius.** Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents

to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-2.4: **Source Reduction and Recycling Efforts.** Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

Policy RM-2.5: **Organic Waste.** Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

Action RM-2a: On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

Policy RM-4.1: **Regional Cooperation.** Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: **Measurement and Enforcement.** Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: **GHG Emissions.** Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: **Transportation Options.** Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: **Walkability.** Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: **Land Use Planning.** Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.8: **Mitigation.** Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: **GHG Reduction.** Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: **Public Engagement.** Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the

California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NOx emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Policy RM-5.1: **Compliance with State Legislation.** Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: **Green Building Standards Code.** Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: **Renewable Energy.** Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: **Energy-Efficient Materials.** Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: **Energy Conservation.** Promote energy conservation and recycling by the public and private sectors.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade

patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through state programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

PUBLIC SAFETY ELEMENT

Policy PS-7.1: **Community Preparedness.** Promote a well-prepared City that can effectively overcome natural disasters and scarcity of resources due to climate change.

Policy PS-7.2: **Collaboration.** Collaborate with local, regional, State and/or Federal jurisdictions and agencies on climate resiliency and adaptation strategies.

Policy PS-7.3: **Ecological Recovery.** Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

Policy PS-7.4: **Air Pollution**. Work with responsible Federal, State, and County agencies to decrease air pollution emissions occurring within the air basin to reduce the risk posed by air pollution.

Policy PS-7.5: **Energy Supply.** Promote plans and programs that increase sustainable energy sources.

Policy PS-7.6: **Drought Preparation.** Implement necessary actions and programs to improve drought preparation and response for the most vulnerable community members.

Policy PS-7.7: **Cooling Centers.** Designate public buildings, specific private buildings, or institutions with air conditioning as public cooling shelters; extend hours at air-conditioned sites during periods of extreme heat or power outage (if the site is supported by a backup generator).

Policy PS-7.8: **Storms.** Provide access to flood protection resources and services (signage, sandbags, etc.) as feasible at designated public facilities during and after extreme weather events.

Policy PS-7.9: **Special Assistance.** Address the needs of individuals with limited mobility or limited access to transportation for access to safe and comfortable shelter during extreme heat events or other severe weather events.

Policy PS-7.10: **Leadership.** Demonstrate leadership in local climate planning efforts through a range of tangible actions and policies at the municipal operations level.

Policy PS-7.11: **Greenhouse Gas Reductions.** Reduce communitywide greenhouse gas emissions locally by actively supporting regional efforts to reduce greenhouse gases throughout the county.

Policy PS-7.12: **Extreme Heat Vulnerabilities.** Require that new developments, major remodels, and redevelopments address urban heat island issues and reduce urban heat island effects for the proposed project site and adjacent properties.

Policy PS-7.13: **Ongoing Monitoring.** Monitor climate change-related effects with local, regional, state, and/or Federal partners to provide information of effectiveness of existing infrastructure and programs.

Action PS-7a: Provide information and resources to the public and businesses regarding steps the City is taking to address the issue of climate change.

Action PS-7b: Expand the use of energy-efficient lighting, such as LEDs for City-owned light facilities.

Action PS-7c: Consider purchasing only electric or alternative-energy vehicles for the City vehicle fleet, as appropriate, based on the intended use of the vehicle.

Action PS-7d: Evaluate the feasibility for government-constructed and/or -operated new development to exceed the California Green Building Standards Code CalGreen Tier 1, or successor program, standards.

Action PS-7e: Promote the use of sustainable and carbon-neutral energy sources in new development.

Action PS-7f Explore using renewable energy and clean generation technologies such as solar, wind, biogas, or fuel cells to power City facilities where appropriate.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.11.5 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The geographic setting for land use and planning considers the SCAG region and the City.

Would the project, combined with other related cumulative projects, physically divide an established community?

Impact Analysis: Development of cumulative projects in the City of Lawndale would be required to mitigate land use impacts on a project-by-project basis. Each project would be evaluated for consistency with the project site's General Plan land use designation and zoning, adopted General Plan goals, policies, and actions, and other applicable regional land use plans, such as SCAG's RTP/SCS. As analyzed above, the proposed General Plan Update would result in less than significant impact related to land use and relevant planning. Therefore, the incremental impact of the proposed Project, when considered in combination with development within the City and region, would not result in cumulatively considerable land use impacts.

The land uses allowed under the proposed General Plan provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area, but would not create physical division within the community. The proposed General Plan Update does not include any new roadways, infrastructure, or other features that would divide existing communities. Each individual development project would be reviewed to determine its consistency and compatibility with the surrounding area and its potential to physically divide an established community. As the Project would not physically divide an established community, the Project's incremental effects would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Impact Analysis: As discussed above, the proposed General Plan Update was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection. As demonstrated above, the proposed Project would not cause a significant environmental impact due to a conflict with a land use plan, policy, or regulation adopted for the purposes of avoiding or mitigating an environmental effect. The proposed General Plan Update carries forward and enhances policies and measures from the City's existing General Plan that were intended for environmental protection, and would not remove or conflict with City plans, policies, or regulations adopted for environmental protection. The proposed General Plan Update would require modifications to the City's Zoning Code to provide consistency between the General Plan and zoning; however, these modifications will not remove or adversely alter portions of the Lawndale Municipal Code that were adopted to mitigate an environmental effect.

Similar to future development associated with the proposed Project, cumulative development projects would be evaluated for consistency with the project site's General Plan land use designation and zoning;

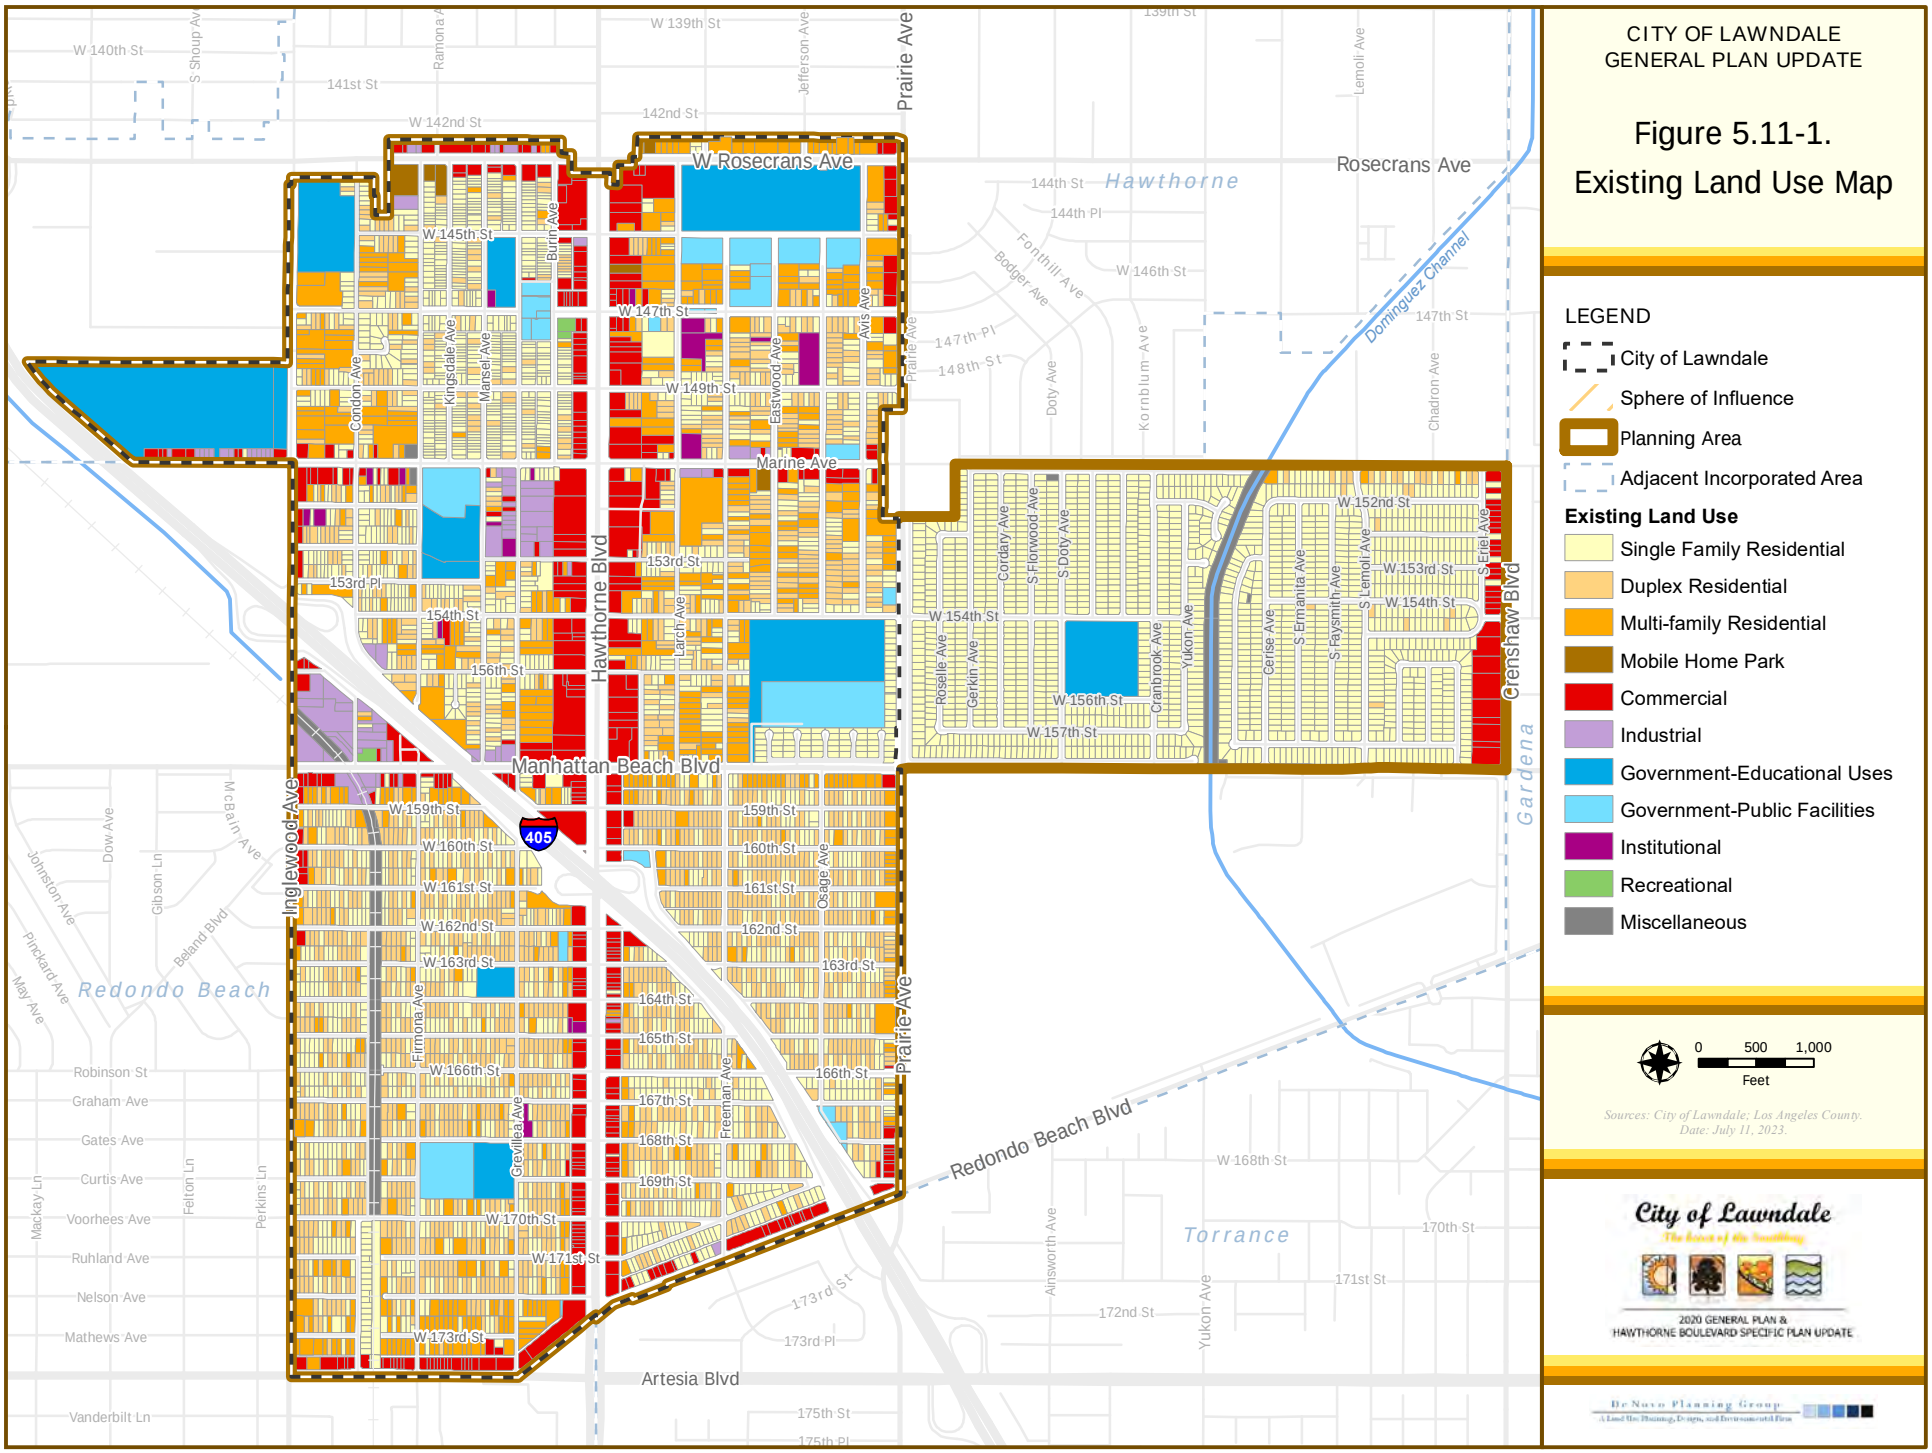
General Plan goals, policies, and actions; and other applicable plans for the purpose of avoiding or mitigating an environmental effect. As analyzed above, the proposed Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Thus, the proposed Project's incremental effects would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.11.6 SIGNIFICANT UNAVOIDABLE IMPACTS



Land use and planning impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable land use and planning impacts would occur as a result of the General Plan Update.

5.12 MINERAL RESOURCES

This section identifies the existing mineral resource conditions within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

5.12.1 ENVIRONMENTAL SETTING

MINERAL RESOURCE CLASSIFICATION

Pursuant to the Surface Mining and Reclamation Act of 1975 (SMARA), the California State Mining and Geology Board oversees the Mineral Resource Zone (MRZ) classification system. The MRZ system characterizes both the location and known/presumed economic value of underlying mineral resources. The mineral resource classification system uses four main MRZs based on the degree of available geologic information, the likelihood of significant mineral resource occurrence, and the known or inferred quantity of significant mineral resources. The four classifications are described in Table 5-12-1, *Mineral Resources Classification System*.

Table 5.12-1
Mineral Resources Classification System

Classification	Description
MRZ-1	Areas where adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence.
MRZ-2	Areas where adequate information indicates that significant mineral deposits are present, or where it is judged that a high likelihood exists for their presence.
MRZ-3	Areas containing mineral deposits, the significance of which cannot be evaluated.
MRZ-4	Areas where available information is inadequate for assignment to any other MRZ classification.
Source: California Department of Conservation, *Guidelines for Classification and Designation of Mineral Lands*, 2023a.	

MINERAL RESOURCES

Mineral resources include commercially viable oil and gas deposits, and nonfuel mineral resources deposits. Nonfuel mineral resources include metals such as gold, silver, iron, and copper; industrial metals such as boron compounds, rare-earth elements, clays, limestone, gypsum, salt, and dimension stone; and construction aggregate, including sand, gravel, and crushed stone. California is the largest producer of sand and gravel in the nation. Figure 5.12-1, *Mineral Resource Zones*, shows resources by classification within the Planning Area. The Planning Area is designated as MRZ-1 and MRZ-3. MRZ-1 classifies areas where adequate information indicates that no significant mineral deposits are present. MRZ-3 is a classification for areas containing known or inferred mineral occurrences of undetermined mineral resource significance. MRZ-1 is found throughout the entire Planning Area, including the Sphere of Influence (SOI), and MRZ-3 is found in the southwestern corner of the Planning Area, within City limits.

LOCATION OF PERMITTED AGGREGATE MINES

The California Office of Mine Reclamation periodically publishes a list of qualified permitted aggregate mines regulated under SMARA that is generally referred to as the AB 3098 List. The Public Contract Code precludes mining operations that are not on the AB 3098 List from selling sand, gravel, aggregates or other mined materials to State or local agencies. As of March 2023, there are 26 aggregate mines on the AB 3098 list in Los Angeles County; none of the 26 listed mines are within the Planning Area (California Department of Conservation 2023b).

5.12.2 REGULATORY SETTING

STATE

Surface Mining and Reclamation Act of 1975

The California Department of Conservation Surface Mining and Reclamation Act of 1975 (Section 2710), also known as SMARA, provides a comprehensive surface mining and reclamation policy that permits the continued mining of minerals, as well as the protection and subsequent beneficial use of the mined and reclaimed land. The purpose of SMARA is to ensure that adverse environmental effects are prevented or minimized and that mined lands are reclaimed to a usable condition and are readily adaptable for alternative land uses; that the production and conservation of minerals are encouraged, while giving consideration to values relating to recreation, wildlife, range and forage, and aesthetic enjoyment; and that residual hazards to public health and safety are eliminated. These goals are achieved through land use planning by allowing a jurisdiction to balance the economic benefits of resource reclamation with the need to provide other land uses.

If a use is proposed that might threaten the potential recovery of minerals from an area that has been classified MRZ-2, SMARA would require the jurisdiction to prepare a statement specifying its reasons for permitting the proposed use, provide public notice of these reasons, and forward a copy of the statement to the State Geologist and the State Mining and Geology Board (Cal. Pub. Res. Code Section 2762). Lands classified MRZ-2 are areas that contain identified mineral resources.

5.12.3 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to mineral resources. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state (refer to Impact Statement MR-1); and
- Result in the loss of availability of a locally-important mineral resource recovery site delineated on a general plan, specific plan, or other land use plan (refer to Impact Statement MR-2).

5.12.4 IMPACTS AND MITIGATION MEASURES

MR-1: Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Impact Analysis: The City has no known or identified mineral resources of regional or Statewide importance. As shown in Figure 5.12-1, the Planning Area is designated as MRZ-1 and MRZ-3. MRZ-1 classifies areas where adequate information indicates that no significant mineral deposits are present. MRZ-3 indicates that the significance of the mineral deposits is undetermined. MRZ-1 is found throughout the entire Planning Area, including the SOI, and MRZ-3 is found in the southwestern corner of the Planning Area, within City limits. The land within MRZ-3 is currently developed and is within a highly urbanized area. Given that this land has already been disturbed and developed, and that the Project does not propose any site-specific development, there is no potential for resource extraction from the MRZ-3 area.

There are no known mineral deposits or resources in the Planning Area that are of significant value to the region or the State. Therefore, implementation of the proposed General Plan Update would have a less than significant impact on this environmental topic, and no mitigation is required.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

MR-2: Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Impact Analysis: As shown in Figure 5.12-1, the Planning Area does not contain any "locally important mineral resource recovery sites." The Planning Area does not contain a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan. Implementation of the General Plan Update would not result in the loss of a designated mineral recovery site and as such, no impact would occur.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.12.5 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to mineral resources may occur.

Would the project, combined with other relative cumulative projects, result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Impact Analysis: The majority of land within the Planning Area is designated as MRZ-1, land where no significant mineral deposits are present, with a smaller portion designated as MRZ-3, land for which the significance of mineral resources cannot be determined. The land within the MRZ-3 is currently developed and is within a highly urbanized area, indicating there is little to no potential for resource extraction from the MRZ-3 area.

Further, there are no known mineral deposits or resources in the Planning Area that are of significant value to the region or the State. Therefore, implementation of the proposed General Plan Update, in combination with other relevant cumulative projects, would not contribute to cumulative impacts and impacts in this regard are not cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less than Significant Impact.

Would the project, combined with other relative cumulative projects, result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

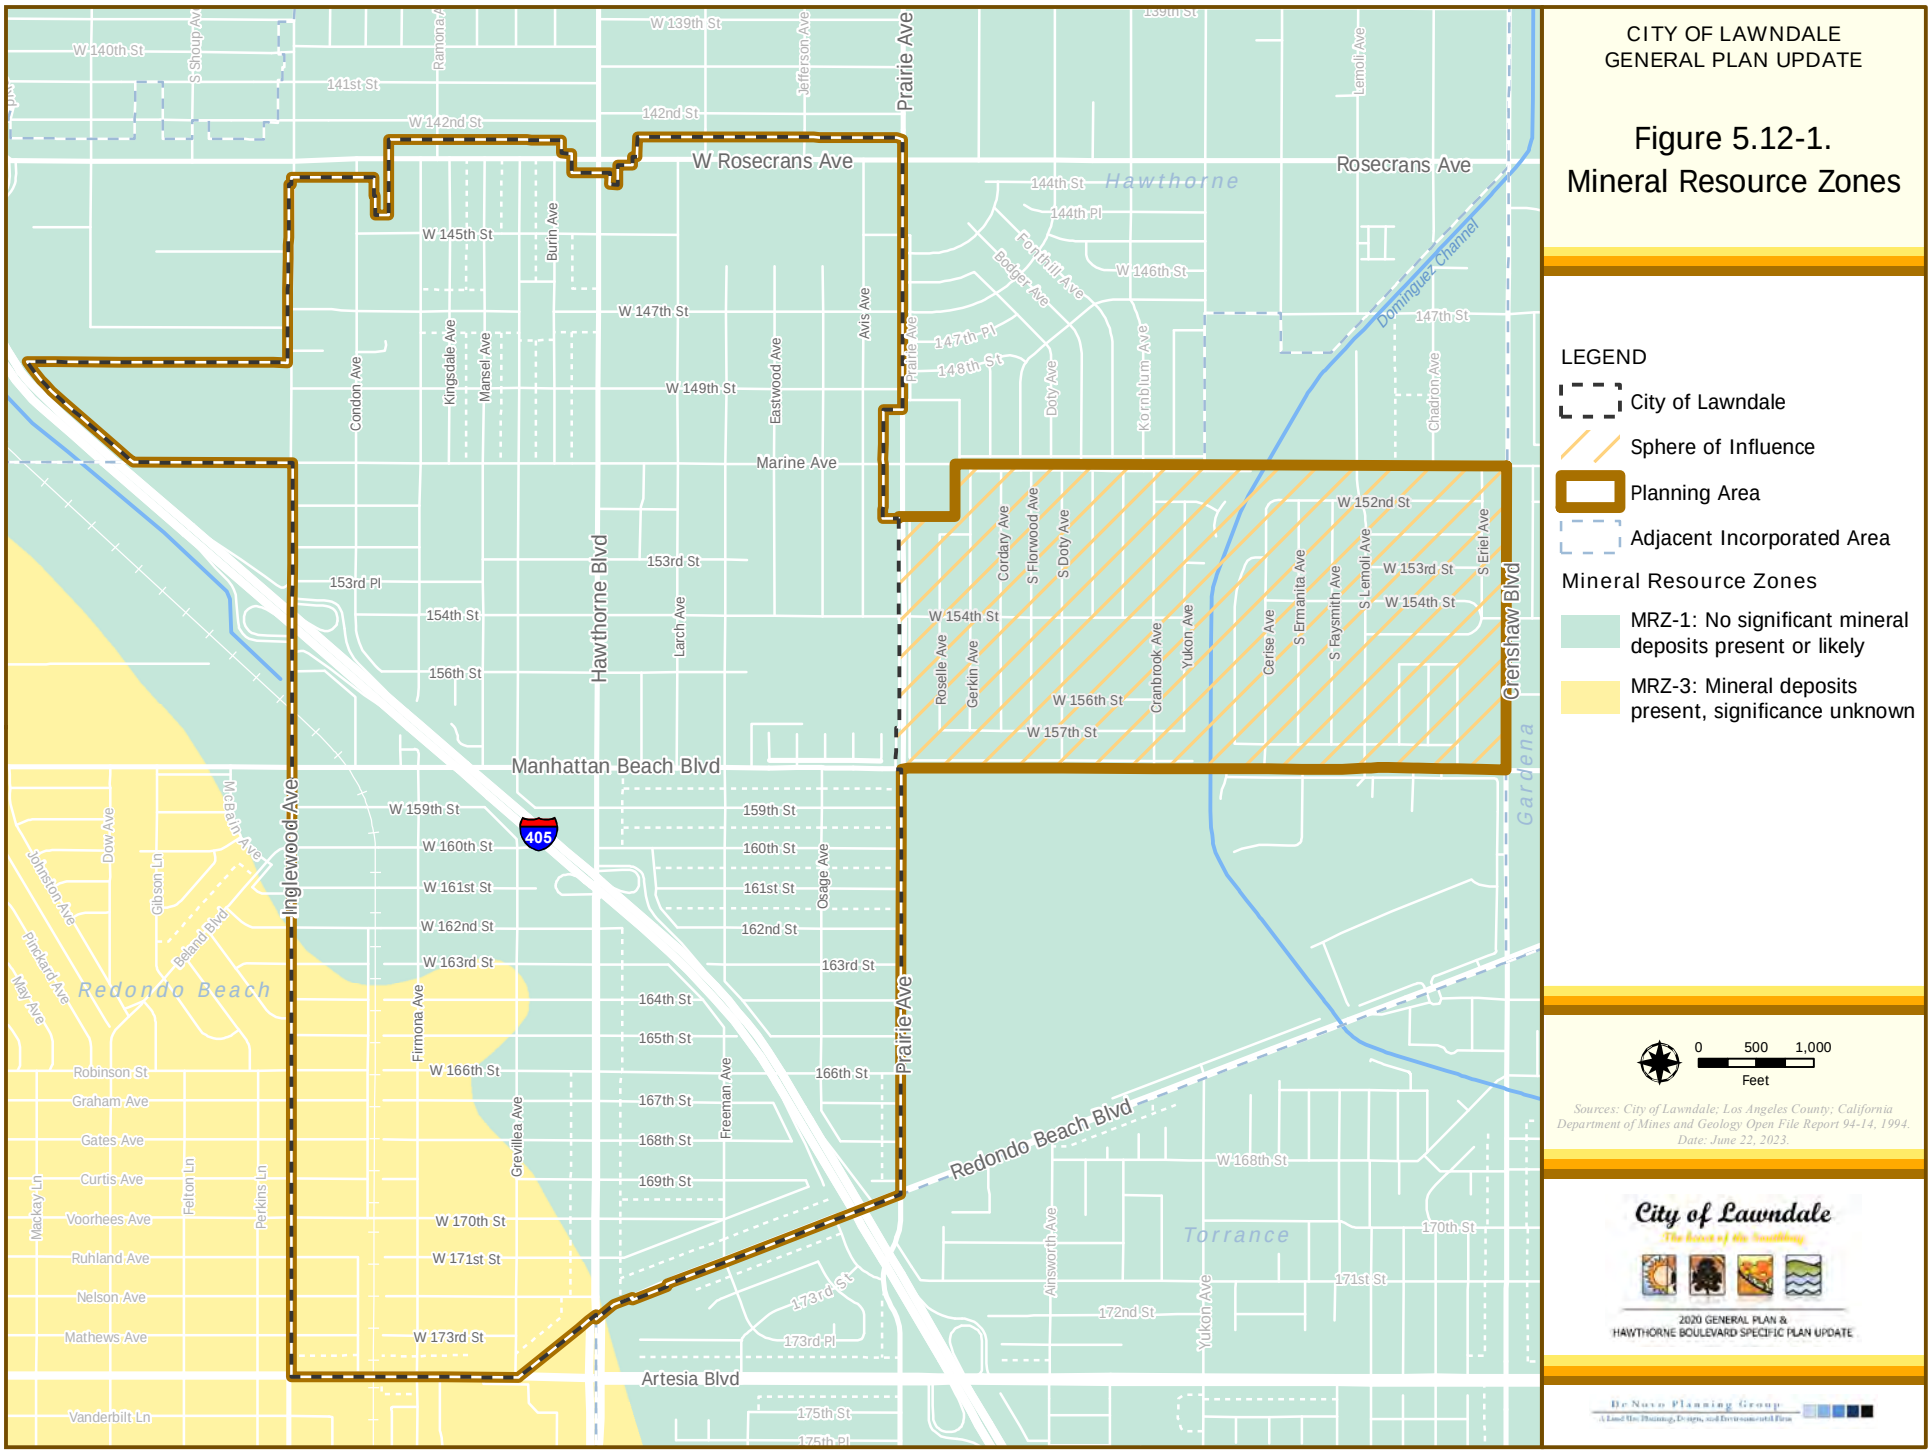
Impact Analysis: The Planning Area does not contain any locally-important mineral resource recovery sites delineated on local general plans, specific plans and other land use plans. As such, future development projects, in combination with other relative cumulative projects, would not result in the loss of availability of a locally-important mineral resource recovery site. Impacts would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.12.6 SIGNIFICANT UNAVOIDABLE IMPACTS



Mineral Resource impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable mineral resource impacts would occur as a result of the General Plan Update.

5.13 NOISE

5.13.1 PURPOSE

This section identifies existing noise conditions within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

This section is primarily based upon *General Plan Update Noise Impact Study – City of Lawndale*, prepared by MD Acoustics, LLC and dated July 12, 2023; refer to Appendix E, *Noise Impact Study*.

5.13.2 ENVIRONMENTAL SETTING

FUNDAMENTALS OF NOISE

Sound, Noise and Acoustics

Sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. Sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting at 20 Hz to the high pitch of 20,000 Hz.

Sound Pressure Levels and Decibels

The *amplitude* of a sound determines its loudness. The loudness of sound increases or decreases as the amplitude increases or decreases. Sound pressure amplitude is measured in units of micro-Newton per square meter ($\mu N/m^2$), also called micro-Pascal (µPa). One µPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels abbreviated dB.

Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two sounds of equal SPL are combined, they will produce an SPL 3 dB greater than the single SPL. In other words, sound energy that is doubled produces a 3 dB increase. If two sounds differ by approximately 10 dB, the higher sound level is the predominant sound. When combining sound levels, estimates shown in Table 5.13-1, *Decibel Addition*, may be utilized.

Table 5.13-1
Decibel Addition

When Two Decibel Values Differ by:	Add This Amount to Higher Value	Example
0 or 1 dB	3 dB	70+69=73 dB
2 or 3 dB	2 dB	74+71=76 dB
4 to 9 dB	1 dB	66+60=67 dB
10 dB or more	0 dB	65+55=65 dB

Source: California Department of Transportation (Caltrans), *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013.

Human Response to Changes in Noise Levels

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this analysis, as well as with most environmental documents, A-scale weighting is typically used and is reported in terms of the A-weighted decibel (dBA). The A-scale was designed to account for the frequency-dependent sensitivity of the human ear. Typical A-weighted noise levels are shown in Table 5.13-2, *Typical Noise Levels*.

In general, the human ear can barely perceive a change in the noise level of 3 dB. As shown in Table 5.13-3, *Perceived Changes in Noise Levels*, a change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g., doubling the volume of traffic on a highway) would result in a barely perceptible change in sound level.

Table 5.13-2
Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor
	110	Rock Band
Jet flyover at 1,000 feet		
	100	
Gas lawnmower at 3 feet		
	90	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawnmower, 100 feet	70	Vacuum cleaner at 3 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60

Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels.

A-Weighted Sound Level: The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24-hour day, obtained after the addition of five (5) decibels to sound levels in the evening from 7:00 p.m. to 10:00 p.m. and after the addition of ten (10) decibels to sound levels in the night between 10:00 p.m. and 7:00 a.m.

Decibel (dB): A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dBA: A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ): The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time-varying noise level. The energy average noise level during the sample period.

Habitable Room: Any room meeting the requirements of the California Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking, or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms, and similar spaces.

L(n): The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly, L50, L90, and L99, etc.

Noise: *A*ny unwanted sound or sound which is undesirable because it interferes with speech and hearing, is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Outdoor Living Area: Outdoor spaces that are associated with residential land uses typically used for passive recreational activities or other noise-sensitive uses. Such spaces include patio areas, barbecue areas, jacuzzi areas, etc., associated with residential uses; outdoor patient recovery or resting areas associated with hospitals, convalescent hospitals, or rest homes; outdoor areas associated with places of worship which have a significant role in services or other noise-sensitive activities; and outdoor school facilities routinely used for educational purposes which may be adversely impacted by noise. Outdoor areas usually not included in this definition are: front yard areas, driveways, greenbelts, maintenance

areas and storage areas associated with residential land uses; exterior areas at hospitals that are not used for patient activities; outdoor areas associated with places of worship and principally used for short-term social gatherings; and, outdoor areas associated with school facilities that are not typically associated with educational uses prone to adverse noise impacts (for example, school play yard areas).

Percent Noise Levels: See L(n).

Sound Level (Noise Level): The weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum.

Sound Level Meter: An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL): The dBA level which, if it lasted for one second, would produce the same A-weighted sound energy as the actual event.

Tonal Sounds

A pure tone sound is a sound produced at or near a single frequency. Laboratory tests have shown that humans are more perceptible to changes in sound levels of a pure tone. For a noise source to contain a "pure tone," there must be a significantly higher A-weighted sound energy in a given frequency band than in the neighboring bands, thereby causing the noise source to "stand out" against other noise sources. A pure tone occurs if the sound pressure level in the one-third octave band with the tone exceeds the average of the sound pressure levels of the two contagious one-third octave bands by 5 dB for center frequencies of 500 Hertz (Hz) and above; by 8 dB for center frequencies between 160 and 400 Hz; and by 15 dB for center frequencies of 125 Hz or less.

Sound Propagation

As sound propagates from a source it spreads geometrically. Sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet or more from a noise source. Wind, temperature, air humidity, and turbulence can further impact have far sound can travel.

Ground Absorption

As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt, or landscaping attenuate noise at a rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall

noise attenuation of 4.5 dB per doubling of distance for a line source and 7.5 dB per doubling of distance for a point source.

Sound Attenuation

Noise-related land use issues are typically composed of three basic elements: (1) the noise source, (2) a transmission path, and (3) a receiver.

The appropriate acoustical treatment for a given project should consider the nature of the noise source and the sensitivity of the receiver. When the potential for a noise-related problem is present, either avoidance of the noise-related problem or noise control techniques should be selected to provide an acceptable noise environment for the receiver while remaining consistent with local aesthetic standards and practical structural and economic limits. Fundamental noise control options are described below.

Noise Barriers

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. To achieve that reduction, the barrier must be high enough and long enough to block the line-of-sight of the vehicles on the road. A noise barrier can still achieve up to a 5 dBA noise level reduction when it is tall enough to barely allow a line-of-sight of the vehicles. A noise barrier is most effective when placed close to the noise source or receiver. When the noise barrier is an earthen berm instead of a wall, the noise attenuation can be increased by another 3 dBA.

Setbacks

Noise exposure may be reduced by increasing the setback distance between the noise source and the receiving use. Setback areas can take the form of open space, frontage roads, recreational areas, and storage yards. The available noise attenuation from this technique is limited by the characteristics of the noise source but generally ranges between 4 and 6 dBA.

Site Design

Buildings can be placed on a property to shield other structures or areas affected by noise and to prevent an increase in noise levels caused by reflections. The use of one building to shield another can significantly reduce overall noise control costs, particularly if the shielding structure is insensitive to noise. An example would be placing a detached garage nearest the noise source to shield the house or backyard. Site design should guard against creating reflecting surfaces that may increase onsite noise levels. For example, two buildings placed at an angle facing a noise source may cause noise levels within that angle to increase by up to 3 dBA. The open end of U-shaped buildings should point away from noise sources for the same reason. Landscaping walls or noise barriers located within a development may inadvertently reflect noise to a noise-sensitive area unless carefully located.

Building Facades

When interior noise levels are of concern in a noisy environment, noise reduction may be obtained through the acoustical design of building facades. Standard construction practices provide a noise reduction of 10 to 15 dBA for building facades with open windows, and a noise reduction of approximately 25 dBA when windows are closed; refer to Table 5.13-4, *Noise Reduction Afforded by Common Building*

Construction. An exterior-to-interior noise reduction of 25 dBA can be obtained by requiring that building design include adequate ventilation systems, which would allow windows facing a noise source to remain closed, even during periods of excessively warm weather.

Where greater noise reduction is required, acoustical treatment of the building facade may be necessary. Reducing relative window area is the most effective control technique, followed by providing acoustical glazing (e.g., thicker glass or increased air space between panes) within frames with low air infiltration rates, using fixed (i.e., non-movable) acoustical glazing, or eliminating windows. Noise transmitted through walls can be reduced by increasing wall mass (e.g., using stucco or brick in lieu of wood siding), or isolating wall members by using double or staggered stud walls, while noise transmitted through doorways can be lessened by reducing door area, using solid-core doors, or sealing door perimeters with suitable gaskets. Noise-reducing roof treatments include using plywood sheathing under roofing materials.

Table 5.13-4
Noise Reduction Afforded by Common Building Construction

Construction Type	Typical Occupancy	General Description	Range of Noise Reduction (dB)[1]
1	Residential, Commercial, Schools	Wood frame, stucco, or wood sheathing exterior. Interior drywall or plaster. Sliding glass windows, with windows partially open.	15-20
2	Same as 1 above	Same as 1 above, but with windows closed.	25-30
3	Commercial, Schools	Same as 2 above, but with fixed 0.25-inch plate glass windows.	30-35
4	Commercial, Industrial	Steel or concrete frame, curtain wall, or masonry exterior wall. Fixed 0.25-inch plate glass windows.	35-40
Source: California Department of Transportation (Caltrans), *California Airport Land Use Planning Handbook*, January 2002.			

Landscaping

While the use of trees and other vegetation is often thought to provide significant noise attenuation, approximately 100 feet of dense foliage – with no visual path extending through the foliage – is required to achieve a 5 dBA attenuation of traffic noise. Thus, the use of vegetation as a noise barrier is not considered a practical method of noise control unless large tracts of dense foliage are part of the existing landscape.

Vegetation can be used, however, to acoustically "soften" intervening ground between a noise source and a receiver, increasing ground absorption of sound, and thus, increasing the attenuation of sound with distance. Planting trees and shrubs also offers aesthetic and psychological value, and it may reduce adverse public reaction to a noise source by removing the source from view, even though noise levels would be largely unaffected.

GROUND-BORNE VIBRATION FUNDAMENTALS

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and mainly exists indoors since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves. Several different methods are used to quantify vibration amplitude. Typical human reaction and effect on buildings due to ground-borne vibration is shown in Table 5.13-5, *Typical Human Reaction and Effect on Buildings Due to Ground-Borne Vibration*.

PPV. Known as the peak particle velocity (PPV) which is the maximum instantaneous peak in vibration velocity, typically given in inches per second.

RMS. Known as root mean squared (RMS) can be used to denote vibration amplitude.

VdB. A commonly used abbreviation to describe the vibration level (VdB) for a vibration source.

Table 5.13-5
Typical Human Reaction and Effect on Buildings Due to Ground-Borne Vibration

Vibration Level Peak Particle Velocity (PPV)	Human Reaction	Effect on Buildings
0.006–0.019 in/sec	Threshold of perception, possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08 in/sec	Vibrations readily perceptible	Recommended upper level of vibration to which ruins and ancient monuments should be subjected
0.10 in/sec	Level at which continuous vibration begins to annoy people	Virtually no risk of "architectural" (i.e., not structural) damage to normal buildings
0.20 in/sec	Vibrations annoying to people in buildings	Threshold at which there is a risk to "architectural" damage to normal dwelling – houses with plastered walls and ceilings
0.4–0.6 in/sec	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage
Source: California Department of Transportation (Caltrans), *Transportation and Construction Vibration Guidance Manual*, April 2020.		

Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Outdoor sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration.

The California Department of Transportation has published one of the seminal works for the analysis of ground-borne noise and vibration relating to transportation- and construction-induced vibrations and although the Project is not subject to these regulations, it serves as useful tools to evaluate vibration impacts.

Vibration Propagation

There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation. As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. This drop-off rate can vary greatly depending on the soil, but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

TRAFFIC NOISE PREDICTION MODEL

The FHWA Highway Traffic Noise Prediction model (FHWA-RD 77-108) was used to model and compare existing traffic noise levels to General Plan 2045 Buildout noise levels. The FHWA model arrives at the predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). Roadway modeling assumptions utilized for the technical study are provided in Tables 8 and 9 of the Noise Impact Study provided in Appendix E. The vehicle mix indicates the percentage of automobiles, medium trucks, and heavy trucks for each segment.

EXISTING NOISE ENVIRONMENT

General Land Use Noise

Existing land uses within the Planning Area include single- and multi-family residential development, commercial, industrial, open space, and public facility land uses. Noise sources associated with existing land uses include residential maintenance, parking lot noise, heating, and cooling system (HVAC) noise, property maintenance noise, trash truck noise, loading and unloading noise, and recreational noise.

Noise Measurements

Three long-term 24-hour noise measurements and 10 short-term 15-minute noise measurements were conducted throughout the Planning Area to document the existing noise environment. Figure 5.13-1, *Noise Measurement Locations*, shows the locations of these measurements.

Short-Term Noise Measurements

Ten short-term noise measurements (15-minute) were taken on May 24 and May 26, 2023, in order to document the daytime Leq level at different locations throughout the Planning Area. Measured noise levels ranged between 57.4 and 72.3 dBA Leq. Vehicle noise associated with Hawthorne Boulevard, Marine Avenue, and Rosecrans Avenue was the primary sources of ambient noise. Short-term noise measurement results are presented in Table 5.13-6, *Short-Term Noise Measurement Summary*.

Table 5.13-6
Short-Term Noise Measurement Summary

Noise Measurement Location	Approximate Location	Start Time	A-Weighted Sound Level (dBA)							
			Leq	Lmax	Lmin	L(2)	L(8)	L(25)	L(50)	L(90)
ST1	4317 Rosecrans Avenue	5:37 PM	72.3	80.4	54.4	77.9	76.3	73.9	70.7	63.4

Source: MD Acoustics, LLC, *General Plan Update Noise Impact Study – City of Lawndale*, July 12, 2023.

Notes: 15-minute duration.

dBA = A-weighted decibels; Leq = equivalent noise level; Lmax = maximum noise level; Lmin = minimum noise level; Ln = noise level exceeded n percent of the measurement period.

Long-Term Noise Measurements

Three long-term noise measurements (24 consecutive hours) were taken in order to document the Community Noise Equivalent Level (CNEL) at different locations throughout the Planning Area. As shown in Table 5.13-7, *Long-Term Noise Measurement Summary*, the measured CNEL was 77.7 dBA CNEL at 55 feet from the centerline of Manhattan Beach Boulevard and 120 feet from the centerline of I-405, 74.8 dBA CNEL at 20 feet from the centerline of Freeman Avenue and 170 feet from the centerline of I-405, and 61.6 dBA CNEL at 50 feet from the railroad and 160 feet from the centerline of Artesia Boulevard. The primary noise source was vehicle traffic. Table 5.13-7 also outlines the daytime (7:00 a.m. to 7:00 p.m.), evening (7:00 p.m. to 10:00 p.m.), and nighttime (10:00 p.m. to 7:00 a.m.) Leq levels at each location. These represent the average level over each time period (day/evening/night).

Table 5.13-7
Long-Term Noise Measurement Summary

Noise Measurement Location	Approximate Location	Date	Description	A-Weighted Sound Level (dBA)			
				Daytime Leq	Evening Leq	Nighttime Leq	CNEL
LT1	4538 Manhattan Beach Boulevard	05/24/23 - 05/25/23	I-405 & Manhattan Beach Boulevard traffic noise	72.8	72.8	70.4	77.7
LT2	16310 Freeman Avenue	05/24/23 - 05/25/23	I-405 traffic noise	72.4	70.2	66.7	74.8
LT3	4626 W 173rd Street	05/31/23 - 06/01/23	Artesia Boulevard traffic noise	62.9	51.5	50.2	61.6

Source: MD Acoustics, LLC, *General Plan Update Noise Impact Study – City of Lawndale*, July 12, 2023.

Notes: 24hour duration.

dBA = A-weighted decibels; Leq = equivalent noise level; Lmax = maximum noise level; Lmin = minimum noise level; Ln = noise level exceeded n percent of the measurement period.

Existing Noise Modeling

The primary sources of noise in Lawndale are transportation-related noises. Major roadways create ambient noise levels that affect the overall quality of life in the community. Modeled existing noise levels provided in Table 5.13-8, *Existing Exterior Noise Levels Along Roadways*, and on Figure 5.13-2, *Existing Roadway Noise Level Contours*, confirm that there are currently sensitive land uses in the Planning Area that are exposed to noise levels above 65 dBA CNEL.

It should be noted that the modeled noise contours do not take into account factors such as existing buildings, walls, etc., that may reduce or, in some cases, amplify or reduce noise sources. The model also assumes hard site, when in reality, some of the City has soft site ground such as grass or dirt, which will reduce the noise levels. Measured noise levels provided in Table 5.13-6 and Table 5.13-7 do take into account existing structures as well as other existing noise sources.

Those areas in the City that currently experience sound levels greater than 65 dBA CNEL are typically near major vehicular transportation corridors. Traffic noise levels typically depend on three factors: (1) the volume of traffic, (2) the average speed of traffic, and (3) the vehicle mix (i.e., the percentage of trucks versus automobiles in the traffic flow). Vehicle noise includes noises produced by the engine, exhaust, tires, and wind generated by taller vehicles. Other factors that affect the perception of traffic noise include the distance from the highway, terrain, heavy vegetation, and natural and structural obstacles. While tire noise from automobiles is generally located at ground level, some truck noise sources may emanate from 12 feet or more above the ground.

Table 5.13-8
Existing Exterior Noise Levels Along Roadways

Roadway	Segment Limits	CNEL, dBA	Distance to Contour (feet)			
		@50 ft[1]	70 dBA	65 dBA	60 dBA	55 dBA
Inglewood Ave	Marine Ave to 153rd Pl	73.3	107	338	1,068	3,378

Source: MD Acoustics, LLC, *General Plan Update Noise Impact Study – City of Lawndale*, July 12, 2023.

Notes: Exterior noise levels calculated at 5-feet above ground. Noise levels calculated from centerline of subject roadway. Contour distances do not take into account potential noise reduction from existing barriers such as buildings, walls or berms as a worst-case scenario for planning screening purposes. Overall levels are likely lower at sensitive receptors.

1. Hawthorne Boulevard & I-405 were calculated at 100 ft away.

Airport and Aircraft Noise

There are no airports located within the Planning Area, and the Planning Area is not located within any airport noise contours. The closest airport to the Planning Area is the Hawthorne Municipal Airport, also known as Jack Northrop Field, located approximately 1.4 miles northeast of the Planning Area. The Los Angeles International Airport is 2.5 miles from the Planning Area. The noise contours associated with these airports do not encroach into the Planning Area.

Vibration Sources

The main sources of vibration in the Planning Area are related to vehicles, construction, and railway. Typical roadway traffic, including heavy trucks, rarely generates vibration amplitudes high enough to cause structural or cosmetic damage. Although not specifically within Lawndale, there have been cases in which heavy trucks traveling over potholes or other discontinuities in the pavement have caused vibration

high enough to result in complaints from nearby residents. These types of issues typically can be resolved by smoothing the roadway surface.

Construction activities that produce vibration that can be felt by adjacent land uses include the use of vibratory equipment, large bulldozers, and pile drivers. The primary source of vibration during construction is usually from a bulldozer. A large bulldozer has a peak particle velocity of 0.089 inches per second (87 VdB) at 25 feet.

One freight rail line runs through the City of Lawndale. According to the Federal Railroad Administration Crossing Inventory Forms, there are two daytime and two nighttime freight trains that pass through the City each day at a maximum of 20 miles per hour (mph). Existing buildings are about 50 feet from the centerline of the railway. Therefore, the expected maximum vibration at these buildings is 76 VdB (0.025 inches per second).

5.13.3 REGULATORY SETTING

FEDERAL

Noise Control Act of 1972

The Federal Office of Noise Abatement and Control originally was tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other Federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows:

- The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies.
- The Federal Aviation Agency (FAA) is responsible to regulate noise from aircraft and airports.
- The Federal Highway Administration (FHWA) is responsible to regulate noise from the interstate highway system.
- The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The Federal government advocates that local jurisdictions use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being constructed adjacent to a highway or that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the Federal government has preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement Codes and land use planning.

The intent of a General Plan Noise Element is to set goals to limit and reduce the effects of noise intrusion and to set acceptable noise levels for varying types of land uses. To this end, the City has the authority to set land use noise standards and place restrictions on private activities that generate excessive or intrusive noise. However, it should be recognized that the City does not have the authority to regulate all sources of noise within the City and various other agencies may supersede City authority.

Federal Highway Administration

Federal Highway Administration State routes and freeways that run through the City are subject to Federal funding and, as such, are under the purview of the Federal Highway Administration (FHWA). The FHWA has developed noise standards that are typically used for Federally funded roadway projects or projects that require either Federal or Caltrans review. These noise standards are based on Leq and L10 values and are included in Table 5.13-9, *FHWA Design Noise Levels*.

Table 5.13-9
FHWA Design Noise Levels

Activity Category	Description of Category	Design Noise Levels	
		Leq (dBA)	L10 (dBA)
A	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose. Examples include natural parks or wildlife habitats.	57 (exterior)	60 (exterior)
B	Picnic areas, recreation areas, playgrounds, active sports areas, parks, residences, motels, hotels, schools, churches, libraries, and hospitals.	67 (exterior)	70 (exterior)
C	Developed lands, properties, or activities not included in Categories A or B, above.	72 (exterior)	75 (exterior)
D	Undeveloped lands.	--	--
E	Residences, motels, hotels, public meeting rooms, schools, churches, libraries, hospitals, and auditoriums.	52 (interior)	55 (interior)

Source: FHWA Noise Standard (23 Code of Federal Regulations 772).
Notes: Either Leq or L10 (but not both) design noise levels may be used on a project.

U.S. Department of Housing and Urban Development

The Department of Housing and Urban Development (HUD) issues formal requirements related specifically to standards for exterior noise levels along with policies for approving HUD-supported or assisted housing projects in high noise areas. In general, these requirements established three zones. These include:

- 65 dBA Ldn or less - an acceptable zone where all projects could be approved,
- Exceeding 65 dBA Ldn but not exceeding 75 dBA Ldn - a normally unacceptable zone where mitigation measures would be required, and each project would have to be individually evaluated for approval or denial. These measures must provide 5 dBA of attenuation above the attenuation provided by standard construction required in a 65 to 70 dBA Ldn area and 10 dBA of attenuation in a 70 to 75 dBA Ldn area, and
- Exceeding 75 dBA Ldn - an unacceptable zone in which projects would not, as a rule, be approved.

The Federal Interagency Committee on Noise

The Federal Interagency Committee on Noise (FICON) developed guidance for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies of the percentage of persons highly annoyed by aircraft noise. These recommendations are often used for different types of environmental noise such as traffic noise. A readily perceptible 5 dBA or greater project-related noise level increase is considered a significant impact when the noise criteria for a given land use is exceeded. In areas where the existing noise levels range from 60 to 65 dBA, a 3 dBA barely perceptible noise level increase is considered significant. When the existing noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact, since it likely contributes to an existing noise exposure exceedance.

STATE

California Department of Health Services

The California Department of Health Services (DHS) Office of Noise Control studied the correlation of noise levels and their effects on various land uses. As a result, the DHS established four categories for judging the severity of noise intrusion on specified land uses. These categories are presented in the State Land Use Compatibility for Community Noise Exposure table. As part of the General Plan Update the City has adopted a slightly modified version of this table to use as a planning tool. This table is discussed further and presented below.

Title 24 of the California Building Code

Section 1206.4 of the 2022 California Building Code (Cal. Code Regs., Title 24, Part 2), Chapter 12 (Interior Environment), establishes an interior noise criterion of 45 dBA CNEL in any habitable room. Per California Building Code, Chapter 2 (Definitions), a habitable space is A space in a building for living, sleeping, eating or cooking. Bathrooms, toilet rooms, closets, halls, storage or utility spaces and similar areas are not considered habitable spaces. This section applies to dwelling and sleeping units.

California Green Building Standards Code (2022), Chapter 5 (Non-residential Mandatory Measures) Section 5.507.4 (Acoustical Control), applies to all proposed buildings that people may occupy but are not residential dwelling units, with the exception of factories, stadiums, storage, enclosed parking structures, and utility buildings.

Buildings must comply with Section 5.507.4.1 or Section 5.507.4.2. Section 5.507.4.1 requires wall and roof-ceiling assemblies exposed to the noise source making up the building, or addition envelope or altered envelope, shall meet a composite Sound Transmission Class (STC) rating of at least 50 or a composite Outdoor to Indoor Transmission Class (OITC) rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30 when within the 65 CNEL noise contour of an airport, freeway, expressway, railroad, industrial source, or fixed-guideway source. If contours are not available, buildings exposed to 65 dB Leq(h) must meet a composite STC rating of at least 45 or OITC of 35 with exterior windows of at least STC 40 or OITC 30. Section 5.507.4.2 requires that the interior noise attributable to exterior sources must not exceed 50 dBA Leq(h) during any hour of operation. Section 5.507.4.3 requires that assemblies separating tenant spaces from tenant spaces or public places must have an STC of at least 40.

LOCAL

City of Lawndale General Plan

The existing City of Lawndale General Plan (1992 General Plan) Noise Element includes goals, policies, and implementation programs that are intended to avoid or reduce noise impacts related to transportation, stationary, and construction related noise sources. Within the 1992 General Plan Noise Element, Exhibit F, *Noise and Land Use Compatibility*, presents a land use compatibility chart for community noise originally prepared by the California Office of Noise Control (1987). Exhibit F identifies "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable" exterior noise levels for various land uses. A "conditionally acceptable" designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a "normally acceptable" designation indicates that standard construction can occur with no special noise reduction requirements. This land use compatibility chart is based on the 24-hour descriptor CNEL.

City of Lawndale Municipal Code

The City's Noise Ordinance is designed to protect people from non-transportation noise sources such as construction activity; commercial, industrial, and agricultural operations; machinery and pumps; and air conditioners. Enforcement of the ordinance ensures that adjacent properties are not exposed to excessive noise from stationary sources. Enforcing the ordinance includes requiring proposed development projects to show compliance with the ordinance, including operating in accordance with noise levels and hours of operations limits placed on the project site. The City also requires construction activity to comply with established work schedule limits. The ordinance is reviewed periodically for adequacy and amended as needed to address community needs and development patterns.

The City of Lawndale's Noise Ordinance consists of Chapter 8.20, *Noise Control*, of the Lawndale Municipal Code. The City's Zoning Code (Title 17) also contains specific noise limits relating to specific uses.

Section 8.20.010, *Sound-Amplifying Equipment Defined*, defines sound-amplifying equipment as any machine or device for the amplification of the human voice, music, or any other sound, including automobile radios and warning devices.

Sections 8.20.020, *Noncommercial Sound Trucks*, 8.20.030, *Commercial Sound Trucks or Advertising Vehicles*, and 8.20.050, *Sound-Producing Vehicles at Night*, outline noise restrictions with regards to non-commercial sound trucks, commercial sound trucks or advertising vehicles, and sound-producing vehicles at night.

Section 8.20.060, *Unnecessary, Annoying sounds Prohibited*, states that "[n]o person shall make, cause or suffer, or permit to be made upon any premises owned, occupied or controlled by that person any noises or sounds which are unreasonably loud or physically annoying to persons of ordinary sensitivity, or which are so harsh or so prolonged or unnatural or unusual in their use, time or place as to occasion physical discomfort to other persons." This section also states that the previous statement does not apply to noise or sounds generated in connection with any of the following:

1. Emergency vehicle response sounds and/or sounds from necessary equipment utilized by members of law enforcement, the fire department, paramedics or other emergency responders for the purpose of responding to an emergency or necessary to restore, preserve, protect or save lives or property from imminent danger of loss or harm.
2. Safety and warning devices, including but not limited to, train horns and railroad crossing warning systems, which are consistent with applicable state and Federal laws.
3. The installation, maintenance, repair or replacement of public utilities or public infrastructure conducted by the city, other public entity or a public or private utility company, or their agents, contractors and employees, while undertaking a public works project, subject to the restrictions contained in Section 8.20.070 for allowable construction times.
4. School-related activities and/or programs, including, but not limited to, athletic and entertainment events and activities, provided said activities are conducted on the grounds of a public or private school or college or on other public property.
5. Noise from special community events provided said events are conducted by the city or pursuant to a permit or license issued by the city, including, but not limited to, occasional outdoor events/activities, outdoor gatherings, public dances, shows and sporting and entertainment events.
6. Any activity to the extent regulation thereof has been preempted by state or Federal law.

Section 8.20.070, *Construction*, subsection (A) outlines the allowable hours for construction as follows:

> Construction activity may be conducted between the hours of seven a.m. and seven p.m., Monday through Friday (except national holidays), and eight a.m. and five p.m. Saturdays. Construction activity is prohibited at all other hours and on Sundays and national holidays. For purposes of this section, "construction" or "construction activity" shall include site preparation, demolition, grading, excavation, and the erection, improvement, remodeling or repair of structures, including operation of equipment or machinery and the delivery of materials associated with those activities.

Section 8.20.070, *Construction*, also lists scenarios where the provisions of subsection A do not apply.

Section 17.48.273, *Construction Standards Regulating Apartment Houses*, subsection (A) specifies that the interior of apartments in the R-4 zone must not exceed 45 dBA CNEL. Subsection (B) states that mechanical equipment in this zone will be screened from view and not exceed a maximum of 50 dBA.

Section 17.44.020, *Encroachment Prohibited—Exceptions*, subsection (K) regulates pool equipment to 40 dBA CNEL as measured from the property line. Subsection (L) regulations air conditioning equipment to 40 dBA CNEL as measured from the property line as well.

Section 17.96.040, *Criteria and Standards*, subsection (A)(12) states that small collection facilities shall not exceed noise levels of 55 dBA as measured at a residential property or 60 dBA as measured at other adjacent properties.

Section 17.80.070, *Criteria and Standards*, subsection (A)(16) states that the interior noise levels of condominiums will not exceed 40 dBA CNEL and sound insulation requirements.

Section 17.94.040, *Findings/Requirements*, subsection (A)(19) limits the noise levels of adult-oriented businesses to 55 dBA as measured on the property line.

5.13.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to noise and groundborne vibrations. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies (refer to Impact Statement NOI-1);
- Generation of excessive groundborne vibration or groundborne noise levels (refer to Impact Statement NOI-2); and/or
- For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise (refer to Impact Statement NOI-3).

5.13.5 IMPACTS AND MITIGATION MEASURES

Transportation Noise Standards

The significance criteria for Transportation Noise Standards are based on published guidance from FICON, which have been incorporated into the proposed General Plan Update under Policy PS-6.4. Transportation noise may result in substantial increases in ambient noise levels if:

- Existing noise levels are within or below the “normally acceptable” noise criteria at the affected land use (see proposed General Plan Update Table PS-1, Land Use Compatibility for Community Noise Exposure) and the project creates a readily perceptible 5 dBA CNEL or greater project-related noise level increase; or
- Existing noise levels fall within the “conditionally acceptable” noise criteria and the project creates a 3 dBA CNEL or greater project-related noise level increase; or
- Existing noise levels exceed the “conditionally acceptable” noise criteria, and the project creates a community noise level impact of greater than 1.5 dBA CNEL.

Stationary Noise Standards

Stationary noise impacts would be considered significant if they exceed the levels outlined in the Lawndale Municipal Code, as outlined in Section 5.13.3.

Construction Noise Standards

Construction noise would be significant if:

- Construction activities occur outside of the permitted construction hours specified in Section 8.20.070(A) of the Lawndale Municipal Code.

- Construction activities are not consistent with proposed General Plan Update Goals, Policies and Actions relative to Noise.

NOI-1: Would the project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Impact Analysis:

TRANSPORTATION NOISE IMPACTS

Transportation noise includes noise from aircraft, railways, and roadways. The Planning Area is outside of any airport 65 dBA CNEL contours and therefore, there is no aircraft impact.

One freight rail line runs through the City. The General Plan Update would not increase railway operations within the Planning Area; however, existing buildings are about 50 feet from the centerline of the railway and include primarily residential uses. Therefore, there is the potential for sensitive uses to be exposed to railway noise.

The primary noise source in the Planning Area would continue to be vehicle traffic. Table 5.13-10, *2045 No Project Traffic Noise Levels (dBA, CNEL)* and Table 5.13-11, *2045 Plus Project Traffic Noise Levels (dBA, CNEL)* show the future noise levels at a distance of 50 feet from the centerline of studied roadways by the year 2040 for No Project and With Project conditions. The distances to the 55, 60, 65, and 70 dBA CNEL noise contours are also provided. Future traffic noise level contours are presented in Figure 5.13-3, *2045 No Project Noise Contours (CNEL)* and Figure 5.13-4, *2045 With Project Noise Contours*.

Table 5.13-10

Overall levels are likely lower at sensitive receptors.

1. Hawthorne Boulevard & I-405 were calculated at 100 ft away.

As shown in Table 5.13-10 and Table 5.13-11 and Figure 5.13-2, Figure 5.13-3 and Figure 5.13-4, by the year 2045, existing land uses adjacent to the studied roadways would be exposed to noise levels that exceed the City's exterior standards of 65 dBA CNEL for sensitive uses. A significant impact would occur if the Project resulted in levels higher than 65 dBA CNEL and increased the overall roadway noise level by 3 dBA CNEL, which is a noticeable change in noise level.

Compared to existing traffic noise levels, 2045 without Project traffic volumes are expected to be up to 0.8 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible

increases in ambient noise along the analyzed roadways; refer to Table 5.13-12, *Change in Noise Along Roadways (dBA, CNEL @ 50')*.

Compared to existing traffic noise levels, 2045 with Project traffic volumes are expected to be up to 0.9 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise. Implementation of the Project would therefore result in a less than significant impact to roadway noise levels.

Table 5.13-12
Change in Noise Along Roadways (dBA, CNEL @ 50')

Roadway	Segment	Existing	2045 No Project		2045 With Project	
		CNEL @ 50' dBA[1]	CNEL @ 50' dBA	Change in Noise Level	CNEL @ 50' dBA	Change in Noise Level

Source: MD Acoustics, LLC, *General Plan Update Noise Impact Study – City of Lawndale*, July 12, 2023; Kittelson & Associates, Inc., 2023.

Notes: An impact would occur if the Project increased the roadway segment level by 3 dB or more (an audible difference) and resulting in a future level above 65 dBA CNEL.
1. Hawthorne Boulevard & I-405 were calculated at 100 ft away.

Where future development projects under the General Plan Update may be exposed to noise levels that exceed the land use compatibility criteria, such as residential developments within the Hawthorne Boulevard Specific Plan area or sensitive land uses developed adjacent to the existing rail line, impacts could be mitigated to a level that is less than significant with the implementation of noise control measures, such as relocating residential outdoor recreational areas away from 60 dBA CNEL or greater areas or shielding outdoor areas using noise barriers. Additionally, the General Plan Update Public Safety Element includes policies and actions intended to minimize exposure to excessive noise, including noise associated with traffic. Specifically, proposed Policies PS-6.1 through PS-6.4 and proposed Action PS-6c would reduce potential noise impacts associated with transportation. Policy PS-6.1 requires adherence to the latest standards related to noise in the most current edition of the California Building Code to avoid or minimize noise pollution in the community. Policy PS-6.2 requires consistency with the land use compatibility standards contained in proposed Table PS-1 and the Lawndale Municipal Code. Policy PS-6.3 requires the use of best practices in new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code. Policy PS-6.4 requires acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses, and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in the proposed Public Safety Element. Action PS-6c requires new development and transportation projects be reviewed for compliance with the noise requirements established in the proposed General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code, and, where necessary, mitigate excessive noise through best practices. Following conformance with the existing regulatory framework, including the General Plan and Lawndale Municipal Code, impacts would be less than significant in this regard.

STATIONARY NOISE SOURCES

Implementation of the General Plan Update could result in the future development of land uses that generate noise levels in excess of applicable City noise standards for non-transportation noise sources. While the General Plan Update does not explicitly propose any new noise-generating uses, the proposed Land Use Map would allow for the development of mixed-uses, increased residential development at higher densities, and new commercial development, which may result in new noise sources along major corridors, including Hawthorne Boulevard. Specific development projects and the details of future noise-generating land uses that may be located in the Planning Area are not known at this time. Additionally, noise from existing stationary sources, as identified above, would continue to impact noise-sensitive land uses in the vicinity of the noise sources.

While no specific development projects are proposed under the General Plan Update, changes in land use may allow for more intensive noise-generating uses in closer proximity to noise-sensitive uses. Where this occurs, detailed noise studies would be required to ensure that noise control measures are implemented into the project design. Such measures could include the redesign of stationary noise sources away from sensitive uses, construction of sound walls or berms between noise generating uses and sensitive uses, using buildings to create additional buffer distance and screening, or other site design measures to ensure that non-transportation (stationary) noise sources do not cause exterior and interior noise levels to exceed allowable standards at sensitive receptors.

The General Plan Update Public Safety Element includes policies and actions that are intended to reduce noise associated with stationary sources. Specifically, proposed Policies PS-6.3, PS-6.4, PS-6.8, and proposed Actions PS-6c, PS-6d, and PS-6e would reduce noise associated with stationary sources. Policy PS-6.3 requires the use of best practices in new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code. Policy PS-6.4 requires acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses, and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in the proposed Public Safety Element. Policy PS-6.8 requires the use of noise attenuation measures for all new commercial development expected to produce excessive noise. In existing cases where the City's noise standards are exceeded, Policy PS-6.8 directs Code Enforcement to require compliance. Action PS-6c requires new development and transportation projects be reviewed for compliance with the noise requirements established in the proposed General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code, and, where necessary, mitigate excessive noise through best practices. Action PS-6d requires acoustical studies for all new discretionary projects, including those related to development and transportation, which have the potential to generate noise impacts which exceed the standards identified in the proposed General Plan. The studies must include representative noise measurements, estimates of existing and projected noise levels, and mitigation measures necessary to facilitate compliance with the proposed Public Safety Element. Action PS-6e requires review of locations of proposed projects with the potential to generate stationary noise in relation to sensitive receptors through the discretionary project review process, and limits delivery or service hours for stores and businesses with loading areas, docks, or trash bins that front, side, border, or gain access on driveways next to residential and other noise sensitive areas. Exceptions may only be approved if full compliance with the nighttime limits of the noise regulations is achieved. Implementation of the proposed policies and actions of the General Plan Update would reduce noise impacts from stationary noise sources to a less than significant level.

CONSTRUCTION NOISE

The degree of construction noise may vary for different projects associated with implementation of the General Plan, depending on the construction activities. Noise levels associated with construction also vary with the different phases of construction. In accordance with Section 8.20.070(A) of the Lawndale Municipal Code, construction is prohibited between the hours of 7:00 p.m. and 7:00 a.m. on weekdays, between the hours of 5:00 p.m. and 8:00 a.m. on Saturdays, or any time on Sunday or a Federal holiday. Construction noise is exempt from the noise ordinance outside of those times.

The Environmental Protection Agency (EPA) has compiled data regarding the noise-generated characteristics of typical construction activities. The data is presented in Table 5.13-13, *Typical Construction Noise Levels*. These noise levels would diminish rapidly with distance from the construction site at a rate of 6 dBA per doubling of distance. For example, a noise level of 86 dBA measured 50 feet from the noise source would reduce to 80 dBA at 100 feet. At 200 feet from the noise source, the noise level would reduce to 74 dBA. At 400 feet, the noise source would reduce by another 6 dBA to 68 dBA.

Table 5.13-13
Typical Construction Noise Levels

Equipment Powered by Internal Combustion Engines	
Type	**Noise Levels (dBA) at 50 Feet**
Earth Moving	
Compactors (Rollers)	73 - 76
Front Loaders	73 - 84
Backhoes	73 - 92
Tractors	75 - 95
Scrapers, Graders	78 - 92
Pavers	85 - 87
Trucks	81 - 94
Materials Handling	
Concrete Mixers	72 - 87
Concrete Pumps	81 - 83
Cranes (Movable)	72 - 86
Cranes (Derrick)	85 - 87
Stationary	
Pumps	68 - 71
Generators	71 - 83
Compressors	75 - 86
Impact Equipment	
Saws	71 - 82
Vibrators	68 - 82
Source: U.S. Environmental Protection Agency, *Reference Noise Levels*.	

Individual projects associated with implementation of the General Plan Update would result in short-term noise impacts associated with construction activities. Two types of short-term noise impacts could occur during construction activities, on-site and off-site.

Construction crew commute and the transport of construction equipment and materials to the site for future development projects would incrementally increase noise levels on access roads leading to the site. Truck traffic associated with project construction would be limited to within the permitted construction hours, as listed in the City's Municipal Code Section 8.20.070(A). Although there would be a relatively high single-event noise exposure potential at a maximum of 87 dBA Lmax at 50 feet from passing trucks, causing possible short-term intermittent annoyances, the effect on ambient noise levels would be less than 1 dBA when averaged over one hour or 24 hours. In other words, the changes in noise levels over one hour or 24 hours attributable to passing trucks would not be perceptible to the normal human ear. Therefore, short-term construction-related impacts associated with worker commute and equipment transport on local streets leading to the project site would result in a less than significant impact on noise-sensitive receptors along the access routes.

The site preparation phase, which includes grading and paving, tends to generate the highest noise levels, since the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes

excavating machinery such as backhoes, bulldozers, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three or four minutes at lower power settings. Site-specific construction activities associated with future development is expected to require the use of scrapers, bulldozers, motor graders, and water and pickup trucks. The maximum noise level generated by each scraper is assumed to be approximately 87 dBA Lmax at 50 feet from the scraper in operation. Each bulldozer would also generate approximately 85 dBA Lmax at 50 feet. The maximum noise level generated by the sound sources with equal strength increases the noise level by 3 dBA. The potential for noise reduction is project and site-specific. Construction noise would be an impact if construction occurred outside of the hours outlined in Section 8.20.070(A) of the Lawndale Municipal Code. Potential impacts would be site-specific, depending on the equipment used and distances to sensitive receptors.

The General Plan Update Public Safety Element includes policies and actions intended to reduce exposure to excessive noise, including construction noise. Policy PS-6.9 requires construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices. Action PS-6f requires all construction activity to comply with the limits (maximum noise levels, hours and days of allowed activity) established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible. With implementation of the General Plan Update policies and actions, and compliance with Section 8.20.070(A) of the Lawndale Municipal Code, impacts would be less than significant in this regard.

Proposed General Plan Update Goals, Policies, and Actions:

General Plan Public Safety Element Table PS-1, *Land Use Compatibility for Community Noise Exposure*, presents a land use compatibility chart for community noise derived from a similar table originally prepared by the California Office of Noise Control (2017). This table is proposed to be included in the General Plan Update Public Safety Element. The table identifies “normally acceptable,” “conditionally acceptable,” “normally unacceptable,” and “clearly unacceptable” exterior noise levels for various land uses. A “conditionally acceptable” designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a “normally acceptable” designation indicates that standard construction can occur with no special noise reduction requirements.

PUBLIC SAFETY ELEMENT

Policy PS-6.1: **California Building Code.** Adhere to the latest standards related to noise in the most current edition of the California Building Code to avoid or minimize noise pollution in the community.

Policy PS-6.2: **Noise Exposure.** Consider the noise compatibility of existing and future development when making land use planning decisions. Require development and infrastructure projects to be consistent with the land use compatibility standards contained in Table PS-

1 and the Lawndale Municipal Code to facilitate acceptable noise exposure levels for existing and future development.

Policy PS-6.3: **Noise Mitigation.** Require new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials.

Policy PS-6.4: **Acoustical Studies.** Require acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses such as schools, hospitals, libraries, care facilities, and residential areas; and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in this element. For projects that are required to prepare an acoustical study, the following mobile and stationary noise source criteria shall be used to determine the significance of those impacts.

A. Mobile Noise Sources:

- Where existing traffic noise levels are within or below the "normally acceptable" noise criteria at the affected land use (see Table PS-1), a readily perceptible 5 dBA CNEL or greater increase in roadway noise will be considered significant;
- Where existing traffic noise levels falls within the "conditionally acceptable" noise criteria at the sensitive land use, a +3 dBA CNEL or greater increase in roadway noise levels will be considered significant; and
- Where existing traffic noise levels exceed the "conditionally acceptable" noise criteria at the sensitive land use, a + 1.5 dBA CNEL or greater increase in roadway noise levels will be considered significant

B. Stationary and Non-Transportation Noise Sources

- A significant impact will occur if the project results in an exceedance of the noise level standards contained in this element, or the project will result in an increase in ambient noise levels by more than 3 dB, whichever is greater.

Policy PS-6.8: **Commercial Noise.** Require the use of noise attenuation measures, including screening and buffering techniques, for all new commercial development expected to produce excessive noise; in existing cases where the City's noise standards are exceeded, work with Code Enforcement to require compliance.

Policy PS-6.9: **Construction Noise.** Require construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices.

Action PS-6c: Review new development and transportation projects for compliance with the noise requirements established in this General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code. Where necessary, require new development to mitigate excessive noise through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials such as rubberized asphalt.

Action PS-6d: Require acoustical studies for all new discretionary projects, including those related to development and transportation, which have the potential to generate noise impacts which exceed the standards identified in this General Plan. The studies shall include representative noise measurements, estimates of existing and projected noise levels, and mitigation measures necessary to facilitate compliance with this element.

Action PS-6e: Review the locations of proposed projects with the potential to generate stationary noise in relation to sensitive receptors through the discretionary project review process. Limit delivery or service hours for stores and businesses with loading areas, docks, or trash bins that front, side, border, or gain access on driveways next to residential and other noise sensitive areas. Only approve exceptions if full compliance with the nighttime limits of the noise regulations is achieved.

Action PS-6f: Require all construction activity to comply with the limits (maximum noise levels, hours and days of allowed activity) established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

NOI-2: Would the project result in the generation of excessive groundborne vibration or groundborne noise levels?

Impact Analysis: The main sources of vibration in the Planning Area are related to vehicles, railways and construction. Typical roadway traffic, including heavy trucks, rarely generates vibration amplitudes high enough to cause structural or cosmetic damage. Although not specifically within Lawndale, there have been cases in which heavy trucks traveling over potholes or other discontinuities in the pavement have caused vibration high enough to result in complaints from nearby residents. These types of issues typically can be resolved by smoothing the roadway surface.

TRANSPORTATION VIBRATION

One freight rail line runs through the City of Lawndale. Existing buildings are about 50 feet from the centerline of the railway and include primarily residential uses. With regards to vibration impacts on new development near railroads, human disturbance is the primary concern. It is extremely rare for vibration levels from trains passing to result in structural damage to buildings. In addition, buses and other transit

vehicles are not anticipated to generate excessive vibration levels that would disturb sensitive receptors because these vehicles are traveling at lower speeds and do not generate substantial vibrations. The General Plan Update would not increase railway operations within the Planning Area. Additionally, the Project does not include any specific development proposals. The General Plan Update includes proposed Action PS-6h, which would require future residential projects located adjacent to railroad lines to follow Federal Transit Administration vibration screening distance criteria to prevent residential uses from being exposed to vibrations exceeding 72 VdB for frequent events (more than 70 events per day), 75 VdB for occasional events (30-70 events per day), or 80 VdB for infrequent events (less than 30 events per day). With implementation of proposed Action PS-6h, this impact would be reduced to less than significant.

CONSTRUCTION VIBRATION

Construction activities that produce vibration that can be felt by adjacent land uses include the use of vibratory equipment, large bulldozers, and pile drivers. The primary sources of vibration during construction are usually vibratory rollers and large bulldozers. As shown in Table 5.13-14, *Vibration Source Levels for Construction Equipment*, a vibratory roller has a peak particle velocity (inches/second) of 0.21 and a large bulldozer has a peak particle velocity of 0.089 (inches per second) at 25 feet. The use of pile driving equipment can generate a peak particle velocity of 1.5 (inches per second) depending on the size and model.

Table 5.13-14
Vibration Source Levels for Construction Equipment

Equipment	Peak Particle Velocity (inches/second) at 25 feet	Approximate Vibration Level LV (VdB) at 25 feet
Pile driver (impact)	1.518 (upper range)	112
	0.644 (typical)	104
Pile driver (sonic)	0.734 upper range	105
	0.170 typical	93
Clam shovel drop (slurry wall)	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory Roller	0.21	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, May 2006.		

Table 5.13-15, *Guidelines Vibration Damage Potential Threshold Criteria*, provides maximum PPV levels (inches/second) to be used to determine if groundborne vibration may result in damage, depending on the type of structure. When evaluated in light of the estimated groundborne vibration levels presented in Table 5.13-14, it can be determined that construction activities in the Planning Area have the potential to result in significant impacts related to groundborne vibration associated with construction activities. This impact would be reduced to less than significant with the implementation of the General Plan Update Public Safety Element Policy PS-6.14 and Action PS-6k, which require vibration impact studies when construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings.

Table 5.13-15
Guidelines Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (inches/second)	
	Transient Sources	Continuous/Frequent Intermittent Source
Extremely fragile historic buildings, ruins, ancient monuments	0.1	0.1
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.3
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Source: California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, April 2020.
Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Policy PS-6.14: **Vibration Studies.** Require vibration impact studies for new discretionary development and transportation improvements whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings.

Action PS-6h: Require new residential projects located adjacent to railroad lines to follow the FTA vibration screening distance criteria to prevent residential uses from being exposed to vibrations exceeding 72 VdB for frequent events (more than 70 events per day), 75 VdB for occasional events (30-70 events per day), or 80 VdB for infrequent events (less than 30 events per day).

Action PS-6k: Require vibration impact studies for all new discretionary projects, including those related to development and transportation, whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. The

studies shall include a detailed mitigation plan to avoid any potential significant impacts to existing structures due to groundborne vibrations, based on the California Department of Transportation's Construction Vibration Guidance Manual.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

NOI-3: For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise?

Impact Analysis: Hawthorne Municipal Airport, also known as Jack Northrop Field, is an FAA-designated general aviation reliever airport owned by the City of Hawthorne. The airport is located approximately 1.4-miles northeast of the northeastern-most portion of the Planning Area. The City of Hawthorne General Plan Noise Element provides noise contours (Figures 5A and 5B) for Hawthorne, which include the airport. The noise contours associated with the airport do not extend beyond the municipal boundaries of the City of Hawthorne. The Planning Area is not located within any adopted airport land use plan and is located outside of any airport 65 dBA CNEL contours. As such, there are no impacts related to private airports, public airports, airstrips, or adopted airport land use plans.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.13.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The geographic setting for noise is typically localized and considers development within the City.

Would the project, combined with other related cumulative projects, generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Impact Analysis:

TRANSPORTATION NOISE IMPACTS

Table 5.13-11 shows the cumulative noise levels associated with traffic on the local roadway network, including projects within the Planning Area. Cumulative conditions include traffic due to 2045 buildout of

the General Plan Update in addition to pass-through traffic from other jurisdictions. Table 5.13-12 shows the estimated noise level increases which may occur under cumulative conditions. As shown in Table 5.13-11 and Table 5.13-12, by the year 2045, existing land uses adjacent to the studied roadways would be exposed to noise levels that exceed the City's exterior standards of 65 dBA CNEL for sensitive uses. A significant impact would occur if the Project resulted in levels higher than 65 dBA CNEL and increased the overall roadway noise level by 3 dBA CNEL, which is a noticeable change in noise level. As shown in Table 5.13-12, compared to existing traffic noise levels, 2045 without Project traffic volumes are expected to be up to 0.8 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise along the analyzed roadways. Compared to existing traffic noise levels, 2045 with Project traffic volumes are expected to be up to 0.9 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise. Implementation of the Project would therefore not result in a cumulatively considerable impact relative to traffic noise.

STATIONARY NOISE

While the Project does not explicitly propose any new noise-generating uses, implementation of the Project could result in the future development of land uses that generate noise levels in excess of applicable City noise standards for non-transportation noise sources. Implementation of land use planning and policies and actions can minimize cumulative noise impacts related to stationary sources by avoiding the placement of noise generating equipment near noise-sensitive land uses and where unavoidable, including design measures to the degree practicable to avoid violating the noise criteria presented in Table PS-1 of the General Plan Update and the Lawndale Municipal Code. The General Plan Update includes policies and actions that are intended to reduce noise associated with stationary sources. Applicants of future development projects would be required to demonstrate compliance with the City's Noise Ordinance and the policies and actions in the proposed General Plan Update Public Safety Element, including proposed Policies PS-6.3, PS-6.4, PS-6.8, and proposed Actions PS-6c, PS-6d, and PS-6e. Conformance with the existing regulatory framework would reduce cumulative noise impacts from stationary noise sources to a less than significant level. Therefore, the proposed Project's incremental contribution to cumulative impacts associated with stationary noise would not be cumulatively considerable.

CONSTRUCTION NOISE

Short-term construction noise and vibration is a localized activity and would affect only land uses that are immediately adjacent to a specific project site. Each construction project would have to comply with the local noise ordinance and General Plan Update policies and actions, including Policy PS-6.9,which requires construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices, and Action PS-6f, which requires all construction activity to comply with the limits established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible. Additionally, projects would comply with mitigation measures that may be prescribed pursuant to CEQA provisions that require significant impacts to be reduced to the extent feasible. Further, it is unlikely that all construction projects would occur simultaneously within the City. Therefore, the

proposed Project's incremental contribution to cumulative impacts associated with construction noise would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, generate excessive groundborne vibration or groundborne noise levels?

Impact Analysis: Short-term construction noise and vibration is a localized activity and would affect only land uses that are immediately adjacent to a specific project site. The General Plan Update includes policies and actions that are intended to reduce groundborne vibration and groundborne noise levels. In order to reduce potentially significant impacts related to groundborne vibration associated with construction activities of future site-specific development, project applicants would be required to comply with proposed General Plan Update Public Safety Element Policy PS-6.14 and Action PS-6k, which require vibration impact studies when construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. The vibration impact studies would be required to include a detailed mitigation plan to avoid any potential significant impacts to existing structures due to groundborne vibrations. With implementation of the General Plan Update, potential significant impacts associated with the proposed Project related to construction vibration would be reduced to less than significant. Cumulative development projects within the City would also be reviewed to ensure project-specific construction activities would not generate excessive groundborne vibration or noise levels. If it is determined that site-specific development associated with the cumulative projects would result in groundborne vibration or noise impacts, mitigation measures would be required to reduce the impact. As the Project's potential for vibration impacts would be reduced to a less than significant level, the proposed Project's incremental contribution to cumulative impacts associated with construction vibration would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project, combined with other related cumulative projects, expose people residing or working in the project area to excessive noise?

Impact Analysis: As discussed above, the noise contours associated with the airport do not extend beyond the municipal boundaries of the City of Hawthorne. The Planning Area is not located within any adopted

airport land use plan and is located outside of any airport 65 dBA CNEL contours. As such, there are no impacts related to private airports, public airports, airstrips, or adopted airport land use plans. Therefore, proposed Project's incremental contribution to cumulative impacts associated with airport noise would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.13.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Noise impacts associated with implementation of the General Plan Update would be less than significant. No significant unavoidable noise impacts would occur as a result of the General Plan Update.

5.14 POPULATION AND HOUSING

5.14.1 PURPOSE

This section identifies the existing population, housing, and employment for the Planning Area and Los Angeles County, as applicable, and provides an analysis of potential population and housing impacts associated with implementation of the General Plan Update.

5.14.2 ENVIRONMENTAL SETTING

POPULATION AND HOUSEHOLD GROWTH

Table 5.14-1, *Population Projections (2022-2045)*, shows the current Los Angeles County and City of Lawndale populations as reported by the Department of Finance (DOF). The DOF population estimates are derived by multiplying the number of occupied housing units by persons per household. The 2022 persons per household estimates are based on 2020 Census benchmark data.

The 2045 population projections are forecasted by the Southern California Association of Governments (SCAG) as part of the Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS) and the companion technical report, the Demographics and Growth Forecast Report. SCAG's 2020-2045 RTP/SCS, referred to as Connect SoCal, provides population, household, and employment data and projections for the counties in the SCAG region, including Los Angeles County. SCAG's forecasts are based in part on jurisdictions' existing land uses and General Plan land use designations. Population projections are calculated based on household growth and household size. Connect SoCal forecasts that the County and City populations would increase by approximately 18 and 10 percent, respectively, between 2022 and 2045.

Table 5.14-1
Population Projections (2022-2045)

Region	Existing Conditions (2022)[1]	Projected Future Conditions (2045)[2]	Percent Change
Los Angeles County	9,861,224	11,674,000	18.38%
Lawndale	31,301	34,400	9.90%

Source:
1. California Department of Finance (DOF), *Report E-5 Population and Housing Estimates for Cities, and Counties, and the State,* January 1, 2022.
2. Southern California Association of Governments (SCAG), *2020-2045 RTP/SCS, Demographics and Growth Forecast,* September 3, 2020b.
Notes: Existing conditions population for Lawndale does not include the Sphere of Influence (SOI) area.

HOUSING UNITS

Similar to the region overall, the housing stock in Lawndale consists primarily of single-family homes. This home type makes up approximately two-thirds (66.2 percent) of all housing units in the City, which is a higher proportion than in all of Los Angeles County (54.5 percent). The City's proportion of units within multifamily buildings—which includes duplexes and four-plexes as well as larger apartment buildings—is approximately 31.4 percent. In comparison, similar unit types make up 43.9 percent of housing in Los Angeles County. The breakdown of housing unit types is shown in Table 5.14-2, *Existing Housing Supply Mix*.

Table 5.14-2
Existing Housing Supply Mix

Category	2022[1]	
	Los Angeles County	Lawndale
Single-family units	1,981,094	6,818
Multi-family units	1,595,006	3,236
Mobile home	59,035	248
Total Housing Units	3,635,136	10,302
Occupied	3,443,284	9,971
Vacancy Rate	5.3%	3.2%
Persons per household	2.80	3.12

Source:
1. California Department of Finance (DOF), *Report E-5 Population and Housing Estimates for Cities, and Counties, and the State,* January 1, 2022.
Notes: Housing supply for Lawndale does not include the SOI area.

The DOF estimates housing units by adding new construction and land annexations; subtracting housing that is removed (e.g., demolition); and, adjusting for units lost or gained by conversions. Annual housing unit change data is supplied to the DOF by local jurisdictions and the U.S. Census Bureau. As indicated in Table 5.14-2, based on DOF estimates, the City's housing stock as of January 2022 was an estimated 10,302 housing units.

Vacancy rates are a measure of general availability of housing. They also indicate how well the types of available units meet the housing market demand. The availability of vacant housing units provides households with choices of type and price to accommodate their specific needs. Low vacancy rates can result in higher prices, limited choices, and settling with inadequate housing. It may also contribute to overcrowding. A vacancy rate between 4.0 and 6.0 is considered "healthy." As indicated in Table 5.14-2, the City's 2022 vacancy rate was 3.2 percent. A low vacancy rate suggests households may have difficulty finding housing within their price range.

SCAG's Connect SoCal (2020-2045 RTP/SCS) projects housing unit stock estimates for 2045. For Lawndale, the number of projected housing units in 2045 is 10,200; for Los Angeles County, the number of projected

housing units is 4,119,000. SCAG forecasts total housing need for each community in southern California based on three general factors:

(1) The number of housing units needed to accommodate future population and employment growth;
(2) The number of additional units needed to allow for housing vacancies; and
(3) The number of very low, low, moderate, and above moderate-income units needed in the community.

Additional factors used to determine the Regional Housing Needs Assessment (RHNA) include tenure, the average rate of units needed to replace housing units demolished, proximity to high quality transit areas, and other factors.

EMPLOYMENT

As shown in Table 5.14-3, *Labor Force Participation and Unemployment*, the County's current employment totals 4,767,204 jobs and is forecast to increase by approximately 12.9 percent to 5,382,000 jobs between 2022 and 2045. Employment numbers are forecasted to increase from approximately 7,407 jobs to 8,300 jobs in 2045 within the City, an increase of approximately 12.1 percent.

Table 5.14-3
Labor Force Participation and Unemployment

Category	Existing Jobs (Employment)	Future Jobs (Employment)[3]	2045 SCAG: Existing Conditions % Difference
Los Angeles County	4,767,204[1]	5,382,000	12.89%
Lawndale	7,407[2]	8,300	12.06%

Source:
1. Southern California Association of Governments (SCAG), *SCAG Local Profiles Report County of Los Angeles*, May 2019.
2. Southern California Association of Governments (SCAG), *SCAG Local Profiles Report City of Lawndale*, May 2019.
3. Southern California Association of Governments (SCAG), *2020-2045 RTP/SCS, Demographics and Growth Forecast*, September 3, 2020.

SCAG states that "a balance between jobs and housing in a metropolitan region can be defined as a provision of an adequate supply of housing to house workers employed in a defined area (i.e., community or subregion). Alternatively, a jobs/housing balance can be defined as an adequate provision of employment in a defined area that generates enough local workers to fill the housing supply." Jobs and housing are considered in balance when a subregion has enough employment opportunities for most people who live there and enough housing opportunities for most of the people who work there. The jobs/housing balance is one indicator of a project's effect on growth and quality of life in a project area. SCAG uses the jobs/housing ratio to assess the relationship between housing and employment growth.

More specifically, Connect SoCal states that "an imbalance between employment and housing in a community is a key contributor to local traffic congestion. These types of origin/destination disparities may also be considered an impediment to environmental justice." According to SCAG, improvements in

the jobs to housing balance may result in a reduction of transportation congestion and related air quality problems. Communities with more than 1.5 jobs per dwelling unit (DU) are considered "jobs rich" and those with fewer than 1.5 jobs per DU are considered "housing rich." As identified in Table 5.14-4, *Jobs to Housing Ratio*, under existing conditions and projected 2045 conditions, both the County and City are considered housing rich. However, under existing conditions and projected 2045 conditions, the City has a much lower ratio of jobs to housing than the County. Both the County and the City would need more job growth to provide greater balance.

Table 5.14-4
Jobs to Housing Ratio

Municipality	Existing Conditions (2022)	Projected Conditions (2045)[3]
Los Angeles County		
Jobs	4,767,204[1]	5,382,000
Housing units	3,635,136[2]	4,119,000
Jobs/house ratio	**1.31**	**1.31**
Lawndale		
Jobs	7,407[4]	8,300
Housing units	10,302[2]	10,200
Jobs/house ratio	**0.72**	**0.81**

5.14.3 REGULATORY SETTING

STATE

Regional Housing Needs Assessment (RHNA)

State law requires that jurisdictions provide their fair share of regional housing needs. The State of California Department of Housing and Community Development (HCD) is mandated to determine the State-wide housing need. In cooperation with HCD, local governments and Councils of Governments (COGs) are charged with making a determination of the existing and projected housing needs as a share of the State-wide housing need of their city or region.

The Regional Housing Needs Assessment (RHNA) quantifies the housing need by income group within each jurisdiction during specific planning periods. The RHNA is incorporated into local General Plans. The RHNA allows communities to anticipate growth, so that collectively the region can grow in ways that

enhance quality of life, improve access to jobs, promote transportation mobility, and address social equity and fair share housing needs. The 6th Cycle Final RHNA Allocation Plan was adopted by the SCAG Regional Council on March 4, 2021 and covers the planning period from October 15, 2021 to October 15, 2029. Table 5.14-5, *Lawndale 6th Cycle Regional Housing Needs Allocation*, shows the City's 6th Cycle RHNA for the 2021-2029 planning period.

Table 5.14-5
Lawndale 6th Cycle Regional Housing Needs Allocation

Income Level	Dwelling Unit Allocation
Very-low income	732
Low income	311
Moderate income	371
Above-moderate income	1,083
Total	**2,497**

Source: Southern California Council of Governments (SCAG), *Pre-Certified Local Housing Data For the City of Lawndale*, April 2021.

LOCAL

Southern California Association of Governments

Regional planning agencies such as SCAG recognize that planning issues extend beyond the boundaries of individual cities. Efforts to address regional planning issues such as affordable housing, transportation, and air pollution have resulted in the adoption of regional plans that affect the Planning Area.

SCAG has evolved as the largest council of governments in the United States, functioning as the Metropolitan Planning Organization (MPO) for six counties (Los Angeles, Orange, San Bernardino, Riverside, Ventura and Imperial) and 191 cities. The region encompasses an area more than 38,000 square miles. As the designated MPO, the Federal government mandates SCAG research and develop plans for transportation, growth management, hazardous waste management, and air quality. As a result, SCAG prepares comprehensive regional plans to address these concerns.

SCAG is responsible for the maintenance of a continuous, comprehensive and coordinated planning process resulting in a Regional Transportation Plan (RTP) and a Regional Transportation Improvement Program. SCAG is responsible for development of demographic projections and is also responsible for development of the integrated land use, housing, employment, transportation programs, measures, and strategies for the Air Quality Management Plan.

Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

The passage of California Senate Bill (SB) 375 in 2008 requires that an MPO, such as SCAG, prepare and adopt a Sustainable Communities Strategy (SCS) that sets forth a forecasted regional development pattern which, when integrated with the transportation network, measures, and policies, will reduce greenhouse gas emissions from automobiles and light duty trucks (Government Code Section 65080(b)(2)(B)). The SCS outlines certain land use growth strategies that provide for more integrated land use and transportation

planning and maximize transportation investments. The SCS is intended to provide a regional land use policy framework that local governments may consider and build upon.

On September 3, 2020, SCAG's Regional Council approved and fully adopted Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy). Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. Connect SoCal outlines more than $638 billion in transportation system investments through 2045. It was prepared with input from local governments, county transportation commissions, tribal governments, non-profit organizations, businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino and Ventura.

The 2020 RTP/SCS considers the role of transportation in the broader context of economic, environmental, and quality-of-life goals for the future, identifying regional transportation strategies to address mobility needs. The 2020 RTP/SCS describes how the region can attain the GHG emission-reduction targets set by CARB by achieving a 19 percent reduction by 2035 compared to the 2005 level. Although the focus of the 2020 RTP/SCS is on GHG emission-reduction, compliance with and implementation of 2020 RTP/SCS policies and strategies would also have co-benefits of reducing per capita criteria air pollutant and TAC emissions associated with reduced per capita vehicle miles traveled (VMT). Improved air quality with implementation of the 2020 RTP/SCS policies would decrease reactive organic gases (ROG) (i.e., VOCs), CO, NOx, and $PM_{2.5}$.

SCAG's 2020 RTP/SCS builds on the land use policies that were incorporated into the 2016 RTP/SCS, and provides specific strategies for successful implementation. These strategies include implementing the Sustainable Communities Program (SCP) – Housing and Sustainable Development (HSD) which will both accelerate housing production as well as enable implementation of the Sustainable Communities Strategy of Connect SoCal; encouraging use of active transportation, or human powered transportation such as bicycles, tricycles, wheelchairs, electric wheelchairs/scooters, skates, and skateboards; and supporting alternative fueled vehicles. The 2020 RTP/SCS overall land use pattern reinforces the trend of focusing new housing and employment in infill areas well served by transit.

In addition, the 2020 RTP/SCS includes goals and strategies to promote active transportation and improve transportation demand management (TDM). The 2020 RTP/SCS strategies support local planning and projects that serve short trips, increase access to transit, expand understanding and consideration of public health in the development of local plans and projects, and support improvements in sidewalk quality, local bike networks, and neighborhood mobility areas. The 2020 RTP/SCS proposes to better align active transportation investments with land use and transportation strategies, increase competitiveness of local agencies for Federal and State funding, and to expand the potential for all people to use active transportation.

Growth Forecasts

SCAG's Forecasting Section is responsible for producing socio-economic estimates and projections at multiple geographic levels and in multiple years. The Forecasting Section develops, refines, and maintains SCAG's regional and small area socio-economic forecasting/allocation models. Adopted 2020 RTP/SCS

Growth Forecasts provide population, household, and employment data for 2045. The socio-economic estimates and projections are used by Federal and State mandated long-range planning efforts such as the RTP, Air Quality Management Plan, Regional Transportation Improvement Program, and the Regional Housing Needs Assessment. SCAG's Adopted 2020 RTP/SCS Growth Forecasts are used to assess a project's consistency with adopted plans that have addressed growth management from a local and regional standpoint; refer to Section 6.3, *Growth-Inducing Impacts*.

City of Lawndale 2021-2029 Housing Element

The Housing Element is one of the seven General Plan Elements that are mandated by the State of California (California Government Code Sections 65580 to 65589.8). California State law requires that the Housing Element consists of, "an identification and analysis of existing and projected housing needs and a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing" (Government Code Section 65580).

The Housing Element is a guide for housing within Lawndale and provides an indication of the need for housing in the community in terms of affordability, availability, adequacy, and accessibility. The Housing Element provides a strategy to address housing needs and identifies a series of specific housing programs to meet community needs.

The City's 6th Cycle Housing Element was adopted on September 19, 2022 and specifically addresses housing needs for Lawndale from October 15, 2021 through October 15, 2029, in line with the RHNA planning period adopted by SCAG. Lawndale's share of the regional housing need for the 2021-2029 RHNA period was allocated by SCAG based on factors such as existing need, recent growth trends, income distribution, and capacity for future growth. The Housing Element identifies adequate land with appropriate zoning and development standards to accommodate its allocation of the regional housing need. Table 5.14-5, shows the City's 6th Cycle RHNA for the 2021-2029 planning period.

The City introduced two new mechanisms to allow for residential development to be created to implement the Housing Element on sites considered viable for housing development. The first is "Housing Overlay 100", which will be applied to 16 nonresidential sites outside of the Hawthorne Boulevard Specific Plan area and allow for residential densities of up to 100 dwelling units per acre. The second is "Housing Overlay 150" which will be applied to 68 nonresidential sites inside the Hawthorne Boulevard Specific Plan area, will allow for residential densities up to 150 dwelling units per acre.

City of Lawndale Municipal Code

Title 17 of the Lawndale Municipal Code contains the City's Zoning Ordinance (Zoning Code). The Zoning Code carries out the policies of the General Plan by classifying and regulating the uses of land and structures within the City, consistent with the General Plan. Zoning provides a legal mechanism for local government regulation of the land uses described in the General Plan Land Use Map. In addition to providing specific regulations related to minimum lot size, building heights, setbacks, lot coverage, etc., for each zoning district, the Zoning Code also lists the uses that would be acceptable or could be considered in each district, as well as those that would be considered unacceptable. For some uses, further regulations are established. Zoning regulations designate the permitting process that applies for approval of land uses in the zoning district.

Chapter 12.34, *Park Development Fees*, provides for the payment of park facilities impact fees applicable to dwelling units constructed, enlarged, or remodeled in the City.

The City of Lawndale Municipal Code Chapter 3.14, *Utility Users Tax*, imposes a tax for users of various utilities within the City in order to fund municipal utility services. Section 3.14.090*, Water Users Tax,* imposes a tax on every person in the City using water which is delivered through mains or pipes.

5.14.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to population and housing. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure) (refer to Impact Statement POP-1); and
- Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere (refer to Impact Statement POP-2).

5.14.5 IMPACTS AND MITIGATION MEASURES

POP-1: Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure?

Impact Analysis: The City and surrounding area, are highly urbanized and considered to be built-out. At buildout, the General Plan Update would accommodate approximately 3,942 new housing units and 808,864 square feet of new non-residential building square footage within the Planning Area compared to existing conditions, as shown in Table 3-4 in Section 3.0, *Project Description*. This new growth may increase the City's population by approximately 9,482 residents and 2,738 jobs compared to the existing condition. The land uses allowed under the proposed General Plan (Figure 3-4 in Section 3.0) provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area. Overall, the proposed Project would provide new development opportunities to support the vision for development consistent with the General Plan Update and the State's Housing Element Law, including accommodating the City's RHNA. This is primarily accommodated through the implementation of the "Housing Opportunity Overlay" on sites currently identified for non-residential development and through the Hawthorne Boulevard Specific Plan.

Given the historical and current population, housing, and employment trends, growth in the City, as well as the entire State, is inevitable. The primary factors that account for population growth are natural increase and net migration. Other factors that affect growth include the cost of housing, the location of jobs, the economy, the climate, and transportation. Residential growth within the City would continue to occur based primarily on the demand of the housing market. Existing development within the City is served by existing roads, transit, infrastructure, and public services. Further, the area surrounding the

Planning Area is developed. There is the potential for infrastructure improvements within the Planning Area associated with site-specific development and overall development growth; however, General Plan implementation would not require the extension of roads or other infrastructure into an area that is not already served.

Potential growth inducing impacts are also assessed based on a project's consistency with adopted plans that have addressed growth management from a local and regional standpoint. As discussed above, SCAG is the responsible agency for developing and adopted regional housing, population, and employment growth forecasts for local Los Angeles County governments, among other counties. SCAG provides household, population, and employment projection estimates in five-year increments through 2045.

Table 5.14-6, *General Plan Update Compared to SCAG*, compares the General Plan Update growth projections with SCAG's 2045 households, dwelling units, population and employment growth forecasts for the City.

Table 5.14-6
General Plan Update Compared to SCAG

Forecast Category	2045 General Plan Update	SCAG 2045 Growth Forecast	GPU Difference	Percent Change
Population	47,948	34,400	+13,548	39.4%
Households	14,882[1]	10,200	+4,682	45.9%
Dwelling Units	15,405	11,128[1]	+4,277	38.4%
Employment	9,208	8,300	+908	10.9%

Notes:
1. Based on 3.4% vacancy rate (California Department of Finance 2023).

As indicated in Table 5.14-6, SCAG projects that the City's population will reach 34,400 persons by 2045. The General Plan Update is projected to result in a population of approximately 47,948 persons (2045). The City's projected population would be approximately 39.4 percent greater than SCAG's forecast. Similarly, the City's projected housing stock and employment would be approximately 38.4 percent and 10.9 percent greater than SCAG forecasts, respectively. As discussed above, the SCAG projections, which are compiled using a number of sources including adopted plans, historical trends, and interviews with local jurisdictions, tend to be more accurate on a regional level than on a local or city level. It is likely that through a combination of market changes, catalytic projects, updated land use direction in the General Plan, and other factors, Lawndale could capture either more or less of expected regional growth than forecasted by SCAG. Discrepancies between Project and regional forecasts can also be attributed to the RHNA process. The proposed Project is intended to implement the City's 2021-2029 Housing Element; SCAG's Connect SoCal growth forecasts through 2045 do not consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. The regional housing needs would be included as part of SCAG's future growth forecasts.

The General Plan Update growth projections would exceed SCAG's 2045 population, housing stock, and employment projections for the City of Lawndale. General Plan Update growth projections form the basis

of SCAG's planning and policy documents, including regional growth forecasts. Thus, the growth anticipated with the General Plan Update would be considered in SCAG's updated growth forecasts for the City.

The proposed General Plan Update includes policies and actions that mitigate environmental impacts associated with growth, such as air quality, noise, traffic, water supply, and water quality effects. Sections 5.1 through 5.20 and 6.0 provide a discussion of environmental effects associated with development allowed under the proposed General Plan Update. Each of these EIR sections include relevant policies and action items that would mitigate potential environmental impacts associated with growth, to the greatest extent feasible. Further, the General Plan Update accounts for the proposed Project's anticipated population growth and establishes goals, policies, and actions to accommodate such growth. The proposed Land Use Element Goal LU-2 seeks to manage and direct growth so that the community and its neighborhoods are protected and enhanced.

With implementation of General Plan Update policies and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the proposed General Plan Update, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds beyond those disclosed and analyzed throughout this EIR. Therefore, population and housing growth associated with the proposed General Plan Update would result a less than significant impact, as there are no additional potential environmental impacts beyond those analyzed and disclosed in this EIR that would result from growth accommodated by the proposed project. No additional mitigation is required.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: **Balance Jobs and Housing.** Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Action LU-1e Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Goal LU-2: **Managed Growth.** A City that manages and directs growth to strategic locations so that the community and its neighborhoods are protected and enhanced.

Policy LU-2.2: **Focused Areas for New Development.** Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-3.1: **Surrounding Uses.** Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

POP-2: Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Impact Analysis: While no specific development projects are proposed as part of the Lawndale General Plan Update, the General Plan Update will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. Overall, the proposed Project would provide new development opportunities to support the vision for development consistent with the General Plan Update and the State's Housing Element Law, including accommodating the City's 2021-2029 RHNA. This is primarily accommodated through the implementation of the "Housing Opportunity Overlay" on sites currently identified for non-residential development and through the Hawthorne Boulevard Specific Plan.

The Project does not propose any site-specific development at this time; therefore, no existing residents would be displaced. Development and redevelopment of the identified parcels would occur gradually over time. The General Plan Update establishes goals, policies, and actions to ensure the compatibility of new and existing development, including housing. The proposed Land Use Element Goal LU-2 seeks to manage and direct growth so that the community and its neighborhoods are protected and enhanced. Goal LU-3 supports new development to be sensitively integrated with existing development. Policy LU-3.1 ensures the City considers the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area. Therefore, impacts of the proposed General Plan Update on the displacement of people or housing are considered less than significant and no mitigation is required. The policies listed below would further ensure that a range of housing types are provided in the City, and that housing conditions are evaluated as the housing supply ages.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health;

sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Goal LU-2: **Managed Growth.** A City that manages and directs growth to strategic locations so that the community and its neighborhoods are protected and enhanced.

Policy LU-2.2: **Focused Areas for New Development.** Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-2.3 **Hawthorne Boulevard Specific Plan.** Facilitate the redevelopment of Hawthorne Boulevard through implementation of the Hawthorne Boulevard Specific Plan which encourages a mixture of quality multi-family housing development, local- and destination-type commercial uses, eateries, and civic uses such as cultural and performing art facilities in innovative development formats.

Action LU-2e Implement the Hawthorne Boulevard Specific Plan to guide future development in this area. This includes reviewing and revising the implementation strategies identified in the Specific Plan as part of the Specific Plan's comprehensive update, and prioritizing the most critical actions for funding and staff resources.

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Policy LU-3.3 **Code Compliance**. Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

Policy LU-3.4 **Residential Uses**. Require that new residential development be designed to protect residents from potential conflicts with adjacent land uses, and other features including transportation facilities.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Action LU-3e Analyze land use compatibility through the development review process to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.14.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The geographic setting for population and housing considers the SCAG region and the City.

Would the project, combined with other related cumulative projects, induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes, and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Impact Analysis: As discussed, although implementation of the General Plan Update would provide for increased population growth within the Planning Area when compared to SCAG's growth forecasts, the proposed Project is intended to accommodate the City's fair share of statewide housing needs, which are allocated by SCAG, based on regional numbers provided by HCD on a regular basis (every five to eight years). SCAG's Connect SoCal growth forecasts through 2045 do not currently consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. However, the regional housing needs and associated General Plan growth projections will be included as part of SCAG's future growth forecasts.

The land uses allowed under the proposed General Plan Update provide opportunities for infill development in the Planning Area, primarily in the Hawthorne Boulevard Specific Plan area, but would not create physical division within existing communities. New development and redevelopment projects would be designed to complement the character of existing neighborhoods and provide connectivity between existing development and new development within the cumulative analysis area. The proposed General Plan Update does not include any new roadways, infrastructure, or other features that would divide existing communities. Moreover, with implementation of General Plan Update policies and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the proposed General Plan Update, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds, beyond those disclosed and analyzed throughout this EIR. Therefore, the proposed General Plan Update's incremental contribution to cumulative population impacts would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Impact Analysis: As discussed, implementation of the General Plan Update would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. Sites designated with the Housing Opportunity Overlay have existing non-residential uses. The Project does not propose any site-specific development at this time; therefore, no existing residents would be displaced. Development and redevelopment of the identified parcels would occur gradually over time. The General Plan Update establishes goals, policies, and actions to ensure the compatibility of new and existing development, including housing. Therefore, the proposed General Plan Update's incremental contribution to cumulative impacts associated with displacement of people or housing would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.14.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Population and housing impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable population and housing impacts would occur as a result of the General Plan Update.

5.15 PUBLIC SERVICES

This section identifies the existing public services within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

Public Services include fire protection, police protection, schools, public parks, and libraries. Public parks are discussed in Section 5.16, *Parks and Recreation*, of this EIR.

5.15.1 ENVIRONMENTAL SETTING

FIRE PROTECTION AND EMERGENCY SERVICES

Fire Protection Services

The Los Angeles County Fire Department (LACoFD) provides full-service firefighting and emergency medical services to the Planning Area. LACoFD serves over four million residents in 60 cities and the unincorporated areas of the County, along with the City of La Habra located in Orange County (Los Angeles County Fire Department 2022). Fire protection services include fire, emergency medical, urban search and rescue, hazardous materials prevention and response, air operations, and other emergency response resources. In 2021, the LACoFD received a total of 403,924 calls within the LACoFD service area, including: 312,550 calls (77 percent) for emergency medical services (EMS); 11,373 calls (3 percent) for fire; 63,702 (16 percent) miscellaneous calls; 13,478 (3.3 percent) false alarm calls; 2,144 (0.5 percent) mutual aid calls; and 677 (0.2 percent) hazardous materials calls (Los Angeles County Fire Department 2022).

The Kenny Hahn Memorial Lawndale Fire Station No. 21 (Station 21), located at 4312 West 147th Street, serves the Planning Area; refer to Figure 5.15-1, *Public Safety Facilities*. Station 21 is staffed with a three-person engine company (one Captain, one Fire Fighter Specialist, one Fire Fighter) and a two-person paramedic squad (two Fire Fighter/Paramedics) (Los Angeles County Fire Department 2023a).

According to LACoFD, during 2022, the average response time in the City was five minutes, two seconds, which is within the acceptable response time goals of the LACoFD (Los Angeles County Fire Department 2023a).

Los Angeles County Fire Department Programs

The LACoFD provides a number of educational programs to reduce fire risk and prepare residents for emergency response (Los Angeles County Fire Department 2023b).

Ready! Set! Go!

The LACoFD distributes an informational Ready! Set! Go! brochure, which provides residents with critical information on creating defensible space around their home, retrofitting homes with fire-resistant materials, and preparing to safely evacuate well ahead of a wildfire.

F.I.R.E.

The LACoFD provides a Family Instructions for Rapid Escape (F.I.R.E.) guide and coloring book, so families can make their homes F.I.R.E. ready and learn how to safely escape. The F.I.R.E. guide contains instructions and a checklist to prepare one's home for quick escape in the event of a fire.

Community Emergency Response Team (CERT) Training

The LACoFD offers a free Federal Emergency Management Agency (FEMA)-approved 20-hour Community Emergency Response Team (CERT) training program to resident volunteers. CERT training provides residents with the skills and tools necessary to take care of themselves, their families, neighbors, and coworkers in the event of a disaster. In the event of an emergency, some CERT volunteers may become part of the disaster plan for local authorities.

POLICE PROTECTION

The City contracts with the Los Angeles County Sherriff's Department (LASD) for its law enforcement services. Lawndale is served by a local substation (Lawndale Sheriff's Center) located at 15331 Prairie Avenue; refer to Figure 5.15-1. The Lawndale Sheriff's Center provides general law enforcement services specifically to the citizens and visitors of Lawndale. The South Los Angeles Sheriff's Station, located at 1310 West Imperial Highway, Los Angeles, provides additional police protection services to the City and serves unincorporated El Camino Village within the Planning Area.

The Lawndale Sheriff's Center provides the City with general law enforcement services including field patrol deputies, supervision, and traffic services. Specialized services such as Detective Bureau, Narcotics Bureau, Commercial Crimes Bureau, Family Crimes Bureau, Special Weapons Teams, and other such services are provided to the City by the South Los Angeles Station and/or other Los Angeles County Sheriff's Department resources.

The City does not have an adopted target officer-to-population service ratio. However, the City works closely with the Sheriff's Department to determine and meet the community needs for adequate personnel and equipment to effectively combat crime, and meet existing and projected service demands. As of April 2023, the Lawndale Sheriff's Center was staffed with 19 sworn personnel and two professional staff (Los Angeles County Sheriff's Department 2023). As of April 2023, the South Los Angeles Sheriff's Station was staffed with 141 sworn personnel and 38 professional staff. The Sheriff's Department provides 24-hour per day coverage (Los Angeles County Sheriff's Department 2023).

The LASD generally adheres to the following, widely-accepted industry standard among law enforcement agencies for responding to emergent, priority, and routine calls for service: 10 minutes, 20 minutes, and 60 minutes, respectively (Los Angeles County Sheriff's Department 2023). Current average response times for emergency, priority, and routine calls for service received from the proposed Planning Area are five, 20, and 60 minutes, respectively (these are approximate time ranges only and could be affected by traffic conditions; these response times are variable because the responding unit may be elsewhere within the Station's service area and not necessarily dispatched from the Station itself) (Los Angeles County Sheriff's Department 2023).

Crime Statistics

Available crime statistics were obtained for the most recent years available. In 2019, approximately 536 crimes (125 violent crimes and 411 property crimes) were reported in the City (Federal Bureau of Investigation 2023a). As such, the City had approximately 16.4 crimes per 1,000 people over the course of the year. This is lower than the rate for the Los Angeles-Long Beach-Glendale Metropolitan Division, which had approximately 27.9 crimes per 1,000 people in 2019 (Federal Bureau of Investigation 2023b).

SCHOOLS

The Planning Area is primarily served by the Lawndale Elementary School District (LESD) and Centinela Valley Union High School District (CVUHSD). Environmental Charter High School leases a site in the City of Lawndale from LESD and provides a grade 9-12 program with emphasis on experiential, project-based learning. As shown in Table 5.15-1, *Lawndale Schools*, LESD includes six elementary and two middle schools; and CVUHSD includes two comprehensive high schools, two alternative high school, and one adult education school. For the 2021-2022 school year, 9,251 students were enrolled in grades kindergarten through 12 in schools within the Planning Area. LESD and CVUHSD also serve portions of the City of Hawthorne and unincorporated Los Angeles County.

Table 5.15-1
Lawndale Schools

School	Grades	Address	Enrollment (2021-2022)
Lawndale Elementary School District (LESD)			
Jane Addams Middle School	6-8	4535 West 153rd Place	795
F. D. Roosevelt Elementary[1]	K-5	3533 West Marine Ave.	497
William Anderson Elementary	K-7	4130 West 154th Street	596
William Green Elementary	K-5	4520 West 168th Street	586
Billy Mitchell Elementary	K-5	14429 Condon Avenue	417
Will Rogers Middle School	6-8	4110 West 154th Street	852
Lucille Smith Elementary	K-5	4521 West 147th Street	363
Mark Twain Elementary	K-5	3728 West 154th Street	564
Centinela Valley Union High School District (CVUHSD)			
Lawndale High School	9-12	14901 Inglewood Avenue	1,984
Leuzinger High School	9-12	4118 West Rosecrans Avenue	1,836
Lloyd High School (Alternative)	10-12	4951 Marine Avenue	220
Centinela Valley Independent Study School (Alternative)	9-12	4951 Marine Avenue	26
Centinela Valley Adult School	9-12	4951 Marine Avenue	--

Environmental Charter High School	9-12	16315 Grevillea Avenue	515

Source: California Department of Education, *DataQuest,* https://dq.cde.ca.gov/dataquest/, accessed March 8, 2023.
Notes:
1. F. D. Roosevelt Elementary School is located outside of the Planning Area but is a part of the LESD and serves the Planning Area.

As described in the CVUHSD Level I Developer Fee Study, the CVUHSD has calculated the costs of modernized/expanded school facilities based on anticipated growth generated by new development within the CVUHSD district area, which includes the City of Lawndale (Jack Schreder & Associates 2017). The CVUHSD Fee Study notes that school facility buildings typically have a useful life span of 20 years before modernization is needed; therefore, the CVUHSD Fee Study estimates modernization need over a 20-year period. Based on the adopted Housing Elements for Los Angeles County (Lennox and Alondra Park areas), the City of Hawthorne, and the City of Lawndale, the CVUHSD Fee Study anticipates 4,667 residential units to be constructed within the CVUHSD district area over a 20-year period. The CVUHSD Fee Study is based on the Statewide student yield averages calculated by the Office of Public School Construction, which utilizes a student yield factor of 0.2 students per household for high school students and 0.5 students per household for elementary/middle school students (Jack Schreder & Associates 2017; California Department of General Services 2012). The CVUHSD Fee Study also provides generation factors for commercial and industrial development. Projections are based on an average of 2.55 employees generated for every 1,000 square feet of commercial/industrial development and 0.27 district households generated for every employee. Development fees are shared between the CVUHSD and its elementary feeder districts, including the LESD, with 35 percent of fees allocated to the high school district and 65 percent of fees allocated to the feeder districts.

LIBRARY FACILITIES

The County of Los Angeles Public Library (LA County Library) provides library services to the County through its 85 library locations, four cultural resources centers, and three bookmobiles. The LA County Library services over 3.4 million residents living in unincorporated areas and 49 incorporated cities in Los Angeles County (Los Angeles County Library 2023a).

The Lawndale Library is a 17,360 square foot facility located at 14615 Burin Avenue within the City (Los Angeles County Library 2023b). It is a part of, and is operated by, the LA County Library system. The library principally serves City residents, though its users may also be drawn from adjacent cities and unincorporated areas.

PARKS

There are six parks, one community center, and one community garden within Lawndale; refer to Section 5.16 of this EIR for more information.

5.15.2 REGULATORY SETTING

FIRE PROTECTION & EMERGENCY SERVICES

State

California Building Code and California Fire Code

The California Building Code is a compilation of building standards, including fire safety standards for new buildings, which are provided in the California Fire Code. The California Fire Code is Chapter 9 of Title 24 of the California Code of Regulations. The California Fire Code provides regulations for safeguarding life and property from fire and explosion hazards derived from the storage, handling, and use of hazardous substances, materials, and devices. The provisions of this code apply to construction, alteration,

movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure or any appurtenance connected or attached to such building structures throughout the state.

California Department of Forestry and Fire Protection

Under Title 14 of the Natural Resources of the California Code of Regulations (CCR), the California Department of Forestry and Fire Protection (CAL FIRE) has the primary responsibility for implementing wildfire planning and protection for State Responsibility Area (SRA) lands. CAL FIRE develops fire safe regulations and issues fire safe clearances for land within the SRA. The CAL FIRE Resource Management Program manages more than 31 million acres of California's privately-owned wildlands, and provides emergency services in 36 of the State's 58 counties via contracts with local governments.

In addition to fighting and planning for wildland fires, CAL FIRE's responsibilities involve responding to other types of emergencies that may occur on a daily basis, including residential or commercial structure fires, automobile accidents, heart attacks, drowning victims, lost hikers, hazardous material spills on highways, train wrecks, floods, and earthquakes.

Under CCR Title 24, Regulations Development, the Office of the State Fire Marshal is responsible for promulgating regulations that promote fire and life safety for inclusion into the State Building Codes, including the California Building Code, California Fire Code, California Electrical Code, California Mechanical Code, California Plumbing Code, and California Historical Building Code. The process incorporates a great deal of public participation and is guided by the State Building Standards Law.

California Occupational Safety and Health Administration

In compliance with CCR, Title 8, Sections 1270, Fire Prevention, and 6773, Fire Protection and Fire Equipment, the California Occupational Safety and Health Administration (Cal/OSHA) has established minimum standards for fire suppression and emergency medical services. The standards include guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of firefighting and emergency medical equipment, among others.

Office of Emergency Services

The State of California passed legislation authorizing the Office of Emergency Services (OES) to prepare a Standard Emergency Management System (SEMS) program, which sets forth measures by which a jurisdiction should handle emergency disasters. Non-compliance with SEMS could result in the State withholding disaster relief from the non-complying jurisdiction in the event of an emergency disaster.

Mutual Aid Agreements of the California Emergency Services Act

The California Disaster and Civil Defense Master Mutual Aid Agreement, as provided by the California Emergency Services Act, provides statewide mutual aid between and among local jurisdictions and the state. The statewide mutual aid system exists to ensure that adequate resources, facilities, and other supports are provided to jurisdictions whenever resources prove to be inadequate for a given situation. Each jurisdiction controls its own personnel and facilities but can give and receive help whenever needed.

Assembly Bill 1600 Mitigation Fee Act

A development impact mitigation fee is a monetary exaction other than a tax or special assessment that is charged by a local governmental agency to an applicant in connection with an approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project (Government Code Section 66000(b)). The legal requirements for enactment of development impact fee program are set forth in Government Code Sections 66000-66025 (the "Mitigation Fee Act"), the bulk of which were adopted as AB 1600 and thus are commonly referred to as “AB 1600 requirements.” A development impact fee is not a tax or special assessment; by its definition, a fee is voluntary and must be reasonably related to the cost of the service provided by the local agency.

AB 1600 mitigation fees imposed by county ordinance are required to be adjusted on an annual basis, with the exception of the Quimby and Fire fees. The mitigation fees are adjusted automatically on July 1st of each fiscal year, by a percentage equal to the appropriate engineering Construction Cost Index as published by Engineering News Record (ENR) for the preceding twelve months.

Local

County of Los Angeles All-Hazard Mitigation Plan (AHMP)

The 2020 County of Los Angeles All-Hazard Mitigation Plan (AHMP) conforms to the requirements of Federal Emergency Management Agency (FEMA) Disaster Mitigation Act of 2000. The 2020 AHMP replaces the AHMP that was approved in 2014. The County developed the 2020 AHMP to cover mitigation responsibilities of County departments (including LACoFD). It helps ensure the most effective allocation of resources for the maximum benefit and protection of the public in time of emergency.

City of Lawndale Local Hazard Mitigation Plan (LHMP)

The City adopted the Local Hazard Mitigation Plan (LHMP) in 2016 to assess natural hazard risk and incorporate mitigation strategies to reduce the potential impact from hazards. It complies with the Federal Disaster Mitigation Act (2000), and Federal Register 44 CFR Parts 201 and 206. The City's Emergency Preparedness Coordinator managed preparation of the LHMP in cooperation with the City’s other departments, community stakeholders, partner jurisdictions, agencies and organizations, and members of the public.

City of Lawndale Emergency Operations Plan (EOP)

The City adopted the Emergency Operations Plan (EOP) in 2011, which was updated in 2015. The EOP addresses the City’s planned response to natural or human-caused disasters, provides an overview of operational concepts, and identifies components of the City’s emergency/disaster management organization within the Standardized Emergency Management System (SEMS), the National Incident Management System (NIMS) and the Incident Command System (ICS). The EOP also describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support.

City of Lawndale Municipal Code

Lawndale Municipal Code Chapter 2.44, *Disaster Council,* provides for the preparation and carrying out of plans for the protection of persons and property within the City in the event of an emergency; the direction of the emergency organization; and the coordination of the emergency functions of the City with all other public agencies, corporations, organizations and affected private persons.

Municipal Code Chapter 15.20, *Fire Code*, adopts and incorporates the California Fire Code, as amended by Title 32 the Los Angeles County Fire Code. The Fire Code sets fire safety related building standards and practices to safeguard life and property.

POLICE PROTECTION

State

California Penal Code

The California Penal Code establishes the basis for the application of criminal law in California.

SCHOOLS

State

Kindergarten-University Public Education Facilities Bond Act of 2002 (Prop 47)

This act was approved by California voters in November 2002 and provides for a bond issue to fund necessary education facilities to relieve overcrowding and to repair older schools. Funds will be targeted at areas of greatest need and must be spent according to strict accountability measures. Funds will also be used to upgrade and build new classrooms in the California Community Colleges, the California State University, and the University of California in order to provide adequate higher education facilities to accommodate growing student enrollment.

Assembly Bill 2926

The State of California has traditionally been responsible for the funding of local public schools. To assist in providing facilities to serve students generated by new development projects, the State passed Assembly Bill (AB) 2926 in 1986. AB 2926 allowed school districts to collect impact fees from developers of new residential and commercial/industrial building space. Development impact fees were also referenced in the 1987 Leroy Greene Lease-Purchase Act, which required school districts to contribute a matching share of project costs for construction, modernization, or reconstruction.

Senate Bill 50 & Proposition 1A

Senate Bill (SB) 50 and Proposition 1A provide comprehensive school facilities financing and reform program, in part by authorizing a school facilities bond issue, school construction cost containment provisions, and an eight-year suspension of the Mira, Hart, and Murrieta court cases, which allowed local governments to deny new development on the basis of inadequate schools. Specifically, the bond funds were to provide for new construction and for reconstruction/modernization needs.

The provisions of SB 50 prohibit local agencies from denying either legislative or adjudicative land use approvals on the basis that school facilities are inadequate and reinstates the school facility fee cap for

legislative actions (e.g., General Plan amendments, specific plan adoption, zoning plan amendments) as was allowed under the Mira, Hart, and Murrieta court cases. SB 50 states that these fees are the exclusive means of considering as well as mitigating school impacts caused by new development. Accordingly, these fees limit the scope of impact review in an EIR, the mitigation that can be imposed, and the findings a lead agency must make in justifying its approval of a Project (Government Code Sections 65995-65996). According to Government Code Section 65996, the development fees authorized by SB 50 are deemed to be "full and complete school facilities mitigation." These provisions remain in place as long as subsequent State bonds are approved and available.

SB 50 also establishes three levels of Developer Fees that may be imposed upon new development by the governing board of a school district depending upon certain conditions within a district. Level One Fees are the statutory fees, which can be adjusted for inflation every two years. Level Two Fees allow school districts to impose fees beyond the base statutory cap, under specific circumstances. Level Three Fees come into effect if the State runs out of bond funds after 2006, which would allow school districts to impose 100 percent of the cost of the school facility or mitigation minus any local dedicated school monies. The school fee amounts provided for in Government Code Sections 65995, 65995.5, and 65995.7 would constitute full and complete mitigation for school facilities.

In order to accommodate students from new development projects, school districts may alternatively finance new schools through special school construction funding resolutions and/or agreements between developers, the affected school districts, and occasionally, other local governmental agencies. These special resolutions and agreements often allow school districts to realize school mitigation funds in excess of the developer fees allowed under SB 50.

The passage of Proposition 1A in 1998 created the School Facility Program (SFP), in order to streamline the process districts go through to obtain State funding. Pursuant to the SFP, funding for new construction and modernization is provided by the State in the form of per-pupil grants. Generally, projects also require local matching funds. The SFP also implemented numerous reforms intended to streamline the application process, simplify the State facilities program, and create a more transparent and equitable funding mechanism.

5.15.3 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to public services. A significant impact will occur if implementation of the proposed Project would:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response to times or other performance objectives for any of the public services:
    - Fire Protection (refer to Impact Statement PS-1);
    - Police Protection (refer to Impact Statement PS-2);
    - Schools (refer to Impact Statement PS-3);
    - Parks (refer to EIR Section 5.16); and
    - Other Public Facilities (refer to Impact Statement PS-4).

5.15.4 IMPACTS AND MITIGATION MEASURES

PS-1: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **FIRE PROTECTION AND EMERGENCY SERVICES**

Impact Analysis: Development accommodated under the General Plan Update would result in additional residents and businesses in the City. Based on the anticipated growth, as described in Section 3.0, *Project Description*, and summarized in Table 3-4, *General Plan 2045 Buildout by Land Use Designation*, 2045 buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units, an additional population of 9,482 people, an additional 808,864 square feet of non-residential building square footage, and an additional 2,738 jobs within the Planning Area.

According to LACoFD, there are no plans to expand Station 21 and/or develop a new fire station for Lawndale. Future development projected in the General Plan Update may result in the need for additional LACoFD resources (i.e., additional staffing, equipment, expanded/new facilities). At this time, it is unknown whether LACoFD would need to expand or construct new facilities to meet the demand of future development in the Planning Area. Future development is assumed to occur over time through 2045; thus, any increase in demand for fire protection services would occur gradually as additional development and associated population growth is added to the City. The General Plan Update includes a range of policies and actions to ensure that fire protection and emergency services are provided in a timely fashion, are adequately funded, are coordinated between the City and the LACoFD, and that new development funds its fair share of services. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities

needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Public Safety Element Policy PS-1.5 supports policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1e directs the investigation and pursuit of available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment. Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 directs the collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a promotes the coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region. LACoFD would continue to regularly monitor fire department resources to ensure that adequate facilities, staffing, and equipment are available to serve existing and future development and population increases. Further, as development occurs, a proportional increase in property tax, charges for LACoFD services, and other funding sources would increase and offset impacts of new development on LACoFD's existing resources in the City.

Future site-specific development would be required to comply with applicable City, County, and State code and ordinance requirements for fire protection. The Lawndale Municipal Code Chapter 15.20, *Fire Code*, adopts and incorporates the California Fire Code, as amended by Title 32 the Los Angeles County Fire Code, by reference. As part of the development review process, site-specific development proposals would be required to comply with standard LACoFD conditions of approval. LACoFD Fire Prevention Division reviews site plans to ensure that access and water system requirements, which would enhance the proposed development's fire protection, are adequate. Specifically, LACoFD addresses fire and life safety requirements for project construction at the fire plan check stage. This includes plan review of the design details of the architectural, structural, mechanical, plumbing, and electrical systems. Implementation of all Fire Code requirements would reduce potential impacts concerning fire protection services associated with site-specific development.

As previously stated, new fire facilities would potentially be needed to serve growth contemplated in the General Plan Update. The environmental effect of providing the fire protection and emergency services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does

not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects anticipated under the General Plan Update. These impacts are described in the relevant sections (Sections 5.1 through 5.20, and 6.0) of this Draft EIR. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of fire protection and emergency services are less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.5: **Public Services for Quality of Life.** Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

PUBLIC SAFETY ELEMENT

Policy PS-1.5: **Resources.** Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

Policy PS-4.1: **Fire Protection Services.** Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.4: **Building Fire Codes.** Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: **Regional Issues.** Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: **Cost Sharing.** Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: **Regional Services Providers.** Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: **Capital Improvement Planning.** Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

PS-2: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **POLICE PROTECTION**

Impact Analysis: Development accommodated under the General Plan Update would result in additional residents and businesses in the City, which would increase demand for police protection services provided by LASD.

Additional facilities, personnel, and equipment may be required to maintain adequate levels of police protection within the City. Development assumed by the General Plan Update is expected to occur gradually over time through 2045; thus, any increase in demand for police protection services would similarly occur gradually as additional development and associated population growth is added to the Planning Area, which also depends on the economic market demands. As individual projects are proposed within the Planning Area, LASD service levels and staffing requirements would be evaluated on an annual basis to determine if additional staffing and/or facilities would be required. If the General Plan Update is adopted, LASD would utilize the projected growth in population, dwelling units, and nonresidential development to effectively plan for increases in population and police protection service demand.

The General Plan Update includes a range of policies and actions, to ensure that adequate police protection services are provided to serve growth associated with implementation of the General Plan Update. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Public Safety Element Policy PS-1.5 supports policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1e directs the investigation and pursuit of available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment. Proposed Community

Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 ensures collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a directs the coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

The environmental effect of providing police protection services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development, nor does it designate specific sites for new or expanded public facilities. If new police facilities are needed to serve growth associated with future development anticipated by the General Plan Update, the facilities would most likely be provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects anticipated under the General Plan Update. These impacts are described in the relevant sections (Sections 5.1 through 5.20, and 6.0) of this Draft EIR. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of police protection services are less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.5: **Public Services for Quality of Life.** Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

PUBLIC SAFETY ELEMENT

Policy PS-1.5: **Resources.** Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: **Regional Issues.** Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: **Cost Sharing.** Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: **Regional Services Providers.** Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: **Capital Improvement Planning.** Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

PS-3: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **SCHOOLS**

Impact Analysis: Implementation of the General Plan Update could result in the development of up to 3,942 housing units over existing conditions. School districts typically use student generation factors to determine the potential number of students that would be generated by the amount of residential development in order to accurately anticipate the needs for new/expanded facilities. Table 5.15-2, *LESD/CVUHSD School Districts Student Generation Rates*, identifies the number of potential students that would be generated from development anticipated by the General Plan Update in 2045.

Table 5.15-2
LESD/CVUHSD School Districts Student Generation Rates

Grade Level	Student Generation Factor	Proposed Net Increase Dwelling Units	Total Students Generated
Elementary/Middle School	0.5	3,942	1,971
High School	0.2	3,942	789
		Total	**2,760**

Source: Jack Schreder & Associates, *Level I Developer Fee Study for Centinela Valley Union High School District*, May 26, 2017.

Assuming all new development anticipated under the proposed General Plan Update occurs within the LESD and CVUHSD's school boundary, the Project would generate approximately 2,760 students (1,971 elementary/middle school students and 789 high school students). As mentioned above, the CVUHSD presumes that school facilities have a useful life span of 20 years before modernization is needed in order to maintain the same level of service as previously existed; therefore, the costs of modernized/expanded school facilities are based on anticipated 20-year growth generated by new development within the CVUHSD district area.

The exact location of future development and associated student generation is currently unknown. However, future development projected within the General Plan Update is anticipated to occur gradually through 2045 and would be largely based on market demand. Thus, any increase in demand for school services would occur gradually as additional development occurs in the Planning Area. The General Plan Update includes policies and actions, to ensure that adequate services are provided to serve growth associated with implementation of the General Plan Update. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 ensures collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a directs coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region. Policy PF-6.1 encourages the maintenance of high-quality schools and diverse educational opportunities in Lawndale. Policy PF-6.3 directs the City to work with developers and the school districts to ensure the payment of fees, construction, and expansion of school facilities to address expected increases in school-age population. Action PF-6a directs the City to work with school districts to ensure adequate school facilities are provided and maintained in the community. This includes consultation with school districts during the processing of development proposals and requiring the mitigation of impacts to schools in compliance with State law.

School districts assess development impact fees against residential and non-residential development to mitigate impacts resulting from the increase in demand for school related services. Pursuant to SB 50, payment of fees to the applicable school district is considered full mitigation for project impacts, including impacts related to the provision of new or physically altered governmental facilities, need for new or

physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, or other performance objectives for schools. Therefore, individual development projects in accordance with the General Plan Update would be required to pay the statutory fees, so that school facilities can be constructed/expanded, if necessary, at the nearest sites to accommodate the impact of project-generated students, reducing impacts to a less than significant level.

The environmental effect of providing school services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development of new or expanded school facilities. If the school districts serving the City determine that new school facilities are needed to serve growth associated with future development anticipated by the General Plan Update, the schools would most likely be provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects anticipated under the General Plan Update. These impacts are described in the relevant sections (Sections 5.1 through 5.20, and 6.0) of this Draft EIR. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and development of school facilities would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of schools are less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.5: **Public Services for Quality of Life.** Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: **Regional Issues.** Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: **Cost Sharing.** Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: **Regional Services Providers.** Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: **Capital Improvement Planning.** Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy PF-6.1: **Education and Learning.** Continue to encourage the maintenance of high-quality schools and diverse educational opportunities in Lawndale.

Policy PF-6.2: **Lifelong Learning.** Proactively cooperate with the Lawndale Elementary School District and Centinela Valley Union High School District to encourage the provision of lifelong learning opportunities for persons living and working in Lawndale.

Policy PF-6.3: **School Facilities.** Work with developers and the school districts to ensure the payment of fees, construction, and expansion of school facilities to address expected increases in school-age population.

Action PF-6a: Continue to work with the school districts to ensure adequate school facilities are provided and maintained in the community. Specifically, the City should:

- During the processing of residential and non-residential development proposals, ensure the school districts are consulted regarding the potential impact of the project on educational services and facilities. When proposed developments cannot be served by existing facilities and services, the City shall work with the developer and the school district in exploring options for service provision and facility funding.
- Prior to approving a project that is likely to generate students, require the applicant to mitigate school impacts to the full extent permitted by State law through land dedications, payment of fees, participation in a special assessment district, or any combination of the above.
- Cooperate with school districts to update population projections, student generation formulas, potential school sites, and facilities improvement plans.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

PS-4: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **LIBRARY FACILITIES**

Impact Analysis: Development accommodated under the General Plan Update would result in additional residents and businesses in the City, which would potentially increase the demand for public services, including library services. The Lawndale Library is a part of, and is operated by, the LA County Library system.

Future development anticipated by the General Plan Update may result in the need for additional LA County Library resources (i.e., additional staffing, equipment, expanded/new facilities). At this time, it is

unknown whether LA County Library would need to expand or construct new facilities to meet the demand of future development in the Planning Area. Future development is assumed to occur over time through 2045; thus, any increase in demand for library services would occur gradually as additional development and associated population growth is added to the City. The County's library system would continue receiving support for library facilities and resources through the General Plan Update policies and actions. The General Plan Update includes policies and actions to ensure that library services are adequately funded, are coordinated between the City and the LA County Library, and that new development funds its fair share of services. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 ensures collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a directs coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region. Policy PF-6.6 directs the City to work with the LA County Library system to provide library facilities and services necessary to meet the needs of all segments of the community. Action PF-6b directs the City to work with the LA County Library system to ensure that library development keeps pace with overall City development and population growth.

The environmental effect of providing library services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects anticipated under the General Plan Update. These impacts are described in the relevant sections (Sections 5.1 through 5.20, and 6.0) of this Draft EIR. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of library services are less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.5: **Public Services for Quality of Life.** Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: **Regional Issues.** Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: **Cost Sharing.** Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: **Regional Services Providers.** Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: **Capital Improvement Planning.** Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy PF-6.6: **Libraries.** Work closely with the Los Angeles County Library system to provide library facilities and services necessary to meet the needs of all segments of the community.

Action PF-6b: Continue to work with the Los Angeles County Library system to ensure that library development keeps pace with overall City development and population growth.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.15.5 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis,* establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The geographic setting for public services considers City as well as the service area for LACoFD, LASD, LESD, CVUHSD, and LA County Library.

Would the Project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **Fire Protection**

Impact Analysis: As discussed, LACoFD provides fire protection services to the Planning Area. In addition, cumulative projects within the City would receive fire protection services from LACoFD. Similar to future development associated with Project implementation, cumulative development projects would be required to comply with standard LACoFD conditions of approval. LACoFD Fire Prevention Division reviews site plans to ensure that access and water system requirements, which would enhance the proposed development's fire protection, are adequate. Specifically, LACoFD addresses fire and life safety requirements for project construction at the fire plan check stage. This includes plan review of the design details of the architectural, structural, mechanical, plumbing, and electrical systems.

Project implementation may require new or the expanded fire protection facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded fire protection facilities. However, it is anticipated that if new facilities or expansion of facilities are determined necessary, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development projects under the Project. Thus, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts. Future development within the City and LACoFD service area would be reviewed to determine whether the development being proposed would require new or expanded facilities with the potential for causing significant environmental impacts. The provision of specific facilities or the expansion of facilities would undergo review pursuant to CEQA. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services, including fire protection, and fire hazards. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of fire facilities to a less than significant level. Thus, the Project's incremental impacts to the provision of fire protection services would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact

Would the Project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **Police Protection:**

Impact Analysis: As discussed, LASD provides police protection services to the Planning Area. In addition, cumulative projects within the City would receive police protection services from LASD. Similar to future development associated with the Project, the LASD would review cumulative development projects development plans and applicants would be required to comply with any specific conditions related to safety and security specified by the LASD.

Project implementation may require new or the expanded police protection facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded police facilities. However, it is anticipated that if new facilities or expansion of facilities are determined necessary, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development projects under the Project. Thus, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered police facilities, or the need for new or physically altered police facilities, the construction of which could cause significant environmental impacts. Future development within the City would be reviewed to determine whether the development being proposed would require new or expanded facilities with the potential for causing significant environmental impacts. The provision of specific facilities or the expansion of facilities would undergo review pursuant to CEQA. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services, including police protection. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of sheriffs' facilities to a less than significant level. Thus, the Project's incremental impacts to the provision of police protection services would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact

Would the Project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **Schools:**

Impact Analysis: Students generated by the implementation of the Project, combined with other relevant cumulative projects within the City and LESD and CVUHSD service areas would combine to result in increased demand on schools within the area. As discussed, CVUHSD has calculated the costs of

modernized/expanded school facilities based on anticipated growth generated by new development within the CVUHSD district area, which includes the City of Lawndale.

As discussed, the exact location of future development and associated student generation is currently unknown. Future development associated with the Project is anticipated to occur gradually through 2045 and would be largely based on market demand. Thus, any increase in demand for school services would occur gradually as additional development occurs in the Planning Area. Future residential development associated with implementation of the Project would be required to comply with SB 50, which would fully mitigate potential impacts related schools. Similarly, the cumulative development projects would be required to pay the statutory fees, so that school facilities can be constructed/expanded, if necessary, to accommodate future students. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of school facilities to a less-than-significant level. Therefore, the Project's incremental impacts relative to the provision of schools would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact

Would the Project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- **Other Public Facilities**

Impact Analysis: Future Project development and cumulative development may result in the need for additional LA County Library resources and other public facilities. As discussed, future development is assumed to occur over time through 2045; thus, any increase in demand for public services would occur gradually as additional development and associated population growth is added to the City. The General Plan Update includes policies to ensure that library services are adequately funded, are coordinated between the City and the LA County Library, and that new development funds its fair share of services.

Similar to the Project, cumulative development projects within the City would be required to comply with the General Plan Update policies and the established regulatory framework regarding the payment of fees. Any future development of library facilities or other public facilities to serve demand associated with implementation of the proposed Project and cumulative projects would be required to comply with applicable regulations, policies, and standards, and would be subject to CEQA review as appropriate.

Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of libraries and other public facilities to a less than significant level. Thus, the Project's incremental impacts relative to the provision of other public facilities would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact

5.15.6 SIGNIFICANT UNAVOIDABLE IMPACTS

Public Services impacts associated with the implementation of the General Plan Update would be less than significant; no significant unavoidable public service impacts would occur as a result of the General Plan Update.

5.16 PARKS AND RECREATION

This section describes the availability and anticipated demand on parks and recreation opportunities within the Planning Area, and identifies and addresses potential impacts from implementation of the General Plan Update related to parks and recreational facilities.

5.16.1 ENVIRONMENTAL SETTING

The City of Lawndale Parks and Recreation Division, under the Community Services Department, oversees and manages parks and recreational facilities within the City.

PARKS

Similar to many cities in Los Angeles County, Lawndale is a developed community and therefore has limited opportunities to expand its parks and recreation resources. The two primary forms of parkland within the City are City-owned parks and parks that are contracted through a Joint Powers Agreement with the Lawndale Elementary School District for utilization by the City's residents. There are six parks within Lawndale, as shown in Table 5.16-1, *Existing Parkland and Recreational Uses in the Planning Area.* There are no parks located within the City's Sphere of Influence (SOI).

Alondra Community Regional Park, located just outside of the Planning Area along the southern boundary of the SOI, also provides recreation opportunities to residents in Lawndale due to its close proximity. The 53-acre Alondra Park is part of the Los Angeles County parks system and includes amenities such as baseball/softball fields, playgrounds, picnic tables, a skate park, a splash pad, fishing lakes, fitness courses, outdoor stages, and basketball courts (Los Angeles County 2023).

Table 5.16-1
Existing Parkland and Recreational Uses in the Planning Area

Name	Acres	Location	Amenities
Hogan Park	0.75	4045 West 167th Street	6 Picnic Tables, 2 Playgrounds, 2 Picnic Shelters, 1 Outdoor Fitness Space, 1 Restroom and Open Green Space.
Hopper Park	0.63	4418 West 162nd Street	2 Covered Picnic Areas, 1 Fitness Zone, 1 Full-size Playground, 1 Mini Playground/Sand Play Area, 1 Restroom and Open Green Space.
Jane Addams Park*	4.59	15114 Firmona Avenue	3 Outdoor Basketball Courts, 3 Baseball Diamonds, 1 Multi-use Athletic Field, 3 Playgrounds, 1 Wading Pool, 1 Recreation Office, 2 Restrooms, 1 Picnic Area and Open Green Space.
Larry R. Rudolph Park	1.44	14725 Larch Avenue	1 Covered Picnic Area, 1 Fitness Zone, 1 Walking Trail, 1 Playground, 1 View Deck, 1 Performance Stage, 1 Restroom and Open Green Space.
Rogers/Anderson Park*	14.73	4161 West Manhattan Beach Boulevard	6 Outdoor Basketball Courts, 1 Full-size Baseball Field, 1 Soccer Field, 1 Multi-use Athletic Field, 2 Playgrounds, 1 Gymnasium, 1 Restroom and Open Green Space.
William Green Park*	4.06	4558 West 168th Street	6 Outdoor Basketball Courts, 1 Skin Softball Diamond, 1 Multi-use Athletic Field, 1 Recreation Office, 1 Community Room, 2 Playgrounds, 1 Restroom and Open Green Space.
Total	*26.2*

Notes:

* Designates parks contracted through Joint Powers Agreement with the Lawndale School District.

COMMUNITY RECREATION FACILITIES

In addition to the six parks shown in Table 5.16-1, Lawndale has one community recreational center and one community garden. The primary community recreation facility in Lawndale is the Harold E. Hofmann Community Center, located at 14700 Burin Avenue. The approximately 41,000 square foot Community Center features a multi-purpose room with a stage, full-service kitchen, meeting rooms, a dance room, a computer room, an exercise room, common areas, terraces, and offices for the City's Community Services Department. The Community Center offers programs, classes, and events for families and individuals of all ages. The McKenzie Community Garden, located at 4324 West 160th Street, consists of 44,200-square-foot garden plots available for lease to residents, along with storage sheds, a picnic area, and a restroom.

5.16.2 REGULATORY SETTING

STATE

Mitigation Fee Act

The California Mitigation Fee Act, Government Code Sections 66000, et seq., allows cities to establish fees which would be imposed upon development projects for the purpose of mitigating the impact that the development projects have upon the City's ability to provide specified public facilities. In order to comply with the Mitigation Fee Act, the City must follow four primary requirements: 1) Make certain determinations regarding the purpose and use of a fee and establish a nexus or connection between a development project or class of project and the public improvement being financed with the fee; 2) Segregate fee revenue from the General Fund in order to avoid commingling of capital facilities fees and general funds; 3) For fees that have been in the possession of the City for five years or more and for which the dollars have not been spent or committed to a project, the City must make findings each fiscal year describing the continuing need for the money; and 4) Refund any fees with interest for developer deposits for which the findings noted above cannot be made.

California Public Park Preservation Act of 1971

The California Public Park Preservation Act is the primary measure for protecting and preserving parkland in California. The legislation states that "No city, city and county, county, public district, or agency of the state, including any division department or agency of the state government, or public utility, shall acquire any real property, which property is in use as a public park at the time of such acquisition, for the purposes of utilizing such property for any non-park purpose, unless the acquiring entity pays or transfers to the legislative body of the entity operating the park sufficient compensation or land, or both."

Quimby Act

The Quimby Act of 1975, (California Government Code § 66477), commonly called the "Quimby Act", allows a city or county to pass an ordinance that requires, as a condition of approval of a subdivision, either the dedication of land, the payment of a fee in lieu of dedication, or a combination of both for park and recreational purposes allows a city or county to require a maximum parkland dedication standard of three acres of parkland per 1,000 residents for new subdivision development unless the jurisdiction can demonstrate that the amount of existing neighborhood and community parkland exceeds that limit. In accordance with Section 66477, a jurisdiction may establish a parkland dedication standard based on its existing parkland ratio, provided required dedications do not exceed five acres per 1,000 persons.

LOCAL

Lawndale Municipal Code

Lawndale Municipal Code Chapter 12.34, *Park Development Fees*, provides for the payment of park facilities impact fees applicable to dwelling units constructed, enlarged, or remodeled in the City.

5.16.3 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to recreational facilities and amenities as well as parks (listed under Public Services). The issues presented in the Initial Study Environmental Checklist for both parks and recreational facilities have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated (refer to Impact Statement PR-1);
- Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment (refer to Impact Statement PR-2); and/or
- Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response to times or other performance objectives for any of the public services: Parks (refer to Impact Statement PR-2)?

5.16.4 IMPACTS AND MITIGATION MEASURES

PR-1: Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Impact Analysis: Development accommodated under the General Plan Update is expected to result in increased population and employment growth within the Planning Area, and thus, an overall increase in the demand for parks and recreational facilities. Based on the anticipated growth, as described in Section 3.0, and summarized in Table 3-4, *General Plan 2045 Buildout by Land Use Designation*, 2045 buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units, resulting in an additional population of 9,482 people within the Planning Area. These new residents are expected to use park and recreational facilities, and this additional use may result in greater demands on parks and recreational facilities in the Planning Area such that deterioration of these facilities could occur or be accelerated. The additional demand on existing parks and recreational facilities would increase the need for maintenance and improvements. These improvements could have environmental impacts, although the exact impacts cannot be determined since the potential improvements are currently unknown.

As shown in Table 5.16-1, there are six parks totaling 26.2 acres within the Planning Area, indicating that the City currently provides approximately 0.7 acres of parkland for every 1,000 people, based on the current (2022) Planning Area population of 37,948. The City does not currently have an adopted standard of parkland acreage to residents. However, the General Plan Update does include the adoption of a parkland standard of 3.0 acres of parkland per 1,000 residents. The City's existing parkland deficit, based on the Quimby Act minimum ratio of 3.0 acres of parkland per 1,000 residents, is currently being offset

through dedication fees, pursuant to Lawndale Municipal Code Chapter 12.34, *Park Development Fees*, which provides for the payment of park facilities impact fees applicable to dwelling units constructed, enlarged, or remodeled in the City. The provision of new parks and recreation facilities would help to reduce the potential for adverse impacts and physical deterioration of existing parks and recreation facilities, by providing additional facilities to accommodate the demand for parks and recreation facilities. These new facilities would be provided at a pace and in locations appropriate to serve new development.

Development under the General Plan Update could indirectly lead to the construction of new parks and recreation facilities to serve new growth and to meet existing parks and recreation needs. The General Plan Update supports the creation of new parks and recreation facilities to accommodate a wide range of activities for all age groups. Proposed Resource Management Element Policy RM-1.1 strives to provide residents with a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities. Policy RM-1.2 strives to achieve a minimum parkland standard of three acres per 1,000 City residents. Policy RM-1.4 directs the City to actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs. Policy RM-1.5 directs City collaboration with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public. Policy RM-1.8 recognizes the value of non-traditional public and semi-public open space and encourages creativity and innovation during the development and provision of additional open space or parks to supplement the City's green space and parks. Action RM-1a directs the City to periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development. Action RM-1b directs the City to pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance. Action RM-1c directs the creation of a Master Parks Plan to guide the provision and maintenance of parkland in the City. Action RM-1d works with the Lawndale Elementary School District to maximize the joint use of facilities and pursues additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

The General Plan Update does not specifically propose any development projects, including parks. As a result, site-specific physical impacts of future park development and construction cannot be determined until projects are brought forward for review. As future parks and recreation projects are considered by the City, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Parks and recreation projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

In addition to ensuring that new and expanded parks and recreation facilities are provided to accommodate new growth, the General Plan Update includes policies and actions to ensure that parks and recreation facilities are adequately maintained and improved to serve both existing and planned growth. Proposed Land Use Element Policy LU-1.5 requires the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to regularly review and adjust population assumptions and forecasts in order to adequately plan for growth. Proposed Community Facilities Element Policy CF-1.1 maintains and finances the capital improvement program to ensure the timely implementation of the

General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy CF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Action CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Although implementation of the General Plan Update would cause an incremental increase in demand for parks in the future, this increase could be reduced to a less than significant level by the provision of public parkland and private on-site recreational amenities and through the payment of park fees, as established in Municipal Code Chapter 12.34, *Park Development Fees*. Compliance with and the implementation of applicable General Plan Update policies and actions and compliance with the City Municipal Code would ensure parks and recreational facilities would not be overused to the point of substantial deterioration.

As stated, the General Plan Update does not propose or approve the construction or expansion of parks or recreational facilities. Any new parks or recreational facilities that may be constructed in the future would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the parks and recreational facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects anticipated under the General Plan. These impacts are described in the relevant chapters (Sections 5.1 through 5.20, and 6.0) of this EIR. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts to parks and recreational facilities associated with implementation of the General Plan Update would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.5: **Public Services for Quality of Life.** Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.1: **Recreation Types.** Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.2: **Parkland Standard.** Achieve a minimum parkland standard of 3 acres per 1,000 City residents.

Policy RM-1.4: **Parkland Funding.** Actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs.

Policy RM-1.5: **Partnerships and Joint-Use Agreements.** Collaborate with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public.

Policy RM-1.8: **Creative Open Space and Parks.** Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

Action RM-1a: Periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1d: Continue to work with the Lawndale Elementary School District to maximize the joint use of facilities and pursue additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy CF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy CF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

PR-2: Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Parks?

Impact Analysis: No site-specific projects are proposed under the General Plan Update. As stated, 2045 buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units and an additional population of 9,482 people. Based on the General Plan Update's proposed standard of three acres per 1,000 residents, the increase in population due to implementation of the Project would require approximately 96.1 acres of additional parkland, for a total of 122.3 acres of parkland.

Construction of these future parks could result in environmental impacts. At the time future parks are proposed, they would require a separate environmental review and compliance with regulations in existence at that time, which would address potential environmental impacts related to the construction and operation of new parks. Furthermore, these future parks would be subject to General Plan Update policies and actions intended to protect the environment and the programmatic mitigation framework established in this EIR. Proposed Land Use Element Policy LU-1.5 requires the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to regularly review and adjust population assumptions and forecasts in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Resource Management Element Policy RM-1.1 strives to provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities. Policy RM-1.4 directs the City to actively pursue financing for parkland acquisition and maintenance, and allocates sufficient funding to park development to support the community's recreational needs. Policy RM-1.5 directs City collaboration with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public. Action RM-1a directs the City to periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development. Action RM-1b directs the City to pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance. Action RM-1c directs the creation of a Master Parks Plan to guide the provision and maintenance of parkland in the City. Action RM-1d works with the Lawndale Elementary School District to maximize the joint use of facilities and pursues additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs. Proposed Community Facilities Element Policy CF-1.1 maintains and finances the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy CF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Action CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Therefore, upon compliance with environmental regulations established at the time future park and recreational projects are proposed, and adherence to General Plan Update policies and actions, the environmental impacts associated with the construction or expansion of recreational facilities would less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.5: **Public Services for Quality of Life.** Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.1: **Recreation Types.** Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.4: **Parkland Funding.** Actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs.

Policy RM-1.5: **Partnerships and Joint-Use Agreements.** Collaborate with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public.

Action RM-1a: Periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1d: Continue to work with the Lawndale Elementary School District to maximize the joint use of facilities and pursue additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy CF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy CF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Action CF-1b Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.16.5 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis,* establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The geographic setting for parks and recreation facilities considers the City and County.

Would the project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Parks?

Would the Project, combined with other relevant cumulative projects, increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Would the Project, combined with other relevant cumulative projects, include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Impact Analysis: Future development associated with the General Plan Update, combined with other relevant cumulative projects, would bring new residents to the Planning Area. These new residents are expected to use existing park and recreational facilities, and this additional use may result in greater demands on parks and recreational facilities in the Planning Area such that deterioration of these facilities could occur or be accelerated. Additionally, the additional demand on existing parks and recreational facilities would increase the need for maintenance and improvements. These improvements could have potential environmental impacts, although the exact impacts cannot be determined since the potential improvements are currently unknown. As future parks and recreation projects are considered by the City, each project will be evaluated for conformance with the General Plan Update, Municipal Code, and other applicable regulations. Parks and recreation projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

As discussed, although implementation of the Project would cause an increase in demand for parks in the future, potential impacts could be reduced to a less than significant level through the payment of park fees, as established in Municipal Code Chapter 12.34, and adherence to local regulations established in the Municipal Code and General Plan Update policies and actions, which support the creation of new parks and recreation facilities, to accommodate a wide range of activities for all age groups. Similarly, cumulative development projects would be required to comply with Municipal Code and General Plan Update policies regarding parks and recreation facilities, including compliance with CEQA associated with any site-specific development of parks or recreational facilities. Thus, the Project's incremental impacts associated with parks and recreational facilities would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.16.6 SIGNIFICANT UNAVOIDABLE IMPACTS

Park and recreation impacts associated with implementation of the General Plan Update would be less than significant. No significant unavoidable impacts to parks and recreation facilities would occur as a result of the General Plan Update.

5.17 TRANSPORTATION

5.17.1 PURPOSE

This section describes the existing physical and operational conditions for the transportation system and provides an analysis of potential impacts to the transportation system associated with adoption and implementation of the General Plan Update. The impact analysis examines the roadway, transit, bicycle, and pedestrian components of the City's transportation system. This section is based on the *Lawndale General Plan CEQA Transportation Analysis*, prepared by Kittelson & Associates, Inc., dated July 12, 2023, and included as Appendix F, *Transportation Impact Analysis*.

Under Senate Bill 743 as of July 1, 2020, local agencies may no longer rely on roadway/intersection delay and capacity-based analyses for California Environmental Quality Act (CEQA) purposes. Agencies must analyze transportation impacts utilizing vehicle miles travelled (VMT), which measures the number of vehicle trips generated by a project and their average distance of travel to and from a project. These are calculated and assessed as rates (e.g., per capita for residential projects or per employee for commercial projects). The previous method of analyzing transportation impacts measured travel time delay at intersections and roadway segments and was assessed using a Level-of-Service (LOS) grade from LOS A to LOS F. Travel delay as measured by LOS is no longer a CEQA-related topic and is not discussed in this EIR.

5.17.2 ENVIRONMENTAL SETTING

EXISTING ROADWAY NETWORK

Freeways

Interstate 405 (I-405) is a major north-south interstate freeway that connects I-5 to coastal cities within the Los Angeles Basin, between west Los Angeles and Orange County. The freeway traverses the City of Lawndale from the northwest to the southeast.

Local Roadways

The City is supported by a network of core regional streets, including Hawthorne Boulevard, Inglewood Avenue, Prairie Avenue, Manhattan Beach Boulevard, Marine Avenue, Rosecrans Avenue, Redondo Beach Boulevard, and Artesia Boulevard, plus several smaller connecting streets that provide local connectivity. Much of the street network was designed to prioritize cars over other modes of transportation. This is demonstrated by the abundance of public parking, wide streets and travel lanes, and limited pedestrian and bicycle connectivity and amenities. Key streets within the City are discussed below.

Hawthorne Boulevard is a major north-south roadway that spans the length of the City. It is a six to eight lane corridor (with three to four lanes in each direction) with on-street parking and a wide center median which is used for parking in some sections. The travel lanes are generally 12 to 14 feet wide, with wider outside lanes to accommodate on-street parking. On-street curbside parallel parking is permitted on both sides of Hawthorne Boulevard during specific timeframes. Two-hour parking is permitted in the center median outside the hours of 2:00 a.m. to 4:00 a.m. The surrounding land issues are primarily commercial, and the corridor provides direct access to I-405 south of Manhattan Beach Boulevard. Hawthorne

Boulevard acts as a major transit corridor, serving transit riders through LA Metro lines 40 and 740 (Rapid), as well as through Lawndale Beat's Express and Residential Routes. The posted speed limit is 35 miles per hour. South of I-405, Hawthorne Boulevard is also known as California State Route 107 (SR-107). Hawthorne Boulevard is under Caltrans jurisdiction; however, the City of Lawndale maintains it within City limits.

Inglewood Avenue is a major north-south connection through the City and forms the majority of Lawndale's western boundary. Inglewood Avenue includes an interchange with I-405 south of Marine Avenue. South of I-405, where Inglewood Avenue abuts mostly residential land uses, the corridor is divided by a median. Three travel lanes are provided in each direction, with the outside lanes serving as flex lanes between through travel lanes and on-street parking. On-street parking is not permitted in the northbound direction from 7:00 a.m. to 9:00 a.m. daily and Monday and Thursdays from 4:00 p.m. to 7:00 a.m. In the southbound direction, on-street parking is not permitted from 3:00 p.m. to 7:00 p.m. and on Wednesdays from 11:00 a.m. to 2:00 p.m. North of I-405, the surrounding land use include commercial properties, and the roadway has two to three lanes in each direction with a center turn lane and no on-street parking. Between Marine Avenue and Rosecrans Avenue, there are several schools and a major commercial/shopping center. The posted speed limit is 40 miles per hour south of I-405 and 35 miles per hour north of I-405.

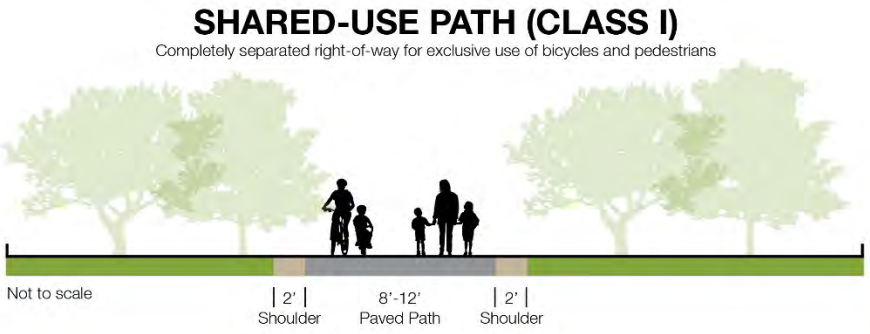
Prairie Avenue runs in the north-south direction and forms the eastern boundary of Lawndale. It primarily includes two travel lanes in each direction with a two-way center left-turn lane. On-street parking is available throughout the corridor, except for northbound, north of Manhattan Beach Boulevard. South of Marine Avenue, Prairie Avenue is mostly residential and is adjacent to Alondra Park and Golf Course, Will Rogers Middle School, and Anderson Elementary School. North of Marine Avenue, the roadway is surrounded by commercial uses, including a major shopping area at Rosecrans Avenue. The posted speed limit is 40 miles per hour.

Manhattan Beach Boulevard is an east-west corridor that connects Lawndale to Manhattan Beach to the west and Gardena to the east. It has two lanes in each direction, divided by a median. On-street parking is available on both sides of the street. Manhattan Beach Boulevard passes through an industrial area between Inglewood Avenue and I-405, crossing the Harbor Subdivision railway line. East of I-405, it provides access to residential areas and intermittent commercial development. Manhattan Beach Boulevard does not provide direct access to I-405. The posted speed limit is 40 miles per hour.

Marine Avenue is an east-west corridor with two lanes in each direction, undivided with an intermittent center left-turn lane. On-street parking is available in both directions except on Tuesday and Fridays from 4:00 a.m. to 7:00 a.m. Marine Avenue is mostly adjacent to commercial and light industrial land uses and provides access to several key destinations, including the LA Metro C Line (Green Line) station, Lawndale High School, and Jane Addams Park. The posted speed limit is 40 miles per hour.

Rosecrans Avenue is a major east-west corridor that forms the northern boundary of the City. Rosecrans Avenue has three travel lanes in each direction with a continuous center left-turn lane. On-street parking is available outside the hours of 6:30 a.m. to 6:00 p.m. on both sides of the road. Major commercial and residential developments and schools, including Leuzinger High School, are present along the corridor. The posted speed limit is 40 miles per hour.

Redondo Beach Boulevard runs along the southern boundary of the City and is a major thoroughfare connecting Lawndale to Gardena in the east. The corridor has two travel lanes in each direction with a continuous center left-turn lane. On-street parking is permitted throughout from 7:00 a.m. to 6:00 p.m., except Tuesdays and Fridays from 4:00 a.m. to 7:00 a.m. Land uses along the corridor are primarily a mix of multi-family residential and commercial. The corridor also provides access to the I-405 freeway. The posted speed limit is 35 miles per hour.



Artesia Boulevard is an east-west corridor along the southern boundary of the city. Artesia Boulevard has three travel lanes in the eastbound direction and two travel lanes in the westbound direction with a raised center median. On-street parking is available in the westbound direction only. The corridor provides direct access to numerous commercial uses, including the South Bay Galleria mall. The posted speed limit is 35 miles per hour.

BICYCLE FACILITIES

The City of Lawndale does not currently provide any bicycle facilities on its street network. Facilities have been proposed through several documents and plans, including the South Bay Bicycle Master Plan (2011), the Los Angeles County Bicycle Master Plan (2012), and the LA Metro Bicycle Transportation Strategic Plan (2006). However, there are currently no bike-related projects included in Lawndale's Capital Improvements Program.

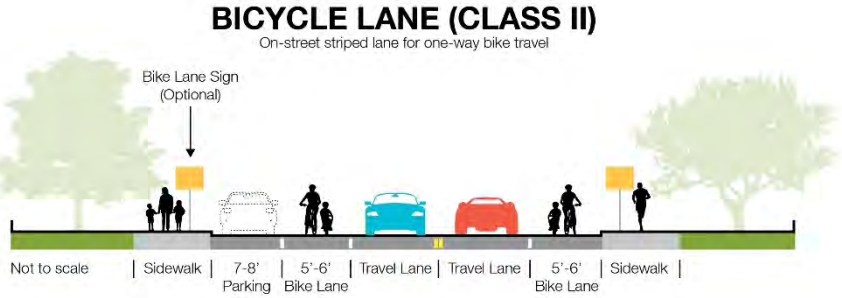


Figure 5.17-1, *Existing and Planned Bicycle Facilities*, displays existing and planned bicycle facilities in the City and its immediate vicinity. The California Department of Transportation (Caltrans) categorizes bicycle facilities into four types, as described and depicted in the illustrations below. Note that while the graphics include typical widths for the various facilities, the exact configuration of a bike facility can vary depending on its location and the jurisdiction's preferences.

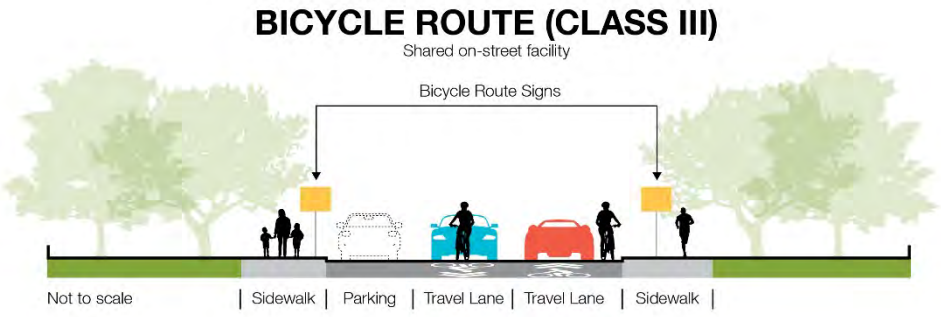
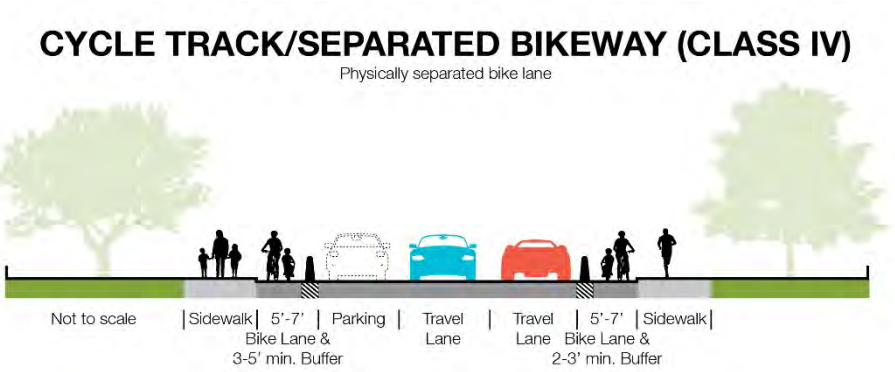
- **Class I Bikeway (Bike Path).** Also known as a shared path or multi-use path, a bike path is a paved right-of-way for bicycle travel that is completely separate from any street or highway.





- **Class II Bikeway (Bike Lane).** A striped and stenciled lane for one-way bicycle travel on a street or highway. This facility could include a buffered (typically painted) space between the bike lane and vehicle lane and the bike lane could be adjacent to on-street parking.

- **Class III Bikeway (Bike Route).** A signed route along a street where the bicyclist shares the right-of-way with motor vehicles. This facility can also be designated using a shared-lane marking (sharrow).

- **Class IV Bikeway (Separated Bike Lane).** A bikeway for the exclusive use of bicycles including a separation required between the separated bikeway and the through vehicular traffic. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

I-405 represents a major barrier for bicyclists in both the north/south and east/west directions. The only roadways that provide access under the freeway are Inglewood Avenue, Hawthorne Boulevard, Manhattan Beach Boulevard, 166th Street, and Redondo Beach Boulevard. The Metro rail right-of-way (ROW) also presents a challenge to bicyclists, especially in the residential area south of Manhattan Beach Boulevard. The only available railway crossings south of Manhattan Beach Boulevard are at 159th Street, 160th Street, 161st Street, 162nd Street, and 170th Street.

PEDESTRIAN FACILITIES

Most streets have paved sidewalks on both sides of the street. Crosswalks are generally provided at signalized or stop-controlled intersections on the arterial and collector roads. They are generally standard crosswalks and on all four approaches. Skewed crossings are common along principal arterials and cause longer pedestrian crossing times and distances. The City's overall automobile-centric design creates long walking distances due to the nature of larger block sizes.

The City of Lawndale offers several types of facilities and amenities that support walking in the City. The availability and quality of pedestrian facilities vary throughout the City and were analyzed using seven key factors as shown in 5.17-1, *Pedestrian Facility Conditions in Lawndale*.

Table 5.17-1
Pedestrian Facility Conditions in Lawndale

Factor	Assessment	Overview of Conditions
Sidewalk Availability	+	Sidewalks are generally provided on both sides of streets across the City. No significant gaps were identified across the City.
Sidewalk Conditions	−	Sidewalks on local streets in residential neighborhoods throughout the City are generally in good condition, free of cracks or uplifts. While sidewalks are present along major corridors (such as Redondo Beach Boulevard, Manhattan Beach Boulevard, Inglewood Avenue, and Marine Avenue) conditions range from poor to fair, with some areas experiencing uplifts, cracks, and uneven surfaces.
Crosswalk Availability	+	Marked crosswalks are consistently provided at major intersections across the City. While marked crosswalks are provided at major intersections, approximately half of the intersections have faded markings.
Shading	−	Shading is provided across the City in the form of tree landscaping on both sides of local streets. Less shading is observed, however, on Rosecrans Avenue, Prairie Avenue, and Crenshaw Boulevard.
Flat Grade	+	The City road network is generally flat without steep grade changes at the pedestrian level.
Buffer	−	Within Lawndale's residential neighborhoods, buffers consist of grass, trees, and other landscaping. Along major corridors, however, sidewalks are generally constructed adjacent to the roadways; many streets allow on-street parking.
Amenities	−	Within Lawndale's residential neighborhoods, the primary amenity is street landscaping. There are six neighborhood parks, including William Green Park, Roger Anderson Park, and Jane Addams Park, that are accessible to pedestrians. Major roads, however, offer few pedestrian-level amenities, and retail is generally not pedestrian-facing.

Legend			
+	Facilities are generally present and in good condition	−	Facilities are generally not present or in poor condition

TRANSIT SERVICE

Transit service in the Planning Area is provided primarily by the Los Angeles County Metropolitan Transportation Authority (LA Metro) and the Lawndale Beat. LA Metro provides bus and passenger rail service throughout Los Angeles County. The Lawndale Beat runs a fixed-route bus service throughout the City of Lawndale. The adjacent cities of Gardena and Torrance also provide local transit options that operate through Lawndale. Figure 5.17-2, *Existing and Planned Transit Routes*, displays existing and planned transit routes that serve Lawndale.

Los Angeles County Metropolitan Transportation Authority (LA Metro)

LA Metro provides bus, light rail, and heavy rail service for travel within Los Angeles County. LA Metro currently offers bus service throughout the City, including local and rapid fixed-route services. LA Metro's transit stops are often shared stops with the Lawndale Beat. Three major shared transit stops are located just outside of the City limits: at the LA Metro C Line (Green Line) terminus near Marine Avenue and Redondo Beach Avenue; on Douglas Street north of Rosecrans Avenue; and at South Bay Galleria south of Artesia Boulevard.

Table 5.17-2, *LA Metro Bus Service in Lawndale*, describes the local LA Metro Bus routes in the City. While LA Metro does not offer rail service through Lawndale, the C Line (Green Line) ends just west of the City limits at the Redondo Beach Station on Marine Avenue, west of I-405. Metro has conducted an environmental analysis and is considering alignments to extend the C Line (Green Line) approximately 4.6 miles south through Lawndale into Torrance by 2028.

Table 5.17-2
LA Metro Bus Service in Lawndale

Route	Route Type	Description
40	Local	Downtown Los Angeles to South Bay Galleria via Martin Luther King Boulevard and Hawthorne Boulevard
125	Local	El Segundo to Norwalk Station via Rosecrans Avenue
210	Local	Hollywood/Vine Station to South Bay Galleria via Crenshaw Boulevard
211/215	Local	Inglewood to South Bay Galleria via Prairie Avenue/Inglewood Avenue
Source: *Lawndale General Plan CEQA Transportation Analysis*, prepared by Kittelson & Associates, Inc., dated July 12, 2023.		

Lawndale Beat

Lawndale Beat provides a local transit option through the operation of two fixed-route bus routes: Express Route and Residential Route. The Express Route offers service from LA Metro's C Line (Green Line) Station on Marine Avenue to the Galleria at South Bay shopping area south of Artesia Boulevard on Hawthorne Boulevard. The Residential Route provides service to various residential areas, parks, schools, and shopping areas.

The Express Route operates with a 40-minute headway, running from 7:20 a.m. to 5:55 p.m. on weekdays, 8:40 a.m. to 5:55 p.m. on Saturdays, and 9:20 a.m. to 3:55 p.m. on Sundays and holidays. The Residential

Route has a 50-minute headway, running from 7:00 a.m. to 6:39 p.m. on weekdays, 8:40 a.m. to 5:49 p.m. on Saturdays, and 10:20 a.m. to 5:49 p.m. on Sundays and holidays. Stops for both routes are often shared with LA Metro routes.

Other Transit Agencies

The neighboring cities of Gardena and Torrance operate fixed-route bus service that serves areas within and surrounding Lawndale. Gardena's GTrans Line 1X runs along Marine Avenue through Lawndale, connecting Gardena to LA Metro's C Line (Green Line); and Line 3 runs along Redondo Beach Boulevard to South Bay Galleria. Torrance Transit's Lines 2, 8, and 13 also run through Lawndale along Artesia Boulevard, the City's southern boundary.

FREIGHT AND GOODS MOVEMENT

The Surface Transportation Assistance Act (STAA) of 1982 defines a network of state facilities as truck routes which accommodate large trucks. I-405, which runs through Lawndale, is an STAA-designated truck route. Lawndale's Municipal Code also designates several local roads as local truck routes. Changes to the truck route network are subject to public hearings and consideration by the Traffic Safety Commission and City Council prior to their adoption. These routes are described in Table 5.17-3, *Existing Truck Routes* and displayed in Figure 5.17-3, *Existing Truck Routes*.

Table 5.17-3
Existing Truck Routes

On Road	From Road	To Road	Direction of Travel

Redondo Beach Boulevard	Artesia Boulevard	Prairie Avenue	W
I-405	North of Manhattan Beach Boulevard	Redondo Beach Boulevard	N/S
Source: De Novo Planning, *City of Lawndale General Plan Existing Conditions Report*, 2023.			

Additional goods movement through the City is supported by the Burlington Northern Santa Fe (BNSF) Railroad. Currently, a freight rail runs through the City of Lawndale along the Harbor Subdivision line, crossing into Lawndale at Inglewood Avenue north of Manhattan Beach Boulevard and running south parallel to Condon Boulevard to the City limits. This route is currently being considered as a future alignment for the extension of LA Metro's C Line (Green Line) light rail.

EXISTING VEHICLE MILES TRAVELED

Table 5.17-4, *Existing Conditions (2023) VMT*, shows the existing VMT levels in Lawndale and the existing Los Angeles Countywide average VMT per capita and VMT per employee. Two types of VMT were determined:

- VMT per Capita: This calculation represents the VMT for all home-based trips that originate within an area, divided by the area's resident population.
- VMT per Employee: This calculation represents the VMT for all work-based trips that originate or end within an area, divided by that area's employee population.

As shown in Table 5.17-4, the City's existing VMT per capita is approximately 23 percent below the County average and the City's existing VMT per employee is approximately 10 percent below the County average.

Table 5.17-4
Existing Conditions (2023) VMT

Units	Los Angeles County 2023 Existing Conditions	Lawndale 2023 Existing Conditions
VMT per Capita	12.81	9.87
VMT per Employee	18.13	16.26
Source: Source: *Lawndale General Plan CEQA Transportation Analysis*, prepared by Kittelson & Associates, Inc., dated July 12, 2023.		

5.17.3 REGULATORY SETTING

FEDERAL

Americans With Disabilities Act

The Americans with Disabilities Act of 1990 (ADA) provides comprehensive rights and protections to individuals with disabilities. The goal of the ADA is to assure equality of opportunity, full participation, independent living, and economic self-sufficiency. To implement this goal, the United States Access Board has created accessibility guidelines for public rights-of-way. The guidelines address various issues, including roadway design practices, slope and terrain issues, pedestrian access to streets, sidewalks, curb ramps, street furnishings, pedestrian signals, parking, and other components of public rights-of-way.

The City of Lawndale is committed to ensure that people with disabilities have access to City programs, services, activities, and facilities. In all of its services, programs, events, activities, facilities, and public meetings, the City strives to eliminate any barriers that prohibit people with disabilities from full access to facilities.

Federal Highway Administration

The Federal Highway Administration (FHWA) is a Federal agency that focuses on national highway programs. FHWA administers and manages Federal highway programs and establishes national standards. The FHWA publishes the Manual on Uniform Traffic Control Devices (MUTCD) which specifies the standards for street markings, traffic signals, and street signs in the United States. The California Department of Transportation (Caltrans) developed the 2014 California MUTCD (Rev. 6) based on the FHWA MUTCD.

STATE

California Department of Transportation

The California Department of Transportation (Caltrans) is the primary State agency responsible for transportation oversight. One of its duties is the construction and maintenance of the State highway system. Caltrans has established standards for roadway traffic flow and developed procedures to determine if State-controlled facilities require improvements. For projects that may physically affect facilities or require access to a state highway, Caltrans requires encroachment permits before such activity

may be undertaken. For projects that would not physically affect facilities but may influence traffic flow and levels of services at such facilities, Caltrans may recommend measures to mitigate the traffic impacts of such projects.

Additionally, the following Caltrans procedures and directives are relevant to transportation improvements in the City:

- Caltrans recently updated its transportation analysis guidelines to reflect a statewide shift from LOS to VMT. Caltrans has provided guidance in three recent publications: Vehicle Miles Traveled-Focused Transportation Impact Study Guide (May 2020), Transportation Analysis Under CEQA: Evaluating Transportation Impacts of State Highway System Projects (September 2020), and Transportation Analysis Framework: Evaluating Transportation Impacts of State Highway System Projects (September 2020).
- Traffic Safety Bulletin 20-02-R1 (Interim Local Development Intergovernmental Review Safety Review Practitioners Guide) provides instructions to Caltrans staff, lead agencies, developers, and consultants conducting safety reviews for proposed land use projects and plans affecting the state highway system. This guidance establishes the safety impact review expectations for Caltrans and lead agencies to comply with CEQA. This guidance is part of the shift away from using LOS or other similar metrics to assess transportation impacts.
- The Caltrans Project Development Procedures Manual outlines pertinent statutory requirements, planning policies, and implementing procedures regarding transportation facilities. It is continually and incrementally updated to reflect changes in policy and procedures. For example, the most recent revision incorporates the Complete Streets policy from Deputy Directive 64-R1, which is detailed below.
    - Caltrans Deputy Directive 64 (2001) requires Caltrans to consider the needs of non-motorized travelers, including pedestrians, bicyclists, and persons with disabilities, in all programming, planning, maintenance, construction, operations, and project development activities and products. This includes incorporation of the best available standards in all of the Department's practices.
    - Caltrans Deputy Directive 64-R1 (2014) requires Caltrans to provide for the needs of travelers of all ages and abilities in all planning, programming, design, construction, operations, and maintenance activities and products on the state highway system. Caltrans supports bicycle, pedestrian, and transit travel with a focus on "complete streets" that begins early in system planning and continues through project construction and maintenance and operations.
- Caltrans Director's Policy 22 (2001) establishes support for balancing transportation needs with community goals. Caltrans seeks to involve and integrate community goals in the planning, design, construction, and maintenance and operations processes, including accommodating the needs of bicyclists and pedestrians.
- Caltrans, as a responsible agency under CEQA, is available for early consultation on a project to provide guidance on applicable transportation analysis methodologies or other transportation

related issues and is responsible for reviewing the traffic impact study for errors and omissions pertaining to the state highway facilities.

Assembly Bill 32, Senate Bill 32, and Senate Bill 375

Assembly Bill (AB) 32, also known as the Global Warming Solutions Act of 2006, committed California to reducing greenhouse gas (GHG) emissions to 1990 levels by 2020. In 2016, Senate Bill (SB) 32 added a new target: reducing statewide emissions to 40 percent below 1990 levels by 2030.

The California Air Resources Board (CARB) adopted its first *Climate Change Scoping Plan* (Scoping Plan) in 2008, which functions as a roadmap of CARB's plans to achieve GHG reductions in California required by Assembly Bill (AB) 32 through subsequently enacted regulations. Updates to the Scoping Plan occurred in 2013, 2017, and 2022. The 2022 Scoping Plan Update was adopted by the CARB on December 15, 2022. The 2022 Scoping Plan Update assesses progress towards the SB 32 GHG reduction target of at least 40 percent below 1990 emissions by 2030, while laying out a path to achieving carbon neutrality no later than 2045 and a reduction in anthropogenic emissions by 85 percent below 1990 levels.

SB 375 provides guidance for curbing emissions from cars and light trucks to help California comply with AB 32. There are five major components to SB 375:

- CARB will guide the adoption of GHG emission targets to be met by each Metropolitan Planning Organization (MPO) in the State.
- MPOs are required to create a Sustainable Communities Strategy (SCS) that provides a plan for meeting these regional targets. The SCS must be consistent with the Regional Transportation Plan (RTP).
- Regional housing elements and transportation plans must be synchronized on eight-year schedules. Also, the SCS and Regional Housing Needs Assessment (RHNA) must be consistent with each other.
- CEQA is streamlined for preferred development types such as mixed-use projects and transit-oriented developments (TODs) if they meet specific requirements.
- MPOs must use transportation and air emission modeling methodologies consistent with California Transportation Commission (CTC) guidelines.

California Complete Streets Act of 2008 (AB 1358)

Passed in 2008, California's Complete Streets Act took effect in 2011 and requires local jurisdictions to plan for land use transportation policies that reflect a "complete streets" approach to mobility. "Complete streets" comprises a suite of policies and street design guidelines which provide for the needs of all road users, including pedestrians, bicyclists, transit operators and riders, children, the elderly, and persons with disabilities. From 2011 onward, any local jurisdiction—county or city—that undertakes a substantive update of the circulation element of its general plan must consider "complete streets" and incorporate corresponding policies and programs. In 2010, the California Governor's Office of Planning and Research (OPR) released guidelines for compliance with this legislation which provide direction on how circulation elements can best plan for a variety of travel modes such as transit, walking, bicycling, and freight.

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law. SB 743 has fundamentally changed transportation impact analysis as part of CEQA compliance. In its *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018), OPR provides recommendations for jurisdictions to implement SB 743-compliant transportation analyses. OPR's recommendations are not binding and lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence. Key guidance includes:

- VMT is the most appropriate metric to evaluate a project's transportation impact.
- OPR recommends tour- and trip-based travel models to estimate VMT, but ultimately defers to local agencies to determine the appropriate tools.
- OPR recommends measuring VMT for residential and office projects on a "per rate" basis. Specifically, OPR recommends VMT per capita for residential projects and VMT per employee for office projects.
- OPR's recommended impact threshold for residential and office projects is VMT per capita fifteen percent below the city or regional average (whichever is applied). In other words, an office project that generates VMT per employee that is more than 85 percent of the regional VMT per employee could result in a significant impact. This threshold is in line with statewide greenhouse gas emission reduction targets.
- For retail projects, OPR recommends measuring the net decrease or increase in VMT in the study area with and without the project. The recommended impact threshold is any increase in total VMT.
- Lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence.
- Cities and counties still can use metrics such as LOS for other plans, studies, or network monitoring. However, LOS and similar metrics cannot constitute the sole basis for CEQA impacts.

For land use and transportation projects, SB 743-compliant CEQA analysis became mandatory on July 1, 2020.

CEQA Guidelines Section 15064.3 describes how transportation impacts are to be analyzed under SB 743. It states that in general transportation impacts are best measured by evaluating the project's vehicle miles traveled. For land use projects, VMT exceeding an applicable threshold of significance may indicate a significant impact.

The City of Lawndale has not adopted VMT criteria to evaluate transportation impacts under CEQA. For the purpose of this analysis, the Governor's Office Planning and Research (OPR) technical advisory is being used for the traffic impact analysis guidelines. The technical advisory serves as a tool for the City to evaluate the effects a development will have on the City's transportation infrastructure, identify improvements required to maintain the Level of Service (LOS) standards and address Section XV (Transportation/Traffic) of Appendix G of the California Environmental Quality Act (CEQA) Guidelines.

Assembly Bill 417

In October 2013, AB 417 created a statutory CEQA exemption for bicycle plans in urbanized areas. Before the passage of this bill, cities and counties that prepared bicycle plans were required to carry out a CEQA review. AB 417 exempts the following types of bicycle projects in an urbanized area:

- Restriping of streets and highways;
- Bicycle parking and storage;
- Signal timing to improve intersection operations; and
- Signage for bicycles, pedestrians, and vehicles.

However, not all bicycle plans are exempt if certain conditions are met (e.g., a new Class I bicycle trail through a sensitive natural area).

LOCAL

Southern California Association of Governments

Southern California Association of Governments (SCAG) is a federally designated MPO and is made up of six counties and 191 cities. SCAG develops long-range regional transportation plans including sustainable communities' strategies and growth forecast components, regional transportation improvement programs, regional housing needs allocations, and a portion of the South Coast Air Quality Management Plans.

On May 7, 2020, SCAG's Regional Council adopted Connect SoCal, the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which is an update of the previous 2016 RTP/SCS. The plan is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. Connect SoCal outlines more than $638 billion in transportation system investments in the region through 2045, and charts a path toward a more mobile, sustainable, and prosperous region. The 2020 RTP/SCS describes how the region can attain the GHG emission-reduction targets set by CARB by achieving a 19 percent reduction by 2035 compared to the 2005 level. Although the focus of the 2020 RTP/SCS is on GHG emission-reduction, compliance with and implementation of 2020 RTP/SCS policies and strategies would also have co-benefits of reducing per capita criteria air pollutant and TAC emissions associated with reduced per capita VMT. Improved air quality with implementation of the 2020 RTP/SCS policies would decrease reactive organic gases (ROG) (i.e., VOCs), CO, NOx, and $PM_{2.5}$.

SCAG's 2020 RTP/SCS builds on the land use policies that were incorporated into the 2016 RTP/SCS, and provides specific strategies for successful implementation. These strategies include implementing the Sustainable Communities Program (SCP) – Housing and Sustainable Development (HSD) which will both accelerate housing production as well as enable implementation of the Sustainable Communities Strategy of Connect SoCal; encouraging use of active transportation, or human powered transportation such as bicycles, tricycles, wheelchairs, electric wheelchairs/scooters, skates, and skateboards; and supporting alternative fueled vehicles. The 2020 RTP/SCS overall land use pattern reinforces the trend of focusing new housing and employment in infill areas well served by transit.

In addition, the 2020 RTP/SCS includes goals and strategies to promote active transportation and improve transportation demand management (TDM). The 2020 RTP/SCS strategies support local planning and projects that serve short trips, increase access to transit, expand understanding and consideration of public health in the development of local plans and projects, and support improvements in sidewalk quality, local bike networks, and neighborhood mobility areas. The 2020 RTP/SCS proposes to better align active transportation investments with land use and transportation strategies, increase competitiveness of local agencies for Federal and state funding, and to expand the potential for all people to use active transportation.

SCAG also develops and maintains the regional travel demand model. Several local and county agencies have developed subregional travel demand models based on the SCAG model.

Los Angeles County Metropolitan Transportation Authority

The Los Angeles County Metropolitan Transportation Agency (Metro) coordinates transportation planning efforts throughout Los Angeles County and programs local, regional, State and Federal funding for project implementation. Additionally, it prepares the Congestion Management Program (CMP), a plan mandated by California law to describe the strategies to address congestion problems on the CMP network, which includes State highways and principal arterials. The CMP Guidelines require analysis of the Metropolitan Transportation System (MTS) roadway and transit system and uses level of service standards to measure congestion and to determine how local governments meet CMP standards.

The 2020 Long Range Transportation Plan (LRTP) provides a detailed roadmap for how Metro will plan, build, operate, maintain, and partner for improved mobility in the next 30 years. The LRTP guides future funding plans and policies needed to move LA County forward for a more mobile, resilient, accessible and sustainable future. The adopted 2020 plan lays out a strategy for meeting transportation needs for all users in LA County and includes projects and other improvements for new and existing freeways, local streets, and public transit (paratransit, buses, rails, ferries), as well as facilities and programs to support bicycling and walking.

Metro has several countywide planning efforts that outline regional networks and provide guidance on best practices. These plans include the Countywide Multimodal Arterial Plan, the Countywide Goods Movement Plan, the Countywide Transit Plan, the Active Transportation Strategic Plan, and the First Last Mile Strategic Plan.

South Bay Bicycle Master Plan

The 2011 South Bay Bicycle Master Plan, prepared for the Los Angeles County Bicycle Coalition and the South Bay Bicycle Coalition, aims to develop and maintain a cohesive and connected bicycle network and policy strategy for the cities of El Segundo, Gardena, Hermosa Beach, Lawndale, Manhattan Beach, Redondo Beach, and Torrance. The plan proposes the installation of 213 additional miles of bike facilities, including over 20 miles of bicycle facilities within Lawndale. The plan generally recommends adding Class II bicycle lanes to the City's arterial streets and designating key collector and local streets as "bike-friendly streets."

South Bay Cities Council of Governments

The South Bay Cities Council of Governments (SBCCOG) is a joint powers authority government agency of 16 cities and Los Angeles County. SBCCOG developed the Local Travel Network (LTN) to support the growing local use of "micromobility" and the use of zero-emission, slow speed vehicles. Such devices include neighborhood electric vehicles (NEVs)—which appear similar to golf carts, e-bikes, non-motorized pedal bikes, e-scooters, e-bikes and other "novelty" zero-emission, slow speed mobility devices such as one-wheels (electric skateboards).

In May 2021, the SBCCOG board passed a resolution that directed the SBCCOG to begin implementation of the Local Travel Network in the South Bay. The scope of creating a 243-mile LTN necessitated it be implemented in phases. The initial phase was separated into two corridor projects:

- Phase 1: El Segundo, Manhattan Beach, Hermosa Beach, and Redondo Beach
- Phase 2: Hawthorne, Lawndale, Gardena, Inglewood, Carson, Lomita, Torrance, areas of unincorporated Los Angeles County as well as the communities of Wilmington, Harbor City, and San Pedro.

Lawndale Municipal Code

Municipal Code Chapter 10.50, *Truck Routes*, establishes designated truck routes for the primary use of commercial truck traffic through the City of Lawndale, specifically designated for use by licensed vehicles exceeding ten-thousand-pound gross weight.

Section 17.36.220, *Temporary Storage of Construction Materials*, and Section 17.36.230, *Temporary Storage- City Construction Materials and Other Public Agency Construction Materials*, regulate construction materials and equipment. In particular, Section 17.36.220 requires construction activities to keep adjacent sidewalks, public streets, and, alleys, to be kept free of trash, dirt, debris, or other material for the duration of the construction, as well as sixty days following substantial completion of such construction. Section 17.36.230 allows property in any zone to be used for the storage of materials, equipment and/or for a contractor's temporary office for any city construction project and/or other public agency construction projects.

Lawndale Parkway Design Policy Guidelines

First developed in 2018 and updated in July 2020, the Lawndale Parkway Design Policy Guidelines outlines specific guidelines and standards for parkways in the City. Parkways are defined as a portion of the public right-of-way that includes the strip of land between the street and the walkway. In Lawndale, property owners adjacent to the parkway are responsible for maintaining the area, except for street trees that are maintained by the City.

5.17.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to transportation. A significant transportation impact would occur if the Project would:

- Conflict with an applicable plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities (refer to Impact Statement TR-1);
- Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b) (refer to Impact Statement TR-2);
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) (refer to Impact Statement TR-3); and/or
- Result in inadequate emergency access (refer to Impact Statement TR-4).

VEHICLE MILES TRAVELED THRESHOLDS

As previously discussed, the City has not adopted VMT thresholds and has not published guidelines for the preparation of transportation studies. Under CEQA, lead agencies have the discretion to choose the most appropriate methodology to evaluate VMT and have discretion to choose their own significance thresholds. The Governor's Office of Planning and Research (OPR) provided a Technical Advisory containing guidelines related to VMT analysis methodology, thresholds, and mitigation. In Metropolitan Planning Organization (MPO) counties, OPR recommends that the significance threshold for residential and office projects be based on comparisons of VMT/capita and VMT/employee generated by the project to regional and city-wide average values. Lead agencies are encouraged in Section 15064.7 of the CEQA Guidelines to adopt significance thresholds through a formal adoption process but may also apply thresholds on a case-by-case basis. Since the City has not officially adopted VMT thresholds and guidelines for the preparation of transportation studies, this analysis relies on guidance from the OPR technical advisory to evaluate CEQA guidelines for VMT.

OPR recommended thresholds for residential and office land uses as follows:

- Residential: A project exceeding a level of 15% below existing VMT per capita for the city or region may indicate a significant transportation impact.
- Office: A project exceeding a level of 15% below existing regional VMT per employee may indicate a significant transportation impact.

For typical land development projects, such as residential, office, and commercial spaces, the VMT comparison is normally relative to the existing year (e.g., 2023). Since the General Plan Update is anticipated to take multiple years to be implemented and developed, it is more appropriate to calculate the project-generated VMT under the long-term 2045 horizon year (which would be consistent with the anticipated implementation of the General Plan). Based on this approach, if the VMT per capita or VMT per employee is lower in the horizon year with the General Plan Update than the respective metrics under existing conditions, the General Plan Update would have a less than significant impact on VMT. In summary, the following VMT thresholds apply as project impacts:

- The General Plan Update's residential generated VMT under 2045 horizon year conditions would be compared to 15 percent below the baseline region-wide VMT/capita average to determine impact significance.

- The General Plan Update's office generated VMT under 2045 horizon year conditions would be compared to 15 percent below the baseline region-wide VMT/employee average to determine impact significance.

A cumulative impact consists of an impact which is created as a result of the combination of the Project with other projects causing related impacts. A plan/project has cumulatively considerable environmental effects (i.e., is significant) when the incremental effects of the plan/project are significant when viewed in connection with the effects of other projects, including probable future projects. According to OPR's Technical Advisory, a project that falls below an efficiency-based threshold (such as VMT per capita or VMT per employee) that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact. Accordingly, a finding of a less than significant project impact would imply a less than significant cumulative impact. A significant cumulative impact may also occur if the project is not consistent with the RTP/SCS. In summary, a significant cumulative VMT impact would occur if the Project threshold is exceeded, or if the Project is determined to be inconsistent with the RTP/SCS.

Travel Demand Model

Existing (2023) VMT and future VMT were estimated using the Southern California Association of Governments (SCAG) travel demand model. Calculations for the VMT for the Project were determined for the transportation analysis zones (TAZs) that most closely represent the study area including the City limits and Sphere of Influence.

The daily activity patterns in the travel model are based on a statistical analysis of a household travel survey, where a representative sample of households were asked to track all daily activities and trips by all members of their household. The travel model was calibrated to these surveyed travel patterns, and also validated by its ability to replicate counted traffic volumes, transit ridership, and total VMT from traffic count sources.

The version of the SCAG model that has been used for VMT analysis in most communities in the SCAG region has a base year of 2012 and a forecast year of 2040.

Modeled Scenarios

The following scenarios were reviewed and developed to provide VMT and roadway segment forecasts:

- **2023 Existing Conditions:** corresponds to an interpolation between the SCAG model 2012 base year and the 2045 forecast conditions.
- **2045 No Project:** corresponds to 2045 horizon year conditions under the existing (currently adopted) General Plan. It consists of the adopted general plan network and land uses, and assumes allowable land use buildout with current zoning. Outside of the Lawndale Planning Area, the forecasts use the 2040 SCAG RTP land use forecast.
- **2045 Project:** corresponds to 2045 conditions with maximum development potential with the General Plan Update, including the Hawthorne Boulevard Specific Plan. Outside of the Lawndale Planning Area, the forecasts use the 2040 SCAG RTP land use forecast.

5.17.5 IMPACTS AND MITIGATION MEASURES

TR-1: Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities?

Impact Analysis:

CIRCULATION SYSTEM

No specific development projects are proposed as part of the Lawndale General Plan Update. The update will accommodate future growth in the City, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. The General Plan Update Mobility Element does not propose any roadway changes or increases in roadway capacity.

The Mobility Element developed as part of the General Plan Update contain goals, policies, and actions that support access to and the performance of the circulation system. Specifically, proposed Mobility Element Goal M-1 promotes a safe circulation system for the Planning Area. Policy M-1.5 ensures that new developments in the City provide appropriate and feasible improvements to improve traffic flow and roadway operations. Policy M-1.7 encourages the development of traffic calming strategies to slow traffic and promote safety. Action M-1b directs the City to continue to update and implement projects in the City's Capital Improvement Plan to maintain the roadway network. As a result, implementation of the General Plan Update would not conflict with applicable plans, polices, or ordinances related to vehicle circulation, and its impact on the City's circulation system is considered less than significant.

BICYCLE AND PEDESTRIAN CIRCULATION

The proposed Mobility Element references and incorporates the South Bay Bicycle Master Plan and the SBCCOG Local Travel Network, which include bicycling and walking improvements, and facilities that will improve non-motorized accessibility and connectivity throughout the City. The proposed Mobility Element includes new planned bike facilities on several key roadways including but not limited to Hawthorne Boulevard, Inglewood Avenue, Prairie Avenue, Rosecrans Avenue, Manhattan Beach Boulevard, and Artesia Boulevard. Implementation of the General Plan Update would also enhance the pedestrian experience by providing a more walkable and denser environment, especially in the HBSP area.

The Mobility Element developed as part of the General Plan Update contains goals, policies, and actions that support access to and the performance of bicycle and pedestrian facilities. Specifically, Mobility Element Policy M-3.1 requires the City to apply Complete Street principals, which are streets that are designed to provide safe travels for all modes of travel, to all transportation improvement projects. Policy M-6.4 directs the City to identify and eliminate gaps in sidewalks and bikeways to create a more complete active transportation network. Policy M-6.5 requires new developments in the City to provide bicycle and pedestrian facilities. Action M-6b directs the City to implement the South Bay Bicycle Master Plan during roadways projects as funding allows. The implementation of policies and actions contained in the General Plan Update would ensure that the Project would not conflict with a program plan, ordinance, or policy addressing bicycle facilities. Therefore, the Project's impact is considered less than significant.

PUBLIC TRANSIT SYSTEM

The City does not have defined measures of effectiveness for public transit service and circulation. The proposed General Plan Update would be expected to increase demand for travel via public transit given the proposed development and expected increase in residents and employees. This population and job growth within the City could increase the demand for public transit but also result in increased levels of vehicular traffic which could slow transit operations and impact transit reliability. The Mobility Element developed as part of the General Plan Update includes policies to support and enhance transit service. Specifically, Mobility Element Policy M-5.2 encourages the City to coordinate with local public transit provides to plan and improve local transit service and transit facilities. Policy M-5.3 requires that new developments construct transit facilities when appropriate. The implementation of policies and actions contained in the General Plan Update would ensure that the Project would not conflict with a program plan, ordinance, or policy addressing the public transit system. Therefore, the Project's impact is considered less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: **Balance Jobs and Housing.** Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-4.4: **Pedestrian-Scale Amenities.** Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

MOBILITY ELEMENT

Goal M-1: **Local Circulation System.** A community served by a safe circulation system with adequate traffic flow on arterial roadways and minimized adverse traffic effects on residential neighborhoods.

Policy M-1.5: **Development-Related Traffic Impacts.** Impose conditions on new development to provide appropriate and feasible improvements to enhance and/or prevent the impediment to traffic flow, parking, ADA accessibility and roadway operations.

Policy M-1.7: **Traffic Calming on Local Streets.** Encourage traffic calming strategies, such as diverters, median islands, and speed humps, and incorporation of traffic calming design in

residential and school areas to slow traffic and promote safety, while not reducing parking supply.

Action M-1a: Periodically review and assess the vehicular level of service along City facilities to determine, what, if any, improvements are warranted to maintain a safe and efficient flow of traffic throughout the City of Lawndale. Based on a thorough review of facility operations and funding availability, improvements should be included in the City's Capital Improvement Plan and/or required as part of project approval through the development review process.

Action M-1b: Continue to update and implement projects in the City's Capital Improvement Plan to maintain and repair roadways; construct and improve roadways to build out the roadway network to ensure adequate levels of service.

Action M-1e: Monitor cut-through traffic on local streets, especially along residential areas and schools, and where appropriate evaluate the applicability of traffic calming tools and implement improvements as necessary.

Policy M-2.3: **Facility Connections.** Plan and implement vehicular facilities, roadway treatments, active transportation facilities, transit routes, and goods movement network to relate to those in neighboring jurisdictions.

Goal M-3: **Complete Streets.** A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users

Policy M-3.1: **Complete Streets for Roadway Projects.** Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: **Multimodal Connectivity.** Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-3.3: **Streetscape Improvements.** Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

Policy M-3.6: **Safe Routes to School.** Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.1: **Transit Use.** Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2: **Improve Local Public Transit Service.** Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: **Transit Facilities.** Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Policy M-5.4: **C (Green) Line Service.** Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

Policy M-5.5: **C (Green) Line Stations.** Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

Policy M-5.6: **Effects of New Technologies on Transit Use.** Monitor the development of new mobility technologies and the potential effects on transit demand and how users access public transit.

Action M-5a: Continue on-going coordination with transit authorities toward the expansion of transit facilities.

ActionM-5b: Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

Goal M-6: **Active Transportation.** A community with a comprehensive network of pedestrian and bicycle facilities that encourages active transportation.

Policy M-6.1: **Bicycle Master Plan.** Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan’s facility recommendations as shown in Figure M-2.

Policy M-6.2: **Local Travel Network.** Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.4: **Sidewalk and Bikeway Gaps.** Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: **Bicycle/Pedestrian Facilities at New Developments.** Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: **Effects of New Technologies on Active Transportation.** Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.9: **Active Transportation Trails.** Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

Policy RM-1.10: **Service Area Radius.** Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-4.4: **Transportation Options.** Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: **Walkability.** Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: **Land Use Planning.** Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

ECONOMIC DEVELOPMENT ELEMENT

Policy ED-4.2: **Streetscape Improvements.** Enhance aesthetics and "curb appeal" of the Hawthorne corridor with strategic investments such as landscaping, outdoor lighting, wayfinding, entry and building façade improvements, and other initiatives that increase its attractiveness for businesses and consumers.

Policy ED-4.3: **Accessibility.** Enhance City and regional connectivity by supporting multimodal transportation options along Hawthorne Boulevard and other major City thoroughfares.

Action ED-4c: Implement strategies and actions in the Mobility Element and the Hawthorne Specific Boulevard Plan that promote infrastructure improvements and land use policies that will enhance economic activity and accessibility.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

TR-2: Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Impact Analysis: A significant Project VMT or cumulative VMT impact would occur:

- Project Threshold: if the Project's 2045 VMT per capita or VMT per employee exceeds 15 percent below the existing Los Angeles countywide average VMT per capita, or VMT per employee, respectively.
- Cumulative Threshold: if the Project threshold is exceeded, or if the Project is determined to be inconsistent with the RTP/SCS.

Table 5.17-5, *VMT Generated by Land Uses*, summarizes the VMT results for the 2023 existing conditions, the applicable thresholds to evaluate potential project impacts, and the future two VMT scenarios.

Table 5.17-5
VMT Generated by Land Uses

Units	Los Angeles County 2023 Existing Conditions	Lawndale 2023 Existing Conditions	Lawndale 2045 Project
VMT per Capita	12.81	9.87	9.19
VMT per Employee	18.13	16.26	14.78
Source: Source: *Lawndale General Plan CEQA Transportation Analysis*, prepared by Kittelson & Associates, Inc., dated July 12, 2023.			

Future conditions with the Project would result in decreased VMT per employee and VMT per capita in comparison to existing conditions. The 2045 Project VMT per capita is approximately 28 percent less than the existing Los Angeles countywide average VMT per capita and the 2045 Project VMT per employee is approximately 18 percent less than the existing Los Angeles countywide average VMT per employee. Thus,

the proposed General Plan Update would not exceed 15 percent below the existing Los Angeles countywide average VMT per capita or VMT per employee and therefore would result in a less than significant Project VMT impact.

The reductions of VMT from 2023 Existing Conditions to 2045 Project Conditions indicate that future development under the General Plan Update, in particular the proposed mixed-use development within the Hawthorne Boulevard Specific Plan area, would provide more opportunities for Lawndale residents and employees to access jobs and services within shorter distances. The shorter trip distances reduce VMT by vehicles, and also increase the likelihood that trips would be made by non-auto modes such as bicycling and walking. Improved transit service and accessibility to transit also help to reduce VMT even as travel activity increases.

A significant cumulative VMT impact would occur if the Project threshold is exceeded or if the Project is determined to be inconsistent with the 2020 RTP/SCS. As detailed in this section, the Project VMT threshold is not exceeded. In addition, the Project is consistent with SCAG's 2020 RTP/SCS. Implementation of the proposed Project would increase the local and regional housing supply to meet regional housing needs and locate housing in a transit-rich area. Additionally, the Project helps further the goals of SCAG's 2020 RTP/SCS. An analysis of the proposed Project's consistency with the relevant SCAG 2020 RTP/SCS goals adopted for the purpose of avoiding or mitigating an environmental effect is provided in Section 5.8, *Greenhouse Gas Emissions*, Table 5.8-5, *Project Consistency with the 2020-2045 RTP/SCS*.

The Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG's 2020 RTP/SCS goals. Therefore, the Project's cumulative impacts related to VMT would be less than significant.

The Land Use and Mobility elements developed as part of the General Plan Update includes policies to support the reduction of VMT, including increasing the balanced mix of residential and employment opportunities within the City with the proposed land uses.

Overall, implementation of the Project would result in reductions in VMT per capita and VMT per employee compared to 2023 existing conditions; impact thresholds would not be exceeded. Therefore, with respect to consistency with CEQA Guidelines Section 15064.3, subdivision (b), the impact of the Project would be less than significant and no mitigation would be required.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: **Balance Jobs and Housing.** Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-2.2: **Focused Areas for New Development.** Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-4.4: **Pedestrian-Scale Amenities.** Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

MOBILITY ELEMENT

Goal M-3: **Complete Streets.** A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users

Policy M-3.1: **Complete Streets for Roadway Projects.** Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: **Multimodal Connectivity.** Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-3.3: **Streetscape Improvements.** Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

Policy M-3.6: **Safe Routes to School.** Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.1: **Transit Use.** Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2: **Improve Local Public Transit Service.** Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: **Transit Facilities.** Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Policy M-5.4: **C (Green) Line Service.** Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

Policy M-5.5: **C (Green) Line Stations.** Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

Action M-5a: Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Action M-5b: Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

Goal M-6: **Active Transportation.** A community with a comprehensive network of pedestrian and bicycle facilities that encourages active transportation.

Policy M-6.1: **Bicycle Master Plan.** Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan’s facility recommendations as shown in Figure M-2.

Policy M-6.2: **Local Travel Network.** Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.4: **Sidewalk and Bikeway Gaps.** Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: **Bicycle/Pedestrian Facilities at New Developments.** Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: **Effects of New Technologies on Active Transportation.** Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.1: **Vehicle Miles Traveled Guidelines.** Require vehicle miles traveled (VMT) analysis for the purposes of environmental review under the California Environmental Quality Act (CEQA). The City shall continue to maintain Level of Service (LOS) standards for the purposes of planning and designing street improvements.

Policy M-9.2: **Transportation Demand Management.** Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Policy M-9.3: **Regional Coordination.** Encourage regional agencies such as Metro, the South Coast Air Quality Management District (SCAQMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

Policy M-9.4: **New Development.** Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

Action M-9a: Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.

Action M-9b: Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.9: **Active Transportation Trails.** Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

Policy RM-1.10: **Service Area Radius.** Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

TR-3: Would the project substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Impact Analysis: A significant Project impact would occur if the Project substantially increases hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

The Project does not propose changes to the Citywide roadway network and configuration. Geometric design features would generally be limited to individual projects' internal roadway networks, as well as driveways along City roads. Hazards are typically assessed at the individual project level when an actual design and construction of a circulation facility is proposed. Site-specific developments would be reviewed by the City to ensure adequate ingress and egress would be provided and site distance standards would be implemented. The City's design and construction standards and specifications provide for coordinated and standardized development of city facilities, including roadways. The standards apply to, regulate, and guide the design and preparation of plans, and the construction of streets, highways, alleys, drainage, traffic signals, site access, and related public improvements. As individual projects would undergo review by the City for approval and construction and would have to meet design guidelines, potential safety design hazards associated with land development projects would be addressed and result in less than significant impacts.

Prior to implementation, any improvements would be subject to a detailed review and future consideration by the City's Public Works engineering staff and other relevant City departments. An evaluation of the roadway alignments, intersection geometrics, and traffic control features would be needed at the project design level. Roadway improvements would have to be made in accordance with the City's roadway design guidelines and meet design guidelines in the California Manual of Uniform Traffic Control Devices and the Caltrans Roadway Design Manual.

The types of uses included as part of the General Plan Update are generally similar to existing and surrounding uses and thereby are compatible with the existing uses in the Planning Area and in the surrounding area. In addition, the Mobility Element developed as part of the General Plan Update contains policies in support of roadway network safety and reducing design hazards. This includes proposed Mobility Element Policy M-3.5 and Action M-3e which promotes managing and improving the City's transportation network to be safe, accessible and consistent with ADA and to include ADA accessible features as part of roadway infrastructure projects. Proposed Mobility Element M-3.4 encourages roadway design to include traffic calming measures to maintain safe vehicular speeds. Proposed Land Use Element Policy LU-3.1 considers the compatibility of new development with surrounding uses when reviewing development proposals. The implementation of goals, policies and actions contained in the General Plan Update and compliance with the Lawndale Municipal Code would ensure that new development in the Planning Area would not substantially increase hazards due to geometric design features or incompatible uses. Therefore, the impact of the Project with respect to design and incompatible use hazards would be considered less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Goal LU-3: **Land Use Compatibility.** A community where new development is sensitively integrated with existing development, including residential neighborhoods, and minimizes impacts on surrounding land uses.

Policy LU-3.1: **Surrounding Uses.** Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Policy LU-3.4: **Residential Uses.** Require that new residential development be designed to protect residents from potential conflicts with adjacent land uses, and other features including transportation facilities.

Action LU-3b: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

MOBILITY ELEMENT

Goal M-3: **Complete Streets.** A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users

Policy M-3.1: **Complete Streets for Roadway Projects.** Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.4: **Traffic Calming on Residential Streets.** Encourage traffic calming strategies and incorporation of traffic calming design in residential areas to slow traffic and promote safety.

Policy M-3.5: **ADA Accessibility.** Implement a transportation network that is safe, accessible, and consistent with the Americans with Disabilities Act (ADA), to allow mobility-impaired users, such as disabled persons and seniors, to safely travel within the City.

Policy M-3.6: **Safe Routes to School.** Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Action M-3e: Include ADA-accessible facilities as part of roadway infrastructure projects.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

TR-4: Would the project result in inadequate emergency access?

Impact Analysis: A significant project impact would occur if it results in inadequate emergency access. It is noted that the Project does not propose site-specific development; emergency accessibility is typically assessed at the project level.

Future development within the Planning Area is not anticipated to result in the substantial modification of roadways surrounding specific development sites or the placement of any permanent physical barriers on adjacent roadways. There is the potential that traffic lanes located immediately adjacent to a development site may be temporarily closed or controlled by construction personnel during construction activities. However, any temporary construction activity would adhere to Municipal Code Section 17.36.220, *Temporary Storage of Construction Materials*, which requires sidewalks, public streets, and, alleys adjacent to construction sites to be kept free of debris or other materials that could interfere with circulation for the duration of construction activities, as well as sixty days following substantial completion

of such construction. Additionally, the applicant of any proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. LACoFD would review the proposed development for access requirements, minimum driveway widths, fire apparatus access roads, fire lanes, signage, access devices and gates, access walkways, among other requirements to ensure adequate emergency access would be provided to and within the site. The proposed development would be required to comply with all applicable Building and Fire Code requirements and would submit construction plans to the Fire Department's Engineering Building Plan Check Unit for review and approval prior to issuance of any building permit. Approval by the Fire Department would ensure that construction and operation of future projects associated with implementation of the General Plan Update would not result in inadequate emergency access. In addition, the Public Safety and Mobility Elements developed as part of the General Plan Update contains policies in support of emergency access along local roads.

The proposed Mobility Element Goal M-3 promotes striving to maintain sufficient access and mobility for all modes of travel and users of the roadway network. The proposed Public Safety Element Policy PS-1.6 encourages improvements to emergency access and circulation throughout the community. Policy PS-4.3 requires all new developments to provide adequate access for emergency vehicles and evacuation as part of the development review process. The implementation of goals, policies and actions contained in the General Plan Update and compliance with the Lawndale Municipal Code would ensure that new development in the Planning Area would not result in inadequate emergency access. Therefore, the impact of the General Plan Update with respect to emergency access would be considered less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

MOBILITY ELEMENT

Policy M-2.1: **Freeway Interchanges.** Coordinate with Caltrans to develop appropriate configurations and operations at Interstate 405 interchange intersections to minimize congestion on City streets and create safe conditions.

Policy M-2.2: **Agency Coordination**: Coordinate with neighboring cities, telecom companies, and regional agencies such as County of Los Angeles, South Bay Cities Council of Governments, and Metro to meet the mobility needs of people living in, working in, or visiting Lawndale.

Goal M-3: **Complete Streets.** A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users.

Policy M-3.5: **ADA Accessibility.** Implement a transportation network that is safe, accessible, and consistent with the Americans with Disabilities Act (ADA), to allow mobility-impaired users, such as disabled persons and seniors, to safely travel within the City.

Action M-3e: Include ADA-accessible facilities as part of roadway infrastructure projects.

PUBLIC SAFETY ELEMENT

Policy PS-1.6: **Emergency Access.** Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Policy PS-4.3: **Emergency Access.** Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.17.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The cumulative projects' setting for transportation considers the region and projects within the City.

Would the project, combined with other related cumulative projects, conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Impact Analysis: A significantly cumulative impact would occur if the Project and cumulative projects conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Overall, the Project is a programmatic land use plan and is not proposing any changes to the circulation system. Any future development within the City would be assessed for consistency with local policies and ordinances, including the Municipal Code and General Plan goals and policies, as appropriate. Therefore, the Project's incremental contribution to cumulative impacts related to transit, roadway, bicycle, and pedestrian facilities would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Impact Analysis: As described above, with implementation of the General Plan Update under the City's cumulative buildout conditions, the 2045 Project VMT per capita is approximately 28 percent less than the existing Los Angeles countywide average VMT per capita and the 2045 Project VMT per employee is approximately 18 percent less than the existing Los Angeles countywide average VMT per employee. With implementation of the Project, the City's VMT per capita would not exceed 15 percent below the Los Angeles countywide average. Implementation of the Project would therefore not result in a cumulatively considerable impact relative to VMT.

A significant cumulative VMT impact would occur if the Project threshold is exceeded or if the Project is determined to be inconsistent with the 2020 RTP/SCS. As discussed, the Project would be consistent with the SCAG's 2020 RTP/SCS and would contribute toward furthering the goals of SCAG's 2020 RTP/SCS.

As the Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG's 2020 RTP-SCS goals, the proposed Project's incremental contribution to cumulative VMT impacts would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Impact Analysis: As described above, the types of uses that would be allowed as part of Project implementation are generally similar to existing and surrounding uses and thereby are compatible with the existing uses in the Planning Area and in the surrounding area. Additionally, site-specific developments would be reviewed by the City to ensure adequate ingress and egress would be provided and site distance standards would be implemented. Implementation of the Project would therefore not contribute to a cumulatively considerable impact relative to an increase in hazards due to a geometric design feature.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, result in inadequate emergency access?

Impact Analysis: A cumulatively significant project impact would occur if implementation of the Project with cumulative projects would result in inadequate emergency access. As noted, the Project does not propose site-specific development; emergency accessibility is typically assessed at the project level.

The Project does not propose changes to the citywide roadway network and configuration that would affect local emergency access. The proposed Project along with the cumulative development projects could result in the temporary closure or control of traffic lanes located immediately adjacent to a development site during construction activities. Any temporary closure would be required to comply with the Lawndale Municipal Code.

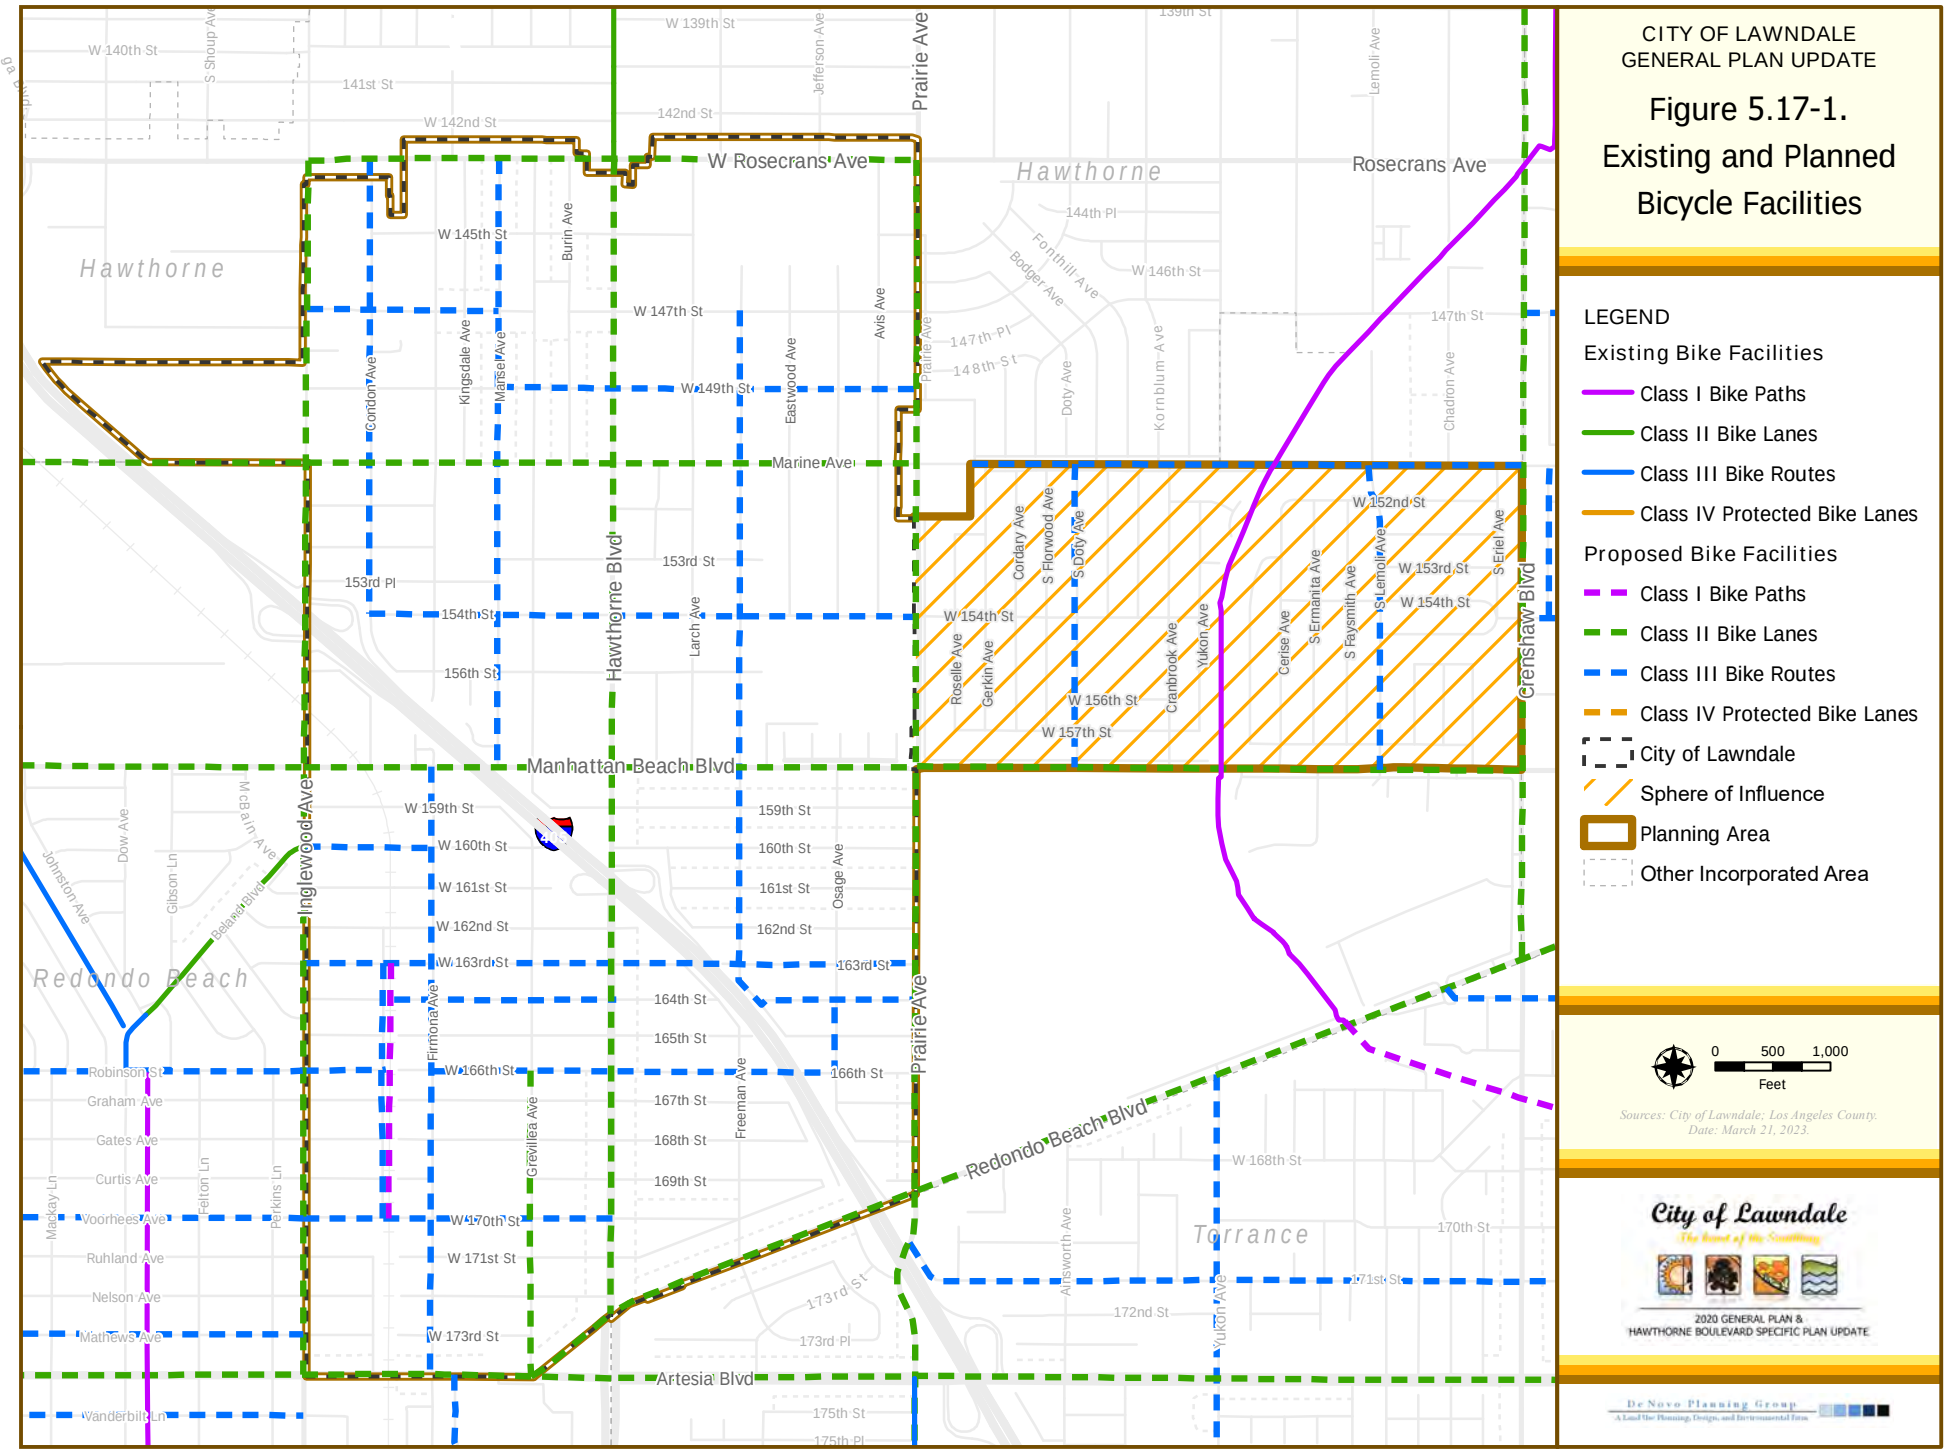
Similarly, the applicant of any proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building

permit. LACoFD would review all development projects for access requirements, minimum driveway widths, fire apparatus access roads, fire lanes, signage, access devices and gates, access walkways, among other requirements to ensure adequate emergency access would be provided to and within the site. Therefore, the proposed Project's incremental contribution to cumulative impacts relative to emergency access would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.



5.17.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Transportation impacts associated with implementation of the General Plan Update would be less than significant. No significant unavoidable transportation impacts would occur as a result of the General Plan Update

5.18 TRIBAL CULTURAL RESOURCES

5.18.1 PURPOSE

This section identifies existing tribal cultural resources within the Planning Area, and provides an analysis of potential impacts associated with implementation of the General Plan Update.

This section is primarily based upon the Cultural and Paleontological Resource Study for the General Plan Update: City of Lawndale, Los Angeles County (Cultural Study), prepared by Duke Cultural Resources Management, LLC and dated October 2020 and updated July 2023; refer to Appendix D, *Cultural and Paleontological Resources Assessment*.

One comment was received during the NOP comment period regarding tribal cultural resources. The comment was received from the Native American Heritage Commission (NAHC). The NAHC provides recommendations for cultural resources assessments and recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the Planning Area as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources.

Cultural resources, specifically historic and archeological resources, are discussed in Section 5.5, *Cultural Resources*.

5.18.2 ENVIRONMENTAL SETTING

ETHNOGRAPHIC OVERVIEW

The Planning Area is located within the boundaries of Gabrielino or Tongva Indians. The Gabrielino Indians are named because of their association with the Mission San Gabriel Arcángel. The Gabrielino are one of the least known Native American groups in California. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands.

The Gabrielino spoke a dialect of the Cupan group of the Takic language family. This language was part of the larger Uto-Aztecan language stock which migrated west from the Great Basin. The Gabrielino shared this language with their neighboring groups to the south and east.

Groups of Gabrielino lived in villages that were autonomous from other villages. Each village had access to hunting, collecting, and fishing areas. Villages were typically located in protected coves or canyons near water. Acorns were the most important food for the Gabrielino, although the types and quantity of different foods varied by season and locale. Other important sources of food were grass and many other seed types, deer, rabbit, jackrabbit, woodrat, mice, ground squirrels, quail, doves, ducks and other fowl, fish, shellfish, and marine mammals.

Typically, Gabrielino women gathered and men hunted, although work tasks often overlapped. Each village had a chief who controlled religious, economic, and warfare authorities. The chief had an assistant and an advisory council who assisted in important decisions and rituals. Each of these positions was

hereditary being passed down from generation to generation. According to mapping of Gabrielino villages undertaken by McCawley, no known villages would be located within the City of Lawndale. The two nearest Gabrielino villages, which may compose large areas rather than just a single location, are Swaanga, approximately 10 miles to the southeast, and Waachnga, approximately five miles to the northwest. The Kirkman-Harriman Pictorial and Historical Map of Los Angeles also does not identify any Gabrielino villages within the City.

TRIBAL CULTURAL RESOURCES

As discussed in Section 5.5, *Cultural Resources*, a search of the California Historic Resources Inventory System (CHRIS) at the South Central Coastal Information Center (SSCIC) located at the California State University, Fullerton was conducted on June 9, 2020. The records search covered the entire City of Lawndale. In addition, a variety of other sources were consulted and a reconnaissance field survey was conducted in order to gather baseline data on the present state of previously recorded cultural resources within the Planning Area.

Results of the SSCIC records search did not indicate the presence of recorded tribal cultural resources within the Planning Area; refer to Table 5.5-1.

NATIVE AMERICAN CONSULTATION

The City conducted Native American consultations under Senate Bill (SB) 18 (Chapter 905, Statutes of 2004), which requires local governments to consult with Tribes prior to making certain planning decisions and requires consultation and notice for a general and specific plan adoption or amendments in order to preserve, or mitigate impacts to, cultural places that may be affected. In addition to SB 18 consultation, the City conducted tribal consultations under the provisions of the California Environmental Quality Act (CEQA) (Public Resources Code section 21080.3.1 subdivisions (b), (d) and (e)), also known as Assembly Bill (AB) 52, which requires consulting for projects within the City's jurisdiction and within the traditional territory of the Tribal Organizations who have previously requested AB 52 consultations with the City.

As part of the General Plan Update, a Tribal Consultation List Request was submitted to the NAHC. The NAHC responded on May 17, 2021 and included a list of Native American individuals or tribal organizations that may have knowledge of cultural resources within or near the Project site. On July 14, 2021, the City sent letters via certified mail to five Native American individuals and/or Tribal Organizations in compliance with AB 52 and SB 18; refer to Appendix H, *Tribal Consultation Communications*. No Tribal Organizations responded requesting formal consultation with the City.

5.18.3 REGULATORY SETTING

FEDERAL

National Historic Preservation Act

Enacted in 1966 and amended in 2000, the National Historic Preservation Act (NHPA) declared a national policy of historic preservation and instituted a multifaceted program, administered by the Secretary of the Interior, to encourage the achievement of preservation goals at Federal, State, and local levels. The NHPA authorized the expansion and maintenance of the National Register of Historic Places (NRHP),

established the position of State Historic Preservation Officer (SHPO) and provided for the designation of State Review Boards, set up a mechanism to certify local governments to carry out the purposes of the NHPA, assisted Native American tribes to preserve their cultural heritage, and created the Advisory Council on Historic Preservation (ACHP).

National Register of Historic Places

Developed in 1981 pursuant to Title 36 CFR Section 60, the NRHP provides an authoritative guide to be used by Federal, State and local governments, private groups and citizens to identify the nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment. It should be noted that the listing of a private property on the NRHP does not prohibit any actions which may otherwise be taken by the property owner with respect to the property. The listing of sites in California to the National Register is initiated through an application submitted to the State Office of Historical Preservation. Applications deemed suitable for potential consideration are handled by the State Historic Preservation Officer. All NRHP listings for sites in California are also automatically added to the California Register of Historical Resources by the State of California. The listing of a site on the NRHP does not generally result in any specific physical protection. Among other things, however, it does create an additional level of CEQA (and NEPA, the National Environmental Protection Act) review to be satisfied prior to the approval of any discretionary action occurring that might adversely affect the resource.

American Indian Religious Freedom Act

This American Indian Religious Freedom Act became law in 1978 (Public Law 95-341, 42 USC 1996) in order to protect and preserve for American Indians their inherent right of freedom to believe, express and exercise their traditional religions. These religious rights extend to, but are not limited to, access to sites, use and possession of sacred objects and the freedom to worship through ceremonials and traditional rites.

Under this regulation, Federal agencies and departments are charged with evaluating their policies and procedures in consultation with native traditional religious leaders in order to eliminate interference with the free exercise of native religion. Agencies must determine and make appropriate changes necessary to protect and preserve Native American religious cultural rights and practices, and to accommodate access to and use of religious sites "to the extent that the use is practicable and not inconsistent with an agency's essential functions." The intent is to protect Native Americans' First Amendment right to "free exercise" of religion.

Native American Graves Protection and Repatriation Act

Enacted in 1990 under Title 25 U.S. Section 3001, the Native American Graves Protection and Repatriation Act (NAGPRA) describes the rights of Native American lineal descendants, Indian Tribes and Native Hawaiian organizations with respect to treatment, repatriation and disposition of Native American cultural items for which they can show a relationship of lineal descent or cultural affiliation. The statute also requires Federal agencies and museums receiving Federal funds to inventory holdings of Native American human remains and funerary objects and provide written summaries of other cultural items. In an attempt to recognize the religious and cultural significance of such sites and to protect their sacred integrity, it also provides for greater protection of Native American burial sites and more careful control

over the removal of Native American human remains, funerary objects, sacred objects and items of cultural patrimony on Federal and tribal lands.

STATE

California Environmental Quality Act

CEQA requires a lead agency determine whether a project may have a significant effect on historical resources (Public Resources Code Section 21084.1). A historical resource is a resource listed in, or determined to be eligible for listing, in the CRHR, a resource included in a local register of historical resources, or any object building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (State CEQA Guidelines, Section 15064.5[a][1-3]).

A resource is considered historically significant if it meets any of the following criteria:

1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2) Is associated with the lives of persons important in our past;
3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4) Has yielded, or may be likely to yield, information important in prehistory or history.

In addition, if it can be demonstrated that a project would cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that resources cannot be left undisturbed, mitigation measures are required (Public Resources Code Section 21083.2[a], [b], and [c]). Public Resources Code Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

California Register of Historical Resources (CRHR)

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by State and local agencies, private groups, and citizens to identify the State's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change." Certain properties, including those listed in or formally determined eligible for listing in the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys or designated by local landmarks programs, may be nominated

for inclusion in the CRHR. A resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the criteria modeled on the NRHP criteria.

Public Resources Code Section 5097 (Related to Cultural Resources)

California Public Resources Code (PRC) Section 5097 addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project; and establishes the California Native American Heritage Commission (NAHC) to resolve disputes regarding the disposition of such remains. It has been incorporated into Section 15064.5(e) of the CEQA Guidelines.

PRC Sections 5097.9 through 5097.991 establish that no public agency or private party using or occupying public property (or operating on under a public license, permit, grant, lease or contract made after July 1, 1977) shall in any manner interfere with the free expression or exercise of Native American religion as provided in the U.S. Constitution and the California Constitution. It also prohibits such agencies and parties from causing severe or irreparable damage to any Native American sanctified cemetery, place of worship, religious or ceremonial site or sacred shrine located on public property, except on a clear and convincing showing that the public interest and necessity so require it.

These sections also establish the state's NAHC. The NAHC is tasked with working to ensure the preservation and protection of Native American human remains, associated grave goods and cultural resources. Towards this end, the NAHC has a strategic plan for assisting the public, development communities, local and Federal agencies, educational institutions and California Native Americans to better understand problems relating to the protection and preservation of cultural resources and to serve as a tool to resolve these problems. In 2006, PRC Sections 5097.91 and 5097.98 were amended by Assembly Bill 2641 to authorize the NAHC to bring legal action when necessary to prevent damage to Native American burial grounds or places of worship. It also established more specific procedures to be implemented in the event that Native American remains are discovered.

California Government Code Sections 6254(r) and 6254.10

Section 6254(r) explicitly authorizes public agencies to withhold information from the public relating to "Native American graves, cemeteries, and sacred places maintained by the Native American Heritage Commission." Section 6254.10 specifically exempts from disclosure requests for "records that relate to archaeological site information and reports, maintained by, or in the possession of the Department of Parks and Recreation, the SHRC, the State Lands Commission, the NAHC, another state agency, or a local agency, including the records that the agency obtains through a consultation process between a Native American tribe and a state or local agency."

California Health and Safety Code (Sections 7050.5, 7051, and 7054)

Sections 7050.5, 7051, and 7054 of the California Health and Safety Code collectively address the illegality of interference with human burial remains (except as allowed under applicable sections of the PRC), as well as the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native

American skeletal remains are discovered during construction of a project, treatment of the remains prior to, during and after evaluation, and reburial procedures.

Native American Heritage Commission (NAHC)

The NAHC, created by statute in 1976 (AB 4239), is a nine-member body, appointed by the Governor to identify, catalog, and protect cultural resources (i.e., places of special religious or social significance to Native Americans, and known graves and cemeteries of Native Americans on private lands) in California. The NAHC is charged with the duty of preserving and ensuring accessibility of sacred sites and burials, the disposition of Native American human remains and burial items, maintaining an inventory of Native American sacred sites located on public lands (i.e., Sacred Lands File), and reviewing current administrative and statutory protections related to these sacred sites.

Senate Bill 18

Signed into law in 2004, Senate Bill (SB) 18 requires that cities and counties notify and consult with California Native American Tribes about proposed local land use planning decisions for the purpose of protecting traditional tribal cultural sites. Cities and counties must provide general and specific plan amendment proposals to California Native American Tribes that have been identified by the Native American Heritage Commission as having traditional lands located within the city's boundaries. If requested by the Native American Tribes, the city must also conduct consultations with the tribes prior to adopting or amending their general and specific plans.

Assembly Bill 52 (Gatto, 2014)

On September 25, 2014, Governor Brown signed AB 52. In recognition of California Native American tribal sovereignty and the unique relationship of California local governments and public agencies with California Native American tribal governments, and respecting the interests and roles of project proponents, of the stated goals of AB 52 are the following:

1) Recognize that California Native American prehistoric, historic, archaeological, cultural, and sacred places are essential elements in tribal cultural traditions, heritages, and identities.
2) Establish a new category of resources in CEQA called "tribal cultural resources" that considers the tribal cultural values in addition to the scientific and archaeological values when determining impacts and mitigation.
3) Establish examples of mitigation measures for tribal cultural resources that uphold the existing mitigation preference for historical and archaeological resources of preservation in place, if feasible.
4) Recognize that California Native American tribes may have expertise with regard to their tribal history and practices, which concern the tribal cultural resources with which they are traditionally and culturally affiliated. Because CEQA calls for a sufficient degree of analysis, tribal knowledge about the land and tribal cultural resources at issue should be included in environmental assessments for projects that may have a significant impact on those resources.
5) In recognition of their governmental status, establish a meaningful consultation process between California Native American tribal governments and lead agencies, respecting the interests and roles of all California Native American tribes and project proponents, and the level of required

confidentiality concerning tribal cultural resources, at the earliest possible point in CEQA environmental review process, so that tribal cultural resources can be identified, and culturally appropriate mitigation and mitigation monitoring programs can be considered by the decision making body of the lead agency.

6) Recognize the unique history of California Native American tribes and uphold existing rights of all California Native American tribes to participate in, and contribute their knowledge to, the environmental review process pursuant to CEQA.

7) Ensure that local and tribal governments, public agencies, and project proponents have information available, early in CEQA environmental review process, for purposes of identifying and addressing potential adverse impacts to tribal cultural resources and to reduce the potential for delay and conflicts in the environmental review process.

8) Enable California Native American tribes to manage and accept conveyances of, and act as caretakers of, tribal cultural resources.

9) Establish that a substantial adverse change to a tribal cultural resource has a significant effect on the environment.

AB 52 establishes a tribal consultation procedure designed to incorporate tribal knowledge into the CEQA environmental review and decision-making processes. Under AB 52, California tribes have the ability to establish, through a formal notice letter, a standing request to consult with a lead agency regarding any proposed project subject to CEQA in the geographic area with which the tribe is traditionally and culturally affiliated. Within 14 days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency must provide formal notification to the designated contact or tribal representative of traditionally and culturally affiliated California Native American tribes that have requested notice. Notice to the tribes must include a brief project description, the project location, and the lead agency's contact information. A tribe then has 30 days to request consultation. If the tribe does not respond in that period or writes to decline consultation, the lead agency has no further obligation. If the tribe requests consultation, the lead agency must begin the consultation within 30 days and prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report for that proposed project.

5.18.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to tribal cultural resources. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
    - Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k) (refer to Impact Statement TCR-1); or

- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe (refer to Impact Statement TCR-1).

5.18.5 IMPACTS AND MITIGATION MEASURES

TCR-1: Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- **Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?**
- **A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.**

Impact Analysis: No archeological or tribal cultural resources have been identified within the City. The Cultural Resources Assessment concludes the lack of identified resources is likely to be a consequence of development occurring prior to the implementation of CEQA, rather than a lack of archaeological sites. The Planning Area is located within the traditional territory of the Gabrielino or Tongva Indians. At the time of publication of this EIR, no Tribal Organizations have requested formal consultation with the City with regards to the Project.

Prehistoric archaeological sites and isolates are tribal cultural resources; additionally, plants and other natural resources, as well as geographic locations can also be tribal cultural resources. Grading of original in situ soils could expose buried tribal cultural resources and features including sacred sites. While the General Plan Update does not directly propose site-specific development with the potential to directly impact a tribal cultural resource, future development allowed under the General Plan Update could cause a substantial adverse change in the significance of previously undiscovered tribal cultural resources. This is considered a potentially significant impact.

The General Plan Update Resource Management Element includes policies and actions addressing tribal cultural resources. Proposed Policy RM-3.1 requires the protection of areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.2 encourages the City to promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations. Policy RM-3.5 requires consultation with Native

American tribes that may be impacted by proposed development and land use policy changes, in accordance with State, local, and Tribal intergovernmental consultation requirements. Action RM-3a requires the City to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to CEQA. Action RM-3e requires, for all development proposals within areas with the potential to contain prehistoric/historic resources, a study to be conducted by a professional archaeologist to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery. Action RM-3g requires, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, that the City halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains is permitted until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

Potential impacts to tribal cultural resources associated with future development would be reduced through implementation of General Plan Update policies and actions. Subsequent development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. Subsequent discretionary projects implemented in accordance with the General Plan Update would be subject to the provisions of AB 52 and may require tribal consultation with California Native American tribes that are traditionally and culturally affiliated with the Planning Area and who have previously requested AB 52 consultations with the City. Future AB 52 consultation may identify tribal cultural resources not yet found and formally recorded that could be impacted by subsequent projects. Compliance with the General Plan Update policies and actions and existing regulations would not cause a substantial adverse change in the significance of a tribal cultural resource and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: **Preservation.** Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.2: **Documentation.** Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

Policy RM-3.5: **Tribal Consultation.** In accordance with State, local, and Tribal intergovernmental consultation requirements, consult with Native American tribes that may be impacted by proposed development and land use policy changes, as necessary.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3e: For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

Action RM-3g: In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, the City shall halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.18.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis,* identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to tribal cultural resources may occur. The cumulative projects' regional geologic setting and tribal cultural resource deposit sensitivity would be similar; however, the local geologic setting and tribal cultural significance would vary according to the site location and specific conditions.

Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically

defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- **Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or**
- **A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?**

Impact Analysis: Tribal cultural resource impacts are site specific and generally do not combine to result in cumulative impacts. Construction of the individual development projects allowed under the land use designations of General Plan Update may result in the discovery and removal of tribal cultural resources. The General Plan Update policies and actions, as well as Federal, State, and local regulations, would reduce the risk to tribal cultural resources in the region. As discussed above, site-specific development with the potential to impact tribal cultural resources would require a resource assessment and coordination with the tribes to determine the potential for tribal cultural resources and identification of mitigation measures to reduce potential impacts associated with the proposed development. Adherence to the General Plan Update policies and actions, and existing Federal, State and local regulations would avoid and/or minimize a cumulative loss of tribal cultural resources. Therefore, the General Plan Update's incremental contribution to cumulative tribal cultural resource impacts would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.18.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Tribal cultural resources impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable tribal cultural impacts would occur as a result of the General Plan Update.

5.19 UTILITIES AND SERVICE SYSTEMS

5.19.1 PURPOSE

This section identifies existing water supply, water consumption, and distribution infrastructure; the nature and location of wastewater conveyance and treatment facilities and existing related infrastructure; stormwater discharge and drainage; solid waste services; and electric power, natural gas, and telecommunications services within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

5.19.2 ENVIRONMENTAL SETTING

WATER SUPPLIES

Key Terms

Acre-feet (AF): The volume of one acre of water to a depth of one foot. Each acre-foot of water is equal to approximately 325,851.4 gallons.

BGS: Below ground surface.

GPD: Gallons per day.

GPM: Gallons per minute.

Groundwater: Water that is underground and below the water table, as opposed to surface water, which flows across the ground surface. Water beneath the earth's surface fills the spaces in soil, gravel, or rock formations. Pockets of groundwater are often called "aquifers" and are the source of drinking water for a large percentage of the population in the United States. Groundwater is often extracted using wells which pump the water out of the ground and up to the surface. Groundwater is naturally replenished by surface water from precipitation, streams, and rivers when this recharge reaches the water table.

MG: Million gallons

MGD: Million gallons per day

Surface water: Water collected on the ground or from a stream, river, lake, wetland, or ocean. Surface water is replenished naturally through precipitation, but is lost naturally through evaporation and seepage into soil.

Water Distribution System

The Planning Area is served by the Golden State Water Company (GSWC) Southwest System (Golden State Water Company 2021). The City is located within GSWC's Southwest System Service Area, which serves the cities of Gardena and Lawndale; parts of the cities of Carson, Compton, El Segundo, Redondo Beach, Hawthorne and Inglewood; and the adjacent unincorporated communities of Athens, Del Aire, El Camino Village, Lennox and Gardena Heights. The GSWC Southwest 2020 Urban Water Management Plan (UWMP) was prepared in accordance with the California Urban Water Management Planning Act, Water

Code Sections 10610 through 10657. The 2020 UMWP addresses GSWC's water management planning efforts to assure adequate water supplies to meet forecast demands through 2045. According to the 2020 UWMP, GSWC's Southwest System services an area of approximately 25.2 square miles containing 47,013 residences.

Water Infrastructure

The City is underlain by potable and non-potable water infrastructure owned and maintained by GSWC and West Basin Municipal Water District (WBMWD), respectively. GIS records provided by GSWC indicate there is approximately 59 miles of pipelines ranging in diameter from 2-inches to 16-inches within the City's boundary as shown on Figure 5.19-1, *Existing Water Infrastructure* (West Yost Associates 2020).

According to the 2020 UWMP, the Southwest area receives potable water from local groundwater and imported water purchased from the Metropolitan Water District of Southern California (MWD). Groundwater is pumped from GSWC's 13 active wells, which pump local groundwater from the Central subbasin and West Coast subbasin of the Coastal Plain of Los Angeles Groundwater Basin, and have a combined capacity of 13,400 gallons per minute. This groundwater is injected with 12.5 percent liquid sodium hypochlorite and 19 percent ammonia hydroxide to provide a disinfectant residual in the distribution system. All wells are also fluoridated, and five wells are treated for manganese removal. Treated groundwater is then blended with water purchases from WBMWD and Central Basin Municipal Water District (CBMWD), which are both in turn supplied by MWD. Purchased water is delivered through 12 interconnections with WBMWD and CBMWD and is already treated to potable standards upon delivery to GSWC. The Southwest System does not include any treatment facilities besides at wellheads. The System also has 13 emergency interconnections to allow sharing of supplies during short term emergencies or during planned shutdowns of primary supply sources. These interconnections are with the City of Hawthorne, City of Inglewood, California Water Service Company, Liberty Utilities, and Los Angeles Department of Water and Power. Each of these is for emergencies only and is not used in normal operations.

GSWC Southwest receives recycled water supplies from the WBMWD. WBMWD delivers water from the West Basin Recycled Water Project where water is collected from the City of Los Angeles' Hyperion Waste Water Treatment Plant and treated to meet Title 22 standards for delivery and use. Secondary effluent from the Hyperion Wastewater Treatment Plant is pumped via the Hyperion Secondary Effluent Pump Station, which is owned and maintained by WBMWD, to WBMWD's main treatment facility, the Edward C. Little Water Recycling Facility. WBMWD owns all the existing recycled water pipelines that fall within the boundaries of the City and is planning to expand its distribution system to continue offsetting potable water demands in its service area (West Yost Associates 2020).

Projected Water Demands and Supply

GSWC Southwest's water assets consist of adjudicated groundwater supplies, leased or purchased groundwater supplies, purchased water from CBMWD and WBMWD, and recycled water. Table 5.19-1, *2020 Annual Potable Water Supplies for the GSWC Southwest Service Area by Source*, provides an assessment of GSWC Southwest's current (2020) potable water supplies.

Table 5.19-1
2020 Annual Potable Water Supplies for the GSWC Southwest Service Area by Source

Water Supply	Water Supplier	Volume (AF)
Purchased or Imported Water	Central Basin Municipal Water District	1,522
Purchased or Imported Water	West Basin Municipal Water District	17,533
Groundwater	Central Subbasin in the Coastal Plain of Los Angeles Groundwater Basin	3,010
Groundwater	West Coast Subbasin in the Coastal Plain of Los Angeles Groundwater Basin	4,162

Source: Golden State Water Company (GSWC), *Southwest Service Area 2020 Urban Water Management Plan,* July 2021.

GSWC Southwest's groundwater rights and future leases within the Central Basin are shared among all GSWC systems in the basin. Therefore, the actual pumping amounts for wells in each system could vary based on GSWC's overall water supply management. Access to local groundwater and imported water affords GSWC flexibility to meet demands in all of its systems. In addition to GSWC's allowed pumping allocation in the Central Basin and adjudicated rights in the West Coast Basin, GSWC also has the ability to annually lease groundwater rights. Leased groundwater quantities are determined annually for all GSWC systems that obtain groundwater from the basin. While quantifiable estimates of groundwater leases are not available for future years, projections are based on historical pumping amounts, including leased groundwater, and assume that available unpumped groundwater will continue to be available as in the past. Table 5.19-2, *Projected Water Supplies for the GSWC Southwest Service Area (AFY)*, provides an assessment of GSWC Southwest's projected potable water supplies.

Table 5.19-2
Projected Water Supplies for the GSWC Southwest Service Area (AFY)

Water Supply	2025	2030	2035	2040	2045
Purchased Imported Water (from CBMWD)	2,100	2,100	2,100	2,100	2,100
Purchased Imported Water (from WBMWD)	21,000	21,000	21,000	21,000	21,000
Groundwater (from Central Subbasin)	16,439	16,439	16,439	16,439	16,439
Groundwater (from West Coast Subbasin)	7,502	7,502	7,502	7,502	7,502
Groundwater (from West Coast Subbasin - leased)	5,000	5,000	5,000	5,000	5,000

* Note that these supplies represent the total potable supplies available to GSWC Southwest but include supplies shared within GSWC service areas within the West Coast Basin and Central Basin.

GSWC's 2020 UWMP shows growth projections for the number of service connections and water use for the years 2025 through 2045 in 5-year increments and were developed using an approach based on projections from the Southern California Association of Governments (SCAG). The SCAG-based water use projections are based on the population and housing growth rates, which used the City of Hawthorne as representative of the Southwest System. SCAG (Hawthorne) household projections were used to determine the growth in single family and multi-family service connections. Similarly, single-family account growth rates were used to determine the growth for commercial, industrial, institutional-government, agricultural irrigation, landscape, and other service connections. The SCAG-based methodology does not include geographic growth such as tariff area expansion.

The projected water use for the Southwest System's retail service area was calculated by applying the corresponding water use factors to the projected number of retail service connections in each UWMP category. Table 5.19-3, *Projected Demands for Potable Water – GSWC Southwest*, presents the data from the 2020 UWMP for the projected potable water demands for the Southwest System through the year 2045.

Table 5.19-3
Projected Demands for Potable Water – GSWC Southwest

Use Type	2025 (AFY)	2030 (AFY)	2035 (AFY)	2040 (AFY)	2045 (AFY)
Single Family	9,427	9,570	9,715	9,862	10,011
Multi Family	8,738	8,870	9,005	9,141	9,279

The 2020 UWMP's Tables 5-2 and 5-3 conclude that GSWC Southwest's supplies are expected to meet demands in normal-, single dry-, and multiple dry-year conditions through 2045; see Table 5.19-4, *GSWC Southwest Service Reliability Assessment for Normal-, Single Dry-, and Multiple Dry-Years*.

Table 5.19-4
GSWC Southwest Service Reliability Assessment for Normal-, Single Dry-, and Multiple Dry-Years

Demand and Supply Projections (in acre-feet)	2025	2030	2035	2040	2045
Normal Year					
Service Area Supply	26,939	27,347	27,761	28,181	28,608

Source: GSWC, *Southwest Service Area 2020 Urban Water Management Plan,* July 2021.					

According to the 2020 UWMP, water use projections for 2025 to 2045 are based on 55 gallons per capita per day (gpcd). Based on the current (2022) estimated Planning Area population of 37,948, existing water use within the Planning Area is approximately 2.1 million gallons per day (MGD), or 6.4 acre-feet per year (AFY).

WASTEWATER

Key Terms

Effluent: Effluent is an outflowing of water from a natural body of water, or from a man-made structure. Effluent in the man-made sense is generally considered to be water pollution, such as the outflow from a sewage treatment facility or the wastewater discharge from industrial facilities. In the context of waste

water treatment plants, effluent that has been treated is sometimes called secondary effluent, or treated effluent.

NPDES: Water pollution degrades surface waters making them unsafe for drinking, fishing, swimming, and other activities. As authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. Point sources are discrete conveyances such as pipes or man-made ditches. Individual homes that are connected to a municipal system, use a septic system, or do not have a surface discharge do not need an NPDES permit; however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters.

WWTP: Wastewater treatment plant. Treatment of wastewater may include the following processes: screening to remove large waste items; grit removal to allow sand, gravel, and sediment to settle out; primary sedimentation where sludge can settle out of the wastewater; secondary treatment to substantially degrade the biological content of the sewage; tertiary treatment to raise the quality of the effluent before it is discharged; and, discharge.

Wastewater Treatment and Sewer Collection

The City of Lawndale, along with the Los Angeles County Sanitation Districts (LACSD), provide wastewater services to the Planning Area. The City of Lawndale owns and operates local wastewater transmission lines within City limits, as shown on Figure 5.19-2, *Existing Sewer Infrastructure*. According to the City's 2014 Sewer System Management Plan, the City's Public Works Department manages the City-owned sanitary sewer collection system, which serves a population of approximately 32,000 residences (City of Lawndale 2014). The sanitary sewer collection system consists of 34 miles of gravity sewer lines ranging from eight to 12 inches in diameter and no pump stations. The City's local gravity sewer lines discharge into LACSD's facilities for conveyance to the Joint Water Pollution Control Plant (JWPCP). The City is responsible for ensuring that the public sewer infrastructure is correctly designed, adequately sized, and easily maintained.

The City is part of the Los Angeles County Department of Public Works' (LACDPW) Consolidated Sewer Maintenance District (CSMD) and, therefore, relies on the staff and resources of the LACDPW for the maintenance of its collection sewer system. The CSMD has maintained the City's facilities for more than 60 years and utilizes the Lawndale Yard as its primary sewer operation and maintenance services provider. The CSMD is not a special district and does not own any infrastructure. LACDPW's Sewer Maintenance Division is responsible for operational maintenance services of the City's sewer collection system, including cleaning, closed-circuit television inspection, manhole inspection, and repairs of the system. The CSMD also provides a supporting role in reviewing all proposed sewer plans for new developments in the City to ensure that they conform to County design standards and to ensure that requirements for acceptability for maintenance are met.

The LACSD owns, operates, and maintains an interconnected network of trunk sewers which convey wastewater to Joint Outfall System (JOS) treatment facilities. The City falls completely within the LACSD's District Number 5 service area. The LACSD's trunk system forms the backbone of the conveyance system. The JOS includes the Joint Outfall trunk sewers, which are typically high-capacity sewers with diameters

as large as 144-inches, and the LACSD trunk sewers, which generally feed the larger trunk sewers. LACSD owns and maintains approximately 9.1 miles of sewers within the City, including two Joint Outfall trunk sewers along with other various LACSD trunk lines; refer to Figure 5.19-2.

Wastewater Treatment Capacity

The City does not directly provide any wastewater treatment services. The City's local sewers discharge into the LACSD facilities for treatment and disposal. All sewage produced within the City is treated at LACSD's JWPCP, which provides both primary and secondary wastewater treatment for an average dry weather flow (DWF) of 280 MGD (West Yost Associates 2020). The JWPCP has a design capacity of 400 MGD. The plant serves a population of approximately 3.5 million people throughout Los Angeles County, including the City.

The treated wastewater is disinfected with hypochlorite and discharged to the Pacific Ocean through a network of outfalls. These outfalls extend 1.5 miles off the coast of Southern California near the Palos Verdes Peninsula to a depth of 200 feet. All of the JWPCP treated effluent is discharged because the JWPCP only provides primary and secondary treatment and do not meet Title 22 standards for using recycled water.

In general, wastewater flows are expected to increase in proportion to population growth within the JOS service area. Population forecasts are derived from projections by SCAG. As part of the LACSD's 2012 Clearwater Program Master Facilities Plan, these projections are then converted to flows using per capita generation rates. Contract and industrial flows are separately projected and added into the projected flow totals. As show in Table 5.19-5, *Annual Projected Buildout Flow vs. Current Treatment Capacity (MGD)*, the projected average flows at the JWPCP for 2050 are estimated to be 423 MGD, which is 23 MGD more than the plant's current permitted capacity. The LACSD continues to monitor and adjust its projected flows and would expand treatment capacity as needed based on these updates. No current plant expansion is being planned as ongoing water conservation efforts throughout the region continue to lower current wastewater flows. In addition, as part of its Clearwater Program Master Facilities Plan, LACSD has identified a recommended plan to expand the treatment capacity of San Jose Creek Water Reclamation Plant to address projected capacity exceedance and meet the needs of the JOS service area through the year 2050; refer to the Clearwater Program Master Facilities Plan (Los Angeles County Sanitation Districts 2012).

Table 5.19-5
Annual Projected Buildout Flow vs. Current Treatment Capacity (MGD)[1]

Treatment Plant	Projected Buildout Flow[2]	Current Treatment Capacity[3]
JWPCP	423	400

Source: West Yost Associates, *Background Report for Infrastructure Analysis for the City of Lawndale General Plan Update,* December 31, 2020.
Notes:
1. Projected wastewater flow and current treatment capacity are based on the 2012 Clearwater Program Master Facilities Plan.
2. Projected buildout wastewater flow is for the year 2050.
3. Current treatment capacity is for the year 2015.

According to the LACSD's 2012 Clearwater Program Master Facilities Plan, the residential/commercial per-capita wastewater generation rate within the JOS service area is 83 gpcd (Los Angeles County Sanitation Districts 2012). Based on the current (2022) estimated Planning Area population of 37,948, the Planning Area currently generates approximately 3.1 MGD of wastewater.

STORMWATER AND DRAINAGE

The information in this section focuses on the potential for the General Plan Update to result in the demand for new or expanded stormwater drainage facilities. Section 5.10, *Hydrology and Water Quality*, includes an expanded analysis of water quality, flooding, and other stormwater related issues.

Stormwater and Flood Control Facilities

Storm drain infrastructure in the City is jointly owned and operated by the City and County. The Los Angeles County Flood Control District (LACFCD) provides flood control services and drainage infrastructure within unincorporated County areas and 86 incorporated cities, including the City of Lawndale (Los Angeles County Flood Control District 2023). LACFCD maintains a network of catch basins, storm drains, laterals, and the Dominguez Channel to convey stormwater out of the Planning Area and eventually discharge to the Pacific Ocean via Los Angeles Harbor. Figure 5.19-3, *Existing Stormwater and Flood Control Facilities*, shows stormwater infrastructure within the Planning Area. According to LACFCD's GIS database, there are approximately 11.8 miles of LACFCD-owned gravity mains within the City (West Yost Associates 2020). The City owns and maintains a number of smaller catch basins, storm drains, and laterals that directly flow into the LACFCD system, eventually discharging into the Pacific Ocean via Los Angeles Harbor.

SOLID WASTE

The City has a contract with Republic Services to collect solid waste, recycling, and green waste within City limits (City of Lawndale 2023). Universal Waste Systems, Inc. currently provides trash collection and recycling services to the unincorporated area of El Camino Village within the Sphere of Influence (LACDPW 2023a). With minor exceptions for certain homeowners' associations, these two waste haulers handle all residential, commercial, and industrial collections within the Planning Area.

Key Terms

Class I landfill: A landfill that accepts for disposal 20 tons or more of municipal solid waste daily (based on an annual average); or one that does not qualify as a Class II or Class III municipal solid waste landfill.

Class II landfill: A landfill that (1) accepts less than 20 tons daily of municipal solid waste (based on an annual average); (2) is located on a site where there is no evidence of groundwater pollution caused or contributed by the landfill; (3) is not connected by road to a Class I municipal solid waste landfill, or, if connected by road, is located more than 50 miles from a Class I municipal solid waste landfill; and (4) serves a community that experiences (for at least three months each year) an interruption in access to surface transportation, preventing access to a Class I landfill, or a community with no practicable waste management alternative.

Class III landfill: A landfill that is not connected by road to a Class I landfill or a landfill that is located at least 50 miles from a Class I landfill. Class III landfills can accept no more than an average of one ton daily of ash from incinerated municipal solid waste or less than five tons daily of municipal solid waste.

Transfer station: A facility for the temporary deposit of some wastes. Transfer stations are often used as places where local waste collection vehicles will deposit their waste cargo prior to loading into larger vehicles. These larger vehicles will transport the waste to the end point of disposal or treatment.

Waste Management Plan: A Waste Management Plan (WMP) is a completed WMP form, approved by the City, submitted by the applicant for any covered project. Prior to project start, the WMP shall identify the types of construction and demolition (C&D) debris materials that will be generated for disposal and recycling. A completed WMP contains actual weight or volume of the material disposed recycled receipts.

Waste Disposal Facilities

In 2019, the majority (89 percent) of waste from the City went to four waste disposal facilities: Olinda Alpha Landfill (34 percent); Sunshine Canyon Landfill (25 percent); El Sobrante Landfill (16 percent); and Southeast Resource Recovery Facility (14 percent) (CalRecycle 2023a). The City disposed of approximately 6,462 tons at Olinda Alpha Landfill, 4,655 tons at Sunshine Canyon Landfill, and 2,940 tons at El Sobrante Landfill. Other landfills that received a relatively small amount of waste from the City in 2019 include:

- Frank R. Bowerman Sanitary Landfill (1,523 tons);
- Azusa Land Reclamation Co. Landfill (210 tons);
- Chiquita Canyon Sanitary Landfill (206 tons);
- Antelope Valley Public Landfill (80 tons); and
- Simi Valley Landfill & Recycling Center (2 tons).

In addition, 2,691 tons were disposed of at the Southeast Resource Recovery Facility, a transformation facility that uses mass burn technology to reduce the volume of solid waste by about 80 percent, while recovering electrical energy (Los Angeles County Sanitation Districts 2023).

Olinda Alpha Landfill

The Olinda Alpha Landfill is a Class III solid waste landfill located just outside of Brea, California. The property spans approximately 565 acres, with approximately 453 acres allocated for waste disposal (CalRecycle 2023b). The Olinda Alpha Landfill has a daily permitted maximum of 8,000 tons per day (TPD) and a remaining capacity of 17.5 million cubic yards as of 2020. The landfill has enough projected capacity to serve residents and businesses until approximately 2036.

Sunshine Canyon Landfill

The Sunshine Canyon Landfill is a Class III solid waste landfill located in Los Angeles, California. The property spans approximately 1,036 acres with approximately 363 acres allocated for waste disposal (CalRecycle 2023c). The Sunshine Canyon Landfill has a daily permitted maximum of 12,100 TPD and a remaining capacity of 77,900,000 cubic yards as of 2018. The landfill has enough projected capacity to serve residents and businesses until approximately 2037.

El Sobrante Landfill

The El Sobrante Landfill is a Class III solid waste landfill located just outside of Corona, California. The property spans approximately 1,322 acres with approximately 468 acres allocated for waste disposal (CalRecycle 2023d). The El Sobrante Landfill has a daily permitted maximum of 16,054 TPD and a remaining capacity of 143,977,170 cubic yards as of 2018. The landfill has enough projected capacity to serve residents and businesses until approximately 2051.

Southeast Resource Recovery Facility

The Southeast Resource Recovery Facility is a Transformation Facility located in the City of Long Beach. The facility is a waste-to-energy facility that uses mass burn technology to reduce the volume of solid waste by about 80 percent, while recovering electrical energy (Los Angeles County Sanitation Districts 2023). Refuse is inspected prior to combustion and non-combustible materials are recycled or disposed of in the same manner as other waste in the City of Long Beach. Treated combustion ash is used at a local landfill as road base material. The Southeast Resource Recovery Facility has a daily permitted maximum of 2,240 TPD (CalRecycle 2023e).

Solid Waste Generation Rates and Volumes

The California Integrated Waste Management Act of 1989 (AB 939), requires each city or county's source reduction and recycling element to include an implementation schedule showing that a city or county must divert 50 percent of solid waste from landfill disposal or transformation on and after January 1, 2000. SB 1016, passed in 2008, required the 50 percent diversion requirement to be calculated in a per capita disposal rate equivalent. AB 341, passed in 2012, requires that California increase its diversion rate to 75 percent by 2020.

The California Department of Resources Recycling and Recovery (CalRecycle) tracks and monitors solid waste generation rates on a per capita basis. Per capita solid waste generation rates and total annual solid waste disposal volumes for the City of Lawndale between 2015 and 2021 are shown in Table 5.19-6, *Solid Waste Generation Rates in City of Lawndale*.

Table 5.19-6
Solid Waste Generation Rates in City of Lawndale

Year	Waste Generation Rate (pounds/person/day)		Total Disposal Tonnage (tons/year)
	Per Resident	Per Employee	
2015	2.0	9.1	15,825.70
2016	2.2	9.8	16,205.01
2017	2.9	14.5	19,440.34
2018	2.3	11.5	17,288.56
2019	2.7	12.7	18,770.93
2020	2.9	13.9	20,790.63
2021	2.1	11.4	15,322.66
Cal Recycle Target Rate	<3.4	<21.1	--

Source: California Department of Resources Recycling and Recovery (CalRecycle), *Jurisdiction Per Capita Disposal Trends*, https://www2.calrecycle.ca.gov/LGCentral/AnnualReporting/ReviewReports, accessed March 10, 2023f.

The City has complied with State requirements to reduce the volume of solid waste through recycling and reuse of solid waste. As shown in Table 5.19-6, the City's per capita disposal rates have consistently satisfied the target rate established by CalRecycle of 3.4 pounds/person/day for residents and 21.1 pounds/person/day for employees. The per capita disposal rate is used as one of several factors that CalRecycle considers in determining a jurisdiction's compliance with the intent of AB 939. It allows CalRecycle and jurisdictions to focus on successful implementation of diversion programs. CalRecycle data also shows that the City of Lawndale has increased landfill diversion programs for solid waste, from 38 diversion programs in 2007 to 40 in 2021.

Hazardous Waste Disposal

Household hazardous waste are products that are flammable, corrosive, reactive or toxic. Examples of household hazardous waste include: automotive fluids, propane, paint and solvents, medical sharps, fertilizers, pool chemicals, cleaning products, pesticides, herbicides, and nonempty aerosol cans. Los Angeles County operates permanent household hazardous waste collection facilities that offer service on a regular basis and temporary one-day and two-day household hazardous waste events throughout the year to collect household hazardous waste. The closest permanent household hazardous waste collection facility to Lawndale is the Hyperion S.A.F.E. Center in Playa Del Rey (LACDPW 2023b).

Separately, as of October 19, 2012, Assembly Bill 1343 established the PaintCare program. The program makes proper paint disposal more convenient for the public by setting up hundreds of new paint drop-off sites at retailers throughout the State. Electronic waste (e-waste) is anything with a circuit board or battery. It is illegal to dispose of e-Waste in any of the regular carts. Residents can legally dispose of these items at designated collection facilities or e-waste recycling events. Universal wastes are hazardous wastes that contain mercury, lead, cadmium, copper, and other substances hazardous to human and environment health. In general, universal waste may not be discarded in solid waste landfills. Residents

and businesses can generally contact a waste disposal service to arrange a pick-up of E-waste or universal waste.

ELECTRIC POWER, NATURAL GAS, AND TELECOMMUNICATIONS

Infrastructure to deliver electricity and natural gas service throughout the Planning Area is currently in place, and can generally provide these services to new development on request.

Electric Power

Electrical power to the Planning Area is provided by Southern California Edison (SCE). SCE provides electrical services to residences and businesses throughout Southern California. SCE's is one of the nation's largest electric utilities delivering power to 15 million people in 50,000 square-miles across central, coastal and Southern California including 180 incorporated cities and 15 counties (Southern California Edison 2023). SCE maintains approximately 12,635 miles of transmission lines, 91,375 miles of distribution lines (less streetlight miles), 1,433,336 electric poles, 720,800 distribution transformers, and 2,959 substation transformers. SCE obtains electricity from various generating sources that utilize natural gas, fossil fuels, hydroelectric sources, nuclear energy, and renewable resources, such as solar and wind.

Natural Gas

The Southern California Gas Company (SoCalGas) provides natural gas service to the Planning Area. SoCalGas is the nation's largest natural gas distribution utility and delivers gas services to 21.8 million consumers through 5.9 million meters in more than 500 communities (Southern California Gas Company 2023). SoCalGas service territory encompasses approximately 24,000 square miles in diverse terrain throughout Central and Southern California, from Visalia to the Mexican border.

Telecommunications

The Planning Area is served by multiple telecommunications providers. Providers in the Planning Area include Spectrum, T-Mobile, AT&T, and Frontier, which both provide internet access, telephone, and television services (Highspeedinternet.com 2023).

5.19.3 REGULATORY SETTING

WATER SUPPLIES

State

California Department of Health Services

The California Department of Health Services, Division of Drinking Water and Environmental Management, oversees the Drinking Water Program. The Drinking Water Program regulates public water systems and certifies drinking water treatment and distribution operators. It provides support for small water systems and for improving their technical, managerial, and financial capacity. It provides subsidized funding for water system improvements under the State Revolving Fund and Proposition 50 programs. The Drinking Water Program also oversees water recycling projects, permits water treatment devices, supports and promotes water system security, and oversees the Drinking Water Treatment and Research Fund for MTBE and other oxygenates.

California Code of Regulations

California Code of Regulations (CCR) Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the Department of Health Services. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water, any detected contaminants in the water, the maximum contaminant levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

Consumer Confidence Report Requirements

CCR Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the Department of Health Services. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water, any detected contaminants in the water, the maximum contaminant levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

Sustainable Groundwater Management Act

The Sustainable Groundwater Management Act (Water Code Section 10720 et seq.) was enacted in 2014. The Act, and related amendments to California law, require that all groundwater basins designated as high- or medium-priority in the California Department of Water Resources' (DWR) California Statewide Groundwater Elevation Monitoring (CASGEM) program and that are subject to critical overdraft conditions must be managed under a new Groundwater Sustainability Plan (GSP), or a coordinated set of GSPs, by January 31, 2020. High- and medium-priority basins that are not subject to critical overdraft conditions must be managed under a GSP by January 31, 2022. Where GSPs are required, one or more local groundwater sustainability agencies (GSAs) must be formed to cover the basin and prepare and implement applicable GSPs. The Act does not apply to basins that are managed under a court-approved adjudication, or to low-or very-low-priority basins.

A GSA has the authority to require registration of groundwater wells, measure and manage extractions, require reports and assess fees, and to request revisions of basin boundaries, including establishing new subbasins. The preparation of a GSP by a GSA is exempt from the California Environmental Quality Act (CEQA). Each GSP must include a physical description of the covered basin, such as groundwater levels, groundwater quality, subsidence, information on groundwater-surface water interaction, data on historical and projected water demands and supplies, monitoring and management provisions, and a description of how the plan would affect other plans, including city and county general plans.

The Act defines groundwater as "water beneath the surface of the earth within the zone below the water table in which the soil is completely saturated with water but does not include water that flows in known and definite channels." A groundwater extraction facility is defined as "a device or method for extracting groundwater from within a basin" Water Code Section 10721(g-h). GSPs are reviewed by the DWR to ensure that, over a period of 20 years, "sustainable groundwater management" is achieved. As defined

by the Act, sustainable groundwater management means that groundwater uses within basins managed by a GSP would not cause any of the following "undesirable results":

- Chronic lowering of groundwater levels (not including overdraft during a drought, if a basin is otherwise managed);
- Significant and unreasonable reductions in groundwater storage;
- Significant and unreasonable seawater intrusion;
- Significant and unreasonable degradation of water quality;
- Significant and unreasonable land subsidence; and
- Surface water depletions that have significant and unreasonable adverse impacts on beneficial uses (Water Code Section 10721(w)).

Water Conservation Act of 2009

Water Code Sections 10800, et seq. creates a framework for future planning and actions by urban (and agricultural) water suppliers to reduce California's water use. The law requires urban water suppliers to reduce Statewide per capita water consumption by 20 percent by 2020. Additionally, the State is required to make incremental progress towards this goal by reducing per capita water use by at least 10 percent by 2015. Each urban retail water supplier was required to develop water use targets and an interim water use target by July 1, 2011. Each urban retail water supplier was required, by July 2011, to include in their water management plan the baseline daily per capita water use, water use target, interim water use target, and compliance daily per capita water use.

Efficiency Standards

CCR Title 24 contains the California Building Standards, including the California Plumbing Code (Part 5), which promotes water conservation. CCR Title 20 addresses Public Utilities and Energy and includes appliance efficiency standards that promote water conservation. In addition, several California laws listed below require water-efficient plumbing fixtures in structures:

- CCR Title 20 Section 1604(g) establishes efficiency standards that give the maximum flow rate of all new showerheads, lavatory faucets, sink faucets, and tub spout diverters;
- CCR Title 20 Section 1606 prohibits the sale of fixtures that do not comply with established efficiency regulations;
- CCR Title 24 Sections 25352(i) and (j) address pipe insulation requirements, which can reduce water used before hot water reaches equipment or fixtures. Insulation of water-heating systems is also required; and
- Health and Safety Code Section 17921.3 requires low-flush toilets and urinals in virtually all buildings.

Urban Water Management Planning Act

The Urban Water Management Planning Act has as its objectives the management of urban water demands and the efficient use of urban water. Under its provisions, every urban water supplier is required

to prepare and adopt an urban water management plan. An "urban water supplier" is a public or private water supplier that provides water for municipal purposes either directly or indirectly to more than 3,000 customers or supplying more than 3,000 AF of water annually. The plan must identify and quantify the existing and planned sources of water available to the supplier, quantify the projected water use for a period of 20 years, and describe the supplier's water demand management measures. The urban water supplier should make every effort to ensure the appropriate level of reliability in its water service sufficient to meet the needs of its various categories of customers during normal, dry, and multiple dry years. The Department of Water Resources must receive a copy of an adopted urban water management plan.

Senate Bill (SB) 610 and Assembly Bill (AB) 901

The State Legislature passed SB 610 and AB 901 in 2001. Both measures modified the Urban Water Management Planning Act.

SB 610 requires additional information in an urban water management plan if groundwater is identified as a source of water available to an urban water supplier. It also requires that the plan include a description of all water supply projects and programs that may be undertaken to meet total projected water use. SB 610 requires a city or county that determines a project is subject to CEQA to identify any public water system that may supply water to the project and to request identified public water systems to prepare a specified water supply assessment. The assessment must include, among other information, an identification of existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and water received in prior years pursuant to these entitlements, rights, and contracts.

AB 901 requires an urban water management plan to include information, to the extent practicable, relating to the quality of existing sources of water available to an urban water supplier over given time periods. AB 901 also requires information on the manner in which water quality affects water management strategies and supply reliability. The bill requires a plan to describe plans to supplement a water source that may not be available at a consistent level of use, to the extent practicable. Additional findings and declarations relating to water quality are required.

Senate Bill (SB) 221

SB 221 adds Government Code Section 66455.3, requiring that the local water agency be sent a copy of any proposed residential subdivision of more than 500 dwelling units within five days of the subdivision application being accepted as complete for processing by the city or county. It also adds Government Code Section 66473.7, establishing detailed requirements for establishing whether a "sufficient water supply" exists to support any proposed residential subdivisions of more than 500 dwellings, including any such subdivision involving a development agreement. When approving a qualifying subdivision tentative map, the city or county must include a condition requiring availability of a sufficient water supply. The applicable public water system must provide proof of availability. If there is no public water system, the city or county must undertake the analysis described in Government Code Section 66473.7. The analysis must include consideration of effects on other users of water and groundwater.

Local

Greater Los Angeles County Integrated Regional Water Management Plan (IRWMP)

The 2014 Greater Los Angeles County IRWMP is a regional plan designed to improve collaboration in water resources management. The IRWMP identifies a comprehensive set of solutions to: reduce the Region's reliance on imported water; comply with water quality regulations by improving the quality of urban runoff, stormwater, and wastewater; protect, restore and enhance natural processes and habitats; increase watershed friendly recreational space for all communities; reduce flood risk in flood prone areas by either increasing protection or decreasing needs using integrated flood management approaches; and adapt to and mitigate against climate change vulnerabilities.

Golden State Water Company Southwest 2020 Urban Water Management Plan

Urban water suppliers such as GSWC Southwest are required to prepare and adopt an UWMP every five years. The UWMP provides water suppliers with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. The UWMP must demonstrate water supply reliability in a normal year, single dry year, and droughts lasting at least five years over a twenty-year planning horizon. GSWC Southwest's 2020 UWMP integrates local and regional land use planning, regional water supply, infrastructure, and demand management projects to address short-term and long-term water conditions and management.

City of Lawndale Municipal Code

The City of Lawndale Municipal Code Chapter 3.14, *Utility Users Tax*, imposes a tax for users of various utilities within the City in order to fund municipal utility services. Section 3.14.090*, Water Users Tax,* imposes a tax on every person in the City using water which is delivered through mains or pipes.

Municipal Code Chapter 8.40, *Water Conservation*, allows the City Council to declare voluntary and mandatory water restrictions, as appropriate to water supply conditions. The stages include: conservation watch, drought watch, and drought emergency.

Municipal Code Title 15, *Buildings and Construction*, adopts various uniform building and construction codes. Chapter 15.28, *Green Building Standards Code*, adopts the 2022 California Green Building Standards Code, also referred to as CALGreen. CALGreen includes regulations to improve water efficiency and conservation.

Municipal Code Chapter 17.88, *Water Efficient Landscape*, promotes water-efficient landscaping by establishing standards for the design, maintenance, and install of water efficient landscapes in new and substantially altered or expanded existing development projects.

WASTEWATER

Federal

Clean Water Act

The Clean Water Act (CWA) (33 United States Code Section 1251 et seq.) is the cornerstone of water quality protection in the United States. The statute employs a variety of regulatory and non-regulatory

tools to sharply reduce direct pollutants discharges into waterways, finance municipal wastewater treatment facilities, and manage polluted runoff. These tools are employed to achieve the broader goal of restoring and maintaining the chemical, physical, and biological integrity of the nation's waters so that they can support "the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water" (United States Environmental Protection Agency n.d.).

The CWA regulates discharges from "non-point source" and traditional "point source" facilities, such as municipal sewage plants and industrial facilities. The CWA makes it illegal to discharge pollutants from a point source to the waters of the United States. CWA Section 402 creates the National Pollutant Discharge Elimination System (NPDES) regulatory program. Point sources must obtain a discharge permit from the proper authority (usually a state, sometimes EPA, a tribe, or a territory). NPDES permits cover industrial and municipal discharges, discharges from storm sewer systems in larger cities, storm water associated with numerous kinds of industrial activity, runoff from construction sites disturbing more than one acre, mining operations, and animal feedlots and aquaculture facilities above certain thresholds.

All so-called "indirect" dischargers are not required to obtain NPDES permits. An indirect discharger is one that sends its wastewater into a city sewer system, so it eventually goes to a sewage treatment plant. Although not regulated under NPDES, "indirect" discharges are covered by the CWA "pretreatment" program.

State

State Water Resources Control Board/Regional Water Quality Control Board

In California, all wastewater treatment and disposal systems fall under the overall regulatory authority of the State Water Resources Control Board (SWRCB) and the nine California Regional Water Quality Control Boards (RWQCBs), who are charged with the responsibility of protecting beneficial uses of State waters (ground and surface) from a variety of waste discharges, including wastewater from individual and municipal systems. The Planning Area falls within the jurisdiction of the Santa Ana RWQCB.

The RWQCB's regulatory role often involves the formation and implementation of basic water protection policies. These are reflected in the individual RWQCB's Basin Plan, generally in the form of guidelines, criteria and/or prohibitions related to the siting, design, construction, and maintenance of on-site sewage disposal systems. The SWRCB's role has historically been one of providing overall direction, organizational and technical assistance, and a communications link to the State legislature.

The RWQCBs may waive or delegate regulatory authority for on-site sewage disposal systems to counties, cities or special districts. Although not mandatory, it is commonly done and has proven to be administratively efficient. In some cases, this is accomplished through a Memorandum of Understanding (MOU), whereby the local agency commits to enforcing the Basin Plan requirements or other specified standards that may be more restrictive. The RWQCBs generally elect to retain permitting authority over large and/or commercial or industrial on-site sewage disposal systems, depending on the volume and character of the wastewater.

Local

Los Angeles County Sanitation Districts Master Connection Fee Ordinance

The LACSD Master Connection Fee Ordinance imposes fees for connecting to the LACSD wastewater system, or for increasing the strength or quantity of wastewater discharged from connected facilities, and to provide for the collection of those fees. Revenue from the Ordinance is used to fund LACSD's capital facilities and the JOS capital facilities.

Los Angeles County Sanitation Districts Wastewater Treatment Surcharge Program

The LACSD charges an annual fee for wastewater collection, treatment, and disposal services for all companies that discharge more than one million gallons of wastewater to the public sewerage system during the fiscal year, or have high strength waste.

City of Lawndale Sewer System Management Plan (2014)

The City's Sewer System Management Plan contains policies and procedures related to the design and maintenance of the City's sewer system to prevent sanitary sewer overflows. The Plan describes responsivities, preventive maintenance activities, conditions assessments, and standards for construction and design of sanitary sewers within the City.

City of Lawndale Municipal Code

Municipal Code Title 13, *Public Services*, addresses wastewater and storm drains within the City. Chapter 13.04, *Sanitary Sewers and Industrial Waste* Code, adopts Title 20, Division 2 of the Los Angeles County Code as the Sanitary Sewer and Industrial Waste Ordinance for the City of Lawndale. The ordinance regulates discharges of wastewater, including industrial waste discharges, into sanitary sewers within the City. Chapter 13.08, *Sewer Capacity – Peak-flow Charges*, also known as the City of Lawndale Sewer Charge Code, recognizes that the City's existing sewers were not designed to accommodate the increased flow of sewage from certain areas being developed, and establishes a means of providing adequate sewers required for future development. The Sewer Charge Code establishes a charge to be collected from properties that propose to discharge to the public sewer quantities of sewage in excess of the quantity for which the system was designed; and to establish a fund in which these charges may be deposited and from which monies will be available for the sanitary sewer reconstruction program. Section 13.08.070 prevents a building permit from being issued if the anticipated sewage from the proposed use is found by the City Engineer to exceed the capacity available in the public sewer. Section 13.08.080 requires that the size and grade of each public sewer must be such as to provide sufficient capacity for peak flow rates of discharge at all times. Section 13.08.090 outlines the required information and charges necessary for building permit applicants.

STORMWATER AND FLOOD CONTROL FACILITIES

Federal

Clean Water Act

The CWA, initially passed in 1972, regulates the discharge of pollutants into watersheds throughout the nation. Section 402(p) of the act establishes a framework for regulating municipal and industrial

stormwater discharges under the NPDES Program. Section 402(p) requires that stormwater associated with industrial activity that discharges either directly to surface waters or indirectly through municipal separate storm sewers must be regulated by an NPDES permit.

The SWRCB is responsible for implementing the CWA and does so through issuing NPDES permits to cities and counties through regional water quality control boards. Federal regulations allow two permitting options for storm water discharges (individual permits and general permits). Pursuant to Section 402 of the CWA and the Porter-Cologne Water Quality Control Act, municipal stormwater discharge in the Planning Area is subject to the Waste Discharge Requirements (WDRs) of the MS4 Permit (R4-2012-0175).

National Pollutant Discharge Elimination System (NPDES)

National Pollutant Discharge Elimination System (NPDES) permits are required for discharges to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, oceans, dry stream beds, wetlands, and storm sewers that are tributary to any surface water body. NPDES permits are issued under the CWA, Title IV, Permits and Licenses, Section 402 (33 USC 466 et seq.).

The RWQCB issues these permits in lieu of direct issuance by the Environmental Protection Agency, subject to review and approval by the EPA Regional Administrator (EPA Region 9). The terms of these NPDES permits implement pertinent provisions of the CWA and the Act's implementing regulations, including pre-treatment, sludge management, effluent limitations for specific industries, and anti-degradation. In general, the discharge of pollutants is to be eliminated or reduced as much as practicable so as to achieve the Clean Water Act's goal of "fishable and swimmable" navigable (surface) waters. Technically, all NPDES permits issued by the RWQCB are also Waste Discharge Requirements issued under the authority of the CWA.

These NPDES permits regulate discharges from publicly owned treatment works, industrial discharges, stormwater runoff, dewatering operations, and groundwater cleanup discharges. NPDES permits are issued for five years or less, and therefore must be updated regularly. To expedite the permit issuance process, the RWQCB has adopted several general NPDES permits, each of which regulates numerous discharges of similar types of wastes. The SWRCB has issued general permits for stormwater runoff from construction sites statewide. Stormwater discharges from industrial and construction activities in the Planning Area can be covered under these general permits, which are administered jointly by the SWRCB and RWQCB.

Construction throughout the Planning Area could disturb more than one acre of land surface for centralized and regional structural BMPs (and possibly for those distributed structural BMPs larger than one acre), affecting the quality of stormwater discharges into waters of the United States. The City would therefore be subject to the NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, NPDES No. CAS000002, Construction General Permit, as amended by Order 2010-0014-DWQ and Order 2012-0006-DWQ). The Construction General Permit regulates discharges of pollutants in stormwater associated with construction activity to waters of the United States from construction sites that disturb one or more acres

of land surface, or that are part of a common plan of development or sale that disturbs more than one acre of land surface.

The Construction General Permit requires the development and implementation of a SWPPP that includes specific BMPs designed to prevent pollutants from contacting stormwater and keep all products of erosion from moving off-site into receiving waters. The SWPPP BMPs are intended to protect surface water quality by preventing the off-site migration of eroded soil and construction-related pollutants from the construction area.

State

California Water Code

California's primary statute governing water quality and water pollution issues with respect to both surface waters and groundwater is the Porter-Cologne Water Quality Control Act of 1970 (Division 7 of the California Water Code) (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and each of the Regional Water Quality Control Boards (RWQCBs) power to protect water quality, and is the primary vehicle for implementation of California's responsibilities under the Federal Clean Water Act. The Porter-Cologne Act grants the SWRCB and the RWQCBs authority and responsibility to adopt plans and policies, to regulate discharges to surface and groundwater, to regulate waste disposal sites, and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, or oil or petroleum product.

Each RWQCB must formulate and adopt a Water Quality Control Plan (Basin Plan) for its region. The regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its State water policy. The Porter-Cologne Act also provides that a RWQCB may include within its regional plan water discharge prohibitions applicable to particular conditions, areas, or types of waste.

State Water Resource Control Board (State Water Board) Storm Water Strategy

The Storm Water Strategy is founded on the results of the Storm Water Strategic Initiative, which served to direct the State Water Board's role in storm water resources management. The Storm Water Strategy developed guiding principles to serve as the foundation of the storm water program; identified issues that support or inhibit the program from aligning with the guiding principles; and proposed and prioritized projects that the Water Boards could implement to address those issues. The State Water Board staff created a strategy-based document called the Strategy to Optimize Management of Storm Water (STORMS). STORMS includes a program vision, missions, goals, objectives, projects, timelines, and consideration of the most effective integration of project outcomes into the Water Board's Storm Water Program.

Local

Water Quality Control Plan (Basin Plan) for the Los Angeles Region

A Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. The Basin Plan is a resource for the Regional Board and others who use water and/or discharge wastewater in the region that the Basin Plan is designed to cover. Other agencies and

organizations involved in environmental permitting and resource management activities also use the Basin Plan. Finally, the Basin Plan provides valuable information to the public about local water quality issues.

The Los Angeles Region (Region 4) has jurisdiction over the coastal drainages between Rincon Point (on the coast of western Ventura County) and the eastern Los Angeles County. The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties covers coastal Los Angeles County, including the Planning Area.

Dominguez Channel Watershed Management Area – Enhanced Watershed Management Program

The Dominguez Channel Watershed Management Area Enhanced Watershed Management Program (EWMP) was developed pursuant to the requirements set forth by Order No. R4-2012-0175, Los Angeles County Municipal Separate Storm Sewer System (MS4) National Pollutant Discharge Elimination System (NPDES) Permit (MS4 Permit). The EWMP identifies water quality priorities and watershed control measures for compliance with all Dominguez Channel TMDLs. The EWMP Plan, along with a Coordinated Monitoring Plan, serves as a guiding document for implementing water quality improving infrastructure, policies, and programs. The City of Lawndale is a participating member in the EWMP.

City of Lawndale Municipal Code

Municipal Code Title 13, *Public Services*, addresses wastewater and storm drains within the City. Chapter 13.12, *Storm Water and Urban Runoff Pollution Control*, establishes stormwater runoff controls and best management practices (BMPs) to prevent and/or reduce the quantity of pollutants from being discharged into the Municipal Separate Storm Sewer System (MS4).

SOLID WASTE

Federal

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) was enacted in 1976 to address the huge volumes of municipal and industrial solid waste generated nationwide. After several amendments, the Act as it stands today governs the management of solid and hazardous waste and underground storage tanks (USTs). RCRA, enacted in 1976, is an amendment to the Solid Waste Disposal Act of 1965. RCRA has been amended several times, most significantly by the Hazardous and Solid Waste Amendments of 1984. RCRA is a combination of the first solid waste statutes and all subsequent amendments. RCRA authorizes the Environmental Protection Agency (EPA) to regulate waste management activities. RCRA authorizes states to develop and enforce their own waste management programs, in lieu of the Federal program, if a state's waste management program is substantially equivalent to, consistent with, and no less stringent than the Federal program.

State

California Integrated Waste Management Act (AB 939 and SB 1322)

The California Integrated Waste Management Act of 1989 (AB 939 and SB 1322) requires every city and county to prepare a Source Reduction and Recycling Element to its Solid Waste Management Plan that

identifies how each jurisdiction will meet the mandatory State waste diversion goals of 25 percent by 1995 and 50 percent by 2000. The purpose of AB 939 and SB 1322 is to "reduce, recycle, and re-use solid waste generated in the state to the maximum extent feasible." The term "integrated waste management" refers to the use of a variety of waste management practices to safely and effectively handle the municipal solid waste stream with the least adverse impact on human health and the environment. The Act has established a waste management hierarchy, as follows: Source Reduction; Recycling; Composting; Transformation; and Disposal.

California Integrated Waste Management Board Model Ordinance

Subsequent to the Integrated Waste Management Act, additional legislation was passed to assist local jurisdictions in accomplishing the goals of AB 939. The California Solid Waste Re-use and Recycling Access Act of 1991 (§42900-42911 of the Public Resources Code) directs the California Integrated Waste Management Board to draft a "model ordinance" relating to adequate areas for collecting and loading recyclable materials in development projects. The model ordinance requires that any new development project, for which an application is submitted on or after September 1, 1994, include "adequate, accessible, and convenient areas for collecting and loading recyclable materials." For subdivisions of single family detached homes, recycling areas are required to serve only the needs of the homes within that subdivision.

California Mandatory Commercial Recycling Law (AB 341)

Assembly Bill (AB) 341 directed CalRecycle to develop and adopt regulations for mandatory commercial recycling. CalRecycle initiated formal rulemaking with a 45-day comment period beginning Oct. 28, 2011. The final regulation was approved by the Office of Administrative Law on May 7, 2012. The purpose of AB 341 is to reduce GHG emissions by diverting commercial solid waste to recycling efforts and to expand the opportunity for additional recycling services and recycling manufacturing facilities in California.

Beginning on July 1, 2012, businesses have been required to recycle, and each jurisdiction has implemented programs that include education, outreach, and monitoring. Jurisdictions were required to start reporting on their 2012 Electronic Annual Report (due August 1, 2013) on their initial education, outreach, and monitoring efforts, and, if applicable, on any enforcement activities or exemptions implemented by the jurisdiction.

In addition to Mandatory Commercial Recycling, AB 341 sets a statewide goal for 75 percent disposal reduction by the year 2020. This is not written as a 75 percent diversion mandate for each jurisdiction. The 50 percent disposal reduction mandate still stands for cities, counties, and State agencies (including community colleges) under AB 939. CalRecycle continues to evaluate program implementation as it has in the past through the Annual Report review process for entities subject to either AB 939.

Assembly Bill 1826 Mandatory Commercial Organics Recycling

In October 2014 Governor Brown signed AB 1826, requiring businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the state implement an organic waste recycling program to divert organic waste generated by businesses, including multifamily residential dwellings that

consist of five or more units (please note, however, that multi-family dwellings are not required to have a food waste diversion program). Organic waste (also referred to as organics) means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste. This law phases in the mandatory recycling of commercial organics over time, while also offering an exemption process for rural counties. In particular, the minimum threshold of organic waste generation by businesses decreases over time, which means an increasingly greater proportion of the commercial sector will be required to comply.

Starting on January 1, 2019, businesses that generate four cubic yards or more of commercial solid waste per week shall arrange for organic waste recycling services. By Summer/Fall 2021, if CalRecycle determines that the statewide disposal of organic waste in 2020 has not been reduced by 50 percent of the level of disposal during 2014, the organic recycling requirements on businesses will expand to cover businesses that generate two cubic yards or more of commercial solid waste per week. Additionally, certain exemptions may no longer be available if this target is not met.

Senate Bill 1383 Short-lived Climate Pollutants: Organic Waste Methane Emissions Reductions

In September 2016, Governor Brown signed SB 1383, establishing methane emissions reduction targets in a statewide effort to reduce emissions of short-lived climate pollutants (SLCP) in various sectors of California's economy. The bill codifies the California Air Resources Board's Short-Lived Climate Pollutant Reduction Strategy, established pursuant to SB 605, in order to achieve reductions in the statewide emissions of short-lived climate pollutants. Actions to reduce short-lived climate pollutants are essential to address the many impacts of climate change on human health, especially in California's most at-risk communities, and on the environment.

As it pertains to solid waste, SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025.

Local

City of Lawndale Municipal Code

The City of Lawndale Municipal Code Chapter 8.28, *Solid Waste – Collection and Management*, establishes regulations for solid waste collection of residential and non-residential uses, and construction/demolition waste. Article VII regulates construction and demolition debris and requires diversion of at least sixty-five percent of all demolition and construction debris generated, unless a lower rate is approved by the City as a part of the project's waste reduction and recycling plan (WRRP). Applicants for a covered building or demolition permit must submit a WRRP as part of the permit process. Section 8.28.290, *Threshold Requirements*, establishes the thresholds for covered projects.

ELECTRICAL POWER, NATURAL GAS, AND TELECOMMUNICATIONS

Federal

Federal Energy Regulation Commission

The Federal Energy Regulatory Commission duties include the regulation of the transmission and sale of electricity and natural gas in interstate commerce, licensing of hydroelectric projects, and oversight of related environmental matters.

State

California Public Utilities Commission

Established in 1911, the California Public Utilities Commission (CPUC) regulates privately owned electric, natural gas, telecommunications, water, railroad, rail transit, and passenger transportation companies. The commission is organized into several advisory units, an enforcement division, and a strategic planning group. SJP, SCE, and SoCalGas are regulated by the CPUC.

Local

City of Lawndale Municipal Code

The City of Lawndale Municipal Code Chapter 3.14, *Utility Users Tax*, imposes a tax for users of various utilities within the City in order to fund municipal utility services, including electricity, gas, and telephone.

5.19.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to utilities and service systems. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects (refer to Impact Statement USS-1);
- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years (refer to Impact Statement USS-2;
- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments (refer to Impact Statement USS-3);
- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals (refer to Impact Statement USS-4); and/or
- Not comply with Federal, state, and local management and reduction statutes and regulations related to solid waste (refer to Impact Statement USS-5).

5.19.5 IMPACTS AND MITIGATION MEASURES

USS-1: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Impact Analysis:

WATER

In regard to water facilities, the General Plan Update is expected to result in population and employment growth within the Planning Area, and thus, an overall increase in demand on water supply, which would necessitate construction of future water supply infrastructure. Based on the anticipated growth, as described in Section 3.0, *Project Description*, and summarized in Table 3-4, *General Plan 2045 Buildout by Land Use Designation*, buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units, an additional population of 9,482 people, an additional 808,000 square feet of non-residential building square footage, and an additional 2,738 jobs within the Planning Area. This increased demand for water infrastructure would be located within areas that are already developed and serviced by the GSWC.

Since no specific development projects are proposed as part of the General Plan Update, the environmental effects from constructing or expanding facilities are unknown at this time. All water infrastructure construction activities associated with future development would be subject to compliance with existing local, State, and Federal laws, ordinances, and regulations, which would ensure impacts are reduced to less than significant levels. The City would continue to coordinate with GSWC to ensure adequate water distribution facilities are available to serve future development. Lawndale Municipal Code Section 3.14.090*, Water Users Tax,* imposes a tax on water users in the City and would help fund necessary infrastructure improvements. Furthermore, these future water facilities would be subject to General Plan Update policies and actions intended to ensure the provision of water and that potential environmental impacts associated with the implementation of new or expanded infrastructure would be reduced. Proposed Resource Management Element Policy RM-6.1 promotes residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices. Action RM-6c directs the City to work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that

would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-2.1 coordinates with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded water facilities to a level that is less than significant.

WASTEWATER

In regard to wastewater, the General Plan Update is expected to result in increased population and employment growth within the Planning Area, and thus, an overall increase in demand on the existing sewer system associated with increased sewage flows.

The Planning Area is urbanized and contains existing wastewater infrastructure. As discussed above, the City's local sewers discharge into the LACSD facilities and are conveyed for treatment at LACSD's JWPCP. The JWPCP has a capacity of 400 MGD and treats approximately 260 MGD of wastewater, resulting in a remaining capacity of 140 MGD. The facility currently has capacity to serve the Planning Area. As shown in Table 5.19-5, LACSD projects an average flow of 423 MGD at the JWPCP for 2050, which exceeds the plant's current permitted capacity by 23 MGD. Based on the anticipated growth under the General Plan Update, as described in Section 3.0, and summarized in Table 3-4, buildout under the General Plan Update could yield a net change over existing conditions of an additional population of 9,482 people within the Planning Area. Using the wastewater generation rate of 83 gpcd from LACSD's 2012 Clearwater Program Master Facilities Plan, growth associated with implementation of the General Plan Update would generate 3.9 MGD of wastewater within the Planning Area, a net increase of 0.8 MGD (25.8 percent) over existing conditions.

As part of LACSD's Clearwater Program Master Facilities Plan, an assessment of future needs was conducted by comparing projected tributary flows within the JOS versus conveyance system capacity. The conveyance capacity was determined using the static GIS conveyance system model's baseline configuration. A capacity need was identified in those sewer line segments for which the static GIS conveyance system model determined that the depth of peak dry weather flow within the sewer was equal to, or greater than, 90 percent of the sewer's diameter. According to LACSD's Clearwater Program Master Facilities Plan, it is estimated that 12.1 miles of City-used Joint Outfall trunk sewers would need to be hydraulically relieved by 2050. No set timeline has been established for when those lines would be improved. The LACSD continues to monitor and adjust its projected flows and would expand conveyance infrastructure and treatment capacity as needed based on these updates. As the regional sewage conveyance agency, LACSD would take the lead in conducting any additional analyses and development of any necessary improvement plans. At such time, LACSD would utilize SCAG's population projection data as part of its projections, such that any change in the City's land use plans or population projections would ultimately be incorporated into any future analysis depending on the timing of such data updates.

The General Plan Update does not include specific development proposals; therefore, the environmental effects of future wastewater collection systems are unknown at this time. At the time future projects are proposed, they would be required to ensure sufficient local and trunk sewer capacity exists to serve the specific development. Pursuant to Lawndale Municipal Code Section 13.08.070, a building permit would not be issued if the anticipated sewage from a proposed project is found by the City Engineer to exceed the capacity available in the public sewer. Lawndale Municipal Code Chapter 13.08, *Sewer Capacity – Peak-flow Charges,* provides for sewer connection and facilities expansion fees for the City's local wastewater transmission lines. Additionally, LACSD charges annual wastewater sewer fees through its Wastewater Treatment Surcharge Program, as well as sewer connection fees through its Connection Fee Program, in order to maintain and expand LACSD's wastewater services.

The General Plan Update includes policies and actions to ensure adequate wastewater services and facilities are available, and that potential environmental impacts associated with the implementation of new or expanded infrastructure would be reduced. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-3.1 directs the City to work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development. Policy CF-3.2 directs coordination with the CSMD to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained. Policy CF-3.3 proposes the City take a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness. Policy CF-3a directs the City to require that sufficient wastewater infrastructure capacity is available to serve proposed development prior to approval of the project; ensure the project applicant has paid the required fees prior to occupancy of any new development; and to periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded wastewater facilities to a level that is less than significant.

STORMWATER

The Planning Area is generally developed and served by existing stormwater drainage and conveyance facilities. As described above, storm drain infrastructure in the City is jointly owned and operated by the City and the LACFCD. The Planning Area is primarily developed, with limited areas of pervious surfaces. Although future development activities have the potential to slightly increase impervious areas within the Planning Area, the majority of development activities under the proposed General Plan Update would consist of infill and redevelopment on currently urbanized sites. Therefore, implementation of the Project would not substantially increase the rate or amount of surface runoff. Federal, State and local regulations

would require individual projects to provide necessary on-site storm drain infrastructure and any off-site infrastructure improvements. The specific impacts of providing new and expanded drainage facilities cannot be determined at this time, as the Project does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities.

Stormwater drainage and conveyance facilities would be evaluated at the project-level in association with subsequent development projects. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan Update. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. As such, this is a less than significant impact and no additional mitigation is required.

The General Plan Update policies and actions would further ensure that there is adequate stormwater drainage and flood control infrastructure to serve future development under the General Plan Update, and would ensure that future drainage and flood control infrastructure projects do not result in adverse environmental impacts. Proposed Resource Management Element Policy RM-6.4 directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action CF-4d reviews development projects to identify potential storm drain and drainage impacts and requires developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded stormwater facilities to a level that is less than significant.

ELECTRICAL, NATURAL GAS, AND TELECOMMUNICATIONS

In regard to electrical, natural gas, and telecommunication services, the Planning Area is within the service areas of SCE, SoCalGas, and various telecommunication providers. The Planning Area is generally developed and existing electrical, natural gas, and telecommunications infrastructure exists within the Planning Area. New growth anticipated by the General Plan Update would require increased electrical, natural gas, and telecommunications services, potentially resulting in the new construction or relocation

of facilities. The environmental effects of future expansions of electrical, natural gas, and telecommunication facilities would be evaluated with each development proposal and would require a separate environmental review related to the construction and operation of new electrical, natural gas, and telecommunications infrastructure. Future implementing projects under the General Plan Update would have to coordinate with each utility provider to establish service, provide any necessary extensions of facilities, and comply with regulations in existence at that time. As future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Furthermore, these future facilities would be subject to General Plan Update policies and actions intended to ensure adequate provision of services and facilities and that potential environmental impacts associated with the implementation of new or expanded electrical, natural gas, and telecommunications infrastructure would be reduced. Proposed Resource Management Element Policy RM-5.4 promotes the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure. Action RM-5a implements energy conservation measures in public buildings. Action RM-5b encourages innovative building design, layout, and orientation techniques to minimize energy use. Action RM-5c directs the City to review development projects to ensure compliance with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-5.1 directs the City to work cooperatively with utility providers to promote the provision of adequate telecommunications services and facilities to serve the needs of existing and future residents and businesses. Action CF-5a directs the City to confer with telecommunications providers regarding major development plans and participate in the planning of the extension of utilities. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded electrical, natural gas, and telecommunications facilities to a level that is less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

RESOURCE MANAGEMENT ELEMENT

Policy RM-5.4: **Energy-Efficient Materials.** Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: **Energy Conservation.** Promote energy conservation and recycling by the public and private sectors.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Policy RM-6.1: **Conservation.** Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: **Stormwater.** Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.2: **Fair Share.** Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy CF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.4: **Revenue Sources.** Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy CF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy CF-1.8: **Regional Issues.** Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy CF-1.9: **Cost Sharing.** Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy CF-1.10: **Regional Services Providers.** Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy CF-1.11: **Capital Improvement Planning.** Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action CF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action CF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy CF-2.1: **Water Supply Needs.** Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: **Use of Recycled Water.** Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: **Climate Change Impacts.** Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

Policy CF-3.1: **Wastewater System.** Work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development.

Policy CF-3.2: **Adequate Infrastructure.** Coordinate with the County of Los Angeles Consolidated Sewer Maintenance District to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained.

Policy CF-3.3: **Integrated Systems Planning.** Develop a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness.

Action CF-3a: Through the development review process, continue to cooperate with the County of Los Angeles Consolidated Sewer Maintenance District to ensure adequate wastewater facilities are provided and maintained in the community. Specifically, the City should:

- Require that sufficient wastewater infrastructure capacity is available to serve the development prior to approval of the project;
- Ensure the project applicant has paid the required fees prior to occupancy of any new development; and
- Periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities.

Policy CF-4.1: **Maintain Capacity.** Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

Policy CF-5.1: **Cooperation with Utilities Providers.** Work cooperatively with utility providers to promote the provision of adequate telecommunications services and facilities to serve the needs of existing and future residents and businesses.

Action CF-5a: Confer with telecommunications providers regarding major development plans and participate in the planning of the extension of utilities.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

USS-2: Would the Project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Impact Analysis: The General Plan Update is expected to result in increased population and employment growth within the Planning Area, and a corresponding increase in the demand for additional water supplies.

As described in Section 3.0, and summarized in Table 3-4, buildout under the General Plan Update could yield a total of 15,405 housing units, a population of 47,430 people, 5,351,026 square feet of non-residential building square footage, and 9,208 jobs within the Planning Area. This represents development growth over existing conditions of an additional 3,942 housing units, an additional population of 9,482 people, an additional 808,000 square feet of non-residential building square footage, and an additional 2,738 jobs within the Planning Area.

As discussed above, water service in the Planning Area is provided by the GSWC. GSWC's 2020 UWMP indicates that GSWC can meet projected water demands under normal-, single dry-, and multiple dry-year conditions through 2045. However, the General Plan Update is expected to result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies, which have not been accounted for in the UWMP. The General Plan Update would result in a water demand of approximately 8.0 AFY within the Planning Area, which would be a net increase of 1.6 AFY (25 percent) over existing conditions.

As discussed, the California Urban Water Management Planning Act requires water suppliers to prepare an UWMP every five years to identify short-term and long-term water demand management measures to meet growing water demands during normal, dry, and multiple-dry years. Current (2020) population used in the UWMP is determined utilizing the DWR Population Tool. However, as noted in the UWMP, the current DWR Population Tool does not contain 2020 census data, and therefore the values may change once the data is available. Additionally, conditions that may have been altered by the pandemic could result in changes. According to the UWMP, projected population is based on the current estimated population (using the DWR Population Tool) and projected growth from the Southern California Association of Governments (SCAG) (2020). The UWMP assumes SCAG's growth rate to be constant throughout the planning period until 2045.

As discussed in Section 5.12, *Population and Housing*, SCAG is the responsible agency for developing and adopting regional housing, population, and employment growth forecasts for local Los Angeles County governments, among other counties. SCAG provides household, population, and employment projection estimates in five-year increments through 2045. While Project growth projections are anticipated to exceed SCAG's 2045 population, SCAG's projections, which are compiled using a number of sources including adopted plans, historical trends, and interviews with local jurisdictions, tend to be more accurate on a regional level than on a local or city level. It is likely that through a combination of market changes, catalytic projects, updated land use direction in the General Plan, and other factors, Lawndale could capture either more or less of expected regional growth than forecasted by SCAG. Discrepancies between Project and regional forecasts can also be attributed to the RHNA process. One of the objectives of the

proposed Project is to accommodate the City's 2021-2029 RHNA; SCAG's Connect SoCal growth forecasts through 2045 do not consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. The regional housing needs and associated General Plan growth projections will be included as part of SCAG's future growth forecasts. Therefore, future updates to the UWMP will account for future residential growth associated with the City's 2021-2029 RHNA and the additional residential and non-residential growth opportunities provided by Project implementation, and would identify short-term and long-term water demand management measures to meet growing water demands during normal, dry, and multiple-dry years.

As site-specific development is not currently proposed, there is the potential that for future qualifying projects, a Water Supply Assessment would be required pursuant to SB 610. The Water Supply Assessment discerns whether the expected demand from the development being proposed has been accounted for in the forecasted demands in the most recent UWMP. A Written Verification of Supply per SB 221 is prepared as a condition of approval for a subdivision map of 500 units or more. Considered a fail-safe mechanism to provide sufficient evidence that adequate water supplies are available before construction begins, the Written Verification of Supply is also prepared/adopted by the water supplier and approved by the land use authority. Depending on the project, one or both of these analyses may be required. Development proposals that may not warrant a Water Supply Assessment and/or Written Verification of Supply, but meet the definition of a project under CEQA, would still require an analysis of sufficient water supplies in the CEQA process. The Lawndale Municipal Code includes several provisions related to water conservation, including: Chapter 8.40, *Water Conservation*, which allows the City Council to declare voluntary and mandatory water restrictions, as appropriate to water supply conditions; Chapter 15.28, *Green Building Standards Code*, which adopts CALGreen's regulations to improve water efficiency and conservation; and Chapter 17.88, *Water Efficient Landscape*, which promotes water-efficient landscaping in new and substantially altered or expanded existing development projects.

Additionally, the General Plan Update includes goals, policies, and actions directed towards water conservation to ensure that adequate water supply, treatment, and distribution capacity is available to meet the needs of future development without negatively impacting the existing community. These actions would result in reduced water consumption on a per capita basis that would help offset the increased demand from additional development within the Planning Area. Proposed Resource Management Element Policy RM-6.1 promotes water conservation strategies using innovative strategies and contemporary best practices. Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6b ensures City participation in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Action RM-6c directs the City to work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy CF-2.1 coordinates with local water districts when considering land use changes in order to assist the districts in planning for adequate

capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. Action CF-2c directs the City to cooperate with the State, regional, and local water agencies and suppliers to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Through implementation of existing Federal, State, and local regulations and the General Plan Update goals, policies, and actions, the environmental impacts to water supplies would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.1: **Conservation.** Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Policy CF-2.1: **Water Supply Needs.** Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: **Use of Recycled Water.** Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: **Climate Change Impacts.** Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

USS-3: Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Impact Analysis: As discussed above, the City's local sewers discharge into the LACSD facilities and are conveyed for treatment at LACSD's JWPCP. The JWPCP has a capacity of 400 MGD and treats approximately 260 MGD of wastewater, resulting in a remaining capacity of 140 MGD. As shown in Table 5.19-5, LACSD projects an average flow of 423 MGD at the JWPCP for 2050, which exceeds the plant's current permitted capacity by 23 MGD. The LACSD continues to monitor and adjust its projected flows and would expand treatment capacity as needed based on these updates. No current plant expansion is being planned, as ongoing water conservation efforts throughout the region continue to lower current wastewater flows.

Based on the anticipated growth under the General Plan Update, as described in Section 3.0, and summarized in Table 3-4, buildout under the General Plan Update could yield a net change over existing conditions of an additional population of 9,482 people within the Planning Area. Using the wastewater generation rate of 83 gpcd from LACSD's 2012 Clearwater Program Master Facilities Plan, growth associated with implementation of the General Plan Update would generate 3.9 MGD of wastewater within the Planning Area, a net increase of 0.8 MGD (25.8 percent) over existing conditions.

As noted above, the General Plan Update enables additional development but does not include specific development proposals. At the time future projects are proposed, they would require a separate

environmental review and compliance with regulations in existence at that time to ensure adequate wastewater treatment capacity exists. LACSD charges annual wastewater sewer fees through its Wastewater Treatment Surcharge Program, as well as sewer connection fees through its Connection Fee Program, in order to maintain and expand LACSD's wastewater services. Additionally, the General Plan Update includes goals, policies, and actions to ensure adequate wastewater facilities capacity to serve the Project's projected demand. Proposed Land Use Element Policy LU-2.6 would notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-3.1 directs the City to work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development. Policy CF-3.2 directs coordination with the CSMD to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained. Policy CF-3.3 proposes the City take a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness. Policy CF-3a directs the City to require that sufficient wastewater infrastructure capacity is available to serve proposed development prior to approval of the project; ensure the project applicant has paid the required fees prior to occupancy of any new development; and to periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities. The implementation of existing Federal, State, and local regulations and the General Plan Update policies and actions would ensure adequate wastewater treatment capacity and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: **Regional Growth.** Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: **Infrastructure and Public Services.** A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: **Capital Improvements.** Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.3: **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.5: **Infrastructure Rehabilitation.** Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy CF-1.8: **Regional Issues.** Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy CF-1.10: **Regional Services Providers.** Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy CF-1.11: **Capital Improvement Planning.** Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action CF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action CF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy CF-3.1: **Wastewater System.** Work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development.

Policy CF-3.2: **Adequate Infrastructure.** Coordinate with the County of Los Angeles Consolidated Sewer Maintenance District to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained.

Policy CF-3.3: **Integrated Systems Planning.** Develop a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness.

Action CF-3a: Through the development review process, continue to cooperate with the County of Los Angeles Consolidated Sewer Maintenance District to ensure adequate wastewater facilities are provided and maintained in the community. Specifically, the City should:

- Require that sufficient wastewater infrastructure capacity is available to serve the development prior to approval of the project;
- Ensure the project applicant has paid the required fees prior to occupancy of any new development; and
- Periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

USS-4: Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Impact Analysis: Future development of projects as contemplated under the General Plan Update may increase the population within the Planning Area by an additional 9,482 people. As described above, the City has achieved a disposal rate of 2.1 PPD per resident in 2021. Assuming these disposal rates remain constant throughout the life of the General Plan Update, the new growth under General Plan buildout would result in a net increase of approximately 19,912.2 PPD of solid waste over existing conditions, which equals 9.6 net TPD or 3,634.0 net tons of solid waste per year.

The City's projected increase in solid waste generation associated with 2045 buildout under the General Plan Update is within the permitted capacity of the Olinda Alpha Landfill, Sunshine Canyon Landfill, and El Sobrante Landfill, where the vast majority of waste from the City was disposed of in 2019. Olinda Alpha Landfill has a remaining capacity of approximately 17.5 million cubic yards as of 2020, is permitted a maximum throughput of 8,000 TPD, and has enough projected capacity to serve residents and businesses until approximately 2036. Sunshine Canyon Landfill has a remaining capacity of approximately 77,900,000 cubic yards as of 2018, is permitted a maximum throughput of 12,100 TPD, and has enough projected capacity to serve residents and businesses until approximately 2037. El Sobrante Landfill has a remaining capacity of approximately 143,977,170 cubic yards as of 2018, is permitted a maximum throughput of

16,054 TPD, and has enough projected capacity to serve residents and businesses until approximately 2051, beyond the 20-year planning horizon of the General Plan Update. In addition, the City disposes solid waste to a number of other landfills and the Southeast Resource Recovery Facility. Conservatively assuming the Olinda Alpha Landfill and Sunshine Canyon Landfill reach full capacity during the 20-year planning horizon of the General Plan Update, the El Sobrante Landfill would have adequate capacity to accommodate the City's projected solid waste generation under buildout of 49.8 TPD. Further, it is more likely that future solid waste would be distributed to the other landfills serving the City.

In addition, all future development would be required to comply with the mandatory commercial and multifamily recycling requirements of AB 341, thus reducing the amount of landfill waste. Furthermore, the General Plan Update includes policies and actions to responsibly manage and reduce solid waste. Proposed Resource Management Element Policy RM-2.1 ensures compliance with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting. Policy RM-2.2 supports efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services in the City, and periodically reviews waste collection performance to verified adequacy of service. Policy RM-2.3 directs City participation in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and to ensure adequate landfill capacity in the region. Policy RM-2.5 directs the City to work with appropriate service providers to collect and compost green waste to distribute for use in parks, medians, and other municipal areas. Policy RM-2.6 directs the City to work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery. Policy RM-2.7 promotes Citywide educational programs related to recycling. Action RM-2a ensures solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan. Action RM-2c requires standard language is included in request for services and in City agreements requiring contractors to use BMPs to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates. Action RM-2e encourages recycling, reuse, and appropriate disposal of hazardous materials through increased participation in single-family and multi-family residential curbside recycling programs; increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and reduced yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

Through the implementation of existing regulations and the General Plan Update policies and actions, this is a less than significant impact.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.1: Compliance with State Legislation. Comply with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting.

Policy RM-2.2: Solid Waste Collection. Support efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services for present and future residents

and businesses, and periodically review waste collection performance to verified adequacy of service.

Policy RM-2.4: **Source Reduction and Recycling Efforts.** Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

Policy RM-2.5: **Organic Waste.** Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

Policy RM-2.6: **Fees and Funding.** Work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery.

Policy RM-2.7: **Public Education.** Promote Citywide educational programs to inform residents of the benefits of recycling and appropriate recycling options and locations.

Action RM-2a: On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

Action RM-2c: Include standard language in request for services and in City agreements requiring contractors to use best management practices to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates.

Action RM-2e: Encourage recycling, reuse, and appropriate disposal of hazardous materials, including the following:

- Increased participation in single-family and multi-family residential curbside recycling programs;
- Increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and
- Reduce yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

USS-5: Would the Project comply with Federal, state, and local management and reduction statutes and regulations related to solid waste?

Impact Analysis: As discussed in the settings section, Chapter 8.32, *Solid Waste – Collection and Management*, of the Municipal Code establishes mandatory solid waste and recycling collection to comply with the requirements of AB 939 and AB 341. The City has also established disposal and mandatory recycling requirements for commercial facilities, single family residential, and multifamily residential premises to comply with State law diversion requirements. As permitted by AB 939, the City authorizes a private solid waste franchisee (i.e., Republic Services) to handle the City's solid waste and requires Republic to cooperate in the preparation of solid waste disposal characterization studies and the preparation of waste stream audits. Republic and the City work together to submit information to meet the reporting requirements of AB 939, or any other law or regulation, to reach the solid waste and recycling goals mandated by AB 939.

The General Plan Update includes policies and actions to responsibly manage and reduce solid waste in compliance with Federal, State, and local regulations. Proposed Resource Management Element Policy RM-2.1 ensures compliance with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting. Policy RM-2.2 supports efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services in the City, and periodically reviews waste collection performance to verified adequacy of service. Policy RM-2.3 directs City participation in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and to ensure adequate landfill capacity in the region. Policy RM-2.5 directs the City to work with appropriate service providers to collect and compost green waste to distribute for use in parks, medians, and other municipal areas. Policy RM-2.6 directs the City to work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery. Policy RM-2.7 promotes Citywide educational programs related to recycling. Action RM-2a ensures solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan. Action RM-2c requires standard language is included in request for services and in City agreements requiring contractors to use BMPs to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates. Action RM-2e encourages recycling, reuse, and appropriate disposal of hazardous materials through increased participation in single-family and multi-family residential curbside recycling programs; increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and reduced yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

Through the implementation of existing regulations and the General Plan Update policies and actions, future development implemented by the General Plan Update would continue to comply with management and reduction statutes and regulations related to solid waste and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.1: **Compliance with State Legislation.** Comply with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting.

Policy RM-2.2: **Solid Waste Collection.** Support efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services for present and future residents and businesses, and periodically review waste collection performance to verified adequacy of service.

Policy RM-2.4: **Source Reduction and Recycling Efforts.** Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

Policy RM-2.5: **Organic Waste.** Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

Policy RM-2.6: **Fees and Funding.** Work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery.

Policy RM-2.7: **Public Education.** Promote Citywide educational programs to inform residents of the benefits of recycling and appropriate recycling options and locations.

Action RM-2a: On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

Action RM-2c: Include standard language in request for services and in City agreements requiring contractors to use best management practices to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates.

Action RM-2e: Encourage recycling, reuse, and appropriate disposal of hazardous materials, including the following:

- Increased participation in single-family and multi-family residential curbside recycling programs;
- Increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and
- Reduce yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

Mitigation Measures: No mitigation is required.

Level of Significance: Less Than Significant Impact.

5.19.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, identifies the methodology used to determine the potential for cumulative growth and development to interact with the proposed Project to the extent that a significant cumulative effect relative to utilities and service systems may occur. The geographic setting for utilities and service systems considers development within the City as well as the service areas specific to water, wastewater conveyance and treatment, and solid waste, which serve the larger region.

Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects, or have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Impact Analysis: As discussed, water service in the Planning Area is provided by the GSWC. In addition to the Project, cumulative projects within the City would receive water service from GSWC. Similar to future development associated with Project implementation, cumulative development projects would be located within areas that are already developed and serviced by the GSWC. Additionally, Lawndale Municipal Code Section 3.14.090*, Water Users Tax*, imposes a tax on water users in the City and would help fund necessary infrastructure improvements. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded water facilities. Cumulative development projects are anticipated to occur gradually as development occurs in the Planning Area and would be required to pay applicable development impact fees to ensure water facilities can be constructed/expanded, if necessary. Further, the General Plan Update includes policies and actions related to the provision of utilities and water conservation. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on water facilities to a less than significant level. Thus, the Project's incremental impacts to water facilities would not be cumulatively considerable.

Project implementation may result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies. Similar to future development associated with Project implementation, cumulative development projects would require an analysis of sufficient water supplies through provisions in SB 610 and/or the CEQA process. Additionally, future development associated with the Project and cumulative projects would be required to comply with existing Federal, State, and local regulations, including the Municipal Code, to conserve water and ensure the efficient use of available water supplies. Further, the General Plan Update includes policies and actions related to the provision of utilities and water conservation. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on water supplies to a less than significant level. Thus, the Project's incremental impacts to water supplies would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects, or result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Impact Analysis: As discussed, the City and LACSD provide wastewater services to the Planning Area. In addition to the Project, cumulative projects within the City would be provided wastewater services by the City and LACSD. Similar to future development associated with Project implementation, cumulative development projects would be located within areas that are already developed and serviced by the City and LACSD. The City would review each site to determine if sufficient local and trunk sewer capacity exists to serve each specific development project. Pursuant to Lawndale Municipal Code Section 13.08.070, a building permit would not be issued if the anticipated sewage from a proposed project is found by the City Engineer to exceed the capacity available in the public sewer. Lawndale Municipal Code Chapter 13.08, *Sewer Capacity – Peak-flow Charges,* provides for sewer connection and facilities expansion fees for the City's local wastewater transmission lines. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded wastewater facilities. Cumulative development projects are anticipated to occur gradually as development occurs in the Planning Area and would be required to pay applicable development impact fees to ensure wastewater facilities can be constructed/expanded, if necessary, to ensure adequate capacity to serve the proposed development. Further, the General Plan Update includes policies and actions related to the provision of utilities. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on wastewater facilities to a less-than-significant level. Thus, the Project's incremental impacts to wastewater facilities would not be cumulatively considerable.

Project implementation may result in increased population growth in the Planning Area, and a corresponding increase in the flow of wastewater requiring treatment. As noted above, the Project enables additional development but does not include specific development proposals. At the time future projects are proposed, they would be required to ensure adequate wastewater treatment capacity exists. Additionally, LACSD charges annual wastewater sewer fees through its Wastewater Treatment Surcharge Program, as well as sewer connection fees through its Connection Fee Program, in order to maintain and expand wastewater services, including wastewater treatment. Thus, the Project's incremental impacts to wastewater would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded stormwater facilities, the construction or relocation of which could cause significant environmental effects?

Impact Analysis: As discussed, storm drain infrastructure in the Planning Area is owned and operated by the City and the LACFCD. The Planning Area is primarily developed, with limited areas of pervious surfaces. Similar to the Project, cumulative projects have the potential to slightly increase impervious areas within specific areas of the Planning Area. However, due to the urbanized nature of the Planning Area, the majority of development activities associated with cumulative development would consist of infill and redevelopment on currently urbanized sites and would not substantially increase the rate or amount of surface runoff. Federal, State and local regulations would require individual projects to provide necessary on-site storm drain infrastructure and any off-site infrastructure improvements.

The specific impacts of providing new and expanded drainage facilities cannot be determined at this time, as the Project does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities. Stormwater drainage and conveyance facilities would be evaluated at the project-level in association with subsequent development projects. However, the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development under the proposed Project. As future development and cumulative development projects are considered by the City, each project would be evaluated for conformance with the Municipal Code, and other applicable regulations. Further, the General Plan Update includes policies and actions related to the provision of public facilities. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on stormwater facilities to a less than significant level. Thus, the Project's incremental impacts to stormwater would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded electrical, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Impact Analysis: As discussed, the City is within the service areas of SCE, SoCalGas, and various telecommunication providers. The Planning Area is primarily developed and includes existing electrical, natural gas, and telecommunications infrastructure. Similar to the Project, cumulative projects have the potential to increase demand for electrical, natural gas, and telecommunications services, potentially resulting in the new construction or relocation of facilities. The specific impacts of providing new and

expanded electrical, natural gas, and telecommunications services cannot be determined at this time, as the Project does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities. The environmental effects of future expansions of electrical, natural gas, and telecommunication facilities would be evaluated with each development proposal and would require a separate environmental review, as required, related to the construction and operation of new electrical, natural gas, and telecommunications infrastructure. Future development associated with the Project and cumulative projects would have to coordinate with each utility provider to establish service, provide any necessary extensions of facilities, and comply with regulations in existence at that time. As future development and cumulative development projects are considered by the City, each project would be evaluated for conformance with the Municipal Code, and other applicable regulations, including the General Plan Update. The General Plan Update includes policies and actions related to the provision of utilities. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on natural gas, electrical, and telecommunications facilities to a less than significant level. Thus, the Project's incremental impacts to electrical, natural gas, or telecommunications would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals, and comply with Federal, state, and local management and reduction statutes and regulations related to solid waste?

Impact Analysis: Similar to the Project, cumulative projects have the potential to increase solid waste generated within the Planning Area. As described above, the Lawndale Municipal Code, Chapter 8.28 establishes mandatory solid waste and recycling collection to comply with the requirements of AB 939 and AB 341. As permitted by AB 939, the City authorizes a private solid waste franchisee (i.e., Republic Services) to handle the City's solid waste and cooperate in the preparation of solid waste disposal characterization studies and the preparation of waste stream audits. Republic and the City work together to submit information to meet the reporting requirements of AB 939, or any other law or regulation, to reach the solid waste and recycling goals mandated by the AB 939. Future development associated with the Project and cumulative projects would be required to implement existing regulations, including the Municipal Code, to comply with regulations related to solid waste and ensure the permitted capacity of landfills serving the City is not exceeded. Further, the General Plan Update includes policies and actions related to solid waste, including source reduction. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on solid waste to a less than significant level. Thus, the Project's incremental impacts to solid waste would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.19.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Impacts to utilities and service systems associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable impacts to utilities and service systems would occur as a result of the General Plan Update.

5.20 WILDFIRE

This section analyzes potentially significant impacts related to wildfire that could result from implementation of the General Plan Update. Further discussion of fire suppression resources is located in Section 5.15, *Public Services*, of this EIR.

5.20.1 ENVIRONMENTAL SETTING

WILDFIRE HAZARDS

Threat from wildfire hazards is determined based on a number of factors, including fuel loading (vegetation); topography; climatic conditions, such as wind, humidity, and temperature; and the proximity of structures and urban development to fire hazards. Wildland fire hazards are most pronounced in Wildland-Urban Interface (WUI) areas and areas of development that are located within Fire Hazard Severity Zones (FHSZs). WUI areas typically contain higher amounts of vegetation that can serve as fuel for fires. Generally, the periods of greatest risk for wildland fire are the late summer and early fall when vegetation is at its driest. Human activity, including residential and agricultural burning, campfires, and the use of fireworks can all trigger fires. Natural causes such as lightning strikes may also start fires.

The State has charged the California Department of Forestry and Fire Protection (CAL FIRE) with the identification of FHSZ within State Responsibility Areas (SRA). In addition, CAL FIRE must recommend Very High Fire Hazard Severity Zones (VHFHSZ) identified within any Local Responsibility Areas (LRA). The FHSZ maps are used by the State Fire Marshall as a basis for the adoption of applicable building code standards and are meant to help limit wildfire damage to structures through planning, prevention, and the application of risk reduction measures. The mapped areas, or "zones," are based on factors such as fuel (e.g., flammable vegetation), slope, and fire weather. There are three zones, based on increasing fire hazard: moderate, high, and very high.

According to Los Angeles County's and CAL FIRE's FHSZ maps, the Planning Area is located within a LRA, and there are no FHSZs in an LRA or SRA within the Planning Area (Los Angeles County 2023; CAL FIRE 2023a).

IDENTIFYING FIRE HAZARDS

Fuel rank is a ranking system developed by CAL FIRE that incorporates four wildfire factors: fuel model, slope, ladder index, and crown index.

The U.S. Forest Service has developed a series of fuel models, which categorize fuels based on burn characteristics. These fuel models help predict fire behavior. In addition to fuel characteristics, slope is an important contributor to fire hazard levels. A surface ranking system has been developed by CAL FIRE, which incorporates the applicable fuel models and slope data. The model categorizes slope into six ranges: 0-10 percent, 11-25 percent, 26-40 percent, 41-55 percent, 56-75 percent, and greater than 75 percent. The combined fuel model and slope data are organized into three categories, referred to as surface rank. Thus, surface rank is a reflection of the quantity and burn characteristics of the fuels and the topography in a given area.

The ladder index is a reflection of the distance from the ground to the lowest leafy vegetation for tree and plant species. The crown index is a reflection of the quantity of leafy vegetation present within individual specimens of a given species. The surface rank, ladder index, and crown index for a given area are combined in order to establish a fuel rank of medium, high, or very high. Fuel rank is used by CAL FIRE to identify areas in the California Fire Plan where large, catastrophic fires are most likely.

The fuel rank data is used by CAL FIRE to delineate fire threat based on a system of ordinal ranking. Thus, the Fire Threat model creates discrete regions, which reflect fire probability and predicted fire behavior. The four classes of fire threat range from moderate to extreme.

HISTORY OF WILDFIRE

Lawndale adopted a Citywide Local Hazard Mitigation Plan (LHMP) in March 2016. As wildfires do not pose a major threat to the City, the LHMP does not include the topics of wildland and urban fires within the Natural Hazard Risk Assessment discussion. However, CAL FIRE records all known fires that occur annually and compiles them into the CAL FIRE Incident Database. The CAL FIRE Incident Database archives date back to 2013, but some of the larger fires have been recorded since the early 2000s. The larger (1,000 acres+) fires that have occurred within an approximately 35-mile radius in and around the Planning Area within the last ten years are shown in Table 5.20-1, *History of Fire in Lawndale and Surrounding Area*.

Table 5.20-1
History of Fire in Lawndale and Surrounding Area

Year	Fire Name, Location, & Description	Acres Burned	Containment
2014	Colby Fire; located near Morris Reservoir, north of Glendora. Active for nine days before containment. Approximately 32 miles northeast of Planning Area.	1,952	100%
2016	Sage Fire; off of Calgrove Blvd, southwest of Santa Clarita. Active for seven days. Approximately 35 miles north of Planning Area.	1,100	100%
2016	Marek Fire; incident located at Lake View Terrace. Active for one day before containment. Approximately 28 miles north of Planning Area.	4,824	100%
2017	La Tuna Fire; incident occurred at Lowell Ave and I-210, Verdugo Hills, in the City of Los Angeles. Active from September 1, 2017 to January 9, 2018. Approximately 22 miles north of Planning Area.	7,194	100%
2017	Creek Fire; located at Kagel Canyon Rd, north of Lake View terrace. Active from December 5, 2017 to August 6, 2018. Approximately 28 miles north of Planning Area.	15,619	100%
2019	Saddle Ridge Fire; located on Saddle Ridge Road, Sylmar. Active for 21 days in October of 2019 before containment. Approximately 30 miles north of Planning Area.	8,799	100%
2020	Ranch 2 Fire; North San Gabriel Canyon Road and Ranch Road, San Gabriel Canyon. Active from August 13 to October 5. Approximately 30 miles northeast of Planning Area.	4,237	100%
2021	Palisades Fire; located at Palisades Court and Michael Lane, Topanga Canyon. Active for 12 days before containment. Approximately 16 miles northwest of Planning Area.	1,202	100%

WILDFIRE PREPAREDNESS & PROGRAMS

Due to the urbanized character of the City, fires would primarily be associated with structures, trash/debris, and vehicle fires. Structure fires, including homes, industrial and commercial buildings, and other facilities are of the greatest concern due to the potential for loss of life as well as property. Generally, the risk of injury and damage is greater for higher occupancy structures, such as condominiums, apartment buildings, hotels, and churches. In addition, higher density areas are of increased concern due to the large number of people residing within a concentrated area and the potential for fires to spread from one structure to another. Lawndale is among the highest density areas within Los Angeles County. Development of the City has resulted in small lot development with multiple structures on single lots and narrow streets. As discussed above, the Planning Area, does not contain VHFHSZs within SRAs and LRAs.

The City of Lawndale contracts with the Los Angeles County Fire Department (LACoFD) for fire and emergency services. The LACoFD contracts with CAL FIRE for provision of services as part of an integrated fire protection system. There is one fire station within City limits: Fire Station 21, located at 4312 West 147th Street.

LACoFD's areas of expertise include: Firefighting; Emergency Medical Services; Urban Search and Rescue, and Hazardous Materials; Air and Wildland; Lifeguarding; Dispatch; Prevention; and Public Education. The Air and Wildland Department maintains a fleet of ten helicopters for paramedic transport, hoist rescues and wildland firefighting. Contract aircraft are also available during wildfire season. Nine camps are also staffed year-round for fire suppression, fire road maintenance and miscellaneous projects. The Prevention Department educates the community about the benefits of proper safety practices and identifies and eliminates all types of hazardous conditions that pose a threat to life, the environment and property (Los Angeles County Fire Department 2023).

The LACoFD Strategic Plan 2017- 2021 outlines goals and strategies for fire protection services throughout the Los Angeles County Operational Area, including facility needs and improvements, training requirements, and disaster preparedness.

Further, LACoFD supports the "Ready Set, Go!" (RSG) CAL FIRE State program. This program is a preparedness campaign that gives Los Angeles County residents tips on how to be prepared for wildfires (and floods) year-round. It is an easy-to-understand guide for how to make a home resistant to wildfires as well as preparing families to leave early and safely. The publication was prepared by the International Association of Fire Chief's RSG Program and the U.S. Department of Agriculture, U.S. Forest Service, U.S. Department of the Interior, and the U.S. Fire Administration.

5.20.2 REGULATORY SETTING

FEDERAL

FY 2001 Appropriations Act

Title IV of the Appropriations Act required the identification of "Urban Wildland Interface Communities in the Vicinity of Federal Lands that are at High Risk from Wildfire" by the U.S. Departments of the Interior and Agriculture.

Disaster Mitigation Act

The Disaster Mitigation Act of 2000 requires that a state mitigation plan, as a condition of disaster assistance, add incentives for increased coordination and integration of mitigation activities at the state level through the establishment of requirements for two different levels of state plans: "Standard" and "Enhanced." The Disaster Mitigation Act also established a new requirement for local mitigation plans.

National Cohesive Wildland Fire Management Strategy

Under the direction of the Federal Land Assistance, Management, and Enhancement Act of 2009 (the FLAME Act), the Secretary of the Interior and the Secretary of Agriculture created the National Cohesive Wildland Fire Management Strategy report. This report contains a cohesive wildfire management strategy as directed by the FLAME Act and under the advisement of the intergovernmental Wildland Fire Leadership Council. The most recent version of this report is The National Strategy: The Final Phase in the Development of the National Cohesive Wildland Fire Management Strategy (2014).

National Fire Plan (NFP) 2000

The summer of 2000 marked a historic milestone in wildland fire records for the United States. Dry conditions (across the western United States), led to destructive wildfire events on an estimated 7.2 million acres, nearly double the 10-year average. Costs in damages, including fire suppression activities, were approximately 2.1 billion dollars. Congressional direction called for substantial new appropriations for wildland fire management. This resulted in action plans, interagency strategies, and the Western Governor's Association's "A Collaborative Approach for Reducing Wildland Fire Risks to Communities and the Environment - A 10-Year Comprehensive Strategy - Implementation Plan", which collectively became known as the National Fire Plan. This plan places a priority on collaborative work within communities to reduce their risk from large-scale wildfires.

Healthy Forest Initiative 2002/Healthy Forest Restoration Act 2003

In August 2002, the Healthy Forests Initiative was launched with the intent to reduce the severe wildfires risks that threaten people, communities, and the environment. Congress then passed the Healthy Forests Restoration Act on December 3, 2003 to provide the additional administrative tools needed to implement the Healthy Forests Initiative. The Healthy Forests Restoration Act strengthened efforts to restore healthy forest conditions near communities by authorizing measures such as expedited environmental assessments for hazardous fuels projects on Federal land. This Act emphasized the need for Federal agencies to work collaboratively with communities in developing hazardous fuel reduction projects and places priority on fuel treatments identified by communities themselves in their Community Wildfire Protection Plans.

Department of the Interior Department Manual Part 620

Wildland Fire Management Part 620 of the Department of the Interior Departmental Manual pertains to wildland fire management policies, with the goal of providing an integrated approach to wildland fire management. The guiding principles of the plan emphasize the need for public health and safety considerations, risk management protocols, inter-agency collaboration, and economic feasibility of wildfire management practices, as well as the ecological role of wildfires.

STATE

California Department of Forestry and Fire Protection (CAL FIRE)

Under Title 14 of the Natural Resources of the California Code of Regulations (CCR), CAL FIRE has the primary responsibility for implementing wildfire planning and protection for SRA lands. CAL FIRE develops fire safe regulations and issues fire safe clearances for land within the SRA. The CAL FIRE Resource Management Program manages more than 31 million acres of California's privately-owned wildlands, and provides emergency services in 36 of the State's 58 counties via contracts with local governments.

Under CCR Title 24, *Regulations Development*, the Office of the State Fire Marshal is responsible for promulgating regulations that promote fire and life safety for inclusion into the State Building Codes, including the California Building Code, California Fire Code, California Electrical Code, California Mechanical Code, California Plumbing Code, and California Historical Building Code. The process incorporates a great deal of public participation and is guided by the State Building Standards Law.

Strategic Fire Plan for California

The State Board of Forestry and Fire Protection, along with CAL FIRE, updated the previous 2010 Strategic Fire Plan to reflect current and anticipated needs by incorporating and updating goals and objectives to reflect new priorities and changed conditions. The 2018 Strategic Fire Plan focuses on 1) fire prevention and suppression activities to protect lives, property, and ecosystem services, and 2) natural resource management to maintain the state's forests as a carbon sink to meet California's climate change goals and to serve as important habitat for adaptation and mitigation. It serves as guidance for CAL FIRE and stakeholders who share similar missions and responsibilities towards public safety and fire suppression.

California Fire Code

The 2022 California Fire Code (CCR Title 24, Part 9) establishes regulations to safeguard against the hazards of fire, explosion, or dangerous conditions in new and existing buildings, structures, and premises. The Fire Code also establishes requirements intended to provide safety for and assistance to firefighters and emergency responders during emergency operations. The provisions of the Fire Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure throughout California. The Fire Code includes regulations regarding fire-resistance-rated construction, fire protection systems such as alarm and sprinkler systems, fire services features such as fire apparatus access roads, means of egress, fire safety during construction and demolition, and WUI areas.

California State Multi-Hazard Mitigation Plan

The purpose of the State Multi-Hazard Mitigation Plan (SHMP) is to significantly reduce deaths, injuries, and other losses attributed to natural- and human-caused hazards in California. The SHMP provides guidance for hazard mitigation activities emphasizing partnerships among local, State, and Federal agencies as well as the private sector.

California Government Code

California Government Code Section 65302.5 requires the State Board of Forestry and Fire Protection to provide recommendations to a local jurisdiction's General Plan fire safety element at the time that the General Plan is amended. While not a direct and binding fire prevention requirement for individuals, General Plans that adopt the Board's recommendations will include goals and policies that provide for contemporary fire prevention standards for the jurisdiction.

California Government Code Section 51175 defines Very High Fire Hazard Severity Zones and designates lands considered by the State to be a very high fire hazard.

California Government Code Section 51182 specifically requires people who own, lease, control, operate, or maintain a building or structure on or adjoining land within a VHFHSZ, to do all of the following: (A) Maintain defensible space of 100 feet from each side and from the front and rear of the structure, (B) Remove that portion of a tree that extends within 10 feet of the outlet of a chimney or stovepipe, (C) Maintain a tree, shrub, or other plant adjacent to or overhanging a building free of dead or dying wood, (D) Maintain the roof of a structure free of leaves, needles, or other vegetative materials, and (E) Prior to constructing a new dwelling or structure that will be occupied or rebuilding an occupied dwelling or occupied structure damaged by a fire in that zone, the construction or rebuilding of which requires a building permit, the owner shall obtain a certification from the local building official that the dwelling or structure, as proposed to be built, complies with all applicable state and local building standards.

California Government Code Section 51189 directs the Office of the State Fire Marshal to create building standards for wildland fire resistance. The code includes measures that increase the likelihood of a structure withstanding intrusion by fire (such as building design and construction requirements that use fire-resistant building materials) and provides protection of structure projections (such as porches, decks, balconies and eaves), and structure openings (such as attics, eave vents, and windows).

California Public Resources Code

The State's Fire Safe Regulations are set forth in Public Resources Code Section 4290, which include the establishment of SRAs.

Public Resources Code Section 4291 sets forth defensible space requirements, which are applicable to anyone that owns, leases, controls, operates, or maintains a building or structure in, upon, or adjoining a mountainous area, forest-covered lands, brush covered lands, grass-covered lands, or land that is covered with flammable material (Section 4291(a)).

Public Resources Code Sections 4292-4296 and 14 CCR 1256, Fire Prevention for Electrical Utilities, address the vegetation clearance standards for electrical utilities. They include the standards for clearing around energy lines and conductors such as power-line hardware and power poles. These regulations are critical to wildland fire safety because of the substantial number of power lines in wildlands, the historic source of fire ignitions associated with power lines, and the extensive damage that results from power line caused wildfires in severe wind conditions.

Assembly Bill 337

Per AB 337, local fire prevention authorities and CAL FIRE are required to identify VHFHSZs in LRAs. Standards related to brush clearance and the use of fire-resistant materials in fire hazard severity zones are also established.

California Code of Regulations Title 8

In accordance with CCR Title 8, Sections 1270 and 6773 (Fire Prevention and Fire Protection and Fire Equipment), the Occupational Safety and Health Administration (Cal OSHA) establishes fire suppression service standards. The standards range from fire hose size requirements to the design of emergency access roads.

California Code of Regulations Title 14 (Natural Resources)

Division 1.5 (Department of Forestry and Fire Protection), Title 14 of the CCR establishes a variety of wildfire preparedness, prevention, and response regulations.

California Code of Regulations Title 19 (Public Safety)

Title 19 of the CCR establishes a variety of emergency fire response, fire prevention, and construction and construction materials standards.

California Code of Regulations Title 24 (California Building Code)

The California Building Code (CBC) contains general building design and construction requirements relating to fire and life safety, structural safety, and access compliance. CBC provisions provide minimum standards to safeguard life or limb, health, property, and public welfare by regulating and controlling the design, construction, quality of materials, use and occupancy, location, and maintenance of all buildings and structures and certain equipment.

California Health and Safety Code and Uniform Building Code Section 13000 et seq.

State fire regulations are set forth in Section 13000 et seq. of the California Health and Safety Code, which is divided into “Fires and Fire Protection” and “Buildings Used by the Public.” The regulations provide for the enforcement of the UBC and mandate the abatement of fire hazards.

The code establishes broadly applicable regulations, such as standards for buildings and fire protection devices, in addition to regulations for specific land uses, such as childcare facilities and high-rise structures.

California Senate Bill 1241

California Senate Bill 1241 requires that the Safety Element component of city or county general plans to incorporate fire risk related to SRAs and VHFSZ.

LOCAL

Los Angeles County Operational Area Emergency Response Plan

The purpose of the Los Angeles County Operational Area Emergency Response Plan (OAERP) is to increase cooperation and coordination between relevant governmental agencies and jurisdictions in order to

increase efficiency and minimize losses in the event of an emergency or disaster. The OAERP established the Operational Area (OA) emergency organization, identifies departmental responsibilities, and specifies policies and general procedures for addressing emergencies impacting the OA. This Plan provides for the coordination of emergency operations plans of agencies and jurisdictions. The OAERP conforms to the requirements of the National Incident Management System (NIMS) and the California Standardized Emergency Management System (SEMS).

County of Los Angeles All-Hazards Mitigation Plan

The 2020 All-Hazards Mitigation Plan (AHMP) assess risks posed by natural hazards and to develop a mitigation action plan for reducing the risks in Los Angeles County. The primary focus of the 2020 AHMP is preparation for natural hazards and secondary hazards, that follow as a result of a natural hazard. In addition, potential climate change impacts are addressed in the plan as increasing surface temperatures will likely result in more droughts and subsequently the risk of wildfires. Therefore, climate change, dam failure, drought, earthquake, flood, landslide, tsunami, and wildfire are the main focuses in the 2020 AHMP. The County developed the 2020 AHMP to cover mitigation responsibilities of County departments (including LACoFD). It helps ensure the most effective allocation of resources for the maximum benefit and protection of the public in time of emergency.

City of Lawndale Local Hazard Mitigation Plan 2016

The City of Lawndale developed the 2016 Local Hazard Mitigation Plan (LHMP) in an effort to reduce future loss of life and property resulting from natural disasters and to provide increased resiliency for the City, allowing Lawndale to return to “the norm” sooner, with fewer impacts to people and infrastructure. The purpose of the Lawndale LHMP is to provide the City with a blueprint for hazard mitigation action planning. The plan identifies resources, information, and strategies for risk reduction, and provides a tool to measure the success of mitigation implementation on a continual basis.

City of Lawndale Emergency Operations Plan (EOP)

The City adopted the EOP in 2011, which was updated in 2015. The EOP addresses the City’s planned response to natural or human-caused disasters, provides an overview of operational concepts, and identifies components of the City’s emergency/disaster management organization within the Standardized Emergency Management System (SEMS), the National Incident Management System (NIMS) and the Incident Command System (ICS). The EOP also describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support.

City of Lawndale Municipal Code

Chapter 2.44, *Disaster Council*, provides for the preparation and carrying out of plans for the protection of people and property within the City in the event of an emergency; the direction of the emergency organization; and the coordination of the emergency functions of the City with all other public agencies, corporations, organizations and affected private persons. The intent of this Chapter is to develop emergency and mutual-aid plans and agreements.

Municipal Code Title 13, *Public Services*, addresses wastewater and storm drains within the City. Chapter 13.12, *Storm Water and Urban Runoff Pollution Control*, establishes stormwater runoff controls and best management practices (BMPs) to prevent and/or reduce the quantity of pollutants from being discharged

into the municipal stormwater system (MS4). Section 13.12.060, *Best Management Practices Required*, requires the implementation of BMPs during project operation. Section 13.12.070, *Construction Activity Stormwater Measures*, requires applicants for grading or building permits within the City to provide satisfactory proof of compliance with the Construction General Permit, including a Stormwater Pollution Prevention Plan (SWPPP), when applicable. Applicants that are not required to comply with the Construction General Permit are required to implement a grading and construction activity runoff control program. Chapter 3.16, *Standard Urban Stormwater Mitigation Plan and Low Impact Development Implementation*, contains a number of requirements to control stormwater pollution. Subject new development and redevelopment projects are required to comply with standard urban stormwater mitigation program (SUSMP) conditions assigned by the City, consisting of low impact development (LID) structural and non-structural BMPs, source control BMPs; and structural and non-structural BMPs for specific types of uses. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Per Section 13.16.110, *Maintenance of Best Management Practices*, applicants for new subject development and redevelopment projects must agree to maintain any structural or treatment control BMPs.

Municipal Code Chapter 15.20, *Fire Code*, adopts and incorporates the California Fire Code, as amended by Title 32 the Los Angeles County Fire Code, as the City's fire code prescribing regulations governing the creation and maintenance of conditions dangerous to life and property due to hazards of fire and explosions. The Fire Code sets fire safety related building standards and practices to safeguard life and property.

Section 17.36.220, *Temporary Storage of Construction Materials*, and Section 17.36.230, *Temporary Storage- City Construction Materials and Other Public Agency Construction Materials*, regulate construction materials and equipment. Particularly, Section 17.36.220 requires construction activities to keep adjacent sidewalks, public streets, and, alleys, to be kept free of trash, dirt, debris, or other material for the duration of the construction, as well as sixty days following substantial completion of such construction. Section 17.36.230 allows property in any zone to be used for the storage of materials, equipment and/or for a contractor's temporary office for any city construction project and/or other public agency construction projects.

5.20.3 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to wildfire. The issues presented in the Initial Study Environmental Checklist, which have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and if it would:

- Substantially impair an adopted emergency response plan or emergency evacuation plan (refer to Impact Statement WF-1);
- Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire (refer to Impact Statement WF-2);

- Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment (refer to Impact Statement WF-3); and/or
- Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes (refer to Impact Statement WF-4).

5.20.4 IMPACT ANALYSIS AND MITIGATION MEASURES

WF-1: Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Impact Analysis: According to the CAL FIRE and County FHSZ Maps, the Planning Area is not located within an SRA or within a VHFHSZ within a LRA (CAL FIRE 2023a; Los Angeles County 2015). Therefore, although the General Plan Update would allow for a variety of new development within the Planning Area, no future development within the Planning Area would be located within a FHSZ in SRA or LRA. Any future development would be required to comply with all City and LACoFD requirements for fire prevention and safety measures, including site access. Additionally, implementation of the General Plan Update would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. As described in Section 5.15, *Public Services*, LACoFD provides fire and emergency response service to the City of Lawndale. The County OAERP addresses the planned response to extraordinary situations associated with natural disasters and/or human caused incidents, including wildfires, and outlines mutual aid provisions within the Los Angeles County OA. The City's EOP addresses the City's planned response to natural or human-caused disasters and describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support. The EOP does not provide a specific evacuation route map, as evacuation measures would be implemented based on the specific emergency and area affected. The General Plan Update would not require or result in revisions to the adopted OAERP or EOP.

While the Project does not propose site-specific development, infrastructure improvements would occur gradually to accommodate the new growth as further discussed in Section 5.17, *Transportation*. Future development would be designed, constructed, and maintained in accordance with applicable standards, including vehicular access to ensure that adequate emergency access and evacuation would be maintained. Pursuant to Municipal Code Chapter 15.20, *Fire Code*, construction activities that may temporarily restrict fire apparatus access would be required to implement appropriate measures to facilitate the passage of fire apparatus and emergency vehicles through/around any effected roadways, as part of the building permit process. The General Plan Update identifies major arterials as the primary routes for evacuation; however, evacuation routes would depend upon the emergency event and area affected. Law enforcement will identify the appropriate routes and assist residents leaving the City in the event an evacuation of all or part of the City is required.

Future development within the Planning Area is not anticipated to result in the substantial modification of roadways surrounding specific development sites or the placement of any permanent physical barriers on adjacent roadways. There is the potential that traffic lanes located immediately adjacent to a

development site may be temporarily closed or controlled by construction personnel during construction activities. However, any temporary construction activity would adhere to Municipal Code Section 17.36.220, *Temporary Storage of Construction Materials*, which requires sidewalks, public streets, and, alleys adjacent to construction sites to be kept free of debris or other materials that could interfere with circulation for the duration of construction activities, as well as sixty days following substantial completion of such construction. Thus, the Project would not substantially impair an adopted emergency response plan or emergency evacuation plan.

The General Plan Update includes policies and actions to address public safety and emergency evacuation. Proposed Public Safety Element Goal PS-1, and subsequent policies and actions, pertains to emergency operations. Policy PS-1.3 implements emergency preparedness and response measures in coordination with the County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses. Policy PS-1.4 requires the Lawndale Local Hazard Mitigation Plan to be regularly maintained and updated. Policy PS-1.6 seeks opportunities to improve emergency access and circulation throughout the community. Action PS-1a reviews County and State emergency response procedures that must be coordinated with City procedures. Action PS-1b continues to implement and update (when relevant) the City's EOP. Policy PS-4.2 continues involvement of the LACoFD in the development review process to ensure fire safety is addressed in new and modified developments. Policy PS-4.3 ensures all new development provides adequate access for emergency vehicles and evacuation. With adherence to Municipal Code regulations and General Plan Update policies, implementation of the Project would not substantially impair an adopted emergency response plan or emergency evacuation plan and no impact would occur.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-1: **Emergency Operations.** A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.2: **Critical Facilities**. Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.3: **Emergency Preparedness and Response**. Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

Policy PS-1.4: **Local Hazard Mitigation**. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.6: **Emergency Access**. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Action PS-1a: Regularly review County and State emergency response procedures that must be coordinated with City procedures.

Action PS-1b: Continue to implement and update (when relevant) the City's Emergency Operations Plan.

Policy PS-4.2: **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.3: **Emergency Access**. Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

WF-2: Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Impact Analysis: The Planning Area does not contain lands classified as FHSZs, nor is the Planning Area located within an SRA. The Planning Area is predominantly flat, built-out, and surrounded by highly urbanized development. Urbanized land does not typically facilitate the spread of wildfire in the same manner as vegetated, open space areas.

The Project would allow for a variety of new development within the Planning Area, but does not propose any site-specific development. Implementation of the General Plan Update would not substantially alter the slope, prevailing winds, or other factors that would increase exposure Lawndale residents, employees or visitors to increased pollutant concentrations from wildfire or result in the uncontrollable spread of a wildfire. Future development is not anticipated to exacerbate wildfire risks. The General Plan Update includes policies and actions to address public safety and emergency services, including fire protection services. Proposed Public Safety Element Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards. Action PS-4a requires all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City. Therefore, with implementation of the applicable General Plan Update goals, policies and actions, and compliance with fire codes, no impact would occur.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Policy PS-1.4: **Local Hazard Mitigation**. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.6: **Emergency Access**. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Goal PS-4: **Fire Hazards.** A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: **Fire Protection Services**. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.4: **Building Fire Codes.** Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Action PS-4b: Work with LACoFD to disseminate educational programs for residents on fire hazard risks and fire safety measures.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

WF-3: Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Impact Analysis: The City is highly urbanized and existing infrastructure generally exists within the Planning Area. While no site-specific development is currently proposed, future development anticipated by the General Plan Update could require the eventual construction and installation of new infrastructure or maintenance of existing infrastructure, including roads, water and sewer, and power lines to serve increased growth and development. The Planning Area does not contain lands classified as FHSZs, nor is the Planning Area located within an SRA.

The General Plan Update includes provisions for emergency access, fire protection services, and fire safe design site standards. Proposed Public Safety Element Policy PS-1.2 directs coordination with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery. Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2

involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Future development of utility infrastructure would be subject to the requirements established in Public Resources Code Section 4292, which requires clearing of flammable fuels for a minimum 10-foot radius from the outer circumference of poles and towers; and Section 4293, which sets basic requirements for clearances around electrical conductors. Furthermore, future development would be required to meet vegetation clearance requirements outlined in Title 14, Section 1104.1(d) of the California Code of Regulations for single overhead facilities.

Maintenance of existing infrastructure and the potential installation of new infrastructure for future projects in the Planning Area would be required to comply with Fire Code requirements found in the Municipal Code (Chapter 15.20, *Fire Code*). Proposed development would be reviewed by the LACoFD to determine the specific fire requirements applicable to ensure compliance with the Fire Code. The potential for future projects to impact environmental resources to meet compliance with fire development standards such (as fuel breaks and clearance requirements) would require site specific environmental evaluation under CEQA to identify any site-specific impacts. In addition, any development in the City would need to comply with the California Building Code, Public Resource Code, and the City Municipal Code to ensure that new developments have access to necessary utilities, and any additional utility construction complies with all code requirements.

As demonstrated throughout this EIR, implementation of the various policies and actions contained in the General Plan Update would reduce potential impacts associated with the construction and expansion of infrastructure. Implementation of the General Plan Update policies and actions, combined with local and State requirements, would ensure that potential wildland fire hazards would not be exacerbated by the installation or maintenance of local infrastructure, and no impact would occur.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Policy PS-1.2 **Critical Facilities.** Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.4: **Local Hazard Mitigation**. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.5: **Resources.** Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Goal 4: **Fire Hazards.** A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: **Fire Protection Services**. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.4 **Building Fire Codes.** Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

WF-4: Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Impact Analysis: Wildfire can alter the hydrologic response of a watershed to the extent that even modest rainstorms can produce dangerous flash floods and debris flows (United States Geological Survey 2021). A number of factors affect the likelihood of downstream flooding or landslide after a fire including basin morphometry, burn severity, soil properties, and rainfall characteristics.

The General Plan Update would allow development and improvement projects that would involve some land clearing, grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. There are no designated FHSZs within the Planning Area. Additionally, the Planning Area is predominantly flat, built-out, and surrounded by highly urbanized development.

As detailed throughout Section 5.10, *Hydrology and Water Quality*, there are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard. Future development resulting from implementation of the General Plan Update could increase the potential for localized flooding in low spots or where infrastructure is unable to accommodate peak flows during a storm event. However, as discussed in Section 5.10, all future development and redevelopment projects would be required to comply with applicable Federal, State, regional, and local plans, policies, and regulations to address site-specific drainage and potential flooding risks. Specifically, future site-specific development would be required to comply with Municipal Code Chapter 13.12, *Storm Water and Urban Runoff Pollution Control*, and 13.16, *Standard Urban Stormwater Mitigation Plan and Low Impact Development Implementation*. Municipal Code Chapter 13.12 establishes required BMPs during operational phase of projects. Municipal Code Chapter 13.12 also indicates that each person applying to the City for a grading or building permit must submit satisfactory proof to the City that a SWPPP has been prepared, before the City issues any grading or building permit on the construction project. Municipal Code Chapter 13.16 requires subject new development and redevelopment projects to comply with SUSMP conditions assigned by the City, consisting of LID structural and non-structural BMPs; source control BMPs; and structural and non-structural BMPs for specific types of uses. Section 13.16.060,

Stormwater Pollution Control and Design Standards for Best Management Practices (BMPs), requires applicable development and redevelopment projects to submit a SUSMP for City review and approval, which is required to be incorporated into the applicant's project plans. Section 13.16.070, *Control of Erosion of Slopes and Channels*, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Per Section 13.16.110, *Maintenance of Best Management Practices*, applicants for new subject development and redevelopment projects must agree to maintain any structural or treatment control BMPs. These regulations would minimize danger to life and property due to the hazards of flood, soil erosion, seepage and destruction of natural topography and plant material. Further, subsequent development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Construction of storm drainage improvements would occur as part of an overall development or infrastructure project, and would be considered in the environmental review associated with the specific project being proposed (refer to Section 5.10 for additional details).

The General Plan Update includes policies and actions to address public safety, which would limit risks to people and structures within the City. Proposed Public Safety Element Policy PS-1.2 directs coordination with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery. Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards. Policy PS-5.3 adheres to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Compliance with local, State, and Federal regulations, and General Plan Update goals, policies, and actions would reduce potential exposure of people or structures to significant risks resulting from runoff, post-fire slope instability, or drainage changes. No impact would occur in this regard.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-1: **Emergency Operations.** A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.2: **Critical Facilities.** Coordinate with service providers to ensure the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Goal 4: **Fire Hazards.** A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: **Fire Protection Services**. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Goal PS-5: **Flood Hazards.** A community that is protected from flood hazards.

Policy PS-5.3 **Site Design**. Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

Policy PS-5.4 **Best Management Practices.** Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.6: **Local Storm Drainage Infrastructure.** Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.20.5 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to wildfire may occur. The cumulative projects' setting for wildfire considers the region and projects within the City.

Would the project, combined with other related cumulative projects, substantially impair an adopted emergency response plan or emergency evacuation plan?

Impact Analysis: The Planning Area and immediately surrounding area is highly urbanized and not located within an SRA or FHSZ per CAL FIRE and County regulatory maps. Therefore, future development associated with implementation of the Project and cumulative projects would not be developed in an SRA or FHSZ. Additionally, future development associated with implementation of the Project and cumulative projects would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. The County OAERP addresses the planned response to extraordinary situations associated with natural disasters and/or human caused incidents, including wildfires, and outlines mutual aid provisions within the Los Angeles County OA. The City's EOP addresses the City's planned response to natural or human-caused disasters and describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support. Future development associated with implementation of the Project and cumulative projects would be subject to similar fire protection

development standards and would be required to comply with each jurisdiction's established regulatory framework, including the respective municipal code and General Plan policies and programs to assist in protecting life and property in the event of a wildfire. The Project's would not contribute to cumulative wildfire hazard impacts. Thus, the Project and cumulative development projects' incremental effects involving an adopted emergency response plan or emergency evacuation plan would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Impact Analysis: The Planning Area and immediately surrounding area is highly urbanized and not located within an SRA or FHSZ per CAL FIRE and County regulatory maps. Therefore, future development associated with implementation of the Project and cumulative projects would not be developed in an SRA or FHSZ. Urbanized land does not typically facilitate the spread of wildfire in the same manner as vegetated, open space areas. Future development and cumulative development would be required to comply with the Fire Code, which would further minimize and reduce impacts related to wildfire. Additionally, the General Plan Update includes policies and programs to address public safety and emergency services. As part of the City's development review process, the LACoFD would review all projects for related fire hazards. Wildfire risks would not change with adoption of the General Plan Update, and exposure to pollutant concentrations from wildfire for occupants in the Planning Area would not significantly increase. Accordingly, the Project's incremental contribution to wildfire risks exposing project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects, require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Impact Analysis: The Planning Area and immediately surrounding area is highly urbanized and not located within an SRA or FHSZ per CAL FIRE regulatory maps. Therefore, future development associated with

implementation of the Project and cumulative projects would not be developed in an SRA or FHSZ. Future development and cumulative development could require the eventual construction and installation of new infrastructure or maintenance of existing infrastructure, including roads, water and sewer, and power lines to serve increased growth and development. Maintenance of existing infrastructure and the potential installation of new infrastructure for future development and cumulative development would be required to comply with Fire Code requirements and would be reviewed by the LACoFD to determine the specific fire requirements applicable to ensure compliance with the Fire Code. Additionally, the General Plan Update includes policies and programs to address public safety and emergency services. Thus, the Project's incremental contribution involving potential wildland fire hazards due to the installation or maintenance of local infrastructure would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects, expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Impact Analysis: Future development associated with implementation of the Project and cumulative projects would be subject to similar fire protection development standards and would be required to comply with each jurisdictions established regulatory framework, including the respective municipal code and General Plan policies and programs to assist in protecting life and property in the event of a fire. The Project's incremental contribution to cumulative wildfire hazard impacts would not be significant. As previously discussed, the City is highly urbanized and future development and redevelopment activities in the City under would occur in areas that have been previously developed. As a result, the degree of wildland fire hazard, including secondary hazards such as post-fire flooding and landslides, would not substantially change with adoption of the General Plan Update, and current hazards would not significantly increase.

As described previously, there are no SRA or FHSZs mapped within the Planning Area. As such, the General Plan Update does not approve, propose, or authorize development in an SRA or FHSZ per CAL FIRE and County regulatory maps. New development would be required to comply with the Fire Code, which would further minimize and reduce impacts related to potential fires within the City. As part of the City's development review process, the LACoFD would review all projects for fire related hazards. Additionally, the General Plan Update includes policies and programs to address public safety and emergency services. Accordingly, the Project's incremental contribution involving significant risks as a result of runoff, post-fire slope instability, or drainage changes would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.20.6 SIGNIFICANT UNAVOIDABLE IMPACTS

Wildfire impacts associated with the implementation of the General Plan Update would have no impact; no significant unavoidable wildfire impacts would occur as a result of the General Plan Update.

6.0 OTHER CEQA CONSIDERATIONS

6.1 LONG-TERM IMPLICATIONS OF THE PROPOSED PROJECT

Pursuant to CEQA Guidelines Section 15126.2, Consideration and Discussion of Significant Environmental Effects, an EIR is required to consider: (a) The Significant Environmental Effects of the proposed Project; (b) Energy Impacts; (c) Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented; (d) Significant Irreversible Environmental Changes Which Would be Caused by the Proposed Project Should it be Implemented; and (e) Growth-Inducing Impact of the Proposed Project.

In response to CEQA Guidelines, Section 15162.2 (a), Significant Environmental Effects of the Proposed Project and Section 15162 (c), Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented, are considered and identified in Section 5.0, *Environmental Analysis*, of this EIR. Energy Impacts, pursuant to CEQA Guidelines Section 15162.2 (b), are analyzed in Section 5.6, *Energy*.

6.2 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

According to CEQA Guidelines Sections 15126(c) and 15126.2(d), an EIR is required to address any significant irreversible environmental changes that would occur should the proposed project be implemented. As stated in CEQA Guidelines Section 15126.2(d):

> *"Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified."*

Determining whether the proposed Project would result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed such that there would be little possibility of restoring them. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

CONSUMPTION OF NONRENEWABLE RESOURCES

The environmental impacts associated with implementation of the General Plan Update are analyzed in Section 5.0. Future development would consume limited, slowly renewable and non-renewable resources. This consumption would occur during each individual project's construction phase and would continue throughout its operational lifetime.

Construction associated with future development would require a commitment of resources that would include: (1) building materials; (2) fuel and operational materials/resources; and (3) the transportation of goods and persons to and from individual development sites. Construction would require the consumption of resources that are not renewable or which may renew so slowly as to be considered non-

renewable. These resources would include the following construction supplies: lumber and other forest products; aggregate materials used in concrete and asphalt; metals; and water. Fossil fuels such as gasoline and oil would also be consumed to power construction vehicles and equipment.

The operational activities of new development accommodated through implementation of the General Plan Update would consume resources which would be similar to those currently consumed within the City (i.e., energy resources such as electricity and natural gas, petroleum-based fuels required for vehicle-trips, fossil fuels, and water). Fossil fuels would represent the primary energy source associated with both construction and ongoing operation, and the existing, finite supplies of these natural resources would be incrementally reduced. Future development operations would occur in accordance with California Code of Regulations (CCR) Title 24, Part 6, which sets forth conservation practices that would limit energy consumption. Nonetheless, the proposed Project's energy requirements would represent a long-term commitment of essentially non-renewable resources.

Construction activities associated with implementation of the General Plan Update could release hazardous materials into the environment through reasonably foreseeable upset and accident conditions; refer to Section 5.9, *Hazards and Hazardous Materials*. All potential demolition, grading, and excavation activities would be subject to the established regulatory framework to ensure that hazardous materials are not released into the environment. Compliance with the established regulatory framework and mitigation measures would protect against a significant and irreversible environmental change resulting from the accidental release of hazardous materials.

In addition, there is the potential that individual future development projects would use and store limited amounts of potentially hazardous materials typical; refer to Section 5.9. All future development activities requiring the routine use, storage, transport, or disposal of hazardous materials would be subject to all applicable Federal, State, and local regulations and standards in place for hazardous materials. Compliance with these regulations and standards would protect against significant and irreversible environmental changes due to the accidental release of hazardous materials.

In conclusion, future construction and operations would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources, which would limit the availability of these resource quantities for future generations or for other uses during the life of the individual developments. It is noted that the continued use of such resources would be on a relatively small scale in a regional context.

IRRETRIEVABLE COMMITMENTS/IRREVERSIBLE PHYSICAL CHANGES

Implementation of the General Plan Update would result in a commitment of land uses designated for the foreseeable future. Land use and development consistent with the Project would result in irretrievable commitments by designating land for development that is more intense, in some instances, than current designations allow. Additionally, residential development would be allowed on land not currently designated for residential development. Development would physically change the environment in terms of aesthetics, air emissions, noise, and traffic. These physical changes are irreversible after development occurs. Therefore, the Project would result in changes in land use within the Planning Area that would commit future generations to these uses.

In summary, the General Plan Update includes an extensive policy framework that is designed to address land use and environmental issues to the greatest extent feasible, while allowing growth and economic prosperity for the City. Construction and operation of future development projects associated with Project implementation would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources that would limit the availability of these resource quantities for future generations or for other uses during the life of the Project. However, the Planning Area is an urbanized area and already uses such resources. Additionally, the continued use of such resources would be on a relatively small scale in a regional context. As such, although irreversible environmental changes would result from the Project, such changes would not be considered significant.

6.3 GROWTH-INDUCING IMPACTS

Section 15126.2(e) of the CEQA Guidelines requires that an EIR evaluate the growth-inducing impacts of a proposed action. A growth-inducing impact is defined by the CEQA Guidelines as:

> *"The way in which a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a waste water treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment."*

The State CEQA Guidelines do not provide specific criteria for evaluating growth inducement. Growth-inducing impacts fall into two general categories: direct or indirect. Direct growth-inducing impacts are generally associated with new residences or businesses that could induce population growth directly. Indirect growth-inducing impacts provide urban services, such as the extension or roads or other infrastructure, to an undeveloped area that could induce population growth indirectly.

In general, a project may foster spatial, economic, or population growth in a geographic area if it results in any of the following:

- Removal of an impediment to growth (e.g., establishment of an essential public service and provision of new access to an area);
- Fostering of economic expansion or growth (e.g., changes in revenue base and employment expansion);
- Fostering of population growth (e.g., construction of additional housing), either directly or indirectly;
- Establishment of a precedent-setting action (e.g., an innovation, a change in zoning and general plan amendment approval); or

- Development of or encroachment on an isolated or adjacent area of open space (being distinct from an infill project).

Should a project meet any one of the above-listed criteria, it may be considered growth inducing. Generally, growth-inducing projects are either located in isolated, undeveloped, or underdeveloped areas, necessitating the extension of major infrastructure such as sewer and water facilities or roadways, or encourage premature or unplanned growth. Note that the CEQA Guidelines require an EIR to "discuss the ways" a project could be growth inducing and to "discuss the characteristics of some projects that may encourage…activities that could significantly affect the environment." However, the CEQA Guidelines do not require that an EIR predict (or speculate) specifically where such growth would occur, in what form it would occur, or when it would occur. The answers to such questions require speculation, which CEQA discourages (refer to CEQA Guidelines Section 15145).

In accordance with the CEQA Guidelines and based on the above-listed criteria, the project's potential growth-inducing impacts are evaluated below.

Removal of an Impediment to Growth: The Planning Area and surrounding area are fully developed and urbanized. Transportation and infrastructure exists to serve the range of residential and non-residential uses within the surrounding area. The General Plan Update does not introduce new roadways or new or significantly expanded infrastructure that would provide for additional development within the surrounding area. Potential infrastructure improvements associated with future site-specific development would not remove obstacles to growth since the Planning and surrounding area are already served by existing utility providers and potential improvements would be to serve the specific development being proposed. As the General Plan Update would not establish an essential public service or provide new access to an area, the proposed Project would not be considered growth-inducing.

Economic Expansion or Growth: In addition to residential uses, the Project anticipates the development of commercial uses within the Planning Area. The construction of future development projects would result in construction-related jobs. However, construction activities and durations would vary depending upon the specific development and would be temporary in respect to each individual development site and therefore, would not be considered growth-inducing.

Project operations would introduce new residents and jobs to the Planning Area. Future development associated with implementation of the General Plan Update would primarily consist of infill development and redevelopment of already developed sites. New residential development could occur and greater densities, providing additional housing opportunities that would further support commercial and retail uses within the City. Additional non-residential development would provide for new employment opportunities. Residents and employees would seek shopping, entertainment, employment, and other economic opportunities in the City and surrounding area. This could create an increased demand for goods and services that would encourage the creation of new businesses or the expansion of existing businesses. Although economic growth is anticipated within the Planning Area, significant economic growth resulting in the potential to significantly affect the environment is not anticipated as the surrounding area is urbanized.

Population Growth: A project could induce population growth in an area either directly or indirectly. More specifically, the development of new residences or businesses could induce population growth directly, whereas the extension of roads or other infrastructure could induce population growth indirectly. The Planning Area is located within an urbanized area served by existing roads, transit, and infrastructure. The Project does not involve the extension of roads or infrastructure into undeveloped areas; refer to the "Removal of an Impediment to Growth" discussion above.

As shown in Table 3-4, *General Plan Update Growth Assumptions*, buildout of the General Plan Update through 2045 could yield up to 3,942 new housing units and 808,864 square feet of new non-residential building square footage within the Planning Area. The General Plan Update is intended to accommodate the City's fair share of Statewide housing needs, based on regional numbers provided by the California Department of Housing and Community Development on a regular basis (every five to eight years). The City of Lawndale 2021-2029 Housing Element was adopted in February 2022 and accommodates the City's share of the regional housing need for the 2021-2029 RHNA period of 2,463 units. The City's 2021-2029 Housing Element identifies the implementation of Housing Overlays as the primary opportunity to accommodate the City's RHNA allocation. The Project has the potential to yield an additional 3,942 dwelling units and 9,482 residents over existing conditions. This would be an approximately 34 percent increase over existing conditions and an approximately 38 percent increase over SCAG's projected future conditions of 34,400 residents (2045). Thus, Project implementation would exceed the population projections anticipated by SCAG's growth forecasts.

SCAG is the responsible agency for developing and adopting regional housing, population, and employment growth forecasts for local Los Angeles County governments, among other counties. SCAG provides household, population, and employment projection estimates in five-year increments through 2045. While Project growth projections are anticipated to exceed SCAG's 2045 population, SCAG's projections, which are compiled using a number of sources including adopted plans, historical trends, and interviews with local jurisdictions, tend to be more accurate on a regional level than on a local or city level. It is likely that through a combination of market changes, catalytic projects, updated land use direction in the General Plan, and other factors, Lawndale could capture either more or less of expected regional growth than forecasted by SCAG. Discrepancies between Project and regional forecasts can also be attributed to the RHNA process. The General Plan Update is intended to implement the City's 2021-2029 Housing Element; SCAG's Connect SoCal growth forecasts through 2045 do not consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. The regional housing needs and associated General Plan growth projections will be included as part of SCAG's future growth forecasts.

Although the Project would allow for currently unplanned population growth anticipated in the existing General Plan and by SCAG, this Draft EIR identifies General Plan Update goals, policies, and actions, where appropriate, that would serve to reduce or eliminate potentially significant impacts associated with specific environmental issues associated with growth. Sections 5.1 through 5.20 provide a discussion of environmental effects associated with development allowed under the General Plan Update.

With implementation of General Plan Update goals, policies, and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under

the General Plan Update, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds. Therefore, population and housing growth associated with the General Plan Update would result a less than significant impact.

Establishment of a Precedent-Setting Action: The General Plan is a long-term plan intended to accommodate projected population, housing, and employment growth, including the appropriate balance among these factors with the necessary public services and infrastructure. The proposed General Plan Update would serve as a comprehensive, long-term plan for the physical development of Lawndale. The proposed General Plan Update would only regulate future land development within the Planning Area and would not induce growth within areas outside of the City's jurisdiction. Any future development within the Planning Area would be reviewed in light of the General Plan and this General Plan Update EIR pursuant to CEQA on a project-by-project basis. Future development would be required to comply with the goals, policies, and actions intended to reduce potential environmental impacts associated with future site-specific development. Thus, Project implementation would not involve a precedent-setting action that could significantly impact the environment.

Development or Encroachment of Open Space: As stated, the Planning Area is located within an urbanized area. Park and open space resources within the City are limited and primarily associated with parks and schools. The Project does not propose modifications to these existing resources and would not result in encroachment into these areas. The Project would not be growth-inducing with respect to development or encroachment into an isolated or adjacent area of an existing open space.

6.4 SIGNIFICANT AND UNAVOIDABLE IMPACTS

CEQA Guidelines Section 15126.2(b) requires an EIR to discuss unavoidable significant environmental effects, including those that can be mitigated but not reduced to a level of insignificance. The following significant and unavoidable impacts of the General Plan Update are discussed in Section 5.0. Refer to those discussions for further details and analysis of the significant and unavoidable impacts identified below:

Air Quality

- General Plan implementation would result in a cumulatively considerable net increase of criteria pollutants for which the project region is non-attainment under an applicable Federal or State ambient air quality standard during construction and operational activities.
- General Plan implementation would expose sensitive receptors to substantial pollutant concentrations during construction and operational activities.
- General Plan implementation would result in a cumulatively considerable contribution to significant cumulative air quality impacts with the potential to expose sensitive receptors to substantial pollutant concentrations.

Greenhouse Gas Emissions

- Project implementation would generate greenhouse gas emissions that would not satisfy the Greenhouse Gas reduction targets established by Federal and State law and may have a significant effect on the environment.
- Project implementation would contribute to global climate change through a cumulatively considerable contribution of greenhouse gases. The Project would result in a cumulatively considerable and significant adverse GHG emissions impact.

This page intentionally left blank.

7.0 ALTERNATIVES

7.1 INTRODUCTION

Section 15126.6 of the CEQA Guidelines requires the identification and evaluation of a range of reasonable alternatives designed to feasibly achieve the most basic objectives of the project, while avoiding or substantially lessening any of the significant environmental effects of the project. In addition, CEQA requires a comparative evaluation of the merits of the alternatives.

Pursuant to Section 15126.6(f)(1) of the CEQA Guidelines, factors that may be taken into account when addressing the feasibility of alternatives include, but are not limited to, site suitability, economic viability, availability of infrastructure, general plan consistency, other plan or regulator limitations, jurisdictional boundaries, and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). Although these factors do not present a strict limit on the scope of reasonable alternatives to be considered, they help establish the context in which "the rule of reason" is measured against when determining an appropriate range of alternatives sufficient to establish and foster meaningful public participation and informed decision-making.

7.2 ALTERNATIVES CONSIDERED IN THIS EIR

FACTORS GUIDING SELECTION OF ALTERNATIVES

A Notice of Preparation (NOP) was circulated to the public and a public scoping meeting was held during the public review period to solicit recommendations for a reasonable range of alternatives to the proposed project. No specific alternatives were recommended by commenting agencies or the general public during the NOP public review and comment period.

An EIR must only discuss in detail an alternative that is capable of feasibly attaining most of the basic objectives associated with an action, while at the same time avoiding or substantially lessening any of the significant effects associated with the proposed project. As described in Section 3.0, *Project Description*, the following objectives have been identified for the proposed Project:

1. Reflect the current goals and vision expressed by city residents, businesses, decision-makers, and other stakeholders;
2. Address issues and concerns identified by city residents, businesses, decision-makers, and other stakeholders;
3. Protect Lawndale's existing residences, character, and sense of community;
4. Proactively plan for and accommodate local and regional growth in a responsible manner;
5. Encourage mixed-use development patterns that promote vibrant commercial and residential areas;
6. Allow for a range of high-quality housing options;

7. Attract and retain businesses and industries that provide jobs for local residents;
8. Continue to maintain and improve multimodal transportation opportunities;
9. Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
10. Address new requirements of State law; and
11. Address emerging transportation, housing, and employment trends.

SIGNIFICANT AND UNAVOIDABLE IMPACTS

The General Plan Update would result in the following significant and unavoidable impacts, which are described in Sections 5.1 through 5.20:

Air Quality

- General Plan implementation would result in a cumulatively considerable net increase of criteria pollutants for which the project region is non-attainment under an applicable Federal or State ambient air quality standard during construction and operational activities.
- General Plan implementation would expose sensitive receptors to substantial pollutant concentrations during construction and operational activities.
- General Plan implementation would result in a cumulatively considerable contribution to significant cumulative air quality impacts with the potential to expose sensitive receptors to substantial pollutant concentrations.

Greenhouse Gas Emissions

- Project implementation would generate greenhouse gas emissions that would not satisfy the Greenhouse Gas reduction targets established by Federal and State law and may have a significant effect on the environment.
- Project implementation would contribute to global climate change through a cumulatively considerable contribution of greenhouse gases. The Project would result in a cumulatively considerable and significant adverse GHG emissions impact.

Implementation of the proposed General Plan goals, policies and actions can reduce all other potentially significant impacts to less than significant levels. This section considers alternatives that could otherwise avoid or minimize these significant and unavoidable impacts. A description of each alternative and a comparative environmental evaluation of the impacts identified for the General Plan Update is provided below.

An EIR must identify an “environmentally superior” alternative and where the No Project Alternative is identified as environmentally superior, the EIR is then required to identify as environmentally superior an alternative from among the others evaluated. Each alternative’s environmental impacts are compared to the proposed Project and determined to be environmentally superior, inferior, or neutral. However, as stated above, only those impacts found to be significant and unavoidable for the proposed Project are

used in making the final determination of whether an alternative is environmentally superior or inferior to the proposed Project.

ALTERNATIVES TO THE GENERAL PLAN UPDATE

Two alternatives to the General Plan Update were considered based on the analysis performed to identify the environmental effects of the proposed Project. Project alternatives focus on amending land uses to potentially address impacts. The alternatives analyzed in this EIR include the following:

Alternative 1: No Project Alternative/Existing General Plan.

As required by CEQA Guidelines Section 15126.6(e), under Alternative 1, the City would not adopt the General Plan Update. The existing Lawndale General Plan would continue to be implemented and no changes to the General Plan, including the Land Use Map, goals, policies, or actions would occur. This Alternative assumes that ultimate development of the 1992 General Plan would occur and the 1992 General Plan would continue to provide outdated information regarding several issues, including projections and policy direction that were identified in the 1990s that are not reflective of the existing socioeconomic data and anticipated development patterns. This Alternative assumes that increased residential development opportunities in the Hawthorne Boulevard Specific Plan area and Housing Opportunity Overlay land use designation areas in order to accommodate the City's Regional Housing Needs Allocation (RHNA) as identified in the 2021-2029 Housing Element, would not occur. Subsequent projects, such as updating the Hawthorne Boulevard Specific Plan and amending the Municipal Code (including the zoning map), would not occur. The existing General Plan Land Use Map is shown on Figure 3.3 in Section 3.0, *Project Description*.

Alternative 2: Reduced Growth Alternative

Under Alternative 2, the City would adopt the updated General Plan policy document, but at residential densities lower than those reflected in the proposed General Plan Update. This Alternative is defined by two major changes from the proposed General Plan Update:

1. Reduction in the maximum density associated with the Housing Opportunity Overlay (HOO) land use designation; in Alternative 2, the maximum density for residential development in areas designated with the HOO is reduced from 100 du/ac to 33 du/ac (consistent with the maximum density proposed for the High Density Residential land use designation).
2. Reduction in the maximum density associated with residential development within the Hawthorne Boulevard Specific Plan (HBSP) land use designation; in Alternative 2, the maximum density for residential development in the HBSP is reduced from 150 du/ac to 33 du/ac (consistent with the maximum density proposed for the High Density Residential land use designation).

Under Alternative 2, non-residential development potential and anticipated job growth would remain unchanged from the proposed General Plan Update. This alternative continues to allow for mixed-use opportunities with less residential development potential than allowed under the General Plan Update. It also reflects a maximum residential density of 33 du/ac, consistent with the maximum residential density allowed under the current General Plan. This alternative was developed to potentially reduce the severity of potential impacts related to air quality and greenhouse gas emissions, as overall development of residential uses would be less than what could develop under the proposed Project.

7.3 ENVIRONMENTAL ANALYSIS

A summary of the growth projections, including population growth, housing units, jobs, and the resultant job/housing balance for the project and each alternative is shown in Table 7-1, *Growth Projections by Alternative*.

Table 7-1
Growth Projections by Alternative

Alternative	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs	Jobs per Housing Unit
Existing Conditions					
Planning Area	11,463	37,948	4,542,162	6,470	0.56
New Growth					
Proposed General Plan	3,942	9,482	808,864	2,738	-
Alternative 1: No Project/Existing General Plan	1,923	704	528,817	2,247	-
Alternative 2: Reduced Growth Alternative	2,339	5,843	808,864	2,738	-
Buildout Growth: Existing plus New Growth					
Proposed General Plan	15,405	47,430	5,351,026	9,208	0.59
Alternative 1: No Project/Existing General Plan	13,386	38,652	5,070,979	8,717	0.65
Alternative 2: Reduced Growth Alternative	13,802	43,791	5,351,026	9,208	0.67

The alternatives analysis provides a summary of the relative impact level of significance associated with each alternative for each of the environmental issue areas analyzed in this EIR. Following the analysis of each alternative, Table 7-4, *Comparison of Alternatives*, summarizes the comparative effects of each alternative with the proposed Project.

The primary difference between the proposed Project and Alternative 2 is that Alternative 2 would result in approximately 1,603 fewer housing units and 3,639 fewer residents within the Planning Area when compared to the proposed Project; refer to Table 7-3, *Alternative 2: Reduced Growth Alternative Compared to the Proposed Project*.

ALTERNATIVE 1 – NO PROJECT/EXISTING GENERAL PLAN

Under Alternative 1, the City would continue to implement the existing General Plan and no changes would be made to address updated OPR General Plan Guidelines, or the requirements of State law. Since

adoption of the existing General Plan, State legislation has been passed requiring the City to address new safety and circulation requirements in the General Plan and to further address greenhouse gas emissions. Additionally, the City recently updated its 2021-2029 Housing Element (adopted in February 2022), and the existing General Plan does not conform to State requirements regarding planning for future housing growth. In the 2021-2029 Housing Element, the City introduced two new mechanisms to allow for residential development to be created to implement the Housing Element on sites considered viable for housing development. The first is "Housing Overlay 100", which will be applied to 16 nonresidential sites outside of the Hawthorne Boulevard Specific Plan area and allow for residential densities of up to 100 dwelling units per acre. The second is "Housing Overlay 150" which will be applied to 68 nonresidential sites inside the Hawthorne Boulevard Specific Plan area, will allow for residential densities up to 150 dwelling units per acre. The General Plan goals, policies, and actions, as well as the Land Use Map, would not be updated to address the vision and concerns of the City's residents, property owners, decision-makers, and other stakeholders that actively participated in the visioning and goal and policy development process.

Alternative 1 would result in the continuation of existing conditions and development levels, as described in Section 5.11, *Land Use and Planning*, and as shown in Table 3-1 in Section 3.0, *Project Description*. New growth would be allowed as envisioned under the existing General Plan, with land uses required to be consistent with the existing General Plan Land Use Map as shown on Figure 3.3 in Section 3.0. Table 7-2, *Alternative 1: No Project/Existing General Plan Alternative Compared to the Proposed Project*, compares the assumed development potential associated with the 1992 General Plan and the General Plan Update 2045 buildout.

Table 7-2
Alternative 1: No Project/Existing General Plan Alternative Compared to the Proposed Project

Alternative	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs	Jobs per Housing Unit
Alternative 1: Existing General Plan/No Project	13,386	38,652	5,070,979	8,717	0.65
General Plan Update (Proposed Project)	15,405	47,430	5,351,026	9,208	0.59
Difference	**-2,019**	**-8,778**	**-280,047**	**-491**	-

As shown in Table 7-2, Alternative 1 (No Project/Existing General Plan Alternative) would result in less development within the Planning Area compared to the proposed Project. Under Alternative 1, the existing General Plan policy framework would still be in effect, which would constitute a status quo approach to land use regulation in the City.

The Proposed Land Use Map, along with the policy framework proposed by the General Plan Update, encourages and aims to achieve a community with a balanced land use pattern that meets the City's long-term housing, employment, and civic needs. The land uses allowed under the General Plan Update provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard

Specific Plan area. A balanced land use pattern would create a community where new development blends with existing neighborhoods. The proposed General Plan Update carries forward and enhances policies and measures from the City's existing General Plan that were intended for environmental protection. The proposed General Plan Update was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection.

Alternative 1 would not include updated policies, particularly those related to housing, greenhouse gases, hazards, complete streets, and environmental justice to address environmental health concerns for disadvantaged communities, as required by State law. This alternative would not include policies proposed in the General Plan Update to ensure protection of environmental resources, both at a project level and under cumulative conditions, consistent with the objectives of CEQA.

Alternative 1 fails to meet several of the basic Project objectives, including the following:

- Reflect the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders;
- Address issues and concerns identified by city residents, businesses, decision-makers, and other stakeholders;
- Proactively plan for and accommodate local and regional growth in a responsible manner;
- Encourage mixed-use development patterns that promote vibrant commercial and residential areas;
- Allow for a range of high-quality housing options;
- Attract and retain businesses and industries that provide jobs for local residents;
- Continue to maintain and improve multimodal transportation opportunities;
- Address new requirements of State law; and
- Address emerging transportation, housing, and employment trends.

Aesthetics

As described in Section 5.1, *Aesthetics*, impacts related to Aesthetics were found to be less than significant. Both the General Plan Update and No Project/Existing General Plan Alternative would anticipate increased development within the City through future development that would result in densification of the City. Alternative 1 would result in decreased densities in the Planning Area when compared to the General Plan Update. Future projects under both development scenarios would be subject to applicable Municipal Code requirements. Although buildout of this Alternative would result in 2,019 fewer housing units and 280,047 fewer square feet of nonresidential uses, overall, the Planning Area would experience significant development compared to existing conditions which would change the character and image of the area under both Alternative 1 and the proposed Project.

Generally, the existing General Plan would not address the visual character of future development to the extent of the General Plan Update. For example, the General Plan Update includes goals and policies to develop and enforce design standards and objective design guidelines, and include site planning

requirements. Additionally, this Alternative would not require the update of the Hawthorne Boulevard Specific Plan area, which would allow a combination of commercial and residential uses together in the same area, creating more pedestrian and transit-oriented neighborhoods. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Agricultural Resources

As described in Section 5.2, *Agricultural Resources*, the proposed General Plan Update would result in no impacts to agriculture and forestry resources. Like the General Plan Update, Alternative 1 would accommodate development generally in the same areas, and these areas are already urbanized. Given that no agriculture and forestry resources would be impacted by the proposed Project, impacts associated with Alternative 1 would be the same and no impacts would occur. As such, Alternative 1 would be neither environmentally superior nor inferior to the General Plan Update.

Air Quality

As described in Section 5.3, *Air Quality*, construction and operation of future developments would occur within close proximity to sensitive receptors, and there is the potential for localized emissions to exceed regulatory levels. The following significant impacts related to air quality have been identified:

- General Plan implementation would result in a cumulatively considerable net increase of criteria pollutants for which the project region is non-attainment under an applicable Federal or State ambient air quality standard during construction and operational activities.
- General Plan implementation would expose sensitive receptors to substantial pollutant concentrations during construction and operational activities.
- General Plan implementation would result in a cumulatively considerable contribution to significant cumulative air quality impacts with the potential to expose sensitive receptors to substantial pollutant concentrations.

When compared to Alternative 1 (No Project/Existing General Plan), the General Plan Update includes a range of goals and policies that would reduce air quality emissions, including policies to encourage mixed-use development, complete streets, and multi-modal improvements that would further reduce air quality impacts. Additionally, when compared to Alternative 1 (No Project/Existing General Plan), the General Plan Update presents substantially more opportunities for trip internalization and increased opportunities for walking and bicycling due to the proposed mix of higher density residential and commercial development. While land uses and development under Alternative 1 would be required to adhere to the same policy guidance and local, State, and regional air quality measures as the General Plan Update, the decrease in residential units and non-residential building square footage, and the corresponding reduction in construction emissions, operational emissions, and potential reductions in overall traffic volumes would result in reductions in air emissions under Alternative 1 when compared to the proposed General Plan Update, although impacts to air quality would continue to be significant and unavoidable. As such, Alternative 1 would be considered environmentally superior to the General Plan Update.

Biological Resources

The Planning Area is urbanized and developed with residential and non-residential uses. The Planning Area consists primarily of developed and/or disturbed land that has been developed, paved, or landscaped, and existing vegetation consists of primarily ornamental and/or nonnative plant species. As described in Section 5.4, *Biological Resources*, the General Plan Update does not include any specific development proposals and would not result in significant direct impacts to existing biological resources. However, subsequent development projects under the proposed General Plan Update could result in direct impacts to certain species found present on an individual project site. Future development projects would be required to adhere to applicable Federal, State, and local regulations that provide for sensitive species as part of the discretionary approval process for site-specific development projects. Compliance with Federal, State, and local regulations, and implementation of General Plan Update policies and actions, would reduce potential impacts to sensitive species to a less than significant level.

Alternative 1 would result in similar development patterns to the General Plan Update, which could result in a less than significant impact to biological resources. The proposed General Plan Update would also include updated biological policies and actions aimed at protecting biological resources (as described in detail in Section 5.4), which Alternative 1 would not include. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Cultural Resources

As described in Section 5.5, *Cultural Resources*, while the General Plan Update does not directly propose site-specific development with the potential to directly impact cultural resources, future development associated with implementation of the General Plan Update could cause a substantial adverse change in the significance of known or unknown historic or archaeological resources. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the City's General Plan, Municipal Code, and other applicable State and local regulations relative to historic and potentially historic resources. The General Plan Update Resource Management Element includes goals, policies, and actions addressing heritage resources, including historical and archaeological resources. Compliance with the General Plan Update policies and actions and existing regulations, would not cause a substantial adverse change in the significance of a historical and/or cultural resource and impacts would be less than significant.

Alternative 1 would result in similar development patterns and a similar development footprint to the General Plan Update. However, because Alternative 1 would not update cultural resource policies to include new policies and actions related to agency coordination, consultation, and monitoring that is included in the proposed General Plan Update, impacts to cultural resources would be greater when compared to the General Plan Update which does not include additional and updated policies related to cultural resources. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Energy

As described in Section 5.6, *Energy*, buildout of the General Plan Update would use energy resources for the operation of buildings (electricity and natural gas), for on-road vehicle trips (e.g., gasoline and diesel

fuel), and from off-road construction activities (e.g. diesel fuel) associated with 2045 buildout of the General Plan Update. Buildout of the General Plan Update would be in compliance with all applicable Federal, State, and local regulations regulating energy usage. Energy use impacts associated with the implementation of the General Plan Update would be less than significant.

When compared to Alternative 1 (No Project/Existing General Plan), the General Plan Update includes a range of goals and policies that would reduce energy usage, including policies to encourage mixed-use development, complete streets, and multi-modal improvements that would further reduce per capita energy usage. Additionally, when compared to Alternative 1 (No Project/Existing General Plan), the General Plan Update presents substantially more opportunities for trip internalization and increased opportunities for walking and bicycling to the proposed mix of higher density residential and commercial development. While land uses and development under Alternative 1 would be required to adhere to the same local, State, and regional measures regulating energy usage as the General Plan Update, the decrease in residential units and non-residential building square footage, and the corresponding reduction in electricity and gas for the operation of buildings, diesel fuel for off-road construction activities, and potential reductions in gasoline due to a decrease in the overall traffic volumes would result in reductions in energy usage under Alternative 1 when compared to the proposed General Plan Update. As such, Alternative 1 would be considered environmentally superior to the General Plan Update.

Geology and Soils

As described in Section 5.7, *Geology and Soils*, geology and soils impacts associated with the implementation of the General Plan Update would be less than significant. It is possible that undiscovered paleontological resources could be encountered during future ground-disturbing activities within the Planning Area. Future development associated with implementation of the General Plan Update would be required to assess the potential for development proposals to significantly impact paleontological resources pursuant to CEQA. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation. With implementation of the General Plan Update policies and actions, potential impacts to paleontological resources associated with future development anticipated by the General Plan Update would be reduced to less than significant.

Alternative 1 would result in similar development patterns as the General Plan Update. Since the Planning Area is the same under both development scenarios, similar physical constraints related to geology and soils exist. The potential for new development to expose people or structures to adverse effects associated with seismic ground shaking and geologic instabilities would be similar under this Alternative and the General Plan Update. Further, new development would be required to comply with the California Building Code and applicable Municipal Code requirements. However, this Alternative would not include the updated policies related to geologic hazards, including requirements for project reviews and standards for construction and building practices as the General Plan Update (as described in detail in Section 5.7).

Additionally, this Alternative would not update paleontological resource policies to include new policies and actions related to agency coordination, consultation, and monitoring that is included in the proposed General Plan Update, therefore impacts to paleontological resources would be greater when compared to the General Plan Update which does not include additional and updated policies related to paleontological resources. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Greenhouse Gas Emissions

As described in Section 5.8, *Greenhouse Gas Emissions*, the proposed Project would be required to comply with regulations imposed by the State of California and the SCAQMD aimed at the reduction of air pollutant emissions, and implementation of the General Plan Update's goals, policies and actions would reduce GHG emissions. However, development projects associated with implementation of the proposed Project, would potentially generate emissions inconsistent with the State's long-term goals for reducing GHG emissions in the State of California, particularly the net-zero target as promulgated under AB 1279. As such, the City cannot state with certainty whether implementation of the General Plan Update would meet the State's community emissions target. Therefore, the proposed Project would have a cumulatively significant and unavoidable adverse impact in regards to greenhouse gas emissions.

When compared to Alternative 1 (No Project/Existing General Plan), the General Plan Update includes a range of goals and policies that would reduce GHG emissions, including policies to encourage mixed-use development, complete streets, and multi-modal improvements that would further reduce per capita GHG impacts. Additionally, when compared to Alternative 1 (No Project/Existing General Plan), the General Plan Update presents substantially more opportunities for trip internalization and increased opportunities for walking and bicycling due to their proposed mix of higher density residential and commercial development. While land uses and development under Alternative 1 would be required to adhere to the same policy guidance and local, State, and regional air quality measures as the General Plan Update, the decrease in residential units and non-residential building square footage, and the corresponding reduction in construction emissions, operational emission, and potential reductions in overall traffic volumes would result in reductions in greenhouse gas emissions under Alternative 1 when compared to the proposed General Plan Update, although GHG impacts would continue to be significant and unavoidable. As such, Alternative 1 would be considered environmentally superior to the General Plan Update.

Hazards and Hazardous Materials

As described in Section 5.9, *Hazards and Hazardous Materials*, all impacts related to hazardous materials, aircraft hazards, and emergency response were found to be less than significant.

The General Plan Update would include updated policies and actions aimed at protecting the public from hazardous materials. These policies and actions in the General Plan Update would ensure that potential hazards are identified on a project site, that development is located in areas where potential exposure to hazards and hazardous materials can be mitigated to an acceptable level, and that business operations comply with Federal and State regulations regarding the use, transport, storage, and disposal of hazardous materials. The General Plan Update also includes policies and actions to ensure that the City has adequate

emergency response plans and measures to respond in the event of an accidental release of a hazardous substance (as described in detail in Section 5.9).

Similar to the General Plan Update, Alternative 1 would result in additional urban uses including commercial, and residential development. However, Alternative 1 would not include the updated policies and actions aimed at protecting the public from hazardous materials that are included as part of the General Plan Update. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Hydrology and Water Quality

As described in Section 5.10, *Hydrology and Water Quality*, under all impact areas, implementation of the General Plan Update would result in less than significant impacts related to Hydrology and Water Quality.

While this Alternative would result in less dense and intense development compared to the General Plan Update, all new development would be subject to applicable stormwater and water quality requirements per the Los Angeles RWQCB. This variation in intensity and land use designation changes would not substantially alter impacts from or to flooding, water quality, or on groundwater supplies because existing Federal, State, and local regulations would apply to guard against flood hazards, water quality contamination, or impact on groundwater supplies. Potential hydrology and water quality impact for this Alternative, like the proposed Project, would be less than significant.

Alternative 1 would result in slightly reduced development of housing units and non-residential square feet when compared to the General Plan Update. Compared to the General Plan Update, the potential water quality impacts related to construction and operation would be similar. As described in Section 5.10, implementation of the General Plan Update would not result in construction, or long-term impacts to surface water quality from urban stormwater runoff. Future development under all alternatives would also be required to submit a SWPPP with BMPs to the RWQCB and comply with all storm water sewer system (MS4) requirements. It would be expected that impacts related to water quality would be similar under Alternative 1 as compared to the General Plan Update. As such, Alternative 1 would be neither environmentally superior nor inferior to the General Plan Update.

Land Use and Planning

The proposed General Plan Update and Alternative 1 are long-range land use plans. As described in Section 5.11, *Land Use and Planning*, all impacts related to land use and planning were found to be less than significant under the General Plan Update. As described previously, the General Plan Update would include adoption of the updated policy document. Under Alternative 1, the existing Land Use Element would continue to provide outdated information that does not reflect the current conditions or goals of the City. This Alternative would prevent the City from achieving some of the core objectives of the General Plan Update to meet new State requirements and accommodating the City's RHNA allocation as identified in the City's 2021-2029 Housing Element. In addition, the General Plan Update would allow for greater consistency with applicable State and regional plans related to the provision of housing options at varying densities and income levels within an area served by transit, retail, and services to provide opportunities to reduce VMT and associated GHG emissions when compared to Alternative 1. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Mineral Resources

As described in Section 5.12, *Mineral Resources*, the General Plan Update would result in no impacts relating to mineral resources. Like the General Plan Update, Alternative 1 would accommodate development generally in the same areas, and these areas are already urbanized. Given that no mineral resources would be impacted by the proposed Project, impacts associated with Alternative 1 would be the same and would remain less than significant. As such, Alternative 1 would be neither environmentally superior nor inferior to the General Plan Update.

Noise

As described in Section 5.13, *Noise*, while the General Plan Update does not directly propose site-specific development, future development associated with implementation of the General Plan Update could generate additional noise from construction and operational activities associated with future projects. Where future development projects under the General Plan Update may be exposed to noise levels that exceed the land use compatibility criteria, such as residential developments within the Hawthorne Boulevard Specific Plan area or sensitive land uses developed adjacent to the existing rail line, impacts could be mitigated to a level that is less than significant with the implementation of noise control measures, such as relocating residential outdoor recreational areas away from 60 dBA CNEL or greater areas or shielding outdoor areas using noise barriers. Additionally, the General Plan Update Public Safety Element includes policies and actions intended to minimize exposure to excessive noise, including noise associated with traffic, stationary noise sources, and construction noise.

Alternative 1 would result in similar development patterns and a similar development footprint as the General Plan Update. Alternative 1 would allow for slightly less development (2,019 fewer housing units and 280,047 square feet less of non-residential uses), resulting in a corresponding reduction in construction and operational noise. The decrease in residential units and non-residential building square footage, and the corresponding reduction in overall traffic volumes would result in reductions in roadway noise under Alternative 1 when compared to the proposed General Plan Update. As such, Alternative 1 would be considered environmentally superior to the General Plan Update.

Population and Housing

As shown in Table 7-2, Alternative 1 would allow for 2,019 fewer residential units which would result in 8,778 less residents compared to the General Plan Update. Alternative 1 would not establish updated goals and policies intended to reduce potential growth-related impacts when compared to the General Plan Update. The Existing General Plan does not reflect the most current population, employment, and housing numbers or projections, nor does it provide quantitative population, employment, and housing projections for the year 2045. In contrast, the General Plan Update reflects existing population, employment, and housing conditions and provides projections to 2045.

While the amount and typology of allowable development under the General Plan Update has been crafted to meet City's Regional Housing Needs Allocation (RHNA) for future housing needs, Alternative 1, would not allow the City to adequately plan for population growth and housing to meet its RHNA obligations. The City failing to meet its RHNA obligations would result in the decertification of the adopted

Housing Element by the State and potential penalties such as the loss of significant grants. As such, this Alternative would be considered environmentally inferior to the General Plan Update.

Public Services and Recreation

As described in Section 5.15, *Public Services* and Section 5.16, *Parks and Recreation*, the General Plan Update would result in less than significant impacts relating to public services, parks and recreation. New development would place increased demands on public services such as police, fire, schools, parks, libraries, and other governmental services. The General Plan Update includes policies and actions and compliance with the Municipal Code would require payment of impact fees to the City and other public agencies to ensure that additional development allowed does not have adverse impacts on these services and agencies.

Under Alternative 1, the development area and development types would remain similar, however, there would be fewer jobs, housing units, and reduced population increase when compared to the General Plan Update and thus, impacts to public services (the demand for police, fire and other public services) would be slightly reduced. Overall, Alternative 1 would have a slightly reduced impact to public services when compared to the proposed Project. As such, Alternative 1 would be considered environmentally superior to the General Plan Update.

Transportation

As described in Section 5.17, *Transportation*, transportation impacts associated with implementation of the General Plan Update would be less than significant. The proposed Project would not conflict with policies, plans, or programs regarding roadways, bicycle, pedestrian, or transit facilities or the performance or safety of those facilities. The Project includes goals, policies and actions to encourage new and improved facilities to support multi-modal transportation and access within the Planning Area. Similarly, Alternative 1 would provide for increased density and development within the Planning Area and would not conflict with policies, plans, or programs regarding roadways, bicycle, pedestrian, or transit facilities or the performance or safety of those facilities.

The proposed Project would result in a VMT per capita and VMT per employee below the Los Angeles Countywide average. Comparing the Project to Alternative 1, there would be an increase in VMT per capita and a decrease in VMT per employee. As such, Alternative 1 would be neither environmentally superior nor inferior to the General Plan Update.

Tribal Cultural Resources

As described in Section 5.18, *Tribal Cultural Resources*, while the General Plan Update does not directly propose site-specific development with the potential to directly impact tribal cultural resources, future development associated with implementation of the General Plan Update could cause a substantial adverse change in the significance of known or unknown tribal cultural resources. Potential impacts to tribal cultural resources associated with future development would be reduced through implementation of General Plan Update policies and actions. Subsequent development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. Subsequent discretionary projects implemented in accordance with the General Plan Update would be subject to the provisions of AB 52 and may require tribal consultation

with California Native American tribes that are traditionally and culturally affiliated with the Planning Area and who have previously requested AB 52 consultations with the City. Future AB 52 consultation may identify tribal cultural resources not yet found and formally recorded that could be impacted by subsequent projects. Compliance with the General Plan Update policies and actions and existing regulations would not cause a substantial adverse change in the significance of a tribal cultural resource and impacts would be less than significant.

Alternative 1 would result in similar development patterns and a similar development footprint as the proposed General Plan Update. However, Alternative 1 would not update tribal cultural resource policies to include new policies and actions related to agency coordination, consultation, and monitoring compared with the General Plan Update. As such, Alternative 1 would be considered environmentally inferior to the General Plan Update.

Utilities and Service Systems

As described in Section 5.19, *Utilities and Service Systems*, the General Plan Update would result in less than significant impacts relating to utilities and service systems.

New development would place increased demands on utilities. Under Alternative 1, the Planning Area would be developed with similar development patterns and uses as the General Plan Update; however, the overall residential intensity/density, and job increases would be reduced. The quantity of infrastructure installed would not be substantially reduced, as this alternative would require similar development patterns and footprints, but the demand for utility services, including wastewater and solid waste services would be less than would be required under the General Plan Update. However, both Alternative 1 and the proposed Project would likely require the construction or expansion of new utilities to serve the site-specific development that is being proposed. The quantity of infrastructure installed would not be substantially reduced, as the Project Area is urbanized and contains existing utilities infrastructure. The potential environmental effects associated with infrastructure projects would be similar under Alternative 1 and the proposed Project. Similarly, storm drainage runoff under Alternative 1 would be approximately the same when compared to the proposed Project, due to the general development footprint remaining the same for this alternative when compared to the General Plan Update. Since demand for utilities would be slightly less under Alternative 1 due to the lower densities and associated development potential, Alternative 1 would be considered environmentally superior to the General Plan Update.

Wildfire

As described in Section 5.20, *Wildfire*, the Planning Area is not located in or near state responsibility areas or lands classified as very high fire hazard severity zones; the General Plan Update would result in no impacts related to wildfire. Like the General Plan Update, Alternative 1 would accommodate development generally in the same areas, and these areas are already urbanized. Given that the Planning Area is not located in an area of high fire hazard potential, impacts associated with Alternative 1 would be the same and no impacts would occur. As such, Alternative 1 would be neither environmentally superior nor inferior to the General Plan Update.

Irreversible Effects

The proposed Project would have a less than significant impact associated with irreversible environmental effects as described in Section 6.0, *Other CEQA Considerations*. Implementation of the General Plan Update would result in a commitment of land uses designated for the foreseeable future. Land use and development consistent with the Project would result in irretrievable commitments by designating land for development that is more intense, in some instances, than current designations allow. Additionally, residential development would be allowed on land not currently designated for residential development. Development would physically change the environment in terms of aesthetics, air emissions, noise, and traffic. Therefore, the Project would result in changes in land use within the Planning Area that would commit future generations to these uses. Construction and operation of future development projects associated with Project implementation would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources that would limit the availability of these resource quantities for future generations or for other uses during the life of the Project. However, the Planning Area is an urbanized area and already uses such resources. Additionally, the continued use of such resources would be on a relatively small scale in a regional context. As such, although irreversible environmental changes would result from the Project, such changes would not be considered significant.

During the planning horizon, development under Alternative 1 would be reduced in comparison to the General Plan Update. Under cumulative conditions, Alternative 1 would result in less residential and less non-residential floor area (see Table 7-1). Alternative 1 would use nonrenewable resources, including metals, stone, and other materials related to construction, and result in on-going demand for fossil fuels and other resources associated with energy production at levels lower than the proposed Project. Alternative 1 would have slightly reduced impacts in comparison to the General Plan Update due to reduced development levels. As such, Alternative 1 would be considered environmentally superior to the General Plan Update.

ALTERNATIVE 2 – REDUCED GROWTH ALTERNATIVE

Alternative 2 (Reduced Growth Alternative) continues to allow for new development in mixed-use opportunities, like those included in the proposed Project, but at lower densities that are more consistent with those allowed under the current General Plan. Table 7-3, *Alternative 2: Reduced Growth Alternative Compared to the Proposed Project*, compares the assumed development potential associated with the Reduced Growth Alternative and the General Plan Update 2045 buildout.

Table 7-3
Alternative 2: Reduced Growth Alternative Compared to the Proposed Project

Alternative	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs	Jobs per Housing Unit
Alternative 2: Reduced Growth Alternative	13,802	43,791	5,351,026	9,208	0.67
General Plan Update (Proposed Project)	15,405	47,430	5,351,026	9,208	0.59
Difference	**-1,603**	**-3,639**	**0**	**0**	**-**

The goals, policies, and actions of the General Plan Update would apply to subsequent development, planning, and infrastructure projects under this alternative. This Alternative was developed to reduce the severity of potential impacts related to air quality and greenhouse gas emissions, as overall development of residential uses within the Planning Area would be less than what could under the proposed Project.

As shown in Table 7-3, Alternative 2 would result in approximately 1,603 fewer housing units and 3,639 fewer residents within the Planning Area when compared to the proposed General Plan Land Use Map. Nonresidential development potential and employment opportunities would remain the same under this alternative when compared to the proposed General Plan Update. The City recently updated its 2021-2029 Housing Element (adopted in February 2022), and the existing General Plan does not conform to State requirements regarding planning for future housing growth. In the 2021-2029 Housing Element, the City introduced two new mechanisms to allow for residential development to be created to implement the Housing Element on sites considered viable for housing development. The first is "Housing Overlay 100", which will be applied to 16 nonresidential sites outside of the Hawthorne Boulevard Specific Plan area and allow for residential densities of up to 100 dwelling units per acre. The second is "Housing Overlay 150" which will be applied to 68 nonresidential sites inside the Hawthorne Boulevard Specific Plan area, will allow for residential densities up to 150 dwelling units per acre. This Alternative assumes that the 2021-2029 Housing Element would be in non-compliance, since it would not implement these mechanisms at the planned densities.

Alternative 2 fails to meet several of the basic Project objectives, including the following:

- Proactively plan for and accommodate local and regional growth in a responsible manner;
- Allow for a range of high-quality housing options;
- Address new requirements of State law; and
- Address emerging transportation, housing, and employment trends.

Aesthetics

As described in Section 5.1, *Aesthetics*, impacts related to Aesthetics were found be less than significant. Both the General Plan Update and Reduced Growth Alternative would anticipate increased development and associated densification within the City. The proposed General Plan Update and Alternative 2 would

allow for an increase in density of the existing land uses than is currently allowed. Future projects under both development scenarios would be subject to applicable Municipal Code requirements. Although, buildout of this Alternative would result in 1,603 fewer housing units, overall, the Planning Area would experience significant development compared to existing conditions which would change the character and image of the area under both Alternative 2 and the proposed Project.

Similar to the General Plan Update, Alternative 2 would provide guidance as to the intensity and density of development. Future projects under both development scenarios would be subject to applicable Municipal Code requirements and be guided by relevant General Plan Update policies. Neither Alternative 2 nor the proposed Project would conflict with applicable zoning and other regulations governing scenic quality. As such, Alternative 2 would be neither environmentally superior nor inferior to the General Plan Update.

Agricultural Resources

As described in Section 5.2, *Agricultural Resources*, the proposed General Plan Update would result in no impacts to agriculture and forestry resources. Like the General Plan Update, Alternative 2 would accommodate development generally in the same areas, and these areas are already urbanized. Given that no agriculture and forestry resources would be impacted by the proposed Project, impacts associated with Alternative 2 would be the same and no impacts would occur. As such, Alternative 2 would be neither environmentally superior nor inferior to the General Plan Update.

Air Quality

As described in Section 5.3, *Air Quality*, construction and operation of future developments would occur within close proximity to sensitive receptors, and there is the potential for localized emissions to exceed regulatory levels. The following significant impacts related to air quality have been identified:

- General Plan implementation would result in a cumulatively considerable net increase of criteria pollutants for which the project region is non-attainment under an applicable Federal or State ambient air quality standard during construction and operational activities.
- General Plan implementation would expose sensitive receptors to substantial pollutant concentrations during construction and operational activities.
- General Plan implementation would result in a cumulatively considerable contribution to significant cumulative air quality impacts with the potential to expose sensitive receptors to substantial pollutant concentrations.

Both Alternative 2 and the General Plan Update would provide opportunities for trip internalization and increased opportunities for walking and bicycling due to the proposed mix of higher density residential and commercial development. While land uses and development under Alternative 2 would be required to adhere to the same policy guidance and local, State, and regional air quality measures as the General Plan Update, the decrease in residential units, and the corresponding reduction in construction emissions, operational emission, and potential reductions in overall traffic volumes would result in reductions in air emissions under Alternative 2 when compared to the proposed General Plan Update. As such, Alternative

2 would be considered environmentally superior to the General Plan Update, although air quality impacts would remain significant and unavoidable.

Biological Resources

The Planning Area is urbanized and developed with residential and non-residential uses. The Planning Area consists primarily of developed and/or disturbed land that has been developed, paved, or landscaped, and existing vegetation consists of primarily ornamental and/or nonnative plant species. As described in Section 5.4, *Biological Resources*, the General Plan Update does not include any specific development proposals and would not result in significant direct impacts to existing biological resources. However, subsequent development projects under the proposed General Plan Update could result in direct impacts to certain species found present on an individual project site. Future development projects would be required to adhere to applicable Federal, State, and local regulations that provide for sensitive species as part of the discretionary approval process for site-specific development projects. Compliance with Federal, State, and local regulations, and implementation of General Plan Update policies and actions, would reduce potential impacts to sensitive species to a less than significant level.

Alternative 2 would result in similar development patterns to the General Plan Update, which could result in a less than significant impact to biological resources. The proposed General Plan Update and Alternatives 2 would also include updated biological policies and actions aimed at protecting biological resources (as described in detail in Section 5.4). Therefore, impacts to biological resources under Alternative 2 would remain the same when compared to the proposed General Plan Update. As such, Alternative 2 is considered neither environmentally superior nor inferior to the General Plan Update.

Cultural Resources

As described in Section 5.5, *Cultural Resources*, while the General Plan Update does not directly propose site-specific development with the potential to directly impact cultural resources, future development associated with implementation of the General Plan Update could cause a substantial adverse change in the significance of known or unknown historic or archaeological resources. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the City's General Plan, Municipal Code, and other applicable State and local regulations relative to historic and potentially historic resources. The General Plan Update Resource Management Element includes goals, policies, and actions addressing heritage resources, including historical and archaeological resources. Compliance with the General Plan Update policies and actions and existing regulations, would not cause a substantial adverse change in the significance of a historical and/or cultural resource and impacts would be less than significant.

Alternative 2 would result in similar development patterns and a similar development footprint as the proposed Project. Additionally, Alternative 2 would update cultural resource policies to include new policies and actions related to agency coordination, consultation, and monitoring consistent with the proposed General Plan Update. The impact under Alternatives 2 would remain the same compared to the proposed Project. As such, Alternative 2 is considered neither environmentally superior nor inferior to the General Plan Update.

Energy

As described in Section 5.6, *Energy*, buildout of the General Plan Update would use energy resources for the operation of buildings (electricity and natural gas), for on-road vehicle trips (e.g., gasoline and diesel fuel), and from off-road construction activities (e.g. diesel fuel) associated with 2045 buildout of the General Plan Update. Buildout of the General Plan Update would be in compliance with all applicable Federal, State, and local regulations regulating energy usage. Energy use impacts associated with the implementation of the General Plan Update would be less than significant.

While land uses and development under Alternative 2 would be required to adhere to the same policy guidance and local, State, and regional measures regulating energy usage as the General Plan Update, the decrease in residential units, and the corresponding reduction in electricity and gas for the operation of buildings, diesel fuel for off-road construction activities, and potential reductions in gasoline due to a decrease in the overall traffic volumes would result in reductions in energy usage under Alternative 2 when compared to the proposed General Plan Update. As such, Alternative 2 would be considered environmentally superior to the General Plan Update.

Geology and Soils

As described in Section 5.7, *Geology and Soils*, geology and soils impacts associated with the implementation of the General Plan Update would be less than significant. It is possible that undiscovered paleontological resources could be encountered during future ground-disturbing activities within the Planning Area. Future development associated with implementation of the General Plan Update would be required to assess the potential for development proposals to significantly impact paleontological resources pursuant to CEQA. If the project involves earthwork, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation. With implementation of the General Plan Update policies and actions, potential impacts to paleontological resources associated with future development anticipated by the General Plan Update would be reduced to less than significant.

Alternative 2 would result in similar development patterns to the General Plan Update. Since the Planning Area is the same under both development scenarios, similar physical constraints related to geology and soils exist. The potential for new development to expose people or structures to adverse effects associated with seismic ground shaking and geologic instabilities would be similar under this Alternative and the General Plan Update. Further, new development would be required to comply with the California Building Code and applicable Municipal Code requirements. The General Plan Update and Alternative 2 would also include updated policies related to geologic hazards, including requirements for project reviews and standards for construction and building practices, as well as updated policies related to mitigate potential impacts to paleontological resources (as described in detail in Section 5.7). Therefore, impacts under Alternative 2 related to Geology and Soils would generally remain the same as the General

Plan Update. As such, Alternative 2 is considered neither environmentally superior nor inferior to the General Plan Update.

Greenhouse Gas Emissions

As described in Section 5.8, *Greenhouse Gas Emissions*, the proposed Project would be required to comply with regulations imposed by the State of California and the SCAQMD aimed at the reduction of air pollutant emissions, and implementation of the General Plan Update's goals, policies and actions would reduce GHG emissions. However, development projects associated with implementation of the proposed Project, would potentially generate emissions inconsistent with the State's long-term goals for reducing GHG emissions in the State of California, particularly the net-zero target as promulgated under AB 1279. As such, the City cannot state with certainty whether implementation of the General Plan Update would meet the State's community emissions target. Therefore, the proposed Project would have a cumulatively significant and unavoidable adverse impact in regards to greenhouse gas emissions.

Under Alternative 2, the Planning Area would be developed with similar uses as the General Plan Update, but the potential increase in total housing units and population would be reduced. The reduced residential development potential and resulting population may decrease total greenhouse gas emissions when compared to the General Plan Update. The General Plan Update and Alternative 2 include a range of goals and policies that would reduce GHG emissions, including policies to encourage mixed-use development, complete streets, and multi-modal improvements that would further reduce per capita and per employee GHG impacts. Both the General Plan Update and Alternative 2 present more opportunities for trip internalization and increased opportunities for walking and bicycling due to their proposed mix of higher density residential and commercial development. However, the greenhouse gas emissions impact would be decreased slightly under Alternative 2 when compared to the proposed General Plan Update. As such, Alternative 2 would be considered environmentally superior to the General Plan Update, although GHG impacts would remain significant and unavoidable.

Hazards and Hazardous Materials

As described in Section 3.9, *Hazards and Hazardous Materials*, all impacts related to hazardous materials, aircraft hazards, and emergency response were found to be less than significant.

The General Plan Update and Alternative 2 would include updated policies and actions aimed at protecting the public from hazardous materials. These policies and actions in the General Plan Update would ensure that potential hazards are identified on a project site, that development is located in areas where potential exposure to hazards and hazardous materials can be mitigated to an acceptable level, and that business operations comply with Federal and State regulations regarding the use, transport, storage, and disposal of hazardous materials. The General Plan Update also includes policies and actions to ensure that the City has adequate emergency response plans and measures to respond in the event of an accidental release of a hazardous substance (as described in detail in Section 5.9).

Similar to the General Plan Update, Alternative 2 would result in additional urban uses including commercial and residential development. Impacts related to hazards and hazardous materials and emergency response under Alternative 2 would remain the same when compared to the proposed

General Plan Update. As such, Alternative 2 is considered neither environmentally superior nor inferior to the General Plan Update.

Hydrology and Water Quality

As described in Section 5.10, *Hydrology and Water Quality*, under all impact areas, implementation of the General Plan Update would result in less than significant impacts related to Hydrology and Water Quality.

While this Alternative would result in less dense development compared to the General Plan Update, all new development would be subject to applicable stormwater and water quality requirements per the Los Angeles RWQCB. This variation in intensity and land use designation changes would not substantially alter impacts from or to flooding, water quality, or on groundwater supplies because existing Federal, State, and local regulations would apply to guard against flood hazards, water quality contamination, or impact on groundwater supplies. Potential hydrology and water quality impacts for this alternative, like the proposed Project, would be less than significant.

Alternative 2 would result in slightly reduced development of housing units when compared to the General Plan Update. Compared to the General Plan Update, the potential water quality impacts related to construction and operation would be similar. As described in Section 5.10, implementation of the General Plan Update would not result in construction, or long-term impacts to surface water quality from urban stormwater runoff. Future development under all alternatives would also be required to submit a SWPPP with BMPs to the RWQCB and comply with all storm water sewer system (MS4) requirements. It would be expected that impacts related to water quality would be similar under Alternative 2 as compared to the General Plan Update. As such, Alternative 2 would be neither environmentally superior nor inferior to the General Plan Update.

Land Use and Planning

The proposed General Plan Update and Alternative 2 are long-range land use plans. As described in Section 5.11, *Land Use and Planning*, all impacts related to land use and planning were found to be less than significant under the General Plan Update. As described previously, the General Plan Update and Alternative 2 would include adoption of the updated policy document. This Alternative would prevent the City from achieving some of the core objectives of the General Plan Update to meet new State requirements and accommodating the City's RHNA allocation as identified in the City's 2021-2029 Housing Element. This Alternative would result in inconsistency between the General Plan Elements, and would require amendments to the 2021-2029 Housing Element to provide consistency. In addition, the General Plan Update would allow for greater consistency with applicable State and regional plans related to the provision of housing options at varying densities and income levels within an area served by transit, retail, and services to provide opportunities to reduce VMT and associated GHG emissions when compared to Alternative 2. As such, Alternative 2 would be considered environmentally inferior to the General Plan Update.

Mineral Resources

As described in Section 5.12, *Mineral Resources*, the General Plan Update would result in no impacts relating to mineral resources. Like the General Plan Update, Alternative 2 would accommodate development generally in the same areas, and these areas are already urbanized. Given that no mineral

resources would be impacted by the proposed Project, impacts associated with Alternative 2 would be the same and would remain less than significant. As such, Alternative 2 would be neither environmentally superior nor inferior to the General Plan Update.

Noise

As described in Section 5.13, *Noise*, while the General Plan Update does not directly propose site-specific development, future development associated with implementation of the General Plan Update could generate additional noise from construction and operational activities associated with future projects. Where future development projects under the General Plan Update may be exposed to noise levels that exceed the land use compatibility criteria, such as residential developments within the Hawthorne Boulevard Specific Plan area or sensitive land uses developed adjacent to the existing rail line, impacts could be mitigated to a level that is less than significant with the implementation of noise control measures, such as relocating residential outdoor recreational areas away from 60 dBA CNEL or greater areas or shielding outdoor areas using noise barriers. Additionally, the General Plan Update Public Safety Element includes policies and actions intended to minimize exposure to excessive noise, including noise associated with traffic, stationary noise sources, and construction noise.

Alternative 2 would result in similar development patterns and a similar development footprint as the General Plan Update. Alternative 2 would allow for less development (1,603 fewer housing units), resulting in a corresponding reduction in construction and operational noise. The decrease in residential units and non-residential building square footage, and the corresponding reduction in overall traffic volumes would result in reductions in roadway noise under Alternative 2 when compared to the proposed General Plan Update. As such, Alternative 2 would be considered environmentally superior to the General Plan Update.

Population and Housing

Similar to the General Plan Update, this Alternative would update the City's environmental baseline conditions and development projections through 2045. As shown in Table 7-3, the Reduced Growth Alternative would anticipate 1,603 fewer residential units compared to the General Plan Update, which would result in 3,639 less residents compared to Alternative 2. Both the General Plan Update and Reduced Growth Alternative account for population growth and establish goals and policies to reduce potential growth-related impacts. The net increase in population and housing is nominal and would result in similar less than significant impacts.

The amount and typology of allowable development under the General Plan Update and Alternative 2 has been crafted to meet City's Regional Housing Needs Allocation (RHNA) for future housing needs. While Alternative 2 would provide sufficient development capacity to accommodate the City's RHNA, the development assumption in the City's adopted 2021-2029 Housing Element would need to be updated to assume that each housing opportunity site would be developed at the maximum allowable density and the City would be required to prove in the Housing Element based on substantial evidence that development at this density allowed under Alternative 2 would be feasible.

Given the limited development history of similar projects in the City, it would be challenging to provide the evidence required to prove development of each housing opportunity site at maximum allowable

density. If the State does not approve the City's analysis, the State may withdraw certification of the City's Housing Element, even if sufficient development capacity is provided to accommodate its RHNA. However, since the lower density does not preclude the City from meeting it's RHNA obligations, impacts associated with Alternative 2 would be the same and would remain less than significant. As such, Alternative 2 is considered neither environmentally superior nor inferior to the General Plan Update.

Public Services and Recreation

As described in Section 5.15, *Public Services* and Section 5.16, *Parks and Recreation*, the General Plan Update would result in less than significant impacts relating to public services, parks and recreation. New development would place increased demands on public services such as police, fire, schools, parks, libraries, and other governmental services. The General Plan Update includes policies and actions and compliance with the Municipal Code would require payment of impact fees to the City and other public agencies to ensure that additional development allowed does not have adverse impacts on these services and agencies.

Under Alternative 2, the development area and development types would remain similar, however, there would be slightly fewer jobs, dwelling units, and reduced population increase when compared to the General Plan Update and thus, impacts to public services (the demand for police, fire and other public services) would be slightly reduced. Overall, Alternative 2 would have a slightly reduced impact to public services when compared to the proposed Project. As such, Alternative 2 is considered environmentally superior to the General Plan Update.

Transportation

As described in Section 5.17, *Transportation*, transportation impacts associated with implementation of the General Plan Update would be less than significant. The proposed Project would not conflict with policies, plans, or programs regarding roadways, bicycle, pedestrian, or transit facilities or the performance or safety of those facilities. The Project includes goals, policies and actions to encourage new and improved facilities to support multi-modal transportation and access within the Planning Area. Similarly, Alternative 1 would provide for increased density and development within the Planning Area and would not conflict with policies, plans, or programs regarding roadways, bicycle, pedestrian, or transit facilities or the performance or safety of those facilities.

Alternative 2 also includes a more balanced mix of uses and additional opportunities for increased densities as part of mixed-use developments which includes opportunities for trip internalization, and increased opportunities for walking and bicycling. Overall, Alternative 2 would slightly reduce densities as part of mixed-use developments when compared to the General Plan Update, therefore this alternative would have slightly increased impacts relative to per capita VMT when compared to the General Plan Update. As such, Alternative 2 is considered environmentally inferior to the General Plan Update.

Tribal Cultural Resources

As described in Section 5.18, *Tribal Cultural Resources*, while the General Plan Update does not directly propose site-specific development with the potential to directly impact tribal cultural resources, future development associated with implementation of the General Plan Update could cause a substantial adverse change in the significance of known or unknown tribal cultural resources. Potential impacts to

tribal cultural resources associated with future development would be reduced through implementation of General Plan Update policies and actions. Subsequent development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. Subsequent discretionary projects implemented in accordance with the General Plan Update would be subject to the provisions of AB 52 and may require tribal consultation with California Native American tribes that are traditionally and culturally affiliated with the Planning Area and who have previously requested AB 52 consultations with the City. Future AB 52 consultations may identify tribal cultural resources not yet found and formally recorded that could be impacted by subsequent projects. Compliance with the General Plan Update policies and actions and existing regulations would not cause a substantial adverse change in the significance of a tribal cultural resource and impacts would be less than significant.

Alternative 2 would result in similar development patterns and a similar development footprint as the proposed General Plan Update. Additionally, Alternative 2 would update tribal cultural resource policies to include new policies and actions related to agency coordination, consultation, and monitoring consistent with the proposed General Plan Update. Potential impacts to tribal cultural resources would be the same under Alternative 2 and the proposed General Plan Update. As such, Alternative 2 is considered neither environmentally superior nor inferior to the General Plan Update.

Utilities and Service Systems

As described in Section 5.19, *Utilities and Service Systems*, the General Plan Update would result in less than significant impacts relating to utilities and service systems.

New development would place increased demands on utilities. Under Alternative 2, the Planning Area would be developed with similar development patterns and uses as the General Plan Update, however, the overall residential density increases would be reduced. The quantity of infrastructure installed would not be substantially reduced, as the Project Area is urbanized and contains existing utilities infrastructure.

The potential environmental effects associated with infrastructure projects would be similar under Alternative 2 and the proposed Project. Similarly, storm drainage runoff under Alternative 2 would be approximately the same when compared to the proposed Project, due to the general development footprint remaining the same for this alternative when compared to the General Plan Update. Since demand for utilities would be slightly less under Alternative 2 due to the lower densities and associated development potential, Alternative 1 would be considered environmentally superior to the General Plan Update.

Wildfire

As described in Section 5.20, *Wildfire*, the Planning Area is not located in or near state responsibility areas or lands classified as very high fire hazard severity zones; the General Plan Update would result in no impacts related to wildfire. Like the General Plan Update, Alternative 2 would accommodate development generally in the same areas, and these areas are already urbanized. Given that the Planning Area is not located in an area of high fire hazard potential, impacts associated with Alternative 2 would be the same and no impacts would occur. As such, Alternative 2 would be neither environmentally superior nor inferior to the General Plan Update.

Irreversible Effects

The proposed Project would have a less than significant impact associated with irreversible environmental effects as described in Section 6.0, *Other CEQA Considerations*. Implementation of the General Plan Update would result in a commitment of land uses designated for the foreseeable future. Land use and development consistent with the Project would result in irretrievable commitments by designating land for development that is more intense, in some instances, than current designations allow. Additionally, residential development would be allowed on land not currently designated for residential development. Development would physically change the environment in terms of aesthetics, air emissions, noise, and traffic. Therefore, the Project would result in changes in land use within the Planning Area that would commit future generations to these uses. Construction and operation of future development projects associated with Project implementation would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources that would limit the availability of these resource quantities for future generations or for other uses during the life of the Project. However, the Planning Area is an urbanized area and already uses such resources. Additionally, the continued use of such resources would be on a relatively small scale in a regional context. As such, although irreversible environmental changes would result from the Project, such changes would not be considered significant.

During the planning horizon, development under Alternative 2 would be reduced in comparison to the General Plan Update. Under cumulative conditions, Alternative 2 would result in less housing units (see Table 7-1). Alternative 2 would use nonrenewable resources, including metals, stone, and other materials related to construction, and result in on-going demand for fossil fuels and other resources associated with energy production at levels lower than the proposed Project. Alternative 2 would have slightly reduced impacts in comparison to the General Plan Update due to reduced development levels. As such, Alternative 2 would be considered environmentally superior to the General Plan Update.

ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires that an environmentally superior alternative be identified among the alternatives that are analyzed in the EIR. If the No Project Alternative is the environmentally superior alternative, an EIR must also identify an environmentally superior alternative among the other alternatives (CEQA Guidelines Section 15126.6(e)(2)). The environmentally superior alternative is that alternative with the least adverse environmental impacts when compared to the General Plan Update.

A comparative analysis of the General Plan Update and each of the Project alternatives is provided in Table 7-4, *Comparison of Alternatives*, below. As shown in Table 7-4, Alternative 2 (Reduced Growth Alternative) is the environmentally superior alternative when looked at in terms of all potential environmental impacts. While it would not eliminate the General Plan Update's significant and unavoidable impacts, Alternative 2 would lessen the majority of the environmental impacts associated with the proposed Project. Both alternatives fail to reduce any significant and unavoidable impacts to a less than significant level.

Table 7-4
Comparison of Alternatives

Environmental Issue	Alternative 1 (No Project)	Alternative 2 (Reduced Growth)
Aesthetics	▲	=
Agricultural Resources	=	=
Air Quality	▼*	▼*
Biological Resources	▲	=
Cultural Resources	▲	=
Energy	▼	▼

Notice of Preparation and Scoping Meeting
Lawndale General Plan Update Environmental Impact Report

Date:	December 6, 2022
To:	State Clearinghouse, Agencies, Organizations and Interested Parties
Subject:	Notice of Preparation and Scoping Meeting for the Lawndale General Plan Update Environmental Impact Report
Scoping Meeting:	Thursday, December 15, 2022, 6:30 p.m. to 7:30 p.m. Harold E. Hofmann Community Center 14700 Burin Avenue, 2nd Floor Lawndale, CA 90260
Comment Period:	Tuesday, December 6, 2022 to Thursday, January 5, 2023

NOTICE IS HEREBY GIVEN that the City of Lawndale (City) will prepare an Environmental Impact Report (EIR) for the City of Lawndale General Plan Update (Project). The City is the lead agency for the Project. The purpose of this notice is to: (1) serve as a Notice of Preparation (NOP) of an EIR pursuant to the State California Environmental Quality Act (CEQA) Guidelines § 15082; (2) advise and solicit comments and suggestions regarding the scope and content of the EIR to be prepared for the proposed project; and (3) notice the public scoping meeting.

The City determined that the proposed Project would require preparation of a full-scope EIR; thus, an Initial Study was not prepared in conjunction with this NOP. Consistent with § 15082(b) of the CEQA Guidelines, the City will prepare an EIR to address the environmental impacts associated with the Project at a programmatic level. The proposed Project is a long-term plan consisting of policies that will guide future development activities and City actions. No specific development projects are proposed as part of this General Plan Update. However, the program EIR can serve to streamline environmental review of future projects.

Information regarding the project description, project location, and topics to be addressed in the Draft EIR is provided below. Additional information on the General Plan Update and Program EIR are available at the City of Lawndale, Community Development Department, located at 14717 Burin Avenue, Lawndale, CA 90260, and on-line at: www.lawndale.generalplan.org.

For questions regarding this notice, please contact Jared Chavez, Community Development Manager at (310) 973-3231, or by email: jchavez@lawndalecity.org.

Notice of Preparation Comment Period: The City, as Lead Agency, requests that responsible and trustee agencies, all interested parties, and the Office of Planning and Research, respond in a manner consistent with § 15082(b) of the CEQA Guidelines. Pursuant to Public Resources Code § 21080.4, responsible

agencies, trustee agencies and the Office of Planning and Research must submit any comments in response to this notice no later than the comment period deadline identified below. In accordance with the time limits established by CEQA, the NOP public review period will begin on Tuesday, December 6, 2022 and end on Thursday, January 5, 2023.

In the event that the City does not receive a response from any Responsible or Trustee Agency, or by any interested parties, by the end of the review period, the City may presume that the Responsible Agency, Trustee Agency, or interested party has no response to make (State CEQA Guidelines Section 15082(b)(2)). Comments in response to this notice must be submitted to the address below, or by email by the close of the NOP review period, which is 5:00 PM on Thursday, January 5, 2023:

Jared Chavez - Community Development Manager
City of Lawndale
14717 Burin Ave.
Lawndale, CA 90260
Email: jchavez@lawndalecity.org

Scoping Meeting

The City will hold a scoping meeting to provide an opportunity for agency representatives and the public to assist the City in determining the scope and content of the EIR. The scoping meeting will be held on **Thursday, December 15, 2022, at 6:30 p.m.** The scoping meeting will not discuss the merits of the Project, but rather the environmental topics to be included in the environmental review. The location of the meeting is as follows:

Harold E. Hofmann Community Center
14700 Burin Avenue, 2nd Floor
Lawndale, CA 90260

Public Agency Approvals

The City Council is the final decision-making body for the General Plan Update. Before the City Council considers the proposed Project, the Planning Commission will review it and make recommendations to the City Council. While other agencies may be consulted during the General Plan Update process, their approval is not required for adoption of the General Plan. However, subsequent development under the General Plan Update may require approval of state, federal and responsible trustee agencies that may rely on the programmatic EIR for decisions in their areas of expertise.

Project Location and Setting

As shown on Figure 1, the City of Lawndale is located in the South Bay portion of Los Angeles County, approximately 10 miles southwest of downtown Los Angeles. Lawndale is bounded by the City of Hawthorne to the north and west, by unincorporated areas of Los Angeles County and the City of Gardena to the east, by the City of Torrance to the south, and by the City of Redondo Beach to the south and west. Regional access to the City is provided by Interstate 405, a major north-south highway which provides access to Lawndale and the greater Los Angeles region.

The Planning Area is the geographic area for which the Plan provides a framework for long-term growth and resource conservation. State law requires the Plan to include all territory within Lawndale's incorporated area as well as "any land outside its boundaries which in the planning agency's judgment bears relation to its planning" (California Government Code Section 65300). The Planning Area, as shown in Figure 2, includes the entire city limits (approximately 917 acres) as well as the City of Lawndale's Sphere of Influence (approximately 229 acres); the entire Planning Area is approximately 1,146 acres.

Project Description

State law requires the City to adopt a comprehensive, long-term general plan for the physical development of its planning area. The General Plan must include land use, circulation, housing, conservation, open space, air quality, noise, safety, and environmental justice elements, as specified in Government Code Section 65302, to the extent that the issues identified by State law exist in the City's planning area. Additional elements that relate to the physical development of the City may also be addressed in the General Plan. The degree of specificity and level of detail of the discussion of each General Plan Element need only reflect local conditions and circumstances. The City of Lawndale is preparing a comprehensive update to its existing General Plan. The General Plan is being prepared to address the requirements of State law and the relevant items addressed in Government Code Section 65300 et seq. The Lawndale General Plan will include all of the State-mandated elements, and will address two optional topics: Economic Development and Community Facilities.

The updated Lawndale General Plan is expected to be adopted in 2023 and will guide the City's development and conservation through land use objectives and policy guidance. The General Plan is intended to be an expression of the community's vision for the City and Planning Area and constitutes the policy and regulatory framework by which future development projects will be reviewed and public improvements will be implemented. The Lawndale General Plan will include a comprehensive set of goals, policies, and actions (implementation measures), as well as a revised Land Use Map (Figure 3). The revisions to the Land Use Map will include review and revision of the land uses within the existing Hawthorne Boulevard Specific Plan area. The City will implement the General Plan by requiring development, infrastructure improvements, and other projects to be consistent with its policies and by implementing the actions included in the General Plan.

A goal in the General Plan is the broadest statement of community values. It is a generalized ideal which provides a sense of direction for action. They are overall statements of desired future conditions. The essence of the General Plan is contained within its policies. Policies are statements which further refine the goals, and guide the course of action the City must take to achieve the goals in the General Plan. It is important to note that policies are guides for decision makers, not decisions themselves. Action items are steps or actions the City should take to implement the General Plan.

The Lawndale General Plan Update is intended to reflect the desires and vision of Lawndale residents, businesses, the Planning Commission, and City Council. The following objectives were identified for the proposed update to the General Plan:

1. Reflect the current goals and vision expressed by city residents, businesses, decision-makers, and other stakeholders;
2. Address issues and concerns identified by city residents, businesses, decision-makers, and other stakeholders;
3. Protect Lawndale's existing residences, character, and sense of community;
4. Proactively plan for and accommodate local and regional growth in a responsible manner;
5. Encourage mixed-use development patterns that promote vibrant commercial and residential areas;
6. Allow for a range of high-quality housing options;
7. Attract and retain businesses and industries that provide jobs for local residents;
8. Continue to maintain and improve multimodal transportation opportunities;
9. Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
10. Address new requirements of State law; and
11. Address emerging transportation, housing, and employment trends.

General Plan Buildout Summary

The EIR will evaluate the anticipated development that could occur within the Planning Area if every parcel developed at the densities and intensities expected under the General Plan. While no specific development projects are proposed as part of the Lawndale General Plan Update, the General Plan will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. The buildout analysis assumes a 20-year planning horizon, and 2045 is to be the full buildout year of the General Plan (the point at which all parcels in the City are developed according to their General Plan land use designation).

Table 1 provides a statistical summary of the buildout potential associated with the Proposed Land Use Map compared to existing on-the-ground conditions and the currently adopted General Plan. Table 1 also shows the buildout potential associated with updated land uses within the Hawthorne Boulevard Specific Plan area.

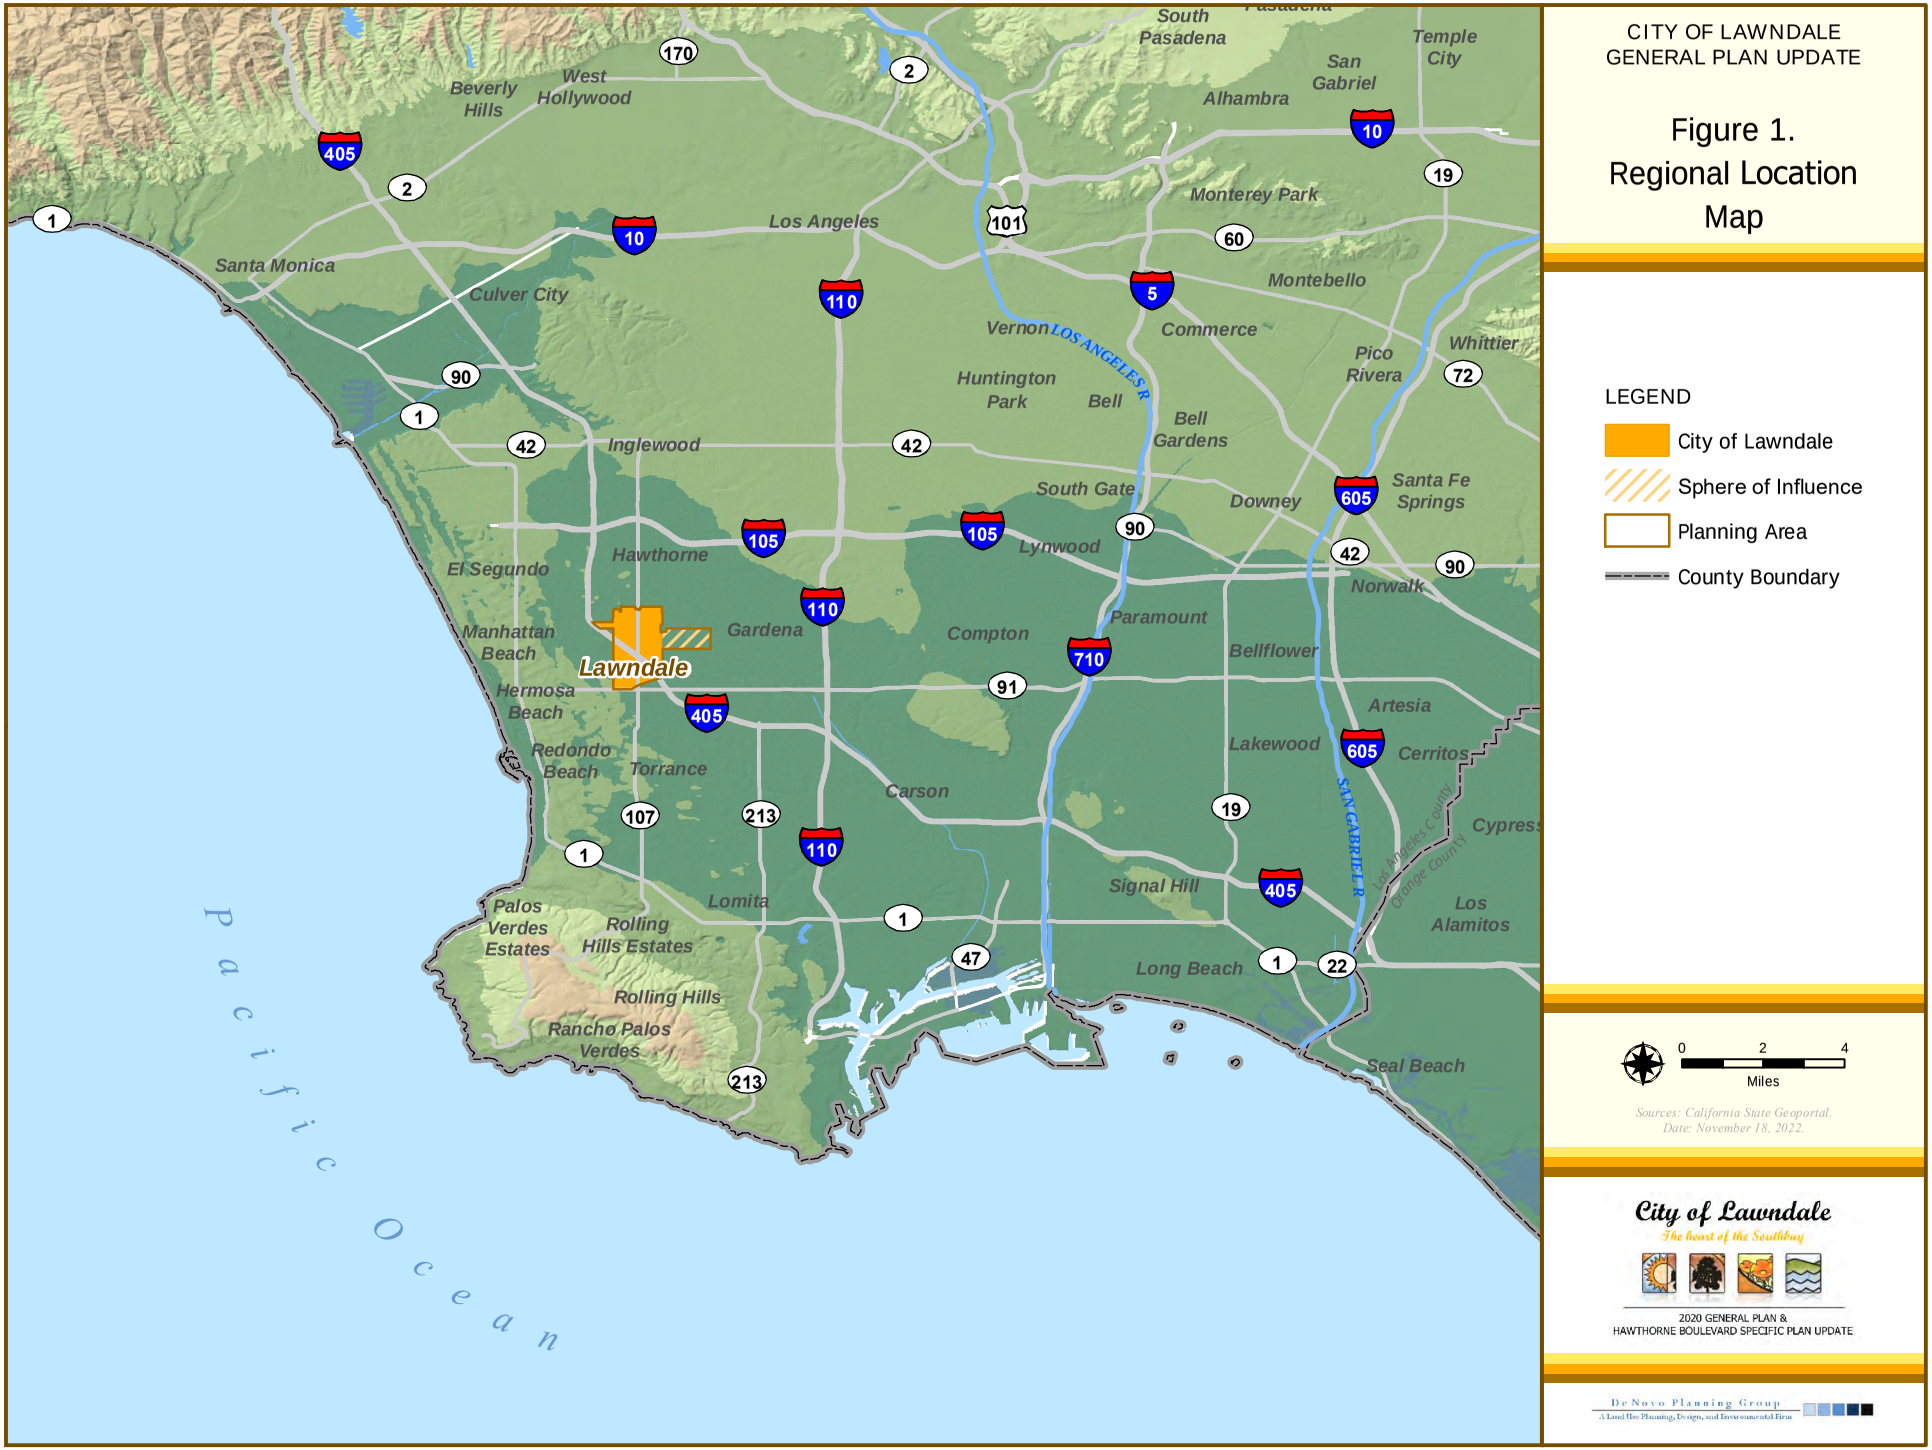
Table 1 Buildout Statistical Summary

Description	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs
Existing Conditions				
HBSP	391	1,125	2,174,447	3,424
City	9,501	31,084	2,126,587	2,703
SOI	1,571	5,740	241,129	343
Total	**11,463**	**38,948**	**4,542,162**	**8,470**
Current Land Use Map				
HBSP	1,331	3,620	2,063,401	4,125
City	10,338	28,746	2,541,429	3,763
SOI	1,717	6,286	446,149	829
Total	**13,386**	**38,652**	**5,070,979**	**8,717**
Proposed Land Use Map				
HBSP	3,931	11,017	2,484,823	4,970
City	9,757	30,127	2,420,054	3,409
SOI	1,717	6,286	446,149	829
Total	**15,405**	**47,430**	**5,351,026**	**9,208**

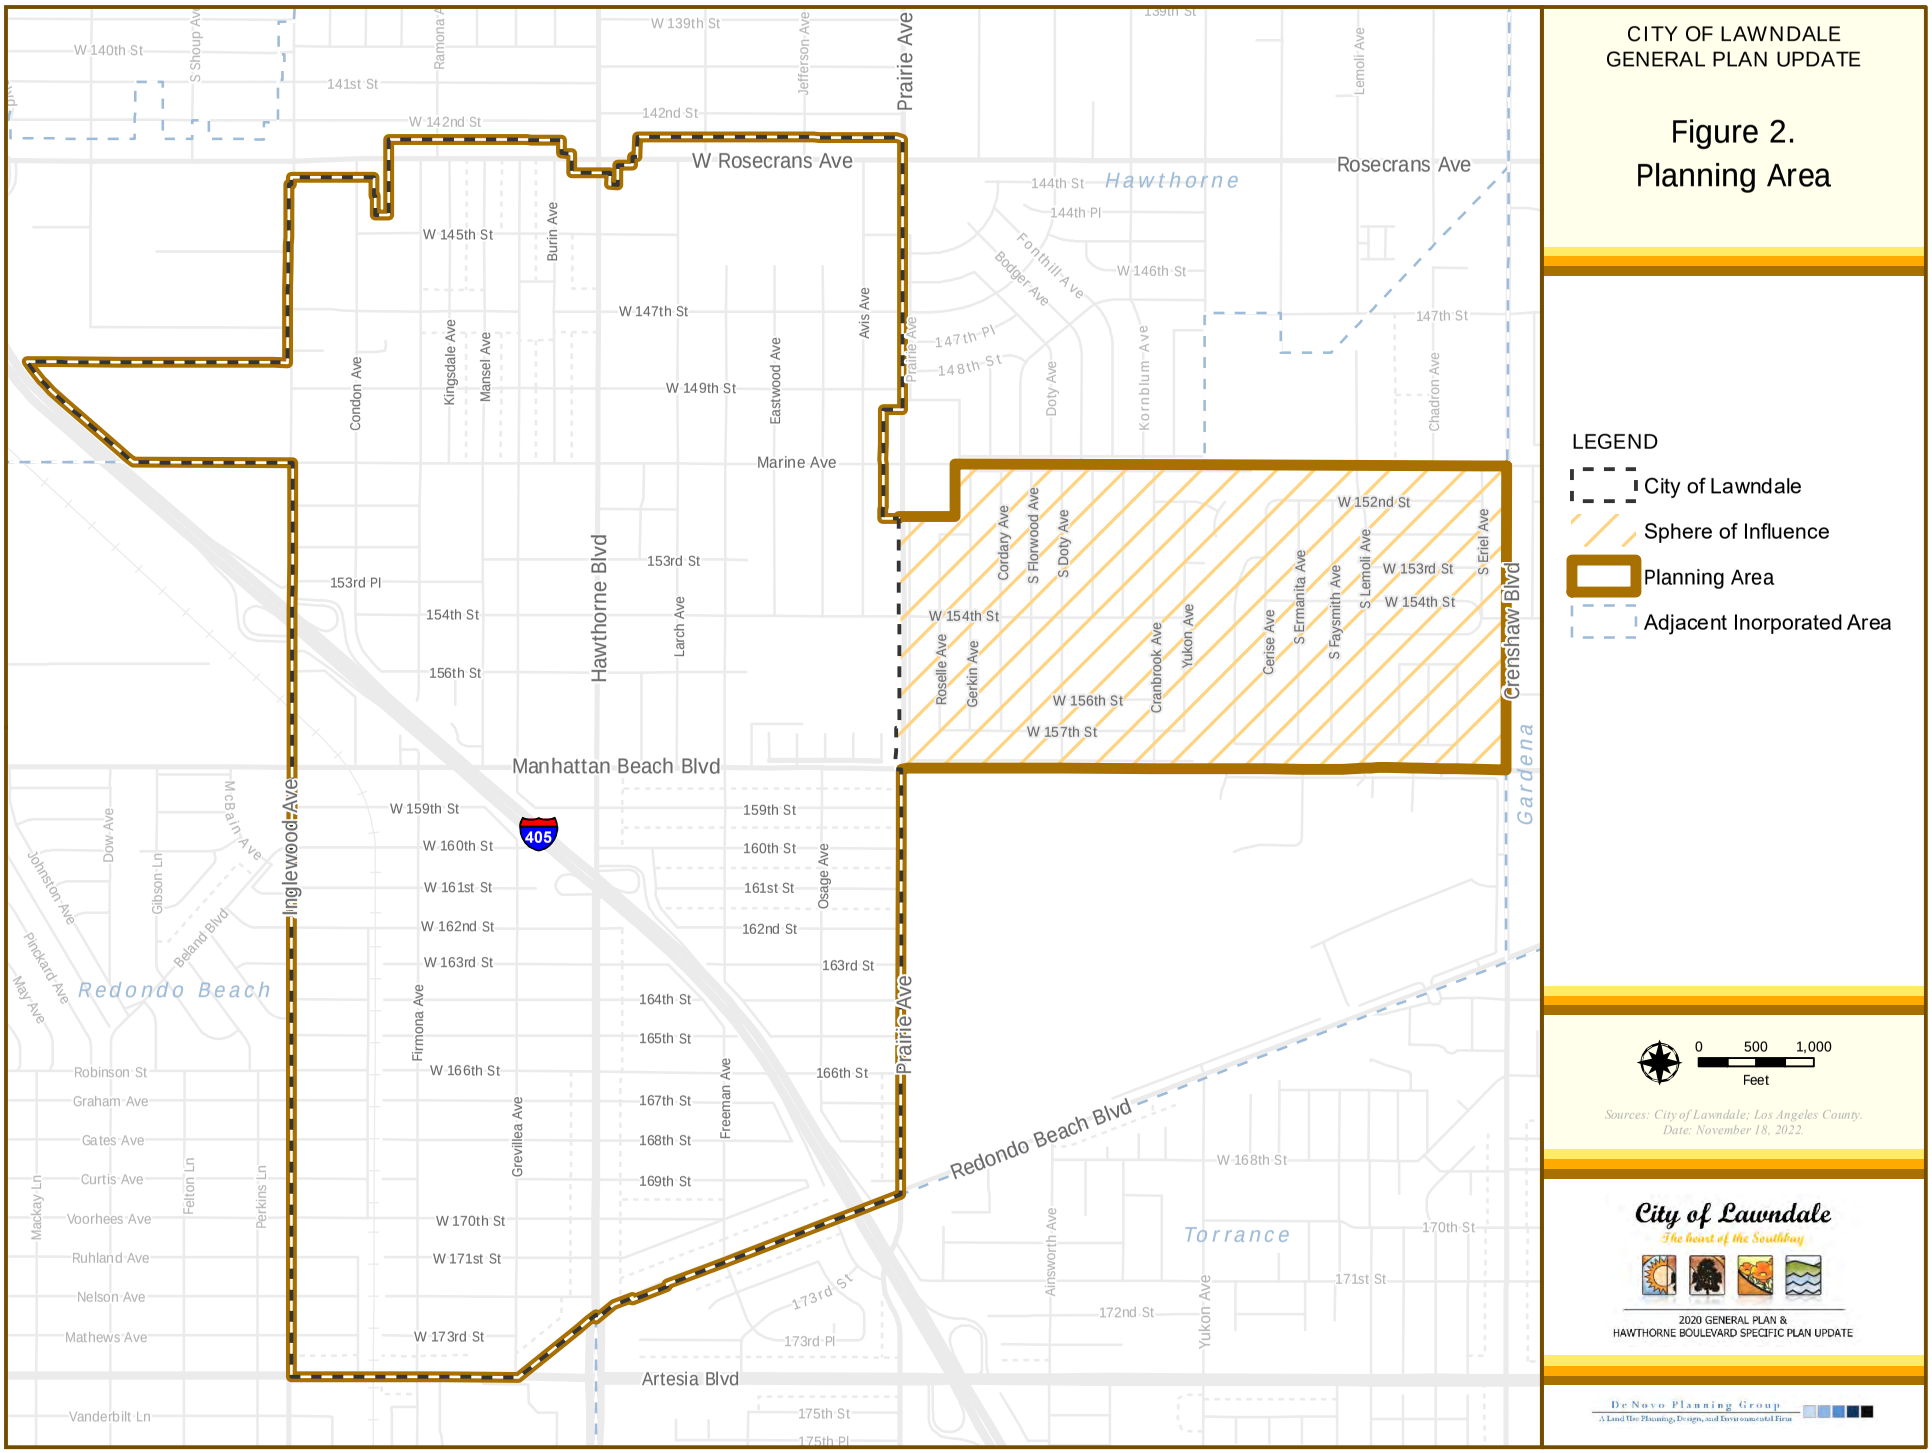
HBSP – Hawthorne Boulevard Specific Plan Area
City – Development outside of the HBSP Area but within the City limits
SOI – Sphere of Influence
Total – Planning Area

Notes:

1. *The statistical summary is based a 20-year planning horizon and buildout year (the point at which all parcels in the City are developed according to their General Plan land use designation).*
2. *Numbers have been rounded and may not add exactly.*
3. *HBSP is located within the City limits.*



Environmental Factors Potentially Affected



The proposed Project could potentially affect the following environmental factors, and each will be addressed in the EIR:

- Aesthetics
- Air Quality
- Agriculture and Forestry Resources
- Biological Resources
- Cultural Resources
- Energy
- Geology/Soils
- Greenhouse Gases Emissions
- Hazards and Hazardous Materials
- Hydrology/Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Parks and Recreation
- Transportation and Traffic
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfires
- Mandatory Findings of Significance

Re: 2022120088, City of Lawndale General Plan Update Project, Los Angeles County

Dear Mr. Chavez:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative decloration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigotion that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
    a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
    b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
    a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
    b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
    c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Lawndale General Plan Update [SCAG NO. IGR10798]

Dear Jared Chavez,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Lawndale General Plan Update ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is responsible for providing informational resources to regionally significant plans, projects, and programs per the California Environmental Quality Act (CEQA) to facilitate the consistency of these projects with SCAG's adopted regional plans, to be determined by the lead agencies.[1]

Pursuant to Senate Bill (SB) 375, SCAG is the designated Regional Transportation Planning Agency under state law and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS). SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and align with RTP/SCS policies. Finally, SCAG is the authorized regional agency for Intergovernmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Lawndale General Plan Update in Los Angeles County. The proposed project includes a comprehensive update to all the State-mandated elements and will address two optional topics: Economic Development and Community Facilities.

When available, please email environmental documentation to IGR@scag.ca.gov providing, at a minimum, the full public comment period for review.

If you have any questions regarding the attached comments, please contact the Intergovernmental Review (IGR) Program, attn.: Annaleigh Ekman, Associate Regional Planner, at (213) 630-1427 or IGR@scag.ca.gov. Thank you.

Sincerely,

Frank Wen, Ph.D.
Manager, Planning Strategy Department

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2020 RTP/SCS (Connect SoCal) for the purpose of determining consistency for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE LAWNDALE GENERAL PLAN UPDATE [SCAG NO. IGR10798]

CONSISTENCY WITH CONNECT SOCAL

SCAG provides informational resources to facilitate the consistency of the proposed project with the adopted 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with Connect SoCal.

CONNECT SOCAL GOALS

The SCAG Regional Council fully adopted Connect SoCal in September 2020. Connect SoCal, also known as the 2020 – 2045 RTP/SCS, builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health. The goals included in Connect SoCal may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project. Among the relevant goals of Connect SoCal are the following:

SCAG CONNECT SOCAL GOALS	
Goal #1:	*Encourage regional economic prosperity and global competitiveness*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*
Goal #3:	*Enhance the preservation, security, and resilience of the regional transportation system*
Goal #4:	*Increase person and goods movement and travel choices within the transportation system*
Goal #5:	*Reduce greenhouse gas emissions and improve air quality*
Goal #6:	*Support healthy and equitable communities*
Goal #7:	*Adapt to a changing climate and support an integrated regional development pattern and transportation network*
Goal #8:	*Leverage new transportation technologies and data-driven solutions that result in more efficient travel*
Goal #9:	*Encourage development of diverse housing types in areas that are supported by multiple transportation options*
Goal #10:	*Promote conservation of natural and agricultural lands and restoration of habitats*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG CONNECT SOCAL GOALS		
	Goal	Analysis
Goal #1:	*Encourage regional economic prosperity and global competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

Connect SoCal Strategies

To achieve the goals of Connect SoCal, a wide range of land use and transportation strategies are included in the accompanying twenty (20) technical reports. Of particular note are multiple strategies included in Chapter 3 of Connect SoCal intended to support implementation of the regional Sustainable Communities Strategy (SCS) framed within the context of focusing growth near destinations and mobility options; promoting diverse housing choices; leveraging technology innovations; supporting implementation of sustainability policies; and promoting a Green Region. To view Connect SoCal and the accompanying technical reports, please visit the Connect SoCal webpage. Connect SoCal builds upon the progress from previous RTP/SCS cycles and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that helps the SCAG region strive towards a more sustainable region, while meeting statutory requirements pertinent to RTP/SCSs. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

SCAG staff would like to call your attention to resources available from SCAG's Regional Climate Adaptation Framework including the Southern California Climate Adaptation Planning Guide, Communication and Outreach Toolkit, Library of Model Policies, and SB 379 Compliance Curriculum for Local Jurisdictions.

DEMOGRAPHICS AND GROWTH FORECASTS

A key, formative step in projecting future population, households, and employment through 2045 for Connect SoCal was the generation of a forecast of regional and county level growth in collaboration with expert demographers and economists on Southern California. From there, jurisdictional level forecasts were ground-truthed by subregions and local agencies, which helped SCAG identify opportunities and barriers to future development. This forecast helps the region understand, in a very general sense, where we are expected to grow, and allows SCAG to focus attention on areas that are experiencing change and may have increased transportation needs. After a year-long engagement effort with all 197 jurisdictions one-on-one, 82 percent of SCAG's 197 jurisdictions provided feedback on the forecast of future growth for Connect SoCal. SCAG also sought feedback on potential sustainable growth strategies from a broad range of stakeholder groups – including local jurisdictions, county transportation commissions, other partner agencies, industry groups, community-based organizations, and the general public. Connect SoCal utilizes a bottom-up approach in that total projected growth for each jurisdiction reflects feedback received from jurisdiction staff, including city managers, community development/planning directors, and local staff. Growth at the neighborhood level (i.e., transportation analysis zone (TAZ) reflects entitled projects and adheres to current general and specific plan maximum densities as conveyed by jurisdictions (except in cases where entitled projects and development agreements exceed these capacities as calculated by SCAG). Neighborhood level growth projections also feature strategies that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance

with state planning law. Connect SoCal's Forecasted Development Pattern is utilized for long range modeling purposes and does not supersede actions taken by elected bodies on future development, including entitlements and development agreements. SCAG does not have the authority to implement the plan -- neither through decisions about what type of development is built where, nor what transportation projects are ultimately built, as Connect SoCal is adopted at the jurisdictional level. Achieving a sustained regional outcome depends upon informed and intentional local action. To access jurisdictional level growth estimates and forecasts for years 2016 and 2045, please refer to the Connect SoCal Demographics and Growth Forecast Technical Report. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts				Adopted City of Lawndale Forecasts

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for Connect SoCal for guidance, as appropriate. SCAG's Regional Council certified the PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on May 7, 2020 and also adopted a PEIR Addendum and amended the MMRP on September 3, 2020 (please see the PEIR webpage and scroll to the bottom of the page for the PEIR Addendum). The PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

ENVIRONMENTAL JUSTICE

Per Senate Bill 1000 (SB 1000), local jurisdictions in California with disadvantaged communities are required to develop an Environmental Justice (EJ) Element or consider EJ goals, policies, and objectives in their General Plans when updating two or more General Plan Elements. SCAG staff recommends that you review the Environmental Justice Technical Report and the updated Environmental Justice Toolbox, which is a resource document to assist local jurisdictions in developing EJ-related goals and policies regarding solutions for EJ-related community issues.

Notice of Preparation of an Environmental Impact Report for the City of Lawndale General Plan Update

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send a copy of the EIR upon its completion and public release directly to South Coast AQMD as copies of the EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA *operational* thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

Sensitive receptors are people that have an increased sensitivity to air pollution or environmental contaminants and include schools, daycare centers, nursing homes, elderly care facilities, hospitals, and residential dwelling units. The Proposed Project will include, among others, many high, medium, and low density residential areas and is located in close proximity to I-405 freeway, and to facilitate the purpose of an EIR as an informational document, it is recommended that the Lead Agency perform a mobile source health risk assessment[5] to disclose the potential health risks[6].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the Draft EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

The California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*[7] is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory[8].

The South Coast AQMD's *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*[9] includes suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. It is recommended that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions.

South Coast AQMD staff is concerned about potential public health impacts of siting industrial use area (including warehouses and distribution center) within close proximity of sensitive land uses, especially in communities that are already heavily affected by the existing warehouse and truck activities. The South Coast AQMD's Multiple Air Toxics Exposure Study (MATES V), completed in August 2021, concluded

[5] South Coast AQMD's guidance for performing a mobile source health risk assessment can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis.
[6] *Ibid*.
[7] CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* can be found at: http://www.arb.ca.gov/ch/handbook.pdf.
[8] CARB's technical advisory can be found at: https://www.arb.ca.gov/ch/landuse.htm.
[9] South Coast AQMD. 2005. *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*. Available at: http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf.

that the largest contributor to cancer risk from air pollution is diesel particulate matter (DPM) emissions[10]. According to the MATES V Carcinogenic Risk interactive Map, the area surrounding the Proposed Project has an estimated cancer risk over 450 in one million[11]. Operation of warehouses generates and attracts heavy-duty diesel-fueled trucks that emit DPM. When the health impacts from the Proposed Project are added to those existing impacts, residents living in the communities surrounding the Proposed Project will possibly face an even greater exposure to air pollution and bear a disproportionate burden of increasing health risks.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook,[12] South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2022 Air Quality Management Plan,[13] and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.[14].

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the Draft EIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule[15] and the Heavy-Duty Low NOx Omnibus Regulation[16], ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year[17] that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental

[10] South Coast AQMD. August 2021. *Multiple Air Toxics Exposure Study in the South Coast Air Basin V*. Available at: http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/mates-v.
[11] South Coast AQMD. MATES V Data Visualization Tool. Accessed at: MATES Data Visualization (arcgis.com).
[12] https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook
[13] South Coast AQMD's 2022 Air Quality Management Plan can be found at: http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan (Chapter 4 - Control Strategy and Implementation).
[14] Southern California Association of Governments' 2020-2045 RTP/SCS can be found at: https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf.
[15] CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks.
[16] CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox.
[17] CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.

analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.

- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the Draft EIR may include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, day care centers, etc.).
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing outside.
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule

2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. If the Proposed Project consists of the development of warehouses, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation[18]. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage[19].

Health Risk Reduction Strategies

Many strategies are available to reduce exposures, including, but are not limited to, building filtration systems with MERV 13 or better, or in some cases, MERV 15 or better is recommended; building design, orientation, location; vegetation barriers or landscaping screening, etc. Enhanced filtration units are capable of reducing exposures. However, enhanced filtration systems have limitations. For example, in a study that South Coast AQMD conducted to investigate filters[20], a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary and include costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, because the filters would not have any effectiveness unless the HVAC system is running, there may be increased energy consumption that the Lead Agency should evaluate in the EIR. It is typically assumed that the filters operate 100 percent of the time while residents are indoors, and the environmental analysis does not generally account for the times when the residents have their windows or doors open or are in common space areas of the project. These filters have no ability to filter out any toxic gases. Furthermore, when used filters are replaced, replacement has the potential to result in emissions from the transportation of used filters at disposal sites and generate solid waste that the Lead Agency should evaluate in the EIR. Therefore, the presumed effectiveness and feasibility of any filtration units should be carefully evaluated in more detail prior to assuming that they will sufficiently alleviate exposures to diesel particulate matter emissions.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at swang1@aqmd.gov.

Sincerely,

Sam Wang

Subject: Re: City of Lawndale General Plan Update: Notice of Preparation of an EIR
Date: Tuesday, December 6, 2022 11:19:26 AM

Thank you for the file, but the current general plan land use map was not included so that the proposed changes can be more objectively and immediately reviewed. Can a revised version that includes that map be distributed so that changes are more opaque to our neighbors?

On Tue, Dec 6, 2022, 11:12 <abrodkin@denovoplanning.com> wrote:

> The City of Lawndale will prepare an Environmental Impact Report (EIR) for the City of Lawndale General Plan Update (Project) to address the environmental impacts associated with the Project at a programmatic level. The proposed Project is a long-term plan consisting of policies that will guide future development activities and City actions. No specific development projects are proposed as part of this General Plan Update. However, the program EIR can serve to streamline environmental review of future projects.
>
> The City, as Lead Agency, requests that responsible and trustee agencies, all interested parties, and the Office of Planning and Research, respond in a manner consistent with § 15082(b) of the CEQA Guidelines. A **Notice of Preparation (NOP)** has been prepared and released to advise and solicit comments and suggestions regarding the scope and content of the EIR to be prepared for the proposed Project. **The NOP public review period will begin on Tuesday, December 6, 2022 and end on Thursday, January 5, 2023.** Comments in response to this notice must be submitted to the address below, or by email by the close of the NOP review period, which is 5:00 PM on Thursday, January 5, 2023:

Appendix B: Air Quality, Energy and Greenhouse Gas Emissions Modeling Data

Lawndale General Plan Update Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Demolition (2023) - Unmitigated

3.3. Demolition (2024) - Unmitigated

3.5. Demolition (2025) - Unmitigated

3.7. Demolition (2026) - Unmitigated

3.9. Demolition (2027) - Unmitigated

3.11. Demolition (2028) - Unmitigated

3.13. Demolition (2029) - Unmitigated

3.15. Demolition (2030) - Unmitigated

3.17. Demolition (2031) - Unmitigated

3.19. Demolition (2032) - Unmitigated

3.21. Demolition (2033) - Unmitigated

3.23. Demolition (2034) - Unmitigated

3.25. Demolition (2035) - Unmitigated

3.27. Demolition (2036) - Unmitigated

3.29. Demolition (2037) - Unmitigated

3.31. Demolition (2038) - Unmitigated

3.33. Demolition (2039) - Unmitigated

3.35. Demolition (2040) - Unmitigated

3.37. Demolition (2041) - Unmitigated

3.39. Demolition (2042) - Unmitigated

3.41. Demolition (2043) - Unmitigated

3.43. Demolition (2044) - Unmitigated

3.45. Demolition (2045) - Unmitigated

3.47. Site Preparation (2023) - Unmitigated

3.49. Site Preparation (2024) - Unmitigated

3.51. Site Preparation (2025) - Unmitigated

3.53. Site Preparation (2026) - Unmitigated

3.55. Site Preparation (2027) - Unmitigated

3.57. Site Preparation (2028) - Unmitigated

3.59. Site Preparation (2029) - Unmitigated

3.61. Site Preparation (2030) - Unmitigated

3.63. Site Preparation (2031) - Unmitigated

3.65. Site Preparation (2032) - Unmitigated

3.67. Site Preparation (2033) - Unmitigated

3.69. Site Preparation (2034) - Unmitigated

3.71. Site Preparation (2035) - Unmitigated

3.73. Site Preparation (2036) - Unmitigated

3.75. Site Preparation (2037) - Unmitigated

3.77. Site Preparation (2038) - Unmitigated

3.79. Site Preparation (2039) - Unmitigated

3.81. Site Preparation (2040) - Unmitigated

3.83. Site Preparation (2041) - Unmitigated

3.85. Site Preparation (2042) - Unmitigated

3.87. Site Preparation (2043) - Unmitigated

3.89. Site Preparation (2044) - Unmitigated

3.91. Site Preparation (2045) - Unmitigated

3.93. Grading (2023) - Unmitigated

3.95. Grading (2024) - Unmitigated

3.97. Grading (2025) - Unmitigated

3.99. Grading (2026) - Unmitigated

3.101. Grading (2027) - Unmitigated

3.103. Grading (2028) - Unmitigated

3.105. Grading (2029) - Unmitigated

3.107. Grading (2030) - Unmitigated

3.109. Grading (2031) - Unmitigated

3.111. Grading (2032) - Unmitigated

3.113. Grading (2033) - Unmitigated

3.115. Grading (2034) - Unmitigated

3.117. Grading (2035) - Unmitigated

3.119. Grading (2036) - Unmitigated

3.121. Grading (2037) - Unmitigated

3.123. Grading (2038) - Unmitigated

3.125. Grading (2039) - Unmitigated

3.127. Grading (2040) - Unmitigated

3.129. Grading (2041) - Unmitigated

3.131. Grading (2042) - Unmitigated

3.133. Grading (2043) - Unmitigated

3.135. Grading (2044) - Unmitigated

3.137. Grading (2045) - Unmitigated

3.139. Building Construction (2023) - Unmitigated

3.141. Building Construction (2024) - Unmitigated

3.143. Building Construction (2025) - Unmitigated

3.145. Building Construction (2026) - Unmitigated

3.147. Building Construction (2027) - Unmitigated

3.149. Building Construction (2028) - Unmitigated

3.151. Building Construction (2029) - Unmitigated

3.153. Building Construction (2030) - Unmitigated

3.155. Building Construction (2031) - Unmitigated

3.157. Building Construction (2032) - Unmitigated

3.159. Building Construction (2033) - Unmitigated

3.161. Building Construction (2034) - Unmitigated

3.163. Building Construction (2035) - Unmitigated

3.165. Building Construction (2036) - Unmitigated

3.167. Building Construction (2037) - Unmitigated

3.169. Building Construction (2038) - Unmitigated

3.171. Building Construction (2039) - Unmitigated

3.173. Building Construction (2040) - Unmitigated

3.175. Building Construction (2041) - Unmitigated

3.177. Building Construction (2042) - Unmitigated

3.179. Building Construction (2043) - Unmitigated

3.181. Building Construction (2044) - Unmitigated

3.183. Building Construction (2045) - Unmitigated

3.185. Paving (2023) - Unmitigated

3.187. Paving (2024) - Unmitigated

3.189. Paving (2025) - Unmitigated

3.191. Paving (2026) - Unmitigated

3.193. Paving (2027) - Unmitigated

3.195. Paving (2028) - Unmitigated

3.197. Paving (2029) - Unmitigated

3.199. Paving (2030) - Unmitigated

3.201. Paving (2031) - Unmitigated

3.203. Paving (2032) - Unmitigated

3.205. Paving (2033) - Unmitigated

3.207. Paving (2034) - Unmitigated

3.209. Paving (2035) - Unmitigated

3.211. Paving (2036) - Unmitigated

3.213. Paving (2037) - Unmitigated

3.215. Paving (2038) - Unmitigated

3.217. Paving (2039) - Unmitigated

3.219. Paving (2040) - Unmitigated

3.221. Paving (2041) - Unmitigated

3.223. Paving (2042) - Unmitigated

3.225. Paving (2043) - Unmitigated

3.227. Paving (2044) - Unmitigated

3.229. Paving (2045) - Unmitigated

3.231. Architectural Coating (2023) - Unmitigated

3.233. Architectural Coating (2024) - Unmitigated

3.235. Architectural Coating (2025) - Unmitigated

3.237. Architectural Coating (2026) - Unmitigated

3.239. Architectural Coating (2027) - Unmitigated

3.241. Architectural Coating (2028) - Unmitigated

3.243. Architectural Coating (2029) - Unmitigated

3.245. Architectural Coating (2030) - Unmitigated

3.247. Architectural Coating (2031) - Unmitigated

3.249. Architectural Coating (2032) - Unmitigated

3.251. Architectural Coating (2033) - Unmitigated

3.253. Architectural Coating (2034) - Unmitigated

3.255. Architectural Coating (2035) - Unmitigated

3.257. Architectural Coating (2036) - Unmitigated

3.259. Architectural Coating (2037) - Unmitigated

3.261. Architectural Coating (2038) - Unmitigated

3.263. Architectural Coating (2039) - Unmitigated

3.265. Architectural Coating (2040) - Unmitigated

3.267. Architectural Coating (2041) - Unmitigated

3.269. Architectural Coating (2042) - Unmitigated

3.271. Architectural Coating (2043) - Unmitigated

3.273. Architectural Coating (2044) - Unmitigated

3.275. Architectural Coating (2045) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Lawndale General Plan Update
Construction Start Date	10/1/2023
Operational Year	2045
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.20
Precipitation (days)	17.8
Location	33.88757771544401, -118.3536468469073
County	Los Angeles-South Coast
City	Lawndale
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4562
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.14

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Single Family Housing	14,832	Dwelling Unit	824	28,922,400	173,725,095	0.00	43,903	Assume Single-family for residential (for simplicity). Also assumes average density (18 units per acre)
Strip Mall	2,439	1000sqft	56.0	2,439,360	0.00	0.00	—	Assumes retail "strip mall" land use type (for simplicity)
General Light Industry	50.0	1000sqft	21.0	50,000	0.00	0.00	—	Assumes industrial "general light industry" land use type (for simplicity)
City Park	13.0	Acre	13.0	0.00	0.00	0.00	—	Assumes recreational "City Park" land use type (for simplicity)
Library	6,011	1000sqft	138	6,011,280	0.00	0.00	—	Assumes educational "Library" land use type (for simplicity)
General Office Building	4,138	1000sqft	95.0	4,138,200	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—

Unmit.	83.6	121	312	1,087	1.00	6.67	189	196	6.27	45.6	51.9	—	307,562	307,562	12.6	22.1	991	315,467
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	91.6	125	351	1,025	1.00	7.25	189	196	6.80	45.6	52.4	—	304,008	304,008	13.2	22.4	27.4	311,042
Average Daily (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	59.3	85.9	236	707	0.72	4.78	134	139	4.49	32.3	36.8	—	215,650	215,650	9.25	16.0	306	220,970
Annual (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	10.8	15.7	43.0	129	0.13	0.87	24.4	25.3	0.82	5.89	6.71	—	35,703	35,703	1.53	2.66	50.7	36,584

2.2. Construction Emissions by Year, Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Year	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily - Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
2024	83.6	121	312	1,087	1.00	6.67	189	196	6.27	45.6	51.9	—	307,562	307,562	12.6	22.1	991	315,467
2025	79.0	117	286	1,006	1.00	5.97	189	195	4.80	45.6	50.4	—	302,074	302,074	12.6	22.1	928	309,916
2026	70.8	110	267	939	1.00	5.57	189	194	4.44	45.6	50.0	—	296,718	296,718	12.3	22.1	861	304,485
2027	67.9	108	253	880	1.00	4.49	189	193	4.19	45.6	49.8	—	291,385	291,385	12.3	21.3	791	298,836

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit

Temperature and Extreme Heat	5.38	annual days of extreme heat
Extreme Precipitation	4.70	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	29.9
AQ-PM	79.9
AQ-DPM	83.9
Drinking Water	38.2
Lead Risk Housing	83.3

Pesticides	26.9
Toxic Releases	95.3
Traffic	95.3
Effect Indicators	—
CleanUp Sites	40.8
Groundwater	91.3
Haz Waste Facilities/Generators	83.1
Impaired Water Bodies	0.00
Solid Waste	84.7
Sensitive Population	—
Asthma	71.4
Cardio-vascular	62.6
Low Birth Weights	38.7
Socioeconomic Factor Indicators	—
Education	83.1
Housing	61.5
Linguistic	71.9
Poverty	80.8
Unemployment	18.3

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	22.05825741
Employed	70.02438085
Median HI	31.25882202

Education	—
Bachelor's or higher	26.78044399
High school enrollment	4.863338894
Preschool enrollment	33.99204414
Transportation	—
Auto Access	47.37585012
Active commuting	79.09662518
Social	—
2-parent households	31.36147825
Voting	29.74464263
Neighborhood	—
Alcohol availability	13.8842551
Park access	18.0803285
Retail density	46.7855768
Supermarket access	94.25125112
Tree canopy	41.57577313
Housing	—
Homeownership	28.19196715
Housing habitability	22.13524958
Low-inc homeowner severe housing cost burden	34.51815732
Low-inc renter severe housing cost burden	25.88220198
Uncrowded housing	31.48979854
Health Outcomes	—
Insured adults	22.41755422
Arthritis	0.0
Asthma ER Admissions	28.0
High Blood Pressure	0.0

Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	34.9
Cognitively Disabled	82.5
Physically Disabled	50.9
Heart Attack ER Admissions	38.7
Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	84.8
Physical Health Not Good	0.0
Stroke	0.0
Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0
No Leisure Time for Physical Activity	0.0
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	39.2
Elderly	67.6
English Speaking	22.6
Foreign-born	73.7
Outdoor Workers	65.0

Climate Change Adaptive Capacity	—
Impervious Surface Cover	7.6
Traffic Density	92.4
Traffic Access	87.4
Other Indices	—
Hardship	64.8
Other Decision Support	—
2016 Voting	29.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	87.0
Healthy Places Index Score for Project Location (b)	26.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Land uses and sizes selected from Table 3-2 and Table 3-3 of the EIR Project Description. Land use subtypes selected for simplicity. Based on average land use acreage, assumes approximately 18 units per acre for residential.
Construction: Construction Phases	Construction schedule assumed to occur throughout Project buildout period (for simplicity) and a conservative estimate.
Operations: Hearths	No hearths or fireplaces.
Construction: Dust From Material Movement	Site is relatively flat; soil is anticipated to balance on-site.
Construction: Demolition	No demolition for the purposes of modeling.

Source: EMFAC2021 (v1.0.2) Emissions Inventory
Region Type: County
Region: Los Angeles
Calendar Year: 2023, 2045
Season: Annual
Vehicle Classification: EMFAC202x Categories
Units: miles/day for CVMT and EVMT, trips/day for Trips, kWh/day for Energy Consumption, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

Gasoline: **29.9**

Step 3: **Therefore:**

34,367 **daily gallons of gasoline**

or

12,544,095 **annual gallons of gasoline**

Off-road (i.e. On-site) Mobile (Construction) Energy Usage

Note: Assu For the sake of simplicity, and as a conservative estimation, it was assumed that all off-road vehicles use diesel fuel as an energy source.
Demolition, Site preparation and grading off-road mobile vehicle on-site gallons of fuel are calculated below.

Given Factor:	**40,485.0**	**metric tons**	**CO2 (provided in CalEEMod Output File)**	
Conversion Factor:	2204.6262	pounds	per metric ton	
Intermediate Result:	**89,254,292**	**pounds**	**CO2**	
Conversion Factor:	22.38	pounds	CO2 per 1 gallon of diesel fuel	Source: U.S. EIA, 2016
Final Result:	**3,988,127**	**gallons**	**diesel fuel**	http://www.eia.gov/tools/faqs/faq.cfm?id=307&t=11

Mitigated Onsite Scenario	Total CO2 (MT/yr) (provided in CalEEMod Output File)
Demolition - 2023 to 2045	9,061
Site Preparation - 2023 to 2045	13,989
Grading - 2023 to 2045	17,435

On-road Mobile (Construction) Energy Usage - Demolition

Note: Assumes that all vehicles that are generated as part of project use gasoline as a fuel source (for simplicity), since the vast majority of vehicles generated by project would use it.

Step 1: **Total Daily Worker Trips (CalEEMod output)**

15

Worker Trip Length (miles) (CalEEMod output)

18.5

Therefore:

Average Worker Daily VMT:

278

Step 2: Given:

Assumed Fleet Mix for Workers (Percentage mix is provided on Appendix A: Calculation Details for CalEEMOD p. 15)

LDA	LDT1	LDT2
0.5	0.25	0.25

And:

Gasoline MPG Factors for each Vehicle Class - Year 2023 (EMFAC2021 output)

LDA	LDT1	LDT2
28.42	23.75	23.10

Therefore:

Weighted Average Worker MPG Factor

25.92

Step 3: **Therefore:**

11 **Worker daily gallons of gasoline (all workers)**

Step 4: 5,805 **# of Days (CalEEMod ouput)**

Therefore:

Result: **62,142** **Total gallons of gasoline (all workers)**

On-road Mobile (Construction) Energy Usage - Site Preparation

Note: Assumes that all vehicles that are generated as part of project use gasoline as a fuel source (for simplicity), since the vast majority of vehicles generated by project would use it.

Step 1: **Total Daily Worker Trips (CalEEMod Output)**

18

Worker Trip Length (miles) (CalEEMod Output)

18.5

Therefore:

Average Worker Daily VMT:

333

Step 2: Given:

Assumed Fleet Mix for Workers (Percentage mix is provided on Appendix A: Calculation Details for CalEEMOD p. 15)

LDA	LDT1	LDT2
0.5	0.25	0.25

And:

Gasoline MPG Factors for each Vehicle Class - Year 2023 (EMFAC2021 output)

LDA	LDT1	LDT2
28.42	23.75	23.10

Therefore:

Weighted Average Worker MPG Factor

25.92

Step 3: **Therefore:**

13 Worker daily gallons of gasoline

Step 4: 5,805 **# of Days (CalEEMod Output)**

Therefore:

Result: **74,571** **Total gallons of gasoline**

On-road Mobile (Construction) Energy Usage - Grading

Note: Assumes that all vehicles that are generated as part of project use gasoline as a fuel source (for simplicity), since the vast majority of vehicles generated by project would use it.

Step 1: **Total Daily Worker Trips (CalEEMod Output)**

20

Worker Trip Length (miles) (CalEEMod Output)

18.5

Therefore:

Average Worker Daily VMT:

370

Step 2: Given:

Assumed Fleet Mix for Workers (Percentage mix is provided on Appendix A: Calculation Details for CalEEMOD p. 15)

LDA	LDT1	LDT2
0.5	0.25	0.25

And:

Gasoline MPG Factors for each Vehicle Class - Year 2023 (EMFAC2021 output)

LDA	LDT1	LDT2
28.42	23.75	23.10

Therefore:

Weighted Average Worker MPG Factor

25.9

Step 3: **Therefore:**

14 Worker daily gallons of gasoline

Step 4: 5,805 **# of Days (CalEEMod Output)**

Therefore:

Result: **82,857** **Total gallons of gasoline**

On-road Mobile (Construction) Energy Usage - Building Construction

Note: Assumes that all vehicles that are generated as part of project use gasoline as a fuel source (for simplicity), since the vast majority of vehicles generated by project would use it.

Step 1:

Total Daily Worker Trips (CalEEMod Output)

9,990 500

Assumes 5% of workers on-site on a given day

Total Daily Vendor Trips (CalEEMod Output)

3,657 183

Worker Trip Length (miles) (CalEEMod Output)

18.5

Vendor Trip Length (miles) (CalEEMod Output)

10.2

Therefore:

Average Worker Daily VMT:

9,241

Average Vendor Daily VMT:

1,865

Step 2:

Given:

Assumed Fleet Mix for Workers (Percentage mix is provided on Appendix A: Calculation Details for CalEEMOD p. 15)

LDA	LDT1	LDT2
0.5	0.25	0.25

Assumed Fleet Mix for Vendors

Fleet Mix for Workers (CalEEMod Output)

MHD	HHD
0%	100%

And:

Gasoline MPG Factors for each Vehicle Class - Year 2023 (EMFAC2021 output)

Gasoline:

LDA	LDT1	LDT2
28.42	23.75	23.10

Diesel:

MHD	HHD
9.65	7.48

Therefore:

Weighted Average Worker (Gasoline) MPG Factor

25.92

Weighted Average Vendor (Diesel) MPG Factor

7.48

Step 3:

Therefore:

356 **Worker daily gallons of gasoline**

Therefore:

249 **Vendor daily gallons of diesel**

Step 4:

5,805 **# of Days (CalEEMod Output)**

Therefore:

2,069,342 **Total gallons of gasoline**

Therefore:

1,447,872 **Total gallons of diesel**

On-road Mobile (Construction) Energy Usage - Paving

Note: Assumes that all vehicles that are generated as part of project use gasoline as a fuel source (for simplicity), since the vast majority of vehicles generated by project would use it.

Step 1: **Total Daily Worker Trips (CalEEMod Output)**

15

Worker Trip Length (miles) (CalEEMod Output)

18.5

Therefore:

Average Worker Daily VMT:

278

Step 2: Given:

Assumed Fleet Mix for Workers (Percentage mix is provided on Appendix A: Calculation Details for CalEEMOD p. 15)

LDA	LDT1	LDT2
0.5	0.25	0.25

And:

MANAGEMENT SUMMARY

DUKE Cultural Resources Management, LLC (DUKE CRM) is under contract to De Novo Planning Group, to conduct a cultural and paleontological resources assessment for the Lawndale General Plan Update and Hawthorne Specific Plan Update (Project). The Project includes the City of Lawndale (City) and a length of Hawthorne Boulevard and limited side streets in total comprising approximately 1,260 acres.

The purpose of this report is to inventory the previously recorded paleontological and cultural resources in the City and Specific Plan area to assess the potential for impacts to these resources during implementation of the Project. This effort was completed in compliance with the California Environmental Quality Act (CEQA).

DUKE CRM requested paleontological records searches for the Project from the Natural History Museum of Los Angeles County and fossil localities within a three 3 mile radius were investigated on the online University of California Museum of Paleontology collections, Paleobiology Database, FAUNMAP, and other available published resources. Fossil localities have been recorded in deposits similar in age to those underlying the Project.

DUKE CRM requested a records search from the South Central Coastal Information Center (SCCIC). Records from the SCCIC indicate that there are at least 12 built environment historic resources mapped within the City of which nine are listed in the Built Environment Resource Directory maintained by the State Office of Historic Preservation. No prehistoric or historic archaeological resources have been previously recorded in the Project boundaries. A city-wide reconnaissance resource survey was conducted. A combination of digital, windshield, and reconnaissance survey methods were employed. No cultural resources were recorded.

INTRODUCTION

DUKE Cultural Resources Management, LLC (DUKE CRM) is under contract to De Novo Planning Group to conduct a cultural and paleontological resources assessment for the Lawndale General Plan Update and Hawthorne Boulevard Specific Plan Update Project (Project). The General Plan area consists of the City of Lawndale (City) comprising approximately 1,260 acres. The Hawthorne Boulevard Specific Plan is entirely within the General Plan and does not add any acreage to the General Plan. The purpose of this report is to inventory recorded paleontological, cultural, and historical resources in order to assess the potential for impacts to them during the implementation of the Project and to assist the City in managing these resources in their long term growth and development. This effort was completed in compliance with the California Environmental Quality Act (CEQA).

Project Location

The City of Lawndale is in the Los Angeles Basin situated approximately 26 miles southwest of downtown Los Angeles, and three miles from the Pacific Ocean (Appendix A, Map 1). Regional access is provided by the Interstate 405 (I-405), State Route 78 (SR 107), and SR 91. The City is located in the former *Sausal Redondo* Rancho in Township 3 south, Range 14 west in what would be sections 20, 21, and 28, as depicted on the USGS *Torrance, Calif.* 7.5 Minute Quadrangles (see Appendix A, Map 2). The central artery of the City is Hawthorne Boulevard. The Hawthorne Boulevard Specific Plan Update is located between Rosecrans Boulevard on the north and Redondo Beach Boulevard on the south. It also includes small segments of Redondo Beach Boulevard and other side streets. Generally, the area of the Project is nestled between the Cities of Hawthorne to the north, Redondo Beach to the west and south, and Torrance to the south and east. (Appendix A, Map 3).

Project Description

The project includes a comprehensive update to the City's General Plan (1992) and the Hawthorne Boulevard Specific Plan (1999) goals and polices to assist the City with their long-term growth and development. A Program Environmental Impact Report will be prepared to analyze the potential impacts associated with implementation of the new General Plan and Specific Plan.

Cultural Resource: Cultural resources are tangible remains of past human activity. These may include buildings, structures, prehistoric and historic archaeological sites, historic or prehistoric objects, rock art, earthworks, canals, and landscapes. These nonrenewable resources may yield unique information about past societies and environments and provide answers for modern day social and conservation problems. A cultural resource is not necessarily significant and is not necessarily eligible for the California Register of Historical Resources (CRHR).

Historical Resource: A historical resource is defined as any cultural resource that is either listed in or determined eligible for the CRHR, included in a local register of historical resources, or identified as significant in a historical resources survey (CEQA, PRC § 21084.1), and can be any of the above-listed types of cultural resources.

Tribal Cultural Resource: Tribal Cultural Resources (TCRs) are defined as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either included or determined to be eligible for inclusion in the CRHR or included in a local register of historical resources, or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant (CEQA, PRC § 21074).

Paleontological Resource: The term paleontological resource refers to any fossilized remains, traces, or imprints of organisms, preserved in or on the earth's crust, that are of paleontological interest and that provide information about the history of life on earth (SVP 2019).

Regulatory Setting

State Regulations

California Environmental Quality Act of 1970, as amended

The California Environmental Quality Act of 1970 (CEQA) is legislation that requires a Lead Agency to evaluate if a proposed project would have a significant adverse effect on the environment, including historical resources (defined above). CEQA Guidelines pertaining to historical resources (Section 15064.5(b)(1)) state that "A substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired".

California Register of Historical Resources

The CRHR is the state-maintained list of cultural resources found to be historically significant. The CRHR is maintained by the California Department of Parks and Recreation. Much like the NRHP, the CRHR has four major criteria that a cultural resource must meet to be eligible for inclusion on the list:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual or possesses high artistic values; or,
4. Has yielded, or may be likely to yield, information important in prehistory or history.

To be considered eligible for the CRHR a historical resource should also possess integrity of location, design, setting, materials, workmanship, feeling and association. As used here, integrity is defined as the ability of a historical resource to convey its significance. To determine which of these factors are most important will depend on the property being evaluated and which particular CRHR criterion under which the resource is considered eligible for listing. The period of significance is the period of time in which significant events or themes occurred. Alterations and impacts that affect the period of significance and overall integrity of the resource and its eligibility for the CRHR.

Furthermore, CEQA requires the lead agency consider whether or not a project will significantly affect unique archaeological resources that may be ineligible for listing in the CRHR and to avoid these unique archaeological resources when possible or mitigate any effects to less than significant levels (PRC 21083.2). As stated by CEQA, a unique archaeological resource means an archaeological artifact, object, or site that clearly demonstrates with a high probability that it meets, without merely adding to the current body of knowledge, any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Impacts to non-unique archaeological resources are generally not considered a significant environmental impact (PRC section 21083.2(a); CEQA Guidelines section 15064.5(c)(4).) However, if a non-unique archaeological resource qualifies as a TCR (PRC 21074(c); 21083.2(h)), further consideration of significant impacts is required.

In addition, excavation must be stopped whenever human remains are uncovered, and the county coroner must be called in to assess the remains (Section 15064.5[e] of the CEQA Guidelines). If the county coroner determines that the remains are those of a Native American, the Native American Heritage Commission (NAHC) must be contacted within 24 hours, and the provisions for treating or disposing of the remains and any associated grave goods as described in Section 15064.5 of the CEQA Guidelines must be followed.

California Historical Landmarks

California Historical Landmarks (CHLs) are buildings, structures, sites, or places that have been determined to have statewide historical significance. These resources are evaluated according to four criteria:

1. The first, last, only, or most significant of its type in the state or within a large geographic region (Northern, Central, or Southern California).
2. Associated with an individual or group having a profound influence on the history of California.
3. A prototype of, or an outstanding example of, a period, style, architectural movement or construction; or is one of the more notable works, or the best surviving work in a region, of a pioneer architect, designer, or master builder.

CHLs must also be approved for designation by the County Board of Supervisors or the City/Town Council in which the resource is located; must be recommended by the State Historical Resources Commission; and be officially designated by the Director of California State Parks. The effect of designation on a property or resource is:

- Limited protection against alteration or demolition. Environmental review may be required under CEQA if a property is threatened by a project. The relevant local planning agency should be contacted for more information.
- If the municipality or local government participates in the Mills Act Program, then a historic property owner may enter into a contract with the local assessor for property tax reduction.
- Local building inspector must grant code alternative provided under the California Historical Building Code (CHBC). Registration will be recorded on the property deed.
- Automatic listing in CRHR.
- Bronze plaque at site (underwritten by local sponsor) ordered through the California Office of Historic Preservation (OHP); highway directional sign available through local Department of Transportation (Caltrans) district office.

A designated CHL needs to have the written consent of the property owner, and the local government is given 60 days for comment on any application for designation prior to the State Historical Resources Commission considers the nomination.

California Points of Historic Interest

California Points of Historical Interest (CPHI) are sites, buildings, features, or events that are of local (City or County) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. CPHIs designated after December 1997 and recommended by the State Historical Resources Commission are also listed in the CRHR.
No resource may be designated as both a CHL and a CPHI. If a CPHI is subsequently granted status as a CHL, the CPHI designation will be retired. To be eligible for designation as a CPHI, a resource must meet at least one of the following criteria:

1. The first, last, only, or most significant of its type within the local geographic region (City or County).
2. Associated with an individual or group having a profound influence on the history of the local area.
3. A prototype of, or an outstanding example of, a period, style, architectural movement or construction or is one of the more notable works or the best surviving work in the local region of a pioneer architect, designer or master builder.

The effect of designation on a property or resource is:

- Limited protection against alteration or demolition. Environmental review may be required under CEQA if a property is threatened by a project. The relevant local planning agency should be contacted for more information.

- If the municipality or local government participates in the Mills Act Program, then a historic property owner may enter into a contract with the local assessor for property tax reduction.
- Local building inspector must grant code alternative provided under State Historic Building Code. Registration will be recorded on the property deed.

A designated CPHI needs to have the written consent of the property owner, and the local government is given 60 days for comment on any application for designation prior to the State Historical Resources Commission considers the nomination.

California Historical Building Code

The California Historical Building Code (CHBC) is defined by Sections 18950 to 18961 of Division 13, Part 2.7 of the Health and Safety Code. The CHBC provides guidelines and regulations for the preservation and contemporary use of historic structures and buildings that are considered "qualified historical buildings or structures." The CHBC specifically provides alternative building regulations and guidelines for permitting repairs, alterations and additions necessary for preservation, rehabilitation, relocation, related construction, change of use, or continued use.

Section 8-201 of the CHBC (2016) defines a "qualified historical building or structure" as "any structure or property, collection of structures, and their associated sites deemed of importance to the history, architecture, or culture of an area by an appropriate local or state governmental jurisdiction. This includes structures on existing or future national, state or local historical registers or official inventories, such as the National Register of Historic Places (NRHP), CHL, CPHI, and city or county registers or inventories of historical or architecturally significant sites, places, historic districts, or landmarks.

Mills Act

The City of Lawndale authorized the creation of a Mills Act Program in 2010 for the preservation of historically significant properties. The Mills Act of 1972 is an economic incentive program by the State of California to encourage private property owners to restore and preserve qualified historic buildings. Local governments (Counties and Municipalities) can choose to implement and administer contracts with property owners to provide tax abatement, establish their own criteria for qualified historic buildings, and determine how many contracts they will allow in their jurisdiction. California State Codes relating to the Mills Act include the California Government Code, Article 12, Sections 50280 – 50290 and the California Revenue and Taxation Code, Article 1.9, Sections 439 – 439.4.

The Mills Act also known as the Historical Property Contract, is a formal agreement executed between the City of Lawndale and the property owner for a revolving, automatic ten-year term. Owners of qualified historic properties may apply for the program if they pledge to rehabilitate and maintain the historical and architectural character of their properties for the minimum ten-year life of the contract. A qualified historic property in the City of Lawndale is a property listed on the NRHP, the CRHR, or CHL.

Contracts are renewed each year so that the term of the contract can extend for ten years automatically. Under this contract, property owners agree to restore, maintain, and protect the property in accordance with specific historic preservation standards and other conditions identified in the contract. Periodic inspections by City and County of Los Angeles officials ensure proper upkeep of the property to the standards included in the contract. Either the property owner or the City may elect not to renew for any reason. The effect of non-renewal is to terminate the contract at the end of the current ten-year term. The owner may also petition the City to initiate an immediate cancellation. If cancelled, a penalty is imposed. The City may also cancel the contract, but only in the case of breach of the contract conditions. The contract is transferred to new owners if the property is sold and is binding to all successive owners.

Participation in the Mills Act is a benefit to qualified property owners, especially for recent buyers of historic properties but also for current owners of historic buildings who have made major improvements to their properties. An income approach to value rather than by the standard market approach determines the appraised value. The income approach, divided by a capitalization rate, determines the assessed value of the

property. In general, the income potential for an owner-occupied residential property is calculated by examining comparable rents for similar properties in the area, while the income amount on a commercial property is based on actual rent received. Because rental values vary from area to area, actual property savings may vary. In addition, as counties are required to assess all property annually, Mills Act properties may realize slight increases in property taxes each year.

Senate Bill 18

Senate Bill 18 (SB 18) states that prior to the amendment or adoption of any general plan or specific plan or the designation of open space land proposed on or after March 1, 2005, the local or county government shall conduct consultation with California Native American tribes for the purpose of preserving or mitigating impacts to Cultural Places. A Cultural Place is defined as:

- Native American sanctified cemetery, place of worship, religious or ceremonial site, or sacred shrine (PRC 5097.9), or;
- Native American historic, cultural, or sacred site, that is listed or may be eligible for listing in the CRHR pursuant to Section 5024.1, including any historic or prehistoric ruins, any burial ground, or any archaeological or historic site (PRC Section 5067.995).

The intent of SB 18 is to establish "meaningful consultation" between tribal governments and local governments (government-to-government) at the earliest possible point in the planning process so that Cultural Places can be identified and preserved and to determine the necessary levels of confidentiality regarding Cultural Place locations and uses. SB 18 is not part of CEQA.

Assembly Bill 52

Assembly Bill 52 (AB 52) required an update to Appendix G (Initial Study Checklist) of the CEQA Guidelines to include questions related to impacts to TCRs. The law went into effect on July 1, 2015 with the changes to Appendix G approved on September 27, 2016. The Lead Agency would now also be charged with engaging with tribal governments at the earliest possible point in the planning process so that TCRs can be identified and preserved and to determine the necessary levels of confidentiality regarding TCR locations and uses.

Municipal Regulations

City of Lawndale General Plan 1992

The 1992 Lawndale General Plan addresses cultural resources in Chapter III, Resource Management, Section 2, Conservation Element. The addition of a conservation element is mandated under state government code section 65302(d). The overall purpose of Chapter 2 is to address increasing public concern for environmental quality, such as clean water and air, and the prevention and control of pollution, in light of growth and urbanization. The conservation element intends to:

- Promote the protection, maintenance and use of the state's natural resources;
- Prevent the wasteful exploitation, destruction, and neglect of the state's natural resources; and
- Recognize the natural resources must be maintained for the ecological value as well as for their direct benefits to the public.

The General Plan (1992:2-2) found that:

> "The City of Lawndale is a highly urbanized area that functions primarily as bedroom community within the surrounding Los Angeles South Bay region. Because of the City's high degree of urbanization, there are few natural resources remaining."

The General Plan (1992:2-5) identified several private residences that, at the time, were believed to be of "local historical interest". Mentioned among these was the First Congregational Church at 4521 W. 147th Street built in 1906 and the first church in the City. No other historic in age (50+ years or older) civic or public structures were known to exist within the City. Importantly, it was asserted that in terms of potential significant residential development that:

> "Many of the significant residential buildings were moved into Lawndale from other areas within the Los Angeles region. Many of these buildings are unknown and unrecognizable to the community because they are not located in one general area of the City, and many are concealed behind mature landscaping, or by remodeling that has 'modernized' or significantly customized their appearance." (City of Lawndale 1992:2-5)

The 1992 General Plan established Goal 4 for Cultural Resources:

> "Promote the preservation and rehabilitation of cultural resources that are significant to the Lawndale community because of their age, architecture, history, or symbolism."

The City adopted six related policies for implementation of the above Goal:

- Policy 4a: Promote the preservation and/or conservation of historic structures, places, and or architectural features.
- Policy 4b: Investigate the appropriateness and feasibility of implementation a Historic Preservation Ordinance for the preservation of historic structures.
- Policy 4c: Investigate the feasibility of implementing a local historic registry program.
- Policy 4d: Encourage the preservation of historic structures on their existing sites, or relocation if necessary and feasible.
- Policy 4e: Discourage the demolition or movement of historic structures without an evaluation of the condition of the structure, the cost of rehabilitation, and feasibility of preservation or conservation alternatives.
- Policy 4f: Encourage the adaptive re-use of historic structures.

The General Plan (1992) also details the implementation programs for cultural resources:

- 4.1 Historic Preservation: The City shall develop and implement a Historic Preservation Ordinance for the preservation of historic residences and structures.
- 4.2 Historic Registry: Establish the feasibility of implementing a local historic registry program that provides incentives for retrofitting and maintenance, as well as public recognition, of the local resource.
- 4.3 Demolition Review: The City shall prohibit the demolition or movement of historic structures without an evaluation of the condition of the structure, the costs of rehabilitation, and the feasibility of preservation or conservation alternatives.

SETTING

The setting of the Project, composed of environmental, cultural, and historic backgrounds contextualize the findings of the current study. The Project covers 1,260 acres that overlap a limited number of geological, geomorphological, topographic components. Various other factors of the natural setting include water accessibility, climate, and broad patterns of soil development. The prehistoric, ethnographic and historical settings form the backdrop to human occupation of the Project. Each of the contextual elements to this study are considered below.

Geomorphological Setting

California is divided into 11 geomorphic provinces, each naturally defined by unique geologic and geomorphic characteristics. The Project is located on the western end of the Peninsular Ranges geomorphic province. The Peninsular Ranges province is distinguished by northwest trending mountain ranges and valleys following faults branching from the San Andreas Fault. The Peninsular Ranges are bound to the east by the Colorado Desert and extend north to the San Bernardino – Riverside County line (Norris and Webb 1976), west into the submarine continental shelf, and south to the California state line.

Locally, the City of Lawndale is located within the western end of the inland portion of the Los Angeles Basin, an actively subsiding basin bound by the Santa Monica and San Gabriel Mountains to the north, the Santa Ana Mountains to the east, and the Palos Verdes Hills to the south (Yerkes et al. 1965). The City is in the southwestern block of the Los Angeles Basin, which was the site of initial basin deformation, and is currently dominated by folded marine strata (Hauksson 1990). The geologic units underlying the Project record coastal and inland deposition during the Pleistocene Epoch (2.5 million years ago to 11,700 years ago). Information regarding the specific geologic units and their paleontological sensitivity are discussed in detail in the results section of this report.

Environmental

The Project is broadly located within the Southern California/Northern Baja Coast region and it is composed of coastal and alluvial plains, marine terraces, and low hills within an area extending over 200 miles south into Baja California. The area has been largely cleared through overgrazing, agriculture and urban development. Before these modern and historic processes occurred, coastal sage scrub and chaparral vegetation communities with many endemic species once were widespread. Plant species in coastal sage scrub communities includes coastal cholla, white sage, golden yarrow, California buckwheat, black sage, and chamise. The chaparral communities on the low hills include mountain-mahogany, ceanothus, manzanita, and scrub oak though stands of coast and canyon live oaks, poison oak, and black walnut can also be present.

Specifically, the Project is located within the Los Angeles Plain ecoregion. Ecoregions denote general similarity in ecosystems and environmental resources. Moist and cool marine air greatly moderates temperatures and rainfall in the Los Angeles Plain with annual precipitation ranging from 10 to 17 inches. The ecoregion is nearly level with flat floodplains and terraces and very gently to gently sloping alluvial fans. The soil temperature regime is thermic and soil moisture regime is xeric. Hydrology has been greatly modified and channelized. The Los Angeles River drains the San Fernando Valley and San Gabriel Mountains (Griffith et al. 2016).

Cultural

Prehistory

Of the many chronological sequences proposed for southern California, two primary regional syntheses are commonly used in the archaeological literature. The first, advanced by Wallace (1955), defines four cultural horizons for the southern California coastal province, each with characteristic local variations:

I. Early Man (~9000–8500 B.P.)
II. Milling Stone (8500–4000 B.P.)
III. Intermediate (4000–1500 B.P.)
IV. Late Prehistoric (1500~200 B.P.)

Warren (1968:1) chose instead to define "traditions" (La Jolla, Encinitas, Campbell, and Chumash, Yuman, or Shoshonean) that are "a generic unit comprising of historically related phases. Cultural traditions are identified and distinguished from one another on the basis of differences in cultural patterns reflected in differences in artifact types and assemblages and difference in cultural features". While Warren (1968) keeps environment and cultural traditions distinct, his efforts marked that the relationship between them, through time was important for archaeological study. These two chronologies are still commonly used in tandem to discuss the chronology of southern California.

King (1990), in his work in the Santa Barbara Channel region, introduced yet another chronological scheme that was based on the seriation of shell beads and grave goods backed by radiocarbon dates. King's chronology is divided into three periods, Early, Middle, and Late with date ranges for each. King's chronology is widely used in the Santa Barbara region and has been heavily employed in the discussion of the nature of the emergence of social complexity on the southern California coast (Arnold 1992; Arnold and Munns 1994; Gamble 2005; Kennett and Kennett 2000; Raab and Larson 1997). King (1990) argued that correlations can be made between the physical characteristics of beads and the social contexts in which they were used. King

analyzed beads and other artifacts, in addition to mortuary practices to demonstrate that changes in material culture reflect changes in society.

The works of Wallace (1955), Warren (1968) and King (1990) reflect a variety of methods to develop temporal sequences for describing archaeological remains. Refinements in methods, specifically the application of radiocarbon dating has significantly improved chronology building. In addition, applying successful models used in other regions, such as King's (1990) application of the Bennyhoff and Hughes (1987) method of shell bead seriation to the southern California region has aided in the refinement of chronology building for the region. Complications such as the timing of the adaptation of "marker" artifact types, arise when broad regional chronologies are applied to small local areas that do not fit neatly into large macro schemes. Likewise, the subtle, yet significant nuances of local , micro-chronologies often complicate attempts to create a simple chronology that can be applied to a large region, such as southern California.

Ethnography

The project is located within the boundaries of Gabrielino or Tongva Indians. The Gabrielino Indians are named because of their association with the *Mission San Gabriel Arcángel*. The Gabrielino are one of the least known Native American groups in California. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands.

The Gabrielino spoke a dialect of the Cupan group of the Takic language family. This language was part of the larger Uto-Aztecan language stock which migrated west from the Great Basin. The Gabrielino shared this language with their neighboring groups to the south and east (Bean and Smith 1978, Shipley 1978).

Groups of Gabrielino lived in villages that were autonomous from other villages. Each village had access to hunting, collecting, and fishing areas (Bean and Smith 1978). Villages were typically located in protected coves or canyons near water. Acorns were the most important food for the Gabrielino, although the types and quantity of different foods varied by season and locale. Other important sources of food were grass and many other seed types, deer, rabbit, jackrabbit, woodrat, mice, ground squirrels, quail, doves, ducks and other fowl, fish, shellfish, and marine mammals.

Typically, Gabrielino women gathered and men hunted, although work tasks often overlapped. Each village had a chief who controlled religious, economic, and warfare authorities. The chief had an assistant and an advisory council who assisted in important decisions and rituals. Each of these positions was hereditary being passed down from generation to generation (Bean and Smith 1978). According to mapping of Gabrielino villages undertaken by McCawley (1996), no known villages would be located with the City. The two nearest Gabrielino villages, which may compose large areas rather than just a single location, are *Swaanga* approximately 10 miles to the southeast and *Waachnga* approximately five miles to the northwest (McCawley 1996:Map 8). The Kirkman-Harriman Pictorial and Historical Map of Los Angeles (1938) also does not identify any Gabrielino villages within the City.

History

In California, the historic era is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present). The first Europeans in California were the Spanish. In 1542 Juan Rodriguez Cabrillo entered what was to become known as San Diego Harbor (Rolle 2003) where he met a group of Kumeyaay Indians while on shore. Over the next few hundred years there were several maritime excursions along the California coast, but it would be more than 225 years until the Spanish established a permanent settlement. To protect its interests, Spain sent four excursions into California, two by land and two by sea. The entire expedition was led by Captain Gaspar de Portolá, military commander of California (Rolle 2003). Portolá came through the Los Angeles basin area in 1769 while travelling from San Diego to Monterey. To fulfill some of the religious goals of the expedition Father Junípero Serra was sent to California to establish a system of Catholic Missions. It was not until two years later on September 8, 1771 that *Mission San Gabriel Arcángel* was established by Fathers Pedro Cambon and Angel Somera (Hoover et al. 1990).

Ten years later on September 4, 1781, Los Angeles was founded. Early settlers farmed and they built a system of *zanjas*, or irrigation ditches, to transport water from the Los Angeles River to plots of land. With Mexican Independence in 1821, Los Angeles and California experienced great economic independence and growth (Rolle 2003). By 1822, the Mexican government began to grant permits to its citizens along the southern coast for animal pasture. Governor of Alta California, Juan Alvarado, gave the *Rancho Sausal Redondo* land grant to Antonio Ignacio Ávila, son of Spanish soldier Cornelio Ávila, that encompassed the present-day cities of Lawndale, Inglewood, Hawthorne, Redondo Beach, Manhattan Beach, and Hermosa Beach. The total acreage of the land grant was roughly 40,000 acres; but when the United States Land Commission confirmed title, *Rancho Sausal Redondo* was reduced to 22,000 acres. The City of Lawndale is located in what was the southwestern corner of *Rancho Sausal Redondo*. Between 1820 and 1841 the population of Los Angeles tripled to 1,680. California was ceded to the U.S. in 1848 with the signing of the Treaty of Guadalupe Hidalgo (City of Lawndale 2020).

The Treaty of Guadalupe Hidalgo assured owners that prior, valid land grants would be honored if a claim was filed as required by the Land Act of 1851. Soon after, Antonio Ignacio Ávila filed a claim for *Rancho Sausal Redondo* and was awarded a patent in 1855 by the Public Land Commission. He later died in 1858 and his heirs sold the *Rancho* to pay for the probate costs. In 1868, ten years after his death, a Scottish nobleman named Sir Robert Burnett purchased the land grant from Ávila's heirs. Having also acquired the *Aquaje de la Centinela* parcel, Burnett combined both areas and named it Centinela Ranch. After doing so, Burnett gradually slowed cattle ranching and began to incorporate his prior specialization of sheep raising. In 1873, Burnett leased Centinela Ranch to Daniel and Catherine Freeman and retuned to his home in Scotland. The Freeman's continued to raise sheep but after a tumultuous two-year drought from 1875-1876, they began to plant barley along with several thousand citrus, almond, olive, and eucalyptus trees. The Freeman's made dry-land farming profitable and exported 3,000,000 bushels of barley and other crops to Liverpool and London well in to the 1880's (City of Lawndale 2020).

The history of what later would be Lawndale begins with the opening of the Redondo seaport in 1890 and the railroad service created between the port and Los Angeles. By 1902, the Los Angeles and Redondo railways passed along in what is now Hawthorne Boulevard, extending from Inglewood to Railroad Avenue. In March of 1905, real estate developer Charles B. Hopper subdivided and opened the southern portion of Centinela Ranch and named it Lawndale. It was marketed as an ideal poultry farming location for early settlers, but unfortunately a lack of buyers forced Hopper to change to smaller lots a year later. When the US Census was taken in 1910, the unincorporated town of Lawndale had already reached 142 residents. In the 1920's the discovery of oil transformed the Lawndale community into a town that built oil derricks, though the Great Depression muted this economic development. After WWII, Lawndale boomed primarily due to subsidized veteran housing and increased accessibility of the Harbor Freeway. Also, the Businessman's Group Association created zoning policies to promote and advertise the residential, commercial, and industrial advantages of Lawndale. Amid rapid commercial growth and urbanization of the Centinela Valley in 1958, zoning restrictions officially abolished agriculture in the community. On December 28, 1959, Lawndale was incorporated as a City in Los Angeles County, but long had a unique history and character (City of Lawndale 2020).

METHODS

The focus and purpose of this report are to support the CEQA process as part of the Project and, therefore are broad and programmatic in scope. Baseline paleontological, archaeological and historical data was compiled from record searches at various research facilities and online. Multiple survey methods, including desktop and field reconnaissance, were employed. Survey was limited due to lack of access to resources on private property and the shutdown of the Hawthorne Historical Society due to the Novel Coronavirus Pandemic. Research was also limited due to the same pandemic. The South Central Coastal Information at California State University, Fullerton was only able to respond with partial information as not all records are digital and therefore accessible.

Paleontological Resources Records Search

The geology of the Lawndale area has been mapped by Saucedo and others (2016) at a scale of 1:100,000. A paleontological records search were requested from the Natural History Museum of Los Angeles County (LACM). Fossil localities within 3 miles of the Project were investigated by DUKE CRM using the online University of California Museum of Paleontology collections, Paleobiology Database, FAUNMAP, and other published resources (Miller 1971; Jefferson 1991a, b). Additional background research was conducted in the Journal of Vertebrate Paleontology.

Cultural Resources Records Search

On April 9, 2020, Nicholas F. Hearth of DUKE C R M requested a records search at the South Central Coastal Information Center (SCCIC). The SCCIC provided the records search results on June 9, 2020. The SCCIC is part of the California Historical Resources Information System (CHRIS) and is located at California State University, Fullerton. The SCCIC records search included a review of all recorded historic and prehistoric archaeological sites within the City including the California OHP's Historic Resources Inventory (HRI) directory, as well as a review of known cultural resource survey and excavation reports. The California State Historic Property Data File (HPDF) was examined, which includes the NRHP, CRHR, CHL, and CPHI. The Built Environment Resource Directory (BERD) was also consulted.

Research

Throughout the course of the Project, research was conducted in an effort to assess cultural sensitivity and focus field efforts. This included both published and unpublished materials. The following online resources were reviewed:

- Historic aerial photos and maps
  - http://mil.library.ucsb.edu/ap_indexes/FrameFinder/,
  - http://www.davidrumsey.com/rumsey_collection.kmz,
  - www.historicaerials.com,
  - https://oac.cdlib.org/
  - https://www.loc.gov/collections/sanborn-maps
  - and https://livingatlas.arcgis.com/topoexplorer/index.html
- NRHP (http://www.gelib.com/historic-places-inventory.htm)
- Soil mapping data (https://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/survey/)

Field Surveys

On April 29, 2020, a combination of reconnaissance and pedestrian archaeological and historic resource field survey was performed within the City. Survey efforts attempted to relocate potential resources that were generally indicated upon the 1992 General Plan Update for the City. Access to these potential resources was through public roads. The resources' status was determined by the presence/absence of appearance of a potential historic built environment resource, and/or basic level of development and.

Personnel

DUKE CRM Archaeologist Nicholas F. Hearth., M.A. RPA conducted the reconnaissance survey of archaeological and built environment resources, and prepared this report. Mr. Edgar Alvarez, B.A. was the co-author of this report. Paleontologist Benjamin Scherzer, M.S. conducted all paleontological research and prepared the geology, natural setting, and all paleontology sections of this report. Curt Duke, M.A., President and Principal Archaeologist for DUKE CRM oversaw all efforts and contributed to this report.

Mr. Duke meets the professional qualifications of the Secretary of the Interior for prehistoric and historical archaeology; he is also a Registered Professional Archaeologist (RPA) who has worked in all phases of archaeology (archival research, field survey, testing and data recovery excavation, laboratory analysis, construction monitoring) since 1994. Mr. Duke holds a Master of Arts degree in Anthropology with an emphasis in archaeology from California State University, Fullerton and a Bachelor of Arts degree in

Anthropology from the University of California, Santa Cruz. Mr. Duke has worked throughout southern and Northern California and parts of Arizona and Nevada.

Mr. Hearth has worked as an archaeologist in cultural resource management since 2002. He meets the Secretary of Interior's Professional Qualifications Standards for Prehistoric Archaeology. He received his B.A. in Anthropology in 2003 from the University of Massachusetts, Amherst, and his M.A. in Anthropology in 2006 from the University of California, Riverside. Mr. Hearth has worked in California, New Mexico and multiple states both in the Midwest and New England. Mr. Hearth is well-versed applying Section 106 of the NHPA, NEPA, and CEQA on a variety of projects across many market sectors. Mr. Hearth has completed projects in all phases of archaeology: Phase I Pedestrian and Shovel Test Surveys, Extended Phase I Survey, Buried Site Testing, Archaeological Sensitivity Assessments, Phase II Testing and Evaluations, Phase III Data Recovery, Phase IV Monitoring, Controlled Demolition, and Native American consultation. His project responsibilities primarily include overseeing archaeological, historical, and paleontological studies, directing all phases of archaeological and historical field and laboratory work, conducting ensuring that the quality of analysis and reporting meets or exceeds appropriate local, state, and federal standards.

Mr. Scherzer holds a Master of Science in Earth Sciences from Montana State University, Bozeman. He has more than 10 years of experience in paleontological research, field surveys, fossil salvage, laboratory identification, report preparation, and curatorial experience. Mr. Scherzer is a member of the Society for Vertebrate Paleontology, Geological Society of America, Society for Sedimentary Geology, and the Paleontological Society.

RESULTS

Paleontological Resources Records Search

The City of Lawndale is underlain by two geologic units. Individual units, and their paleontological sensitivity, are described below.

Old alluvium, undivided (Qoa)

Old alluvium underlies the majority of the Project. It is composed of moderately well-consolidated, poorly-sorted, permeable, slightly dissected gravel, sand, silt, and clay. These sediments were deposited on canyon floors by fluvial activity in the late to middle Pleistocene Epoch (Saucedo et al. 2016).

Old eolian deposits (Qoe)

Old eolian deposits underlie the northwest and southwest corners of the Project. It is composed of poorly consolidated, dense to very dense, well-sorted, fine- to coarse-grained sand and silty sand. These sediments were deposited as eolian coastal dunes in the late to middle Pleistocene (Saucedo et al. 2016) but the dune formation processes are now inactive (Poland et al. 1959).

The climate of Southern California during the Pleistocene was cooler and moister than the modern Mediterranean climate (Lamb 1989). In contrast to the harsh, cold conditions in high latitudes near the ice sheets, Southern California experienced a relatively milder climate during this time (Calder 1983). During this time, the area was inhabited by the familiar Pleistocene or "Ice Age" fauna, such as mammoth, mastodons, horses, camelids, and ground sloths (Stock 2001).

Deposits from the Pleistocene Epoch have not produced any fossil localities within the Project, but have produced two fossil localities within 3 miles:

- The "Mobile Oil Refinery" locality produced cetacean (whale) and *Equus* (horse) material from two miles southeast of the Project (Jefferson 1991b) and
- Locality LACM 2035 produced *Mammuthus columbi* (Columbian mammoth) on 139th St, one mile north of the Project (Miller 1971).

Due to fossil material being previously discovered in deposits from the Pleistocene Epoch in vicinity of the Project, both old alluvium and old eolian deposits have a high paleontological sensitivity at the surface and at depth.

Table 1. Geologic Units and Their Paleontological Potential

Age	Geologic Unit	Fossils Present[1]	Paleontological Sensitivity

	Old eolian deposits (*Qoe*)		

Cultural Resources Records Search

Cultural Resources

Results of the records search from the SCCIC and BERD indicate that twelve historic built environment resources are recorded within the City. No prehistoric cultural resources have been documented within the City. These resources are listed in Table 2.

Table 2. Cultural Resources within the City of Lawndale

Primary # or BERD #	Resource Age	Characteristics	Year Recorded	Status
P-19-178543	1972	Single Family Property (HP2) at 16713 Firmona Ave	Unknown	7R
P-19-188892	1959	Educational Building Complex	2010	U

574962	1923	Government Building (HP14), City Hall at 14717 Burin Ave	1997	U
681590	1955	Commercial Building, 3 stories, at 16715 Hawthorne Boulevard	2018	U

NHRP Status Code
3CS: Appears eligible for CR as an individual property through survey evaluation
6Z: Found ineligible for NR, CR or Local designation through survey evaluation
7R: Identified in Reconnaissance Level Survey: Not evaluated.
U: Unknown information

All historic built environment resources are located within the City surrounded by paved asphalt parking lots, commercial buildings, and single-family residential homes. None of the resources were accompanied by any historic archaeological deposits. Nor were any prehistoric cultural resources identified. The records of three built environment resources were provided by the SCCIC, below is a brief description of three of the historic built environment resources within the City.

P-19-188892

Resource P-19-188892 is the Lawndale High School Campus complex. First constructed in 1959, it was built to accommodate the postwar growing population needs of the newly founded City of Lawndale. The core campus consists of an administration building, a cafeteria, classroom buildings, support buildings, athletic fields, and a parking lot (McKenna et al. 2010). The original campus was a series of one- and two-story brick and cinder block buildings with low pitched roofs constructed on concrete pads. Windows consisted of steel framed fixed and casements. The campus complex was recommended not historically significant (McKenna et al. 2010).

P-19-188893

Resource P-19-188893 is the Leuzinger High School complex. It is the earliest high school built in the City in 1930, shortly after the Great Depression. It consisted of a main administration building, a cafeteria, an Olympian gym and a classroom building. It was named in honor of Adolph Leuzinger, who was a member of the Inglewood Union High School District Board of Trustees for 25 consecutive years. The campus was later expanded in 1956 with the addition of a new cafeteria, locker rooms north of the Olympic gymnasium, and classroom buildings 2, 3, 4, and 5 (McKenna el al. 2011). By 1976, a locker room, the Thompson gym, and

classroom buildings 6, 7, and 8 (McKenna et al. 2011) had been added. Leuzinger High School was recommended to be considered a significant cultural resource under CEQA, therefore qualifies as a historical resource eligible for listing in the CRHR. Additionally, it was recommended that any additional alterations or demolition to the Olympic Gymnasium and/or Memorial Garden be avoided while any alterations to the interior of the Main Administration Building be kept to a minimum (McKenna et al. 2011).

P-19-190021

Located in a commercial zone in the City of Lawndale, 16720 Hawthorne Boulevard is a two-story retail building and a 10-vehicle parking lot first constructed in 1947. Designated as Tract 8293, Lot Number 106 and 107, this 6,000 square foot retail building measures roughly 50 feet wide by 105 feet long. Much of the construction is reinforced masonry on a concrete foundation and clad with stucco (Johnson 2012). The building has a flat roof covered with asphalt and gravel. The roof has a stepped parapet and fenestration that consists of an enframed window wall on the front with metal frames that span the length of the building. There are no records of the original site plan or building permit, however, by 1970 a building permit indicates that the building was used for office space by the Mattel Toymakers Federal Credit Union (Johnson 2012). By 2003, building permits show the building was remodeled with the addition of a bathroom, a storefront, and stairs, as well as the demolition of a partition wall. The property does not appear to qualify for the NRHP (Johnson 2012).

Cultural Resource Studies

Based on the research from the SCCIC, five cultural resources studies have been completed in the Project area. Cultural resource studies date from 1991 to the present. Most of these projects relate to upgrading development of a highway, water reclamation and the Leuzinger High School. The bibliography from the SCCIC for cultural resource studies within the City is provided in Appendix C.

Additional Research

Supplemental additional research was conducted referencing online resources of maps, land grants, and aerial photographs. The earliest map of the Lawndale area found during research is a circa 1840s *Diseño del Rancho Sausal Redondo* that depicts a not-to-scale corral, mountain ranges to the west, and a broad flat area for the majority of the diseño (Calisphere 2011). The location of the Project is unclear due to the mapping inaccuracies common with diseño sketches.

General Land Office (GLO) plat maps of the area from original and supplemental survey dating from 1869 was reviewed for historic land ownership information and other pertinent historical locations within the Project (GLO 1869). Most of the Project is within Township 3 south, Range 14 west, and if plotted what would be Sections 21 and 28 though a small portion is in Section 20. The entire Project was plotted as within the *Rancho Sausal Redondo* and no features within the Rancho were mapped. It was noted that "George Harrison's survey of the Sausal Redondo was decided to be the correct survey by the Secretary of the Interior, October 31, 1871". Data was on file for the 1858 Mexican Land Grant Survey and the 1875 State of California Survey, but no plat images were available. No other GLO plat maps were available.

A minimum level of development consisting of widely spaced roads, is indicated in the Project on the 1880 map of the Los Angeles Basin (Rumsey Map 2020). Historic USGS maps of the City date from 1896 through the modern era as late as 1981 (USGS 2020). The following maps were reviewed:

- *Redondo, Calif.* 7.5 minute (1:24,000 scale), 1896;
- *Torrance, Calif.* 7.5 minute (1:24,000 scale), 1924, 1934;
- *Inglewood, Calif.* 7.5 minute (1:24,000 scale), 1950, 1952, 1964, 1972, and 1981;
- *Southern California Map Sheet No. 1.* (1:250,000 scale), 1901, 1904; and
- *Long Beach, California* (1:250,000 scale), 1949, 1957, 1960.

These maps track the growth of the Lawndale area over late 19th through the 20th century. The late 19th and early 20th century maps indicate the area that would later become the City of Lawndale is rural and largely devoid of roads even, except around its borders. The 1924 *Torrance, Calif.* Map covers most of the Project and

indicates that the area is known as Lawndale. Approximately 100 structures including what likely are residences, a school and a rail line are indicated though in essence the area indicate as Lawndale retains a largely rural character. The 1934 version of the same map indicates a greater number of structures, especially in the southern end of the Project, but the rural character is largely retained due to the low density of the development. The single school on this later map shows that it has been moved to the center of town. A single 1938 aerial image (UCSB) indicated an even greater level of development than the 1934 USGS.

By the mid-20th century, USGS maps and many aerial photographs are available to consult (UCSB 2020). Urban levels of development of Lawndale dates to the mid-20th century as show on maps and aerial photography. A major transportation-related development is Highway 405, which is apparent on maps by 1957. The nearly complete urbanization is evident by the 1964 USGS maps.

Cultural Resources Field Survey

On April 29, 2020, a reconnaissance-level overview of the City was conducted by Nicholas F. Hearth of DUKE CRM. Reconnaissance survey consisted of surveying the City to get a general sense of the potential for the historical nature and visits to locations of built environment resources indicated in the previous General Plan (City of Lawndale 1992:Figure B). Revisits to site and resource locations were cursorial in effort. The goal was to determine if the resource was present and if the surrounding area of the resource has been disturbed. Photographs were taken, and field notes were taken to document the findings. The reconnaissance-level survey of the City revealed that land use within Lawndale is predominantly residential though commercial development is also present especially along Hawthorne Boulevard, see Figures 2-4.

A total of 12 built environment resources have been previously recorded within the City and are on-file with the SCCIC and BERD. In the City's (1992:Figure B) General Plan 32 locations of historic structures were indicated. Of these 32 locations, 17 were visited during the field survey, see Table 3, and Figures 5 - 10. The remaining 15 historic structures noted in the 1992 General Plan appear to be removed or are so altered as to be unrecognizable.

RECOMMENDATIONS

The unique environment, events, people, and places of Lawndale have shaped its history, archaeology and paleontology. The traces of these events, people, and places are cultural and paleontological resources that are the physical remains of past activities. DUKE CRM recommends compliance with CEQA that requires a Lead Agency to evaluate if a proposed project would have a significant adverse effect on the environment, including historical resources. CEQA Guidelines pertaining to historical resources (Section 15064.5(b)(1)) state that "A substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired". The following recommendations build on the previous goals and policies regarding the treatment of paleontological, archaeological, and historic resources.

Historic Resources

Historic built environment resources are the tangible evidence of past human activity, but are limited to buildings, structures, objects, linear features such as railroads or canals, and other types of earthworks. Twelve built environment resources are recorded at the SCCIC and in the BERD. The City's 1992 General Plan lists 32 historic structures. Through the reconnaissance survey it was determined 17 of the 32 structures are extant, the remaining 15 have either been demolished or are so disturbed so as to be unrecognizable. Four of these 17 were also listed at the SCCIC/BERD bringing the total historic structures recorded in the City to 25. None are listed on the NRHP or CRHR. The following recommendations for built environment resources should be applied to all projects conducted within the jurisdiction of the City of Lawndale.

1. If there is a building/structure that is 50 years or older, it should be evaluated for significance and eligibility for the CRHR.
2. If the building/structure is eligible for the CRHR preservation is the preferred treatment.
3. If preservation is not accomplished, minimization of impacts is recommended.
4. Mitigation of impacts is recommended for any impacts to historical resources,

Archaeological Resources

Archaeological resources are tangible remains of past human activity. These may include prehistoric and historic sites, artifacts, rock art, ruins, features, and landscapes. These nonrenewable resources may yield unique information about past societies and environments, and provide answers for modern day social and conservation problems. Within the City, no archaeological resources are previously recorded. This situation seems highly likely to be a consequence of development occurring prior to the implementation of CEQA, rather than a lack of archaeological sites. The following recommendations for archaeological resources should be applied to all projects conducted within the jurisdiction of the City of Lawndale.

1. The project/property should be reviewed for archaeological sensitivity. This will involve a qualified archaeologist reviewing geology and soils reports and maps, historic maps, and as-built plans of the project/property.
2. The qualified archaeologist should make a recommendation of high, moderate, low, or no sensitivity for archaeological resources.
3. In areas of high sensitivity, buried sites testing is recommended prior to construction. Alternatively, full-time monitoring could be implemented during construction activities. In any event, if an archaeological site is discovered it should be evaluated/excavated to determine significance, this would include artifact analysis, interpretation, and a technical report. If the site is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the site would be required.
4. In areas of moderate sensitivity, part-time monitoring during construction activities is recommended. If an archaeological site is discovered it should be evaluated/excavated to determine significance, this would include artifact analysis, interpretation, and a technical report. If the site is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the site would be required.
5. In areas of low sensitivity, spot-check monitoring during construction activities is recommended. If an archaeological site is discovered it should be evaluated/excavated to determine significance, this would include artifact analysis, interpretation, and a technical report. If the site is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the site would be required.
6. In areas of no sensitivity, no monitoring during construction activities is recommended. If an archaeological site is discovered a qualified archaeologist should be retained to evaluate/excavate the site to determine significance, this would include artifact analysis, interpretation, and a technical report. If the site is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the site would be required.

A qualified archaeologist is a person with a M.A. in anthropology or archaeology (or closely related filed) with at least one year of full-time professional experience in the field of archaeology, who has completed a supervised field school, who possess a demonstrated ability to conduct research to completion, and who maintains one year in a supervisory level in archaeological study; and/or who is a Registered Professional Archaeologist (RPA).

Paleontological Resources

The paleontological resources research indicates that the geologic formations in the City are known to contain paleontological localities with rare, well-preserved fossil materials that offer important information about the plant or animal and/or its evolutionary history. Both formations have been determined to be highly sensitive for paleontological resources. These important resources are most often destroyed as a result of construction, such as excavation, trenching, and tunneling. Impacts can be mitigated through pre-construction and construction mitigation programs. The following recommendations for paleontological resources should be applied to all projects conducted within the jurisdiction of the City of Lawndale.

1. The project/property should be reviewed for paleontological sensitivity. This will involve a qualified paleontologist reviewing geology and soils reports and maps, historic maps, and as-built plans of the project/property.

2. The qualified paleontologist should make a recommendation of high, moderate, low, or no sensitivity for paleontological resources.
3. In areas of high sensitivity, full-time monitoring should be implemented during construction activities. If a paleontological site is discovered it should be evaluated/excavated to determine significance. If it is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the fossil would be required.
4. In areas of moderate sensitivity, part-time monitoring should be implemented during construction activities. If a paleontological site is discovered, it should be evaluated/excavated to determine significance. If it is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the fossil would be required.
5. In areas of low sensitivity, spot-check monitoring should be implemented during construction activities. If a paleontological site is discovered, it should be evaluated/excavated to determine significance. If it is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the fossil would be required.
6. In areas of no sensitivity, no monitoring during construction activities is recommended. If a paleontological site is discovered, a qualified paleontologist should be retained to evaluate/excavate the discovery to determine significance. If it is significant, preservation is the preferred treatment. If preservation is not accomplished, then treatment and/or mitigation of the fossil would be required.

A qualified paleontologist is a person with a B.S. or B.A. in geology, or closely related discipline with an emphasis in paleontology and demonstrated experience and competence in paleontological research, fieldwork, reporting, and curation.

CONCLUSIONS

DUKE CRM has conducted a cultural (archaeological and historical) and paleontological resources assessment for Project for the City, comprising approximately 1,260 acres. The purpose of this report is to inventory the previously recorded paleontological and cultural resources in the City, to assess the potential for impacts to these resources during implementation of the Project. This effort was completed in compliance with the CEQA.

DUKE CRM requested cultural and paleontological records searches. There are at least 12 cultural resources mapped within the City and all are historic built environment resources. No historic or prehistoric archaeological resources have been previously recorded within the City. Additionally, fossil localities have not been recorded in the City. The entire City is underlain by Pleistocene-age alluvium and Pleistocene-age eolian deposits that are considered to have a high sensitivity for paleontological resources due to the discovery of these resources near the City in similar deposits.

DUKE CRM recommends compliance with the resource management regulations in CEQA. Tribal Cultural Resources are recommended to be added to the City's categories of cultural resources which reflect changes to CEQA.

Brian Glenn

Principal Investigator/Archaeologist

Professional Experience: 30 Years

Expertise

Cultural Resources Management
California Prehistory
Section106 & CEQA Compliance
Native American Consultation
Database (Collections) Management

Education

UCLA , M.A. Anthropology, 1991
UC, Santa Barbara, B.A., Anthropology, 1986
UC, Santa Barbara, B.A., Geography, 1986
San Diego Mesa College, Certificate, GIS, 2010

Professional Registrations

RPA, No. 989903

Professional Memberships

Society for California Archaeology
Society for American Archaeology
San Diego County Archaeological Society President, 1999

Summary of Qualifications

Mr. Glenn has worked on hundreds of cultural resources management projects over his 30 year career. This includes projects throughout California in compliance with Section 106 of the National Historic Preservation Act (NHPA) and California Environmental Quality Act (CEQA). He is listed on the RPA and meets the Secretary of Interior Standards for Principal Investigator. His recent experience includes cultural resources surveys and studies for clients such as the Los Angeles Department of Water and Power, Metropolitan Transit Authority, and La Plaza Foundation. His responsibilities have included the preparation of technical reports (assessment, evaluation, and mitigation), cultural resources management plans and EIS/EIR sections, as well as archaeological monitoring. He has training and significant experience in lithic, faunal, typological and spatial analyses, as well as obsidian source and hydration studies. He has identified, evaluated, and investigated historic era resources from a 1792 Spanish gun emplacement on Ballast Point overlook San Diego Bay to late 19th to mid-20th century household and commercial deposits. Mr. Glenn received B.A. degrees in Geography and Anthropology from UC, Santa Barbara and an M.A. in Archaeology from UCLA. During his graduate work at UCLA, he was acting coordinator of the SCCIC (CHRIS).

Selected Project Experience

First Solar Energy Blythe #1, City of Blythe, CA

Mr. Glenn supervised construction monitoring of the 200-acre solar project in Blythe. CA and prepared the Phase IV report for the County of Riverside. A single historic era dump site was located, recorded and reported.

Hammock Project, SCE, County of Riverside, CA

Conducted a cultural resources assessment of a two-mile section of transmission line in anticipation of upgrades.

Arbor Ridge, Beaumont, CA

Conducted a Phase I cultural resources assessment of a 1,200-acre project area in Beaumont, Riverside County that included historic archives review, pedestrian survey and paleontological literature review for SunCal Development/City of Beaumont.

MWD of Southern California Potholing Project. County of Riverside, CA

Conducted a pedestrian survey of six proposed potholing locations directly adjacent to the Colorado River Aqueduct for the Metropolitan Water District of Southern California.

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

This noise assessment was prepared to evaluate the potential noise impacts for the Project Area and to recommend noise mitigation measures, if necessary, to minimize the potential noise impacts. The assessment was conducted and compared to the noise standards set forth by the Federal, State, and Local agencies. Consistent with the City's Noise Guidelines, the Project must demonstrate compliance to the applicable noise criterion as outlined within the City's existing Noise Element and proposed Public Safety Element and Municipal Code.

The following is provided in this report:

- A description of the Project Area and the proposed Project
- Information regarding the fundamentals of noise and vibration
- A description of the local noise and vibration guidelines and standards
- An analysis of traffic noise impacts to and from the project site
- An analysis of stationary noise impacts to and from the project site
- An analysis of construction noise impacts
- An analysis of ground-borne vibration impacts to and from the project site
- Suggested mitigation measures to reduce impacts

1.2 Site Location and Project Area

The City of Lawndale is located in the South Bay area of Los Angeles County, approximately 10 miles southwest of downtown Los Angeles. The City is approximately 1.9 square miles (1,241 acres) and is bounded by the City of Hawthorne to the north and west, by unincorporated areas of Los Angeles County and the City of Gardena to the east, by the City of Torrance to the south, and by the City of Redondo Beach to the south and west. Regional access to the City is provided by Interstate 405, a major north-south highway which provides access to Lawndale and the greater Los Angeles region.

The General Plan Update Study Area, as shown in Exhibit A, includes the entire City limits (approximately 1,241 acres) as well as the City of Lawndale's Sphere of Influence (approximately 314 acres); the entire Study Area is approximately 1,555 acres.

1.3 Proposed Project Description

The City of Lawndale is preparing a comprehensive update to its existing General Plan. The updated Lawndale General Plan is expected to be adopted in 2023 and will guide the City's development, growth, and conservation through land use objectives and policy guidance. The General Plan Update is intended to be an expression of the community's vision for the City and Study Area, and constitutes the policy and regulatory framework by which future development projects will be reviewed, and public improvements will be implemented. The City will implement the General Plan Update by requiring development, infrastructure improvements, and other projects to be consistent with its policies and by implementing the actions included in the General Plan Update.

This report will aid in the development of the noise portion of the Public Safety Element of the General Plan Update. The Public Safety Element establishes goals, policies, and actions to protect the community from risk associated with geologic, fire, and flood hazards, as well as setting standards for emergency preparedness. The Public Safety Element supports the City's participation in the Lawndale Local Hazard Mitigation Plan, the County of Los Angeles All-Hazards Mitigation Plan, and the Lawndale Climate Action Plan. This Element also addresses the required topics related to noise, including standards and policies to protect the community from the harmful and annoying effects of exposure to excessive noise levels. This Element includes strategies to reduce land use conflicts that may result in exposure to unacceptable noise levels.

1.4 General Plan Update Buildout Assumptions

Buildout of the General Plan could yield a total of up to 15,405 housing units, a population of 47,430 people, approximately 5.35 million square feet of non-residential building square footage, and 9,208 jobs within the Planning Area. As shown in Table 1, this represents development growth over existing conditions of up to approximately 3,942 new housing units, 9,482 people, 808,864 square feet of new non-residential building square footage, and 738 jobs.

The analysis of the General Plan Update is based on various assumptions regarding existing and future conditions in Lawndale. Unless otherwise stated, the assumptions are as specified in Table 1, which are based on the General Plan 2045 Buildout.

Table 1: General Plan Update Growth Assumptions

Description	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs
Existing Conditions (2022)	11,463	38,948	4,542,162	8,470
2045 General Plan	15,405	47,430	5,351,026	9,208
Net Change	+3,942	+9,482	+808,864	+738

2.0 Fundamentals of Noise

This section of the report provides basic information about noise and presents some of the terms used within the report.

2.1 Sound, Noise, and Acoustics

Sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. Sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

2.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting at 20 Hz to the high pitch of 20,000 Hz.

2.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines its loudness. The loudness of sound increases or decreases as the amplitude increases or decreases. Sound pressure amplitude is measured in units of micro-Newton per square meter ($\mu N/m^2$), also called micro-Pascal (µPa). One µPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels abbreviated dB.

2.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two sounds of equal SPL are combined, they will produce an SPL 3 dB greater than the single SPL. In other words, sound energy that is doubled produces a 3 dB increase. If two sounds differ by approximately 10 dB, the higher sound level is the predominant sound. When combining sound levels, estimates shown in Table 2 may be utilized.

Table 2: Decibel Addition

When Two Decibel Values Differ by:	Add This Amount to Higher Value	Example
0 or 1 dB	3 dB	70+69=73 dB
2 or 3 dB	2 dB	74+71=76 dB
4 to 9 dB	1 dB	66+60=67 dB
10 dB or more	0 dB	65+55=65 dB

2.5 Human Response to Changes in Noise Levels

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, A-scale weighting is typically used and is reported in terms of the A-weighted decibel (dBA). The A-scale was designed to account for the frequency-dependent sensitivity of the human ear. Typical A-weighted noise levels are shown in Table 3.

Table 3: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor
	110	Rock Band
Jet flyover at 1,000 feet		
	100	
Gas lawnmower at 3 feet		
	90	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawnmower, 100 feet	70	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60	
		Large Business Office
Quiet urban daytime	50	Dishwasher in next room
Quiet urban nighttime	40	Theater, large conference room (background)
Quiet suburban nighttime		
	30	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	20	
		Broadcasting/recording studio
	10	
Lowest Threshold of Human Hearing	0	Lowest Threshold of Human Hearing

Source: Caltrans Technical Noise Supplement to the Traffic Noise Analysis Protocol. Caltrans, 2013.

In general, the human ear can barely perceive a change in the noise level of 3 dB. As shown in Table 4, a change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g., doubling the volume of traffic on a highway) would result in a barely perceptible change in sound level.

Table 4: Perceived Changes in Noise Levels

Changes in Intensity Level, dBA	Changes in Apparent Loudness
1	Not perceptible
3	Just perceptible
5	Clearly noticeable
10	Twice (or half) as loud
Source: Caltrans Technical Noise Supplement to the Traffic Noise Analysis Protocol. Caltrans, 2013.	

2.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, and others are random. Some noise levels are constant, while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels.

A-Weighted Sound Level: The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24-hour day, obtained after the addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after the addition of ten (10) decibels to sound levels in the night between 10:00 PM and 7:00 AM.

Decibel (dB): A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dBA: A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ): The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time-varying noise level. The energy average noise level during the sample period.

Habitable Room: Any room meeting the requirements of the California Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking, or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms, and similar spaces.

L(n): The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly, L50, L90, L99, etc.

Noise: *A*ny unwanted sound or sound which is undesirable because it interferes with speech and hearing, is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Outdoor Living Area: Outdoor spaces that are associated with residential land uses typically used for passive recreational activities or other noise-sensitive uses. Such spaces include patio areas, barbecue areas, jacuzzi areas, etc. associated with residential uses; outdoor patient recovery or resting areas associated with hospitals, convalescent hospitals, or rest homes; outdoor areas associated with places of worship which have a significant role in services or other noise-sensitive activities; and outdoor school facilities routinely used for educational purposes which may be adversely impacted by noise. Outdoor areas usually not included in this definition are: front yard areas, driveways, greenbelts, maintenance areas and storage areas associated with residential land uses; exterior areas at hospitals that are not used for patient activities; outdoor areas associated with places of worship and principally used for short-term social gatherings; and, outdoor areas associated with school facilities that are not typically associated with educational uses prone to adverse noise impacts (for example, school play yard areas).

Percent Noise Levels: See L(n).

Sound Level (Noise Level): The weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum.

Sound Level Meter: An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL): The dBA level which, if it lasted for one second, would produce the same A-weighted sound energy as the actual event.

2.7 Tonal Sounds

A pure tone sound is a sound produced at or near a single frequency. Laboratory tests have shown that humans are more perceptible to changes in sound levels of a pure tone. For a noise source to contain a "pure tone," there must be a significantly higher A-weighted sound energy in a given frequency band than in the neighboring bands, thereby causing the noise source to "stand out" against other noise sources. A pure tone occurs if the sound pressure level in the one-third octave band with the tone exceeds the average of the sound pressure levels of the two contagious one-third octave bands by 5 dB for center frequencies of 500 Hertz (Hz) and above; by 8 dB for center frequencies between 160 and 400 Hz; and by 15 dB for center frequencies of 125 Hz or less.

2.8 Sound Propagation

As sound propagates from a source it spreads geometrically. Sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The

sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet or more from a noise source. Wind, temperature, air humidity, and turbulence can further impact have far sound can travel.

2.9 Ground Absorption

As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt, or landscaping attenuate noise at a rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall noise attenuation of 4.5 dB per doubling of distance for a line source and 7.5 dB per doubling of distance for a point source.

2.10 Sound Attenuation

Noise-related land use issues are typically composed of three basic elements: (1) the noise source, (2) a transmission path, and (3) a receiver.

The appropriate acoustical treatment for a given project should consider the nature of the noise source and the sensitivity of the receiver. When the potential for a noise-related problem is present, either avoidance of the noise-related problem or noise control techniques should be selected to provide an acceptable noise environment for the receiver while remaining consistent with local aesthetic standards and practical structural and economic limits. Fundamental noise control options are described below.

2.10.1 Noise Barriers

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. To achieve that reduction, the barrier must be high enough and long enough to block the line-of-sight of the vehicles on the road. A noise barrier can still achieve a 5 dBA noise level reduction when it is tall enough to barely allow a line-of-sight of the vehicles. A noise barrier is most effective when placed close to the noise source or receiver. When the noise barrier is an earthen berm instead of a wall, the noise attenuation can be increased by another 3 dBA.

2.10.2 Setbacks

Noise exposure may be reduced by increasing the setback distance between the noise source and the receiving use. Setback areas can take the form of open space, frontage roads, recreational areas, and storage yards. The available noise attenuation from this technique is limited by the characteristics of the noise source but generally ranges between 4 and 6 dBA.

2.10.3 Site Design

Buildings can be placed on a property to shield other structures or areas affected by noise and to prevent an increase in noise levels caused by reflections. The use of one building to shield another can significantly reduce overall noise control costs, particularly if the shielding structure is insensitive to noise. An example would be placing a detached garage nearest the noise source to shield the house or backyard. Site design should guard against creating reflecting surfaces that may increase onsite noise levels. For example, two buildings placed at an angle facing a noise source may cause noise levels within that angle to increase by up to 3 dBA. The open end of U-shaped buildings should point away from noise sources for the same reason. Landscaping walls or noise barriers located within a development may inadvertently reflect noise to a noise-sensitive area unless carefully located.

2.10.4 Building Facades

When interior noise levels are of concern in a noisy environment, noise reduction may be obtained through the acoustical design of building facades. Standard construction practices provide a noise reduction of 10–15 dBA for building facades with open windows and a noise reduction of approximately 25 dBA when windows are closed (Table 5). An exterior-to-interior noise reduction of 25 dBA can be obtained by requiring that building design include adequate ventilation systems, which would allow windows facing a noise source to remain closed, even during periods of excessively warm weather.

Where greater noise reduction is required, acoustical treatment of the building facade may be necessary. Reducing relative window area is the most effective control technique, followed by providing acoustical glazing (e.g., thicker glass or increased air space between panes) within frames with low air infiltration rates, using fixed (i.e., non-movable) acoustical glazing, or eliminating windows. Noise transmitted through walls can be reduced by increasing wall mass (e.g., using stucco or brick in lieu of wood siding), or isolating wall members by using double or staggered stud walls, while noise transmitted through doorways can be lessened by reducing door area, using solid-core doors, or sealing door perimeters with suitable gaskets. Noise-reducing roof treatments include using plywood sheathing under roofing materials.

Table 5: Noise Reduction Afforded by Common Building Construction

Construction Type	Typical Occupancy	General Description	Range of Noise Reduction (dB)[1]
1	Residential, Commercial, Schools	Wood frame, stucco, or wood sheathing exterior. Interior drywall or plaster. Sliding glass windows, with windows partially open.	15-20
2	Same as 1 above	Same as 1 above, but with windows closed.	25-30
3	Commercial, Schools	Same as 1 above, but with fixed 0.25-inch plate glass windows.	30-35
4	Commercial, Industrial	Steel or concrete frame, curtain wall, or masonry exterior wall. Fixed 0.25-inch plate glass windows.	35-40

Source: California Airport Land Use Planning Handbook, 2002.

2.10.5 Landscaping

While the use of trees and other vegetation is often thought to provide significant noise attenuation, approximately 100 feet of dense foliage – with no visual path extending through the foliage – is required to achieve a 5 dBA attenuation of traffic noise. Thus, the use of vegetation as a noise barrier is not considered a practical method of noise control unless large tracts of dense foliage are part of the existing landscape.

Vegetation can be used, however, to acoustically "soften" intervening ground between a noise source and a receiver, increasing ground absorption of sound, and thus, increasing the attenuation of sound with distance. Planting trees and shrubs also offers aesthetic and psychological value, and it may reduce adverse public reaction to a noise source by removing the source from view, even though noise levels would be largely unaffected.

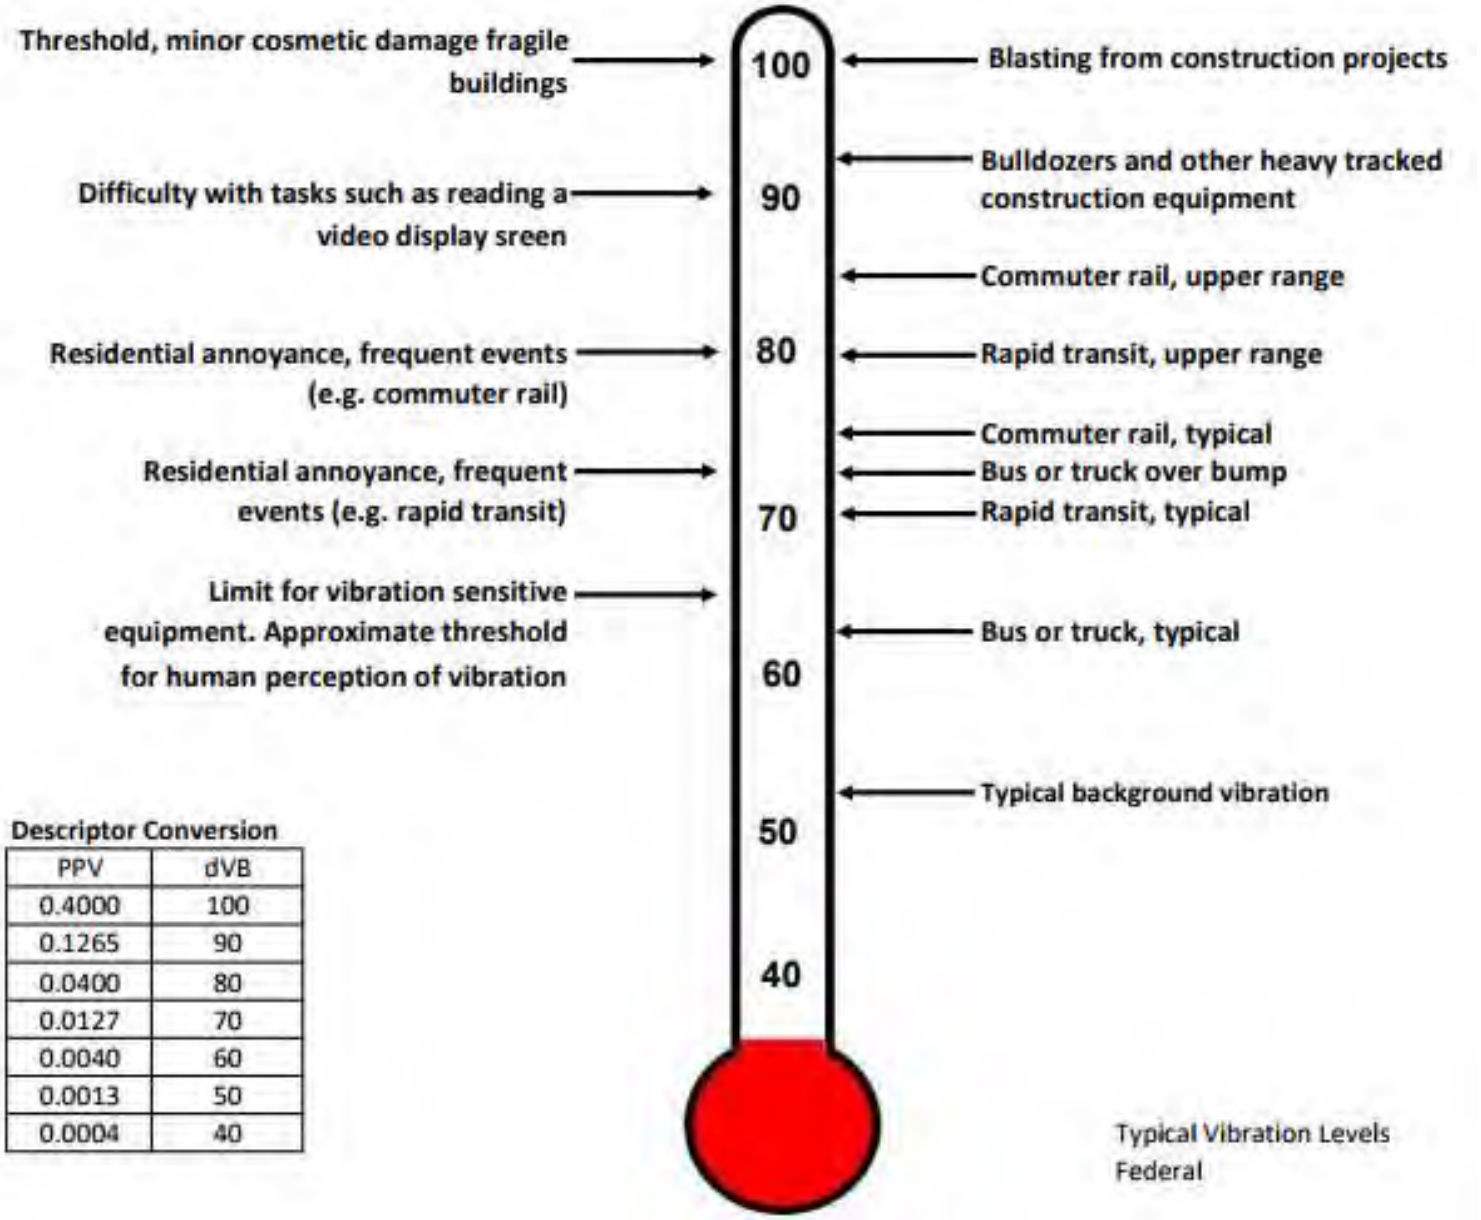
3.0 Ground-Borne Vibration Fundamentals

3.1 Vibration Descriptors

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors, where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and mainly exists indoors since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves. Several different methods are used to quantify vibration amplitude. Typical human reaction and effect on buildings due to ground-borne vibration is shown in Table 6. Exhibit E illustrates common vibration sources and the human and structural responses to ground-borne vibration.

PPV – Known as the peak particle velocity (PPV) which is the maximum instantaneous peak in vibration velocity, typically given in inches per second.

RMS – Known as root mean squared (RMS) can be used to denote vibration amplitude



VdB – A commonly used abbreviation to describe the vibration level (VdB) for a vibration source.

Table 6: Typical Human Reaction and Effect on Buildings Due to Ground-Borne Vibration

Vibration Level Peak Particle Velocity (PPV)	Human Reaction	Effect on Buildings
0.006–0.019 in/sec	Threshold of perception, possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08 in/sec	Vibrations readily perceptible	Recommended upper level of vibration to which ruins and ancient monuments should be subjected
0.10 in/sec	Level at which continuous vibration begins to annoy people	Virtually no risk of “architectural” (i.e., not structural) damage to normal buildings
0.20 in/sec	Vibrations annoying to people in buildings	Threshold at which there is a risk to “architectural” damage to normal dwelling – houses with plastered walls and ceilings
0.4–0.6 in/sec	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause “architectural” damage and possibly minor structural damage
Source: Caltrans Transportation and Construction Vibration Guidance Manual, 2020.		

Exhibit E

Typical Ground-Borne Vibration Levels

Descriptor Conversion

PPV	dVB
0.4000	100
0.1265	90
0.0400	80
0.0127	70
0.0040	60
0.0013	50
0.0004	40

3.2 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Outdoor sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration.

The California Department of Transportation has published one of the seminal works for the analysis of ground-borne noise and vibration relating to transportation- and construction-induced vibrations and although the Project is not subject to these regulations, it serves as useful tools to evaluate vibration impacts. (California Department of Transportation, 2020).

3.3 Vibration Propagation

There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation. As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. This drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

4.0 Regulatory Setting

The proposed Project is located in the City of Lawndale, and noise regulations are addressed through the efforts of various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

4.1 Federal Regulations

4.1.1 Noise Control Act of 1972

The Federal Office of Noise Abatement and Control (ONAC) was originally tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows:

- The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies.
- The Federal Aviation Agency (FAA) regulates noise from aircraft and airports.
- The Federal Highway Administration (FHWA) regulates noise from the interstate highway system.
- The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The federal government advocates that local jurisdictions use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being constructed adjacent to a highway or that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement Codes and land use planning.

The intent of a General Plan Noise Element or Section is to set goals to limit and reduce the effects of noise intrusion and to set acceptable noise levels for varying types of land uses. To this end, the City has the authority to set land use noise standards and restrict private activities that generate excessive or intrusive noise. However, it should be recognized that the City does not have the authority to regulate all sources of noise within the City and various other agencies may supersede City authority. The following is a summary of some federal agency requirements that apply to noise within the Project Area.

4.1.2 Federal Highway Administration

Federal Highway Administration State routes and freeways that run through the City are subject to Federal funding and, as such, are under the purview of the Federal Highway Administration (FHWA). The FHWA has developed noise standards that are typically used for Federally funded roadway projects or projects that require either Federal or Caltrans review. These noise standards are based on Leq and L10 values and are included in Table 7, FHWA Design Noise Levels.

Table 7: FHWA Design Noise Levels

Activity Category	Description of Category	Design Noise Levels[1]	
		Leq (dBA)	L10 (dBA)
A	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose. Examples include natural parks or wildlife habitats.	57 (exterior)	60 (exterior)
B	Picnic areas, recreation areas, playgrounds, active sports areas, parks, residences, motels, hotels, schools, churches, libraries, and hospitals.	67 (exterior)	70 (exterior)
C	Developed lands, properties, or activities not included in Categories A or B, above.	72 (exterior)	75 (exterior)
D	Undeveloped lands.		
E	Residences, motels, hotels, public meeting rooms, schools, churches, libraries, hospitals, and auditoriums.	52 (interior)	55 (interior)

Source: FHWA Noise Standard. 23 Code of Federal Regulations 772.
Notes: Either Leq or L10 (but not both) design noise levels may be used on a project.

U.S. Department of Housing and Urban Development
The Department of Housing and Urban Development (HUD) issues formal requirements related specifically to standards for exterior noise levels along with policies for approving HUD-supported or assisted housing projects in high noise areas. In general, these requirements established three zones. These include:

- 65 dBA Ldn or less - an acceptable zone where all projects could be approved,

- Exceeding 65 dBA Ldn but not exceeding 75 dBA Ldn - a normally unacceptable zone where mitigation measures would be required, and each Project would have to be individually evaluated for approval or denial. These measures must provide 5 dBA of attenuation above the attenuation provided by standard construction required in a 65 to 70 dBA Ldn area and 10 dBA of attenuation in a 70 to 75 dBA Ldn area, and

- Exceeding 75 dBA Ldn - an unacceptable zone in which projects would not, as a rule, be approved.

4.1.3 The Federal Interagency Committee on Noise

The Federal Interagency Committee on Noise (FICON) developed guidance for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies of the percentage of persons highly annoyed by aircraft noise. These recommendations are often used for different types of environmental noise such as traffic noise. A readily perceptible 5 dBA or greater project-related noise level increase is considered a significant impact

when the noise criteria for a given land use is exceeded. In areas where the existing noise levels range from 60 to 65 dBA Ldn, a 3 dBA barely perceptible noise level increase is considered significant. When the existing noise levels already exceed 65 dBA Ldn, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact since it likely contributes to an existing noise exposure exceedance.

4.2 State Regulations

4.2.1 California Department of Health Services

The California Department of Health Services (DHS) Office of Noise Control studied the correlation between noise levels and their effects on various land uses. As a result, the DHS established four categories for judging the severity of noise intrusion on specified land uses. These categories are presented in the State Land Use Compatibility for Community Noise Exposure table (California Office of Noise Control, 2017).

4.2.2 The California Building Code

Section 1206.4 of the 2022 California Building Code (Cal. Code Regs., Title 24, Part 2), Chapter 12 (Interior Environment), establishes an interior noise criterion of 45 dBA CNEL in any habitable room. Per California Building Code, Chapter 2 (Definitions), a habitable space is A space in a building for living, sleeping, eating or cooking. Bathrooms, toilet rooms, closets, halls, storage or utility spaces and similar areas are not considered habitable spaces. This section applies to dwelling and sleeping units.

4.2.3 California Green Building Standards Code

California Green Building Standards Code (2022), Chapter 5 (Non-residential Mandatory Measures) Section 5.507.4 (Acoustical Control), applies to all proposed buildings that people may occupy but are not residential dwelling units, with the exception of factories, stadiums, storage, enclosed parking structures, and utility buildings.

Buildings must comply with Section 5.507.4.1 or Section 5.507.4.2. Section 5.507.4.1 requires wall and roof-ceiling assemblies exposed to the noise source making up the building, or addition envelope or altered envelope, shall meet a composite Sound Transmission Class (STC) rating of at least 50 or a composite Outdoor to Indoor Transmission Class (OITC) rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30 when within the 65 CNEL noise contour of an airport, freeway, expressway, railroad, industrial source, or fixed-guideway source. If contours are not available, buildings exposed to 65 dB Leq(h) must meet a composite STC rating of at least 45 or OITC of 35 with exterior windows of at least STC 40 or OITC 30. Section 5.507.4.2 requires that the interior noise attributable to exterior sources must not exceed 50 dBA Leq(h) during any hour of operation. Section 5.507.4.3 requires that assemblies separating tenant spaces from tenant spaces or public places must have an STC of at least 40.

4.3 City of Lawndale

Existing planning policies and noise regulations applicable to noise within the City of Lawndale are presented in the Noise Plan of the City of Lawndale General Plan 1992 and within the City of Lawndale Municipal Code. Applicable goals, policies, and regulations are presented below.

4.3.1 City of Lawndale General Plan 1992

General Plan Goals, Policies and Actions
The 1992 General Plan Noise Plan includes the following goals, policies and implementation programs that are intended to avoid or reduce noise impacts related to transportation, stationary, and construction related noise sources.

Noise Goal 1: To achieve and maintain an environment which is free from excessive or harmful noise through identification, control and abatement.

Policies
Policy 1a: Control and abate undesirable sounds through the development of land use compatibility guidelines and a noise ordinance.
Policy 1b: Encourage the development of industrial and commercial land uses which do not produce excessive noise.
Policy 1c: Discourage development of noise sensitive land uses in area impacted by high noise levels.
Policy 1d: Ensure that sensitive land uses are not subjected to inappropriate noise levels resulting from transportation systems.
Policy 1e: Maintain coordination of noise control policies and standards with the surrounding cities and Caltrans.
Policy 1f: Provide for implementation, periodic review and revision of the Noise Element.
Policy 1g: Provide for the education of the community in the nature and extent of noise in the City of Lawndale.

Implementation Programs
1.1 Comprehensive Noise Ordinance Adoption: Adopt a comprehensive noise ordinance to prohibit unwanted and unnecessary sound. The ordinance shall identify acceptable property line sound level limits and control noise sources such as barking dogs, mechanical equipment, amplified music, construction activity and other noise identified as disturbing, excessive or offensive.
1.2 Noise Compatibility Standards: Adopt the land use noise compatibility standards presented in Figure A for general planning and zoning purposes.
1.3 Noise Insulation Standards: Enforce the California Administrative Code, Title 24, Noise Insulation Standards. Title 24 requires that an acoustical analysis be performed for all new multi-family construction in areas where the exterior sound level exceeds 60 CNEL. The analysis shall ensure that the building design limits the interior noise environment to 45 CNEL or below.

1.4 Noise Insulation Standards for Single-Family Dwellings: Adopt a policy or implementation ordinance making California Administrative Code, Title 24, Noise Insulation Standards applicable to new single0family dwellings.

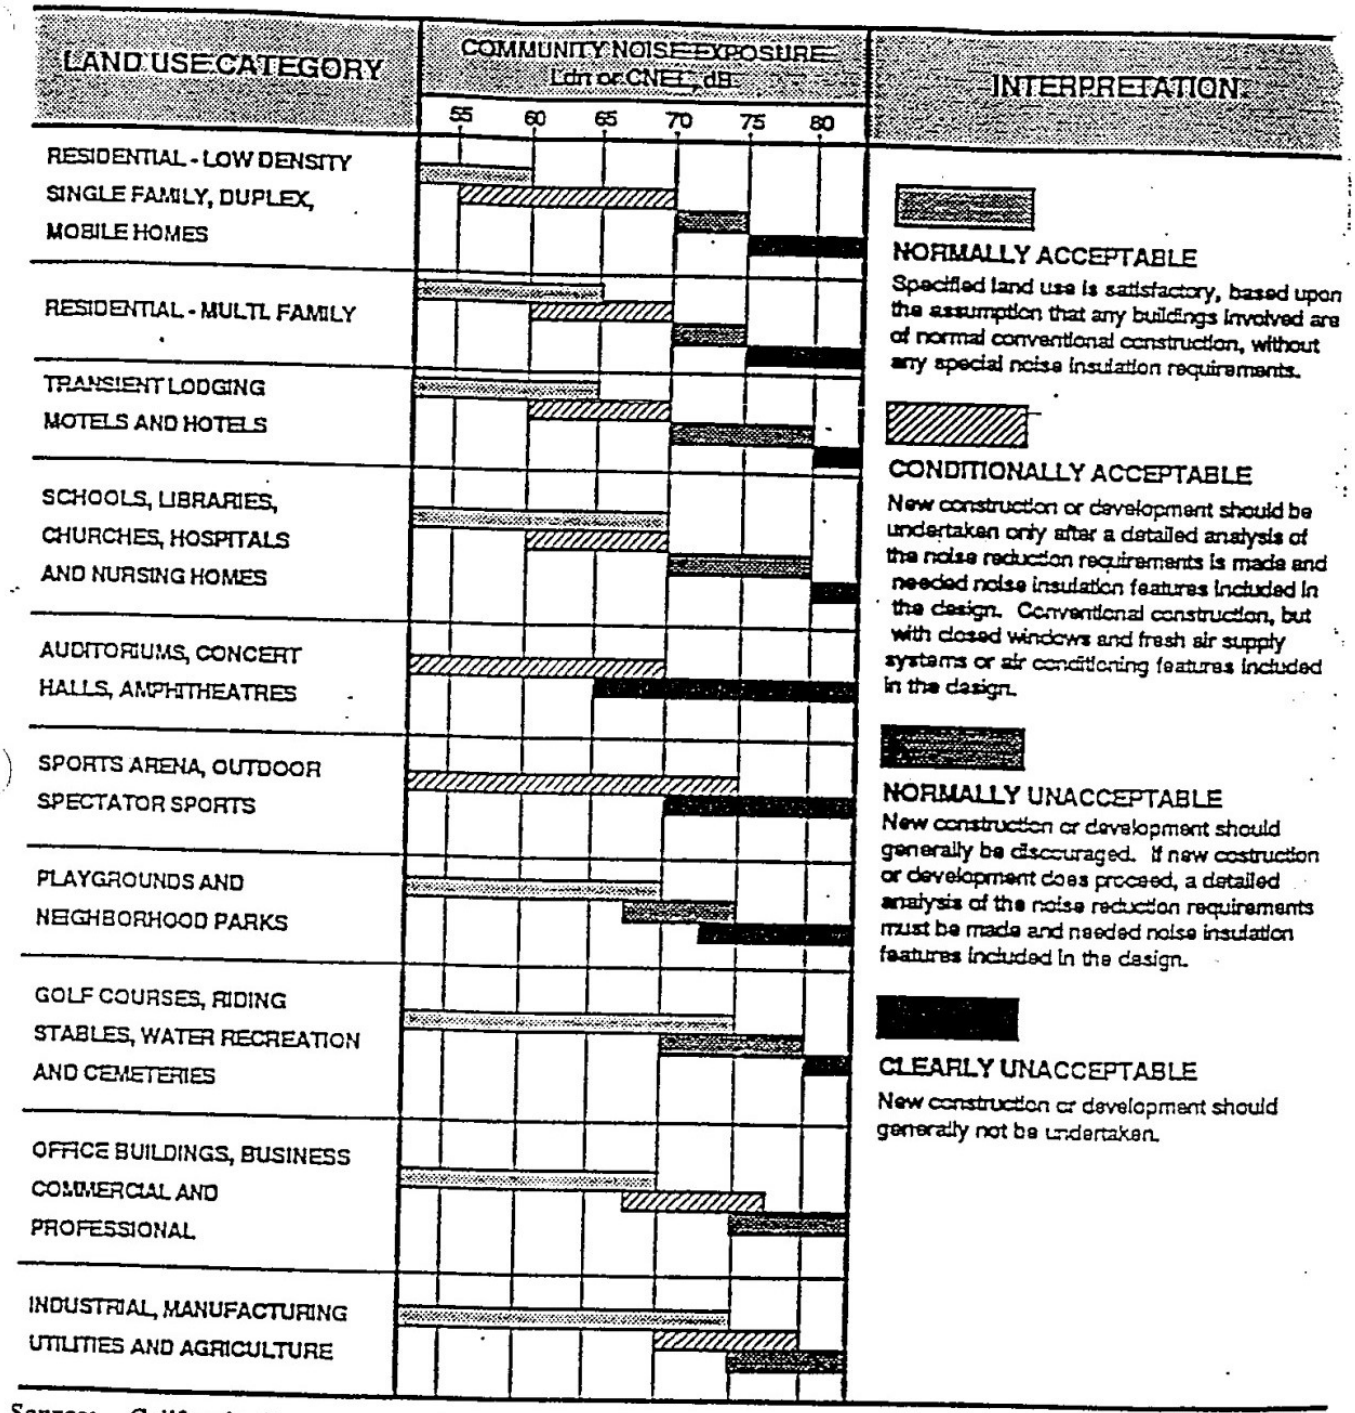
1.5 Project Review: Review actions or projects that may have the potential to generate noise impacts which may impact existing land uses.

1.6 Acoustical Analysis: Require noise studies for projects where exterior noise levels exceed 60 dB CNEL to identify potential noise impacts, analyze mitigation alternatives, and identify methods to monitor the effectiveness of the mitigation following implementation.

1.7 Transportation Noise Standards: Develop noise standards for use in reviewing the construction and improvement of any roadway, railroad, or other transit system.

1.8 Enforce Motor Vehicle Code: Enforce the provisions of the State Motor Vehicle Code which requires that all vehicles be equipped with a properly maintained muffler and that the exhaust system not be modified.

1.9 Regulate Traffic Flow: Review traffic flow systems and synchronize signals to avoid traffic stops which produce excessive noise wherever possible.



1.10 Limit Truck Noise: Limit truck traffic in noise sensitive areas.

- Increasing the distance from the noise source to sensitive receptors by creation of setbacks;
- Placing non-noise sensitive uses such as parking lots and utility areas between the noise source and receiver; and
- Orient usable outdoor living space such as balconies, patios, and children play areas away from roadways.

Noise/Land Use Compatibility

Exhibit F, Noise and Land Use Compatibility presents a land use compatibility chart for community noise originally prepared by the California Office of Noise Control (1987). The table identifies “normally acceptable,” “conditionally acceptable,” “normally unacceptable,” and “clearly unacceptable” exterior noise levels for various land uses. A “conditionally acceptable” designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a “normally acceptable” designation indicates that standard construction can occur with no special noise reduction requirements. This land use compatibility chart is based on the 24-hour descriptor CNEL.

Exhibit F: Existing Noise and Land Use Compatibility

Source: California Department of Health Services Noise Element Guidelines, 1987.

4.3.2 City of Lawndale General Plan 2023

The following Goal, Policies, and Actions are proposed for the 2023 City of Lawndale General Plan.

Goal PS-6: An environment where excessive or harmful noise pollution is limited.

Noise levels within the community can affect the quality of life experienced by people living and working in Lawndale. High noise levels can create stress and irritation. The following policies and actions address other potential sources of excessive noise by creating effective strategies to reduce and limit the community's exposure to loud sources of noise.

PS-6 Policies

PS-6.1 **California Building Code.** Adhere to the latest standards related to noise in the most current edition of the California Building Code to avoid or minimize noise pollution in the community.

PS-6.2 **Noise Exposure**. Consider the noise compatibility of existing and future development when making land use planning decisions. Require development and infrastructure projects to be consistent with the land use compatibility standards contained in Table PS-1 and the Lawndale Municipal Code to facilitate acceptable noise exposure levels for existing and future development.

PS-6.3 **Noise Mitigation**. Require new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials.

PS-6.4 **Acoustical Studies**. Require acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses such as schools, hospitals, libraries, care facilities, and residential areas; and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in this element. For projects that are required to prepare an acoustical study, the following mobile and stationary noise source criteria shall be used to determine the significance of those impacts.

A. Mobile Noise Sources:

- Where existing traffic noise levels are within or below the "normally acceptable" noise criteria at the affected land use (see Table PS-1), a readily perceptible 5 dBA CNEL or greater increase in roadway noise will be considered significant;

- Where existing traffic noise levels falls within the "conditionally acceptable" noise criteria at the sensitive land use, a +3 dBA CNEL or greater increase in roadway noise levels will be considered significant; and

- Where existing traffic noise levels exceed the "conditionally acceptable" noise criteria at the sensitive land use, a + 1.5 dBA CNEL or greater increase in roadway noise levels will be considered significant

B. Stationary and Non-Transportation Noise Sources

A significant impact will occur if the project results in an exceedance of the noise level standards contained in this element, or the project will result in an increase in ambient noise levels by more than 3 dB, whichever is greater.

PS-6.5 **Roadway Noise**. Encourage nonmotorized transportation alternatives for local trips and the implementation of noise sensitivity measures in the public realm, including traffic-calming road design, lateral separation, natural buffers, and setbacks to decrease excessive motor vehicle noise.

PS-6.6 **Freeway Noise**. Coordinate with the California Department of Transportation (Caltrans) to achieve maximum noise abatement in the design of new freeway projects or improvements along I-405.

PS-6.7 **Railroad Noise**. Coordinate with Burlington Northern and Santa Fe Rail (BNSF) to support and maintain reasonable limits on the use of bells and whistles, and the speed and hours of rail operation in affected areas of the City, and maintain adequate setbacks and buffer zones along rail lines to reduce adverse noise impacts on sensitive receptors.

PS-6.8 **Commercial Noise**. Require the use of noise attenuation measures, including screening and buffering techniques, for all new commercial development expected to produce excessive noise; in existing cases where the City's noise standards are exceeded, work with Code Enforcement to require compliance.

PS-6.9 **Construction Noise**. Require construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices.

PS-6.10 **Special Events**. Temporary special events which generate noise in excess of local noise standards including, but not limited to, festivals, concerts, parades, and other similar activities may be considered on a case-by-case basis through issuance of a temporary use permit.

PS-6.11 **Temporary Emergency Operations and Emergency Equipment Usage**. Temporary emergency operations or emergency equipment usage are exempt from noise standard criteria set by this element.

PS-6.12 **Interjurisdictional and Multiagency Coordination**. Coordinate with neighboring cities and transportation providers such as Caltrans to minimize noise conflicts between land uses along the City's boundaries.

PS-6.13 **Community Education**. Provide education to the community regarding potential noise sources and how to reduce them or report violations.

PS-6.14 Vibration Studies. Require vibration impact studies for new discretionary development and transportation improvements whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings.

PS-6 Actions

PS-6a Monitor changes in the California Building Code and other federal and State laws and regulations related to noise and incorporate necessary changes into the Municipal Code and building codes as required.

PS-6b Review the Lawndale Municipal Code and update as necessary so that the noise standards are consistent with this General Plan, including Table PS-1, and to require new residential, mixed-use with a residential component, and other noise-sensitive development to be designed to minimize noise exposure to noise sensitive uses through incorporation of site planning and architectural techniques. The update shall also include noise standards for residential uses within a mixed-use development, which may differ from other adopted residential noise standards.

PS-6c Review new development and transportation projects for compliance with the noise requirements established in this General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code. Where necessary, require new development to mitigate excessive noise through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials such as rubberized asphalt.

PS-6d Require acoustical studies for all new discretionary projects, including those related to development and transportation, which have the potential to generate noise impacts which exceed the standards identified in this General Plan. The studies shall include representative noise measurements, estimates of existing and projected noise levels, and mitigation measures necessary to facilitate compliance with this element.

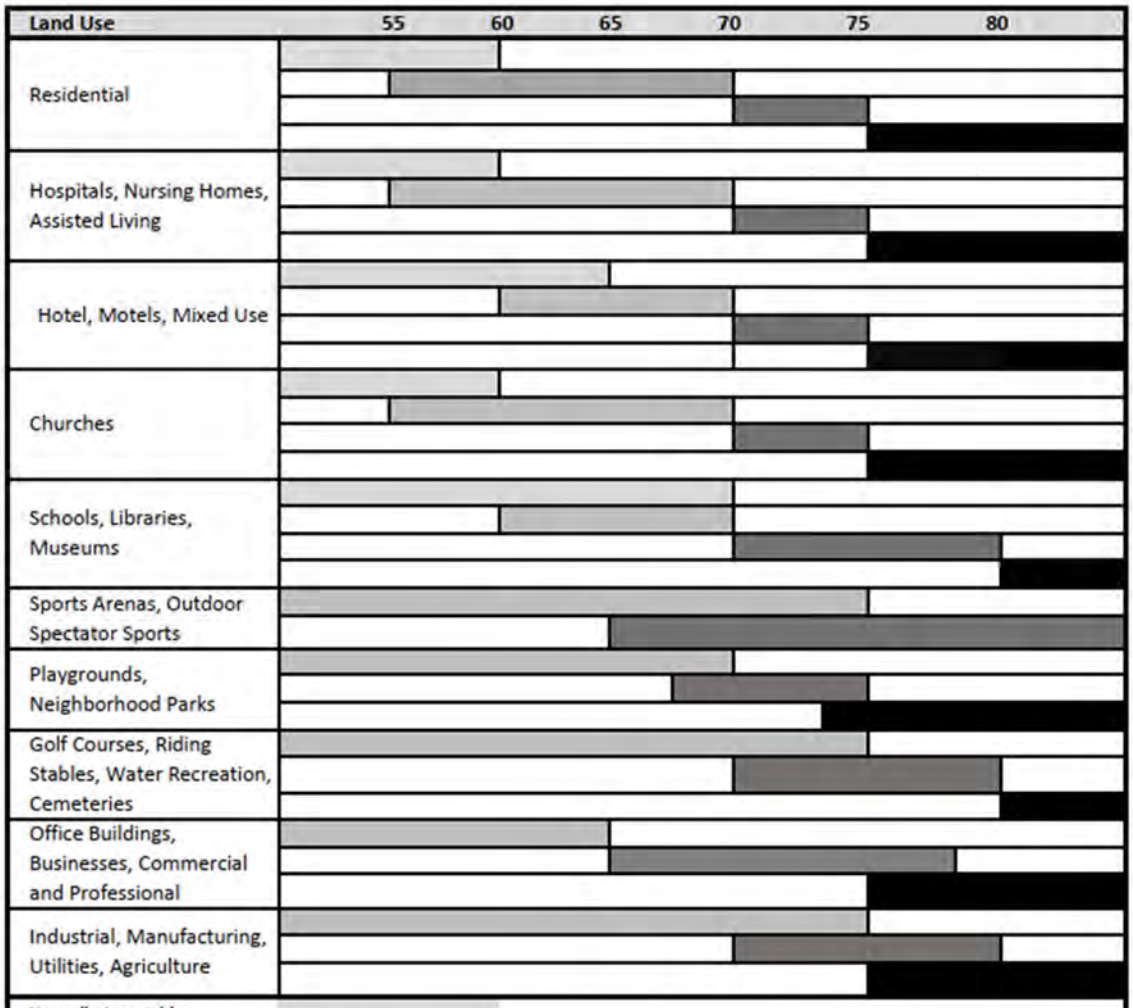
PS-6e Review the locations of proposed projects with the potential to generate stationary noise in relation to sensitive receptors through the discretionary project review process. Limit delivery or service hours for stores and businesses with loading areas, docks, or trash bins that front, side, border, or gain access on driveways next to residential and other noise sensitive areas. Only approve exceptions if full compliance with the nighttime limits of the noise regulations is achieved.

PS-6f Require all construction activity to comply with the limits (maximum noise levels, hours and days of allowed activity) established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible.

PS-6g Actively enforce the standards identified within the Lawndale Municipal Code to reduce impacts to the extent feasible. Update and amend the Lawndale Municipal Code as

appropriate. Provide a link on the City's website for those to file complaints against activities and uses that may be violating the Municipal Code.

PS-6h Require new residential projects located adjacent to railroad lines to follow the FTA vibration screening distance criteria to prevent residential uses from being exposed to vibrations exceeding 72 VdB for frequent events (more than 70 events per day), 75 VdB for occasional events (30-70 events per day), or 80 VdB for infrequent events (less than 30 events per day).



PS-6i Enforce the provisions of the most current California Motor Vehicle Code regarding muffler maintenance and exhaust systems.

PS-6j Limit truck traffic in noise sensitive areas.

PS-6k Require vibration impact studies for all new discretionary projects, including those related to development and transportation, whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. The studies shall include a detailed mitigation plan to avoid any potential significant impacts to existing structures due to groundborne vibrations, based on the California Department of Transportation's Construction Vibration Guidance Manual.

Exhibit G presents the proposed Land Use Compatibilities Guidelines, Table PS-1 in the proposed Public Safety Element.

Exhibit G: Proposed Noise and Land Use Compatibility

Normally Acceptable:
Specified land uses is satisfactory based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation or requirements.

Conditionally Acceptable:
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice. Outdoor environment will seem noisy.

Normally Unacceptable:
New construction and development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made with needed noise insulation features included in the design. Outdoor areas must be shielded.

Clearly Unacceptable
New construction or development should generally not be undertaken. Construction costs to make the indoor environment acceptable would be prohibitive and the outdoor environment would not be usable.

Source: California Office of Noise Control. Guidelines for the Preparation and Content of Noise Elements of the General Plan. February 2017.

Notes:

1. Where a proposed use is not specifically listed, the use shall comply with the standards for the most similar use as determined by the City.

2. Outdoor activity areas for residential development are considered to be the backyard patios or decks of single-family units and the common areas where people generally congregate for multi-family developments. Where common outdoor activity areas for multi-family developments comply with the outdoor noise level standard, the standard will not be applied at patios or decks of individual units provided noise-reducing measures are incorporated (e.g., orientation of patio/deck, screening of patio with masonry or other noise-attenuating material). Outdoor activity areas for non-residential developments are the common areas where people generally congregate, including pedestrian plazas, seating areas, and outside lunch facilities; not all residential developments include outdoor activity areas.

4.3.3 City of Lawndale Municipal Code

The Noise Ordinance of the Municipal Code is designed to protect people from non-transportation noise sources such as construction activity; commercial, industrial, and agricultural operations; machinery and pumps; and air conditioners. Enforcement of the ordinance ensures that adjacent properties are not exposed to excessive noise from stationary sources. Enforcing the ordinance includes requiring proposed development projects to show compliance with the ordinance, including operating in accordance with noise levels and hours of operations limits placed on the project site. The City also requires construction activity to comply with established work schedule limits. The ordinance is reviewed periodically for adequacy and amended as needed to address community needs and development patterns.

The City of Lawndale's Noise Ordinance consists of Chapter 8.20 of the Lawndale Municipal Code. The zoning code, Title 17, also contains specific noise limits relating to specific uses.

Section 8.20.010 defines sound-amplifying equipment as any machine or device for the amplification of the human voice, music, or any other sound, including automobile radios and warning devices.

Sections 8.20.020, 8.20.030, and 8.20.050 outline noise restrictions with regards to noncommercial sound trucks, commercial sound trucks or advertising vehicles, and sound-producing vehicles at night.

Section 8.20.060 states that "No person shall make, cause or suffer, or permit to be made upon any premises owned, occupied or controlled by that person any noises or sounds which are unreasonably loud or physically annoying to persons of ordinary sensitivity, or which are so harsh or so prolonged or unnatural or unusual in their use, time or place as to occasion physical discomfort to other persons." This section also states that the previous statement does not apply to noise or sounds generated in connection with any of the following:

1. Emergency vehicle response sounds and/or sounds from necessary equipment utilized by members of law enforcement, the fire department, paramedics or other emergency responders for the purpose of responding to an emergency or necessary to restore, preserve, protect or save lives or property from imminent danger of loss or harm.
2. Safety and warning devices, including but not limited to, train horns and railroad crossing warning systems, which are consistent with applicable state and federal laws.
3. The installation, maintenance, repair or replacement of public utilities or public infrastructure conducted by the city, other public entity or a public or private utility company, or their agents, contractors and employees, while undertaking a public works project, subject to the restrictions contained in Section 8.20.070 for allowable construction times.
4. School-related activities and/or programs, including, but not limited to, athletic and entertainment events and activities, provided said activities are conducted on the grounds of a public or private school or college or on other public property.
5. Noise from special community events provided said events are conducted by the city or pursuant to a permit or license issued by the city, including, but not limited to, occasional outdoor events/activities, outdoor gatherings, public dances, shows and sporting and entertainment events.
6. Any activity to the extent regulation thereof has been preempted by state or federal law.

Section 8.20.070 outlines the allowable hours for construction as follows:

> Construction activity may be conducted between the hours of seven a.m. and seven p.m., Monday through Friday (except national holidays), and eight a.m. and five p.m. Saturdays. Construction activity is prohibited at all other hours and on Sundays and national holidays. For purposes of this section, "construction" or "construction activity" shall include site preparation, demolition, grading, excavation, and the erection, improvement, remodeling or repair of structures, including operation of equipment or machinery and the delivery of materials associated with those activities.

This section also lists scenarios where the provisions of subsection A do not apply.

Section 17.48.273(A) specifies that the interior of apartments in the R-4 zone must not exceed 45 dBA CNEL. Part B states that mechanical equipment in this zone will be screened from view and not exceed a maximum of 50 dBA.

Section 17.44.020(K) regulates pool equipment to 40 dBA CNEL as measured from the property line. Part (L) regulations air conditioning equipment to 40 dBA CNEL as measured from the property line as well.

Section 17.96.040(A)12 states that small collection facilities shall not exceed noise levels of 55 dBA as measured at a residential property or 60 dBA as measured at other adjacent properties.

Section 17.80.070(A)16 states that the interior noise levels of condominiums will not exceed 40 dBA CNEL and sound insulation requirements.

Section 17.94.040(A)19 limits the noise levels of adult-oriented businesses to 55 dBA as measured on the property line.

5.0 Study Method and Procedure

The following section describes the noise modeling procedures and assumptions used for this assessment.

5.1 Noise Measurement Procedure and Criteria

Noise measurements are taken to determine the existing noise levels. A noise receiver or receptor is any location in the noise analysis in which noise might produce an impact. The following criteria are used to select measurement locations and receptors:

- Locations expected to receive the highest noise impacts, such as the first row of houses
- Locations that are acoustically representative and equivalent of the area of concern
- Human land usage
- Sites clear of major obstruction and contamination

MD conducted the sound level measurements in accordance with the City and Caltrans technical noise specifications. All measurements equipment meets American National Standards Institute (ANSI) specifications for sound level meters (S1.4-1983 identified in Chapter 19.68.020.AA). The following gives a brief description of the Caltrans Technical Noise Supplement procedures for sound level measurements:

- Microphones for sound level meters were placed 5-feet above the ground for all measurements
- Sound level meters were calibrated before and after each measurement
- Following the calibration of equipment, a windscreen was placed over the microphone
- Frequency weighting was set on “A” and slow response
- Results of the long-term noise measurements were recorded on field data sheets
- During any short-term noise measurements, any noise contaminations such as barking dogs, local traffic, lawnmowers, or aircraft flyovers were noted
- Temperature and sky conditions were observed and documented

5.2 SoundPLAN Noise Modeling

SoundPLAN acoustical modeling software was utilized to create existing (2023), future (2045) without Project (Adopted General Plan), and future (2045) with Project (Proposed General Plan) traffic noise level contours for the 15 segments analyzed in the Project’s traffic impact analysis provided by Kittelson & Associates, Inc. and 2 segments from Caltrans traffic census program. The total change in trips from 2023 to 2045 provided by Kittelson & Associates, Inc. was applied to those 2 segments. Model parameters included average daily traffic volumes, day/evening/night split, roadway classification, width, speed, and truck mix. All modeled roadways were assumed to have a “hard site”, as the majority of analysis occurs at 50 feet from the centerline of the road. Possible reductions in noise levels due to intervening topography and buildings were not accounted for in this analysis. Roadway modeling assumptions utilized for the technical study are provided in Table 8 and Table 9 and in Appendix C. A summary of the model parameters and REMEL adjustments is presented below.

- Roadway classification – (e.g., freeway, major arterial, arterial, secondary, collector, etc.),
- Roadway Active Width – (distance between the center of the outermost travel lanes on each side of the roadway)
- Average Daily Traffic Volumes (ADT), Travel Speeds, Percentages of automobiles, medium trucks, and heavy trucks
- Roadway grade and angle of view
- Site Conditions (e.g., soft vs. hard)
- Percentage of total ADT which flows each hour throughout a 24-hour period

5.3 FHWA Traffic Noise Prediction Model

The FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) was utilized to model and compare existing traffic noise levels to 2045 Future noise levels. The FHWA model arrives at the predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). Roadway modeling assumptions utilized for the technical study are provided in Table 8 and Table 9.

Table 8: Roadway Noise Modeling Parameters

Roadway	Segment	Existing ADT[1]	2045 No Project ADT[1]	2045 With Project ADT[1]	Speed[2]	Vehicle Mix[3]

6.0 Existing Noise Environment

6.1 General Land Use Noise

Existing land uses within the Project Area include single and multiple-family residential development, commercial, industrial, open space, and public facility land uses. Noise sources associated with existing land uses include residential maintenance, parking lot noise, heating, and cooling system (HVAC) noise, property maintenance noise, trash truck noise, loading and unloading noise, and recreational noise.

6.2 Noise Measurements

Three (3) long-term 24-hour noise measurements and ten (10) short-term 15-minute noise measurements were conducted throughout the Project Area to document the existing noise environment. Noise measurement locations are shown in Exhibit H.

6.2.1 Short-Term Noise Measurements

Ten short-term noise measurements (15-minute) were taken on May 24th, 2023, and May 26th, 2023, in order to document the daytime Leq level at different locations throughout the Project Area. Measured noise levels ranged between 57.4 and 72.3 dBA Leq. Vehicle noise associated with Hawthorne Blvd., Marine Ave., and Rosecrans Ave. noise were the primary sources of ambient noise. Noise measurement results are presented in Table 10. Field notes and meter output are provided in Appendix B.

Table 10: Short-Term Noise Measurement Summary

Noise Measurement Location	Approximate Location	Start Time	A-Weighted Sound Level (dBA)							
			Leq	Lmax	Lmin	L(2)	L(8)	L(25)	L(50)	L(90)
ST1	4317 Rosecrans Ave	5:37 PM	72.3	80.4	54.4	77.9	76.3	73.9	70.7	63.4
ST2	4221 Marine Ave	4:25 PM	69.7	82.7	53.7	74.9	73.1	70.9	68.3	61.8
ST3	15300 Hawthorne Blvd	4:03 PM	67.6	75.9	55.0	73.6	72.2	70.1	63.9	57.1
ST4	4241 Redondo Beach Blvd	2:48 PM	64.9	78.5	49.0	71.0	69.0	66.2	62.8	55.0
ST5	16607 Hawthorne Blvd	12:43 PM	66.4	79.4	51.1	72.2	70.6	67.9	64.4	55.7
ST6	16605 Osage Ave	3:15 PM	60.4	66.5	57.0	63.5	61.9	60.8	60.1	58.9
ST7	4521 W 147th St	5:14 PM	57.8	75.7	47.5	66.0	60.7	56.1	52.9	49.3
ST8	4604 Marine Ave	4:50 PM	66.0	82.7	50.6	71.8	70.1	66.8	62.8	56.3
ST9	16725 Firmona Ave	1:27 PM	57.4	72.8	42.4	64.3	61.3	57.9	54.0	45.7
ST10	4130 154th St	3:42 PM	59.9	78.2	47.2	68.8	63.0	57.5	53.2	48.9

6.2.2 Long-Term Noise Measurements

Three (3) long-term noise measurements (24 consecutive hours) were taken in order to document the Community Noise Equivalent Level (CNEL) at different locations throughout the Project Area. As shown in Table 11, the measured CNEL was 77.7 dBA CNEL at 55 feet from the centerline of Manhattan Beach

Blvd. and 120 feet from the centerline of San Diego Freeway, 74.8 dBA CNEL at 20 feet from the centerline of Freeman Ave and 170 feet from the centerline of San Diego Freeway, and 61.6 dBA CNEL at 50 feet from the railroad and 160 feet from the centerline of Artesia Blvd. The primary noise source was vehicle traffic. Table 11 also outlines the daytime (7 AM to 7 PM), evening (7 PM to 10 PM), and nighttime (10 PM to 7 AM) Leq levels at each location. These represent the average level over each time period (day/evening/night). Field notes and meter output are provided in Appendix B.

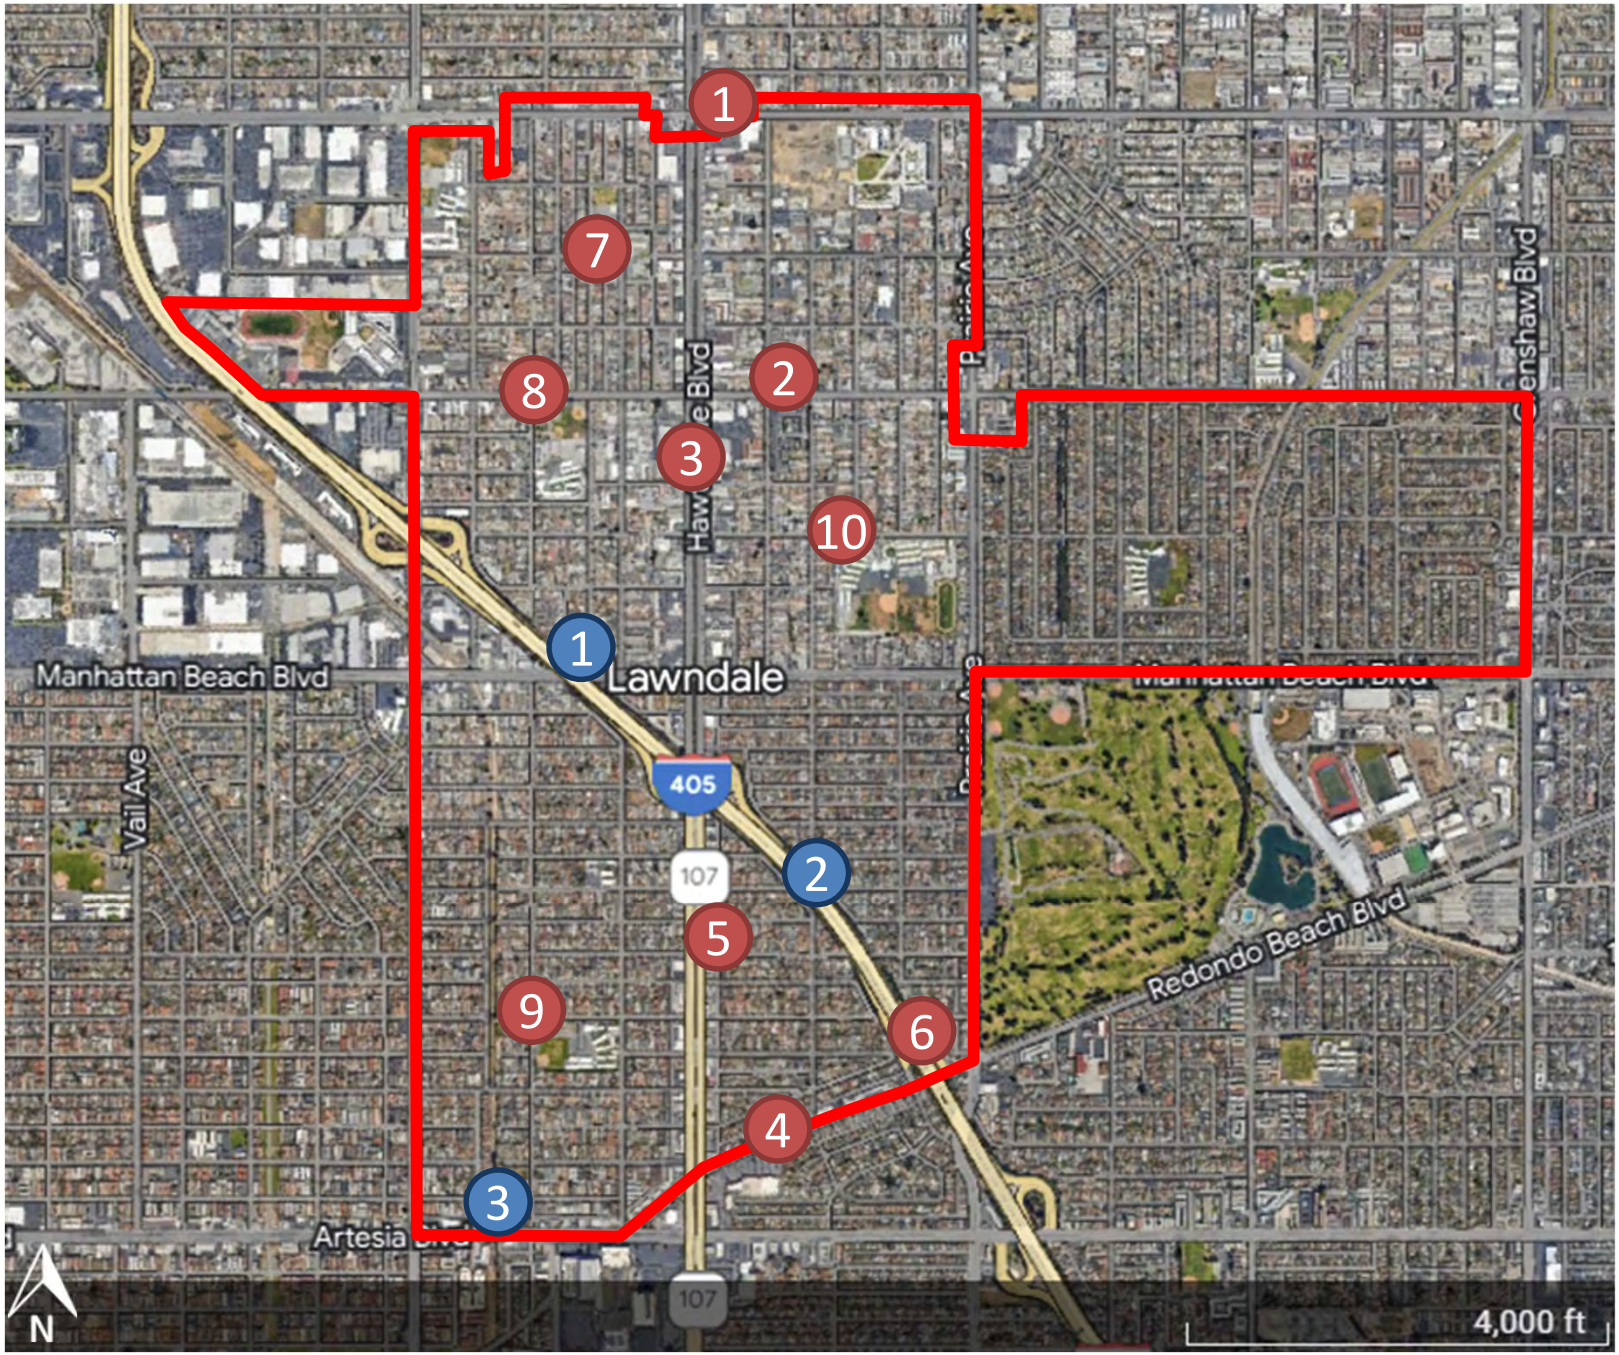

Table 11: Long-Term Noise Measurement Summary

Noise Measurement Location	Approximate Location	Date	Description	A-Weighted Sound Level (dBA)			
				Daytime Leq	Evening Leq	Nighttime Leq	CNEL
LT1	4538 Manhattan Beach Blvd	05/24/23-05/25/23	I-405 & Manhattan Beach Blvd traffic noise	72.8	72.8	70.4	77.7
LT2	16310 Freeman Ave	05/24/23-05/25/23	I-405 traffic noise	72.4	70.2	66.7	74.8
LT3	4626 W 173rd St	05/31/23-06/01/23	Artesia Blvd traffic noise	62.9	51.5	50.2	61.6

Notes:
dBA = A-weighted decibels
Leq = equivalent noise level
Lmax = maximum noise level
Lmin = minimum noise level
Ln = noise level exceeded n percent of the measurement period
24-hour duration

= Long-Term Monitoring Location

6.3 Existing Noise Modeling

The primary sources of noise in Lawndale are transportation-related noises. Major roadways create ambient noise levels that affect the overall quality of life in the community. Modeled existing noise levels provided in Table 12 and on Exhibit I confirm that there are currently sensitive land uses in the project area that are exposed to noise levels above 65 dBA CNEL.

It should be noted that the modeled noise contours do not take into account factors such as existing buildings, walls, etc., that may reduce or, in some cases, amplify or reduce noise sources. The model also assumes hard site, when in reality, some of the City has soft site ground such as grass or dirt, which will reduce the noise levels. Measured noise levels provided in Tables 12 and 13 do take into account existing structures as well as other noise sources.

Those areas in the City that currently experience sound levels greater than 65 dBA CNEL are typically near major vehicular traffic corridors. Traffic noise levels typically depend on three factors: (1) the volume of traffic, (2) the average speed of traffic, and (3) the vehicle mix (i.e., the percentage of trucks versus automobiles in the traffic flow). Vehicle noise includes noises produced by the engine, exhaust, tires, and wind generated by taller vehicles. Other factors that affect the perception of traffic noise include the distance from the highway, terrain, heavy vegetation, and natural and structural obstacles. While tire noise from automobiles is generally located at ground level, some truck noise sources may emanate from 12 feet or more above the ground.

Table 12: Existing Exterior Noise Levels Along Roadways

Roadway	Segment Limits	CNEL, dBA @50 ft[4]	Distance to Contour (feet)			
			70 dBA	65 dBA	60 dBA	55 dBA
Inglewood Ave	Marine Ave to 153rd Pl	73.3	107	338	1,068	3,378
Inglewood Ave	I-405 S Entrance to Manhattan Beach Blvd	75.4	172	544	1,720	5,439
Inglewood Ave	Manhattan Beach Blvd to Artesia Blvd	75.5	178	562	1,777	5,619
Manhattan Beach Blvd	Inglewood Ave to Hawthorne Blvd	73.0	99	313	989	3,127
Artesia Blvd	Inglewood Ave to Grevillea Ave	73.9	123	390	1,234	3,901
Hawthorne Blvd	Marine Ave to Manhattan Beach Blvd	71.3	136	430	1,361	4,303
Hawthorne Blvd	Manhattan Beach Blvd to 160th St	71.6	145	460	1,455	4,600
Hawthorne Blvd	162nd St to 166th St	72.6	184	582	1,839	5,816
Hawthorne Blvd	169th St to Redondo Beach Blvd	72.3	170	538	1,703	5,384
Rosecrans Ave	Hawthorne Blvd to Prairie Ave	75.3	168	531	1,678	5,308
Redondo Beach Blvd	Hawthorne Blvd to Prairie Ave	71.8	75	237	749	2,369
Manhattan Beach Blvd	Freeman Ave to Prairie Ave	72.0	78	248	784	2,480
Prairie Ave	Marine Ave to Manhattan Beach Blvd	73.0	100	316	999	3,160
Manhattan Beach Blvd	Prairie Ave to Crenshaw Blvd	70.7	59	187	591	1,867
Crenshaw Blvd	Marine Ave to Manhattan Beach Blvd	71.9	78	246	778	2,461
San Diego Freeway	West of Hawthorne Blvd	85.4	3,480	11,003	34,795	110,033
San Diego Freeway	East of Hawthorne Blvd	85.2	3,315	10,483	33,152	104,835
Notes:						

Roadway	Segment Limits	CNEL, dBA @50 ft[4]	Distance to Contour (feet)			
			70 dBA	65 dBA	60 dBA	55 dBA

1) Exterior noise levels calculated at 5-feet above ground.
2) Noise levels calculated from centerline of subject roadway.
3) Contour distances do not take into account potential noise reduction from existing barriers such as buildings, walls or berms as a worst-case scenario for planning screening purposes. Overall levels are likely lower at sensitive receptors.
4) Hawthorne Blvd & San Diego Freeway were calculated at 100 ft away.

Exhibit I

Existing Roadway Noise Level Contours (CNEL)

6.3 Existing Airport/Aircraft Noise

There are no airports located within the Project Area, and the Project Area is not located within any airport noise contours. The closest airport to the Project Area is the Hawthorne Municipal Airport located approximately 1.4 miles northeast of the Project Area. The Los Angeles International Airport is 2.5 miles from the Project Are. The noise contours associated with these airports do not encroach into the Project Area.

6.4 Existing Vibration Sources in the Project Area

The main sources of vibration in the project area are related to vehicles, construction, and railway. Typical roadway traffic, including heavy trucks, rarely generates vibration amplitudes high enough to cause structural or cosmetic damage. However, there have been cases in which heavy trucks traveling over potholes or other discontinuities in the pavement have caused vibration high enough to result in complaints from nearby residents. These types of issues typically can be resolved by smoothing the roadway surface (Caltrans 2020).

Construction activities that produce vibration that can be felt by adjacent land uses include the use of vibratory equipment, large bulldozers, and pile drivers. The primary source of vibration during construction is usually from a bulldozer. A large bulldozer has a peak particle velocity of 0.089 inches per second (87 VdB) at 25 feet.

One freight rail line runs through the City of Lawndale. According to the Federal Railroad Administration Crossing Inventory Forms, there are 2 daytime and 2 nighttime freight trains that pass through the city each day at a maximum of 20 MPH. Existing buildings are about 50 feet from the centerline of the railway. Therefore, the expected maximum vibration at these buildings is 76 VdB (0.025 inches per second).

7.0 Future Noise Environment, Impacts, and Mitigation

This assessment analyzes future noise impacts to and from the proposed Project and compares the results to the City of Lawndale General Plan Policies and Noise Standards. The analysis details the estimated noise levels associated with traffic from adjacent roadways and on-site stationary noise sources. Each future noise source related to the Project was evaluated in light of applicable City of Lawndale General Plan policies and ordinances, and programmatic mitigation measures are provided as applicable.

7.1 Transportation Noise and Vibration

Transportation noise includes noise from aircraft, railways, and roadways. The Project Area is outside of any airport 65 dBA CNEL contours and therefore, there is no aircraft impact.

7.1.1 Railway Vibration

One rail line runs through the City of Lawndale. The proposed Project could facilitate the construction of low-density residential projects adjacent to the existing railroad. With regards to vibration impacts on new development near railroads, human disturbance is the primary concern. It is extremely rare for vibration levels from trains passing to result in structural damage to buildings. In addition, buses and other transit vehicles are not anticipated to generate excessive vibration levels that would disturb sensitive receptors because these vehicles are traveling at lower speeds and do not generate substantial vibrations.

The FTA's *Transit Noise and Vibration Impact Assessment* document provides recommended ground-borne vibration criteria for general environmental assessments. The vibration criteria vary according to the sensitivity of the land use and the frequency of vibration events (i.e., number of trains passing by the sensitive land use), as shown in Table 13.

Table 13: FTA Ground-Borne Vibration Impact Criteria for General Assessment

Land Use Category/Type	Impact Level (Velocity Decibels)		
	Frequent Events	Occasional Events	Infrequent Events
Category 1 – Buildings with sensitive equipment	65 VdB	65 VdB	65 VdB
Category 2 – Buildings where people sleep	72 VdB	75 VdB	80 VdB
Category 3 – Institutional buildings	75 VdB	78 VdB	83 VdB
Source: FTA 2018			

There are an estimated 4 trains passing per day, according to the 2021 U.S. Dot Crossing Inventory Form. For infrequent events (i.e., less than 30 trains passing by in one day), the criteria generally vary between 65 VdB for buildings where vibration would interfere with interior operations (e.g., highly sensitive research facilities, hospitals) to 80 VdB for residences and buildings where people normally sleep, to 83 VdB for land uses with primarily daytime use. Highly sensitive research facilities and hospitals are not

anticipated under the proposed Project, and therefore, the 65 VdB threshold is not considered further in this analysis. The FTA's guidance document contains generalized ground surface vibration curves derived from vibration measurements of transit systems in North America (FTA 2018, Figure 6-4). The freight curve assumes the freight is traveling at 50 mph. However, the U.S. Dot Crossing Inventory Form states that the train's maximum timetable speed is 20 mph. According to Table 6-11 in the FTA manual, there is an 8 VdB decrease for a vehicle moving 20 mph compared to 50 mph. Based on these vibration prediction curves and the speed adjustment, the vibration levels will be 80 VdB at residential developments approximately 30 feet away from the passenger rail line centerline and will not exceed the FTA's recommended threshold of 80 VdB for residences. Therefore, future residential developments along the railway will not be exposed to excessive transit train vibration levels that exceed FTA-recommended vibration criteria of 80 VdB if the development is a minimum of 30 feet away from the railroad centerline and the impact is less than significant in accordance with proposed action PS-6h.

7.1.2 Vehicle Traffic Noise

The primary noise source in the Project Area will continue to be vehicle traffic. Future traffic noise level contours are presented in Exhibits I and J. Tables 14 and 15 show the future noise levels at a distance of 50 feet from the centerline of studied roadways by the year 2045 for No Project and With Project. The distances to the 55, 60, 65, and 70 dBA CNEL noise contours are also provided.

Table 14: 2045 No Project Traffic Noise Levels (dBA, CNEL)

Roadway	Segment Limits	CNEL, dBA @50 ft[4]	Distance to Contour (feet)			
			70 dBA	65 dBA	60 dBA	55 dBA
Inglewood Ave	Marine Ave to 153rd Pl	73.2	105	332	1051	3325

Manhattan Beach Blvd	Prairie Ave to Crenshaw Blvd	71.2	66	208	658	2080
Crenshaw Blvd	Marine Ave to Manhattan Beach Blvd	72.8	95	300	950	3004
San Diego Freeway	West of Hawthorne Blvd	85.7	3712	11740	37124	117397
San Diego Freeway	East of Hawthorne Blvd	85.5	3197	10111	31973	101107
Notes: 1) Exterior noise levels calculated at 5 feet above ground. 2) Noise levels calculated from centerline of subject roadway. 3) Contour Distances do not take into account potential noise reduction from existing barriers such as buildings, walls, or berms as a worst-case scenario for planning screening purposes. Overall levels are likely lower at sensitive receptors. 4) Hawthorne Blvd & San Diego Freeway were calculated at 100 ft away.						

As shown in Tables 14 and 15 and Exhibit I, J, and K, by the year 2045, existing land uses adjacent to the studied roadways will be exposed to noise levels that exceed the City's exterior standards of 65 dBA CNEL for sensitive uses. A significant impact would occur if the Project resulted in levels higher than 65 dBA CNEL and increased the overall roadway noise level by 3 dBA CNEL, which is a noticeable change in noise level.

Compared to existing traffic noise levels, 2045 without Project traffic volumes are expected to be up to 0.8 dBA CNEL louder than existing ambient noise levels at existing land uses and will result in inaudible increases in ambient noise along the analyzed roadways (see Table 16).

Compared to existing traffic noise levels, 2045 with Project traffic volumes are expected to be up to 0.9 dBA CNEL louder than existing ambient noise levels at existing land uses and will result in inaudible increases in ambient noise. Implementation of the Project will therefore result in a less than significant impact to roadway noise levels.

Table 16: Change in Noise Along Roadways (dBA, CNEL @ 50')

Roadway	Segment	Existing	2045 No Project		2045 With Project	
		CNEL @ 50' dBA[3]	CNEL @ 50' dBA	Change in Noise Level	CNEL @ 50' dBA	Change in Noise Level
Inglewood Ave	Marine Ave to 153rd Pl	73.3	73.2	-0.1	73.3	0.0

San Diego Freeway	East of Hawthorne Blvd	85.2	85.2	0.0	85.5	0.3

Notes:
1) Existing and Future traffic volumes compiled by Kittelson & Associates, Inc. 2023.
2) An impact would occur if the Project increased the roadway segment level by 3 dB or more (an audible difference) and resulting in a future level above 65 dBA CNEL.
3) Hawthorne Blvd & San Diego Freeway were calculated at 100 ft away.

Exhibit J

2045 No Project Noise Contours (CNEL)

Exhibit K

2045 With Project Noise Contours (CNEL)

Where proposed land uses are expected to be exposed to noise levels that exceed the land use compatibility criteria in Exhibit F, impacts can be mitigated to a level that is less than significant with the implementation of noise control measures, such as relocating residential outdoor recreational areas away from 60 dBA CNEL or greater areas or shielding outdoor areas using noise barriers. Per the General Plan, future development associated with implementation of the proposed Project requires a noise study prior to issuance of a grading permit and mitigation implemented if noise levels exceed normally acceptable levels as outlined in Exhibit F. For residential developments, the study must ensure that interior levels in livable areas do not exceed 45 dBA CNEL. The impact is less than significant with proposed policies PS-6.1, PS-6.2, PS-6.3, PS-6.4, and proposed action PS-6c.

7.2 Stationary Noise

Implementation of the Project could result in the future development of land uses that generate noise levels in excess of applicable City noise standards for non-transportation noise sources as outlined in Section 4.3.3. While the Project does not explicitly propose any new noise-generating uses, Project implementation would allow for the development of mixed-uses, increased residential development at higher densities, and new commercial development, which may result in new noise sources. Specific development projects and the details of future noise-generating land uses that may be located in the Project Area in the future are not known at this time. Additionally, noise from existing stationary sources, as identified in the Existing Settings Section, would continue to impact noise-sensitive land uses in the vicinity of the noise sources.

While no specific projects are proposed under the Project, changes in land use may allow for more intensive noise-generating uses in closer proximity to noise-sensitive uses. Where this occurs, detailed noise studies would be required to ensure that noise control measures are implemented into the project design. Such measures could include the redesign of stationary noise sources away from sensitive uses, construction of sound walls or berms between noise generating uses and sensitive uses, using buildings to create additional buffer distance and screening, or other site design measures to ensure that non-transportation (stationary) noise sources do not cause exterior and interior noise levels to exceed allowable standards at sensitive receptors.

The impact is less than significant with the implementation of the Municipal Code and proposed policies PS-6.3, PS-6.4, PS-6.8, and proposed actions PS-6c, PS-6d, and PS-6e.

7.3 Construction Noise

The degree of construction noise may vary for different projects within the scope of the proposed Project and also vary depending on the construction activities. Noise levels associated with the construction will vary with the different phases of construction. Construction must not occur between the hours of 7:00 p.m. and 7:00 a.m. on weekdays, between the hours of 5:00 p.m. and 8:00 a.m. on Saturdays, or any time on Sunday or a Federal holiday per Section 8.20.070(A) of the Lawndale Municipal Code. Construction noise is exempt from the noise ordinance outside of those times.

The Environmental Protection Agency (EPA) has compiled data regarding the noise-generated characteristics of typical construction activities. The data is presented in Table 17. These noise levels

would diminish rapidly with distance from the construction site at a rate of 6 dBA per doubling of distance. For example, a noise level of 86 dBA measured 50 feet from the noise source would reduce to 80 dBA at 100 feet. At 200 feet from the noise source, the noise level would reduce to 74 dBA. At 400 feet, the noise source would reduce by another 6 dBA to 68 dBA.

Table 17: Typical Construction Noise Levels

Equipment Powered by Internal Combustion Engines	
Type	**Noise Levels (dBA) at 50 Feet**
Earth Moving	
Compactors (Rollers)	73 - 76
Front Loaders	73 - 84
Backhoes	73 - 92
Tractors	75 - 95
Scrapers, Graders	78 - 92
Pavers	85 - 87
Trucks	81 - 94
Materials Handling	
Concrete Mixers	72 - 87
Concrete Pumps	81 - 83
Cranes (Movable)	72 - 86
Cranes (Derrick)	85 - 87
Stationary	
Pumps	68 - 71
Generators	71 - 83
Compressors	75 - 86
Impact Equipment	
Saws	71 - 82
Vibrators	68 - 82
Notes: Source: Reference Noise Levels from the Environmental Protection Agency (EPA)	

7.3.1 Construction Related Traffic

Individual projects within the scope of the Project would result in short-term noise impacts associated with construction activities. Two types of short-term noise impacts could occur during construction activities. First, construction crew commute and the transport of construction equipment and materials to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. Truck traffic associated with project construction should be limited to within the permitted construction hours, as listed in the City's Municipal Code Section 8.20.070(A). Although there would be a relatively high single-event noise exposure potential at a maximum of 87 dBA Lmax at 50 ft from passing trucks, causing possible short-term intermittent annoyances, the effect on ambient noise levels would be less than 1 dBA when averaged over one hour or 24 hours. In other words, the changes in noise levels over 1 hour or 24 hours attributable to passing trucks would not be perceptible to the normal human ear. The impact is less than significant with the implementation of section 8.20.070(A) of the Municipal Code, proposed policy PS-6.9, and proposed action PS-6f.

7.3.2 On-Site Construction Activities

Site preparation phase, which includes grading and paving, tends to generate the highest noise levels since the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backhoes, bulldozers, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings. Site-specific construction activities associated with future development is expected to require the use of scrapers, bulldozers, motor graders, and water and pickup trucks. The maximum noise level generated by each scraper is assumed to be approximately 87 dBA Lmax at 50 ft from the scraper in operation. Each bulldozer would also generate approximately 85 dBA Lmax at 50 ft. The maximum noise level generated by the sound sources with equal strength increases the noise level by 3 dBA. Noise reduction potential will be project and site-specific. Construction noise would be an impact if construction occurred outside of the hours outlined in Section 8.20.070(A) of the Lawndale Municipal Code. Potential impacts would be site-specific, depending on the equipment used and distances to sensitive receptors. The impact is less than significant with the implementation of section 8.20.070(A) of the Municipal Code, proposed policy PS-6.9, and proposed action PS-6f.

7.4 Groundborne Vibration

The main sources of vibration in the project area are related to vehicles and construction. Typical roadway traffic, including heavy trucks, rarely generates vibration amplitudes high enough to cause structural or cosmetic damage. However, there have been cases in which heavy trucks traveling over potholes or other discontinuities in the pavement have caused vibration high enough to result in complaints from nearby residents. These types of issues typically can be resolved by smoothing the roadway surface (Caltrans 2020).

7.4.1 On-Site Construction Activities

Construction activities that produce vibration that can be felt by adjacent land uses include the use of vibratory equipment, large bulldozers, and pile drivers. The primary sources of vibration during construction are usually vibratory rollers and large bulldozers. As shown in Table 18, a vibratory roller has a peak particle velocity (inches/second) of 0.21 and a large bulldozer has a peak particle velocity of 0.089 (inches per second) at 25 feet. The use of pile driving equipment can generate a peak particle velocity of 1.5 (inches per second) depending on the size and model.

Table 18: Vibration Source Levels for Construction Equipment

Equipment	Peak Particle Velocity (inches/second) at 25 feet	Approximate Vibration Level LV (VdB) at 25 feet
Pile driver (impact)	1.518 (upper range)	112
	0.644 (typical)	104
Pile driver (sonic)	0.734 upper range	105
	0.170 typical	93

Table 18: Vibration Source Levels for Construction Equipment

Equipment	Peak Particle Velocity (inches/second) at 25 feet	Approximate Vibration Level LV (VdB) at 25 feet
Clam shovel drop (slurry wall)	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory Roller	0.21	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

Source: Transit Noise and Vibration Impact Assessment, Federal Transit Administration, May 2006.

The California Department of Transportation has published one of the seminal works for the analysis of ground-borne noise and vibration relating to transportation- and construction-induced vibrations and, although the Project is not subject to these regulations, it serves as a useful tool to evaluate vibration impacts (California Department of Transportation, 2013). Table 19 provides maximum PPV levels (inches/second) to be used to determine if groundborne vibration may result in damage, depending on the type of structure. When evaluated in light of the estimated groundborne vibration levels presented in Table 18, it can be determined that construction activities in the project area have the potential to result in significant impacts related to groundborne vibration associated with construction activities. These impacts can be avoided by requiring vibration impact studies when construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings as required in proposed policy PS-6.14 and proposed action PS-6k.

Table 19: Guideline Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (inches/second)	
	Transient Sources	Continuous/Frequent Intermittent Source
Extremely fragile historic buildings, ruins, ancient monuments	0.1	0.1
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.3
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Source: California Department of Transportation and Construction Vibration Guidance Manual. April 2020.

Note: transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

8.0 CEQA Analysis

The California Environmental Quality Act Guidelines (Appendix G) establishes thresholds for noise impact analysis as presented below:

(a) Would the project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise Code, or applicable standards of other agencies?

Transportation Noise Impacts

Traffic noise will be significant if levels are increased by more than 3 dBA to levels above 65 dBA CNEL in areas with sensitive uses. Compared to existing traffic noise levels, 2045 plus Project traffic volumes are expected to be up to 0.9 dBA CNEL louder than existing ambient noise levels at existing land uses and will not result in substantial increases in ambient noise along the analyzed roadways (see Table 16).

Implementation of the proposed Project will result in less than significant impacts related to exceedances of the land use compatibility criteria. ***Where existing land uses will be impacted, the impact would be less than significant. Where proposed land uses are expected to be exposed to noise levels that exceed the 65 dBA CNEL land use compatibility criteria, impacts can be mitigated to "less than significant" with implementation of proposed policies PS-6.1, PS-6.2, PS-6.3, PS-6.4, and proposed action PS-6c.***

Stationary Noise Sources

Stationary noise will be significant if it exceeds the levels outlined in the Lawndale Municipal Code as outlined in Section 4.3.3. Implementation of the Project may result in stationary noise impacts from future uses. Implementation of good land use planning and policies and actions can minimize noise impacts related to these sources by avoiding the placement of noise generating equipment near noise-sensitive land uses and where unavoidable, include design measures to the degree practical to avoid violating the noise criteria presented in Section 4.3.3. ***Stationary noise impacts can be mitigated to "less than significant" with implementation of Lawndale Noise Ordinance, proposed policies PS-6.3, PS-6.4, PS-6.8, and proposed actions PS-6c, PS-6d, and PS-6e.***

Construction Noise and Vibration

Construction noise will be significant if construction occurs outside of the hours specified in Section 8.20.070(A) of the Lawndale Municipal Code. The potential impact is site-specific and depends on the construction equipment used and distance to adjacent sensitive receptors. Implementation of the proposed Project could result in short-term noise impacts associated with construction activities. Two types of short-term noise impacts could occur during construction activities, on-site and off-site.

Construction crew commute and the transport of construction equipment and materials to the site for the proposed Project would incrementally increase noise levels on access roads leading to the site. Truck traffic associated with project construction should be limited to within the permitted construction hours,

as listed in the City's Municipal Code. Although there would be a relatively high single-event noise exposure potential at a maximum of 87 dBA Lmax at 50 ft from passing trucks, causing possible short-term intermittent annoyances, the effect on ambient noise levels would be less than 1 dBA when averaged over one hour or 24 hours. In other words, the changes in noise levels over 1 hour or 24 hours attributable to passing trucks would not be perceptible to the normal human ear. ***Therefore, short-term construction-related impacts associated with worker commute and equipment transport on local streets leading to the project site would result in a less than significant impact on noise-sensitive receptors along the access routes. No mitigation is required.***

The site preparation phase of on-site construction activities, which includes grading and paving, tends to generate the highest noise levels since the noisiest construction equipment is earthmoving equipment. Earthmoving equipment includes excavating machinery such as backhoes, bulldozers, and front loaders. Earthmoving and compacting equipment includes compactors, scrapers, and graders. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings. Site-specific construction activities associated with future development are expected to require the use of scrapers, bulldozers, motor graders, and water and pickup trucks. The maximum noise level generated by each scraper is assumed to be approximately 87 dBA Lmax at 50 ft from the scraper in operation. Each bulldozer would also generate approximately 85 dBA Lmax at 50 ft. The maximum noise level generated by the sound sources with equal strength increases the noise level by 3 dBA. Noise reduction potential will be Project and site-specific. ***Implementation of Section 8.20.070(A) of the Municipal Code, proposed policy PS-6.9, and proposed action PS-6f during site-specific projects will reduce the impact to less than significant.***

b) Generate excessive ground-borne vibration or ground-borne noise levels?
Construction vibration within the Project Area is not anticipated to be significant unless an individual development uses pile driving or vibratory rollers. These impacts can be avoided by requiring vibration impact studies when construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. ***This impact would be less than significant with the implementation of proposed policy PS-6.14 and action PS-6k.***

EXECUTIVE SUMMARY

The City of Lawndale is updating its General Plan, which will guide the City's development, growth, and conservation through land use objectives and policy guidance. While no specific development projects are proposed as part of the Lawndale General Plan Update , the General Plan Update will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. The buildout analysis assumes a 20-year planning horizon, with 2045 being the full buildout year of the General Plan Update. The study area is comprised of city boundaries and the city's sphere of influence. The Hawthorne Boulevard Specific Plan (HBSP) is also being updated and incorporated in this analysis. The proposed general plan is referred to in this study as "General Plan Update" or "Project", and the project area is referenced as "General Plan Planning Area" or "the Planning Area". The adopted General Plan is referred in this study as "Existing General Plan". This transportation impact study was prepared to provide an evaluation of the potential transportation impacts from the Project.

VMT IMPACT ASSESSMENT

Per current CEQA requirements, Vehicle-Miles Traveled (VMT) is the most appropriate metric to evaluate a project's transportation impact. Since the City has not officially adopted VMT thresholds and guidelines for the preparation of transportation studies, this analysis relies on guidance from the California Governor's Office of Planning and Research (OPR) technical advisory to evaluate CEQA guidelines for VMT. The following VMT thresholds apply as project impacts:

- The general plan's residential generated VMT under future conditions would be compared to 15% below the baseline (existing) region-wide VMT/capita average to determine impact significance.
- The general plan's office generated VMT under future conditions would be compared to 15% below the baseline(existing) region-wide VMT/employee average to determine impact significance.

A significant cumulative VMT impact would occur if the Project threshold is exceeded, or if the Project is determined to be inconsistent with the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategies (RTP/SCS). The 2020 RTP/SCS describes how the region can attain the GHG emission-reduction targets set by CARB by achieving a 19 percent reduction by 2035 compared to the 2005 level.

The following scenarios were reviewed and/or developed to analyze potential VMT impacts with the Project:

- 2023 Existing Conditions: corresponds to the existing circulation network and 2023 land use profile.
- 2045 No Project: corresponds to the future year 2045 conditions under currently adopted plan. It consists of the Existing General Plan network and land use adopted in 1992.
- 2045 Project: corresponds to the future year 2045 conditions with maximum development potential with the General Plan Update that is being proposed.

Project VMT Impact Assessment

The projected VMT impacts due to the Project were calculated using the Southern California Association of Governments (SCAG) regional travel model, the results of which are shown in Table 1.

Table 1: Summary of VMT Impacts

Units	2023 Existing Conditions	2045 No Project	2045 Project
Capita			
VMT Per Capita	9.87	8.87	9.19
Impact Threshold[1]	N/A	N/A	10.89
EXCEEDS THRESHOLD	**N/A**	**N/A**	**NO**
Employee			
VMT Per Employee	16.26	15.05	14.78
Impact Threshold[1]	N/A	N/A	**15.41**
EXCEEDS THRESHOLD	**N/A**	**N/A**	**NO**
Total Regional VMT			
Los Angeles County	339,797,977	358,489,475	358,820,209

Source: Kittelson and Associates, 2023.

[1] Impact threshold is 15% below Los Angeles County 2023 base year value

2 Refer to Appendix A for detailed VMT summary showing results for the SCAG region, Los Angeles County and Lawndale.

N/A = not applicable.

Future conditions with the Project would result in decreased VMT per employee and VMT per capita in comparison to 2023 existing conditions. Comparing the Project to 2045 No Project conditions , there would be an increase in VMT per capita and a decrease in VMT per employee; however, the impact threshold would not be exceeded for the Project. Therefore, with respect to consistency with CEQA Guidelines Section 15064.3, subdivision (b), the impact of the Project would be less than significant.

Cumulative VMT Impact Assessment

As noted above, the project impacts in VMT would be less than significant, as the Project's VMT per capita and VMT per employee would not exceed applicable thresholds. The project would also be consistent with the RTP/SCS as it's increasing the local and regional housing supply to meet regional housing needs and locating housing in a transit-rich area. Therefore, cumulative impacts would be less than significant and no mitigation would be required.

POTENTIAL CONFLICT WITH A PROGRAM, PLAN, ORDINANCE, OR POLICY ADDRESSING THE CIRCULATION SYSTEM

Relevant City circulation system policies, programs, and plans were reviewed to confirm consistency and that the Project would not preclude implementation of existing plans. Overall, it was determined the Project would not conflict with any approved transportation plans and programs. Moreover, it was determined that there would be a less than significant impact to emergency vehicle access.

POTENTIAL INCREASE IN HAZARDS

The Project does not propose any specific development projects. The Project will accommodate future growth in the City, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area.

Prior to implementation, any improvements would be subject to a detailed review and future consideration by the City's Public Works engineering staff and other relevant City agencies. An evaluation of the roadway alignments, intersection geometrics, and traffic control features would be needed at the project design level. Roadway improvements would have to be made in accordance with the City's circulation plan and

roadway design guidelines and meet design guidelines in the California Manual of Uniform Traffic Control Devices and the Caltrans Roadway Design Manual.

Overall, implementation of the Proposed General Plan would not result in hazardous conditions. As individual projects and circulation improvements would undergo review by Public Works and Planning departments for approval and construction and would have to meet design guidelines, no significant impacts would occur.

PURPOSE OF TRANSPORTATION STUDY

The purpose of this transportation study is to assess potentially significant impacts resulting from the implementation of the City of Lawndale General Plan Update project (Project) on the transportation system, and to identify measures to mitigate those impacts. The study also serves as the basis for the transportation component of the Plan's Environmental Impact Report (EIR). This study includes a review of the following:

- Assessment of the existing circulation conditions, including roadways, pedestrian, bicycle, and transit facilities.
- Review of consistency with existing City programs, plans, ordinances, and policies related to pedestrian and bicyclists, and transit facilities.
- Assessment of the Project's Vehicle Miles Traveled (VMT) impact compared to the City's adopted thresholds.
- Assessment of impacts and mitigations related to geometric design and emergency access.

PROJECT CHARACTERISTICS

The City of Lawndale is preparing a comprehensive update to its General Plan, which will guide the City's development, growth, and conservation through land use objectives and policy guidance. The general plan update is referred to in this study as "General Plan Update" or "Project" The City will implement the project by requiring development, infrastructure improvements, and other projects to be consistent with its policies, and by implementing the actions included in the General Plan Update.

Figure 1 presents the General Plan Planning Area (Planning Area) and the proposed General Plan Land Use Map. The Planning Area includes the current city limits as well as an extended Sphere of Influence area.

While no specific development projects are proposed as part of the Project, it will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. The transportation analysis is based on a 20-year planning horizon, and 2045 is assumed to be the full buildout year of the General Plan (the point at which all parcels in the City are developed according to their General Plan land use designation).

The Hawthorne Boulevard Specific Plan (HBSP) oversees the development of the Hawthorne Boulevard corridor and the north side of both Artesia Boulevard and Redondo Beach Boulevard. The Specific Plan was originally adopted in June 1999 and has undergone various amendments since its adoption. The Specific Plan includes General Commercial, Downtown Commercial, Public Facilities and Multi-Family Medium land use designations. Hawthorne Boulevard serves as the City's primary transportation route, corridor of economic activity, and the community focal point. The HBSP acts as a tool for implementing the goals and policies of the General Plan through the regulation of use, density, height, and other design standards to achieve the overall vision for the area. The HBSP is incorporated into this analysis.

DEVELOPMENT POTENTIAL

Table 2 provides a summary of the buildout potential associated with the General Plan Update Land Use Map compared to existing on-the-ground conditions by land use designation. As shown in Table 2, buildout of the General Plan could yield a total of up to 15,405 housing units, a population of 47,430 people, approximately 5.35 million square feet of non-residential building square footage, and 9,208 jobs within the Planning Area. Figure 2 shows the land use change map. As shown in Table 3, this represents increases over existing conditions of up to approximately 3,942 new housing units, 9,482 people, 808,000 square feet of new non-residential building square footage, and 2,738 jobs.

The Hawthorne Boulevard Specific Plan (HBSP) would account for 90 percent of the proposed growth in residential units within the planning area, 38 percent of the growth in non-residential square footage, and 56 percent of the growth in jobs.

CIRCULATION AND PARKING

The General Plan Mobility Element correlates closely with the Land Use Element and identifies the general locations and extent of existing and proposed major thoroughfares, transportation routes, and alternative transportation facilities necessary to support a multi-modal transportation system. This Element is intended to facilitate the movement of people and goods throughout Lawndale by a variety of transportation modes, including vehicles, bicycles, pedestrians, and transit.

ROADWAYS

The proposed General Plan Mobility Element includes a map of proposed vehicular roadway classifications, as shown in Figure 3. The proposed General Plan Mobility Element also includes existing and proposed bicycle networks, as shown in Figure 4. The bicycle facilities have been proposed through several documents and plans, including the South Bay Bicycle Master Plan, the Los Angeles County Bicycle Master Plan (2012), and the LA Metro Bicycle Transportation Strategic Plan (2006) and are incorporated in the proposed Mobility Plan. Figure 5 shows the map of the Local Travel Network to promote micro-mobility modes through the City of Lawndale. The Project is not proposing roadway expansions such as adding through lanes to existing roads.

The Los Angeles Metropolitan Transportation Authority (Metro) has plans to connect more of the South Bay by extending the C rail transit line (Green) from Redondo Beach Station to the new Torrance Transit Center (see Figure 6). Metro prepared a Draft Environmental Impact Report (DEIR) for public review from January 26 to March 27, 2023. The DEIR evaluated three alignments: Metro ROW Elevated/At-Grade Alignment, Trench Option, and Hawthorne Option. Both the Metro ROW and Trench Option would utilize a Metro-owned railroad corridor generally located parallel to Condon Avenue though the western portion of the city, whereas the Hawthorne Option would operate in an elevated alignment located within the median of Hawthorne Boulevard. Metro is anticipated to make a recommendation on its preferred alignment in Summer 2023 based on findings from the DEIR, public comments made during the comment period, technical analysis, stakeholder input, and other factors such as cost, ridership, and project objectives. While three alignments are being considered, this transportation analysis assumes the at-grade alignment within the Metro ROW, consistent with assumptions used by SCAG for the Regional Transportation Plan.

REGULATORY FRAMEWORK

The regulatory framework applicable to the Project includes state, regional and local plans pertinent to the City of Lawndale and the California Environmental Quality Act (CEQA) review process for transportation and circulation.

STATE REGULATIONS

California Department of Transportation

The California Department of Transportation (Caltrans) manages the operation of state highways and is the primary state agency responsible for transportation issues. One of its duties is the construction and maintenance of the state highway system. Caltrans approves the planning, design, and construction of improvements for all state-controlled facilities, including I-405, and the associated interchanges. Freeway segments, freeway ramps and intersections associated with freeway on- and off-ramps fall under Caltrans jurisdiction. Hawthorne Boulevard is under Caltrans jurisdiction, however the City of Lawndale maintains it within City limits.

Caltrans has developed procedures to determine if state-controlled facilities require improvements. For projects that may physically affect facilities under its administration, Caltrans requires encroachment permits before any construction work may be undertaken. For projects that would not physically affect facilities but may influence traffic flow and operational deficiencies at such facilities, Caltrans may recommend measures to address adverse effects from traffic caused by such projects. Caltrans also prepares comprehensive planning documents, including Corridor System Management Plans and Transportation Concept Reports, which are long-range planning documents that establish a planning concept for state facilities.

Caltrans updated its guidance in 2020 to include metrics to evaluate transportation impacts based on vehicle miles traveled (VMT) and no longer sets a minimum acceptable level of service (LOS) for its facilities. Based on the Caltrans *Vehicle Miles Traveled-Focused Transportation Impact Study Guide*, Caltrans has transitioned from LOS performance standards to VMT to identify significant impacts.

> "For land use projects and plans, automobile delay is no longer considered a significant impact on the environment under CEQA (SB 743, 2013). Caltrans review of land use projects and plans is focused on a VMT metric, consistent with changes to the CEQA Guidelines (California Code of Regulations Section 15064.3(b)(1)). This VMT-focused TISG provides a foundation for review of how lead agencies apply the VMT metric to CEQA project analysis.
>
> Beyond or in addition to the use of the VMT metric, determining how the State Highway System may otherwise be affected by a land use project may still be necessary at times, particularly as it relates to the safety of the traveling public. Additional future guidance will include the basis for requesting transportation impact analysis that is not based on VMT. This guidance will include a simplified safety analysis approach that reduces risks to all road users and focuses on multi-modal conflict analysis as well as access management issues. With this guidance the Department will transition away from requesting LOS or other vehicle operations analyses of land use projects."[1]

[1] *Vehicle Miles Travelled- Focused Transportation Impact Study Guide, CalTrans, 2020.* https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb-743/2020-05-20-approved-vmt-focused-tisg-a11y.pdf

Assembly Bill 32, Senate Bill 32, and Senate Bill 375

Assembly Bill (AB) 32, also known as the Global Warming Solutions Act of 2006, committed California to reducing greenhouse gas (GHG) emissions to 1990 levels by 2020. In 2016, SB 32 added a new target: reducing statewide emissions to 40 percent below 1990 levels by 2030.

SB 375 provides guidance for curbing emissions from cars and light trucks to help California comply with AB 32. There are five major components to SB 375:

- Air Resources Board (ARB) will guide the adoption of GHG emission targets to be met by each Metropolitan Planning Organization (MPO) in the state.
- MPOs are required to create a Sustainable Communities Strategy (SCS) that provides a plan for meeting these regional targets. The SCS must be consistent with the Regional Transportation Plan (RTP).
- Regional housing elements and transportation plans must be synchronized on eight-year schedules. Also, the SCS and Regional Housing Needs Assessment (RHNA) must be consistent with each other.
- CEQA is streamlined for preferred development types such as mixed-use projects and transit-oriented developments (TODs) if they meet specific requirements.
- MPOs must use transportation and air emission modeling methodologies consistent with California Transportation Commission (CTC) guidelines.

California Complete Streets Act of 2008 (AB 1358)

Originally passed in 2008, California's Complete Streets Act took effect in 2011 and requires local jurisdictions to plan for land use transportation policies that reflect a "complete streets" approach to mobility. "Complete streets" comprises a suite of policies and street design guidelines which provide for the needs of all road users, including pedestrians, bicyclists, transit operators and riders, children, the elderly, and the disabled. From 2011 onward, any local jurisdiction—county or city—that undertakes a substantive update of the circulation element of its general plan must consider "complete streets" and incorporate corresponding policies and programs. In 2010, OPR released guidelines for compliance with this legislation which provide direction on how circulation elements can best plan for a variety of travel modes such as transit, walking, bicycling, and freight.

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law. SB 743 has fundamentally changed transportation impact analysis as part of CEQA compliance. In its *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018), OPR provides recommendations for jurisdictions to implement SB 743-compliant transportation analyses. OPR's recommendations are not binding and lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence. Key guidance includes:

- VMT is the most appropriate metric to evaluate a project's transportation impact.
- OPR recommends tour- and trip-based travel models to estimate VMT, but ultimately defers to local agencies to determine the appropriate tools.
- OPR recommends measuring VMT for residential and office projects on a "per rate" basis. Specifically, OPR recommends VMT per capita for residential projects and VMT per employee for office projects.
- OPR's recommended impact threshold for residential and office projects is VMT per capita fifteen percent below the city or regional average (whichever is applied). In other words, an office project that generates VMT per employee that is more than 85 percent of the regional VMT per employee could result in a significant impact. This threshold is in line with statewide greenhouse gas emission reduction targets.

- For retail projects, OPR recommends measuring the net decrease or increase in VMT in the study area with and without the project. The recommended impact threshold is any increase in total VMT.
- Lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence.
- Cities and counties still can use metrics such as LOS for other plans, studies, or network monitoring. However, LOS and similar metrics cannot constitute the sole basis for CEQA impacts.

For land use and transportation projects, SB 743-compliant CEQA analysis became mandatory on July 1, 2020.

CEQA Guidelines Section 15064.3 describes how transportation impacts are to be analyzed under SB 743. It states that in general transportation impacts are best measured by evaluating the project's vehicle miles traveled. For land use projects, VMT exceeding an applicable threshold of significance may indicate a significant impact (OPR 2017). The City has not adopted VMT criteria to evalaute transportation impacts under CEQA. For the purpose of this analysis, the Governor's Office Planning and Research (OPR) technical advisory is being used for the traffic impact analysis guidelines. The technical advisory serves as a tool for the City to evaluate the effects a development will have on the City's transportation infrastructure, identify improvements required to maintain the Level of Service (LOS) standards and address Section XV (Transportation/Traffic) of Appendix G of the California Environmental Quality Act (CEQA) Guidelines.

REGIONAL REGULATIONS

Southern California Association of Governments (SCAG)

SCAG is a federally designated MPO and is made up of six counties and 191 cities. SCAG develops long-range regional transportation plans including sustainable communities' strategies and growth forecast components, regional transportation improvement programs, regional housing needs allocations, and a portion of the South Coast Air Quality Management Plans.

On May 7, 2020, SCAG's Regional Council adopted Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy) for federal transportation conformity purposes only. Connect SoCal outlines more than $638 billion in transportation system investments through 2045.

Los Angeles County Metropolitan Transportation Authority

The Los Angeles County Metropolitan Transportation Agency (Metro) coordinates transportation planning efforts throughout Los Angeles County and programs local, regional, state and federal funding for project implementation. Additionally, it prepares the Congestion Management Program (CMP), a plan mandated by California law to describe the strategies to address congestion problems on the CMP network, which includes State highways and principal arterials. The CMP Guidelines require analysis of the Metropolitan Transportation System (MTS) roadway and transit system and uses level of service standards to measure congestion and to determine how local governments meet CMP standards.

The 2020 Long Range Transportation Plan (LRTP) provides a detailed roadmap for how Metro will plan, build, operate, maintain, and partner for improved mobility in the next 30 years. The LRTP guides future funding plans and policies needed to move LA County forward for a more mobile, resilient, accessible and sustainable future. The adopted 2020 plan lays out a strategy for meeting transportation needs for all users in LA County and includes projects and other improvements for new and existing freeways, local streets, and public transit (paratransit, buses, rails, ferries), as well as facilities and programs to support bicycling and walking.

Metro has several countywide planning efforts that outline regional networks and provide guidance on best practices. These plans include the Countywide Multimodal Arterial Plan, the Countywide Goods Movement Plan, the Countywide Transit Plan, the Active Transportation Strategic Plan, and the First Last Mile Strategic Plan.

As previously discussed, Metro has plans to extend the C Line from Redondo Beach Station to the new Torrance Transit Center, which would travel through the City. Metro is considering three configuration alternatives, two along Metro-owned ROW and one along Hawthorne Boulevard. The determination of the locally preferred alternative is anticipated in 2023.

South Bay Bicycle Master Plan

The 2011 South Bay Bicycle Master Plan, prepared for the Los Angeles County Bicycle Coalition and the South Bay Bicycle Coalition, aims to develop and maintain a cohesive and connected bicycle network and policy strategy for the cities of El Segundo, Gardena, Hermosa Beach, Lawndale, Manhattan Beach, Redondo Beach, and Torrance. The plan proposes the installation of 213 additional miles of bike facilities, including over 20 miles of bicycle facilities within Lawndale. The plan generally recommends adding Class II bicycle lanes to the City's arterial streets and designating key collector and local streets as "bike-friendly streets".

South Bay Cities Council of Governments

The South Bay Cities Council of Governments (SBCCOG) is a joint powers authority government agency of 16 cities and Los Angeles County. SBCCOG developed the Local Travel Network (LTN) to support the growing local use of "micromobility" and the use of zero-emission, slow speed vehicles. Such devices include neighborhood electric vehicles (NEVs)—which appear similar to golf carts, e-bikes, non-motorized pedal bikes, e-scooters, e-bikes and other "novelty" zero-emission, slow speed mobility devices such as one-wheels (electric skateboards).

In May 2021, the SBCCOG board passed a resolution that directed the SBCCOG to begin implementation of the Local Travel Network in the South Bay. The scope of creating a 243-mile LTN necessitated it be implemented in phases. The initial phase was separated into two (2) corridor projects:

- Phase 1: El Segundo, Manhattan Beach, Hermosa Beach, and Redondo Beach
- Phase 2: Hawthorne, Lawndale, Gardena, Inglewood, Carson, Lomita, Torrance, areas of unincorporated Los Angeles County as well as the communities of Wilmington, Harbor City, and San Pedro.

The implementation of the Local Travel Network will continue into the foreseeable future.

LOCAL REGULATIONS

With the exception of State highways that are under Caltrans' jurisdiction, streets in Lawndale are generally under the jurisdiction of the City.

Lawndale General Plan

The current Lawndale General Plan, adopted in 1991 and amended in 1992, is the primary planning document for the City and serves to guide new development and infrastructure in the city. The General Plan Circulation Element provides the policy framework for the regulation and development of transportation systems, balancing demands for moving people and goods within the city. In particular, the Circulation Element addresses vehicular, pedestrian, bicycle, transit, goods movement, and rail transportation, plus parking. The General Plan Update has a 2045 planning horizon.

Proposed Lawndale General Plan Mobility Element

The General Plan's Community Mobility and Circulation Element provides guidance on expanding options for transit, bicycle, and pedestrian mobility while continuing to support programs that improve automobile travel. The following goals and policies are the most relevant for the purpose of this analysis:

GOAL 1: Local Circulation System | A community served by a safe circulation system with sufficient traffic flow on arterial roadways and minimized adverse traffic effects on residential neighborhoods.

- **Arterial Roadway Network**. Implement the buildout roadway network based on the classifications mapped in Figure M-1 in order to accommodate existing and future needs due to land use growth and shifts in travel patterns.
- **Vehicle Level of Service (LOS)**. Maintain vehicular LOS "D" along major City intersections whenever possible. The City may exempt locations from the LOS "D" target due to right-of-way constraints, and to align to community goals and to balance the needs for different road users including pedestrians and cyclists.
- **Traffic System Management**. Facilitate the efficient movement of vehicles and minimize delay utilizing existing roadway facilities.
- **Rail Crossings Traffic Operations**. Collaborate with Metro to provide adequate intersection operations at at-grade crossing locations to minimize delays and congestion and to create safe crossings for all users.
- **Development-Related Traffic Impacts**. Require new development to provide appropriate and feasible improvements as condition of approval so they do not adversely affect traffic flow and roadway operations.
- **Effects of New Technologies on Traffic Flow.** Maximize the benefit to the public of technologies and services such as ride hailing, autonomous vehicles, electric bicycles and scooters without adversely affecting the City's transportation network.
- **Traffic Calming on Local Streets**. Encourage traffic calming strategies and incorporation of traffic calming design in residential and school areas to slow traffic and promote safety.

GOAL 2: Regional Circulation | A City that coordinates with neighboring jurisdictions and regional agencies to promote consistent and efficient regional circulation.

- **Freeway Interchanges**. Coordinate with Caltrans to develop appropriate configurations and operations at Interstate 405 interchange intersections to minimize congestion on City streets.
- **Agency Coordination**. Coordinate with regional agencies such as County of Los Angeles, South Bay Cities Council of Governments, and Metro to meet the mobility needs of people living in, working in, or visiting Lawndale.
- **Neighboring Jurisdictions**. Plan and implement vehicular facilities, roadway treatments, active transportation facilities, transit routes, and goods movement network to be connected with those in neighboring jurisdictions.

GOAL 3: Complete Streets | A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users.

- **Complete Streets for Roadway Projects**. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).
- **Multimodal Connectivity**. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.
- **Streetscape Improvements**. Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.
- **ADA Accessibility**. Implement a transportation network that is safe, accessible, and consistent with the Americans with Disabilities Act (ADA), to allow mobility-impaired users, such as disabled persons and seniors, to safely travel within the City.

- **Safe Routes to School**. Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

GOAL 4: Parking | A community with an adequate parking supply to support business vibrancy and a high quality of life.

- **New Development Parking Supply**. Ensure new residential and non-residential developments provide adequate parking supply to meet demand and reduce spillover to surrounding areas.
- **Effects of New Technologies on Parking Demand**. Monitor the development of mobility new technologies and the potential effects on parking demand.
- **Parking Demand and Supply Trends**. Monitor and consider trends in the region pertaining to reduced parking demand for transit-oriented developments, mixed-use developments, and other high activity areas and the allocation of parking for shared vehicles, alternative energy vehicles, bicycles, and other modes of transportation.
- **Hawthorne Boulevard Specific Plan Parking**. Consider the development of a parking management plan to ensure developments within the Hawthorne Boulevard Specific Plan provide adequate parking supply to meet demand in the area. The plan may include flexible parking principles, such as shared parking, and may consider timing and pricing strategies, and adding supply with the development of parking structures.

GOAL 5: Transit | A community with a comprehensive public transportation system.

- **Transit Use**. Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.
- **Improve Local Public Transit Service**. Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.
- **Transit Facilities**. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.
- **Paratransit Service**. Work with local transit and other providers to support paratransit service for seniors and persons with disabilities.
- **C (Green) Line Service**. Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.
- **C (Green) Line Stations**. Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.
- **Effects of New Technologies on Transit Use**. Monitor the development of new mobility technologies and the potential effects on transit demand and how users access public transit.

GOAL 6: Active Transportation | A community with a comprehensive network of pedestrian and bicycle facilities that encourages active transportation.

- **Bicycle Master Plan**. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations.
- **Local Travel Network**. Coordinate with the South Bay Cities Council of Governments to implement the Local Travel Network plan to promote micro-mobility modes through the City of Lawndale and support efforts to integrate the network with adjacent cities.
- **Hawthorne Boulevard Sidewalks**. Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.
- **Sidewalk and Bikeway Gaps**. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.
- **Bicycle/Pedestrian Facilities at New Developments**. Require new residential and non-residential developments in the city to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

- **Effective Roadway Projects**. Consider the implementation of projects within the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaced.
- **Effects of New Technologies on Active Transportation**. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

GOAL 7: Goods Movement | A community that integrates safe and efficient goods movement into the local transportation network.

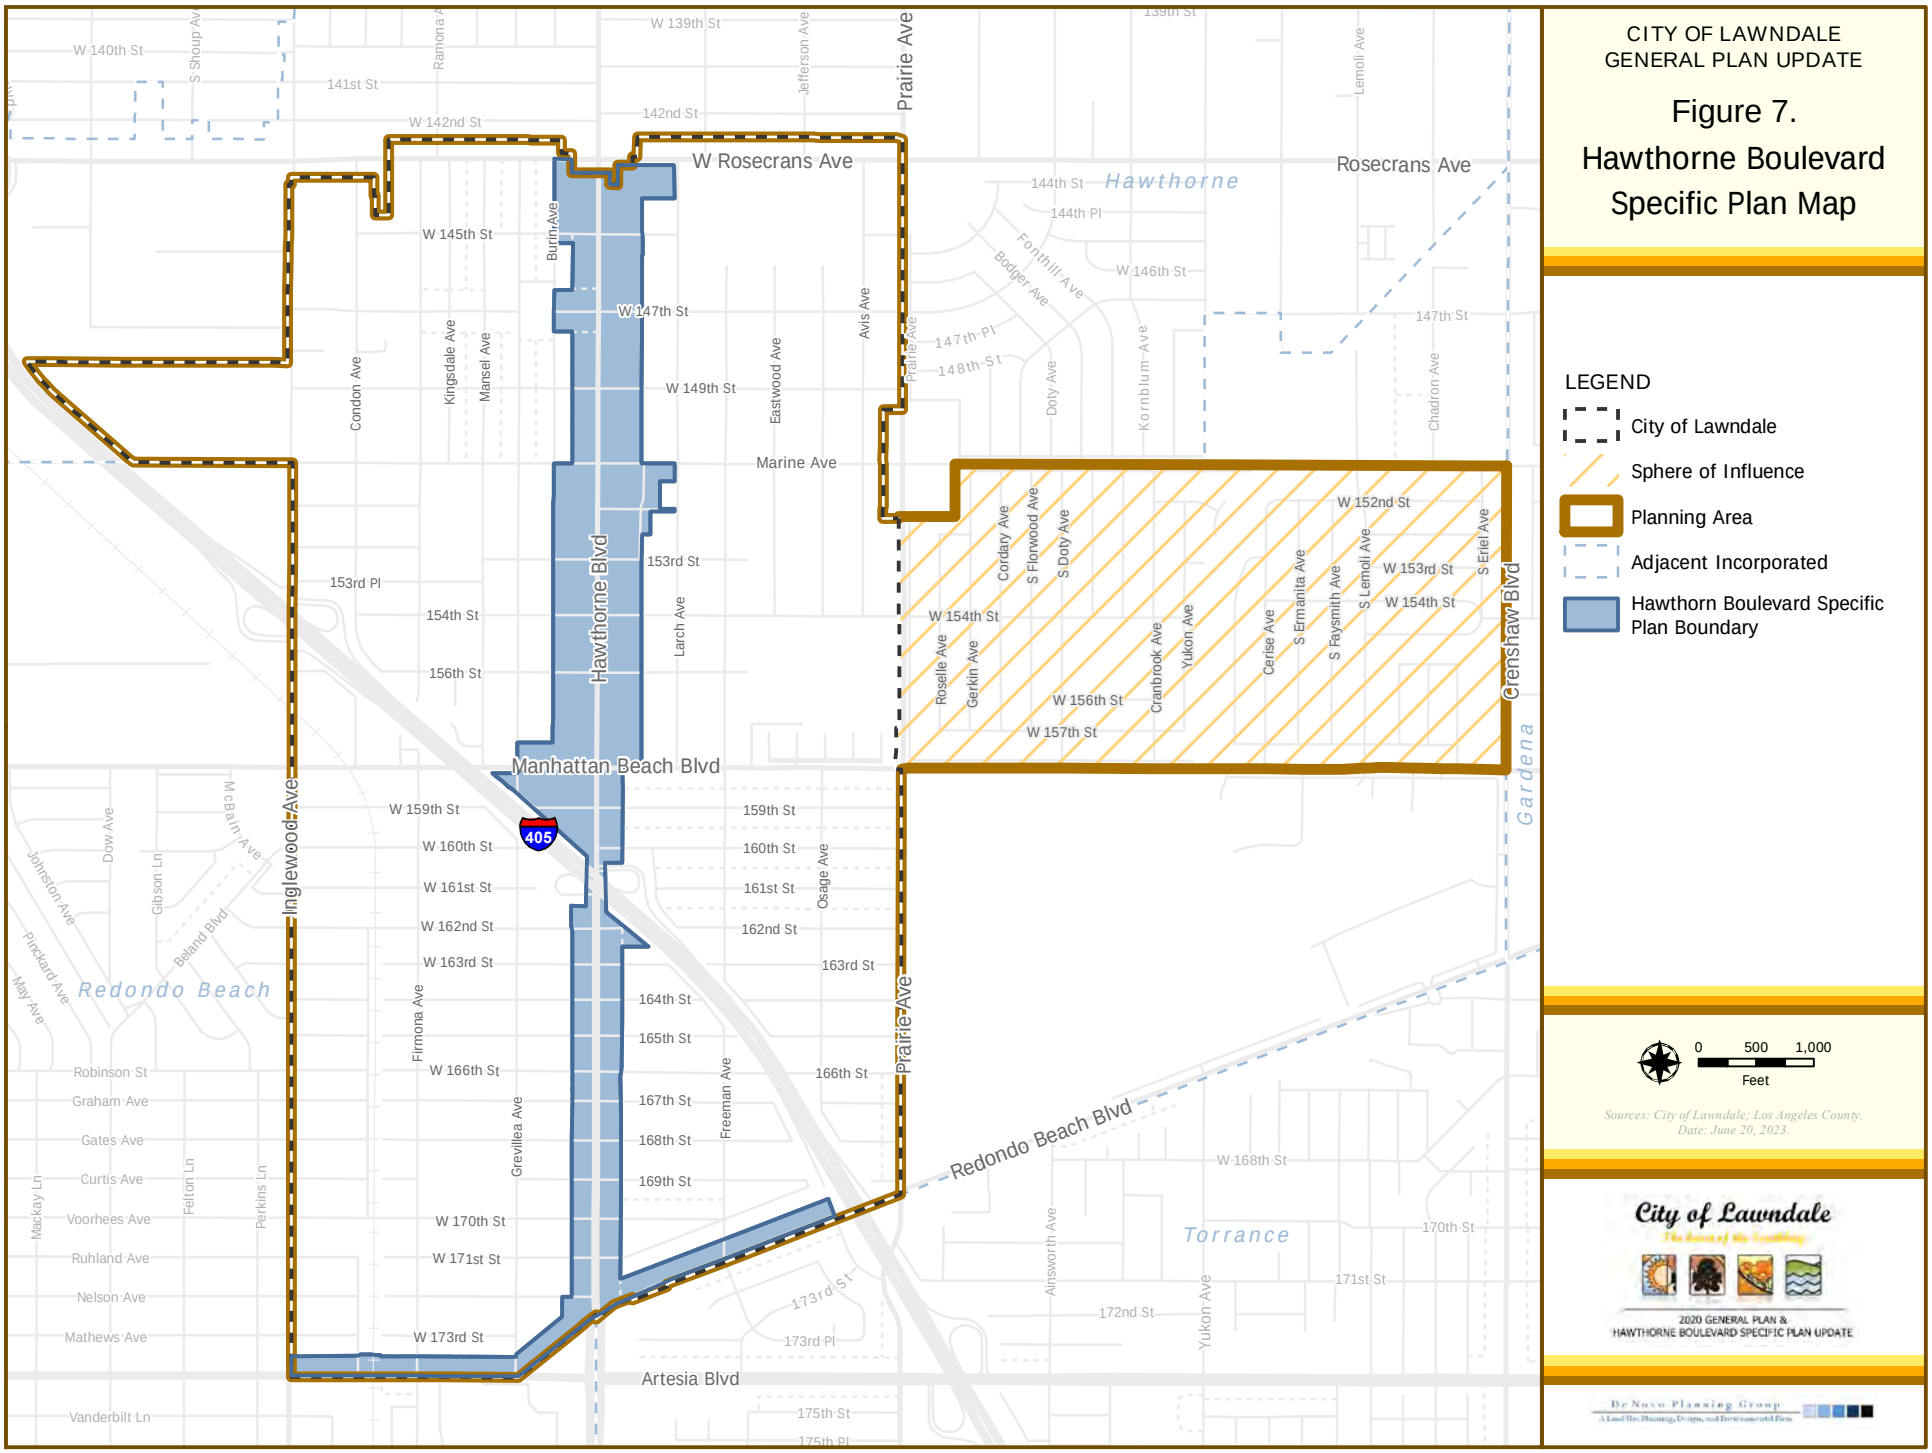
- **Local Truck Routes**. Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.
- **Roadway Design**. Maintain roadway design standards to facilitate access to light industrial and manufacturing areas along designated truck routes.

GOAL 8: Funding | A community with a well-funded and fiscally sound transportation system that utilizes a variety of funding methods.

- **Innovative Funding**. Research and pursue innovative funding sources at the federal, state, regional, and county level to implement transportation projects.
- **Regional Funding**. Encourage regional agencies to continue to provide adequate transportation funding to local jurisdictions such as Metro's Measure R and Measure M to fund capital projects and programs.
- **Development Fees**. Ensure that new development projects contribute their appropriate fair share to transportation network improvements.

GOAL 9: Transportation Management | A community with transportation management strategies that contributes to achieving regional and statewide greenhouse gas emission targets.

- **Vehicle Miles Traveled Guidelines**. Consider adopting vehicle miles traveled (VMT) guidelines and thresholds for transportation analysis for the purposes of environmental review under the California Environmental Quality Act (CEQA). The City shall continue to maintain Level of Service (LOS) standards for the purposes of planning and designing street improvements.
- **Transportation Demand Management**. Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.
- **Regional Coordination**. Encourage regional agencies such as Metro, the South Coast Air Quality Management District (SCAQMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.
- **New Development**. Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.



Hawthorne Boulevard Specific Plan

As a supplement to the 1992 General Plan, the currently adopted Hawthorne Boulevard Specific Plan was developed in 1999. The Plan outlined a long-term vision for land use and development standards, circulation improvements, and an overall vision for streetscape to help make Hawthorne Boulevard a successful urban corridor. In 1998, Lawndale citizens voted to approve up to $15 million for the physical improvement of Hawthorne Boulevard. Figure 7 shows the Hawthorne Boulevard Specific Plan area within Lawndale.

Lawndale Parkway Design Policy Guidelines

First developed in 2018 and updated in July 2020, the Lawndale Parkway Design Policy Guidelines outlines specific guidelines and standards for parkways in the City. Parkways are defined as a portion of the public right-of-way that includes the strip of land between the street and the walkway. In Lawndale, property

owners adjacent to the parkway are responsible for maintaining the area, except for street trees that are maintained by the City.

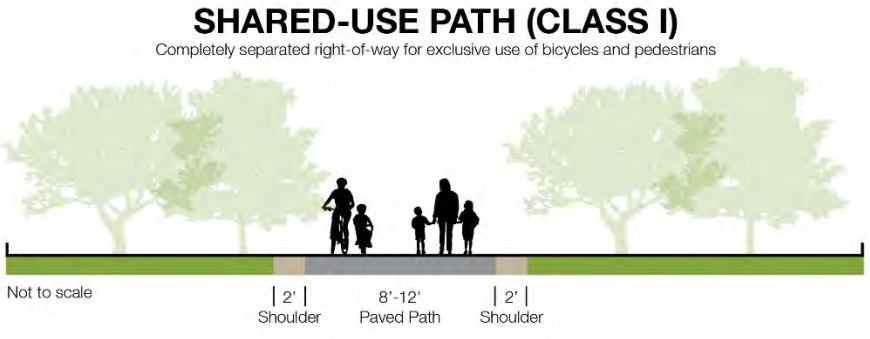
EXISTING CIRCULATION SYSTEM

ROADWAY NETWORK

Street design, connectivity, and the overall built environment influence transportation choices and quality of life. The City of Lawndale is supported by a network of core regional streets, including Hawthorne Boulevard, Inglewood Avenue, Prairie Avenue, Manhattan Beach Boulevard, Marine Avenue, Rosecrans Avenue, Redondo Beach Boulevard, and Artesia Boulevard, plus several smaller connecting streets that provide local connectivity. Much of the street network was designed to prioritize cars over other modes of transportation. This is demonstrated by the abundance of public parking, wide streets and travel lanes, and limited pedestrian and bicycle connectivity and amenities. Key streets which are depicted in Figure 3 include:

- **Hawthorne Boulevard** is a major north-south roadway that spans the length of the city. It is a six to eight lane corridor (with three to four lanes in each direction) with on-street parking and a wide center median which is used for parking in some sections. The travel lanes are generally 12 to 14 feet wide, with wider outside lanes to accommodate on-street parking. On-street curbside parallel parking is permitted on both sides of Hawthorne Boulevard during specific timeframes. Two-hour parking is permitted in the center median outside the hours of 2:00 am – 4:00 am. The surrounding land context is primarily commercial, and the corridor provides direct access to I-405 south of Manhattan Beach Boulevard. Hawthorne Avenue acts as a major transit corridor, serving transit riders through LA Metro lines 40 and 740 (Rapid), as well as through Lawndale Beat's Express and Residential Routes. The posted speed limit is 35 miles per hour. South of I-405, Hawthorne Boulevard is also known as California State Route 107 (SR-107). Hawthorne Boulevard is under Caltrans jurisdiction, however the City of Lawndale maintains it within City limits.
- **Inglewood Avenue** is a major north-south connection through the city and forms the majority of Lawndale's western boundary. Inglewood Avenue includes an interchange with I-405 south of Marine Avenue. South of I-405, where Inglewood Avenue abuts mostly residential land uses, the corridor is divided by a median. Three travel lanes are provided in each direction, with the outside lanes serving as flex lanes that flex between through travel lanes and on-street parking. On-street parking is not permitted in the northbound direction from 7:00 am – 9:00 am daily and Monday and Thursdays from 4:00 pm – 7:00 am. In the southbound direction, on-street parking is not permitted from 3:00 pm – 7:00 pm and on Wednesdays from 11:00 am – 2:00 pm. North of I-405, the surrounding land use includes commercial properties, and the roadway has two to three lanes in each direction with a center turn lane and no on-street parking. Between Marine Avenue and Rosecrans Avenue, there are several schools and a major commercial/shopping center. The posted speed limit is 40 miles per hour south of I-405 and 35 miles per hour north of I-405.
- **Prairie Avenue** runs in the north-south direction and forms the eastern boundary of Lawndale. It primarily includes two travel lanes in each direction with a two-way center left-turn lane. On-street parking is available throughout the corridor, except for northbound north of Manhattan Beach Boulevard. South of Marine Avenue, Prairie Avenue is mostly residential and is adjacent to Alondra Park and Golf Course, Will Rogers Middle School, and Anderson Elementary School. North of Marine Avenue, the roadway is surrounded by commercial uses, including a major shopping area at Rosecrans Avenue. The posted speed limit is 40 miles per hour.
- **Manhattan Beach Boulevard** is an east-west corridor that connects Lawndale to Manhattan Beach to the west and Gardena to the east. It has two lanes in each direction, divided by a median. On-street parking is available on both sides of the street. Manhattan Beach Boulevard passes through an industrial area between Inglewood Avenue and I-405, crossing the Harbor Subdivision railway line. East of I-405, it provides access to residential areas and intermittent commercial development. Manhattan Beach Boulevard does not provide direct access to I-405. The posted speed limit is 40 miles per hour.
- **Marine Avenue** is an east-west corridor with two lanes in each direction, undivided with an intermittent center left-turn lane. On-street parking is available in both directions except on Tuesday and Fridays

from 4:00 am – 7:00 am. Marine Avenue is mostly adjacent to commercial and light industrial land uses and provides access to several key destinations, including the LA Metro C Line (Green Line) station, Lawndale High School, and Jane Addams Park. The posted speed limit is 40 miles per hour.



- **Rosecrans Avenue** is a major east-west corridor that forms the northern boundary of the City. Rosecrans Avenue has three travel lanes in each direction with a continuous center left-turn lane. On-street parking is available outside the hours of 6:30 am – 6:00 pm on both sides of the road. Major commercial and residential developments and schools, including Leuzinger High School, are present along the corridor. The posted speed limit is 40 miles per hour.
- **Redondo Beach Boulevard:** runs along the southern boundary of the City and is a major thoroughfare connecting Lawndale to Gardena in the east and Redondo Beach to the west. The corridor has two travel lanes in each direction with a continuous center left-turn lane. On-street parking is permitted throughout from 7:00 am – 6:00 pm, except Tuesdays and Fridays from 4:00 am – 7:00 am. Land use along the corridor is primarily a mix of multi-family residential and commercial. The corridor also provides access to the I-405 freeway.
- **Artesia Boulevard:** is an east-west corridor along the southern boundary of the city. Artesia Boulevard has three travel lanes in the eastbound direction and two travel lanes in the westbound direction with a raised center median. On-street parking is available in the westbound direction only. The corridor provides direct access to numerous commercial buildings, including the South Bay Galleria mall.

BICYCLE AND PEDESTRIAN FACILITIES

The City of Lawndale does not currently provide any bicycle facilities on its street network. Facilities have been proposed through several documents and plans, including the South Bay Bicycle Master Plan (2011), the Los Angeles County Bicycle Master Plan (2012), and the LA Metro Bicycle Transportation Strategic Plan (2006). However, there are currently no bike-related projects included in Lawndale's Capital Improvements Program.

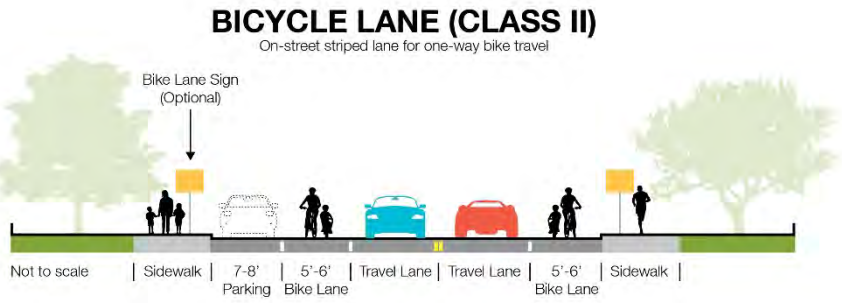


Figure 4 displays the planned bike facilities in Lawndale and in its immediate vicinity. Caltrans categorizes bicycle facilities into four types, as described and depicted in illustrations below. Note that while the graphics include typical widths for each facility type, the exact configuration can vary depending on location and the jurisdiction's preference.

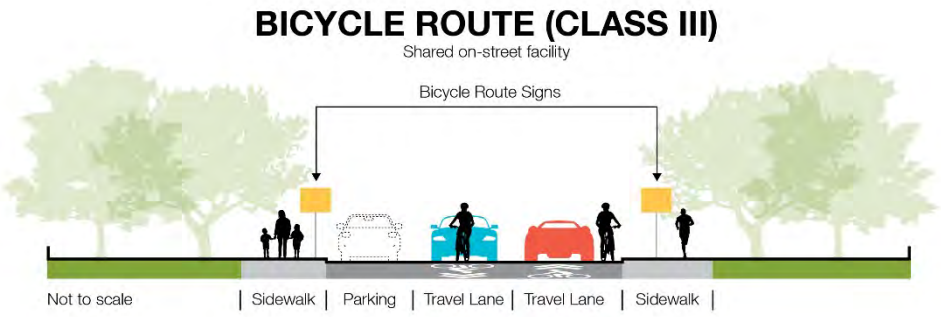
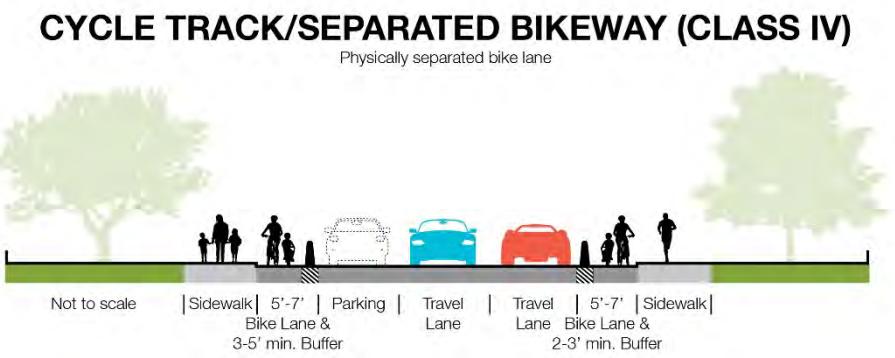
- **Class I Bikeway (Bike Path).** Also known as a shared path or multi-use path, a bike path is a paved right-of-way for bicycle travel that is completely separate from any street or highway.





- **Class II Bikeway (Bike Lane).** A striped and stenciled lane for one-way bicycle travel on a street or highway. This facility could include a buffered (typically painted) space between the bike lane and vehicle lane and the bike lane could be adjacent to on-street parking.

- **Class III Bikeway (Bike Route).** A signed route along a street where the bicyclist shares the right-of-way with motor vehicles. This facility can also be designated using a shared-lane marking (sharrow).

- **Class IV Bikeway (Separated Bike Lane).** A bikeway for the exclusive use of bicycles including a separation required between the separated bikeway and the through vehicular traffic. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

I-405 represents a major barrier for bicyclists in both the north/south and east/west direction. The only roadways that provide access under the freeway are Inglewood Avenue, Hawthorne Boulevard, Manhattan Beach Boulevard, 166th Street, and Redondo Beach Boulevard. The Metro rail ROW also presents a challenge to bicyclists, especially in the residential area south of Manhattan Beach Boulevard. The only available railway crossings south of Manhattan Beach Boulevard are at 159th Street, 160th Street, 161st Street, 162nd Street, and 170th Street.

Most streets have paved sidewalks on both sides of the street. Crosswalks are generally provided at signalized or stop-controlled intersections on the arterial and collector roads. They are generally standard crosswalks and on all four approaches. Skewed crossings are common along principal arterials and cause longer pedestrian crossing times and distances. However, the City of Lawndale's overall automobile-centric design creates long walking distances due to the nature of larger block sizes.

TRANSIT SERVICES

Transit service in Lawndale is primarily provided by Metro, whose transportation system provides bus and passenger rail service throughout Los Angeles County, and by Lawndale Beat, a local agency that runs fixed-route bus service throughout Lawndale. The adjacent cities of Gardena and Torrance also provide local transit options that operate through Lawndale.

LA Metro

LA Metro provides bus, light rail, and heavy rail service for travel within Los Angeles County. LA Metro currently offers bus service throughout Lawndale, including local and rapid fixed-route services. LA Metro's transit stops are often shared stops with the Lawndale Beat. Three major shared transit stops are located just outside of the city limits –at the LA Metro C Line (Green Line) terminus near Marine Avenue and Redondo Beach Avenue, on Douglas Street north of Rosecrans Avenue, and at South Bay Galleria south of Artesia Boulevard. Table 4 displays the LA Metro routes that currently serve Lawndale.

While LA Metro does not offer rail service through Lawndale, the C Line (Green Line) ends just west of the City limits at the Redondo Beach Station on Marine Avenue, west of I-405. As previously discussed, Metro has conducted an environmental analysis and is considering alignments to extend the C Line (Green Line) approximately 4.6 miles south through Lawndale into Torrance by 2028.

Table 4 LA Metro Bus Service in Lawndale

Route	Route Type	Route Description
40	Local	Downtown Los Angeles to South Bay Galleria via Martin Luther King Boulevard and Hawthorne Boulevard
125	Local	El Segundo to Norwalk Station via Rosecrans Avenue
210	Local	Hollywood/Vine Station to South Bay Galleria via Crenshaw Boulevard
211	Local	Inglewood to South Bay Galleria via Prairie Avenue/Inglewood Avenue
215	Local	Inglewood to South Bay Galleria via Prairie Avenue/Inglewood Avenue

Lawndale Beat

Lawndale Beat provides a local transit option through the operation of two fixed-route bus routes: Express Route and Residential Route. The Express Route offers service from LA Metro's C Line (Green Line) Station on Marine Avenue to the Galleria at South Bay shopping area south of Artesia Boulevard on Hawthorne Boulevard. The Residential Route provides service to various residential areas, parks, schools, and shopping areas.

The Express Route operates with a 40-minute headway, running from 7:20 am to 5:55 pm on weekdays, 8:40 am to 5:55 pm on Saturdays, and 9:20 am to 3:55 pm on Sundays and holidays. The Residential Route has a 50-minute headway, running from 7:00 am to 6:39 pm on weekdays, 8:40 am to 5:49 pm on Saturdays, and 10:20 am to 5:49 pm on Sundays and holidays. Stops for both routes are often shared with LA Metro routes.

During the COVID-19 pandemic, the Lawndale Beat Transportation service suspended service. However, the service resumed on May 15, 2023.

Other Transit Agencies

The neighboring cities of Gardena and Torrance operate fixed-route bus service that serves areas within and surrounding Lawndale. Gardena's GTrans Line 1X runs along Marine Avenue through Lawndale, connecting Gardena to LA Metro's C Line (Green Line); and Line 3 runs along Redondo Beach Boulevard to South Bay Galleria. Torrance Transit's Lines 2, 8, and 13 also run through Lawndale along Artesia Boulevard, the City's southern boundary.

CEQA SIGNIFICANCE THRESHOLDS

TRANSPORTATION SIGNIFICANCE CRITERIA

In accordance with Appendix G of the CEQA Guidelines, the Project would be considered to have a significant transportation impact if it would:

a) conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;
b) conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b);
c) substantially increase hazards because of a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or
d) result in inadequate emergency access.

Significance criteria "b" is related to the implementation of vehicle miles traveled (VMT) as the primary performance metric consistent with SB 743 as described above.

SPECIFIC TRANSPORTATION THRESHOLDS

The thresholds used for the CEQA categories are summarized below.

Conflict with Program/Plan/Ordinance/Policy

The following thresholds are used to evaluate impacts for CEQA Appendix G Item (a).

The Project will be qualitatively evaluated to determine if it is expected to conflict with a relevant programs, plans, ordinances, and policies related to the circulation system. A conflict could occur if the proposed Project would preclude the ability of Lawndale to implement its goals or policies. For the purpose of this analysis, the Project could result in a significant impact if it results in a conflict with any adopted City of Lawndale programs, plans, ordinances, and policies.

Generally, a plan/project causes a significant impact to transit facilities and services if an element of it conflicts with existing or planned transit services. The evaluation of transit facilities shall consider if:

- a plan or project creates demand for public transit services above the capacity that is provided or planned;
- a plan or project or related mitigation disrupts existing transit services or facilities;
- a plan or project or related mitigation conflicts with an existing or planned transit facility; or
- a plan or project or related mitigation conflicts with transit policies adopted by the City of Lawndale for its respective facilities.

The City's Mobility Element describes the related policies necessary to ensure that pedestrian and bicycle facilities are safe and effective for Lawndale residents, employees and visitors. Using the Mobility Element as a guide, significant impacts to these facilities would occur when a plan or project:

- creates a hazardous condition that currently does not exist for pedestrians and bicyclists, or otherwise interferes with pedestrian accessibility; or
- conflicts with an existing or planned pedestrian or bicycle facility; or
- conflicts with policies related to bicycle and pedestrian facilities as adopted by the City of Lawndale for its respective facilities.

Conflict with CEQA Guidelines for VMT

The following thresholds are used to evaluate impacts for CEQA Appendix G Item (b).

As previously discussed, the City has not adopted VMT thresholds and has not published guidelines for the preparation of transportation studies. Under CEQA, lead agencies have the discretion to choose the most appropriate methodology to evaluate VMT and have discretion to choose their own significance thresholds. OPR provided a Technical Advisory containing guidelines related to VMT analysis methodology, thresholds, and mitigation. In Metropolitan Planning Organization (MPO) counties, OPR recommends that the significance threshold for residential and office projects be based on comparisons of VMT/capita and VMT/employee generated by the project to regional and city-wide average values. Lead agencies are encouraged in Section 15064.7 of the CEQA Guidelines to adopt significance thresholds through a formal adoption process but may also apply thresholds on a case by case basis. Since the City has not officially adopted VMT thresholds and guidelines for the preparation of transportation studies, this analysis relies on guidance from the OPR technical advisory to evaluate CEQA guidelines for VMT.

The OPR recommended thresholds for residential and office land uses as follows:

- Residential: A project exceeding a level of 15% below existing VMT per capita for the city or region may indicate a significant transportation impact.
- Office: A project exceeding a level of 15% below existing regional VMT per employee may indicate a significant transportation impact.

For typical land development projects, such as residential, office, and commercial spaces, the VMT comparison is normally relative to the existing year (e.g., 2023). Since the General Plan is anticipated to take multiple years to be implemented and developed, it is more appropriate to calculate the project-generated VMT under the long-term 2045 horizon year (which would be consistent with the anticipated implementation of the General Plan). Based on this approach, if the VMT per capita or VMT per employee is lower in the horizon year with the Plan than the respective metrics under existing conditions, the Plan would have a less than significant impact on VMT. In summary, the following VMT thresholds apply as project impacts:

- The general plan's residential generated VMT under horizon conditions would be compared to 15% below the baseline region-wide VMT/capita average to determine impact significance.
- The general plan's office generated VMT under horizon conditions would be compared to 15% below the baseline region-wide VMT/employee average to determine impact significance.

A cumulative impact consists of an impact which is created as a result of the combination of the Project with other projects causing related impacts. A plan/project has cumulatively considerable environmental effects (i.e., is significant) when the incremental effects of the plan/project are significant when viewed in connection with the effects of other projects, including probable future projects. According to OPR's TA, a project that falls below an efficiency-based threshold (such as VMT per capita or VMT per employee) that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact. A significant cumulative impact may also occur if the project is not consistent with the RTP/SCS. In summary, a significant cumulative VMT impact would occur if the Project threshold is exceeded, or if the Project is determined to be inconsistent with the RTP/SCS.

Increase Hazards Because of a Geometric Design Feature

The following threshold is used to evaluate impacts for CEQA Appendix G item (c).

Any project that causes a substantial increase in on-street hazards due to geometric design will potentially result in a significant impact. Generally, a plan/project causes a significant impact related to hazards if the

area plan creates an unsafe geometric design feature in the transportation system. The evaluation of hazards shall consider if:

- The Project creates a change in the transportation system which introduces an unsafe design feature.

Inadequate Emergency Access

The following threshold is used to evaluate impacts for CEQA Appendix G item (d).

Generally, a project causes a significant impact to emergency access if it creates an area with inadequate emergency access. The evaluation of emergency access shall consider if:

- The Project creates a change in land uses or the transportation system which result in inadequate emergency access to one or more areas.

CEQA ANALYSIS METHODOLOGY

Because SB 743 eliminated the use of LOS for CEQA impact analysis purposes, road capacity analysis is not included in this TIA. Under CEQA, the primary quantitative measure to evaluate transportation impacts is VMT. This transportation analysis provides an analysis of potential transportation impacts under current CEQA criteria. A local transportation analysis is being prepared separately to evaluate effects associated with implementation of the Project in terms of roadway capacity and LOS.

TRAVEL DEMAND MODEL

This study assesses the VMT characteristics of the adopted General Plan and the proposed General Plan (Project) conditions in the 2045 planning horizon year to identify if the Project would result in VMT impacts. The applicable VMT significant impact thresholds are described above. Existing (2023) VMT and future VMT were estimated using the Southern California Association of Governments (SCAG) travel demand model. Calculations for the VMT for the Project was determined for the transportation analysis zones (TAZs) that most closely represent the study area including the City limits and sphere of influence.

The SCAG regional travel model evaluates travel throughout the five-county SCAG region and uses the TransCAD software. The model groups land uses in the region into TAZs, and then uses a series of calculation steps to estimate travel associated with the land uses and transportation network.

- **Trip Generation:** How many daily trips by trip purpose are generated by each land use in each TAZ.
- **Trip Distribution:** How many trips of each type travel to each other TAZ.
- **Mode Choice:** Which travel modes are used by people of different demographic categories for trips of different purposes between each origin and destination, including auto, transit, bicycle and walk modes.
- **Time of Day:** Which trips are made during peak hours versus off-peak hours.
- **Trip Assignment:** Which routes are used by each vehicle trip or transit trip.

The daily activity patterns in the travel model are based on a statistical analysis of a household travel survey, where a representative sample of households were asked to track all daily activities and trips by all members of their household. The travel model was calibrated to these surveyed travel patterns, and also validated by its ability to replicate counted traffic volumes, transit ridership, and total VMT from traffic count sources.

The version of the SCAG model that has been used for VMT analysis in most communities in the SCAG region has a base year of 2012 and a forecast year of 2040.

Modelled Scenarios

The following scenarios were reviewed and developed to provide VMT and roadway segment forecasts:

- **2023 Existing Conditions:** corresponds to an interpolation between the SCAG model 2012 base year and the 2045 forecast conditions.
- **2045 No Project:** corresponds to 2045 horizon year conditions under the existing (currently adopted) General Plan. It consists of the adopted general plan network and land use, and assumes allowable land use buildout with current zoning. Outside of the Lawndale planning area, the forecasts use the 2040 SCAG RTP land use forecast.
- **2045 Project:** corresponds to 2045 conditions with maximum development potential with the General Plan Update, including the Hawthorne Boulevard Specific Plan. Outside of the Lawndale planning area, the forecasts use the 2040 SCAG RTP land use forecast.

Land Use

The SCAG travel model requires land uses to be defined for each geographic area in the county. The model defines land uses in TAZs which are typically bounded by major arterial or collector streets and are generally subdivisions of Census tracts. The model land use inputs include numbers of households and employees by employment category, as well as enrollment at schools.

The SCAG model had defined a 2040 land use forecast based on the SCAG Regional Transportation Plan. This forecast was generally consistent with the allowable land uses currently in the City and sphere of influence, but did not fully account for the proposed land uses in the planning area. To assess the transportation impacts of the Project more completely, a revised future 2045 land use forecast was prepared for this TIA.

A detailed mapping of parcels and allowable development was compiled to determine the maximum buildout potential of each parcel and planning area with both the City's currently adopted General Plan (for No Project conditions) and the proposed General Plan land use map (for Project conditions).

Table 5 and Table 6 indicate key assumptions used to calculate model land use inputs. Table 7 summarizes the housing and employment totals in the SCAG model for 2023 and 2045.

Table 5: Existing General Plan Non-Residential Land Use Assumptions

Land Use Designation	FAR[1]	Square Feet per Employee
Commercial	0.5	500
Downtown Commercial	0.5	500
Industrial	0.5	750
Public Facilities/Schools	0.2	1,000

Source: De Novo Planning Group, 2023.

[1] FAR = floor area ratio; ratio of building square footage to land area square footage

Table 6: Proposed General Plan Non-Residential Land Use Assumptions

Land Use Designation	FAR[1]	Square Feet per Employee
Commercial	0.5	500
Hawthorne Boulevard Specific Plan	0.6	500
Industrial	0.5	750
Public Facilities	0.15	1,000

Source: De Novo Planning Group, 2023.

[1] FAR = floor area ratio; ratio of building square footage to land area square footage

Table 7: SCAG Model Land Use Inputs for Lawndale Planning Area TAZs[1]

Housing and Employees	2023 Existing Conditions	2045 No Project	2045 Project
HOUSING UNITS			
Single family	7,201	8,184	7,340
Multi family	4,262	5,203	8,065
Total	**11,463**	**13,387**	**15,405**
EMPLOYEES			
Retail	n/a	2,159	2,448
Non-Retail	n/a	6,919	7,121
Total	**6,470**	**9,078**	**9,569**

Source: De Novo Planning Group, 2023.

[1] Project was represented in existing SCAG model TAZs, The SCAG model TAZ boundaries in the Project Area include some area and land uses outside the Project Area boundary, so totals may not be identical to the Project Description.

Compared to 2023 existing conditions, the adopted General Plan would allow for a 17 percent increase in housing and a 40 percent increase in employment. Compared to the adopted Genera Plan, the Project would increase housing by 2,018 units (15 percent increase) and employment by 491 (5 percent increase).

Transportation Networks

The travel model contains representations of transportation networks for all travel modes, as described below.

- The model road network includes all freeways, highways, arterial streets, most collector streets which provide connectivity between neighborhoods, and selected local streets. The roads are coded with information on functional classification, number of through lanes, speed and capacity.
- All regular weekday transit routes are coded in the model. Bus routes are assumed to run on the streets and be subject to varying congested conditions on those streets. Rail transit operates on separate facilities and is not affected by road congestion. The model also has a general representation of transit stop locations and park-and-ride access. The model assumes the C-Line alignment at street level along the railroad right of way east of Condon Avenue.
- Bicycles and pedestrians are assumed to have access to all streets except freeways.

Future Travel Trends

The model presumes that future background travel options and behaviors remain similar to current conditions and does not explicitly account for potential changes associated with disruptive trends, emerging technologies, and changes in travel preferences. As a result, the travel model is likely to represent a conservative estimate of future amounts of commuting, vehicle use and VMT.

IMPACT ANALYSIS

The following provides an evaluation of the Project's (1) potential conflicts with City's programs, plans, ordinances, and policies, (2) impacts in terms of VMT, (3) potential geometric design hazards, and (4) impacts to emergency vehicle access.

Impact 1: Consistency with Circulation System Programs

SIGNIFICANCE CRITERION A: *Would the proposed plans conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?*

The following reviews consistency with policies and programs related to transit, pedestrian, vehicular, and bicycle travel.

Roadway

No specific development projects are proposed as part of the Lawndale General Plan Update. The update will accommodate future growth in the City, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. The Mobility Element would not propose any roadway changes or increases in roadway capacity. Therefore, the proposed Plan would not conflict with roadway policies adopted by the City of Lawndale or adjacent cities for their respective facilities.

Pedestrian and Bicycle Travel

The proposed Mobility Element update references and incorporates the South Bay Bicycle Master Plan and the South Bay Cities COG Local Travel Network, which include bicycling and walking improvements, and facilities that will improve non-motorized accessibility and connectivity throughout the city. The proposed Mobility Element includes new planned bike facilities on several key roadways including but not limited to Hawthorne Boulevard, Inglewood Avenue, Prairie Avenue, Rosecrans Avenue, Manhattan Beach Boulevard, Artesia Boulevard. The Project would also enhance the pedestrian experience by providing a more walkable and denser environment, especially in the HBSP area.

The Project is consistent with the goals and policies of Lawndale's Mobility Element by promoting pedestrian and bicycle safety and Complete Streets improvements which would enhance the safety and attractiveness of bicycle and pedestrian travel. For instance, Goal 3 (Complete Streets) directs the City to apply complete streets principles to all transportation improvements projects, to wherever feasible provide multimodal connectivity, and promote walking and bicycling to local schools. Goal 6 (Active Transportation) includes several policies to promote a comprehensive network of pedestrian and bicycle facilities.

Transit

The proposed Mobility Element update includes transit policies in Goal 5 (Transit) that supports programs encouraging public transit, that require new developments to construct transit facilities when appropriate, and work with Metro to meet the needs of transit commuters to and from Lawndale. The Project would not conflict with transit policies adopted by the City of Lawndale or transit services from other agencies for their respective facilities.

Conclusion

In summary, a review of the Project's land use and circulation characteristics revealed no potential policy inconsistencies or conflicts with policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities or the performance or safety of those facilities. Additionally, the City has numerous policies

supporting complete streets and to promote use of transit and active transportation. Therefore, with respect to conflicts with circulation system policies, the impact of the Project would be less than significant.

Impact 2: Vehicle Miles of Travel

SIGNIFICANCE CRITERION B: *Would the proposed plans conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?*

The proposed plans were assessed for VMT to comply with SB 743 requirements and CEQA Guideline section 15064.3, subdivision (b).

Applicable Thresholds

As previously discussed, the VMT significant impact thresholds are:

- Project Threshold: a significant impact would occur if the project's 2045 VMT per capita or VMT per employee exceeds 15 percent below the existing Los Angeles countywide average VMT per capita, or VMT per employee, respectively.
- Cumulative Threshold: a significant cumulative VMT impact would occur if the Project threshold is exceeded, or if the Project is determined to be inconsistent with the RTP/SCS.

VMT Project Impact Assessment

The VMT statistics were calculated for the two scenarios mentioned prior, encompassing the Project Area limits. Table 8 summarizes the VMT results for the 2023 existing conditions, the applicable thresholds to evaluate potential project impacts, and the future two VMT scenarios.

Future conditions with the Project would result in decreased VMT per employee and VMT per capita in comparison to existing conditions. Compared to 2045 No Project (adopted General Plan) conditions there would be an increase in VMT per capita, and a decrease in VMT per employee. In summary:

- The VMT per capita with the Project would be 8 percent lower than existing conditions.
- The VMT per employee with the Project would be 7 percent lower than existing conditions.
- The VMT per capita with the Project would be 4 percent higher than 2045 No Project conditions.
- The VMT per employee with the Project would be 2 percent lower than 2045 No Project conditions.
- The impact thresholds would not be exceeded for the Project.

The reductions from the base year to the future year indicate that future development, in particular planned mixed-use development, will provide more opportunities for Lawndale residents and employees to access jobs and services within shorter distances. The shorter trip distances reduce VMT by vehicles, and also increase the likelihood that trips will be made by non-auto modes such as bicycling and walking. Improved transit service and accessibility to transit also help to reduce VMT even as travel activity increases.

Implementation of the Project would result in reductions in VMT per capita and VMT per employee compared to 2023 existing conditions. The impact thresholds would not be exceeded. Therefore, with respect to consistency with CEQA Guidelines Section 15064.3, subdivision (b), the impact of the Project would be less than significant and no mitigaiton would be required.

Table 8: VMT Generated by Land Uses within the Project Area and Region

Units	Los Angeles County 2023 Existing Conditions	Lawndale 2023 Existing Conditions	Lawndale 2045 No Project	Lawndale 2045 Project

Source: Kittelson and Associates, 2023.
Notes: [1] Thresholds are 15% below the VMT per capita and VMT per employee for the Los Angeles County Region under baseline conditions.
N/A = not applicable.

VMT Cumulative Impact Assessment

As discussed previously, a significant transportation cumulative impact would occur if the Project threshold is exceeded, or if the Project is determined to be inconsistent with the RTP/SCS . As noted above, the project impacts in VMT would be less than significant, as the Project's VMT per capita and VMT per employee would not exceed applicable thresholds. In addition, the Project is consistent with the SCAG RTP/SCS. Besides helping increase the local and regional housing supply to meet regional housing needs and locating housing in a transit-rich area, the Project helps further the following RTP/SCS goals:

- Encourage regional economic prosperity and global competitiveness.
- Improve mobility, accessibility, reliability, and travel safety for people and goods.
- Enhance the preservation, security, and resilience of the regional transportation system.
- Reduce greenhouse gas emissions and improve air quality.
- Support healthy and equitable communities.
- Adapt to a changing climate and support an integrated regional development pattern and transportation network.
- Encourage development of diverse housing types in areas that are supported by multiple transportation options.

The Project does not exceed the Project VMT threshold and is not inconsistent with the RTP/SCS. Therefore, cumulative impacts would be less than significant and no mitigaiton would be required.

Impact 3: Roadway Safety Design Hazards

SIGNIFICANCE CRITERION C: *Would the proposed plans substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?*

Buildout of the Project would involve the alteration, intensification, and redistribution of land uses. Hazards are typically assessed at the individual project level when an actual design and construction of a circulation facility is proposed. Potential impacts associated with future land use development projects would be analyzed and evaluated in detail through the city review process for those individual projects. The city's design and construction standards and specifications provide for coordinated and standardized development of city facilities, including roadways. The standards apply to, regulate, and guide the design and preparation of plans, and the construction of streets, highways, alleys, drainage, traffic signals, site access, and related public improvements. As individual projects would undergo review by Public Works and Planning departments for approval and construction and would have to meet design guidelines, potential safety design hazards associated with land development projects would be addressed and result in less than significant impacts.

Prior to implementation, any improvements would be subject to a detailed review and future consideration by the City's Public Works engineering staff and other relevant City agencies. An evaluation of the roadway alignments, intersection geometrics, and traffic control features would be needed at the project design level. Roadway improvements would have to be made in accordance with the City's circulation plan and roadway design guidelines and meet design guidelines in the California Manual of Uniform Traffic Control Devices and the Caltrans Roadway Design Manual. In addition, the City of Lawndale Mobility Element includes goals, policies, and actions to improve the safety of all users of the transportation system in the City such as Goal 1 (Local Circulation System), "Development-Related Traffic Impacts" policy, which requires new development to provide appropriate and feasible improvements as condition of approval so they do not adversely affect traffic flow and roadway operations.

Overall, implementation of the General Plan would not result in hazardous conditions. As individual projects and circulation improvements would undergo review by Public Works and Planning departments for approval and construction and would have to meet design guidelines, impacts would be less than significant.

Impact 4: Emergency Vehicle Access

SIGNIFICANCE CRITERION D: *Would the proposed plans result in inadequate emergency access?*

Emergency access associated with future land use development projects would be analyzed and evaluated in detail through the city review process for those individual projects. The city's emergency access standards would apply to all developments proposed under the proposed Project. Therefore, with respect to inadequate emergency access, the impact of the proposed plans would be less than significant.

ROADWAY VOLUMES FORECAST

Traffic volumes on major roads are provided to inform other technical studies required under CEQA, such as noise analyses. The traffic volumes for existing, and forecasts for 2045 cumulative conditions under the existing General Plan and theGeneral Plan Updateare based on the SCAG Travel Demand Model. Traffic forecasts for specific segments were based on an incremental adjustment methodology to minimize the effects of differences between the travel model and observed traffic counts. For each segment, the increment was calculated between the model's 2023 base year and the model's 2045 forecast for each study roadway (link) volume. Additional calculation was done to find the growth increment to 2045. This growth increment was then added to the observed traffic count to create the adjusted traffic volume forecasts (Table 9).

Table 9: Existing and Future Roadway Segment Daily Traffic Volumes

#	Segment	Existing[1]	2045 No Project	2045 Project
1	Inglewood Ave between Marine Ave & 153rd Pl	30,382	29,900	30,400

Re: Native American Consultation, Pursuant to Senate Bill 18, Government Code §65352.3 and §65352.4, Lawndale Comprehensive General Plan Update and Hawthorne Blvd SP Update Project, Los Angeles County

Dear Ms. Tropiano:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties.

Government Code §65352.3 and §65352.4 require local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans.

The law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction. The NAHC believes that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

The NAHC also believes that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

    - A listing of any and all known cultural resources that have already been recorded or are adjacent to the APE, such as known archaeological sites;
    - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
    - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the APE; and
    - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

    - Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code §6254.10.

3. The result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission. The request form can be found at http://nahc.ca.gov/wp-content/uploads/2015/08/Local-Government-Tribal-Consultation-List-Request-Form-Update.pdf.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event, that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we are able to assure that our consultation list remains current.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

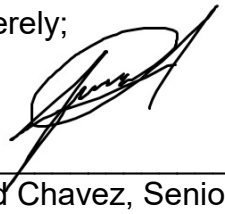
RE: CITY OF LAWNDALE GENERAL PLAN AND HAWTHORNE BOULEVARD SPECIFIC PLAN COMPREHENSIVE UPDATE 2020. SB 18 TRIBAL CONSULTATION.

To whom it may concern:

This letter formally invites you to request consultation pursuant to Senate Bill 18 ("SB18, Government Code Section 65352.3) regarding the above referenced project. As you may know, SB18 became effective on March 1, 2005 and requires local governments to consult with California Native American Tribes about proposed local land use planning decisions for the purpose of protecting traditional tribal cultural places and sacred sites. The above referenced project is subject to the requirements of SB18. The City of Lawndale, is proposing a comprehensive update the City's General Plan (including the Housing Element) and the Hawthorne Boulevard Specific Plan.

City of Lawndale is committed to fulfilling SB18's goals and believes that tribal participation in the planning process is crucial for the success of the proposed project. The City of Lawndale Community Development Department contacted the Native American Heritage Commission (NAHC) to request the list of tribes who should be contacted regarding the proposed project. The NAHC included your tribe on the list.



The intent of consultation is to provide an opportunity for local governments and interested tribes to work together in the project planning early in the process toward the protection of tribal cultural places that might not appear on cultural resource registries. This is your opportunity to participate in the process for this project.

A Request for Consultation for the project must be made within 90 days of the date of this notice. Under SB18, if your tribe requests to participate in the consultation process, any sensitive information shared with the County regarding cultural places and/or sacred sites will be kept strictly confidential and will not be divulged to the public.

If your tribe would like to consult under SB18 regarding the proposed project, please contact Sean M. Moore, at the City of Lawndale in writing, by email at JChavez@lawndalecity.org, at the address listed on the letterhead or by phone at (310) 973-3206 on or before October 14, 2021.

If you have any questions or need additional information regarding this matter please contact our office.

Sincerely;

Jared Chavez, Senior Planner
Community Development Department

RE: AB 52 CONSULTATION CEQA Section 21080.3

TO: Grabrieleño Band of Mission Indians- Kizh Nation – Andre Salas, Chairman

Dear Mr. Salas,

This letter is in response to the AB52 letter received from the Gabrieleno Band of Mission Indians.

The City of Lawndale has decided to undertake the following project: The City of Lawndale, is proposing a comprehensive update the City's General Plan (including the Housing Element) and the Hawthorne Boulevard Specific Plan.

If you would like more information on the project you can log in our website www.lawndale.generalplan.org. You may also contact Jared Chavez by email at jchavez@lawndalecity.org or by phone at (310) 973-3206.

CITY OF LAWNDALE

14717 BURIN AVENUE, LAWNDALE, CALIFORNIA 90260
PHONE (310) 973-3200 ♦ www.lawndalecity.org

DATE: December 18, 2023

TO: Honorable Mayor and City Council

FROM: Sean M. Moore, City Manager

PREPARED BY: Jared Chavez, Community Development Manager

SUBJECT: **Selection of Projects for the Fiscal Year 2024-25 (50th) Program Year of the Community Development Block Grant Program**

BACKGROUND

The 1974 Housing and Urban Development Act established the Community Development Block Grant (CDBG) program to allocate Federal funds for State and local use. The use of these funds is restricted to programs that assist low and moderate-income people. A secondary objective is to prevent and eliminate slum and blight conditions within a community.

The City of Lawndale is a participant in the Los Angeles Urban County CDBG program and receives an annual allocation of CDBG funds from the Los Angeles County Development Authority (LACDA). The current estimate for the new CDBG allocation for FY 2024-25 is $268,304. This estimate is based on current CDBG funding levels and is consistent with the amount of funding the City has received over the last several years. This proposed CDBG allocation is a planning estimate only; LACDA will release final appropriations in spring 2024. The City's final CDBG allocation is generally within five to ten percent (5%-10%) of the estimate provided.

There are several other requirements for CDBG programs. CDBG funds may only be spent in those areas of the City determined to be block grant eligible (See Attachment A). The public must be given the opportunity to comment on the proposed budget (See Attachment B, Public Hearing Notice). Notices of a public hearing were posted at City Hall on December 4, 2023, and published in the *Daily Breeze* on December 6, 2023, pursuant to the applicable public noticing requirements.

Lastly, the maximum amount of CDBG monies that the City may devote to public service projects is up to 15% of its new year allocation (approximately $40,245) and no single public service activity may be funded for less than $10,000.

The recommended CDBG expenditures for FY 2024-25 are consistent with the requirements listed above. The City's FY 2024-25 proposed program of projects and funding levels must be submitted to the LACDA no later than February 1, 2024. The project have been submitted to LACDA before the deadline.

STAFF REVIEW

As described previously, each year the LACDA provides a planning estimate of new CDBG funds that will be made available to the City. The proposed budget retains existing programs and provides sufficient funding for critical projects. The proposed funding strategy is as follows:

Senior Activities Program: The amount to be allocated for senior activities will be the maximum percentage (15%) allowed for public service programs. An estimated $40,245 will be used to continue the existing Senior Activities Nutrition Program.

Street Resurfacing Projects: The proposed resurfacing projects include the following streets:

Proposed Resurfacing Projects

Street Name:	From:	To:	PCI:	Estimated:
165th	Firmona Ave.	Grevillea	~65	$75,000
171St	Larch Ave.	Freeman	~48	$45,000
159th	Grevillea Ave.	Hawthorne Blvd	~67	$50,000
173rd	Grevillea Ave.	Firmona Ave.	~57	$58,000
Total				$228,000

These projects will consist of street improvements, including cold mill variable depth of existing asphalt pavement, installation of new asphalt - asphalt rubber hot mix (ARHM), saw cutting and removal and reconstruction of PCC curb & gutters, reconstruction of curb ramps, reconstruction of driveway approaches, reconstruction of sidewalk, adjusting utility covers to grade, and pavement striping. The estimated project cost is $228,000. Any unallocated CDBG funds not utilized (contingency funds) are rolled over to the following fiscal year and applied toward roadway projects.

ENVIRONMENTAL REVIEW

The proposed funding allocations is not considered to be a project under CEQA. Therefore CEQA does not apply.

COMMISSION REVIEW

Planning Commission review for this project is not required.

LEGAL REVIEW

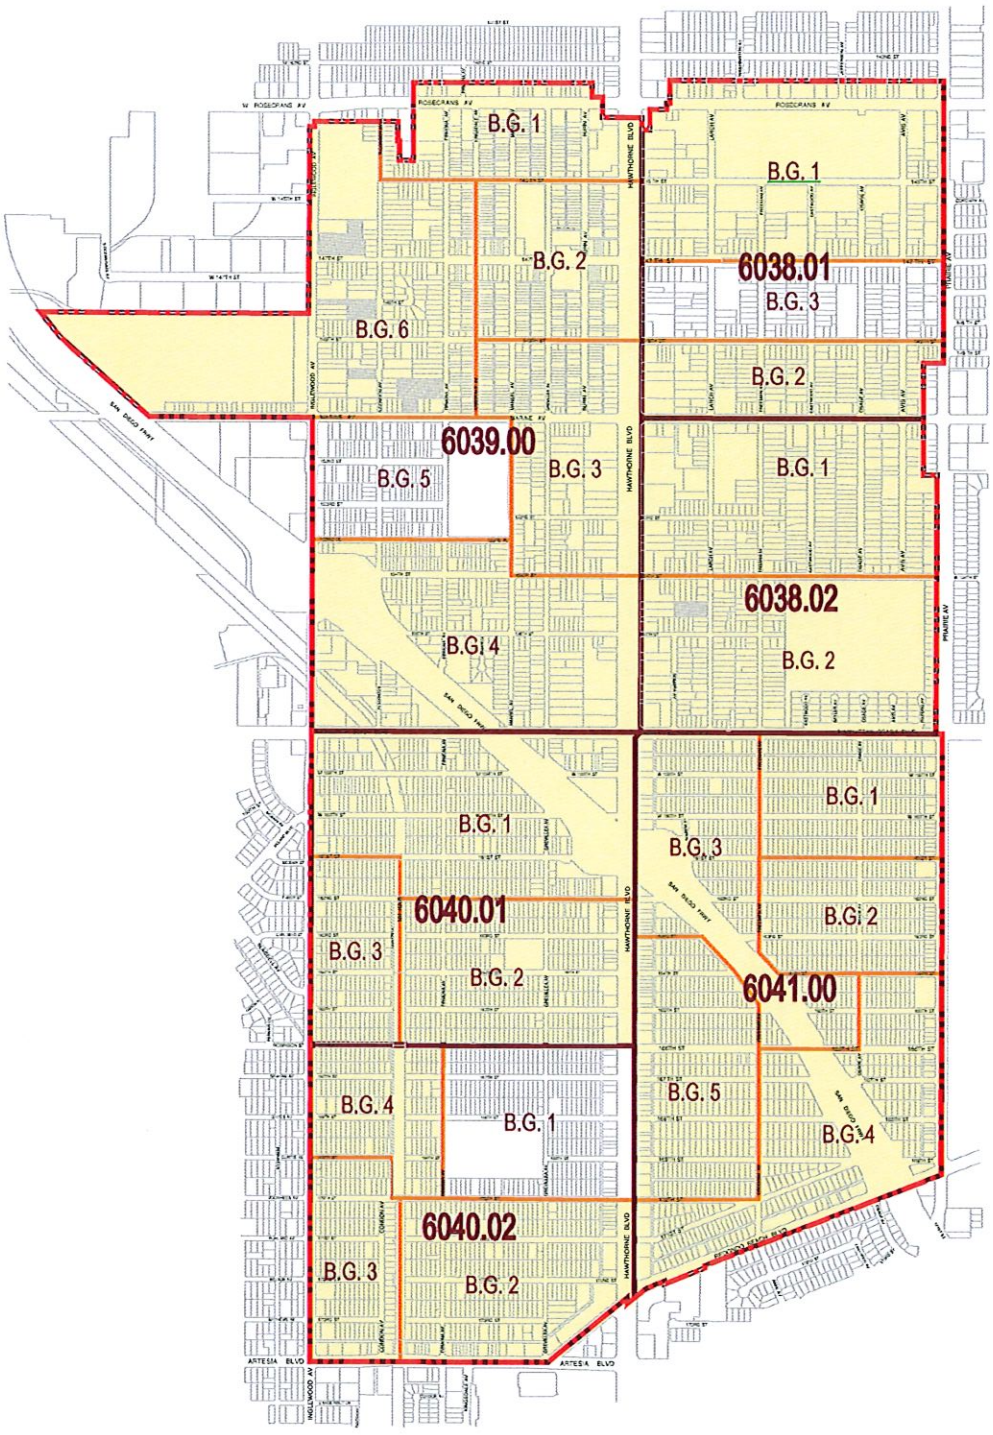
The City Attorney has reviewed Resolution No CC-2312-047 and approved it as to form.

FISCAL IMPACT

Funding is for the FY 2024-25 budget year and will be incorporated into the City's budget as that budget is prepared. Additionally, CDBG funds awarded to the City will offset direct fiscal impacts to the City's General Fund.

RECOMMENDATION

It is recommended that the City Council:



1. Conduct a public hearing;
2. Adopt the FY 2024-25 budget for the CDBG program; and
3. Adopt Resolution No. CC-2312-047, Approving the City's participation in the FY 2024-25 CDBG Program.

PUBLIC NOTICE
CITY OF LAWNDALE
City Council Meeting

Notice is hereby given that at **6:30 p.m. on Monday, December 18, 2023,** the Lawndale City Council will hold a public hearing in the City Council Chambers located at 14717 Burin Avenue, Lawndale, CA to review the following proposal:

CASE 23-21: PROJECT SELECTION FOR THE 2024-2025 COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG) PROGRAM YEAR.

The City of Lawndale is soliciting public input to consider the expenditure of funds to be received as a result of the 1974 Housing and Community Development Act. The public is encouraged to attend and suggest needs and priorities for possible funding during the 2024-2025 (50th) program year beginning July 1, 2024. Initial estimates are that Lawndale will be allocated approximately $268,304 for this Program Year. These are restricted funds to be used to assist low and moderate income persons, or to remove slum and blight conditions. A maximum of 15% of the annual allocation may be used for public service projects. A draft program will be presented for the City Council to consider. Current programs include: Senior Activities and Street Improvements.

Those wishing to comment on this item may do so in person at the public hearing, or by submitting written comments by 5:30 p.m., December 18, 2023. You may contact Jared Chavez, Community Development Manager for further information regarding this matter at (310) 973-3230.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA APPROVING THE CITY'S COMMUNITY DEVELOPMENT BLOCK GRANT PROGRAM FOR FISCAL YEAR 2024-2025

WHEREAS, on August 22, 1974, the President of the United States signed into law the Housing and Community Act of 1974 (Act); and

WHEREAS, the primary goals of Title I of the Act are the development of viable urban communities by providing decent housing and a suitable living environment and expanding economic opportunities, principally for persons of low- and moderate-income; and

WHEREAS, for the past 49 years the City of Lawndale (City) has participated in the Community Development Block Grant (CDBG) Program which was established under the Act; and

WHEREAS, the City has received a planning estimate that $268,304 in CDBG funds will be available to the City for the 2024-2025 Fiscal Year; and

WHEREAS, the City has posted information regarding the Community Development Block Grant Program as required by law and, after notice duly given as required by law, held a public hearing on December 18, 2023 to consider approving the City's proposed Community Development Block Grant Program for fiscal year 2024-2025, and evidence was heard and presented from all persons interested in affecting said proposal, from all persons protesting the same and from members of the City staff, and the City Council has reviewed, analyzed and studied said proposal.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. The CDBG projects, FY 2024-2025 funding allocations, as listed in the CDBG Funding Chart for FY 2024-2025 as set forth on Exhibit A attached hereto and incorporated herein are hereby approved as the City's CDBG Program for Fiscal Year 2024-2025.

SECTION 2. That the Mayor and/or City Manager are authorized and directed to submit the City's proposed 2024-2025 planning documents to the Los Angeles County Development Authority (LACDA) setting forth the City's proposed projects and funding allocations. Should minor adjustments to the allocations vary from the figures contained herein and/or any amounts remaining unspent at the close of the preceding fiscal year, the City Manager is authorized to adjust funding to the approved eligible activities as necessary.

SECTION 3. That the Mayor and/or City Manager are authorized to execute all necessary contracts and agreements with the Los Angeles County Development Authority (LACDA) and

with each approved recipient/subrecipient of the CDBG program, together with any changes therein which may be approved by the City Manager.

SECTION 4. This Resolution shall take effect from and after the date of passage and adoption.

PASSED, APPROVED AND ADOPTED this 18th day of December, 2023

Robert Pullen-Miles, Mayor

ATTEST:

State of California)
County of Los Angeles) SS
City of Lawndale)

I, Erika Harbison, City Clerk of the City of Lawndale, California, do hereby certify that the City Council duly introduced the foregoing Resolution No. CC-2312-047 at its regular meeting held on the 18th day of December, 2023, and duly approved and adopted said resolution at its regular meeting held on the 18th day of December, 2023, by the following roll call vote:

SUBJECT: **Update on Contract with Motorola Solutions, Inc./Vigilant Solutions to be the exclusive provider of Automatic License Plate Recognition cameras for the City of Lawndale.**

BACKGROUND

Last year, the City Council expressed a desire to install Automatic License Plate Recognition cameras (ALPR's) at several major entrances to the City of Lawndale to assist law enforcement with gathering evidence and reducing crime. At the November 6, 2023, City Council meeting, Staff presented their recommendation to use Motorola Solutions, Inc/Vigilant Solutions to be the exclusive provider of Automatic License Plate Recognition cameras for the City of Lawndale. The ALPRs are cameras which are mounted on elevated supports at fixed points throughout Lawndale which allow the cameras to capture hundreds of license plates of vehicles as they enter and exit the City, which provide extremely valuable information to Sheriff's deputies for their ability to place a suspect vehicle at a certain location and point in time to assist detectives with gathering evidence of criminal activity. These cameras can also alert in near real time of stolen, felony, and other wanted vehicles to deputies in the field. At the conclusion of the November 6th, Staff presentation, the City Council voted unanimously in favor of selecting Motorola Solutions, Inc/Vigilant Solutions to be the exclusive provider of Automatic License Plate Recognition cameras for the City of Lawndale.

STAFF REVIEW

Since approval was granted for the purchase of the ALPR cameras from Motorola Solutions Inc/Vigilant Solutions, staff have been drafting the contracts for this purchase and are creating a City of Lawndale Privacy Policy for the use of the APLR's. One concern raised by Councilmembers and addressed by staff at the November 6th meeting was regarding data sharing and record retention. For the privacy and protection of the public, Motorola has very specific policies on who has access to images captured by the ALPR's and how this information is obtained. The cameras do not operate as typical closed circuit surveillance cameras which record everything in their field of view, but instead only capture static snapshots of the vehicle license plates and a portion of the front or rear of the vehicle. Additionally, vehicle owner information is only retrieved when a search is conducted by investigators who will conduct their searches by entering the vehicles license plate, ensuring that only vehicles specific to a crime will be viewed. Also, vehicle information can only be viewed by sworn law enforcement personnel, not City Staff. Additionally, for added security, the Sheriff's Department conducts monthly audits so that no unauthorized users can access these systems without proper credentials.

Councilmembers were also reassured that these cameras could not be used for issuing traffic violations to unsuspecting drivers, or to capture minor traffic violations, as these cameras do not have that capability. The sole purpose of the Automatic License Plate Recognition cameras is to provide information to aid law enforcement in solving major crimes.

The LASD keeps all ALPR data for five years, to help with long term criminal investigations such as homicides, human trafficking, narcotics investigations, etc. This information is shared only with other law enforcement agencies that have signed the LASD data sharing MOU and for authorized purposes as outlined in the MOU.

FISCAL IMPACT

The proposed cost for the Automatic License Plate Recognition system including 21 cameras, installation hardware, software systems, and licensing for the cameras will be $249,411.80. Funding for this project will come from the ARPA fund as this item relates to public safety and would be an allowable expenditure. A budget amendment of $249,411.80 is needed for this item in account 285-300-530.100 (ARPA Fund – Contract Services). There is no impact to the General Fund.

RECOMMENDATION

Staff recommends one of the following options:

Option 1: The City Council receive and file this staff report; or

Option 2: The City Council provide further direction to staff on this matter.

Attachment A: Staff Report from November 6th City Council Meeting on the Recommendation to use Motorola Solutions, Inc./Vigilant Solutions as the exclusive provider of Automatic License Plate Readers for the City of Lawndale.

PREPARED BY: Michael Reyes, Municipal Services Director

SUBJECT: **Recommendation to use Motorola Solutions, Inc./Vigilant Solutions as the exclusive provider of Automatic License Plate Recognition cameras for the City of Lawndale.**

BACKGROUND

Last year, the City Council expressed a desire to install Automatic License Plate Recognition cameras (ALPR's) at several major entrances to the City of Lawndale to assist law enforcement with gathering evidence and reducing crime. The ALPR's are cameras which are mounted on existing power poles, telephone poles or other elevated supports at fixed points throughout Lawndale which allow the cameras to capture hundreds of license plates of vehicles as they enter and exit the City. This information is extremely valuable to Sheriff's deputies for its ability to place a suspect vehicle at a certain location and point in time to assist detectives with gathering evidence and proving criminal activity. These cameras can also alert in near real time of stolen, felony, and other wanted vehicles to deputies in the field.

STAFF REVIEW

At the October 16th City Council meeting, staff spoke with the City Council about the recent RFP process to select a company to provide Automatic License Plate Recognition cameras for the City of Lawndale. After careful consideration of all applicants, Staff recommended Motorola Solutions, Inc/Vigilant Solutions to be the exclusive provider of ALPRs, as Staff felt they offered quality cameras and support services at a reasonable price.

After Staff presented their findings, the City Council had additional questions, and requested that a representative from Motorola Solutions, Inc attend the November 6th City Council meeting. Additionally, Staff has a created a brief PowerPoint presentation which will answer some of the questions that were brought up at the previous City Council meeting.

Privacy Policy

One of the concerns raised by Councilmembers at the October 16th meeting was regarding data sharing and record retention, and specifically how this information could be misused. For the privacy and protection of the public, Motorola has very specific policies on who has access to images captured by the ALPR's and how this information is obtained. The cameras do not operate as typical closed circuit surveillance cameras which record everything in their field of view. The ALPR cameras only capture

static snapshots of the vehicle license plates and a portion of the front or rear of the vehicle. Additionally, vehicle owner information is only retrieved when a search is conducted by investigators who will conduct their searches by entering the vehicles license plate, ensuring that only vehicles specific to a crime will be viewed. Also, vehicle information can only be viewed by sworn law enforcement personnel, not City Staff and the records are audited monthly so that no unauthorized users can access these systems without proper credentials.

Councilmembers also expressed concerns that these cameras could be used for issuing traffic violations to unsuspecting drivers. The ALPR cameras do not capture images of traffic violations such as running red lights or stop signs and cannot be misused to record these violations. ALPR cameras are not Red Light Cameras (RLC's), and the sole purpose of the Automatic License Plate Reader cameras is to provide information to aid law enforcement in solving crimes.

The LASD keeps all ALPR data for five years, to help with long term criminal investigations such as homicides, human trafficking, narcotics investigations, etc. This information is shared only with other law enforcement agencies that have signed the LASD data sharing MOU and for authorized purposes as outlined in the MOU.

FISCAL IMPACT

The proposed cost for the License Plate Reader system including 21 cameras, installation hardware, software systems, and licensing for the cameras will be $249,411.80. Funding for this project will come from the ARPA fund as this item relates to public safety and would be an allowable expenditure. A budget amendment of $249,411.80 is needed for this item in account 285-300-530.100 (ARPA Fund – Contract Services). There is no impact to the General Fund.

RECOMMENDATION

Staff suggests the following options and recommends Option 1.

Option 1) The City Council selects Motorola Solutions, Inc./Vigilant Solutions as the City's preferred provider of Automatic License Plate Reader's at the estimated price and for all the listed services in the RFP.

Option 2) The City Council selects Motorola Solutions, Inc./Vigilant Solutions as the City's preferred provider of Automatic License Plate Reader's at a lower price, but with less cameras, equipment, and coverage in order to reduce the cost to a more comfortable price point.

Option 3) The City Council gives Staff directions as to how many cameras they would like to have in use, with the possibility of adding additional cameras, once the program is underway and successful.

PREPARED BY: Michael Reyes, Municipal Services Director

SUBJECT: **Recommendation to use Motorola Solutions, Inc./Vigilant Solutions as the exclusive provider of Automatic License Plate Readers for the City of Lawndale.**

BACKGROUND

Last year, the City Council expressed a desire to install Automatic License Plate Readers (ALPR's) at several major entrances to the City of Lawndale in order to assist law enforcement with gathering evidence and reducing crime. The ALPRs are cameras which are mounted on existing power poles, telephone poles or other elevated supports at fixed points throughout Lawndale which allow the cameras to capture hundreds of license plates of vehicles as they enter and exit the City. This information is extremely valuable to Sheriff's deputies for its ability to place a suspect vehicle at a certain location and point in time to assist detectives with gathering evidence and proving criminal activity.

STAFF REVIEW

At the direction of the City Council, Staff solicited bids from companies that provide Automatic License Plate Reading cameras, software for information gathering, installation hardware, and camera licensing and warranties. Two companies submitted bids to provide the City with Automatic License Plate Readers. Although both Motorola Solutions, Inc./Vigilant Solutions and Jenoptik gave professional submissions, which could satisfy the needs of the City, Staff felt that the Motorola Solutions, Inc./Vigilant Solutions bid offered the most complete package for the needs of Lawndale.

The Motorola Solutions, Inc./Vigilant Solutions bid included twelve fixed position cameras, nine Quick Deploy Cameras (Solar Kit) mounting hardware, installation costs, licensing costs, and warranties for five years. Motorola Solutions, Inc./Vigilant Solutions was founded in 2005 and is a recognized leader in License Plate Recognition. Motorola Solutions, Inc./Vigilant Solutions is also the preferred system for the Los Angeles County Sheriff's Department and is currently in use by several other Southern California cities and law enforcement agencies.

FISCAL IMPACT

The proposed cost for the License Plate Reader system including 21 cameras, installation hardware, software systems, and licensing for the cameras will be $249,411.80. Funding for this project will come from the ARPA fund as this item relates to public safety and would be an allowable expenditure. A budget amendment of $249,411.80 is needed for this item in account 285-300-530.100 (ARPA Fund –

Contract Services). There is no impact to the General Fund. This amount does follow the recommendation from the Budget Subcommittee to keep the cost at an affordable price.

RECOMMENDATION

Staff suggests the following options and recommends Option 1.

Option 1) The City Council selects Motorola Solutions, Inc./Vigilant Solutions as the City's preferred provider of Automatic License Plate Reader's at the estimated price and for all the listed services in the RFP.

Option 2) The City Council selects Motorola Solutions, Inc./Vigilant Solutions as the City's preferred provider of Automatic License Plate Reader's at a lower price, but with less cameras, equipment, and coverage in order to reduce the cost to a more comfortable price point.

Option 3) The City Council gives Staff directions as to how many cameras they would like to have in use, with the possibility of adding additional cameras, once the program is underway and successful.

RE: RFP Response for Automatic License Plate Readers

Dear Mr. Reyes,

Motorola Solutions, Inc. (Motorola Solutions) is pleased to provide the City of Lawndale with this response, focused on our industry-leading portfolio of automated license plate recognition products. We have taken great care in providing a detailed and comprehensive response package that consists of all requested information outlined in your RFP.

With Vigilant Solutions as your LPR provider, law enforcement agencies have 100% control over their data and whom they share their data with, if they choose to do so. Vigilant Solutions also owns and manages the single largest license plate recognition data sharing initiative that consists of over 35 billion LPR detections and is growing at a rate of over 200 million scans monthly.

Any questions the City has regarding this response can be directed to Louis Wershaw, Vigilant Solutions Account Manager, at (209) 283-0990 or louis.wershaw@motorolasolutions.com.

Our goal is to provide the City of Lawndale with the best products and services available in the communications industry. We thank you for the opportunity to present our solution information, and we hope to strengthen our relationship by implementing this project in the future.

Sincerely,

MOTOROLA SOLUTIONS, INC.

Sean Heieck

Automatic License Plate Recognition

April 20, 2023

Description of Service

The Motorola Solutions LPR system enables officers to get real-time field intelligence to improve their safety and enhance the efficiency of their patrol.

Vigilant Solutions LEARN PlateSearch

Vehicle detections alone will not solve crimes; they create more work. Motorola's Law Enforcement Archival Reporting Network (LEARN) PlateSearch uses a vast database of plate detection data, as well as powerful search, analytic, and data management tools to turn those detections into leads. With precise investigative tools and access to a database containing information from billions of detections, Lynwood Police will be able to quickly solve investigations and make their community safer.

Powerful Searching and Analytics

LEARN PlateSearch is equipped with powerful analytic tools to find, track, and analyze vehicles of LEARN PlateSearch offers:

- **Intuitive Plate Searching** - Users can search for complete and partial plate numbers and add them to hotlists that will send alerts when a matching plate is detected. Users can also access historical data to find where the plate has been previously spotted and use that data to track that vehicle's typical routes.
- **Easily Narrowed Results** - Vehicle year, make, and model search filters can be used to narrow down a large number of vehicles to a manageable subset.
- **Associate & Convoy Vehicle Analysis** - Associate and convoy analysis will enable the City of Lynwood to identify vehicles that are connected to vehicles of interest. This gives the City of Lynwood more opportunities to generate leads using information they find during an investigation.
- **Location Analysis** - Location analysis will allow users to acquire information about the position of suspicious vehicles. They can determine its most probable locations, with dates and times. Addresses can also be paired to vehicles, helping to focus on where a crime took place. This data can be compared to historical LPR data to determine what, if any, vehicles were at a location during the time a crime occurred.

Flexible and Secure Data Management

LEARN PlateSearch will help organize and maintain data in a way that fits users' needs. LEARN PlateSearch data management capabilities supports the following management features:

- **Flexible Data Retention** - A configurable data retention policy preserves data for as long as it's needed to close a case and to meet state and local data retention requirements.

- **Industry Standard Security** - A Criminal Justice Information Services (CJIS) compliant Security Policy provides industry standard quality of physical security, redundancy, access control, audit functionality, encryption of data, and compliance regulation.

Shared Law Enforcement Data

Motorola is proposing cloud-based storage for the data, including access to the largest LPR database in States. It hosts over 30 billion LPR scans and is rate of 450 million scans per month. Data retention is Each agency can set retention length to match their operating procedures, local ordinances, and guidelines. Retention can be set to any length of time, instant deletion after the capture to indefinite storage.

City's LPR the United growing at a customizable. standard community ranging from

The proposed subscription will include Law Archival Reporting Network (LEARN) access. LEARN enforcement agencies to share LPR data with over agencies on the network. This enables cameras to detect vehicles from multiple agency hotlists, including NCIC hotlists.

Enforcement allows law 2,000 other

This data feeds into LEARN PlateSearch and Target Alert Service (TAS) software provided as part of this solution, enabling that software to flag vehicles more effectively.

Target Alert Service (TAS)

Target Alert Service (TAS) improves response speed and efficiency by sending near-real time alerts from camera hardware to officers in vehicles and to back-office personnel, such as the Dispatch Center or a Stolen Vehicle Task Force. TAS compares scanned license plates with a hotlist configured by the City of Lynwood, alerting personnel when it detects a match.

The TAS interface saves time by using alert sounds to personnel of detected hot list alerts, and by helping to law enforcement staff to the location of vehicles that hotlist alert.

notify route trigger a

set up,

Mobile Companion

The Mobile Companion app has been included to enable configuration of and notifications from the L6Q cameras. Mobile Companion can be upgraded (at additional cost) enable officers patrolling on foot to scan license plates, remotely access LEARN PlateSearch on iOS and Android Smartphones, and receive hot list alerts.

Description of Technical Architecture

Motorola's Vigilant Solutions cameras connect to the Vigilant LEARN cloud via cellular connection. Data is encrypted in transit and at rest.

Products and Services

Thirteen (13) areas have been identified as primary entry points for the City of Lawndale. All areas are major roadway intersections where vehicular traffic is present and where ALPR data will be of value for both immediate alert action and long-term investigations.

The locations are:

1. S/B Inglewood Ave/Rosecrans Ave
2. S/B Hawthorne Blvd/Rosecrans Ave
3. S/B Prairie Ave/Rosecrans Ave
4. W/B Marine Ave/Prairie Ave
5. W/B Manhattan Beach Blvd/Prairie Ave
6. W/B Redondo Beach Blvd/Prairie Ave
7. N/B Prairie Ave/Redondo Beach Blvd
8. N/B Hawthorne Blvd/Redondo Beach Blvd
9. N/B Inglewood Ave/Artesia Blvd
10. E/B Manhattan Beach Blvd/Inglewood Ave
11. E/B Marine Ave/Inglewood Ave
12. W/B Marine Ave/Inglewood Ave
13. W/B Rosecrans Ave/Inglewood Ave

Motorola's Vigilant Solutions has multiple camera types based on use case scenarios and recommends the L5F camera system.

The L5F License Plate Recognition Camera System enables precision scanning on high-speed, high-traffic roadways by capturing clearer images at greater distance than ever before. Seamlessly paired with either Vigilant PlateSearch or ClientPortal, this complete, fixed solution enables users to receive real-time alerts, conduct comprehensive searches and leverage advanced analytics to protect communities and generate revenue.

LEARN and Vigilant PlateSearch empowers your team with patented analytics and billions of license plate scans from your agency's own cameras, other departments cameras, enterprise partners and a nationwide commercial data network to identify, predict and alert to vehicle sightings. With this cloud-based software solution, system management couldn't be easier while data retention, access and sharing is completely under your agency's ownership

PROJECT QUOTATION

We at Vigilant Solutions, LLC are pleased to quote the following systems for the above referenced project:

Hardware

Qty	Item #	Description	
(30)	VSF-025-L5F $6,236.00 Each	**L5F Fixed LPR Camera with Sun Shield - 25mm Lens with Camera Cable** • Dual-lens camera with infrared LEDs for plate illumination • 55ft - 85ft capture distance and up to 2 lane coverage • Internal trigger for capture of plate alphanumerics, vehicle make and model • Camera housing with included sunshield is IP67 rated for reliable use in varied weather conditions • 60' camera cable included • Includes CarDetector LPR software for local server hosting • LPR vehicle license plate scanning / real time alerting o Full suite of LPR tools including data analytics	
Subtotal Price			**$187,080.00**
(30)	VS-FX-UNI-POLE-WALL-BRKT_REV_B $350.00 Each	**Fixed LPR Camera Bracket** • Pole or Wall Mount - UPR ARM ASSY POLE & WALL MOUNT BLK REV B	
Subtotal Price			**$10,500.00**
(13)	BCAV1F2-C600 $2,779.00 Each	**Vigilant Fixed Camera Communications Box** • Manages power and communications for up to four (4) Vigilant fixed LPR cameras • Includes modem for communication with cellular carriers o SIM Card not included	
Subtotal Price			**$36,127.00**

Extended Warranty

5 Years Coverage

Qty	Item #	Description	
(30)	CDFS-4HWW $2,000.00 Each	**Fixed Camera LPR System - Extended Hardware Warranty - Year 2 through 5** • Fixed LPR System LPR hardware component replacement warranty • Applies to 1-Channel hardware system kit • Valid for 4 years from standard warranty expiration	
Subtotal Price			**$60,000.00**

Camera Licensing & LEARN

5 Years Coverage

Qty	Item #	Description	
(5)	VSBSCSVC-04 $7,500.00 Each	**Vigilant LPR Basic Service Package for Hosted/Managed LPR Deployments** • Managed/hosted server account services by Vigilant ○ Includes access to all LEARN or Client Portal and CarDetector software updates • Priced per camera per year for over 60 total camera units • Requires new/existing Enterprise Service Agreement (ESA)	
Subtotal Price			**$37,500.00**
(5)	VSBSCSVC-L6Q $3,450.00 Each	**Vigilant L6Q Service Package for Hosted/Managed LPR Deployments** • Vigilant L6Q Service Package for Hosted/Managed LPR Deployments	
Subtotal Price			**$17,250.00**

Cellular Data Connectivity

5 Years Coverage

Qty	Item #	Description	
(13)	VERIZON-NANO-SIM $1,150.00 Each	**Annual Cellular Data Plan (NanoSIM)** • Includes SIM card with unlimited data plan • Valid for one year from shipment	
Subtotal Price			**$14,950.00**
(52)	VZ-NSIM-REN $1,150.00 Each	**Annual Verizon Sim Renewal** • Annual renewal for SIM card with unlimited data plan • Valid for one year	
Subtotal Price			**$59,800.00**

Technical Services

Qty	Item #	Description	
(1)	Installation $58,560.00 Each	**Hardware installation at (13) Locations.** • Engineered traffic control plans are not included.	
Subtotal Price			**$58,560.00**
(30)	SSU-SYS-COM $955.00 Each	**Vigilant System Start Up & Commissioning of 'In Field' LPR system** • Vigilant technician to visit customer site • Includes system start up, configuration and commissioning of LPR system • Includes CDM/CDF Training • Applies to mobile (1 System) and fixed (1 Camera) LPR systems	
Subtotal Price			**$28,650.00**
(1)	VS-TRVL-01 $1,488.00 Each	**Vigilant Travel via Client Site Visit** • Vigilant certified technician to visit client site • Includes all travel costs for onsite support services	
Subtotal Price			**$1,488.00**

Delivery

Qty	Item #	Description	
(43)	VS-SHP-02 $55.00 Each	**Vigilant Shipping Charges - Fixed or Comms** • Applies to each fixed camera LPR System • Or Communication Box Purchased without LPR System • Shipping Method is FOB Shipping	
Subtotal Price			**$2,365.00**
(1)	Sales Tax $23,954.96 Each	**Sales Tax @ 10.25% of $233,707.00 = $23,954.96**	
Subtotal Price			**$23,954.96**

Quote Notes:

1. All prices are quoted in USD and will remain firm and in effect for 60 days.
2. Returns or exchanges will incur a 15% restocking fee.
3. Orders requiring immediate shipment may be subject to a 15% QuickShip fee.
4. This Quote is provided per our conversation & details given by you - not in accordance to any written specification.
5. This Quote does not include anything outside the above stated bill of materials.
6. Motorola's Master Customer Agreement and all applicable addenda, available at https://www.motorolasolutions.com/en_us/about/legal.html shall govern the products and services, and is incorporated herein by this reference.
7. LA County Master Agreement Pricing.
8. L5F hardware installation at (13) locations. Installation cost presumes power at each location.
9. Customer to provide no cost permits if required.
10. Engineered traffic control plans are not included.

Total Price	**$538,224.96**

Contract Terms Acknowledgement

This Contract Terms Acknowledgement (this "**Acknowledgement**") is entered into between **Vigilant Solutions, LLC**, a Delaware corporation ("**Vigilant**") and the entity set forth in the signature block below ("**Customer**"). 1. **Contract Terms Acknowledgement.** Customer acknowledges that they have received Statements of Work that describe the services provided on this Agreement. Parties acknowledge and agree that the terms of the Master Customer Agreement ("MCA"), including all applicable Addenda, shall apply to the Services set forth in the accompanying Ordering Document. Vigilant's Terms and Conditions, available at https://www.motorolasolutions.com/en_us/about/legal.html, including the Master Customer Agreement, is incorporated herein by this reference. By signing the signature block below, Customer certifies that it has read and agrees to the provisions set forth in this Acknowledgement and the signatory to this Acknowledgement represents and warrants that he or she has the requisite authority to bind Customer to this Acknowledgement.

2. **Entire Agreement.** This Acknowledgement, including the accompanying Ordering Document, supplements the terms of the MCA, applicable Addenda, and Ordering Documents entered between the Parties and forms a part of the Parties' Agreement.

3. **Disputes; Governing Law.** **Sections 12 – Disputes** of the MCA is hereby incorporated into this Acknowledgement *mutatis mutandis.*

4. **Execution and Amendments.** This Acknowledgement may be executed in multiple counterparts and will have the same legal force and effect as if the Parties had executed it as a single document. The Parties may sign in writing or by electronic signature. An electronic signature, facsimile copy, or computer image of a signature will be treated, and will have the same effect as an original signature, and will have the same effect, as an original signed copy of this document. This Acknowledgement may be amended or modified only by a written instrument signed by authorized representatives of both Parties.

The Parties hereby enter into this Acknowledgement as of the last signature date below.

L5F FIXED LPR CAMERA SYSTEM

SEE FARTHER. SEE CLEARER. SCAN MORE.

Missed scans mean unsolved cases and unrecognized revenue. The L5F Fixed License Plate Recognition Camera System captures clearer images at greater distances on your high-speed, high-volume roadways. Paired with Vigilant PlateSearch or Vigilant ClientPortal, this solution enables you to receive real-time alerts, conduct comprehensive searches and leverage advanced analytics and parking tools to uncover new vehicle location insights that protect communities and generate revenue.

KEY BENEFITS

Scan More Than Before
Capture your clearest plate detections yet, at greater distance, on your most high-volume, high-speed roadways.

Rely On Better Basics
Beyond ensuring you've captured the best data, we make management, alerting and searching straight-forward.

Do More With More Data
Use patented analytics, specialized tools as well as easier data sharing and access to derive new intelligent insights.

MOTOROLA SOLUTIONS

L5F FIXED LPR CAMERA

The L5F Camera features a new state-of-the-art sensor that allows it to capture clearer images at greater distances on your high-speed, high-volume roadways.

CAMERA PERFORMANCE

Part Number	Optimal Focal Length	Capture Range*
VSR-5x-908	14 ft	6-27 ft
VSR-5x-916	40 ft	25-55 ft
VSR-5x-925	70 ft	55-85 ft
VSR-5x-935	95 ft	85-105 ft
VSR-5x-950	115 ft	105-125 ft

*Up to 2 lanes of traffic coverage in most scenarios.

OPTICS

Window	Shatterproof window	
Resolution	1440x1080 Monochrome global shutter	1440x1080 Color global shutter
Capture speed maximum	150 mph (241 kph)	

ILLUMINATION

Pulsed LED illumination	Zero lux environments *850nm and 750nm options

VIDEO STREAMING

ONVIF compliant	H.264/H.265, M JPEG

HOUSING

Size	6.9 x 6.5 x 2 in / 175 x 165 x 51 mm
Fixed mounting	3-axis (aim precision) lock in place, low profile, solid mount, and sun shield
Color	Matte black
Weight	3.5 lbs

ENVIRONMENTAL

Environmental protection	IP67 / NEMA4 compliant
Operational temperature	-40°F to 140°F (-40°C to 65°C)
Connector	IP67 rated

ELECTRICAL

Power consumption	12.95W nominal
Input voltage	POE (IEEE802.3 af PD)

CABLE MANAGEMENT

Cable length	Up to 328 ft (100 m)
Type	Cat6 STP 22-24 AWG
Connector	10 pin circular- all-weather, impact resistant

CAMERA ACCESSORIES

Part #	VS-UNI-POLE-MNT
Description	Single Fixed Camera Mount/Bracket

VLP COMMUNICATIONS BOX

The VLP Communications Box combines processing and power in a durable, ruggedized enclosure that is equipped with an all-in-one built-in processor with GPS and PoE for up to four cameras.

SYSTEM	
CPU	Intel Gen8 Core i7-8700T (12M Cache 2.4GHz up to 4.0GHz)
Memory	2 x 8GB DDR4 2400 MHz SO-DIMM
LAN Chipset	9 x Intel i210-AT and 1 x i219 (iAMT9.5 w/ i5, i7 only) Gb/s Ethernet Controllers Onboard Support PXE and WOL

I/O	
Serial Port	3 x RS 232/422/485 (Auto Direction Control)
USB Port	4 x USB 3.0 Ports
LAN	10 x RJ45 Ports for GbE (Optional for M12 connector and 8 x PoE total Max. 120W)
Video Port	3 x DP Ports
Wi-Fi Adapter	802.11n/g/b
4G LTE / GPS	Sierra Wireless EM7511-Dual Sim Support

POWER REQUIREMENT	
Power Input	120V AC
Power Protection	Automatic Recovery - Short Circuit Protection
Power Management	Remote/Ignition connection to toggle power
Power Off Control	Power off Delay Time Setting by BIOS and Software

SOFTWARE	
Operating System	Ubuntu 18.04 64bit

GRAPHICS	
Graphics	Intel® UHD Graphics 630
Resolution	Max Resolution (DP) : 4096x2304@60Hz

STORAGE	
Type	2 x 2.5" Drive Bay for SATA Type HDD/SSD RAID 0, 1, 5 1 x mSATA

ENVIRONMENTAL	
Operating Temp.	-40°C ~ 70°C, ambient w/ 0.6m/s airflow
Storage Temp.	-40°C ~ 80°C
Relative Humidity	10% RH – 90% RH (non-condensing)
Vibration (random)	EC60068-2-64, random, 2.5G@5~500Hz, 1hr/axis with SSD
Vibration Operating	MIL-STD-810G, Method 514.6, Procedure 1, Category 4
Shock	Operating: MIL-STD-810G, Method 516.6, Procedure 1, Trucks and semi-trailers=15G (11ms) with SSD
Certifications	CE, FCC Class A, E13

MECHANICAL	
Construction	Polycarbonate
Mounting	Wall or pole mount
Weight	34.5 lbs (15,649g)
Dimensions	356(L) x 305(W) x 178(D) mm

PROJECT QUOTATION

We at Vigilant Solutions, LLC are pleased to quote the following systems for the above referenced project:

Hardware

Qty	Item #	Description
(12)	VSF-025-L5F $6,236.00 Each	**L5F Fixed LPR Camera with Sun Shield - 25mm Lens with Camera Cable** • Dual-lens camera with infrared LEDs for plate illumination • 55ft - 85ft capture distance and up to 2 lane coverage • Internal trigger for capture of plate alphanumerics, vehicle make and model • Camera housing with included sunshield is IP67 rated for reliable use in varied weather conditions • 60' camera cable included • Includes CarDetector LPR software for local server hosting • LPR vehicle license plate scanning / real time alerting o Full suite of LPR tools including data analytics
Subtotal Price		**$74,832.00**

Qty	Item #	Description
(12)	VS-FX-UNI-POLE-WALL-BRKT_REV_B $350.00 Each	**Fixed LPR Camera Bracket** • Pole or Wall Mount - UPR ARM ASSY POLE & WALL MOUNT BLK REV B
Subtotal Price		**$4,200.00**

Qty	Item #	Description
(5)	BCAV1F2-C600 $2,779.00 Each	**Vigilant Fixed Camera Communications Box** • Manages power and communications for up to four (4) Vigilant fixed LPR cameras • Includes modem for communication with cellular carriers o SIM Card not included
Subtotal Price		**$13,895.00**

Qty	Item #	Description
(9)	VSF-L6Q-S-KIT $6,235.00 Each	**L6Q Quick Deploy Camera (Solar Kit)** Offer Includes: • One (1) L6Q camera with two (2) Lex-11 high capacity internal batteries • Solar Kit (40W solar panel, mounting bracket, charge controller, 12 Ah battery, Cable with M12 power connector) • Camera mounting bracket • USB-C cable and USB-C to USB-A adapter, Micro SD card • Requirements o Hosted LPR account for data storage, alerting, analytics and more o Enterprise Service Agreement Optional, Sold Separately: • 12VDC Power Pigtail • 120V AC power supply • Active SIM card with cellular data plan
Subtotal Price		**$56,115.00**

Extended Warranty

5 Years Coverage

Qty	Item #	Description
(12)	CDFS-4HWW $2,000.00 Each	**Fixed Camera LPR System - Extended Hardware Warranty - Year 2 through 5** • Fixed LPR System LPR hardware component replacement warranty • Applies to 1-Channel hardware system kit • Valid for 4 years from standard warranty expiration
Subtotal Price		**$24,000.00**
Qty	**Item #**	**Description**
(9)	CDFS-L6Q-HWW-04 $1,400.00 Each	**Extended Hardware Warranty** • Fixed L6Q Camera System Extended Hardware Warranty • Four (4) Additional Years (Years 2 through 5)
Subtotal Price		**$12,600.00**

Camera Licensing & LEARN

5 Years Coverage

Qty	Item #	Description
(5)	VSBSCSVC-04 $3,000.00 Each	**Vigilant LPR Basic Service Package for Hosted/Managed LPR Deployments** • Managed/hosted server account services by Vigilant o Includes access to all LEARN or Client Portal and CarDetector software updates • Priced per camera per year for over 60 total camera units • Requires new/existing Enterprise Service Agreement (ESA)
Subtotal Price		**$15,000.00**

Qty	Item #	Description
(5)	VSBSCSVC-L6Q $2,160.00 Each	**Vigilant L6Q Service Package for Hosted/Managed LPR Deployments** • Vigilant L6Q Service Package for Hosted/Managed LPR Deployments
Subtotal Price		**$10,800.00**

Technical Services

Qty	Item #	Description
(1)	Installation $15,000.00 Each	**Hardware installation at (4) Locations.** • Site 2: SB Hawthorne & Rosecrans - Install 3 Cameras & 1 Comms Box • Site 6: WB Redondo & Prairie - Install 2 Cameras & 1 Comms Box • Site 9: NB Inglewood & Artesia - Install 2 Cameras & 1 Comms Box • Site 13: EB Rosecrans & Inglewood - Install 2 Cameras & 1 Comms Box • Engineered traffic control plans are not included.
Subtotal Price		**$15,000.00**

Qty	Item #	Description
(5)	SSU-SYS-COM $955.00 Each	**Vigilant System Start Up & Commissioning of 'In Field' LPR system** • Vigilant technician to visit customer site • Includes system start up, configuration and commissioning of LPR system • Includes CDM/CDF Training • Applies to mobile (1 System) and fixed (1 Camera) LPR systems
Subtotal Price		**$4,775.00**

Qty	Item #	Description
(1)	VS-TRVL-01 $1,488.00 Each	**Vigilant Travel via Client Site Visit** • Vigilant certified technician to visit client site • Includes all travel costs for onsite support services
Subtotal Price		**$1,488.00**

Delivery

Qty	Item #	Description
(26)	VS-SHP-02 $55.00 Each	**Vigilant Shipping Charges - Fixed or Comms** • Applies to each fixed camera LPR System • Or Communication Box Purchased without LPR System • Shipping Method is FOB Shipping
Subtotal Price		**$1,430.00**

Qty	Item #	Description
(1)	Sales Tax $15,276.80 Each	**Sales Tax @ 10.25% of $149,042.00 = $15,276.80**
Subtotal Price		**$15,276.80**

Quote Notes:

1. All prices are quoted in USD and will remain firm and in effect for 60 days.
2. Returns or exchanges will incur a 15% restocking fee.
3. Orders requiring immediate shipment may be subject to a 15% QuickShip fee.
4. This Quote is provided per our conversation & details given by you - not in accordance to any written specification.
5. This Quote does not include anything outside the above stated bill of materials.
6. Motorola's Master Customer Agreement and all applicable addenda, available at https://www.motorolasolutions.com/en_us/about/legal.html shall govern the products and services, and is incorporated herein by this reference.
7. LA County Master Agreement Pricing.
8. L5F hardware instalaltion at (4) locations. L6Q camera installation is not included.
9. Customer to provide cellular data SIMs for L6Q cameras and VLPs.

COVER LETTER

April 20, 2023

Mr. Michael Reyes
Director of Municipal Services
The City of Lawndale
14616 Grevillea Avenue
Lawndale, CA 90260

RE: Response to Request for Proposals Automatic License Plate Readers

Dear Mr. Reyes and Evaluation Committee Members:

Traffipax, LLC., a member of the JENOPTIK Smart Mobility Solutions Division presents our response to the RFP Automatic License Plate Reader. We acknowledge the requirements in the RFP and present our response to the City of Lawndale.

JENOPTIK is dedicated to developing and deploying innovative technologies that help protect communities worldwide. Our experience in delivering public safety solutions is recognized throughout the world. We know how best to design, develop, deploy and maintain these types of technologies to meet local rules and regulations. We originally invented ALPR in 1979, which is a cornerstone of any traffic monitoring solution.

We have over *4,000* JENOPTIK systems installed across North America, more than *30,000* systems deployed globally and still continuously expanding by improving the effectiveness of road safety strategies. Our products and services will provide advance analytical tools and applications to enable the City's to be proactive by taking preventative measures against criminal activities such as:

- ☐ Motor Vehicle Theft
- ☐ Robbery
- ☐ Burglaries
- ☐ Amber Alerts
- ☐ Trafficking
- ☐ Homicide

Our ALPR camera is capable of monitoring three (3) lanes of traffic. We design all of our own cameras and back office software and can provide 100% in house support for any potential technical concerns. Our cameras operate in all environmental and weather conditions, day and night, using video analytics and artificial intelligence (AI). JENOPTIK's team are readily available to work closely with the City's staff to provide our full turnkey Smart Mobility Solutions. We will conduct the necessary site assessments, customize the ALPR camera systems, install on new or existing poles, maintain, monitor performance and provide exceptional customer support throughout the term of the contract.

JENOPTIK's authorized representative will be Craig Schmidt, Key Account Manager for this submission. He will be available through the duration of this project at our California office 39300 Civic Center Drive, Suite 240, Fremont, CA 94538, via email craig.schmidt@Jenoptik- Inc.com or his direct phone number 949-603-6615. Mr. Schmidt has many years of experience in public safety and civil security. He has extensive knowledge and experience in the California region and able to collaborate effectively. He is an essential member of our team and can provide excellent support and expertise on our Smart Mobility Solution products and services. JENOPTIK, as the developer and manufacturer of our cameras and software provides powerful, reliable, and efficient public safety to our stakeholders throughout the world. We commit to the same level of quality and standards to a long-term partnership with the City of Lawndale, California.

Respectfully,

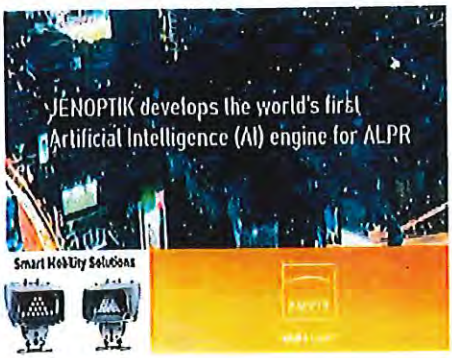
Mr. Finbarr O'Carroll
President Americas
JENOPTIK, Smart Mobility Solutions

16490 Innovation Drive, Jupiter FL 33478 | 561-459-4840 | finbarr.ocarroll@jenoptik-inc.com

JENOPTIK

MORE LIGHT

1. TECHNICAL



1. TECHNICAL
A. EXECUTIVE SUMMARY

Traffipax, LLC., a member of the JENOPTIK Smart Mobility Solutions Division presents our proposal in response to RFP for Fixed-Mount Automatic License Plate Reader (ALPR) Program for the Police Department in the City of Lawndale, California. Our latest generation camera will result in an increase to prosecutable offenses, assist with community policing and safety, our cameras will provide video/streaming and efficient criminal investigations. In addition, there are no third party software or hardware elements and therefore, the City will receive the highest level of customer support, performance and responsiveness.

JENOPTIK's cameras are robust, compact, durable and reliable and our professional technicians can easily install on traffic lights, street lighting and existing pole. Our products and services developed and deployed for all types of environmental and weather conditions. The camera feeds deep learning software, with clear and high-resolution vivid images of vehicles day and night, public safety, video analytics and artificial intelligence (AI).

Our camera has specially designed color and monochrome camera sensors and an array of infrared illuminators that maximizes ALPR capture rates and accuracy. Our cameras can monitor high-speed traffic to ensure optimal performance and accuracy in our system. JENOPTIK provides high definition live remote video streaming, data transfer, lookup, storage and historical retention capability providing the solution within this RFP.

As an end-to-end solution provider, we support our customers with a total system of roadside equipment and software, including integration, implementation, installation, system notification and maintenance. Our own in house team manages our operational implementation.

Our efficient development of camera and sensor technology has guaranteed our unique vertical integration, short development cycles, and a decisive technology cutting edge for many years. JENOPTIK's top quality workmanship and our unmatched reliability have characterized our brand name with many key advantages that benefit private and public governmental authorities.

JENOPTIK is the original Pioneer of the Industry

JENOPTIK, Smart Mobility Solutions is an established provider in this industry. The Industry timeline illustrates JENOPTIK's historical development throughout the year's and shows the evolution from a manufacturer of photographic equipment to a worldwide leading group in traffic enforcement.

Corporate Culture

The focus is to establish a dialog-based corporate culture characterized by initiative, respect for diversity and equal opportunities. The basis for employees to be "*Open, Driving, Confident*". We believe that committed and curious people always perform outstandingly. We value new ideas and develop them further by encouraging employees so we all can be successful.

Our History

1933
Otto Berning & Co was founded in Schwelm/Westfalen

- This is the basis for the success of all ROBOT cameras.
- The small picture camera for amateurs was launched on the market.
- It was a very robust, small, fast and handy camera that met with a very positive response in the professional world.

1950
The company developed towards technical photography.

- Warning – bank robbery: photographic alert systems
- Warning – road accident: photographic traffic surveillance

1960
ROBOT focused on traffic solutions.

At the beginning of the 1960s, the first stationary ROBOT system was installed in Düsseldorf.

At the beginning of the 1970s, the company developed systems that were installed on a tripod or in the vehicle.

1983
The Motor Recorder was launched on the market.

The Motor Recorder became the worldwide standard in photographic traffic monitoring.

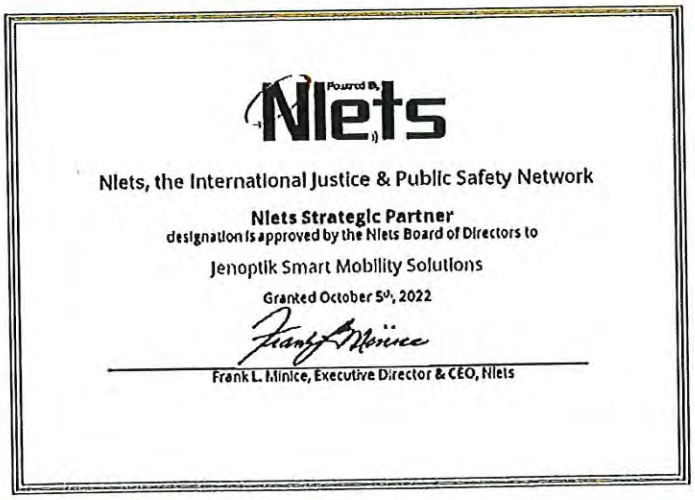
The patented rotor lock was long-lasting and maintenance-free up to 1 million releases.

Today
Jenoptik is an international solution provider for more traffic safety and public security.

Systems and applications for:

- Traffic Law Enforcement
- Civil Security
- Road User Charging

Innovating Public Safety with ALPR since 1979 and expanding for the FUTURE



Notable Recognitions & Certifications

NCPA

JENOPTIK has a strong global presence and installation base supported by reliable partner networks with innovation as our driving force. Our most recent awarded contract in the US is with the National Cooperative Purchasing Alliance (NCPA) https://www.ncpa.us/Vendors/Jenoptik for Red Light, Speed and Automated License Plate Recognition (ALPR) solutions, a valuable and credible recognition.

We are a Strategic Partner with the National Law Enforcement Telecommunication System (Nlets). Car ownership records for in state and out-of-state drivers are retrieved using a recognized and secure resource, therefore our partnership with Nlets is a network communication center that connects to over 55,000 law enforcement and judicial agencies in North America (all 50 states & territories, Mexico and Canada). We are proud of our partnership status and continuing the mission of making our communities and roadways safer.

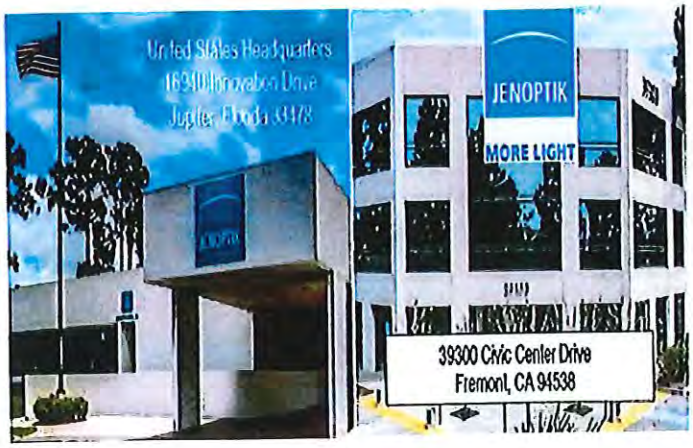
Nlets



Nlets, the International Justice & Public Safety Network

Nlets Strategic Partner
designation is approved by the Nlets Board of Directors to

Jenoptik Smart Mobility Solutions

Granted October 5th, 2022

Frank L. Minice, Executive Director & CEO, Nlets

Our Environmental Health and Safety team is responsible for managing and controlling environment, health and safety matters. We continuously conduct reviews, regular internal audits and obtain external up to date certifications to ensure our systems meet standards. In addition, depending on their environmental relevance, selected JENOPTIK companies are certified compliant with the environmental and quality management standards. We have other mentioned JENOPTIK's notable recognitions and certification https://www.jenoptik.us/about-jenoptik/quality mention listed.

IATF 16949 for the automotive industry
ISO 9001 for quality management processes
ISO 13485 for medical devices and products
ISO 14001 for the environmental management system
ISO 27001 IT security and compliance
ISO 45001 Occupational Health & Safety
ISO 50001 for the energy management system
AQAO 2110/2210 NATO QA System
EN 9100 for aerospace and defense industries
International Railway Industry Standard (IRIS)
JENOPTIK recognized at 2019 TEA Thea Awards for Outstanding Achievement
Jenoptik recognized at 2019 TEA Thea Awards | Jenoptik USA
JENOPTIK wins ABC Design Award and German Design Award 2022 with TraffiPole
JENOPTIK receives ASML Sustainability Excellence Award
JENOPTIK's involvement with New York City Automated Speed Enforcement Program JENOPTIK supplies all the cameras

As a manufacturing technology company, JENOPTIK produces a very small amount of emissions and our focus on green initiative is through our efficient Sustainability Environmental Management program. We want to reduce energy consumption and the ensuing greenhouse gas emissions as much as we can by using commodities and materials carefully and safely. We want to avoid hazardous waste and from our initial implementation on many of our development process, we have paid attention to environmental aspects and the economical use of resources. Through our regulated recycling and disposal programs, we minimize the impact on people, the environment and nature by recycling, circular economy, resource conservation (raw materials, water, etc.), energy and CO2 savings as well as bio-diversity. JENOPTIK is conscientious on protecting our environment and of high priority as our corporate responsibility to grow sustainably in harmony with the environment and society.

JENOPTIK's locations that will facilitate products and services will be our California and Florida offices. Our offices are open normal business hours. However, JENOPTIK's operational facility is made available 24/7/265.

B. Scope of Work

JENOPTIK's ALPR Camera

JENOPTIK's Automatic License Plate Reader cameras are robust, compact, durable and reliable easily installed on traffic lights and streetlights, solar powered trailers and integrated into patrol cars. The benefit of having our complete solution is we design, develop and own our products. The complete solution is custom designed, developed and owned by JENOPTIK and this direct service will ensure the City receives all the required elements.

We provide solutions and strategies for enhancing safety and improving traffic mobility and offer a full range of services based on a robust sensor and digital high-resolution automated camera.

This illustration shows Camera (TLE & ALPR) Locations
Clients throughout the world - Red Light or Speed Safety Camera

JENOPTIK can demonstrate that the proposed Smart Mobility Solutions is "business as usual" using our proven technology, experienced staff and practical procedures. The map represents an extract of JENOPTIK's experience of over 40 years. The blue areas on the adjacent map show the locations of our current installed cameras worldwide. We have successfully installed and operated our equipment adapting to extreme environment conditions.

JENOPTIK'S TECHNOLOGY TO MAKE ROADS SAFER & MORE SECURE

There are no third party software or hardware elements, our solution is 100% designed and supported by us

We customize our products and services to meet our CLIENTS specific Public Safety needs

Our Technologies Contribute to Saving People's Lives and Improving the Safety of the Public On and Off Roads

- ☑ All-in-One: Single camera solutions leads to easier setup, maintenance, and lowers cost automatic vehicle color, make and model detection option
  Video and photo options
- ☑ All ALPR processing is done at the edge (on the camera)
- ☑ Multiple Lanes: A single camera is capable of monitoring 3 lanes
- ☑ High Speed Performance: Capable of capturing vehicles up to 186 MPH
- ☑ Bi-Directional: Can read front and rear license plates simultaneously if monitoring two-way traffic
- ☑ Exceptional Night-time Performance:
  Camera provides superior nighttime accuracy of plate capture and read due to IR Lighting from 16 Nodes, discreet non-human visible Infrared illumination for excellent nighttime vehicle context images where required.
  - No distracting flash or light pollution
  - Dedicated Monochrome Lens
  - Lighting Sensor

We customize our products and services to private and public organizations that include governmental authorities and police enforcement agencies. Our proposed fixed solution with the back office software enables the City to receive actionable hotlist alerts of vehicle of interests in under 5 seconds. All communications to the back office server uses secure HTTPS or SFTP file transfer protocols.

We provide easy configuration instruction for our cameras through a simple easy-to-use GUI, which leads an installer through the key stages needed to make a camera operational. This intuitive interface guides both new and experienced users through the optimum setup configuration for the camera

JENOPTIKS's camera can be configured to supply live video feed viewable through a web browser application. HD video files can be recorded locally at the camera and stored in a secure, weatherproof adjacent storage device. These video files are recorded in two (2) minute increments, without interruption and may be viewed and downloaded by the same web browser application. Video file retention is set for 30 days, and additional days' storage can be available.

JENOPTIK's ALPR camera can operate in two trigger modes, either auto-detecting vehicles as they pass through the field of view, or by linking to an external trigger, for applications where only specific vehicles are required to be identified. In automatic mode, the camera analyze every frame image captured by the camera, and tracks vehicle number plates through the field of view, covering multiple lanes of traffic and flows in the same or opposite directions (depending upon site geometry and plate format). This provides an extremely robust way of locating number plates and provides a measure of vehicle speed. For these reasons, our camera is one of the few ALPR cameras in the world certified for capture of vehicles traveling up to 186 MPH in all weather and lighting conditions. In addition, JENOPTIK's ALPR camera can be configured for Speed and Red Light Enforcement (RLE) with the addition of a Radar device (also supplied by JENOPTIK).

The JENOPTIK Camera is an All-in-One single camera solution, which leads to easier setup, maintenance and lower cost. The Camera represents the latest development and the most successful traffic enforcement and license plate reading technology in the market, and was designed for unattended (24 hours/7 days), automated traffic enforcement system for multiple applications, including red light enforcement. Our solution does not require any in-road loops or piezo detection devices. All communication is wireless, using the cellular network to communicate with the BOF.

Highly Advanced Technology

JENOPTIK combined decades of ALPR experience into a single, highly capable and compact integrated unit. Two high-resolution cameras combined with integral Infra-Red (IR) illuminators provide ALPR and scene overview images, including day/night mode allowing capture on a completely dark road. Images can be transferred via a wide range of communications media, or stored on local high-capacity memory if communication should fail for a certain period. A GPS clock, compass, accelerometer and two light sensors allow the camera to adapt dynamically to a changing operational environment, supporting even the most challenging applications

Our camera is uniquely manufacture by JENOPTIK can operate without relying on third party vendors. The Camera has specially designed color and monochrome camera sensors, and an array of infrared illuminators that maximizes ALPR capture rates and accuracy in all environmental and weather conditions, day and night. Infrared is not visible to the human eye, its narrow band pass infrared active illumination with matched optical filters, dynamic camera control and short shutter exposure time provide a high degree of immunity to the effects of sunlight and vehicle light emission.

JENOPTIK's camera is simple to install, configure and operate, combined with the camera's technical capability, this delivers powerful solutions that can be rapidly implemented.

The Installation of our customized camera can be mounted on a wide variety of fixtures, from traffic signals and street lighting columns to gantries and bridges. A wide angular offset allows installation away from the monitored lanes. A range of mounting fixtures is available for easy installation. A single cable is used for power, data and video, with no requirement for an additional roadside cabinet.

Camera integrated ALPR and can monitor up to three lanes of high-speed traffic in the most challenging of conditions, by day or night. It is capable of bi-directional operation and boasting a greater resolution and processors that are more powerful. The imaging capability can be further enhanced by enabling "gain cycling" and/or "shutter cycling" options. These options will increase and decrease the gain and/or shutter, per frame, based on configurable values best suited for the operational environment. This allows the camera to, at a minimum; analyze several images captures per vehicle at various lighting levels.

The Deep Learning Engine is an artificial intelligence (AI) trained in a similar fashion to a human being, for example, is taught to recognize a "ball" – through correct and numerous repetition. In this case, the AI program identifies a valid license plate and knows how to read and detect each license plate per State. Its program will identify the font type, the font size, the spacing between letters, and the design of the plate amongst other features. This is all done in a "black box," which would be equivalent to our minds – there is no predetermined path to make a decision; it is entirely "organic."

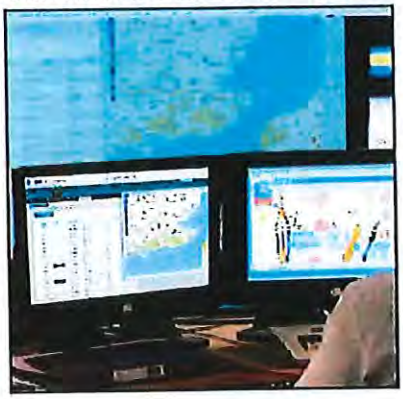
Deep Learning, on the other hand, does not "segment-and-compare," it simply "looks" at the license plates, and "reads" the characters as a human being would.

This has the benefit of being much more accurate, but also faster meaning quicker alert notifications of hotlist or suspect vehicles.

Over a short period and with enough training data, the accuracy of this AI can be tremendous. The result of being "taught," is that the AI is capable of identifying and reading plates in hundredths of a second and with an awesome level of accuracy

JENOPTIK's ALPR cameras feed deep learning software with clear and high-resolution images even under difficult weather conditions, as well as at night and for high speed traffic. Integrated light sensors enable the cameras to adapt optimally to changing exposure conditions and reliably monitor several lanes simultaneously. The ALPR cameras are robust, compact, durable and reliable, and can be installed on traffic lights, street lighting and existing masts, are suitable for both stationary and mobile applications.

In comparison, "Conventional ALPR" must segment (draw a box) each character in the license plate, and then compare that segment to a collection of letters in database (by country or state). This takes significantly more time, and is much less reliable. If the segment or letter is obstructed (by a trailer, license plate frame, mud, etc.), then the technology is defeated, and is incapable of producing a read of the license plate. Deep Learning, on the other hand, does not "segment-and-compare," it simply "looks" at the license plates, and "reads" the characters as a human being would. This has the benefit of being much more accurate, but also faster meaning quicker alert notifications of hotlist or suspect vehicles.



Our Back Office Facility (BOF)

JENOPTIK proposes our owned manufactured cameras with our acclaimed Back Office Facility (BOF) software. This solution provides advance analytical tools to enable Police Department to be proactive by taking preventative measures against life threatening situations and criminal offenses. We can provide a valuable public safety solution for the Police Department in City of Lawndale City.

Industry best practices are employed to protect the integrity and security of data both at-rest and in-transit whether at the roadside (camera) or in the cloud-server environment. This includes physical protection in the form of tamper detection at the camera sites, which in case of unauthorized physical access to the camera will result in any stored data and encryption keys to be automatically deleted.

The connection to and from JENOPTIK's camera to our BOF carries offence data, command status and log information; the data is encrypted and authenticated using the AES algorithm. Each camera maintains a set of Key Encryption Keys (KEKs) from which Data Encryption Key (DEKs) are created for each offence. The encryption strength is AES128 for data with a 64 bit MAC.

All records will be stored on an Amazon Web Services (AWS), Gov Cloud and Cloud-Base Server within the continental U.S. in accordance to Federal, State Local laws, rules, and regulations. The AWS Gov Cloud Base service is compliant with following, but not limited to: the National Institute of Standards and Technology (NIST), Criminal Justice Information Security (CJIS), Federal Risk Authorization Management Program (Fed RAMP), U.S. International Traffic in Arms Regulation (ITAR), Federal Information Processing Standard (FIPS).

JENOPTIK ensures the highest level of data transfer security to protect confidential information through access control, secured firewalls, detection of unauthorized encryption and our BOF VPN systems. Our trained team will not disclose any information to unauthorized users and only after various network verification layers to identify authorized user that will be granted access.

KEKs are encrypted with AES192. Any network traffic incoming and outgoing through the BOF passes through a Federal Information Processing Standard Publication 140-2 (FIPS 142-0)-compliant load balancer to maintain the cybersecurity of the system in relation to connections from both the camera estate and user connections. The JENOPTIK's BOF software will be hosted in a CJIS-compliant cloud environment that has been designed against the CJIS guidelines as per the Federal Bureau of Investigations

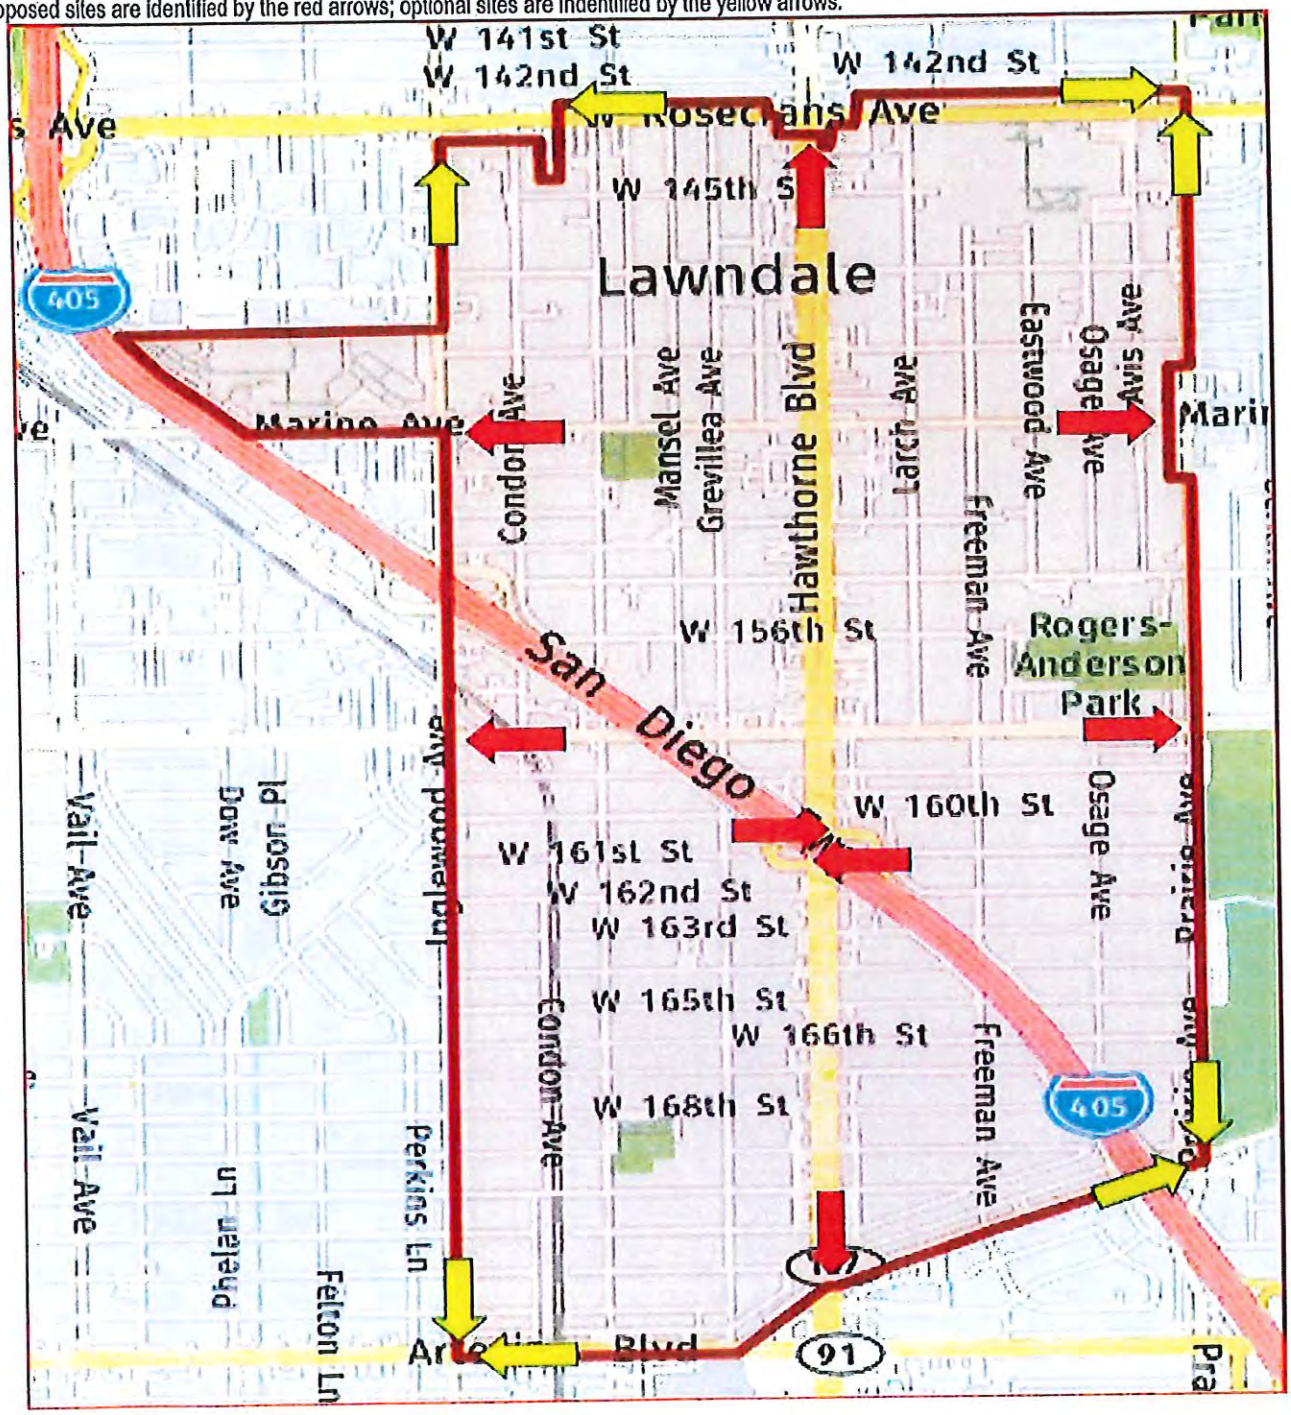
Received ALPR data can be matched against various lists (hotlists, black/white lists) in real time. Live alerts are distributed to all users via audible/visual alert, SMS or email. Logged-in users have the ability to filter their alerts, and rights-based access enhances security.

This allows the administrator to control access to information, especially during sensitive operations. Powerful user features enable real-time interaction, such as the ability to correct misreads, recheck against matching database criteria and redistribute system-wide.

The on-board GIS mapping facility overlays alert information in real time onto detailed maps, enabling the operator to clearly identify alert locations. User activity is fully audited and the administrator via the client application can review this data. Our ALPR software is fully compliant with local, State and Federal laws compliance.

The design and architecture of the system is modular, enabling it to be adjusted, scaled, and tailored to suit unique customer applications. How the BOF is used will vary depending upon who and for what purpose this system has been configured. The available features and interfaces to external processing systems can differ from customer to customer. The BOF will be accessible from any computer located in any municipality through a secure connection and will therefore allow Officers to review incidents locally or centrally. For this proposal, the BOF will be configured to manage and review events, manage camera assets, user accounts, and provide reporting capabilities. It is also capable of providing live alerting of known or desired vehicles to the user in real-time with the use of customer configurable hotlists, if desired.

The public-private key method ensures that the data is accessible only by facilities that have both the tools required to decrypt but also the private key. Both the strong digital signature and the encryption algorithms are standardized, publicly known, well accepted, recommended and approved by governmental and security entities. This may be considered as exceeding the requirements with respect to the required protection level.



Our Trained Staff

Our team of engineers undergo rigorous internal training and certified to perform installation, operation, and maintenance of the camera systems and BOF software. All engineering administrators of BOF systems are required to complete CJIS Level 4 Training for System Administrators. This ensures a high degree of system expertise and familiarization. Additionally, hands- on experience in the field and with other customers ensure that the City of Lawndale City receives the best support possible. JENOPTIK's highly qualified team members will relate personable and valuable information to end users in a series of training sessions. We believe the on-site training for our stakeholders is the most preferred method for information exchange led by a member of our experienced engineers.

C. PROPOSED APPROACH
POTENTIAL ALPR LOCATIONS

As one of the originators of Automated License Plate Recognition, JENOPTIK has been providing ALPR solutions for many years and we are confident in our abilities to provide City of Lawndale with a robust and superior ALPR solution to combat crime, monitor major roadways near the entrance and exit of the City. We have briefly assess based on the parameters listed on the RFP and we propose eight (8) cameras to cover the primary entrances. The images represented below indicate the potential ALPR locations within City of Lawndale, California. The locations were selected based on the proximity to the entrances into the City. This is not considered a final selection, and alternative locations can be selected based on the City's needs. Proposed sites are identified by the red arrows; optional sites are indentified by the yellow arrows.

D. PROPOSED TIMELINE

JENOPTIK's skillful approach is to have the Project Manager plan the various phases and activities within two weeks of an executed contract and deployment of the (Automatic License Plate Reader) ALPR systems, go-live date. Our assigned project manager for this project is Mr. Paul Trujillo paul.trujillo@jenoptik-inc.com whom will service as the primary contact for all business and technical matters related to the proposed solution. JENOPTIK, Smart Mobility Solutions will deliver, install, professional level ALPR Camera systems within City of Lawndale and provide the following estimated time frames based on permits made readily available, weather conditions and construction factors for the identified locations listed in the RFP.

We understand the core elements of this program and project approach and have outlined the estimated days* approach and schedule for the required camera systems.

	PROJECT APPROACH	Duration (days)* Estimated	RESOURCE
1	Notice To Proceed	1	
	Camera Equipment Schedule		
2	Complete site surveys and submit results to the City identifying areas with existing poles or new poles needed	10	JENOPTIK
3	Start installation of new poles with approval from the City	-	CITY
4	Start installation on existing poles based on City's approval	7	JENOPTIK
5	Commissioning and testing	5	JENOPTIK
	Back Office Schedule		
6	Upon completion of fixed pole camera installations, initiate back office application set up	7	JENOPTIK
7	Identify staff to receive credentials for back office access	-	CITY
8	Local training on software	1	JENOPTIK
9	Go Live	7	JENOPTIK
	Training Schedule		
10	On-going training as need and follow-up calls	7	JENOPTIK

JENOPTIK's services includes data transfer from the ALPR systems to the processing Centre specifically designed to comply with the data security and integrity. We provide maintenance of the cameras according to our internationally deployed service and maintenance procedures adapted to the specific requirements as listed in this solicitation. JENOPTIK proposes to survey the location sites and make a valuable assessment to place them in the most obvious points of entry. We remain proactive in our projects to avoid delays or concerns. Therefore, after contract execution, we are prepared to proceed with the project, survey each site and document key inputs to design the necessary plans. All surveys will be shared with the City for an active discussion on the listed locations from the RFP In addition, JENOPTIK's dedicated project team are screened and have significant and level of knowledge with expertise in the traffic safety and public safety.

NEW SITE INSTALLATION PLANNING

The JENOPTIK Service Delivery Team (SDT) conducts surveys of the designated camera locations. These surveys are initially done in collaboration with the customer using intersection construction plans, with markups by all relevant stakeholders. JENOPTIK's workflow will require coordination with the City staff and may include but not limited to as modifications may be necessary.

The following project plan outlines the activities within two weeks of contract award, contract signing and deployment of the ALPR systems; go-live date.

Site Surveys	Delivery of Equipment	Installation	Configuration	Operation "Go Live"
1. The site surveys are conducted based on the criteria of the RFP and specifically developed by JENOPTIK's team with consideration to the most cost- effective solution, utilizing existing infrastructure 2. JENOPTIK will work with local subcontractor(s) to construct the camera sites. (only if applicable, and/or as needed basis) 3. JENOPTIK's Camera are compact easy to installed on the existing poles without affecting existing equipment and/or install new poles if needed. 4. Safely first – All precautionary measures to ensure safety and continuous traffic flow during all phases of installation are taken within compliance 5. JENOPTIK will acquire permits and work with the appropriate public officials to obtain timely approvals	1. As part of the delivery process, specific customer requirements are reviewed and identified per the specification and/or statement of work, scope of services. This may include but not limited to: 2. All components shall be packaged and shipped in a manner that will prevent the parts from being damaged during transit from the supplier to JENOPTIK. 3. The supplier shall bag and tag the components being delivered that easily identify the materials with the following information: • Supplier • PO Number issued • Part Number • Revision • Quantity • Serial Number (if applicable) • Destination (FOB)	1. *(see figure 1)* JENOPTIK's camera is simple to install, configure and operate. 2. *(see figure 2)* JENOPTIK will mount on a wide variety of fixtures: • traffic signals • street lighting columns • gantries • bridges 3. A wide angular offset allows installation away from the monitored lanes. 4. *(see figure 3)* A single cable is used for power, data and video, with no requirement for an additional roadside cabinet. 5. A user-friendly (GUI) graphical user interface guides installers through the key stages needed to make a camera operational, simplifies configuration, and removes the need to program complex routines.	1. Following each plate read, an evidential record – data and images – is created: 2. The images include a plate patch and one or more overview images. Data can be encrypted using the latest DES or AES standards. 3. The evidential records for vehicles of interest can then be transmitted via a wide range of communications media, wired or wireless, or stored on local high- capacity memory. 4. The camera can be configured to read characters in the formats issued by all countries and can read all countries' plates at maximum vehicle speeds.	1. Once the camera is powered up and capturing data, it automatically monitors its performance and the environment around it. Image optimization happens automatically in response to ambient conditions. 2. Onboard movement sensors can detect excessive camera movements due to vibration or vandalism. If plate read falls below a configurable threshold value, an alert message can be sent to the operator. 3. Remote monitoring via WLAN, 3G/4G/LTE, Wi-Fi, or ADSL allows the camera to be viewed at any time without the need for physical access.

JENOPTIK's most innovated generational integrated camera combines decades of ALPR experience into a single, highly capable and compact integrated unit. The installation of our cameras are done on a standard pole and main power (100 - 240 VAC). Our camera automatically monitor its performance and automatically adjust to different ambient lighting conditions.

JENOPTIK SMART MOBILITY SOLUTION - TECHNICAL DATA	
FEATURES	**DETAILS**
Cameras Resolution Lens (for both)	ALPR 5MP Monochrome Camera & Overview Day/Night mode Camera
	5MP (2464 X 2056 pixels) captures 3 lanes and 3.2 MP (2048 x 1536 pixels) captures 2 lanes, color (context) image sensors, remote control motorized zoom & focus: 15-50 mm lens option 8 m² FOV, 2-3 lane coverage. Optimal operating range 60-114'.
Physical	Camera: 370 mm (L) x 230 (W) x 125 mm (H), 5.7lbs supplied with two-axis mounting bracket, 8.3lbs with three-axis bracket. Without sunshield: Height 125mm, Width 168mm, Length 192mm.
	With sunshield: H:125mm, W:230 mm, L:370 mm.
Memory Storage	From 8GB to 128GB
Field of view	Single and dual lane monitoring
Lane Coverage	Up to three standard width lanes
Speed Measurement Range	12.5 mph to 186 mph
Illumination	16 integrated infra-red LEDs with controlled pulse, 850nm. Additional illumination available with external infra-red floodlight, with pulse illumination wirelessly synchronized to camera.
Environmental	-22° to 140° F operational temperature range (80% humidity above +22°F)
	-22° to 158° F storage temperature range
Communications	Fully integrated: WWAN (3G&4G), Wired LAN, 4G/3G/GPRS/GSM via internal wireless module to externally mounted or remote antenna. H264 streaming IP video. WLAN (Wi-Fi) connection (optional)
Installation	82'-115' from stop line, 12'-20' installed height up to 13' lane offset from furthest lane centerline
Electrical/Power	48VDC to camera, 230VAC, range 90-264VAC supplied via column box PSU, 25W typical power consumption
Software Options	Automatic ground truthing data capture tool. Five class vehicle classification tool.
Back Office/Data Gathering	ALPR plate reads, still image & video clips, basic vehicle classification, all with GPS time stamping. Works with Traffi Data and Traffi Mobile software products
Radar	Camera: 370 mm (L) x 230 (W) x 140 mm (H), 2.5kg supplied with two-axis mounting bracket,
Other Features	Built-in compass, pointing angle and ambient illumination sensors. Interfaces to multiple common databases and back office systems. Sun visor, grey as standard, other colors available. Automatic number plate recognition (ANPR), directional classifier, vehicle classification, built-in compass, ambient light sensors, and anti-tamper detection.
JENOPTIK Smart Mobility Solutions division reserves the right to make changes to the specifications and improvements to the product and/or programs herein at any time.	

Figure 1

The benefit to our proposed smart mobility solution is that we manufacture and develop the camera mounted on our customized brackets and mounts as shown on the illustrations below:

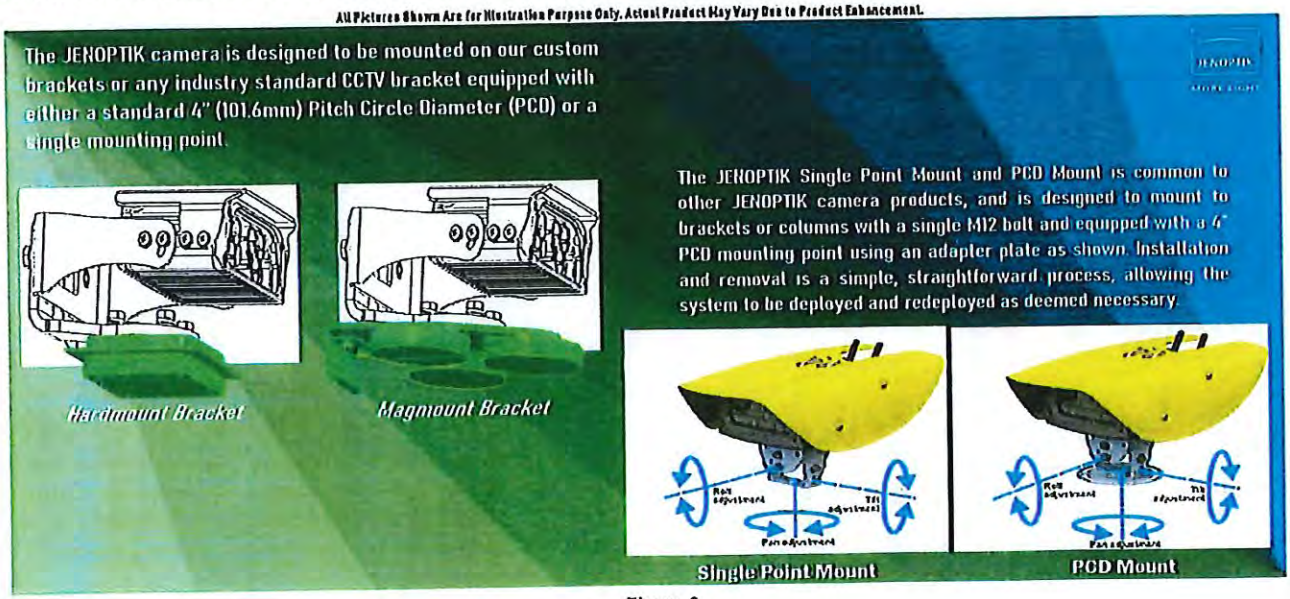


Figure 2

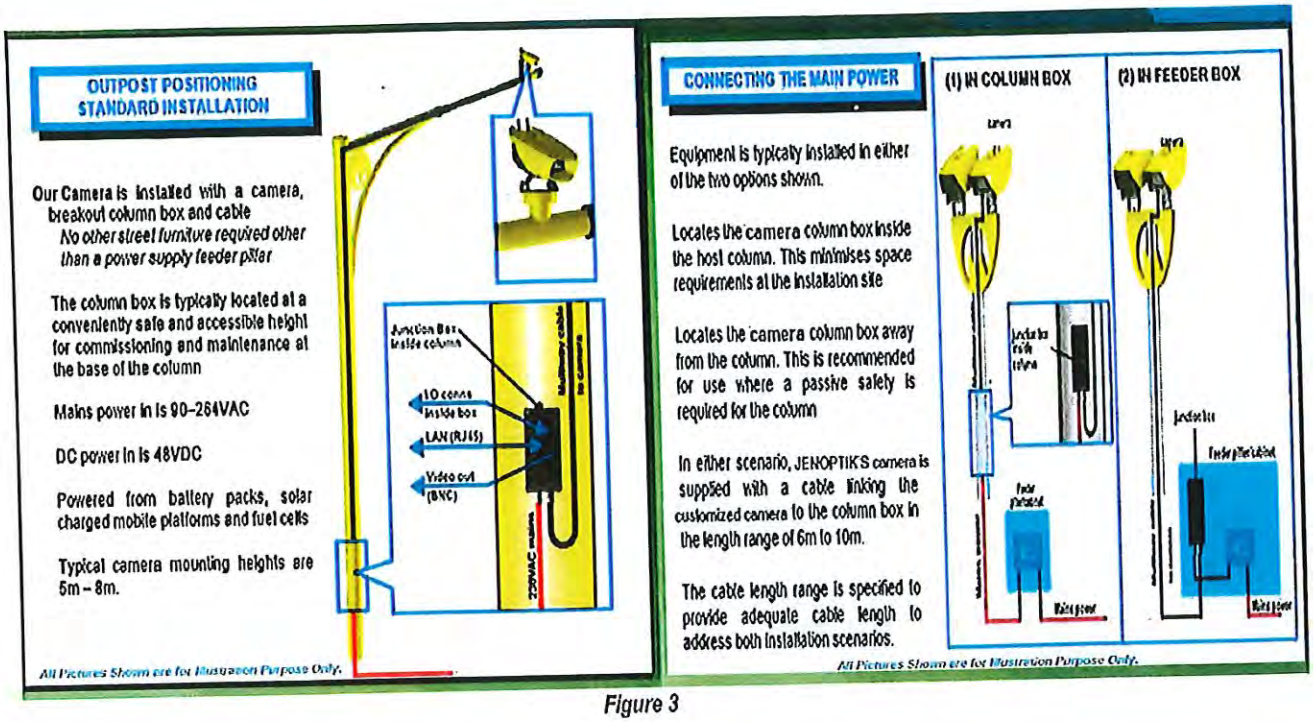

Figure 3

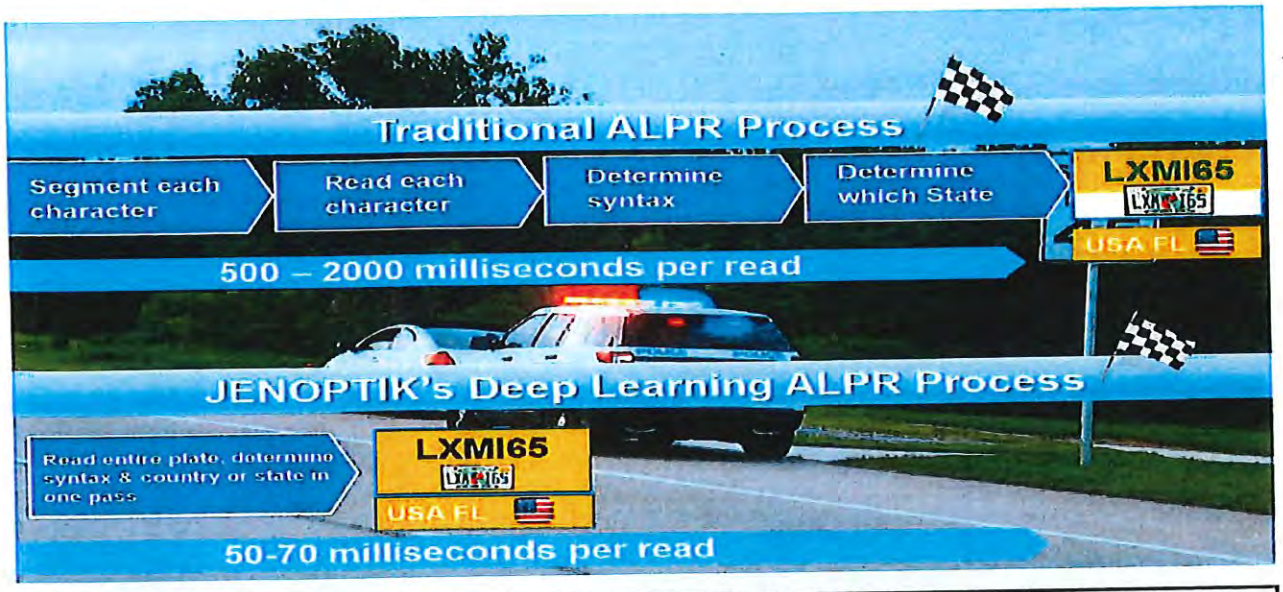
- *JENOPTIK will remove equipment and infrastructure at the end of the contract.*
- *There are no third party software or hardware elements, our solution is 100% designed and supported by us*

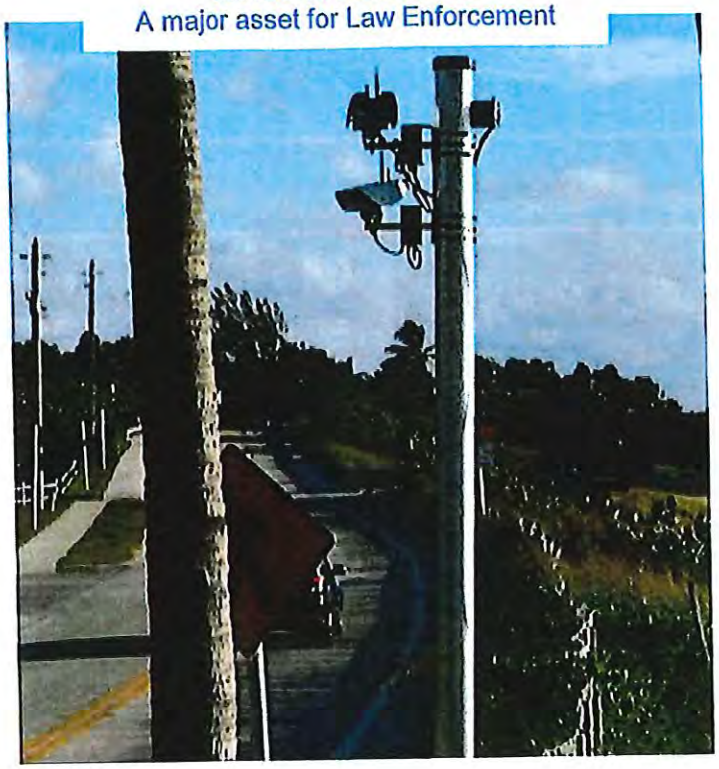


WARRANTY

- Seller warrants the Products will be free from defects in material and workmanship at the time of delivery. In the event a defect in material or workmanship shall arise within the Warranty Period (as hereinafter defined) and such defect is attributable to Seller, Seller shall within a reasonable period of time, at Seller's sole option, repair or replace the Products (or defective portion thereof) or refund the purchase price thereof (the "Warranty"). This is a limited warranty as to the condition of the Products at the beginning of the Warranty Period. As used herein, "Warranty Period" shall mean (i) one (1) year from the date the Products are delivered and for parts in the products, replaced or repaired during the Warranty Period. The warranty period for the said replacement or repaired parts shall be to a maximum of twelve (12) months and will begin on the date the replacement or repair is performed, but in any event shall not exceed the remaining portion of the original Warranty Period of the Product into which the replacement or repaired part is incorporated. Additional years of warranty can be purchased.

JENOPTIK, Smart Mobility Solutions Division
Camera

- *JENOPTIK standard terms and conditions apply, for full details visit https://www.jenoptik.com/gtc*
- *JENOPTIK will provide confidential manuals upon the execution of a contract. These manuals have detailed pages of information about our products and describe their intended use. They outline the mechanical and operational instructions for the products and services featured in this proposal.*



DEEP LEARNING ALPR PROCESS

Deep Learning Engine	Artificial Intelligence (AI) Benefits	Back Office Facility (BOF) Software	Big Data Management	Support Team & Customer Service
☑ Artificial Intelligence (AI) Leads The Way to Higher Read Accuracy ☑ Research & Development done completely in-house ☑ Always Learning New Plate Styles & Types ☑ Achieves Superior Read Rates vs. Optical Character Recognition (OCR) Technology ☑ Able to Handle Difficult License Plates due to obstruction damage & dirt ☑ Enable Vehicle Classification ☑ Developed a proprietary Deep Learning Engine based on the latest developments in Artificial Intelligence (AI) and neutral networks	☑ Make, Model, Color (MMC) Recognition ☑ Abandon Object Detection (AOD) ☑ Occupancy Management ☑ Traversal & Zone (TZ) Detection	☑ Designed & developed by JENOPTIK ☑ Enable alerts to be notified within 2-6 seconds ☑ Alert notifications can be sent to 1–100 users ☑ Extensive BOF software analytics & external database integration ☑ Perform searches on license plates (partial and fuzzy) ☑ Generate analytic reports detailing vehicle movements and whereabouts ☑ Accessible anywhere from desktop, laptop, & mobile devices ☑ All aspects from alerts to data access are customizable ☑ Comprehensive audit functionality	☑ Capable of handling 90 million reads per day ☑ Data retention customized ☑ Data sharing with other agencies ☑ Quality Assurance and Compliance	☑ Ownership of each building block ☑ We are the original manufacturer and developer of hardware and software ☑ Decades of ALPR experience ☑ As the inventor of ALPR technology, our team consists of experts with decades of experience in ALPR, public security and road safety programs. ☑ Available 24/7/365

We provide images and examples of the quality of our products and services. JENOPTIK's Fixed- ALPR solution provides police agencies with the technology they need to dramatically reduce crime in their jurisdiction providing a safer community. The clear imagery produced by JENOPTIK's camera records the license plates of suspect vehicles and analyses their movements. The data is used to create criminal profiles and identifiable patterns.

JENOPTIK's Cameras
A major asset for Law Enforcement

Monitoring suspect vehicles with ALPR

This illustration shows DAY & NIGHT ALPR

Press Release

ALPR technology foils a series of car thefts across multiple counties

19 May 2020 Jupiter, FL USA - JENOPTIK, a world-leading supplier of road safety and public security solutions' VECTOR Automated License Plate Recognition (ALPR) cameras successfully captured the license plate of a vehicle suspected in a series of car thefts throughout South Florida ultimately resulting in an arrest of four suspects.

Last month a stolen black Porsche SUV was identified by a Jenoptik VECTOR ALPR camera in Palm Beach County. Using Jenoptik's TraffiData Convoy Report investigation tool, police identified a white Mercedes sedan preceded the stolen Porsche by 7 seconds. The same Mercedes vehicle had been linked to other car thefts but a license plate was never successfully captured by other camera solutions. This was the first time that the Mercedes license plate was identified successfully by an ALPR camera. Jenoptik's advanced Deep Learning engine running on the Vector camera ensured this license plate was identified. Police quickly notified their law enforcement agency partners and traced the vehicle to Fort Lauderdale which led to the arrest of four minors the following day. The vehicle had been involved in numerous car thefts throughout South Florida, from Collier County down to Miami-Dade.

The Mercedes vehicle had remained elusive to law enforcement agencies for weeks, many of whom had other ALPR camera solutions, but were only able to obtain imagery of the minors and the vehicle's exterior. None of these other ALPR cameras were able to capture the most important image of all- the license plate.

"Jenoptik is committed to helping improve the safety and security in communities and our VECTOR solutions represent a step forward in safer cities with our ALPR cameras and data analysis software," said Finbarr O'Carroll, Vice President for the Americas.

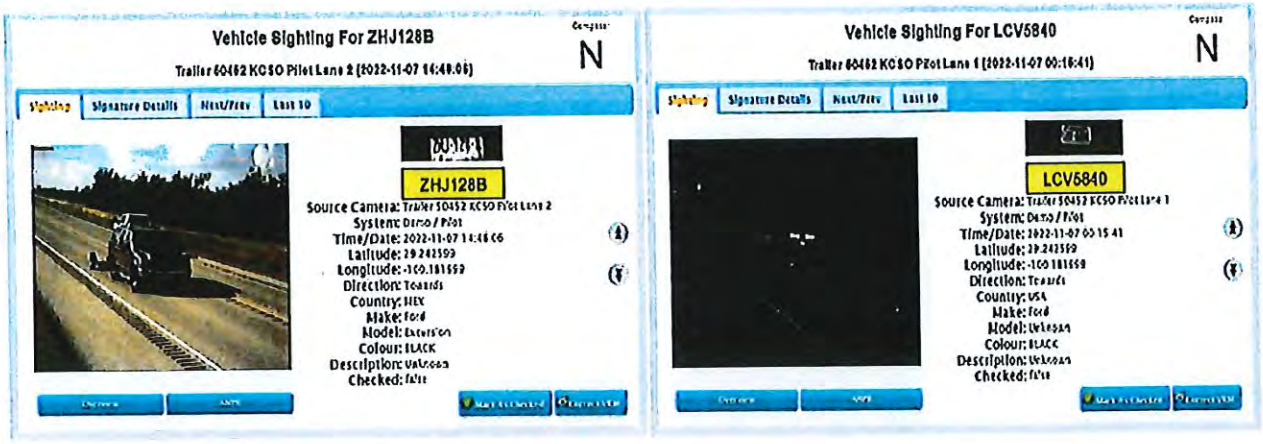
JENOPTIK Artificial Intelligence (AI) Deep learning Engine enables superior plate reads, we attest to the following example of the effectiveness of our ALPR solution. The below stolen vehicle alert *(Image 2)* was automatically sent from our software to deputies' mobile devices in under 10 seconds. The camera read the tow truck plate *(Image 1)* and stolen vehicle *(Image 2)* in milliseconds apart, despite the difficultly to read the license plate at the angle of the stolen vehicle.

Image 1

Image 2

With this actionable hotlist alert, and ability to receive the MMS text *(Images 3-4)* directly to their mobile devices, deputies were able to communicate and take actions instantly. This example lead to an arrest and recovery of the stolen vehicle *(Images 5-6)*.

Images 3-4

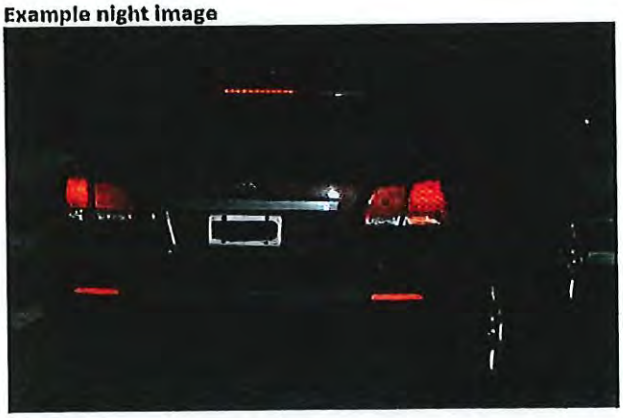


Images 5-6

All Pictures Shown are for Illustration Purpose Only

DAY and NIGHT IMAGES

JENOPTIK's camera is optimized to work both day and night, including roads that are visibly unlit. The camera can switch to 'night' mode, optimizing capture for low light conditions providing monochrome images, even for fast moving vehicles. *(Please see below images)*

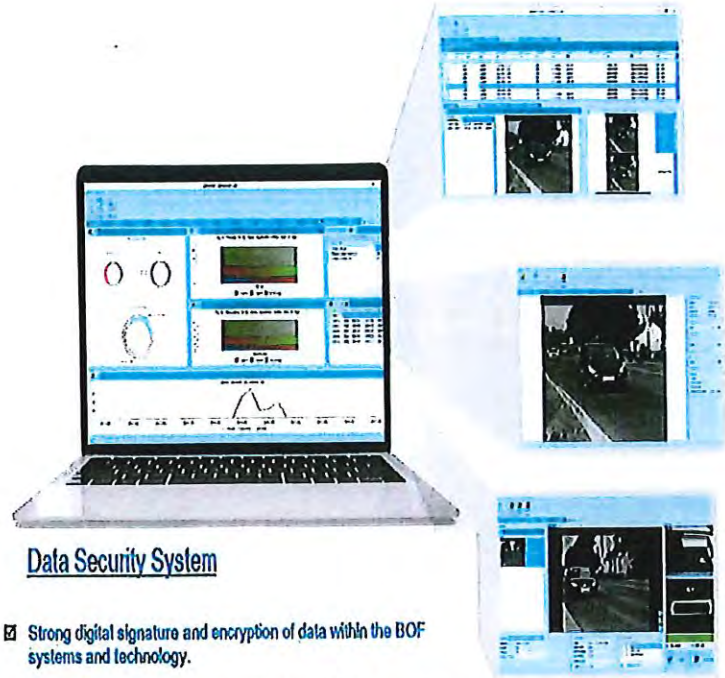


All Pictures Shown Are for Illustration Purpose Only. Actual Product May Vary Due to Product Enhancement

The latest-generation of our integrated ALPR camera can monitor up to three lanes of high-speed traffic in the most challenging of conditions, by day or night. It is capable of bi-directional operation and boasting a greater resolution and more processors that are powerful. In addition, since Infrared is not visible to the human eye, the narrow band pass infrared active illumination with matched optical filters, dynamic camera control and short shutter exposure time provide a high degree of immunity to the effects of sunlight and vehicle light emission.

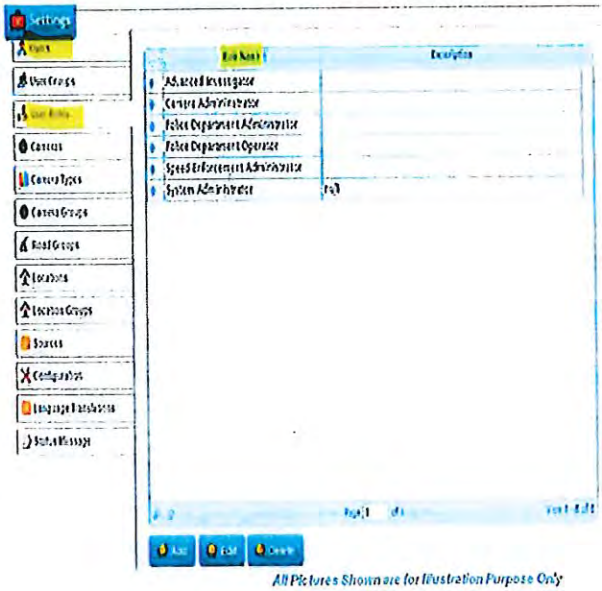
Example daytime image

Example night image



1. Search By Make, Model, Color (if available): the Back Office Facility (BOF) allows searching of vehicles solely by Make, Model, and Color and without the need of a license plate
2. Partial / Fuzzy Search: BOF allows searching for license plates with complete or partial known numbers.
3. Search by Images: Good for searching for vehicles based on physical appearance.

Example of an Overview Image (left), license plate patch (middle) & IR Image (right) of the same vehicle from the JENOPTIK's Camera



BACK OFFICE FACILITY (BOF)

Data Security System

- ☑ Strong digital signature and encryption of data within the BOF systems and technology.
- ☑ Proof of integrity and authenticity of each individual Camera Image
- ☑ Secure wireless transfer of data
- ☑ Strong encryption prevents unauthorized access to Camera Images
- ☑ Secured access to Camera equipment

JENOPTIK's BOF software will be made available to the City of Lawndale City Police Department Divisions as listed in this RFP. The assigned end users will have the ability to tailor various reports based on set parameters and setup and run ad-hoc reports based on the permission granted by the administrator. When creating a new user, the Administrator defines the user's role under the *USER Roles tab* and indicates which system functionality a user is able to process.

All Pictures Shown are for Illustration Purpose Only

JENOPTIK's Back Office Facility can export reports and data to Word, PDF, or Excel files. These files can be printed, viewed, or shared as deem necessary. The BOF features a wide array of reporting tools all of which can be customized by each state. These reports can be categorized as follows:

1. Search Reports
2. Analytical Reports
3. Statistics Reports
4. Convoy Reports

Our alerts contain pertinent information relating to the offending vehicle, if available:

- ☐ Make
- ☐ Model
- ☐ Color
- ☐ Originating Hotlist
- ☐ Hotlist Information (ex: Stolen Vehicle)
- ☐ Location (Street Address & GPS Coordinates)
- ☐ Direction

Alert Stack

The Alert Stack opens the **ALPR Alert Grid** in a new separate browser window. The alerts are permanently displayed on the left side of the window in a stack. Clicking on an alert will display its data on the **Details** tab. The Details tab sows the alert intelligence, with the ALPR data and any warning assigned to that hotlist entry. The Alert Stack is useful in daily operations within law enforcement agencies as target vehicles are typically identified within 2-4 seconds, allowing quick and rapid response, as necessary.

Hotlists

The Hotlist tab displays a list of hotlists held in the database. These lists can be loaded automatically from state and national sources or created locally by an authorized user. The list shows the hotlist name, Alert sound, vehicle count in the hotlist, date of last update, weed date, whether active or not and the alert color that will be displayed in the alert list.

The BOF provides and gives the City the ability to tailor Search Reports and Analytics Reports (e.g. Location, Event, Intercept, Convey) based on set parameters that end users can search license plates using different methods:

1. Search by Plate String
2. Search by Partial Plate String
3. Search by Fuzzy Plate String
4. Filter Search by Hit Filter (e.g. Hotlist, Hot Markers) *Image 1*
5. Filter Search by Signature (e.g. BLE, Wi-Fi, BT; if applicable) *Image 2*
6. Filter Search by Whitelist (e.g. Make, Model, Color) *Image 3*
7. Filter Search by Geo Zone *Image 4*

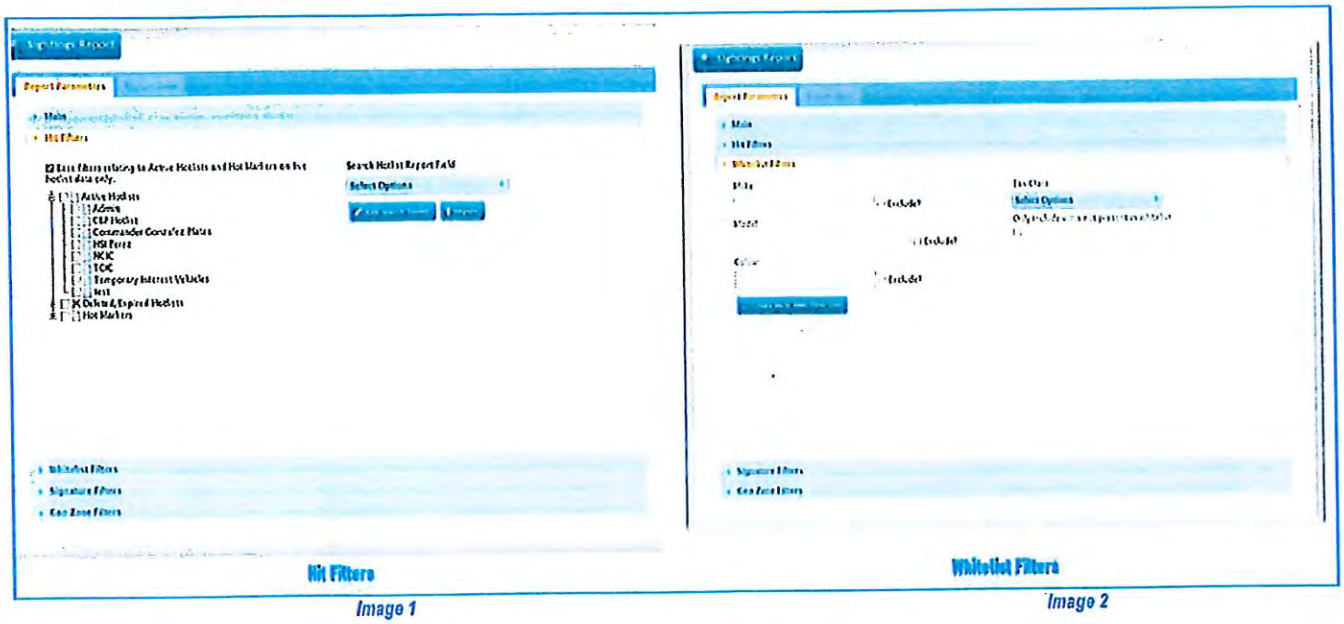


Image 1 *Image 2*

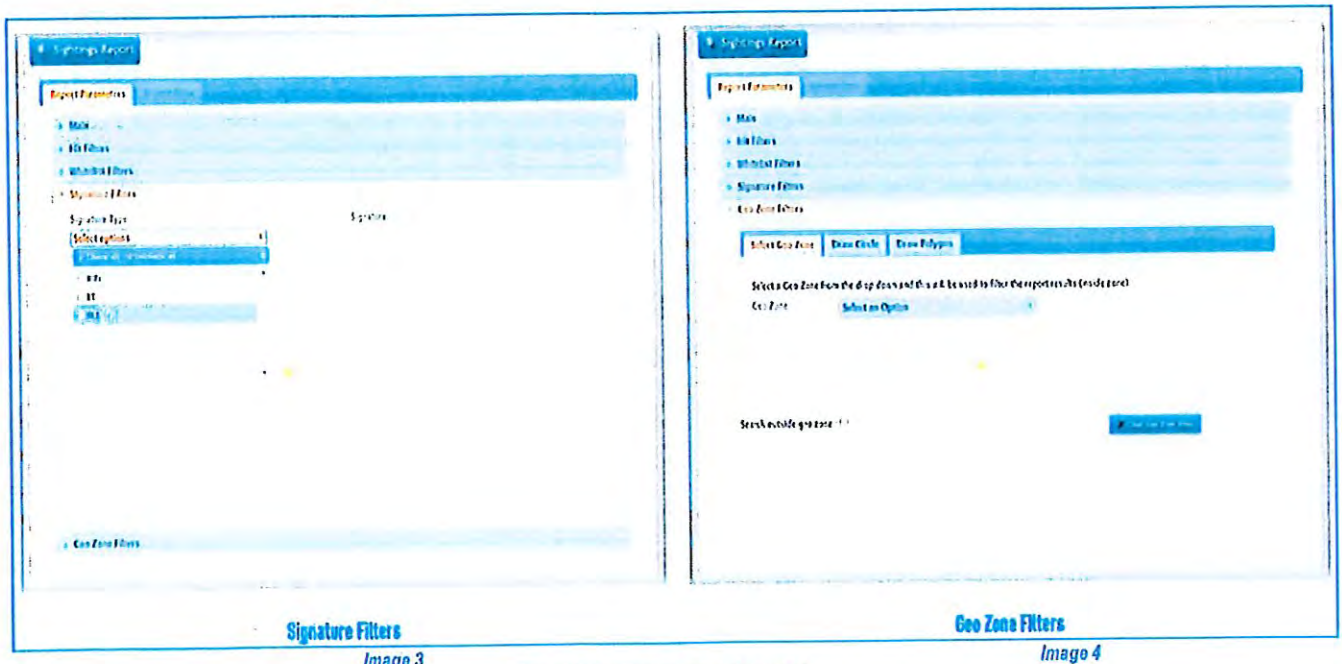

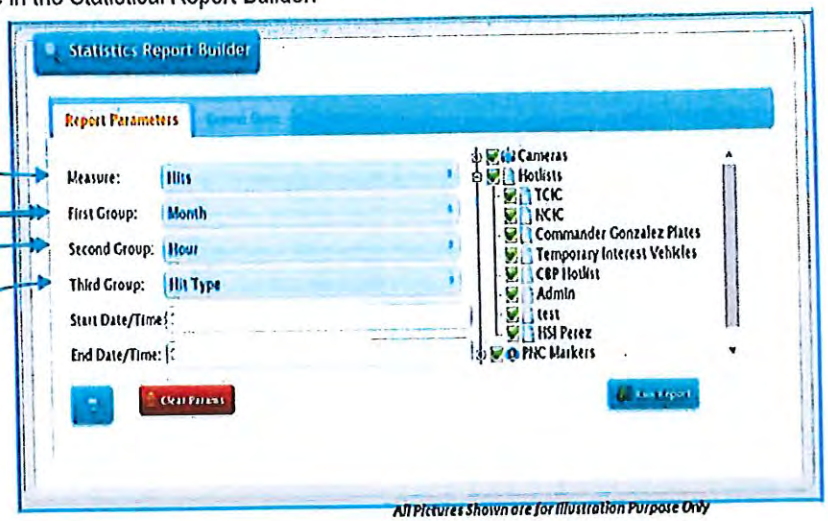

Image 3 *Image 4*

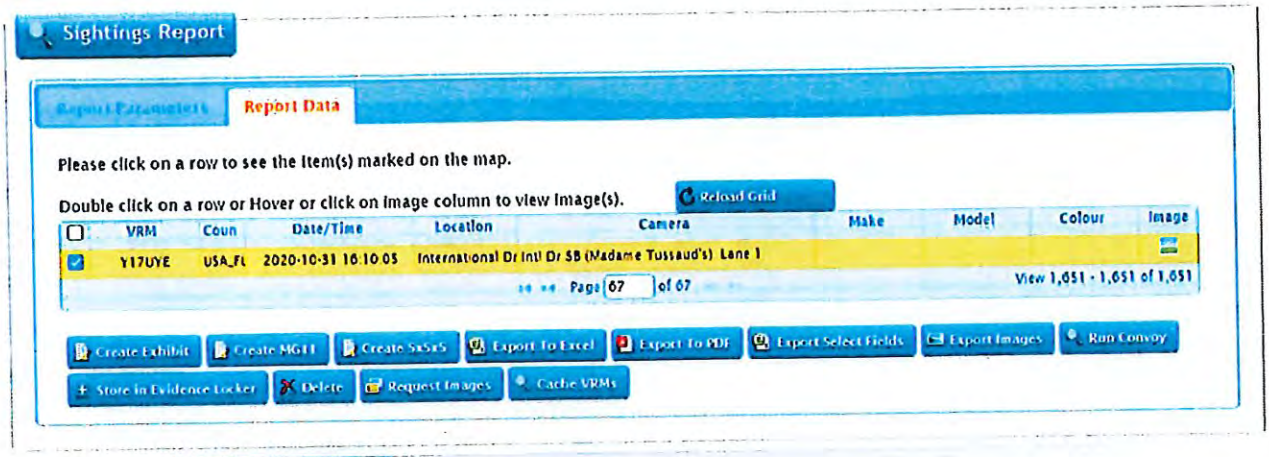
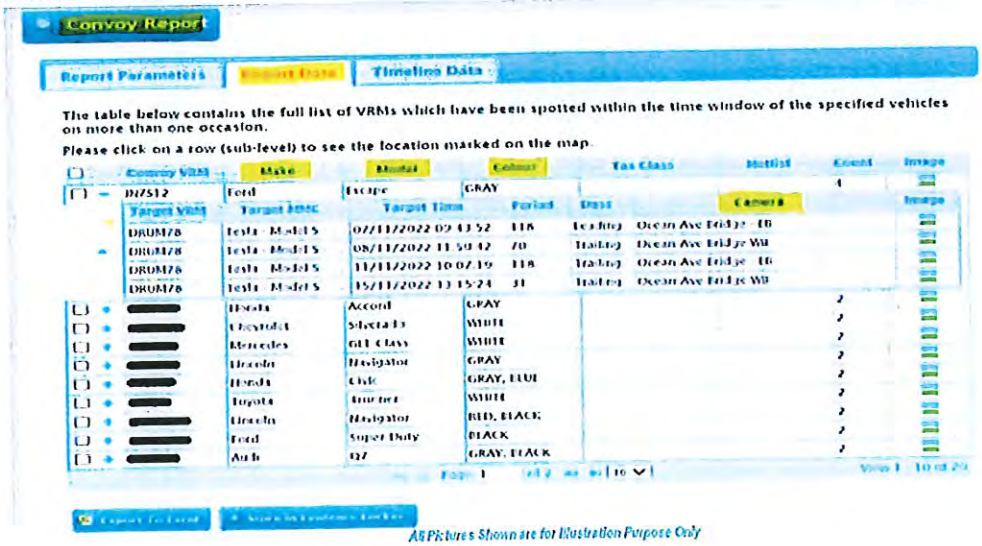


All Pictures Shown are for Illustration Purpose Only



The BOF has built-in capability for scheduling the automatic generation of reports based on criteria specified, and by reports can be provided upon request. Our BOF gives each state the ability to tailor Statistical Reports based on set parameters. End users can search information using options available in the Statistical Report Builder:

1. Hits
2. Reads
3. Searches
4. Corrections
5. Month
6. Week
7. Day
8. Hour
9. Camera
10. Hit Type Hotlists

All Pictures Shown are for Illustration Purpose Only

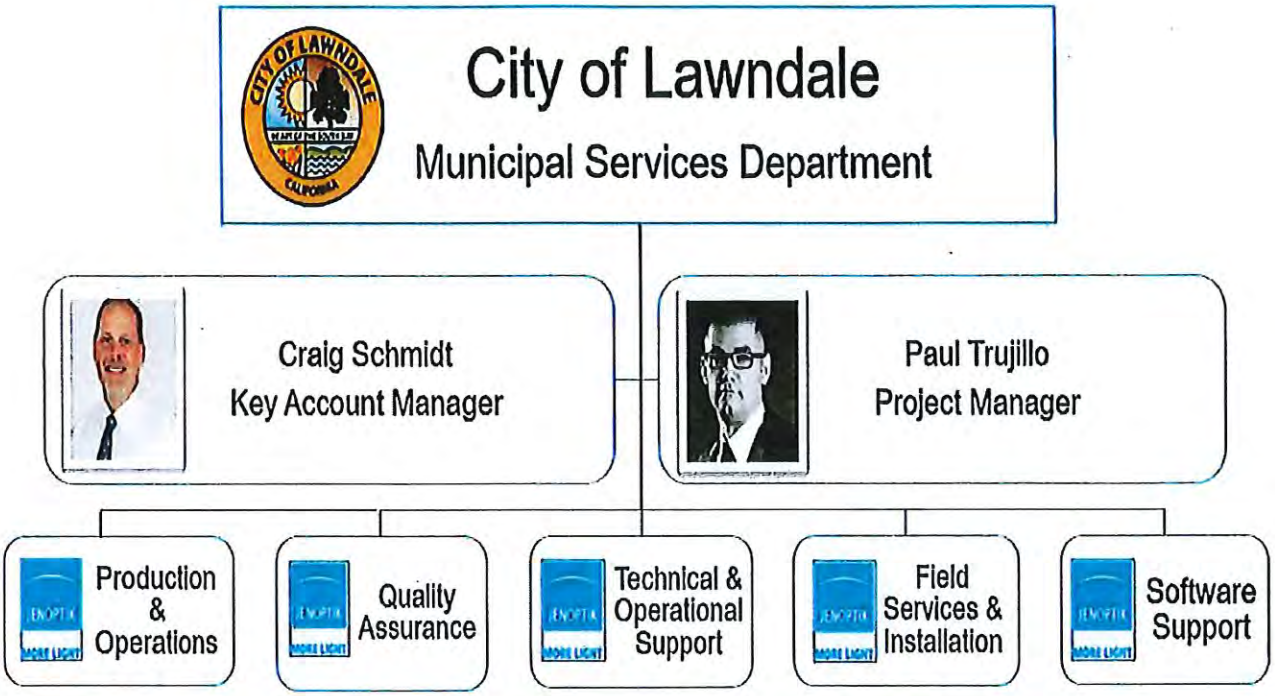
All Pictures Shown are for Illustration Purpose Only

TRAINING FOR CITY OF LAWNDALE

As part of JENOPTIK's commitment to this program, we will develop a bespoke training curriculum aimed at the different user types and stakeholders who use, access, or interact with the different aspects of the program. This includes field technicians and administrative staff, in field (with proper Personal Protection Equipment) or office environment, where applicable. Training will be done via a combination of facilitator-led sessions done in-person or remotely. Depending on project demands and requirements, further training can be scheduled to determine follow-up training sessions based on time and date availability, group size, delivery method, and the resources needed to conduct the session. Qualified personnel with expertise in engineering, field services, or account management will conduct training. Internal personnel are qualified by having successfully undergone a thorough certification process that has been internally developed to achieve and sustain our high level of operational proficiency seen in our projects globally. It is this hands-on experience in the field and with other customers ensure that the Agencies receives the best support possible.

Training for the City of Lawndale's personnel will be provided by JENOPTIK for tasks that may include, but are not limited to:

• Understanding of Photo Speed Enforcement	• JENOPTIK Back Office Usage and Familiarization
• Product Overview and Radar Mini-course	• Public Awareness & Dispelling Myths
• Misconception of Traffic Enforcement systems	• Program Overview



MORE LIGHT

2. MANAGEMENT & STAFFING

2. MANAGEMENT & STAFFING – KEY PERSONNEL

Mr Craig Schmidt, our Key Account Manager for this opportunity, is located in the City of Lake Forest. JENOPTIK's committed team and internal resources will be readily available to work collaboratively with the Police Department in the City of Lawndale, California. Our experienced team can fully deliver the requirements of this RFP. Each member of our team individually and combined have a significant level of knowledge and unique expertise in traffic safety and civil security. The implementation support team will consist of a Key Account Manager, and a Project Manager who will coordinate all related matters of this RFP. Our team of professionals will ensure precise communication with the City and will assist with all public awareness and outreach for this project.

PROJECT TEAM	RESPONSIBILITIES
Project Management	Our experienced and certified Project Manager is assign as fundamentally responsible for the successful delivery of all JENOPTIK systems. PM will ensure our processing team will adhered to governing statute and law, compliance and operational standards throughout all phases of the project to meet timelines and avoid any oversights.
Productions & Operations	Our team will be responsible for all camera production as well as the procurement of ancillary equipment. Our production team will customize design and manufacture quality advance systems including latest software.
Quality Assurance	Our Team will ensuring the highest standards of quality production of all systems required for the project. Team performs daily routine visual inspections of each system and notifies the appropriate parties accordingly.
Technical & Configuration Support	Our team responsible for the configuring and testing equipment and systems ready for deployment into the field. Also providing second line technical support for users to resolve and get equipment back into service as quickly as possible. This department is also responsible for the test and release of software, including change management process for introduction of new releases into the field.
Field Services & Installation	Our team of qualified technicians responsible for installation and configuration of systems onsite. We will install, test systems in the field, report, track progress and monitor systems downtime.
Software Support	Our software team involved in configuration and operation of ticket processing software along with remote software support.

JENOPTIK'S TEAM

Craig Schmidt

Position: Key Account Manager

Experience: 20+

Mr. Schmidt has been with JENOPTIK since July 2022, handling the Western Region, mainly focus to ALPR, Speed and Red Light camera sales and provide lifecycle support to our customers. He has worked with the Law Enforcement Community for over 15 years in Sales and Engineering capacities supporting Radar, Lidar and Video enforcement across the US and over 20 years in the Data and Telecom Industry. Provides extensive strong customer service background to meet the needs of our clients and their challenges to protect its citizens.

Paul Trujillo

Position: Project/ Construction Manager

Experience: 15+

Mr. Trujillo was a Sergeant in the United States Army with 13 years of service. Paul has a Bachelor's of Art Degree and has several years of experience working with the City of Transportation in various states across the U.S. At JENOPTIK, he is assign the role of Project Manager, responsible for the commencement of each project to include the coordination of permitting, engineering, and the construction of smart mobility systems as well as various aspects of each project.

Corlan McDonald

Position: Engineering Manager / Trainer

Experience: 10+

Mr. Corlan has over ten years as a talented software engineer, and provides leadership skills that translate to effective coordination and execution of software requirements. At JENOPTIK, he provides expert engineering software consultancy; Establishes new processes and procedures and provides the essential tools to guide and aid teams; Research all prospective resolutions for internal and external customers; builds and maintains reputable business relationships.

Juan Aldana

Position: Senior Field & Integration Engineer

Experience: 12+

Mr. Aldana has many years of experience in the photo enforcement industry. With key roles played in the deployment of projects across US and Latin-American, installation/programming, troubleshoot and service maintenance of photo enforcement and its components. At JENOPTIK, he is a Senior Field & Integration Engineer, responsible for effectively planning the integration strategies between different types of hardware, software, organizational procedures and databases systems in accordance with established deadlines and time schedules.

Jeri Andersen

Position: Service / Transition Manager

Experience: 20+

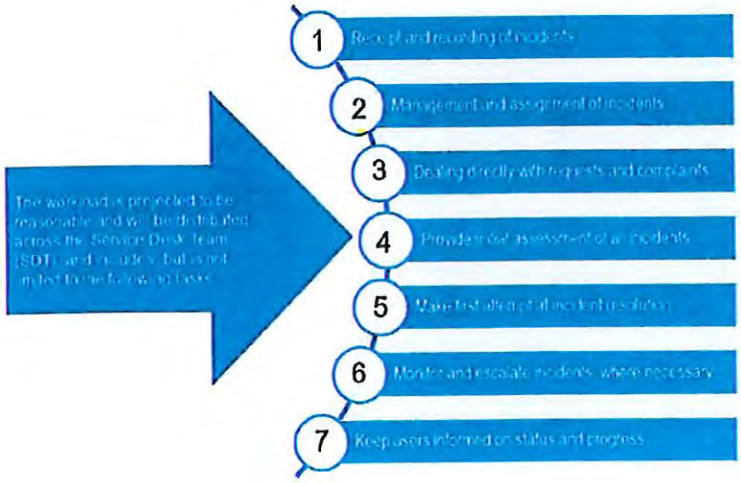
Ms. Andersen has accomplished senior operations, logistics, warehouse, and project management with over 20 years of professional experience. Currently she is responsible for overseeing operational transitions and implementation according to schedule and budget. In addition, she manages the service center for the maintenance and repairs of JENOPTIK product across North America, ensuring high quality product in the field.

Dough Kruhm

Position: IT Specialist

Experience: 35+

Architects the Infrastructure for a structured and modern approach for supporting and facilitating innovation within the enterprise. Models the hardware elements and develops across the enterprise and the relationship between them while following the latest security guidelines.



SUPPORT AND MAINTENANCE

JENOPTIK has a dedicated warehouse and support center that is able to provide call support, repair, documentation, training, engineering support, and capability to meet scheduled and emergency maintenance requirements. JENOPTIK's innovative method of continuous improvement driven by service support, feedback, and maintenance has extended the functionality of our ALPR solutions and has helped sustain a high level of performance. We provide this service upon completion of a project and throughout the length of the contract; JENOPTIK provides ongoing support to ensure system performance is monitored and maintained. This includes maintaining the camera systems and providing professional service, support and ensuring all necessary and relevant proactive measures are in place.

Our customer support services is provided according to the following tier structure depending on the level of severity as determine by both program business logic and JENOPTIK best practices.

SEVERITY LEVEL	RESPONSE TIME
On Site Response Urgency will be handled accordingly and immediately Urgent: A problem that severely impacts the Agencies' use of the System, such as, loss of data or is unable to function. The situation halts Agencies' business operations and no procedural workarounds exist.	The Agencies will receive immediate acknowledgement following report of the issue, and an initial response from Contractor's support staff within thirty (30) minutes of submitting a request for support. Contractor's support staff will provide a fix or procedural workaround within two (2) hours of receipt of notice of the issue from the Agencies.
High: A problem where the System, is functioning, but the use is severely reduced. The situation is causing a high impact to portions of the Agencies' business operations and no procedural workarounds exist.	The Agencies will receive immediate acknowledgement following report of the issue, and an initial response from Contractor's support staff within thirty (30) minutes of submitting a request for support. Contractor's support staff will provide a fix or procedural workaround within four (4) hours.
Medium: A problem that involves partial, non-critical loss of use of the System. The situation is causing a medium-to-low impact on the Agencies' business operations, but users can continue to function, including by using a procedural workaround.	Upon submitting a request for support, the Agencies will receive immediate acknowledgement of the request for support. A member of the Contractor's support staff will respond to the Agencies within two (2) business days with a resolution (fix) or with a plan of resolution that shows resolution (fix) will occur within five (5) business days.
Low: A general usage question, reporting of a documentation error, or recommendation for a future product enhancement or modification. The situation is causing low-to-no impact on the Agencies' business operations or the performance or functionality of the System.	The Agencies will be contacted by the Contractor's support staff within two (2) business days with a response to the support question; or receive notification that the comment or recommendation for feature enhancement has been logged.

JENOPTIK CUSTOMER SERVICE DESK	
Phone Number	561-459-3330
Phone Support Desk Availability	08:00 – 18:00 EST/ Monday to Friday excluding Federal Holidays
Customer Service Desk Portal	http://www.jenoptik.us
Customer Service Desk Availability	24 Hours, 7 Days a Week

On a daily basis, the SDT will review new and open tickets. New tickets are to be prioritized based on internal criteria. Open tickets will be updated, when applicable, to keep the City informed on the resolution process. Critical tickets are given the highest priority. The City will be informed throughout the issue resolution process through the Customer Service Desk Portal. Once an issue is raised and logged by the City through the Phone Support Desk or Customer Service Desk Portal, JENOPTIK will address and resolve outstanding issues, at all times following ITIL-based process framework.

3. FIRM EXPERIENCE

3. FIRMS EXPERIENCE - OUR CLIENTS & REFERENCES

JENOPTIK is a market and technology leader in the field of ALPR cameras with a significant market share. Currently we have over 30,000 systems in use worldwide. Our clients range from law enforcement municipalities and other public authorities up to private owned entities and in-/direct distributors who place their trust in JENOPTIK's technology. JENOPTIK's longest project with an annual estimated revenue greater than $20 million within the states has been our involvement with New York City Automated Speed Enforcement Program. We currently supply 2100 of our cameras for their speed enforcement systems deployed in school zones to protect children's, teachers, parents, and other caregivers throughout the New York City boroughs. System Overview/Date of Contract/Date System was operational: Initial lot less than 100. We deliver our customized camera systems, provisioned as a violation component of a greater end-to-end solution for the capture, recording, and processing of traffic violations having occurred in school zones.

The project and its program success has been due to our longstanding camera accuracy, operability, and reliability led to additional orders over the course of the program, growing the camera count from less than 100 in 2014 to over 2100 in 2023. The systems have been successful in court due to the accuracy and reliability of the systems. We can state that our partners have been pleased with our products and service.

4. COST & PRICING

4. COST & PRICING

DESCRIPTION	COST
FIXED ALPR CAMERA: ☑ Capable of tracking vehicles up to 180MPH ☑ Bi-directional 3 lane coverage with one camera ☑ Deep learning AI for superior ALPR read rates ☑ Video recording, storage and livestreaming capability (optional) ☑ Price per unit on existing pole with 110 Volts Power ☑ Extended Warranty will be included for years 2 - 5	Price per unit: $15,000 Install per unit: $1,500 Per unit $5,600
BACK OFFICE AND CLOUD DATA STORAGE: ☑ Over 25 years of law enforcement features development ☑ Extensive analytical and reporting capability ☑ Capable of integrating other vendors' cameras ☑ Up to 50 Users ☑ Capability to integrate to all needed Hotlists ☑ One Day Training (one-time fee per day)* ☑ NCIC and State level Integration - (one-time fee)	Price per camera Annually: $2,350 $2,500 $1,500
TOTAL ONE TIME COST NOT TO EXCEED	$274,800.00
OPTIONAL ITEMS:	
VIDEO STORAGE AND LIVE STREAMING SOLUTION FOR EACH ALPR CAMERA: ☑ Clear: Video captured in 2K+ resolution providing clear imagery of vehicles, vehicle markers, and pedestrians ☑ Versatile: Capable of 24/7 live-viewing, remote playback, and remote downloading of stored video* ☑ Robust: Reliable performance and connection in even low-latency environments ☑ Remote access: Web portal enables on-demand, remote access to quickly assist in investigations and collisions ☑ Long-term: Reliable 30-day storage of 2K+ resolution video ☑ ONVIF profiles compliant: Connect to your existing Video Management Systems (VMS)	Price per unit: $9,500 Install: $1,500
TraffiCatch: ☑ Next-generation solution for enhanced lifestyle profiling and digital fingerprinting of vehicles and persons of interest ☑ Captures in-vehicle Wi-Fi, Bluetooth and Bluetooth Low Energy (BLE) signals ☑ Completely passive, non-intrusive, and anonymized (hashed) ☑ Standalone or associated with vehicles ☑ MAC address alerts to your mobile device ☑ Vehicle switch ☑ Stolen plates	Price per unit: $9,500 Install: $1,200
Additional Items: ☑ All items above can also be supplied on a Solar Power trailer for mobile environments. ☑ All ALPR cameras can be configured for Speed and Red Light enforcement with the addition of a radar (also supplied by JENOPTIK). ☑ JENOPTIK can also offer distractive driving and sound detections solutions to help keep communities safer.	

Position Title / Skills	Hourly Rates
Project Manager	$ 110.00
Senior Engineer	$ 230.00
Trainer	$ 312.50 * this is for additional training if needed

5-09/550.20 - Rules Applicable to All Capture, Access, and Use of ALPRs Data

Automated License Plate Recognition (ALPR) data shall only be used for legitimate authorized purposes related to law enforcement, criminal justice, and public safety functions of the Department.

ALPRs shall only be used by members who have been trained in the use of the ALPR.

ALPR data shall only be accessed for appropriate, job-related functions. Data shall not be used for any non-work-related purpose, and all users shall take into consideration the privacy, civil rights, and civil liberties of individuals.

ALPR data shall only be accessed by Department personnel who have been authorized to access the data by their unit commander.

ALPR data, whether fixed, mobile, or portable, will be uploaded to the Department's physical and/or hosted ALPR servers and will be managed by the Advanced Surveillance and Protection Unit (ASAP).

If there is enforcement action, an investigation and/or prosecution that results from ALPR data, the ASAP unit shall be notified so that the original information can be preserved and a copy can be kept and held by the investigator.

Revised: 3/15/2017

5-09/550.00 - Automated License Plate Recognition (ALPR)

This policy will establish procedural guidelines and responsibilities of personnel and units utilizing the Automated License Plate Recognition (ALPR) System. As with any technical system, adherence to standards and procedures is a key element to the success of the system. For additional information regarding how the Department shares and receives information, quality assurance, collation and analysis of data, merging records, sharing and disclosure, security safeguards, information retention and destruction, accountability, and enforcement and training, please refer to the Department's ALPR Privacy Policy.

Revised: 3/15/2017

5-09/550.30 - Field Protocols - Patrol

Automated License Plate Recognition (ALPR) is useful in general patrol assignments when the patrol vehicle is in a position to monitor vehicular traffic.

ALPR-equipped vehicles should be deployed regularly. When not in use, ALPR-equipped vehicles shall be secured.

Personnel shall perform an upload of hotlist data prior to the deployment of an ALPR system to prevent potential traffic stops using outdated hotlist information.

When the ALPR system indicates a hit, prior to making the traffic stop and when safe to do so, personnel shall:

- Verify that the license plate information matches the license plate image of the vehicle.
- Confirm that the hit is still "active" by either running the license plate through the vehicle's Mobile Digital Computer (MDC) or via their radio to dispatch (if confirming via SCC, advise the request is for an ALPR hit on a vehicle).
- If a decision is made to initiate a "Code-9" due to an ALPR hit on a stolen vehicle and prior to receiving a secondary confirmation, the deputy shall advise SCC they are following a vehicle due to an ALPR stolen vehicle hit.

Proactive/manual entry of ALPR hotlist in the field is permitted for:

- Dispatched reports of crimes, "Be on the Look Outs" (BOLOs), Amber, Blue, Silver, or Yellow Alerts, or other law enforcement alerts in which a license plate number is part of the broadcast.
- When directed or authorized by the unit commander for a legitimate law enforcement purpose.
- Department members should query their ALPR system to ascertain if there is a prior read of the license plate which is the subject of the particular alert, bulletin, or alarm.

Proactive/manual entry of ALPR hotlist in the field is required for Amber Alerts, missing child, or critical missing persons. Additionally, Department members must query their ALPR system to ascertain if there is a prior scan or read of the license plate which is the subject of the alert.

ALPR may be used in special operations or details such as:

- High crime area patrols;
- Gang investigation/suppression;
- Driving under the influence initiatives;
- Enforcement details;
- Directed criminal investigations;
- Other investigations subject to authorization from the investigating unit's unit commander.

When a violent crime occurs, the Department may solicit assistance from other law enforcement agencies with ALPR-equipped vehicles to assist in identifying potential vehicle license plates and/or to gather license plate data in a particular area. Similarly, other law enforcement agencies may request assistance from this Department in the event of the same. Any mutual aid request shall be directed through the station's

operations staff. Consideration should be given to deploying ALPR strategically, such as at a perimeter, choke points, major highway, or other avenues of approach or escape.

Personnel shall log that they are using a mobile ALPR system in their Mobile Digital Computer (MDC) worksheet when logging on.

- Deputies shall ensure that logs and arrests associated with the ALPR system are complete and utilize the appropriate ALPR statistical code.
- If the deputy's log has an arrest associated with an ALPR hit, this information will be provided to the Advanced Surveillance and Protection Unit (ASAP) to retain the information for the case file.
- The deputy's log will be retained until all ALPR-related arrests have reached a final disposition.

When desk personnel receive a hit from a fixed ALPR system, which is the result of license plate data taken from a fixed camera, they shall confirm the current status of the vehicle via their CAD terminal or SCC. While waiting for confirmation, desk personnel shall advise field patrol units of the ALPR hit, the location, direction of travel, the vehicle description, request Aero Bureau, and coordinate responding field units.

Revised: 3/15/2017

5-09/550.40 - Audit Protocols

An audit trail sufficient to allow the identification of each individual who accessed information shall be retained by the Department, including the information requested and the reason for the access.

Requests to review stored ALPR data shall be recorded and maintained with a sufficient audit trail.

All inquiries of ALPR data will be automatically recorded in the audit trails and maintained by the Department.

ALPR audit trails shall be retained for a minimum of two years or until any associated case is adjudicated.

Revised: 3/15/2017

5-09/550.50 - Data

Department personnel may request (with the concurrence of their unit commander) that the Advanced Surveillance and Protection Unit (ASAP) enter a specific vehicle license plate into the Department's hotlist. Examples of entries include:

- Gang members/associates;
- Sex offenders;
- Crime suspects;
- Fugitives;
- Search warrant targets.

Members making inquiries into the Automated License Plate Recognition (ALPR) database must enter all information requested fully and completely in order to accurately track and manage each query into the system.

If the ALPR data query log contains a hit and an arrest is associated with the hit, the deputy or investigator shall retain a copy of this hit as part of the case file and notify ASAP.

ALPR data query logs shall be maintained and secured for future audits for a minimum of two years or until any associated case is adjudicated.

Personnel conducting a query on behalf of an authorized requestor shall log each query as such.

ALPR data shall be uploaded on specified incremental time frames as designated by ASAP to keep each hotlist up to date in the ALPR server. ALPR data transferred from all mobile, portable, and fixed ALPR cameras will be managed by ASAP.

All ALPR data shall be reviewed for record retention (validation or purge) at five years, and when information has no further value or meets the criteria for removal by applicable law, it shall be purged or permanently deleted except in cases such as:

- ALPR records related to a prosecution will be maintained until a final disposition has been reached in the case.
- ALPR records associated with a criminal investigation can be maintained in the criminal case file and retained for the maximum period of time associated with such records.
- Whenever otherwise directed by an executive of the Department for a particular case or internal investigation.

Stored data shall only be shared pursuant to an executed inter-agency agreement.

The Department does not maintain copies of shared data from outside agencies. Such data is maintained by those agencies subject to their own retention polices.

Revised: 3/15/2017

Attachment C

462.6 MONITORING SECURITY, INFORMATION AND COMPLIANCE OF PRIVACY LAWS

All data will be closely safeguarded and protected by both procedural and technological means. The Manhattan Beach Police Department will observe the following safeguards regarding access to and use of stored data (Civil Code § 1798.90.51; Civil Code § 1798.90.53):

(a) Personnel approved to access ALPR data under these guidelines are permitted to access the data for legitimate law enforcement purposes only.

(b) All access to ALPR information will be documented. The access information will include all of the following:

1. The date and time the information is accessed.
2. The license plate number or other data elements used to query the ALPR system
3. The username of the person who accesses the information
4. The purpose of accessing the information

(c) ALPR system audits will be conducted no less than two times per year by the Administration and Investigation Bureau Commander.

462.7 SHARING ALPR INFORMATION

The ALPR data may be shared only with other law enforcement or prosecutorial agencies for official law enforcement purposes or as otherwise permitted by law, using the following procedures:

(a) The agency makes a written request for the ALPR data that includes:

1. The name of the agency.
2. The name of the person requesting.
3. The intended purpose of obtaining the information.

(b) The request is reviewed by the Records Manager or authorized designee and approved before the request is fulfilled.

(c) The approved request is retained on file.

Requests for ALPR data by non-law enforcement or non-prosecutorial agencies will be processed as provided by the California Public Records Act and the Records Maintenance and Release Policy (Civil Code § 1798.90.55).

462.8 DATA ACCURACY

Several factors may affect the accuracy of the ALPR readings, for example: wear on the license plate, dirt, covers, and license plate frames. For this reason, it is important to verify the accuracy of any alert received.

© 1995-2016 Lexipol, LLC

Automated License Plate Readers (ALPRs) Privacy and Usage

462.1 PURPOSE AND SCOPE

The policy of the Manhattan Beach Police Department is to utilize ALPR technology to capture and store digital license plate data and images while recognizing the established privacy rights of the public.

462.2 ADMINISTRATION

The ALPR technology, also known as License Plate Recognition (LPR), allows for the automated detection of license plates. It is used by the Mahattan Beach Police Department to convert data associated with vehicle license plates for official law enforcement purposes, including identifying stolen or wanted vehicles, stolen license plates and missing persons. It may also be used to gather information related to active warrants, homeland security, electronic surveillance, suspect interdiction and stolen property recovery.

All installation and maintenance of ALPR equipment, as well as ALPR data retention and access, shall be managed by the Administration and Investigation Bureau Commander

The Administration and Investigation Bureau Commander will assign members under his/her command to administer the day-to-day operation of the ALPR equipment and data.

462.3 AUTHORIZED PURPOSES

ALPR shall only be used for official law enforcement business for the following purposes:

- Investigation for prosecution or exoneration of suspected criminal incidents
- Identification and/or location of wanted persons
- Enforcement of sanctions, orders, or sentences
- Crime prevention/general law enforcement purposes
- Crime Analysis

462.4 ALPR ADMINISTRATOR

The Administration and Investigations Bureau Commander is the administrator of the ALPR system and shall ensure that the system is operated in conformity with this Policy and other Department policies, procedures, rules and regulations.

462.5 AUTHORIZED USERS

Only sworn officers, Records Section personnel, and Parking and Animal Control Officers who have received department approved training are allowed to access the ALPR system after receiving department-approved training. Authorized vendors will have limited access for maintenance and repair.

Adoption Date: 2016/08/16
© 1995-2016 Lexipol, LLC

Prior to any action being taken due to an ALPR alert, the officer in the field and/or communications officer in dispatch should view the image of the license plate verifying that the image of the license plate was correctly recognized by the ALPR system.

If practicable, the officer should verify an ALPR response through the California Law Enforcement Telecommunications Systems (CLETS) before taking enforcement action that is based solely on an ALPR alert.

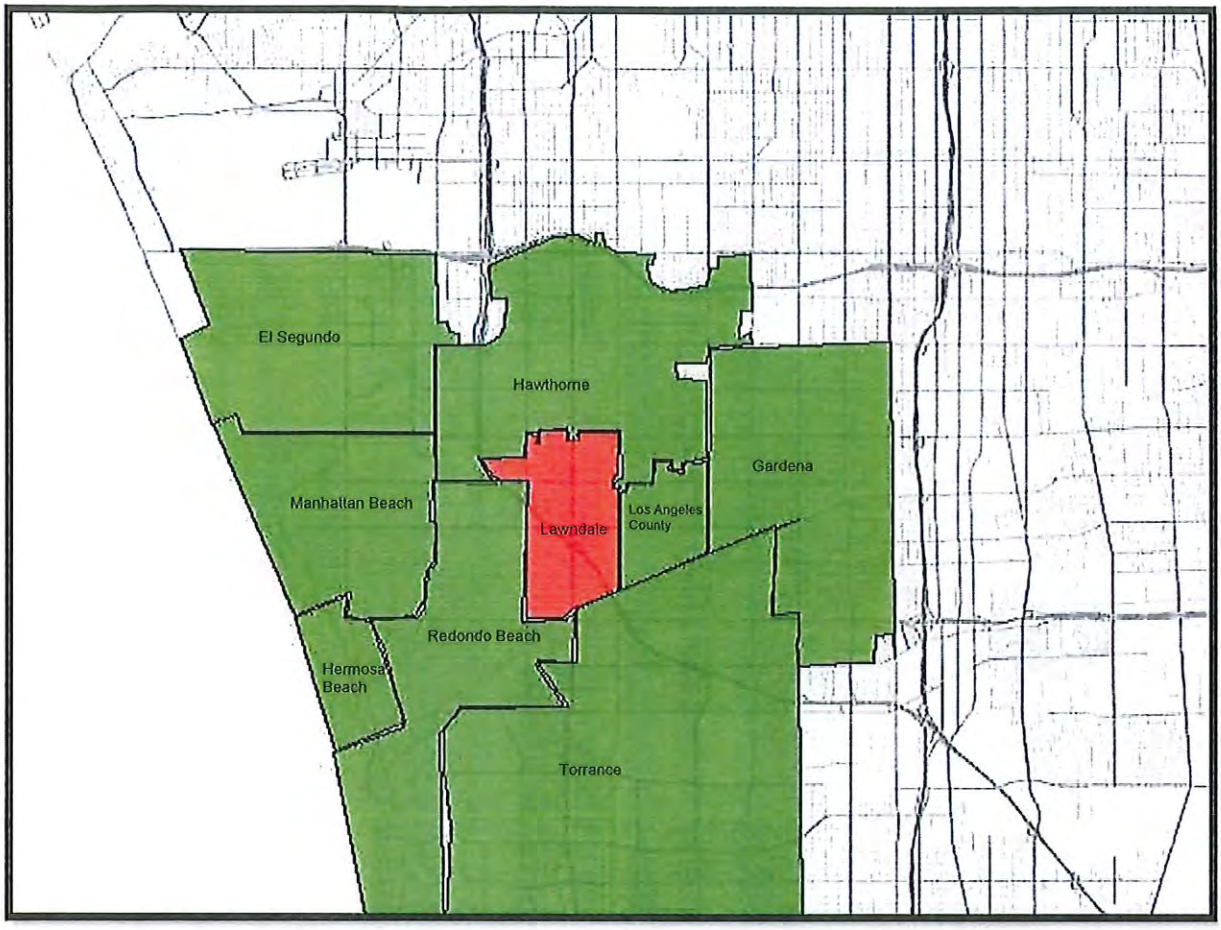
462.9 RETENTION OF ALPR INFORMATION

The Administration and Investigations Bureau Commander is responsible for ensuring systems and processes are in place for the proper collection and retention of ALPR data. Data will be transferred from vehicles to the designated storage in accordance with department procedures.

All ALPR data downloaded to the server should be stored for 1 year. Thereafter, ALPR data should be purged unless it has become, or it is reasonable to believe it will become, evidence in a criminal or civil action or is subject to a discovery request or other lawful action to produce records. In those circumstances, the applicable data should be downloaded from the server onto portable media and booked into evidence.

462.10 TRAINING

All approved ALPR users will have training consisting of the following:



(a) Use and operation of the ALPR equipment

(b) Review of Department Policy

December 18, 2023

TO: Honorable Mayor and City Council

FROM: Sean M. Moore, City Manager

PREPARED BY: Mike Estes, Director of Community Services

SUBJECT: Federal Grant Agreement for Youth Development Center Project

BACKGROUND

In June 2023, the City received a Grant Award Letter from the United States Department of Housing and Urban Development (HUD) for development of a multi-use building. The grant award in the amount of $4,000.000.00 will be funded as part of the Consolidated Appropriations Act of 2023 (CAA).

STAFF REVIEW

HUD is the Clearinghouse:
This particular grant award is being administered by HUD and is the third source of funding for the Lawndale Youth Development Center and requires an agreement between the City and HUD to secure the funding. The attached agreement is a boilerplate type agreement, and like other grant agreements, cannot be changed in any way. The attached agreement confirms such details such as: 1) total grant amount; 2) award specific requirements; 3) grant drawdown requirements; 4) program-specific reporting requirements; and 5) project closeout requirements.

Documentation Due to HUD:
The City is required to provide the following documentation to HUD to accompany the City-executed agreement: 1) project narrative; and 2) approved budget. In addition, a number of other Federal forms must accompany the agreement such as: 3) SF-424 (Application of Federal Assistance); 4) SF-424D (Construction Program Assurances); 5) SF-LLL (Disclosure of Lobbying Activities); 6) 1999-207 (Direct Deposit Registration Form); and 7) Letter from the City's banking institution verifying account information for eventual electronic grant reimbursement purposes.

Final Execution of the Agreement:
Once the required forms have been provided to HUD along with the City-executed agreement, the City will await final execution of the attached agreement by HUD at which time funding will be available on a reimbursement basis. This phase of the process can take several weeks to months to complete. However, this particular source of funding is available through year 2031 and will likely not be needed until phase three or four of the project.

Table of Project Funding Sources and Availability:

Funding Source	Amount	Status	Sunset Date*	Use of Funding
LA County Measure A Technical Assistance Program (TAP) Funding	$285,000**	Secured	December 2025	**Phase 1:** Design, Planning, Architectural Services.
State Funding (California Natural Resources Agency)	$4,000,000	Secured	March 2026	**Phase 2:** Demolition, Street, Sidewalk, Curb and Gutter and Early Project Construction.
LA County Measure A Annual Allocations Funding	$1,500,000	Secured	None	**Phase 3:** Early/Midpoint Project Construction.
Federal Grant Award (CAA/HUD)	$4,000,000	Unsecured***	August 2031	**Phase 4:** Midpoint/Finish Construction, Landscaping and Aesthetics.
Totals	**$9,785,000**	**N/A**	**N/A**	**N/A**

*Date at which funding must be encumbered.
**Funding can only be used on Phase 1 – Design, Planning and Architectural project elements.
***Funding secured once fully executed agreement is returned to the City as fully executed.

Description of Complete Project:
The project being envisioned is as follows:

- Construction of an approximate 16,000 square feet two-level building with Youth Development Center on level one and Municipal Services Department administrative offices on level two;
- Construction of parking lot adjacent to Grevillea Avenue, or between Youth Development Center and Skate Park;
- Construction of an approximately 6,000 square feet Skate Park adjacent to Grevillea Avenue or between Youth Development Center and parking lot.

Phase 1, Design, Planning and Architectural Services:
Due to exorbitant construction costs, cost of construction materials and prevailing wages labor costs, we are not certain what the actual size of each element will be until Phase I is completed. Once Phase 1 has been completed, and costs can be more accurately estimated, the City Council may decide to choose one of three final project designs subsequent to design checkpoints along the way. At this point, the project is being planned to encompass the existing property footprint between Burin Avenue to the east, Grevillea Avenue to the west, De Oro Lane south curb line to the north and City property boundary to the south, or southern extent of the sidewalk between the Municipal Services Department building and Lawndale/Los Angeles County Library.

Search for Additional Funding:
City staff is intent on applying for a National Park Service (NPS) competitive grant that could potentially secure more funding for the skate park element of the Youth Development Center. Although this grant requires a 50% match, if the City is awarded funding, existing Los Angeles County Measure A Annual Allocations funding could be used as the match source. It the City were to get an NPS award, the funding can be used to construct the skate park and free up additional funding for the Youth Development Center building. The application deadline is January 31, 2024 and staff intends to submit. Lawndale is an economically disadvantaged urban community with limited City-owned recreation facilities, so I believe Lawndale would score well in this competitive grant opportunity.

ENVIRONMENTAL ASSESSMENT

In a recent meeting with HUD leadership, City staff was told that an Environmental Assessment (EA) was not required; therefore, the City-executed agreement will be sent to HUD without results of an EA.

LEGAL REVIEW

The City Attorney's office has reviewed attached FY 2023 Community Project Funding Grant Agreement NO. B-23-CP-CA-0257 and has approved the agreement and this staff report as to form.

FISCAL IMPACT

All grant funding is available to the City on a reimbursable basis. Therefore, $285,000.00 of funding must be included in the General Fund Budget for FY 2023-24 for Phase 1 of the project - Design, Planning and Architectural. It is also possible that Phase 2 of the project may start in FY 2023-24 as well. If this is the case, monies will need to be available in the City's FY 2023-24 General Fund Budget to initiate Phase 2 of the project – Demolition, Street, Sidewalk, Curb and Gutter replacement if the Phase 2 of the project commences prior to June 30, 2024.

RECOMMENDATION

Staff recommends that the City Council:

1) Approve the attached FY 2023 Community Project Funding Grant Agreement NO. B-23-CP-CA-0257 and authorize the City Manager to sign the funding agreement between the City of Lawndale and United States Department of Housing and Urban Development; or
2) Provide further direction.

Attachment 1

FY 2023 COMMUNITY PROJECT FUNDING
GRANT AGREEMENT NO. B-23-CP-CA-0257

Grantee Name: City of Lawndale
Grantee Address: 14717 Burin Avc. Lawndale, CA 90260
Grantee's Unique Entity Identifier (UEI):
Grantee's Employer Identification Number (EIN
Federal Award Identification Number (FAIN) B-23-CP-CA-0257
Assistance Listing Number and Name 14.251 Economic Development Initiative, Community Project Funding, and Miscellaneous Grants
Period of Performance/Budget Period Start Date Date of grant obligation
Period of Performance/Budget Period End Dat August 31, 2031

This Grant Agreement between the Department of Housing and Urban Development (HUD) and City of Lawndale (the Grantee) is made pursuant to the authority of the Consolidated Appropriations Act, 2023 (Public Law 117-328) and the Explanatory Statement for Division L of that Act, which was printed in the Senate section of the Congressional Record on December 20, 2022 (Explanatory Statement).

In reliance upon and in consideration of the mutual representations and obligations under this Grant Agreement, HUD and the Grantee agree as follows:

ARTICLE I. Definitions

The definitions at 2 CFR 200.1 apply to this Grant Agreement, except where this Grant Agreement specifically states otherwise.

Budget period is defined in 2 CFR 200.1 and begins and ends on the dates specified above for the Period of Performance/Budget Period Start Date and Period of Performance/Budget Period End Date.

Period of Performance is defined in 2 CFR 200.1 and begins and ends on the dates specified above for the Period of Performance/Budget Period Start Date and Period of Performance/Budget Period End Date.

ARTICLE II. Total Grant Amount

Subject to the provisions of the Grant Agreement, HUD will make grant funds in the amount of $4,000,000 available to the Grantee.

ARTICLE III. Award-Specific Requirements

A. Federal Award Description. The Grantee must use the Federal funds provided under this Grant Agreement (Grant Funds) to carry out the Grantee's "Project." Unless changed in accordance with Article III, section C of this Grant Agreement, the Grantee's Project shall be as described in the Project Narrative that is approved by HUD as of the date that HUD signs this Grant Agreement. For reference, HUD will attach this approved Project Narrative as Appendix 1 to the Grant Agreement on the date that HUD signs this Grant Agreement.

B. Approved Budget. The Grantee must use the Grant Funds as provided by the Approved Budget. Unless changed in accordance with Article III, section C of this Grant Agreement, the Approved Budget shall be the line-item budget that is approved by HUD as of the date that HUD signs this Grant Agreement. For reference, HUD will attach this approved line-item budget as Appendix 2 to this Grant Agreement on the date that HUD signs this Grant Agreement.

C. Project and Budget Changes. All changes to the Grantee's Project or Approved Budget must be made in accordance with 2 CFR 200.308 and this Grant Agreement. To request HUD's approval for a change in the Project or Approved Budget, the Grantee must submit a formal letter to the Director of HUD's Office of Economic Development - Congressional Grants Division through the assigned Grant Officer. The letter must be submitted by email to the assigned Grant Officer and must provide justification for the change. The email submitting the letter must also include a revised project narrative or revised line-item budget, as applicable, that includes the requested change. The Grantee is prohibited from making project or budget changes that would conflict with the Applicable Appropriations Act Conditions described in Article III, section D of this Grant Agreement. The assigned Grant Officer for this grant is provided in the Award Letter for this grant and found on HUD's website. The HUD Office of Economic Development – Congressional Grants Division will notify the Grantee in writing, by email, whether HUD approves or disapproves the change. Before the Grantee expends Grant Funds in accordance with any change approved by HUD or otherwise allowed by 2 CFR 200.308, the Grantee must update its grant information in Disaster Recovery Grant Reporting (DRGR) to reflect that change.

D. Applicable Appropriations Act Conditions. The conditions that apply to the Grant Funds as provided by the Consolidated Appropriations Act, 2023 and the Explanatory Statement are hereby incorporated and made part of this Grant Agreement. In the event of a conflict between those conditions, the conditions provided by the Act will govern. The Grant Funds are not subject to the Community Development Block Grants regulations at 24 CFR part 570 or Title I of the Housing and Community Development Act of 1974.

E. In accordance with 2 CFR 200.307(b), costs incidental to the generation of program income may be deducted from gross income to determine program income, provided these costs have not been charged to the grant. As authorized under 2 CFR 200.307(e)(2), program income may be treated as an addition to the Federal award, provided that the Grantee uses that income for allowable costs under this Grant Agreement. In accordance with 2 CFR 200.307(b), costs incidental to the generation of program income may be deducted from gross income to determine program income, provided these costs have not been charged to the grant. Any program income that cannot be expended on allowable costs under this Grant Agreement must be paid to HUD before closeout of the grant, unless otherwise specified by an applicable Federal statute.

F. The Grantee must use the Grant Funds only for costs (including indirect costs) that meet the applicable requirements in 2 CFR part 200 (including appendices). The Grantee's indirect cost rate information is as provided in Appendix 3 to this Grant Agreement. Unless the Grantee is an Institution of Higher Education, the Grantee must immediately notify HUD upon any change in the Grantee's indirect cost rate during the Period of Performance, so that HUD can amend the Grant Agreement to reflect the change if necessary. Consistent with 2 CFR Part 200, Appendix III (C.7), if the Grantee is an Institution of Higher Education and has a negotiated rate in effect on the date this Grant Agreement is signed by HUD, the Grantee may use only that rate for its indirect costs during the Period of Performance.

G. The Grantee must comply with any specific award conditions that HUD may attach to this Grant Agreement as provided by 2 CFR 200.208. If applicable, these conditions will be listed or added as Appendix 5 to this Grant Agreement.

H. The Grantee is responsible for managing the Project and ensuring the proper use of the Grant Funds. The Grantee is also responsible for ensuring the completion of the Project, the grant closeout, and compliance with all applicable federal requirements. The Grantee may subaward all or a portion of its funds to one or more subrecipients, as identified in the Project Narrative (Appendix 1) or as may be approved by HUD in accordance with 2 CFR 200.308. All subawards made with funding under this Grant Agreement are subject to the subaward requirements under 2 CFR Part 200, including 2 CFR 200.332, and other requirements provided by this Grant Agreement. The Grantee is responsible for ensuring each subrecipient complies with all requirements under this Grant Agreement, including the general federal requirements in Article IV. A subaward may be made to a for-profit entity only if HUD expressly approves that subaward and the for-profit entity is made subject to the same Federal requirements that apply to all other subrecipients, including the requirements 2 CFR part 200 provides for a "non-Federal entity" that receives a subaward.

ARTICLE IV. General Federal Requirements

A. If the Grantee is a unit of general local government, a State, an Indian Tribe, or an Alaskan Native Village, the Grantee is the Responsible Entity (as defined in 24 CFR part 58) and agrees to assume all of the responsibilities for environmental review and decision-making and action, as specified and required in regulations issued by the Secretary pursuant to section 305(c) of the Multifamily Housing Property Disposition Reform Act of 1994 and published in 24 CFR Part 58.

B. If the Grantee is a housing authority, redevelopment agency, academic institution, hospital or other non-profit organization, the Grantee shall request the unit of general local government, Indian Tribe or Alaskan Native Village, within which the Project is located and which exercises land use responsibility, to act as Responsible Entity and assume all of the responsibilities for environmental review and decision-making and action as specified in paragraph A above, and the Grantee shall carry out all of the responsibilities of a grantee under 24 CFR Part 58.

C. After December 29, 2022, neither the Grantee nor any of its contractors, subrecipients and other funding and development partners may undertake, or commit or expend Grant Funds or local funds for, project activities (other than for planning, management, development and administration activities), unless a contract requiring those activities was already executed on or before December 29, 2022, until one of the following occurs: (i) the Responsible Entity has completed the environmental review procedures required by 24 CFR part 58, and HUD has approved the environmental certification and given a release of funds; (ii) the Responsible Entity has determined and documented in its environmental review record that the activities are exempt under 24 CFR 58.34 or are categorically excluded and not subject to compliance with environmental laws under 24 CFR 58.35(b); or (iii) HUD has performed an environmental review under 24 CFR part 50 and has notified Grantee in writing of environmental approval of the activities.

D. Following completion of the environmental review process, the Grantee (recipient) shall exercise oversight, monitoring, and enforcement as necessary to assure that decisions and mitigation measures adopted through the environmental review process are carried out during project development and implementation.

E. The Grantee must comply with the generally applicable HUD and CPD requirements in 24 CFR Part 5, subpart A, including all applicable fair housing, and civil rights requirements. If the Grantee is a Tribe or a Tribally Designated Housing Entity (TDHE) as established under 24 CFR 1000.206, the Grantee must comply with the nondiscrimination requirements in 24 CFR 1000.12 in lieu of the nondiscrimination requirements in 24 CFR 5.105(a). The Grantee must report data on the race, color, religion, sex, national origin, age, disability, and family characteristics of persons and households who are applicants for, participants in, or beneficiaries or potential beneficiaries of the Grantee's Project, consistent with the instructions and forms provided by HUD in order to carry out its responsibilities under the Fair Housing Act, Executive Order 11063, Title VI of the Civil Rights Act of 1964, and Section 562 of the Housing and Community Development Act of 1987 (e.g. HUD-27061).

F. The Grantee must comply with the Uniform Administrative Requirements, Cost Principles, and Audit Requirements in 2 CFR part 200, as may be amended from time to time. If 2 CFR part 200 is amended to replace or renumber sections of part 200 that are cited specifically in this Grant Agreement, the part 200 requirements as renumbered or replaced by the amendments will govern the obligations of HUD and the Grantee after those amendments become effective.

G. The Grantee must comply with the Award Term in Appendix A to 2 CFR Part 25 ("System for Award Management and Universal Identifier Requirements") and the Award Term in Appendix A to 2 CFR Part 170 ("Reporting Subawards and Executive Compensation"), which are hereby incorporated into and made part of this Grant Agreement.

H. If the Total Grant Amount, as provided in Article II of this Grant Agreement, is greater than $500,000, the Grantee must comply with the Award Term and Condition for Grantee Integrity and Performance Matters in Appendix 4 to this Grant Agreement.

I. Unless the Grantee is exempt from the Byrd Amendment as explained below, the Grantee must comply with the provisions of Section 319 of Public Law 101-121, 31 U.S.C. 1352, (the Byrd Amendment) and 24 CFR Part 87, which prohibit recipients of Federal contracts, grants, or loans from using appropriated funds for lobbying the executive or legislative branches of the Federal Government in connection with a specific contract, grant, loan, or cooperative agreement. The Grantee must include in its award documents for all sub-awards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements), the requirements for the certification required by Appendix A to 24 CFR Part 87 and for disclosure using Standard Form- LLL (SF-LLL), "Disclosure of Lobbying Activities." In addition, the Grantee must obtain the executed certification required by Appendix A and an SF-LLL from all covered persons. "Person" is as defined by 24 CFR Part 87. Federally recognized Indian tribes and TDHEs established by Federally recognized Indian tribes as a result of the exercise of the tribe's sovereign power are excluded from coverage of the Byrd Amendment. State-recognized Indian tribes and TDHEs established only under state law must comply with this requirement.

J. The Grantee must comply with drug-free workplace requirements in Subpart B of 2 CFR Part 2429, which adopts the governmentwide implementation (2 CFR Part 182) of sections 5152-5158 of the Drug-Free Workplace Act of 1988, Pub. L. 100-690, Title V, Subtitle D (41 U.S.C. 701-707).

K. The Grantee must comply with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (URA) as implemented by regulations at 49 CFR Part 24. The URA applies to acquisitions of real property and relocation occurring as a direct result of the acquisition, rehabilitation, or demolition of real property for Federal or Federally funded programs or projects. Real property acquisition that receives Federal financial assistance for a program or project, as defined in 49 CFR 24.2, must comply with the acquisition requirements contained in 49 CFR part 24, subpart B. Unless otherwise specified in law, the relocation requirements of the URA and its implementing regulations at 49 CFR part 24, cover any displaced person who moves from real property or moves personal property from real property as a direct result of acquisition, rehabilitation, or demolition for a program or project receiving HUD financial assistance

L. If Grant Funds are used for purchase, lease, support services, operation, or work that may disturb painted surfaces, of pre-1978 housing, you must comply with the lead-based paint evaluation and hazard reduction requirements of HUD's lead- based paint rules (Lead Disclosure; and Lead Safe Housing (24 CFR part 35)), and EPA's lead- based paint rules (e.g., Repair, Renovation and Painting; Pre-Renovation Education; and Lead Training and Certification (40 CFR part 745)).

M. The Grantee must comply with Section 3 of the Housing and Urban Development Act of 1968 (Section 3), 12 U.S.C. 1701u, and HUD's regulations at 24 CFR part 75, as applicable, including the reporting requirements in 24 CFR 75.25. Grants made to Tribes and TDHEs are subject to Indian Preference requirements in Section 7(b) of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5307(b)). As stated in 24 CFR 75.3(c), grants to Tribes and TDHEs are subject to Indian Preference requirements in lieu of Section 3. Grantees that are not exempt from Section 3 must submit annual reports of Section 3

accomplishment Performance Measures in DRGR in January of the calendar year. This report reflects Section 3 accomplishments for the previous calendar year.

N. The Grantee must not use any Grant Funds to support any Federal, state, or local project that seeks to use the power of eminent domain, unless eminent domain is employed only for a public use. Public use includes use of funds for mass transit, railroad, airport, seaport, or highway projects, and utility projects which benefit or serve the general public (including energy-related, communication-related, water-related, and waste water-related infrastructure), other structures designated for use by the general public or with other common-carrier or public-utility functions that serve the general public and are subject to regulation and oversight by the government, and projects for the removal of an immediate threat to public health and safety or brownfields, as defined in the Small Business Liability Relief and Brownfields Revitalization Act (Pub. L. 107-118). Public use does not include economic development that primarily benefits private entities.

O. The Grantee must not use any Grant Funds to maintain or establish a computer network that does not block the viewing, downloading, and exchanging of pornography. This requirement does not limit the use of funds necessary for any Federal, State, tribal, or local law enforcement agency or any other entity carrying out criminal investigations, prosecution, or adjudication activities.

P. The Grantee must administer its Grant Funds in accordance with the Conflict of Interest requirements set forth in Appendix 6 of this Grant Agreement.

Q. The Grantee must comply with the governmentwide debarment and suspension requirements in 2 CFR part 180 as incorporated and supplemented by HUD's regulations at 2 CFR part 2424.

R. The Grantee must comply with the award term and condition regarding trafficking in persons in Appendix 7 of this Grant Agreement.

S. The assurances and certifications the Grantee has made and submitted to HUD are incorporated by this reference and made part of this Grant Agreement.

ARTICLE V. Drawdown Requirements

A. The Grantee may not draw down Grant Funds until HUD has received and approved any certifications and disclosures required by 24 CFR 87.100 concerning lobbying, if applicable.

B. The Grantee must use HUD's Disaster Recovery Grant Reporting (DRGR) system to draw down Grant Funds and report to HUD on activities.

C. The Grantee must enter activity and budget information in DRGR that is consistent with the Grantee's Project and Approved Budget as described in Article III, sections A and B of this Grant Agreement and complies with HUD's instructions for entering information in DRGR found in the document titled "Grant Award Instructions" that accompanies the Grant Agreement.

D. The Grantee must only enter activities in DRGR that are described in the Approved Budget.

E. The Grantee must expend all Grant Funds in accordance with the activity and budget information in DRGR.

F. Each drawdown of Grant Funds constitutes a representation by the Grantee that the funds will be used in accordance with this Grant Agreement.

G. The Grantee must use DRGR to track the use of program income and must report the receipt and use of program income in the reports the Grantee submits to HUD under Article VI of this Grant Agreement. The Grantee must expend program income before drawing down Grant Funds through DRGR.

H. Notwithstanding any other provision of this grant agreement, HUD will not be responsible for payment of any Grant Funds after the date Treasury closes the account in accordance with 31 U.S.C. § 1552. Because Treasury may close the account up to one week before the September 30 date specified by 31 U.S.C. § 1552, the Grantee is advised to make its final request for payment under the grant no later than September 15, 2031.

ARTICLE VI. Program-Specific Reporting Requirements

In addition to the general reporting requirements that apply under other provisions of this Agreement, the following program-specific reporting requirements apply to the Grantee:

A. The Grantee must submit a performance report in DRGR on a semi-annual basis and must include a completed Federal financial report as an attachment to each performance report in DRGR. Performance reports shall consist of a narrative of work accomplished during the reporting period. During the Period of Performance, the Grantee must submit these reports in DRGR no later than 30 calendar days after the end of the 6-month reporting period. The first of these reporting periods begins on the first of January or June (whichever occurs first) after the date this Grant Agreement is signed by HUD.

B. The performance report must contain the information required for reporting program performance under 2 CFR 200.329(c)(2) and (d), including a comparison of actual accomplishments to the objectives of the Project as described in Article III, section A of this Grant Agreement, the reasons why established goals were not met, if appropriate, and additional pertinent information including, when appropriate, analysis and explanation of cost overruns or high unit costs.

C. Financial reports must be submitted using DRGR or such future collections HUD may require and as approved by OMB and listed on the Grants.gov website (https://www.grants.gov/web/grants/forms/post-award-reporting-forms.html).

D. The performance and financial reports will undergo review and approval by HUD. If a report submission is insufficient, HUD will reject the report in DRGR and identify the corrections the Grantee must make.

E. No drawdown of funds will be allowed through DRGR while the Grantee has an overdue performance or financial report.

F. The Grantee must report and account for all property acquired or improved with Grant Funds as provided by 2 CFR part 200 using the applicable common forms approved by OMB and provided on the Grants.gov website (https://www.grants.gov/web/grants/forms/post-award-reporting-forms.html). This reporting obligation includes submitting status reports on real property at least annually as provided by 2 CFR 200.330, accounting for real and personal property acquired or improved with Grant Funds as part of Project Closeout, and promptly submitting requests for disposition instructions as provided by 2 CFR 200.311(c), 200.313(e), and 200.314(a).

ARTICLE VII. Project Closeout

A. The grant will be closed out in accordance with 2 CFR part 200, as may be amended from time to time, except as otherwise specified in this Grant Agreement.

B. The Grantee must submit to HUD a written request to closeout the grant no later than 30 calendar days after the Grantee has drawn down all Grant Funds and completed the Project as described in Article III, section A of this Grant Agreement. HUD will then send the Closeout Agreement and Closeout Certification to the Grantee.

C. At HUD's option, the Grantee may delay initiation of project closeout until the resolution of any findings as a result of the review of semi-annual activity reports in DRGR. If HUD exercises this option, the Grantee must promptly resolve the findings.

D. The Grantee recognizes that the closeout process may entail a review by HUD to determine compliance with the Grant Agreement by the Grantee and all participating parties. The Grantee agrees to cooperate with any HUD review, including reasonable requests for on-site inspection of property acquired or improved with Grant Funds.

E. No later than 120 calendar days after the Period of Performance, Grantees shall provide to HUD the following documentation:

1. A Certification of Project Completion.

2. A Grant Closeout Agreement.

3. A final financial report giving the amount and types of project costs charged to the grant (that meet the allowability and allocability

requirements of 2 CFR part 200, subpart E); a certification of the costs; and the amounts and sources of other project funds.

4. A final performance report providing a comparison of actual accomplishments with the objectives of the Project, the reasons for slippage if established objectives were not met and additional pertinent information including explanation of significant cost overruns.

5. A final property report, if specifically requested by HUD at the time of closeout.

ARTICLE VIII. Default

A default under this Grant Agreement shall consist of any use of Grant Funds for a purpose other than as authorized by this Grant Agreement, any noncompliance with statutory, regulatory, or other requirements applicable to the Grant Funds, any other material breach of this Grant Agreement, or any material misrcpresentation in the Grantee's submissions to HUD in anticipation of this award. If the Grantee fails to comply with the terms and conditions of the Grant Agreement, HUD may adjust specific conditions of this Grant Agreement as described in 2 CFR part 200, as may be amended from time to time. If HUD determines that noncompliance cannot be remedied by imposing additional conditions, HUD may take one or more of the remedies for noncompliance described in 2 CFR part 200, as may be amended from time to time. HUD may also terminate all or a part of this award as provided by 2 CFR 200.340 and other applicable provisions of 2 CFR part 200, as may be amended from time to time. Nothing in this Grant Agreement shall be construed as creating or justifying any claim against the Federal government or the Grantee by any third party.

ARTICLE IX. HUD Contact Information

Except where this Grant Agreement specifically states otherwise, all requests, submissions, and reports the Grantee is required to make to HUD under this Grant Agreement must be made in writing via email to CPFGrants@hud.gov.

This agreement is hereby executed on behalf of the Grantee and HUD as follows:

Attachment 2

APPENDIX 1 – Project Narrative

APPENDIX 1 – Project Narrative
Federal Grant (B-23-CP-CA-0257)

Lawndale Youth Development Center Project:

Project Purpose:
To provide a new two-level multi-use building to serve teenagers in Lawndale and the surrounding community and the City's Municipal Services Department.

Project Scope:
What will the CPF grant be used for?
The monies for this particular grant will be used on phase four of the project which will be comprised of finish construction of the two-level multi-use building, adjacent parking lot, landscaping, aesthetic improvements potentially adjacent or skate park.

Is the CPF funded project part of a larger project?
CPF funding will be used for phase four of a larger project, which is the complete Lawndale Youth Development Center, which likely will include an adjacent parking lot skate park. This phase of the project will be the most important and meaningful phase of the project and will involve final construction elements and finishing touches.

Has the project started?
The project has not started as of yet; however, the project is currently moving towards phase one of the project comprised of the design, architectural, planning and cost estimates phase which will lay out the entire project into three conceptual designs to be approved by the City Council this spring/summer.

Attachment 3

APPENDIX 3 – Grantee's Indirect Cost Rate Information

Subject to the applicable requirements in 2 CFR part 200 (including its appendices), the Grantee will use an indirect cost rate as represented by the Grantee below:

☒ The Grantee will not use an indirect cost rate to charge its indirect costs to the grant.

☐ The Grantee will use the indirect cost rate(s) identified in the table below to charge its indirect costs to the grant.

Agency/Dept./Major Function	Indirect cost rate	Direct Cost Base
_____	_____%	_____
_____	_____%	_____

[PLEASE NOTE: The grantee must check one of the two boxes above. If the second box is checked, the corresponding table must be filled out as described below.

The table must include each indirect cost rate that will be used to calculate the Grantee's indirect costs under the grant. The table must also specify the type of direct cost base to which each included rate applies (for example, Modified Total Direct Costs (MTDC)). Do not include indirect cost rate information for subrecipients.

For government entities, enter each agency or department that will carry out activities under the grant, the indirect cost rate applicable to each department/agency (including if the de minimis rate is used per 2 CFR 200.414), and the type of direct cost base to which the rate will be applied.

For nonprofit organizations that use the Simplified Allocation Method for indirect costs or elects to use the de minimis rate of 10% of Modified Total Direct Costs in accordance with 2 CFR 200.414, enter the applicable indirect cost rate and type of direct cost base in the first row of the table.

For nonprofit organizations that use the Multiple Allocation Base Method, enter each major function of the organization for which a rate was developed and will be used under the grant, the indirect cost rate applicable to that major function, and the type of direct cost base to which the rate will be applied.]

APPENDIX 4 –
Award Term and Condition for Grantee Integrity and Performance Matters

Reporting of Matters Related to Grantee Integrity and Performance

1. General Reporting Requirement
If the total value of the Grantee's currently active grants, cooperative agreements, and procurement contracts from all Federal awarding agencies exceeds $10,000,000 for any period of time during the period of performance of this Federal award, then during that period of time the Grantee must maintain the currency of information reported to the System for Award Management (SAM) that is made available in the designated integrity and performance system (currently the Federal Awardee Performance and Integrity Information System (FAPIIS)) about civil, criminal, or administrative proceedings described in paragraph 2 of this award term and condition. This is a statutory requirement under section 872 of Public Law 110-417, as amended (41 U.S.C. 2313). As required by section 3010 of Public Law 111-212, all information posted in the designated integrity and performance system on or after April 15, 2011, except past performance reviews required for Federal procurement contracts, will be publicly available.

2. Proceedings About Which Grantee Must Report
During any period of time when the Grantee is subject to the requirement in paragraph 1 of this award term and condition, the Grantee must submit the information required about each proceeding that:

a. Is in connection with the award or performance of a grant, cooperative agreement, or procurement contract from the Federal Government;

b. Reached its final disposition during the most recent five-year period; and

c. Is one of the following:

(1) A criminal proceeding that resulted in a conviction, as defined in paragraph 5 of this award term and condition;

(2) A civil proceeding that resulted in a finding of fault and liability and payment of a monetary fine, penalty, reimbursement, restitution, or damages of $5,000 or more;

(3) An administrative proceeding, as defined in paragraph 5. of this award term and condition, that resulted in a finding of fault and liability and the Grantee's payment of either a monetary fine or penalty of $5,000 or more or reimbursement, restitution, or damages in excess of $100,000; or

(4) Any other criminal, civil, or administrative proceeding if:

(i) It could have led to an outcome described in paragraph 2.c.(1), (2), or (3) of this award term and condition;

(ii) It had a different disposition arrived at by consent or compromise with an acknowledgment of fault on the Grantee's part; and

(iii) The requirement in this award term and condition to disclose information about the proceeding does not conflict with applicable laws and regulations.

3. Reporting Procedures
During any period of time when the Grantee is subject to the requirement in paragraph 1 of this award term and condition, the Grantee must enter in the SAM Entity Management area the information that SAM requires about each proceeding described in paragraph 2 of this award term and condition. The Grantee does not need to submit the information a second time under assistance awards that the Grantee received if the Grantee already provided the information through SAM because the Grantee was required to do so under Federal procurement contracts that the Grantee was awarded.

4. Reporting Frequency
During any period of time when the Grantee is subject to the requirement in paragraph 1 of this award term and condition, the Grantee must report proceedings information through SAM for the most recent five-year period, either to report new information about any proceeding(s) that the Grantee has not reported previously or affirm that there is no new information to report. If the Grantee has Federal contract, grant, and cooperative agreement awards with a cumulative total value greater than $10,000,000, the Grantee must disclose semiannually any information about the criminal, civil, and administrative proceedings.

5. Definitions
For purposes of this award term and condition:

a. Administrative proceeding means a non-judicial process that is adjudicatory in nature in order to make a determination of fault or liability (e.g., Securities and Exchange Commission Administrative proceedings, Civilian Board of Contract Appeals proceedings, and Armed Services Board of Contract Appeals proceedings). This includes proceedings at the Federal and State level but only in connection with performance of a Federal contract or grant. It does not include audits, site visits, corrective plans, or inspection of deliverables.

b. Conviction, for purposes of this award term and condition, means a judgment or conviction of a criminal offense by any court of competent jurisdiction, whether entered upon a verdict or a plea, and includes a conviction entered upon a plea of nolo contendere.

c. Total value of currently active grants, cooperative agreements, and procurement contracts includes—

(1) Only the Federal share of the funding under any Federal award with a cost share or match requirement; and

(2) The value of all expected funding increments under a Federal award and options, even if not yet exercised.

APPENDIX 5 – Specific Award Conditions

NONE.

APPENDIX 6 – Conflict of Interest Requirements

1. *Conflicts Subject to Procurement Regulations.* When procuring property or services, the grantee and its subrecipients shall comply with the applicable conflict-of-interest rules in 2 CFR 200.317 and 2 CFR 200.318(c). In all cases not governed by 2 CFR 200.317 and 2 CFR 200.318(c), the Grantee and its subrecipients must follow the requirements contained in paragraphs 2-5 below.

2. *General prohibition.* No person who is an employee, agent, consultant, officer, or elected or appointed official of the Grantee or subrecipient and who exercises or has exercised any functions or responsibilities with respect to assisted activities, or who is in a position to participate in a decision making process or gain inside information with regard to such activities, may obtain a financial interest or benefit from the activity, or have a financial interest in any contract, subcontract, or agreement with respect thereto, or the proceeds thereunder, either for himself or herself or for those with whom he or she has immediate family or business ties, during his or her tenure or for one year thereafter. Immediate family ties include (whether by blood, marriage or adoption) the spouse, parent (including a stepparent), child (including a stepchild), sibling (including a stepsibling), grandparent, grandchild, and in-laws of a covered person.

3. *Exceptions.* HUD may grant an exception to the general prohibition in paragraph (ii) upon the Grantee's written request and satisfaction of the threshold requirements in paragraph (iv), if HUD determines the exception will further the Federal purpose of the award and the effective and efficient administration of the Grantee's Project, taking into account the cumulative effects of the factors in paragraph (v).

4. *Threshold requirements for exceptions.* HUD will consider an exception only after the Grantee has provided the following documentation:

a. A disclosure of the nature of the conflict, accompanied by an assurance that there has been public disclosure of the conflict and a description of how that disclosure was made; and

b. An opinion of the Grantee's attorney that the interest for which the exception is sought would not violate state or local law.

5. *Factors to be considered for exceptions.* In determining whether to grant a requested exception after the Grantee has satisfactorily met the threshold requirements in paragraph (iii), HUD will consider the cumulative effect of the following factors, where applicable:

a. Whether the exception would provide a significant cost benefit or an essential degree of expertise to the program or project that would otherwise not be available;

b. Whether an opportunity was provided for open competitive bidding or negotiation;

c. Whether the person affected is a member of a group or class of low- or moderate-income persons intended to be the beneficiaries of the assisted activity, and the exception

will permit such person to receive generally the same interests or benefits as are being made available or provided to the group or class;

d. Whether the affected person has withdrawn from his or her functions or responsibilities, or the decision-making process regarding the assisted activity in question;

e. Whether the interest or benefit was present before the affected person was in a position as described in paragraph (ii);

f. Whether undue hardship will result either to the Grantee or the person affected when weighed against the public interest served by avoiding the prohibited conflict; and

g. Any other relevant considerations.

6. *Disclosure of potential conflicts of interest.* The Grantee must disclose in writing to HUD any potential conflict of interest.

APPENDIX 7 – Award Term and Condition Regarding Trafficking in Persons

The following award term and condition, which is required by 2 CFR part 175, applies as written:

a. Provisions applicable to a grantee that is a private entity.

1.You as the grantee, your employees, subrecipients under this award, and subrecipients' employees may not—

i. Engage in severe forms of trafficking in persons during the period of time that the award is in effect;

ii. Procure a commercial sex act during the period of time that the award is in effect; or

iii. Use forced labor in the performance of the award or subawards under the award.

2.We as the Federal awarding agency may unilaterally terminate this award, without penalty, if you or a subrecipient that is a private entity:

i. Is determined to have violated a prohibition in paragraph a.1 of this award term; or

ii. Has an employee who is determined by the agency official authorized to terminate the award to have violated a prohibition in paragraph a.1 of this award term through conduct that is either—

A. Associated with performance under this award; or

B. Imputed to you or the subrecipient using the standards and due process for imputing the conduct of an individual to an organization that are provided in 2 CFR Part 180, "OMB Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement)," as implemented by HUD at 2 CFR 2424.

b. Provision applicable to a grantee other than a private entity.
We as the Federal awarding agency may unilaterally terminate this award, without penalty, if a subrecipient that is a private entity—

1. Is determined to have violated an applicable prohibition in paragraph a.1 of this award term; or

2. Has an employee who is determined by the agency official authorized to terminate the award to have violated an applicable prohibition in paragraph a.1 of this award term through conduct that is either:

i. Associated with performance under this award; or

ii. Imputed to the subrecipient using the standards and due process for imputing the conduct of an individual to an organization that are provided in 2 CFR part 180, "OMB Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement)," as implemented by HUD at 2 CFR 2424.

c. Provisions applicable to any grantee.

1. You must inform us immediately of any information you receive from any source alleging a violation of a prohibition in paragraph a.1 of this award term.

2. Our right to terminate unilaterally that is described in paragraph a.2 or b of this section:

i. Implements section 106(g) of the Trafficking Victims Protection Act of 2000 (TVPA), as amended (22 U.S.C. 7104(g)), and

ii. Is in addition to all other remedies for noncompliance that are available to us under this award.

3. You must include the requirements of paragraph a.1 of this award term in any subaward you make to a private entity.

d. Definitions. For purposes of this award term:

1."Employee" means either:

i. An individual employed by you or a subrecipient who is engaged in the performance of the project or program under this award; or

ii. Another person engaged in the performance of the project or program under this award and not compensated by you including, but not limited to, a volunteer or individual whose services are contributed by a third party as an in-kind contribution toward cost sharing or matching requirements.

2. "Forced labor" means labor obtained by any of the following methods: the recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.

3. "Private entity":

i. Means any entity other than a State, local government, Indian tribe, or foreign public entity, as those terms are defined in 2 CFR 175.25.

ii. Includes:

A. A nonprofit organization, including any nonprofit institution of higher education, hospital, or tribal organization other than one included in the definition of Indian tribe at 2 CFR 175.25(b).

B. A for-profit organization.

4. "Severe forms of trafficking in persons," "commercial sex act," and "coercion" have the meanings given at section 103 of the TVPA, as amended (22 U.S.C. 7102).

ASSURANCES - CONSTRUCTION PROGRAMS

OMB Number: 4040-0009
Expiration Date: 02/28/2025

Public reporting burden for this collection of information is estimated to average 15 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0042), Washington, DC 20503.

PLEASE DO NOT RETURN YOUR COMPLETED FORM TO THE OFFICE OF MANAGEMENT AND BUDGET. SEND IT TO THE ADDRESS PROVIDED BY THE SPONSORING AGENCY.

NOTE: Certain of these assurances may not be applicable to your project or program. If you have questions, please contact the Awarding Agency. Further, certain Federal assistance awarding agencies may require applicants to certify to additional assurances. If such is the case, you will be notified.

As the duly authorized representative of the applicant:, I certify that the applicant:

1. Has the legal authority to apply for Federal assistance, and the institutional, managerial and financial capability (including funds sufficient to pay the non-Federal share of project costs) to ensure proper planning, management and completion of project described in this application.
2. Will give the awarding agency, the Comptroller General of the United States and, if appropriate, the State, the right to examine all records, books, papers, or documents related to the assistance; and will establish a proper accounting system in accordance with generally accepted accounting standards or agency directives.
3. Will not dispose of, modify the use of, or change the terms of the real property title or other interest in the site and facilities without permission and instructions from the awarding agency. Will record the Federal awarding agency directives and will include a covenant in the title of real property acquired in whole or in part with Federal assistance funds to assure non-discrimination during the useful life of the project.
4. Will comply with the requirements of the assistance awarding agency with regard to the drafting, review and approval of construction plans and specifications.
5. Will provide and maintain competent and adequate engineering supervision at the construction site to ensure that the complete work conforms with the approved plans and specifications and will furnish progressive reports and such other information as may be required by the assistance awarding agency or State.
6. Will initiate and complete the work within the applicable time frame after receipt of approval of the awarding agency.
7. Will establish safeguards to prohibit employees from using their positions for a purpose that constitutes or presents the appearance of personal or organizational conflict of interest, or personal gain.
8. Will comply with the Intergovernmental Personnel Act of 1970 (42 U.S.C. §§4728-4763) relating to prescribed standards of merit systems for programs funded under one of the 19 statutes or regulations specified in Appendix A of OPM's Standards for a Merit System of Personnel Administration (5 C.F.R. 900, Subpart F).
9. Will comply with the Lead-Based Paint Poisoning Prevention Act (42 U.S.C. §§4801 et seq.) which prohibits the use of lead-based paint in construction or rehabilitation of residence structures.
10. Will comply with all Federal statutes relating to non-discrimination. These include but are not limited to: (a) Title VI of the Civil Rights Act of 1964 (P.L. 88-352) which prohibits discrimination on the basis of race, color or national origin; (b) Title IX of the Education Amendments of 1972, as amended (20 U.S.C. §§1681 1683, and 1685-1686), which prohibits discrimination on the basis of sex; (c) Section 504 of the Rehabilitation Act of 1973, as amended (29) U.S.C. §794), which prohibits discrimination on the basis of handicaps; (d) the Age Discrimination Act of 1975, as amended (42 U.S.C. §§6101-6107), which prohibits discrimination on the basis of age; (e) the Drug Abuse Office and Treatment Act of 1972 (P.L. 92-255), as amended relating to nondiscrimination on the basis of drug abuse; (f) the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act of 1970 (P.L. 91-616), as amended, relating to nondiscrimination on the basis of alcohol abuse or alcoholism; (g) §§523 and 527 of the Public Health Service Act of 1912 (42 U.S.C. §§290 dd-3 and 290 ee 3), as amended, relating to confidentiality of alcohol and drug abuse patient records; (h) Title VIII of the Civil Rights Act of 1968 (42 U.S.C. §§3601 et seq.), as amended, relating to nondiscrimination in the sale, rental or financing of housing; (i) any other nondiscrimination provisions in the specific statue(s) under which application for Federal assistance is being made; and (j) the requirements of any other nondiscrimination statue(s) which may apply to the application.

11. Will comply, or has already complied, with the requirements of Titles II and III of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (P.L. 91-646) which provide for fair and equitable treatment of persons displaced or whose property is acquired as a result of Federal and federally-assisted programs. These requirements apply to all interests in real property acquired for project purposes regardless of Federal participation in purchases.

12. Will comply with the provisions of the Hatch Act (5 U.S.C. §§1501-1508 and 7324-7328) which limit the political activities of employees whose principal employment activities are funded in whole or in part with Federal funds.

13. Will comply, as applicable, with the provisions of the Davis-Bacon Act (40 U.S.C. §§276a to 276a-7), the Copeland Act (40 U.S.C. §276c and 18 U.S.C. §874), and the Contract Work Hours and Safety Standards Act (40 U.S.C. §§327-333) regarding labor standards for federally-assisted construction subagreements.

14. Will comply with flood insurance purchase requirements of Section 102(a) of the Flood Disaster Protection Act of 1973 (P.L. 93-234) which requires recipients in a special flood hazard area to participate in the program and to purchase flood insurance if the total cost of insurable construction and acquisition is $10,000 or more.

15. Will comply with environmental standards which may be prescribed pursuant to the following: (a) institution of environmental quality control measures under the National Environmental Policy Act of 1969 (P.L. 91-190) and Executive Order (EO) 11514; (b) notification of violating facilities pursuant to EO 11738; (c) protection of wetlands pursuant to EO 11990; (d) evaluation of flood hazards in floodplains in accordance with EO 11988; (e) assurance of project consistency with the approved State management program developed under the Coastal Zone Management Act of 1972 (16 U.S.C. §§1451 et seq.); (f) conformity of Federal actions to State (Clean Air) implementation Plans under Section 176(c) of the Clean Air Act of 1955, as amended (42 U.S.C. §§7401 et seq.); (g) protection of underground sources of drinking water under the Safe Drinking Water Act of 1974, as amended (P.L. 93-523); and, (h) protection of endangered species under the Endangered Species Act of 1973, as amended (P.L. 93-205).

16. Will comply with the Wild and Scenic Rivers Act of 1968 (16 U.S.C. §§1271 et seq.) related to protecting components or potential components of the national wild and scenic rivers system.

17. Will assist the awarding agency in assuring compliance with Section 106 of the National Historic Preservation Act of 1966, as amended (16 U.S.C. §470), EO 11593 (identification and protection of historic properties), and the Archaeological and Historic Preservation Act of 1974 (16 U.S.C. §§469a-1 et seq).

18. Will cause to be performed the required financial and compliance audits in accordance with the Single Audit Act Amendments of 1996 and OMB Circular No. A-133, "Audits of States, Local Governments, and Non-Profit Organizations."

19. Will comply with all applicable requirements of all other Federal laws, executive orders, regulations, and policies governing this program.

20. Will comply with the requirements of Section 106(g) of the Trafficking Victims Protection Act (TVPA) of 2000, as amended (22 U.S.C. 7104) which prohibits grant award recipients or a sub-recipient from (1) Engaging in severe forms of trafficking in persons during the period of time that the award is in effect (2) Procuring a commercial sex act during the period of time that the award is in effect or (3) Using forced labor in the performance of the award or subawards under the award.

DIRECT DEPOSIT SIGN-UP FORM

DIRECTIONS

- To sign up for Direct Deposit, the payee is to read the back of this form and fill in the information requested in Sections 1 and 2. Then take or mail this form to the financial institution. The financial institution will verify the information in Sections 1 and 2, and will complete Section 3. The completed form will be returned to the Government agency identified below.
- A separate form must be completed for each type of payment to be sent by Direct Deposit.
- The claim number and type of payment are printed on Government checks. (See the sample check on the back of this form.) This information is also stated on beneficiary/annuitant award letters and other documents from the Government agency.
- Payees must keep the Government agency informed of any address changes in order to receive important information about benefits and to remain qualified for payments.

December 18, 2023

TO: Honorable Mayor and City Council

FROM: Sean M. Moore, City Manager

PREPARED BY: Mike Estes, Director of Community Services

SUBJECT: Recreation Facility Security Camera Project, Additional Funding Request

BACKGROUND

On June 5, 2018, California voters passed Proposition 68 – Parks, Environment and Water Bond. The City was awarded $198,387.00 from the 2018 Parks Bond Act for a qualifying project. The project chosen for the grant award was an upgrade and augmenting of the existing security camera systems at four City-owned recreation facilities.

STAFF REVIEW

Project Nearly Completed:
The Recreation Facility Security Camera Replacement Project is nearing its conclusion and has added 59 high quality security cameras at four of the City's recreation facilities: 1) Community Center, 2) Hogan Park, 3) Hopper Park and 4) Rudolph Park. The project will be completed following the installation of one more camera. Despite, 59 cameras are recording and operating functionally.

System Provides Safer Facilities:
Each camera has multiple views and provides the City with approximately 240 total views and records all movements ensuring that the City's recreation facilities are safer. The cameras also allow the City to identify perpetrators that could face criminal charges if convicted of acts of vandalism. For example, the community center security camera system has already paid dividends helping the Los Angeles County Sheriff's Department apprehend one individual.

Community Center Second Level Outdoor Terrace:
A very effective addition to the community center is an audible recording that is triggered when an individual steps onto the second level outdoor terrace between the hours of 8:00 pm and 6:30 am each day. This recording repeats every one minute until the individual(s) leave the area. We are finding that individuals are leaving immediately or after short periods of time.

Unforeseen Project Expense:
During the project installation phase, there were a number of challenges, most notably at Rudolph Park due to poor underground construction such as cheap conduit and non-weather rated cable. This required the Contractor to identify another method of getting the cameras at Rudolph Park to communicate.

Unforeseen Project Expense (Cont.):
Therefore, a radio was installed at the top of the light standard located at the northeast section of the park that will communicate wirelessly to the other remaining cameras at the park to provide full facility coverage. The City had no choice but to authorize this work so Rudolph Park would have functioning security cameras.

This unforeseen expense cost approximately $14,000.00 and took away needed funding from the overall project. The $14,000.00 used for the installation of a radio, additional wiring and electrical work at Rudolph Park was earmarked for other items such as, DVR cabinets, professional signage, strobe lights for the community center second level outdoor terrace and additional cameras where needed. Although it would have been a bonus to have these extras, the project budget simply would not allow for these items due to the unforeseen expense at Rudolph Park.

Funding Request:
One item that is critical for the project is the addition Digital Video Recorder (DVR) cabinets and wiring at two park locations and professional mounting of a DVR at a third location. The high quality DVR's need to be protected from fluctuating temperatures, dust and other elements that could damage them. The cost for two DVR cabinets, wiring and mounting of a third DVR is $4,403.00. The City has $970.00 remaining in the project budget; however, City staff is requesting an additional $3,433.00 in American Rescue Plan Act (ARPA) funding so this project can be completed.

LEGAL REVIEW

None.

FISCAL IMPACT

There will be no impact to the FY 2023-24 General Fund Budget.

RECOMMENDATION

Staff recommends that the City Council approve the use of American Rescue Plan Act (ARPA) funding in the amount of $3,433.00 to be paid to Blue Violet Networks for: 1) two DVR cabinets and related electrical work at Hopper and Rudolph parks and; 2) mounting of one existing DVR at Hogan Park and necessary electrical work to complete the State grant-funded Recreation Facility Security Camera Replacement Project.

Attachments: Cost Estimate/Quote from Blue Violet Networks for DVR cabinets and installation.

PHONE (310) 973-3200 ♦ www.lawndalecity.org

DATE: December 18, 2023

TO: Honorable Mayor and City Council

FROM: Sean M. Moore, City Manager

PREPARED BY: Lea Reis, Director of Public Works / City Engineer
Grace Huizar, Senior Management Analyst

SUBJECT: Approve Street Sweeping Services Agreement

BACKGROUND

The City's street sweeping services have been provided by CleanStreet for the past 22 years. The company has been dependable and has provided satisfactory service to Lawndale. The agreement provides for one day a week street sweeping services for 56 curb miles of residential streets, two days a week services for business district streets, five days a week along Hawthorne Blvd, one day a week services for the alleys, and one day, bi-weekly service for the medians and City parking lots, for a total of 157.4 curb miles per week. The current agreement expires on December 31, 2023.

STAFF REVIEW

CleanStreet has established a long-term relationship with the City. They are a reliable company and are known to respond to requests for information and assistance in a timely manner. CleanStreet has been on a month-to-month agreement since June 5, 2023, and it is set to expire on December 31, 2023.

Staff released two Requests for Proposals (RFP) this year and only received proposals from one company, Sweeping Corp of America, formerly known as CleanStreet. The RFP included a new prevailing wage requirement which is being imposed on street sweeping contracts by The California Department of Industrial Relations (DIR). This recent requirement has caused street sweeping companies to increase their labor costs which has resulted in many companies opting out of establishing new business accounts. This is why the City did not receive multiple proposals.

Staff has negotiated a street sweeping service rate with CleanStreet that is within the current approved budget. To keep the service costs down, the City will assume the responsibility for disposal of street sweeping debris/city waste by utilizing its access to the Republic Services Transfer Station through the City's contract with Republic Services. CleanStreet will deliver the debris to Republic Services Transfer Station in Gardena at no charge to the City.

The new agreement is set to begin on January 1, 2024 through December 31, 2025 with the option to extend up to three 1-year extensions by contract amendment. The annual rate for the first two years is $327,728 per year for a total not to exceed $656,111 over two years. This total includes

four hours of special sweeping services for the annual parade (two hours per year) at $163.65 per hour.

LEGAL REVIEW

The City Attorney has reviewed the agreement and approved as to form.

FUNDING

The street sweeping service is funded via Gas Tax Funds; Street Maintenance – Contract Services. A total of $188,328 is already allocated in the current FY23/24 budget for the period of January through June 2023.

RECOMMENDATION

Staff recommends approving Agreement with CleanStreet for citywide street sweeping services for the period of January 1, 2024 through December 31, 2025 at an annual rate of $327,728 plus four hours of special sweeping services for the annual parade (two hours per year) at $163.65 per hour for a total not-to-exceed $656,111 for the two year term of the agreement.

Attachment: CleanStreet Agreement

CleanStreet Agreement

CITY OF LAWNDALE

CONTRACT SERVICES AGREEMENT FOR

STREET SWEEPING SERVICES

This Contract Services Agreement ("Agreement") is made and entered into this 1st day of January, 2024, by and between the City of Lawndale, a municipal corporation ("City"), and CleanStreet ("Contractor"). The term Contractor includes professionals performing in a consulting capacity. The parties hereto agree as follows:

1.0 SERVICES OF CONTRACTOR

1.1 Scope of Services. In compliance with all terms and conditions of this Agreement, Contractor shall provide the work and services specified in the "Scope of Services" attached hereto as *Exhibit "A"* and incorporated herein by this reference. Contractor warrants that all work or services set forth in the Scope of Services will be performed in a competent, professional and satisfactory manner.

1.2 Contractor's Proposal. The Scope of Services shall include the Contractor's proposal or bid which shall be incorporated herein by this reference as though fully set forth herein. In the event of any inconsistency between the terms of such proposal and this Agreement, the terms of this Agreement shall govern.

1.3 Compliance with Law. All work and services rendered hereunder shall be provided in accordance with all ordinances, resolutions, statutes, rules, and regulations of the City and any Federal, State or local governmental agency having jurisdiction.

1.4 Licenses, Permits, Fees and Assessments. Contractor shall obtain at its sole cost and expense, such licenses, permits and approvals as may be required by law for the performance of the services required by this Agreement. Contractor shall have the sole obligation to pay for any fees, assessments, taxes, including applicable penalties and interest, which may be imposed by law and arise from or are necessary for the Contractor's performance of the services required by this Agreement; and shall indemnify, defend and hold harmless City against any claim for such fees, assessments, taxes, penalties or interest levied, assessed or imposed against City hereunder.

1.5 Familiarity with Work. By executing this Agreement, Contractor warrants that Contractor (a) has thoroughly investigated and considered the scope of services to be performed, (b) has carefully considered how the work and services should be performed, and (c) fully understands the facilities, difficulties and restrictions attending performance of the services under this Agreement.

1.6 Additional Services. City shall have the right at any time during the performance of the services, without invalidating this Agreement, to order extra work beyond that specified in the Scope of Services or make changes by altering, adding to or deducting from said work. No such extra work may be undertaken unless a written order is first given by the Contract Officer to the Contractor, incorporating therein any adjustment in (i) the Contract Sum, and/or (ii) the time to perform this Agreement, which said adjustments are subject to the written approval of the Contractor. Any increase in compensation must be approved by the City Council. It is expressly understood by Contractor that the provisions of this Section shall not apply to services specifically set forth in the Scope of Services or reasonably

contemplated therein. Contractor hereby acknowledges that it accepts the risk that the services to be provided pursuant to the Scope of Services may be more costly or time consuming than Contractor anticipates and that Contractor shall not be entitled to additional compensation therefor.

1.7 Special Requirements. Additional terms and conditions of this Agreement, if any, which are made a part hereof are set forth in the "Special Requirements" attached hereto as *Exhibit "B"* and incorporated herein by this reference. In the event of a conflict between the provisions of *Exhibit "B"* and any other provisions of this Agreement, the provisions of *Exhibit "B"* shall govern.

1.8 Environmental Laws. Contractor shall comply with all applicable environmental laws, ordinances, codes and regulations of Federal, State, and local governments. Contractor shall also comply with all applicable mandatory standards and policies relating to energy efficiency.

2.0 COMPENSATION

2.1 Contract Sum. For the services rendered pursuant to this Agreement, Contractor shall be compensated in accordance with the "Schedule of Compensation" attached hereto as *Exhibit "C"* and incorporated herein by this reference, but not exceeding the maximum contract amount of Six Hundred Fifty-Six Thousand One Hundred Eleven dollars ($656,111.00) ("Contract Sum"), except as provided in Section 1.6. The method of compensation may include: (i) a lump sum payment upon completion, (ii) payment in accordance with the percentage of completion of the services, (iii) payment for time and materials based upon the Contractor's rates as specified in the Schedule of Compensation, but not exceeding the Contract Sum or (iv) such other methods as may be specified in the Schedule of Compensation. Compensation may include reimbursement for actual and necessary expenditures approved by the Contract Officer in advance if specified in the Schedule of Compensation. The Contract Sum shall include the attendance of Contractor at all project meetings reasonably deemed necessary by the City.

Contractor agrees that if Contractor becomes aware of any facts, circumstances, techniques, or events that may or will materially increase or decrease the cost of the work or services or, if Contractor is providing design services, the cost of the project being designed, Contractor shall promptly notify the Contract Officer of said fact, circumstance, technique or event and the estimated increased or decreased cost related thereto and, if Contractor is providing design services, the estimated increased or decreased cost estimate for the project being designed.

2.2 Method of Payment. Unless some other method of payment is specified in the Schedule of Compensation, in any month in which Contractor wishes to receive payment, no later than the first (1st) working day of such month, Contractor shall submit to the City, in a form approved by the City's Director of Finance, an invoice for services rendered prior to the date of the invoice. Except as provided in Section 7.2, City shall pay Contractor for all expenses stated thereon which are approved by City pursuant to this Agreement generally within thirty (30) days, and no later than forty-five (45) days, from the submission of an invoice in an approved form. City will review each invoice submitted by Contractor to determine whether the work performed and expenses incurred are in compliance with this Agreement. If no charges or expenses are disputed, the invoice will be approved and paid. In the event any charges or expenses are disputed by City, the invoice will be returned by City to Contractor for correction and resubmission. City reserves the right to withhold future payment to Contractor if any aspect of the Contractor's work is found substantially inadequate.

2.3 Availability of Funds. It is mutually understood between the parties that this Agreement is valid and enforceable only if sufficient funds are made available by the City Council of the City for the purposes of this Agreement. The availability of funding is affected by matters outside the City's control, including other governmental entities. Accordingly, the City has the option to void the whole Agreement or to amend the Agreement to reflect unanticipated reduction in funding for any reason.

3.0 PERFORMANCE SCHEDULE

3.1 Time of Essence. Time is of the essence in the performance of this Agreement.

3.2 Schedule of Performance. Contractor shall commence the services pursuant to this Agreement upon receipt of a written notice to proceed and shall perform all services within the time period(s) established in the "Schedule of Performance" attached hereto as *Exhibit "D"*, if any, and incorporated herein by this reference.

3.3 Force Majeure. The time period(s) specified in the Schedule of Performance for performance of the services rendered pursuant to this Agreement shall be extended because of any delays due to unforeseeable causes beyond the control and without the fault or negligence of the Contractor, including, but not restricted to, acts of God or of the public enemy, unusually severe weather, fires, earthquakes, floods, epidemics, quarantine restrictions, riots, strikes, freight embargoes, wars, litigation, and/or acts of any governmental agency, including the City, if the Contractor shall, within ten (10) days of the commencement of such delay, notify the Contract Officer in writing of the causes of the delay. The Contract Officer shall ascertain the facts and the extent of delay and extend the time for performing the services for the period of the enforced delay when and if, in the judgment of the Contract Officer, such delay is justified. The Contract Officer's determination shall be final and conclusive upon the parties to this Agreement. In no event shall Contractor be entitled to recover damages against the City for any delay in the performance of this Agreement, however caused; Contractor's sole remedy being extension of the Agreement pursuant to this Section.

3.4 Term. Unless earlier terminated in accordance with Section 7.4 below, this Agreement shall continue in full force and effect until completion of the services no later than December 31, 2025. The City has the option to extend this Agreement for as many as three 1-year extensions as described in Exhibit "D".

4.0 COORDINATION OF WORK

4.1 Representative of Contractor. Rick Anderson is hereby designated as being the representative of Contractor authorized to act on its behalf with respect to the work or services specified herein and to make all decisions in connection therewith.

It is expressly understood that the experience, knowledge, capability and reputation of the representative was a substantial inducement for City to enter into this Agreement. Therefore, the representative shall be responsible during the term of this Agreement for directing all activities of Contractor and devoting sufficient time to personally supervise the services hereunder. For purposes of this Agreement, the representative may not be replaced nor may his responsibilities be substantially reduced by Contractor without the express written approval of City.

4.2 Contract Officer. The City's City Manager is hereby designated as the representative of the City authorized to act in its behalf with respect to the work and services and to make all decisions in

connection therewith ("Contract Officer"). It shall be the Contractor's responsibility to assure that the Contract Officer is kept informed of the progress of the performance of the services and the Contractor shall refer any decisions which must be made by City to the Contract Officer. The City may designate another Contract Officer by providing written notice to Contractor.

4.3 Prohibition Against Subcontracting or Assignment. The experience, knowledge, capability and reputation of Contractor, its principals and employees were a substantial inducement for the City to enter into this Agreement. Therefore, Contractor shall not contract with any other entity to perform in whole or in part the services required hereunder without the express written approval of the City. In addition, neither this Agreement nor any interest herein may be transferred or assigned without the prior written approval of City. Transfers restricted hereunder shall include the transfer to any person or group of persons acting in concert of more than twenty five percent (25%) of the present ownership and/or control of Contractor taking all transfers into account on a cumulative basis. A prohibited transfer or assignment shall be void. No approved transfer shall release the Contractor or any surety of Contractor of any liability hereunder without the express consent of City.

4.4 Independent Contractor. Neither the City nor any of its employees shall have any control over the manner or means by which Contractor or its employees, perform the services required herein, except as otherwise set forth herein. Contractor shall perform all services required herein as an independent contractor of City and shall remain under only such obligations as are consistent with that role. Contractor represents and warrants that the personnel used to provide services to the City pursuant to this Agreement are classified by Contractor as employees. Contractor shall not at any time or in any manner represent that it or any of its employees are employees of City. City shall not in any way or for any purpose become or be deemed to be a partner of Contractor in its business or otherwise or a joint venturer or a member of any joint enterprise with Contractor. In the event that Contractor or any employee of Contractor providing services under this Agreement claims or is determined by a federal or state agency, a court of competent jurisdiction, or the California Public Employees' Retirement System ("CalPERS") to be classified as other than an independent contractor for the City, then Contractor shall indemnify, defend, and hold harmless the City for the payment of any and all assessed fines, penalties, judgments, employee and/or employer contributions, and any other damages and costs assessed to the City as a consequence of, or in any way attributable to, the assertion that Contractor or any staff used to provide services under this Agreement are employees of the City.

5.0 INSURANCE AND INDEMNIFICATION

5.1 Insurance. Contractor shall procure and maintain, at its sole cost and expense, in a form and content satisfactory to City, during the entire term of this Agreement including any extension thereof, the following policies of insurance:

(a) Commercial General Liability Insurance. A policy of commercial general liability insurance using Insurance Services Office "Commercial General Liability" policy form CG 00 01, with an edition date prior to 2004, or the exact equivalent. Coverage for an additional insured shall not be limited to its vicarious liability. Defense costs must be paid in addition to limits. Limits shall be no less than $1,000,000.00 per occurrence for all covered losses and no less than $2,000,000.00 general aggregate.

(b) Workers' Compensation Insurance. A policy of workers' compensation insurance on a state-approved policy form providing statutory benefits as required by law with employer's liability limits no less than $1,000,000.00 per accident for all covered losses.

(c) Automotive Insurance. A policy of comprehensive automobile liability insurance written on a per occurrence basis in an amount not less than $5,000,000.00 per accident, combined single limit. Said policy shall include coverage for owned, non owned, leased and hired cars.

(d) Professional Liability or Error and Omissions Insurance. A policy of _____ insurance in an amount not less than $_____ per claim with respect to loss arising from the actions of Contractor performing professional services hereunder on behalf of the City. Any policy inception date, continuity date, or retroactive date must be before the effective date of this Agreement and Contractor agrees to maintain continuous coverage through a period no less than three (3) years after completion of the services required by this Agreement.

All of the above policies of insurance shall be primary insurance. The general liability policy shall name the City, its officers, employees and agents ("City Parties") as additional insureds and shall waive all rights of subrogation and contribution it may have against the City and the City's Parties and their respective insurers. Moreover, the insurance policy must specify that where the primary insured does not satisfy the self-insured retention, any additional insured may satisfy the self-insured retention. All of said policies of insurance shall also provide that said insurance may be not cancelled without providing ten (10) days prior written notice by registered mail to the City. In the event any of said policies of insurance are cancelled or amended, Contractor shall, prior to the cancellation or amendment date, submit new evidence of insurance in conformance with this Section 5.1 to the Contract Officer. No work or services under this Agreement shall commence until Contractor has provided City with Certificates of Insurance or appropriate insurance binders evidencing the above insurance coverages and said Certificates of Insurance or binders are approved by City.

Contractor agrees that the provisions of this Section 5.1 shall not be construed as limiting in any way the extent to which Contractor may be held responsible for the payment of damages to any persons or property resulting from Contractor's activities or the activities of any person or persons for which Contractor is otherwise responsible. If the Contractor's insurance policies have higher limits and coverage than those required by this contract, the City will have access to those higher limits and coverage maintained by the Contractor.

The insurance required by this Agreement shall be satisfactory only if issued by companies qualified to do business in California, rated "A" or better in the most recent edition of Best Rating Guide or The Key Rating Guide, and only if they are of a financial category Class VII or better, unless such requirements are waived by the Risk Manager of the City due to unique circumstances.

In the event that the Contractor is authorized to subcontract any portion of the work or services provided pursuant to this Agreement, the contract between the Contractor and such subcontractor shall require the subcontractor to maintain the same policies of insurance that the Contractor is required to maintain pursuant to this Section 5.1.

5.2 Indemnification.

(a) Indemnity for Design Professional Liability. When the law establishes a professional standard of care for Contractor's services, to the fullest extent permitted by law, and except for the statutory limits set forth under California Civil Code Section 2782.8 applicable to services provided by a "design professional", Contractor shall indemnify, defend and hold harmless City and the City's Parties from and against any and all losses, liabilities, damages, costs and expenses, including attorneys' fees and costs to the extent same are caused in whole or in part by any negligent or wrongful

act, error or omission of Contractor, its officers, employees of subcontractors (or any entity or individual for which Contractor shall bear legal liability) in the performance of professional services under this Agreement.

(b) Indemnity for Other Than Design Professional Liability. Other than in the performance of design professional services and to the full extent permitted by law, Contractor shall indemnify, defend and hold harmless City and City's Parties from and against any liability (including liability for claims, suits, actions, losses, expenses or costs of any kind, whether actual, alleged or threatened, including attorneys' fees and costs, court costs, defense costs and expert witness fees), where the same arise out of, are a consequence of, or are in any way attributable to, in whole or in part, the performance of this Agreement by Contractor or by any individual or entity for which Contractor is legally liable, including but not limited to officers, employees, or subcontractors of Contractor.

6.0 RECORDS AND REPORTS

6.1 Reports. Contractor shall periodically prepare and submit to the Contract Officer such reports concerning the performance of the services required by this Agreement as the Contract Officer shall require.

6.2 Records. Contractor shall keep, and require subcontractors to keep, such books and records as shall be necessary to perform the services required by this Agreement and enable the Contract Officer to evaluate the performance of such services. The Contract Officer shall have full and free access to such books and records at all times during normal business hours of City, including the right to inspect, copy, audit and make records and transcripts from such records. Such records shall be maintained for a period of three (3) years following completion of the services hereunder, and the City shall have access to such records in the event any audit is required.

6.3 Ownership of Documents. All drawings, specifications, reports, records, documents and other materials prepared by Contractor, its employees and subcontractors in the performance of this Agreement shall be the property of City and shall be delivered to City upon request of the Contract Officer or upon the termination of this Agreement and Contractor shall have no claim for further employment or additional compensation as a result of the exercise by City of its full rights of ownership of such documents and materials. Contractor may retain copies of such documents for its own use and Contractor shall have an unrestricted right to use the concepts embodied therein. All subcontractors shall provide for assignment to City of any documents or materials prepared by them, and in the event Contractor fails to secure such assignment, Contractor shall indemnify City for all damages resulting therefrom. Except as necessary for the performance of services under this Agreement, no documents prepared under this Agreement may be released by Contractor to any other person or entity without City's prior written approval.

6.4 Confidentiality of Information. All information gained or work product produced by Contractor in performance of this Agreement will be considered confidential, unless such information is in the public domain or already known to Contractor. Contractor may not release or disclose any such information or work product to persons or entities other than City without prior written authorization from the City Manager, except as may be required by law. Contractor, its officers, employees, or agents, may not, without prior written authorization from the City Manager or unless requested by the City Attorney of City, voluntarily provide declarations, letters of support, testimony at depositions, response to interrogatories or other information concerning the services performed under this Agreement. Response to a subpoena or court order will not be considered "voluntary" provided Contractor gives City

notice of such court order or subpoena. If Contractor, or any officer, employee, or agent of Contractor, provides any information or work product in violation of this Agreement, then City will have the right to reimbursement and indemnity from Contractor for any damages, costs and fees, including attorney's fees, caused by or incurred as a result of Contractor's conduct. Contractor must promptly notify City should Contractor, its officers, employees, or agents be served with any summons, complaint, subpoena, notice of deposition, request for documents, interrogatories, request for admissions or other discovery request, court order or subpoena from any party regarding this Agreement and the services performed under this Agreement. City retains the right, but has no obligation, to represent Contractor or be present at any deposition, hearing or similar proceeding. Contractor agrees to cooperate fully with City and to provide City with the opportunity to review any response to discovery requests provided by Contractor. However, this right to review any such response does not imply or mean the right by City to control, direct, or rewrite such response. All media and press releases, including graphic display information, must be approved and distributed solely by City, unless otherwise agreed to in writing by City. All media interviews regarding the performance of services under this Agreement are prohibited unless expressly authorized by City.

7.0 ENFORCEMENT OF AGREEMENT

7.1 California Law. This Agreement shall be construed and interpreted both as to validity and to performance of the parties in accordance with the laws of the State of California. Legal actions concerning any dispute, claim or matter arising out of or in relation to this Agreement shall be instituted in the Superior Court of the County of Los Angeles, State of California, or any other appropriate court in such county, and Contractor agrees to submit to the personal jurisdiction of such court in the event of such action.

7.2 Retention of Funds. Contractor hereby authorizes City to deduct from any amount payable to Contractor (whether or not arising out of this Agreement) (i) any amounts the payment of which may be in dispute hereunder or which are necessary to compensate City for any losses, costs, liabilities, or damages suffered by City, and (ii) all amounts for which City may be liable to third parties, by reason of Contractor's acts or omissions in performing or failing to perform Contractor's obligation under this Agreement. In the event that any claim is made by a third party, the amount or validity of which is disputed by Contractor, City may withhold from any payment due, without liability for interest because of such withholding, an amount sufficient to cover such claim. The failure of City to exercise such right to deduct or to withhold shall not, however, affect the obligations of the Contractor to insure, indemnify, and protect City as elsewhere provided herein.

7.3 Waiver. No delay or omission in the exercise of any right or remedy by a non-defaulting party on any default shall impair such right or remedy or be construed as a waiver. A party's consent to or approval of any act by the other party requiring the party's consent or approval shall not be deemed to waive or render unnecessary the other party's consent to or approval of any subsequent act. Any waiver by either party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Agreement.

7.4 Termination Prior to Expiration of Term. Either party may terminate this Agreement at any time, with or without cause, upon thirty (30) days' written notice to the other party. Upon receipt of any notice of termination, Contractor shall immediately cease all work or services hereunder except such as may be specifically approved by the Contract Officer. Contractor shall be entitled to compensation for the reasonable value of the work product actually produced prior to the effective date of the notice

of termination and for any services authorized by the Contract Officer thereafter in accordance with the Schedule of Compensation and City shall be entitled to reimbursement for any compensation paid in excess of the services rendered.

7.5 Completion of Work After Termination for Default of Contractor. If termination is due to the failure of the Contractor to fulfill its obligations under this Agreement, City may, after compliance with the provisions of Section 7.2, take over the work and prosecute the same to completion by contract or otherwise, and the Contractor shall be liable to the extent that the total cost for completion of the services required hereunder exceeds the compensation herein stipulated (provided that the City shall use reasonable efforts to mitigate such damages), and City may withhold any payments to the Contractor for the purpose of set-off or partial payment of the amounts owed the City as previously stated.

7.6 Attorneys' Fees. If either party to this Agreement is required to initiate or defend or made a party to any action or proceeding in any way connected with this Agreement, the prevailing party in such action or proceeding, in addition to any other relief which may be granted, shall be entitled to reasonable attorneys' fees, whether or not the matter proceeds to judgment, and to all other reasonable costs for investigating such action, taking depositions and discovery, including all other necessary costs the court allows which are incurred in such litigation.

8.0 CITY OFFICERS AND EMPLOYEES: NON-DISCRIMINATION

8.1 Non-liability of City Officers and Employees. No officer or employee of the City shall be personally liable to the Contractor, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Contractor or to its successor, or for breach of any obligation of the terms of this Agreement.

8.2 Conflict of Interest; City. No officer or employee of the City shall have any financial interest in this Agreement nor shall any such officer or employee participate in any decision relating to the Agreement which affects his financial interest or the financial interest of any corporation, partnership or association in which he is interested, in violation of any State statute or regulation.

8.3 Conflict of Interest; Contractor. Contractor warrants that it has not paid or given and will not pay or give any third party any money or other consideration for obtaining this Agreement. Contractor shall comply with all conflict of interest laws and regulations including, without limitation, City's Conflict of Interest Code which is on file in the City Clerk's office. Accordingly, should the City Manager determine that Contractor will be performing a specialized or general service for the City and there is substantial likelihood that the Contractor's work product will be presented, either written or orally, for the purpose of influencing a governmental decision, the Contractor and its officers or employees, as applicable, shall be subject to the City's Conflict of Interest Code.

8.4 Covenant Against Discrimination. Contractor covenants that, by and for itself, its executors, assigns, and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of race, color, creed, religion, sex, marital status, national origin, or ancestry in the performance of this Agreement. Contractor shall take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to their race, color, creed, religion, sex, marital status, national origin or ancestry.

9.0 MISCELLANEOUS PROVISIONS

9.1 Notice. Any notice or other communication either party desires or is required to give to the other party or any other person shall be in writing and either served personally or sent by prepaid, first-class mail, in the case of the City, to the City Manager and to the attention of the Contract Officer, City of Lawndale, 14717 Burin Avenue, Lawndale, California 90260, and in the case of the Contractor, to the person at the address designated on the execution page of this Agreement. Either party may change its address by notifying the other party of the change of address in writing. Notice shall be deemed communicated at the time personally delivered or in seventy-two (72) hours from the time of mailing if mailed as provided in this Section.

9.2 Interpretation. The terms of this Agreement shall be construed in accordance with the meaning of the language used and shall not be construed for or against either party by reason of the authorship of this Agreement or any other rule of construction which might otherwise apply.

9.3 Integration; Amendment. It is understood that there are no oral agreements between the parties hereto affecting this Agreement and this Agreement supersedes and cancels any and all previous negotiations, agreements and understandings, if any, between the parties, and none shall be used to interpret this Agreement. This Agreement may be amended at any time by an instrument in writing signed by both parties.

9.4 Severability. Should a portion of this Agreement be declared invalid or unenforceable by a judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining portions of this Agreement which are hereby declared as severable and shall be interpreted to carry out the intent of the parties unless the invalid provision is so material that its invalidity deprives either party of the basic benefit of their bargain or renders this Agreement meaningless.

9.5 Corporate Authority. The persons executing this Agreement on behalf of the parties hereto warrant that (i) such party is duly organized and existing, (ii) they are duly authorized to execute and deliver this Agreement on behalf of said party, (iii) by so executing this Agreement, such party is formally bound to the provisions of this Agreement, and (iv) the entering into this Agreement does not violate any provision of any other Agreement to which said party is bound. This Agreement is binding upon the heirs, executors, administrators, successors and assigns of the parties.

9.6 Counterparts. This Agreement may be executed in several counterparts, each of which will constitute one and the same instrument and will become binding upon the parties when at least one copy has been signed by both parties. This Agreement and any amendment will be considered executed when the signature page of a party is delivered by facsimile or other electronic transmission. Such electronic signatures will have the same effect as an original signature, provided that a wet signature copy is also mailed to the other party.

9.7 Modification of Agreement. No amendment to or modification of this Agreement will be valid unless made in writing and approved by Consultant and by the City Council or City Manager, as applicable. The parties agree that this requirement for written modifications cannot be waived and that any attempted waiver will be void.

IN WITNESS WHEREOF, the parties have executed and entered into this Agreement as of the date first written above.

EXHIBIT "A"

SCOPE OF SERVICES

1. DEFINITIONS. Whenever the following terms are used in this Exhibit, they shall have the following meaning:

a) "Alleys" means all dedicated alleys in the City of Lawndale. The City has approximately six (6) alley centerline miles.

b) "Business District" means that territory described as commercial, industrial or manufacturing district in the zoning map of the City of Lawndale.

c) "Curb-Mile" means swept path not less than five (5) feet wide for cumulative total length of 5,280 feet.

e) "Debris" means all litter, rubbish, leaves, sand, dirt, garbage and other foreign material removable from a paved area with a street sweeper.

f) "Director of Public Works" means the official designated as the Director of Public Works of the City, or any of his/her authorized representatives.

g) "Median Islands" means the raised portion of the street between opposing lanes of traffic.

h) "Parking Lots" means all City-owned parking lots. The City has eleven (11) parking lots at City-owned facilities as described on "Exhibit E". Parking lots also include the median parking along Hawthorne Boulevard. The term also applies to the School District owned parking lots at Jane Addams Middle School, Roger Anderson and William Green Elementary School.

i) "Regular Sweeping" means of street alleys, parking lots, median and other areas at pre-arranged scheduled intervals.

j) "Residential District" means that portion of the City not included within the business district.

k) "Streets mean all dedicated public right-of-way within the existing or future corporate limits of the City of Lawndale.

2. REGULAR SCHEDULED STREET SWEEPING.

Contractor shall furnish all labor, material and equipment necessary and shall weekly sweep, according to the current posted schedule, all existing streets, alleys, median islands, intersections and parking lots located within the present corporate limits of the City, in accordance with Exhibit "D".

Sweeping shall normally consist of a single pass over an area. Additional passes shall be made as necessary in problem areas where silt, leaves, debris, water or other conditions warrant special attention. In the event that the results of a sweeping are considered unsatisfactory by the Contract Officer, the Contractor shall sweep or clean the unsatisfactory area again at no cost to the City, within two (2) calendar days, without interruption in the regular sweeping schedule.

The aforementioned weekly scheduled street sweeping (Exhibit "E") shall be adhered to by Contractor unless deviation is authorized by the Contract Officer. The schedule is based on a five (5) days per week sweeping schedule. When deviation is authorized due to inclement weather, Contractor shall sweep the area missed as soon as weather conditions will permit. The Contractor shall perform all extra work caused by such weather without additional charge; this work shall not be considered emergency work as discussed in Exhibit "B".

Services consist of weekly street sweeping for 56 curb miles of residential streets, twice weekly services for business district streets; five times weekly services along Hawthorne Blvd; once weekly services for the alleys; and bi-weekly services for the medians and City parking lots, for a total of 157.4 curb miles per week.

3. SWEEPING/CLEANING OF STREETS, ALLEYS AND PARKING LOTS.

In addition to the work required above, the Contract Officer may from time to time request additional sweeping service to be compensated for at the hourly rate specified in Exhibit "C". Such requests shall be preceded by twenty-four (24) hours' notice from the Contract Officer to Contractor.

4. STREET SWEEPING EQUIPMENT

In compliance with the South Coast Air Quality Management District (AQMD) Rule 1186.1 – Less Polluting Sweeper, Contractor shall provide alternative-fuel sweepers or otherwise less-polluting sweeper for sweeping operations undertaken for the City. The Contractor shall normally use a broom type street sweeper approved by the Contract Officer, to clean the equipment used, including stand by or back up equipment, which shall not be more than five (5) years old at any time during the life of this contract or any amendment. Street Sweepers shall have a minimum five (5) cubic yard capacity. All mobile units shall be clearly marked with the Contractor's name and vehicle number and Contractor's telephone number prominently displayed for purposes of identification.

5. TRAFFIC COUNTERS

The Contractor is cautioned that, at various times and locations, portable traffic counting equipment of a type which is activated by vehicles coming in contact with a hose placed in the roadway, are used in the City. Caution shall be used by the Contractor to avoid damaging said equipment. If the Contractor, while in the performance of his contract duties, damages or causes to be damaged any of the aforementioned traffic counting equipment or appurtenances, he shall bear the entire cost of the restoration, repair, inspection, testing or replacement of said damaged equipment.

6. STANDARD OF PERFORMANCE

The primary objective of street sweeping is to pick up all leaves, paper, dirt, rocks, cans or other debris to ensure free flow of water in the gutters and maintain streets, alleys and parking lots in the state of cleanliness. The Contract Officer will make the final determination as to whether the work has been satisfactorily completed and shall order the Contractor to re-sweep or re-do in a satisfactory manner any areas the Contract Officers seems such work necessary.

7. HOLIDAYS

The Contractor is not required to sweep streets on Sundays, nor on any City holidays including the following: New Year's Day, Martin Luther King Day, President's Day, Memorial Day, Juneteenth Day, Fourth of July, Labor Day, Veterans' Day, Thanksgiving Day, Day after Thanksgiving Day, Christmas Day, or any additional holidays set forth in any collective bargaining agreement which may be entered between Contractor and its employees, a copy of which is to be provided to City. No modification of this holiday schedule shall be effective unless authorized in writing by the Contract Officer. Scheduled sweeping for each of the foregoing holidays shall be made up within seven (7) days after such holiday unless deviation is authorized by the Contract Officer.

8. MUNICIPAL SERVICES OFFICER-COORDINATION

The City may utilize a Municipal Services Officer to cite vehicles for parking during street sweeping hours. The Contractor shall coordinate his sweeping activities with the Municipal Services Officer. All cost for this coordination is included within the Contract Sum; no additional compensation is allowed.

9. SUPERVISION

The Contractor agrees that its performance of each of the provisions of this Agreement shall be to the standards set by the Contractor and the Contract Officer of the City to insure cleanliness, health and sanitation and that Contractor shall ensure the sweeping of streets and disposal of all sweepings in accordance with the provisions of this Agreement unless it is modified in writing by, or under the authority of, the Contract Officer. All work shall be done in a thorough and workmanlike manner in accordance with generally accepted good practices in the street sweeping industry.

10. DISPOSAL OF SWEEPINGS

The Contractor shall dispose of all street sweeping debris at a facility designated by the City.

11. COMPLAINTS

Complaints regarding Contractor's performance shall be transmitted to Contractor's office in writing, e-mail or via telephone and handled by Contractor's superintendent. A report shall be made promptly by Contractor and given back to the Contract Officer. Repeat complaints may be handled by joint visit to the site by a City Inspector and the Contractor's Superintendent. All complaints are to receive a follow-up response within a twenty-four (24) hour period after Contractor has been notified.

12. DIVERSION REPORTS

In addition to performance of services reports required by the Contract Officer, Contractor shall prepare and submit a report documenting tonnage of street sweeping debris collections delivered to each facility and copies of weight tickets for each load. Reports shall be submitted with the monthly invoice for services provided.

13. FEES AND GRATUTIES

Contractor shall not, nor shall it permit, any agent, employee or subcontractor employed by it to request, solicit, demand or accept, any compensation or gratuity for the sweeping of streets as herein defined, except such compensation as may be provided by this Agreement or as herein permitted.

14. CHANGE

The Contract Officer may at any time, by written order, direct that changes may be made in the work, specifications and route schedules relating to this Agreement. If any such changes cause an increase or decrease in the cost of, or the time required for performance of this Agreement, an equitable adjustment shall be made in Contractor's compensation or street sweeping schedule, or both; and this Agreement shall be modified in writing accordingly and approved by both parties hereto. Any claim by Contractor for any adjustment under this clause must be asserted within thirty (30) days from the date of receipt by Contractor of the notification of such changes, or such claim for adjustment shall be waived. Nothing in this paragraph shall excuse Contractor form proceeding with the performance of its obligations hereunder as so changed.

15. CONTRACTOR STAGING AREA

Contractor is responsible for securing an area for staging equipment and vehicles used to perform all services required under the Agreement at Contractor's sole cost. The City will not provide an area for staging. Contractor shall not stage equipment or vehicles at the Public Works Yard or on other City-owned property.

EXHIBIT "B"

SPECIAL REQUIREMENTS

- A new Section 2.4 is added to the Agreement to read as follows:

"2.4 Prevailing Wages; Indemnification. Contractor and all subcontractors shall comply with the State Labor standards. State Labor standards provisions, including prevailing wage requirements, will be enforced such that the general rate of per diem wages (prevailing wage) shall be paid for each craft, classification, or type of worker needed to execute the contract to all workers employed in the execution of the contract for the work to be performed by CleanStreet. The State General Prevailing Wage Determination is as established by the California Department of Industrial Relations for Los Angeles County. *(Refer to http://www.dir.ca.gov/OPRL/PWD/Determinations/Statewide/C-TT.pdf for additional information.)* The prevailing rate of per diem wages are on file at the City of Lawndale Department of Public Works, 4722 Manhattan Beach Boulevard, Lawndale, California 90266, and are available to any interested party on request. The statutory provisions for penalties for failure to pay prevailing wages and/or failure to otherwise comply with state's wage and hour laws will be enforced. The Contractor is required to post at the job site the prevailing rate of per diem wages and other notices prescribed by regulation.

The Contractors and all subcontractors must submit electronic certified payroll records weekly directly to the Labor Commissioner (aka Division of Labor Standards Enforcement) no less than monthly and must comply with all statutory requirements relating to certified copies of payroll records, including the maintenance of the records, their certification, and their availability for inspection as required by Labor Code Section 1776 and as required under Subsection 7-2.6 of said Standard Specifications for Public Works Construction.

Contractor shall indemnify, defend with legal counsel approved by the City, and hold the City and City's Parties harmless from and against any all liability, loss, damage, costs, or expenses (including attorneys' fees and court costs) arising from or as a result of any action, claim, or determination relating in any way to the failure to properly pay of prevailing wages. Moreover, the City retains the right to settle or abandon any such the matter without the Contractor's consent as to the City's liabilities or rights only."

- A new Section 5.1(e) is added to the Agreement to read as follows:

(e) Cyber Liability Insurance. The cyber liability insurance must include the following coverage:

- Liability arising from the theft, dissemination and/or use of confidential or personally identifiable information; including credit monitoring and regulatory fines arising from such theft, dissemination or use of the confidential information.

- Network security liability arising from the unauthorized use of, access to, or tampering with computer systems.
- Liability arising from the failure of technology products (software) required under the Agreement for Contractor to properly perform the services intended.
- Electronic media liability arising from personal injury, plagiarism or misappropriation of ideas, domain name infringement or improper deep-linking or framing, and infringement or violation of intellectual property rights.
- Liability arising from the failure to render professional services
- If coverage is maintained on a "claims-made" basis, Cont must maintain such coverage for an additional period of three years following termination of the Agreement.

1. SURETIES AND INSURANCE

Contractor shall provide the City with an annual Faithful Performance Bond and a Labor and Material Bond (Payment Bond) in a form an amount approved by the City within fifteen (15) days from the date of written notice of the award of this Agreement as described in the Request for Proposal for Sweeping/Cleaning of Streets, Alleys and Parking Lots. **At least thirty (30) days prior to the commencement of the second year of services to be provided under this Agreement, and each year thereafter that this Agreement shall be in effect, Contractor must provide the City with copies of the new annual Performance and Payment Bonds** in the same amounts as required above and otherwise meeting the conditions of this section.

The **Faithful Performance Bond** shall be in the sum of not less than $_____. The **Payment Bond** shall be in the sum of not less than $_____. In addition to the requirements above, the bonds must comply with the requirements set forth in the Agreement.

The payment bond shall contain the original notarized signature of an authorized officer of the surety and affixed thereto shall be a certified and current copy of his power of attorney. **The payment bond shall be unconditional.**

All insurers and sureties must be rated A or better according to the most recent A.M. Best Co. Rating Guide. The selected Contractor shall deliver, concurrently with execution of this Agreement and delivery of said payment bond and performance bond, to the City the following documents:

(a) A copy of the "Certificate of Authority" of the Insurer or Surety issued by the Insurance Commissioner, which authorizes the Insurer or Surety to transact surety insurance in the State of California; or

(b) A certificate from the Clerk of the County of Los Angeles that the "Certificate of Authority" of the Insurer or Surety has not been surrendered, revoked, canceled, annulled, or suspended or, in the event the "Certificate of Authority" of the Insurer or Surety has been suspended, that renewed authority has been granted.

Failure of Contractor to deliver these documents by the time of execution of this Agreement shall require the City to refrain from entering or continuing the Agreement, as applicable, as Contractor will be deemed to have failed to ensure the sufficiency of the Insurer or Surety to the satisfaction

of the City, as required by the provisions of the Bond and Undertaking Law, Code of Civil Procedure 995.660.

Upon receipt of any bonds, City shall contact the bond company to verify the bond's validity.

2. CONTRACTORS EMPLOYEES

A. Work Force, Background Checks

The parks and parking lots at Jane Addams, Rogers/Anderson, and William Green schools, which will be part of the work provided pursuant to this contract with the City, are owned by the Lawndale Elementary School District. Contractor hereby warrants that she/he and all employees or agents of Contractor who may provide services pursuant to this Agreement who may have contact with children have never been convicted of any offense specified in Public Resources Code Section 5164 or Penal Code Section 11105.3 which would preclude any such person from contact with children. In addition, Contractor agrees to provide City with Live Scan fingerprints and the related criminal background check for each employee or agent of Contractor who may provide services pursuant to this Agreement.

B. Uniforms and Clothing

The Contractor's employees shall wear uniform shirts that have the Contractor's company name and the employee's first name clearly displayed on the shirt while providing the services required under this Agreement. All shirts worn by Contractor's employees shall be of the same color, material and style and shall have a neat and clean appearance.

C. Emergency Services

Contractor shall provide the City with the names and telephone numbers of at least two (2) contacts who can be called by City representatives when emergency conditions occur. Such work shall be performed for additional compensation unless the emergency condition is created as a result of Contractor's negligence. Emergency work does not include work required as the result of the weather as described above. Emergency work will be compensated at the hourly rate established in Exhibit "C". The City shall call for such assistance only in the event of a genuine and substantial emergency. Upon notification by the City of emergency conditions, the Contractor shall arrive to the site and report status within one (1) hour and Contractor shall charge a maximum of one (1) hour personnel response time for any response to an emergency call requiring a representative of Contractor to travel to the City.

3. LEVEL OF MAINTENANCE

(A) All work shall be performed in accordance with the Schedule of Performance (Exhibit "D") so as to maintain the aesthetic appearance, safety, and usefulness of the streets, alleys, medians, and parking lots.

(B) The City shall make routine inspections of all streets, alleys, and parking lots included in this Agreement and shall advise Contractor of any deficiencies noted. The results of each inspection shall be recorded and retained for reference.

The Contractor shall compensate the City for all time required for any re-inspection and related supervision by the City's Public Works Inspector as a result of noted deficiencies at a rate including actual time, fringe benefits, and mileage costs incurred by the City.

(C) Notices and penalties for non-performance are set forth as follows:

1) Deficiency Notice: The Contractor is required to correct deficiencies within one (1) working day after notification by City.

2) Withholding of Payment: Provided work under the Deficiency Notice has not been completed by Contractor, payment for addressing the subject deficiency shall be withheld until the deficiency is corrected or remedied by the City. Such costs shall be determined by the City based on a percentage of the item cost per month for the area in question, using the cost for that task.

3) City's Right to Correct Deficiency: One (1) working day after issuing a Deficiency Notice to Contractor, City shall re-inspect the noted deficiency to verify whether the deficiency has been corrected to the satisfaction of the City. If the deficiency is not corrected the City may correct the deficiency and shall receive a bill credit for the costs incurred to do so.

4. Description of Deficiencies

- Performance deficiency. Examples include: failure to comply with conditions, specifications, reports, schedules and/or directives from the Contract Officer or City Engineer. Deduction may be based upon costs provided by the Contractor on the Bid Worksheets submitted at the time of bid or as deemed appropriate by the City's Representative.

- Failure to provide adequate equipment in compliance with City specifications and/or as requested by the City's Representative.

EXHIBIT "C"

SCHEDULE OF COMPENSATION

1. The City shall pay the Contractor $27,310.69 per month for the scope of work.

2. The City shall pay the Contractor an additional sum at the rate of $163.65 per hour per street sweeper for any special street sweeping service requested by the city and performed by the Contractor; provided, however, that said hourly rate shall only apply to actual street sweeping time and shall not apply to the Contractor's travel time to and from the designated work site. The minimum work order for additional work shall be one (1) hour in any one (1) day. After that initial hour, the time will be billed in increments of six minutes (0.1 hours).

3. Failure to Perform Required Work – Deductions. In the event the Contractor fails to complete the sweeping in a satisfactory manner, as required by this Agreement, because of equipment breakdown or reasons other than inclement weather, the City may deduct from the monthly compensation due to the Contractor the amount per curb mile which is unsatisfactorily performed at the rate specified in Section 2 of this Exhibit.

Failure to provide adequate equipment in compliance with City specifications and/or as requested by the City's Representative. May result in a deduction of up to $250 per instance per workday.

As set forth in Exhibit "B", when a deficiency is not corrected the City may correct the deficiency and shall receive a bill credit for the costs incurred to do so.

EXHIBIT "D"

SCHEDULE OF PERFORMANCE

The term of this Agreement is two years commencing January 1, 2024 through December 31, 2025. The City has the option to extend this Agreement for as many as three 1-year extensions.

The regular scheduled street sweeping shall be provided as follows:

a) Streets in the residential district shall be swept once (1) a week in accordance with the schedule provided by the Director of Public Works. Residential areas are swept from 8:00 a.m. to 1:00 p.m., Monday through Friday. [Approximately fifty-six (56) curb miles].

b) Hawthorne Boulevard shall be swept five (5) times a week between the hours of 2 a.m. to 6 a.m. [Approximately four (4) curb miles].

c) Streets in the business district (with the exception of Hawthorne Blvd.) shall be swept twice (2) each week in accordance with the schedule provided by the Director of Public Works. [Approximately eleven (11) curb miles].

d) Alleys shall be swept once (1) a week according to the schedule provided by Director of Public Works. [Approximately five (5) curb miles]

e) Median islands shall be swept once (1) every other week according to the schedule provided by the Director of Public Works. [Approximately six (6) curb miles].

f) Parking lots shall be swept once (1) every other week according to the schedule provided by the Director of Public Works.

g) Sweeping along signed routes shall be completed during hours and on the days posted. Sweeping shall not commence along a sign route until ten (10) minutes after the time posted for the sweeping period.

CITY OF LAWNDALE

14717 BURIN AVENUE, LAWNDALE, CALIFORNIA 90260
PHONE (310) 973-3200 ♦ www.lawndalecity.org

DATE: December 18, 2023

TO: Honorable Mayor and City Council

FROM: Sean M. Moore, City Manager

PREPARED BY: Jared Chavez, Community Development Manager

SUBJECT: **Professional Service Agreement Extension with De Novo Planning Group**

BACKGROUND

The Community Development Department initiated the General Plan and Hawthorne Boulevard Specific Plan Update ("Update") in late 2019. The State of California requires that cities periodically update these vital documents to re-evaluate their goals, development policies, long-term planning practices, and vision for their community. These updates also bring the General Plan and the Hawthorne Boulevard Specific Plan ("HBSP") into compliance with current state and federal regulations.

The City issued a competitive Request for Proposal ("RFP") to hire a qualified firm to assist with updating the General Plan and HBSP. The following three firms submitted proposals: CSG Consultants, De Novo Planning Group, and Infrastructure Engineers. On November 4, 2019, an interview panel consisting of various city staff interviewed and scored each consultant individually. The panel selected De Novo Planning Group ("De Novo") based on their high overall interview scores. The original term of the service agreement with De Novo was from March 16, 2020 to December 31, 2021 in the amount of $808,920.

The COVID-19 pandemic started right as major work had begun on the update process, postponing deadlines and interrupting processes. The unpredictable nature of the pandemic forced many local, state, and federal agencies to adapt to the impacts of COVID-19.

On December 6, 2021 staff requested additional time to extend the current service agreement with De Novo until December 31, 2022 to complete the remaining portions of the General Plan and HSBP update process. Due to the new requirements from the State of California Housing and Community Development's Departments new Housing Element regulation changes Staff and De Novo worked on meeting HCD's demands which delayed the completion of the General Plan update.

De Novo has completed the General Plan, which was heard by City Council on December 4, 2023 and continued to December 18, 2023. De Novo is requesting six additional months to complete the Hawthorne Boulevard Specific Plan update and the Zoning Ordinance Title 17, which is currently getting updated.

Staff is requesting an additional six month contract extension for De Novo Planning group to finalize the update of the HBSP and Zoning ordinance Title 17 which is programed for completion by June of 2024.

STAFF REVIEW

There are six phases to the update process, with staff recently starting on the last phase. The sixth phase focuses on holding public hearings, meetings with staff, and project administration.

Staff and De Novo completed the last phase of revisions to update the Housing Element while addressing all remaining tasks. The General Plan has been updated and is ready for public hearing. The last phase will require the completion of the Hawthorne Boulevard Specific Plan and the zoning ordinance to be consistent with the General Plan.

Staff is requesting to extend the service agreement with De Novo until June 30, 2024.

LEGAL REVIEW

The City Attorney has reviewed the agreement and approved as to form.

FISCAL IMPACT

$160,000 (of the $808,920 original total) remains to complete the Hawthorne Boulevards Specific plan and zoning ordinance updates.

There is no additional funding required.

RECOMMENDATION

Staff recommends that the City Council approve to extend the professional service agreement with De Novo for the General Plan and HBSP Update.

Original Professional Service Agreement with De Novo Planning Group

CITY OF LAWNDALE

CONTRACT SERVICES AGREEMENT FOR

GENERAL PLAN AND HAWTHORNE BOULEVARD

SPECIFIC PLAN UPDATE

This Contract Services Agreement ("Agreement") is made and entered into this ___ day of March, 2020, by and between the City of Lawndale, a municipal corporation ("City"), and De Novo Planning Group, a California corporation ("Consultant"). The term Consultant includes professionals performing in a consulting capacity. The parties hereto agree as follows:

1.0 SERVICES OF CONSULTANT

1.1 Scope of Services. In compliance with all terms and conditions of this Agreement, Consultant shall provide the work and services specified in the "Scope of Services" attached hereto as *Exhibit "A"* and incorporated herein by this reference. Consultant warrants that all work or services set forth in the Scope of Services will be performed in a competent, professional and satisfactory manner.

1.2 Consultant's Proposal. The Scope of Services shall include the Consultant's proposal or bid which shall be incorporated herein by this reference as though fully set forth herein. In the event of any inconsistency between the terms of such proposal and this Agreement, the terms of this Agreement shall govern.

1.3 Compliance with Law. All work and services rendered hereunder shall be provided in accordance with all ordinances, resolutions, statutes, rules, and regulations of the City and any Federal, State or local governmental agency having jurisdiction.

1.4 Licenses, Permits, Fees and Assessments. Consultant shall obtain at its sole cost and expense, such licenses, permits and approvals as may be required by law for the performance of the services required by this Agreement. Consultant shall have the sole obligation to pay for any fees, assessments, taxes, including applicable penalties and interest, which may be imposed by law and arise from or are necessary for the Consultant's performance of the services required by this Agreement; and shall indemnify, defend and hold harmless City against any claim for such fees, assessments, taxes, penalties or interest levied, assessed or imposed against City hereunder.

1.5 Familiarity with Work. By executing this Agreement, Consultant warrants that Consultant (a) has thoroughly investigated and considered the scope of services to be performed, (b) has carefully considered how the work and services should be performed, and (c) fully understands the facilities, difficulties and restrictions attending performance of the services under this Agreement.

1.6 Additional Services. City shall have the right at any time during the performance of the services, without invalidating this Agreement, to order extra work beyond that specified in the Scope of Services or make changes by altering, adding to or deducting from said work. No such extra work may be undertaken unless a written order is first given by the Contract Officer to the Consultant, incorporating therein any adjustment in (i) the Contract Sum, and/or (ii) the time to perform this Agreement, which said adjustments are subject to the written approval of the Consultant. Any increase

in compensation must be approved by the City Council. It is expressly understood by Consultant that the provisions of this Section shall not apply to services specifically set forth in the Scope of Services or reasonably contemplated therein. Consultant hereby acknowledges that it accepts the risk that the services to be provided pursuant to the Scope of Services may be more costly or time consuming than Consultant anticipates and that Consultant shall not be entitled to additional compensation therefor.

1.7 Special Requirements. Additional terms and conditions of this Agreement, if any, which are made a part hereof are set forth in the "Special Requirements" attached hereto as *Exhibit "B"* and incorporated herein by this reference. In the event of a conflict between the provisions of *Exhibit "B"* and any other provisions of this Agreement, the provisions of *Exhibit "B"* shall govern.

1.8 Environmental Laws. Consultant shall comply with all applicable environmental laws, ordinances, codes and regulations of Federal, State, and local governments. Consultant shall also comply with all applicable mandatory standards and policies relating to energy efficiency.

2.0 COMPENSATION

2.1 Contract Sum. For the services rendered pursuant to this Agreement, Consultant shall be compensated in accordance with the "Schedule of Compensation" attached hereto as *Exhibit "C"* and incorporated herein by this reference, but not exceeding the maximum contract amount of eight-hundred eight thousand nine hundred twenty dollars ($808,920.00) ("Contract Sum"), except as provided in Section 1.6. The method of compensation may include: (i) a lump sum payment upon completion, (ii) payment in accordance with the percentage of completion of the services, (iii) payment for time and materials based upon the Consultant's rates as specified in the Schedule of Compensation, but not exceeding the Contract Sum or (iv) such other methods as may be specified in the Schedule of Compensation. Compensation may include reimbursement for actual and necessary expenditures approved by the Contract Officer in advance if specified in the Schedule of Compensation. The Contract Sum shall include the attendance of Consultant at all project meetings reasonably deemed necessary by the City.

Consultant agrees that if Consultant becomes aware of any facts, circumstances, techniques, or events that may or will materially increase or decrease the cost of the work or services or, if Consultant is providing design services, the cost of the project being designed, Consultant shall promptly notify the Contract Officer of said fact, circumstance, technique or event and the estimated increased or decreased cost related thereto and, if Consultant is providing design services, the estimated increased or decreased cost estimate for the project being designed.

2.2 Method of Payment. Unless some other method of payment is specified in the Schedule of Compensation, in any month in which Consultant wishes to receive payment, no later than the first (1st) working day of such month, Consultant shall submit to the City, in a form approved by the City's Director of Finance and Director of Community Development, an invoice for services rendered prior to the date of the invoice. Except as provided in Section 7.2, City shall pay Consultant for all expenses stated thereon which are approved by City pursuant to this Agreement generally within thirty (30) days, and no later than forty-five (45) days, from the submission of an invoice in an approved form.

2.3 Availability of Funds. It is mutually understood between the parties that this Agreement is valid and enforceable only if sufficient funds are made available by the City Council of the City for the purposes of this Agreement. The availability of funding is affected by matters outside

the City's control, including other governmental entities. Accordingly, the City has the option to void the whole Agreement or to amend the Agreement to reflect unanticipated reduction in funding for any reason.

3.0 PERFORMANCE SCHEDULE

3.1 Time of Essence. Time is of the essence in the performance of this Agreement.

3.2 Schedule of Performance. Consultant shall commence and shall perform all services within the time period(s) established in the "Schedule of Performance" attached hereto as *Exhibit "D"*, if any, and incorporated herein by this reference.

3.3 Force Majeure. The time period(s) specified in the Schedule of Performance for performance of the services rendered pursuant to this Agreement shall be extended because of any delays due to unforeseeable causes beyond the control and without the fault or negligence of the Consultant, including, but not restricted to, acts of God or of the public enemy, unusually severe weather, fires, earthquakes, floods, epidemics, quarantine restrictions, riots, strikes, freight embargoes, wars, litigation, and/or acts of any governmental agency, including the City, if the Consultant shall, within ten (10) days of the commencement of such delay, notify the Contract Officer in writing of the causes of the delay. The Contract Officer shall ascertain the facts and the extent of delay and extend the time for performing the services for the period of the enforced delay when and if, in the judgment of the Contract Officer, such delay is justified. The Contract Officer's determination shall be final and conclusive upon the parties to this Agreement. In no event shall Consultant be entitled to recover damages against the City for any delay in the performance of this Agreement, however caused; Consultant's sole remedy being extension of the Agreement pursuant to this Section.

3.4 Term. Unless earlier terminated in accordance with Section 7.4 below, this Agreement shall begin on March 17, 2020 and continue in full force and effect until completion of the services no later than December 31, 2021.

4.0 COORDINATION OF WORK

4.1 Representative of Consultant. Amanda Tropiano is hereby designated as being the representative of Consultant authorized to act on its behalf with respect to the work or services specified herein and to make all decisions in connection therewith.

It is expressly understood that the experience, knowledge, capability and reputation of the representative was a substantial inducement for City to enter into this Agreement. Therefore, the representative shall be responsible during the term of this Agreement for directing all activities of Consultant and devoting sufficient time to personally supervise the services hereunder. For purposes of this Agreement, the representative may not be replaced nor may his responsibilities be substantially reduced by Consultant without the express written approval of City.

4.2 Contract Officer. The City's City Manager is hereby designated as the representative of the City authorized to act in its behalf with respect to the work and services and to make all decisions in connection therewith ("Contract Officer"). It shall be the Consultant's responsibility to assure that the Contract Officer is kept informed of the progress of the performance of the services and the Consultant shall refer any decisions which must be made by City to the Contract Officer. The City may designate another Contract Officer by providing written notice to Consultant.

4.3 Prohibition Against Subcontracting or Assignment. The experience, knowledge, capability and reputation of Consultant, its principals and employees were a substantial inducement for the City to enter into this Agreement. Therefore, Consultant shall not contract with any other entity to perform in whole or in part the services required hereunder without the express written approval of the City. In addition, neither this Agreement nor any interest herein may be transferred or assigned without the prior written approval of City. Transfers restricted hereunder shall include the transfer to any person or group of persons acting in concert of more than twenty five percent (25%) of the present ownership and/or control of Consultant taking all transfers into account on a cumulative basis. A prohibited transfer or assignment shall be void. No approved transfer shall release the Consultant or any surety of Consultant of any liability hereunder without the express consent of City.

4.4 Independent Contractor. Neither the City nor any of its employees shall have any control over the manner or means by which Consultant or employees, perform the services required herein, except as otherwise set forth herein. Consultant shall perform all services required herein as an independent contractor of City and shall remain under only such obligations as are consistent with that role. Consultant represents and warrants that the personnel used to provide services to the City pursuant to this Agreement are classified by Consultant as employees. Consultant shall not at any time or in any manner represent that it or any of its employees are employees of City. City shall not in any way or for any purpose become or be deemed to be a partner of Consultant in its business or otherwise or a joint venturer or a member of any joint enterprise with Consultant. In the event that Consultant or any employee of Consultant providing services under this Agreement claims or is determined by a federal or state agency, a court of competent jurisdiction, or the California Public Employees' Retirement System ("CalPERS") to be classified as other than an independent contractor for the City, then Consultant shall indemnify, defend, and hold harmless the City for the payment of any and all assessed fines, penalties, judgments, employee and/or employer contributions, and any other damages and costs assessed to the City as a consequence of, or in any way attributable to, the assertion that Consultant or any staff Consultant used to provide services under this Agreement are employees of the City

5.0 INSURANCE AND INDEMNIFICATION

5.1 Insurance. Consultant shall procure and maintain, at its sole cost and expense, in a form and content satisfactory to City, during the entire term of this Agreement including any extension thereof, the following policies of insurance:

(a) Commercial General Liability Insurance. A policy of commercial general liability insurance using Insurance Services Office "Commercial General Liability" policy form CG 00 01, with an edition date prior to 2004, or the exact equivalent. Coverage for an additional insured shall not be limited to its vicarious liability. Defense costs must be paid in addition to limits. Limits shall be no less than $1,000,000.00 per occurrence for all covered losses and no less than $2,000,000.00 general aggregate.

(b) Workers' Compensation Insurance. A policy of workers' compensation insurance on a state-approved policy form providing statutory benefits as required by law with employer's liability limits no less than $1,000,000 per accident for all covered losses.

(c) Automotive Insurance. A policy of comprehensive automobile liability insurance written on a per occurrence basis in an amount not less than $1,000,000.00 per accident, combined single limit. Said policy shall include coverage for owned, non owned, leased and hired cars.

(d) Professional Liability or Error and Omissions Insurance. A policy of Professional Liability insurance in an amount not less than $1,000,000.00 per claim with respect to loss arising from the actions of Consultant performing professional services hereunder on behalf of the City. Any policy inception date, continuity date, or retroactive date must be before the effective date of this Agreement and Consultant agrees to maintain continuous coverage through a period no less than three (3) years after completion of the services required by this Agreement.

All of the above policies of insurance shall be primary insurance. The general liability policy shall name the City, its officers, employees and agents ("City Parties") as additional insureds and shall waive all rights of subrogation and contribution it may have against the City and the City's Parties and their respective insurers. Moreover, the insurance policy must specify that where the primary insured does not satisfy the self-insured retention, any additional insured may satisfy the self-insured retention. All of said policies of insurance shall also provide that said insurance may be not cancelled without providing ten (10) days prior written notice by registered mail to the City. In the event any of said policies of insurance are cancelled or amended, Consultant shall, prior to the cancellation or amendment date, submit new evidence of insurance in conformance with this Section 5.1 to the Contract Officer. No work or services under this Agreement shall commence until Consultant has provided City with Certificates of Insurance or appropriate insurance binders evidencing the above insurance coverages and said Certificates of Insurance or binders are approved by City.

Consultant agrees that the provisions of this Section 5.1 shall not be construed as limiting in any way the extent to which Consultant may be held responsible for the payment of damages to any persons or property resulting from Consultant's activities or the activities of any person or persons for which Consultant is otherwise responsible. If the Consultant's insurance policies have higher limits and coverage than those required by this contract, the City will have access to those higher limits and coverage maintained by the Consultant.

The insurance required by this Agreement shall be satisfactory only if issued by companies qualified to do business in California, rated "A" or better in the most recent edition of Best Rating Guide or The Key Rating Guide, and only if they are of a financial category Class VII or better, unless such requirements are waived by the Risk Manager of the City due to unique circumstances.

In the event that the Consultant is authorized to subcontract any portion of the work or services provided pursuant to this Agreement, the contract between the Consultant and such subcontractor shall require the subcontractor to maintain the same policies of insurance that the Consultant is required to maintain pursuant to this Section 5.1.

5.2 Indemnification.

(a) Indemnity for Design Professional Liability. When the law establishes a professional standard of care for Consultant's services, to the fullest extent permitted by law, and except for the statutory limits set forth under California Civil Code Section 2782,8 applicable to services provided by a "design professional", Consultant shall indemnify, defend and hold harmless City and the City's Parties from and against any and all losses, liabilities, damages, costs and expenses, including attorneys' fees and costs to the extent same are caused in whole or in part by any negligent or wrongful act, error or omission of Consultant, its officers, employees of subcontractors (or any entity or individual for which Consultant shall bear legal liability) in the performance of professional services under this Agreement.

(b) Indemnity for Other Than Design Professional Liability. Other than in the performance of design professional services and to the full extent permitted by law, Consultant shall indemnify and hold harmless City and City's Parties from and against any liability (including liability for claims, suits, actions, losses, expenses or costs), where the same arise out of, are a consequence of, or are in any way attributable to, in whole or in part, the negligent acts, errors, omissions of the Consultant, or anyone directly or indirectly employed by the Consultant, while in any way engaged in the performance of this Agreement by Consultant or by any individual or entity for which Consultant is legally liable, including but not limited to officers, employees or subcontractors of Consultant. Notwithstanding the foregoing, for any claim alleging the negligent performance of work by Consultant, the Consultant has no immediate obligation to provide the defense of the City, or any other indemnified party. The Consultant will reimburse indemnified parties their reasonable defense costs ultimately determined to have been caused by the negligence of the Consultant and proportionate to the degree of fault of the Consultant."

6.0 RECORDS AND REPORTS

6.1 Reports. Consultant shall periodically prepare and submit to the Contract Officer such reports concerning the performance of the services required by this Agreement as the Contract Officer shall require.

6.2 Records. Consultant shall keep, and require subcontractors to keep, such books and records as shall be necessary to perform the services required by this Agreement and enable the Contract Officer to evaluate the performance of such services. The Contract Officer shall have full and free access to such books and records at all times during normal business hours of City, including the right to inspect, copy, audit and make records and transcripts from such records. Such records shall be maintained for a period of three (3) years following completion of the services hereunder, and the City shall have access to such records in the event any audit is required.

6.3 Ownership of Documents. All drawings, specifications, reports, records, documents and other materials prepared by Consultant, its employees and subcontractors in the performance of this Agreement shall be the property of City and shall be delivered to City upon request of the Contract Officer or upon the termination of this Agreement and Consultant shall have no claim for further employment or additional compensation as a result of the exercise by City of its full rights of ownership of such documents and materials. Consultant may retain copies of such documents for its own use and Consultant shall have an unrestricted right to use the concepts embodied therein. Any use of such completed documents by City for other projects and/or use of uncompleted documents without specific written authorization by the Consultant will be at the City's sole risk and without liability to Consultant and the City shall indemnify the Consultant for all damages resulting therefrom. All subcontractors shall provide for assignment to City of any documents or materials prepared by them, and in the event Consultant fails to secure such assignment, Consultant shall indemnify City for all damages resulting therefrom.

7.0 ENFORCEMENT OF AGREEMENT

7.1 California Law. This Agreement shall be construed and interpreted both as to validity and to performance of the parties in accordance with the laws of the State of California. Legal actions concerning any dispute, claim or matter arising out of or in relation to this Agreement shall be

instituted in the Superior Court of the County of Los Angeles, State of California, or any other appropriate court in such county, and Consultant agrees to submit to the personal jurisdiction of such court in the event of such action.

7.2 Retention of Funds. Consultant hereby authorizes City to deduct from any amount payable to Consultant (whether or not arising out of this Agreement) (i) any amounts the payment of which may be in dispute hereunder or which are necessary to compensate City for any losses, costs, liabilities, or damages suffered by City, and (ii) all amounts for which City may be liable to third parties, by reason of Consultant's acts or omissions in performing or failing to perform Consultant's obligation under this Agreement. In the event that any claim is made by a third party, the amount or validity of which is disputed by Consultant, City may withhold from any payment due, without liability for interest because of such withholding, an amount sufficient to cover such claim. The failure of City to exercise such right to deduct or to withhold shall not, however, affect the obligations of the Consultant to insure, indemnify, and protect City as elsewhere provided herein.

7.3 Waiver. No delay or omission in the exercise of any right or remedy by a non-defaulting party on any default shall impair such right or remedy or be construed as a waiver. A party's consent to or approval of any act by the other party requiring the party's consent or approval shall not be deemed to waive or render unnecessary the other party's consent to or approval of any subsequent act. Any waiver by either party of any default must be in writing and shall not be a waiver of any other default concerning the same or any other provision of this Agreement.

7.4 Termination Prior to Expiration of Term. Either party may terminate this Agreement at any time, with or without cause, upon thirty (30) days' written notice to the other party. Upon receipt of any notice of termination, Consultant shall immediately cease all work or services hereunder except such as may be specifically approved by the Contract Officer. Consultant shall be entitled to compensation for the reasonable value of the work product actually produced prior to the effective date of the notice of termination and for any services authorized by the Contract Officer thereafter in accordance with the Schedule of Compensation and City shall be entitled to reimbursement for any compensation paid in excess of the services rendered.

7.5 Completion of Work After Termination for Default of Consultant. If termination is due to the failure of the Consultant to fulfill its obligations under this Agreement, City may, after compliance with the provisions of Section 7.2, take over the work and prosecute the same to completion by contract or otherwise, and the Consultant shall be liable to the extent that the total cost for completion of the services required hereunder exceeds the compensation herein stipulated (provided that the City shall use reasonable efforts to mitigate such damages), and City may withhold any payments to the Consultant for the purpose of set-off or partial payment of the amounts owed the City as previously stated.

7.6 Attorneys' Fees. If either party to this Agreement is required to initiate or defend or made a party to any action or proceeding in any way connected with this Agreement, the prevailing party in such action or proceeding, in addition to any other relief which may be granted, shall be entitled to reasonable attorneys' fees, whether or not the matter proceeds to judgment, and to all other reasonable costs for investigating such action, taking depositions and discovery, including all other necessary costs the court allows which are incurred in such litigation.

8.0 CITY OFFICERS AND EMPLOYEES: NON-DISCRIMINATION

8.1 Non-liability of City Officers and Employees. No officer or employee of the City shall be personally liable to the Consultant, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Consultant or to its successor, or for breach of any obligation of the terms of this Agreement.

8.2 Conflict of Interest; City. No officer or employee of the City shall have any financial interest in this Agreement nor shall any such officer or employee participate in any decision relating to the Agreement which affects his financial interest or the financial interest of any corporation, partnership or association in which he is interested, in violation of any State statute or regulation.

8.3 Conflict of Interest; Consultant. Consultant warrants that it has not paid or given and will not pay or give any third party any money or other consideration for obtaining this Agreement. Consultant shall comply with all conflict of interest laws and regulations including, without limitation, City's Conflict of Interest Code which is on file in the City Clerk's office. Accordingly, should the City Manager determine that Consultant will be performing a specialized or general service for the City and there is substantial likelihood that the Consultant's work product will be presented, either written or orally, for the purpose of influencing a governmental decision, the Consultant and its officers or employees, as applicable, shall be subject to the City's Conflict of Interest Code.

8.4 Covenant Against Discrimination. Consultant covenants that, by and for itself, its executors, assigns, and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of race, color, creed, religion, sex, marital status, national origin, or ancestry in the performance of this Agreement. Consultant shall take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to their race, color, creed, religion, sex, marital status, national origin or ancestry.

9.0 MISCELLANEOUS PROVISIONS

9.1 Notice. Any notice or other communication either party desires or is required to give to the other party or any other person shall be in writing and either served personally or sent by prepaid, first-class mail, in the case of the City, to the City Manager and to the attention of the Contract Officer, City of Lawndale, 14717 Burin Avenue, Lawndale, California 90260, and in the case of the Consultant, to the person at the address designated on the execution page of this Agreement. Either party may change its address by notifying the other party of the change of address in writing. Notice shall be deemed communicated at the time personally delivered or in seventy-two (72) hours from the time of mailing if mailed as provided in this Section.

9.2 Interpretation. The terms of this Agreement shall be construed in accordance with the meaning of the language used and shall not be construed for or against either party by reason of the authorship of this Agreement or any other rule of construction which might otherwise apply.

9.3 Integration; Amendment. It is understood that there are no oral agreements between the parties hereto affecting this Agreement and this Agreement supersedes and cancels any and all previous negotiations, agreements and understandings, if any, between the parties, and none shall be used to interpret this Agreement. This Agreement may be amended at any time by an instrument in writing signed by both parties.

9.4 Severability. Should a portion of this Agreement be declared invalid or unenforceable by a judgment or decree of a court of competent jurisdiction, such invalidity or unenforceability shall not affect any of the remaining portions of this Agreement which are hereby declared as severable and shall be interpreted to carry out the intent of the parties unless the invalid provision is so material that its invalidity deprives either party of the basic benefit of their bargain or renders this Agreement meaningless.

9.5 Corporate Authority. The persons executing this Agreement on behalf of the parties hereto warrant that (i) such party is duly organized and existing, (ii) they are duly authorized to execute and deliver this Agreement on behalf of said party, (iii) by so executing this Agreement, such party is formally bound to the provisions of this Agreement, and (iv) the entering into this Agreement does not violate any provision of any other Agreement to which said party is bound.

IN WITNESS WHEREOF, the parties have executed and entered into this Agreement as of the date first written above.

First Amendment to the Service Agreement with De Novo Planning Group

FIRST AMENDMENT TO CONTRACT SERVICES AGREEMENT FOR GENERAL PLAN AND HAWTHORNE BOULEVARD SPECIFIC PLAN UPDATE

This FIRST AMENDMENT TO CONTRACT SERVICES AGREEMENT (the "First Amendment") is made and entered into this 6th day of December, 2021, by and between the CITY OF LAWNDALE, a municipal corporation (herein "City") and De Novo Planning Group, a California corporation (herein "Consultant").

RECITALS

WHEREAS, City and Consultant entered into that certain Agreement entitled "Contract Services Agreement for General Plan and Hawthorne Boulevard Specific Plan Update" (the "Agreement") on or about March 17, 2020 and

WHEREAS, it is the desire of the City and the Consultant to amend the Agreement, as set forth in this First Amendment to extend the term until December 31, 2022.

AMENDMENT

NOW, THEREFORE, it is hereby agreed that the Agreement is amended as follows:

1. Section 3.4 of the Agreement (Term) is amended as follows is amended to extend the end date of the contract from December 31, 2021 to December 31, 2022.

- SECTION 3.4 as amended:
  "Term. Unless earlier terminated in according with Section 7.4 below, this Agreement shall be extended starting on January 1, 2022 and continue in full force and effect until completion of the services no later than December 31, 2022."

MISCELLANEOUS PROVISIONS

2. Other Terms Unchanged. Subject to the foregoing amendments, the remainder of the terms in the Agreement will remain the same and are hereby ratified.

3. Authority to Execute. Each party represents and warrants that all necessary action has been taken by such party to authorize the undersigned to execute this First Amendment and to bind the parties to the performance of its obligations.

4. Counterparts, Facsimile or other Electronic Signatures. This First Amendment may be executed in several counterparts, each of which will be deemed an original, and all of which, when taken together, constitute one and the same instrument. The First Amendment will be considered executed when the signature of a party is delivered by facsimile or other electronic transmission. Such facsimile or other electronic signature will have the same effect as an original signature.

Severability. If any term, condition or covenant of this First Amendment is declared or determined by any court of competent jurisdiction to be invalid, void or unenforceable, the remaining provisions of this

First Amendment will not be affected and the First Amendment will be read and construed without the invalid, void or unenforceable provision.

IN WITNESS WHEREOF, the parties have executed and entered into this Amendment as of the date first written above.

Second Amendment to the Service Agreement with De Novo Planning Group

SECOND AMENDMENT TO CONTRACT SERVICES AGREEMENT FOR GENERAL PLAN AND HAWTHORNE BOULEVARD SPECIFIC PLAN UPDATE

This SECOND AMENDMENT TO CONTRACT SERVICES AGREEMENT (the "Second Amendment") is made and entered into this 17th day of October, 2022, by and between the CITY OF LAWNDALE, a municipal corporation (herein "City") and De Novo Planning Group, a California corporation (herein "Consultant").

RECITALS

WHEREAS, City and Consultant entered into that certain Agreement entitled "Contract Services Agreement for General Plan and Hawthorne Boulevard Specific Plan Update" (the "Agreement") on or about March 17, 2020 and

WHEREAS, the City and the Consultant to amended the Agreement, as set forth on the First Amendment to extend the term until December 31, 2022, and

WHEREAS, it is the City and the Consultants desire to amend the agreement, as set forth on this Second Amendment to extend the term until December 31, 2023.

AMENDMENT

NOW, THEREFORE, it is hereby agreed that the Agreement is amended as follows:

1. Section 3.4 of the Agreement (Term) is amended as follows is amended to extend the end date of the contract from December 31, 2022 to December 31, 2023.

- SECTION 3.4 as amended:
  "Term. Unless earlier terminated in according with Section 7.4 below, this Agreement shall be extended starting on January 1, 2023 and continue in full force and effect until completion of the services no later than December 31, 2023."

MISCELLANEOUS PROVISIONS

2. Other Terms Unchanged. Subject to the foregoing amendments, the remainder of the terms in the Agreement will remain the same and are hereby ratified.

3. Authority to Execute. Each party represents and warrants that all necessary action has been taken by such party to authorize the undersigned to execute this First Amendment and to bind the parties to the performance of its obligations.

4. Counterparts, Facsimile or other Electronic Signatures. This Second Amendment may be executed in several counterparts, each of which will be deemed an original, and all of which, when taken together, constitute one and the same instrument. The Second Amendment will be considered executed when the signature of a party is delivered by facsimile or other electronic transmission. Such facsimile or other electronic signature will have the same effect as an original signature.

Severability. If any term, condition or covenant of this Second Amendment is declared or determined by any court of competent jurisdiction to be invalid, void or unenforceable, the remaining provisions of this Second Amendment will not be affected and the Second Amendment will be read and construed without the invalid, void or unenforceable provision.

IN WITNESS WHEREOF, the parties have executed and entered into this Amendment as of the date first written above.

Third Amendment to the Service Agreement with De Novo Planning Group

THIRD AMENDMENT TO CONTRACT SERVICES AGREEMENT FOR GENERAL PLAN AND HAWTHORNE BOULEVARD SPECIFIC PLAN UPDATE

This THIRD AMENDMENT TO CONTRACT SERVICES AGREEMENT (the "Second Amendment") is made and entered into this 18th day of December 2023, by and between the CITY OF LAWNDALE, a municipal corporation (herein "City") and De Novo Planning Group, a California corporation (herein "Consultant").

RECITALS

WHEREAS, City and Consultant entered into that certain Agreement entitled "Contract Services Agreement for General Plan and Hawthorne Boulevard Specific Plan Update" (the "Agreement") on or about March 17, 2020 and

WHEREAS, the City and the Consultant amended the Agreement, as set forth in the First Amendment to extend the term until December 31, 2022, and

WHEREAS, it is the City and the Consultant amended the agreement, as set forth in the Second Amendment to extend the term until December 31, 2023.

WHEREAS, it is the City and the Consultant desire to amend the agreement, as set forth on this Third Amendment to extend the term until June 30, 2024.

AMENDMENT

NOW, THEREFORE, it is hereby agreed that the Agreement is amended as follows:

1. Section 3.4 of the Agreement (Term) is amended as follows is amended to extend the end date of the contract from January 1, 2024 to June 30, 2024.

- SECTION 3.4 as amended:
  "Term. Unless earlier terminated in according with Section 7.4 below, this Agreement shall be extended starting on January 1, 2024 and continue in full force and effect until completion of the services no later than June 30, 2024."

MISCELLANEOUS PROVISIONS

2. Other Terms Unchanged. Subject to the foregoing amendments, the remainder of the terms in the Agreement will remain the same and are hereby ratified.

3. Authority to Execute. Each party represents and warrants that all necessary action has been taken by such party to authorize the undersigned to execute this First Amendment and to bind the parties to the performance of its obligations.

4. Counterparts, Facsimile or other Electronic Signatures. This Second Amendment may be executed in several counterparts, each of which will be deemed an original, and all of which, when taken together, constitute one and the same instrument. The Second Amendment will be considered

executed when the signature of a party is delivered by facsimile or other electronic transmission. Such facsimile or other electronic signature will have the same effect as an original signature.

Severability. If any term, condition or covenant of this Second Amendment is declared or determined by any court of competent jurisdiction to be invalid, void or unenforceable, the remaining provisions of this Second Amendment will not be affected and the Second Amendment will be read and construed without the invalid, void or unenforceable provision.

IN WITNESS WHEREOF, the parties have executed and entered into this Amendment as of the date first written above.

CITY OF LAWNDALE

14717 BURIN AVENUE, LAWNDALE, CALIFORNIA 90260
PHONE (310) 973-3200 ♦ www.lawndalecity.org

DATE: December 18, 2023

TO: Honorable Mayor and City Council

FROM: Sean M. Moore, City Manager

PREPARED BY: Yvette Hall, Assistant City Clerk

SUBJECT: **Annual Reorganization of the City Council**

BACKGROUND

Since 1982, Lawndale has had a Mayor who is directly elected by the voters and a Mayor Pro Tem who is selected by the City Council. It is the City Council's policy that the office of Mayor Pro Tem be rotated to such an extent as possible among the members of the City Council and that the Mayor Pro Tem shall serve a term of one year or until a successor is appointed. (LMC Sec. 2.04.080).

On December 19, 2022, the City Council nominated and approved Councilmember Cuevas as Mayor Pro Tem for a one-year term to begin on January 1, 2023, and set to expire on December 31, 2023.

STAFF REVIEW

Rotation: As stated above, it is the City Council's policy to appoint members in rotation. Therefore, the City Council should be mindful of the recent history of office holders, which is as follows:

2019 James H. Osborne
2020 Bernadette Suarez
2021 Pat Kearney
2022 Rhonda Hofmann Gorman
2023 Sirley Cuevas

It is also notable that the City Council Meeting Procedures specify where each City Councilmember sits on the dais and the seating arrangement is based on the selection of the Mayor Pro Tem each year. The arrangement suggests that the City Councilmember seated on the Mayor's left-hand side is next in line to be Mayor Pro Tem.

Term: The municipal code establishes a term of one year for the office of Mayor Pro Tem. Since the City has changed its election date to November of even-numbered years the Mayor Pro Tem will now be selected at a meeting in December and will serve a term of one year. Staff recommends that the City Council select one of its members to serve as Mayor Pro Tem beginning on January 1, 2024, and ending on December 31, 2024.

Selection Procedure: The selection of Lawndale's Mayor Pro Tem begins with the Mayor calling for nominations from the floor. Nominations do not require a second. If City Councilmembers nominate more than one person, the City Council should then vote on each nominee individually and in the order nominated. Each City Councilmember may vote for only one nominee.

LEGAL REVIEW

The City Attorney has reviewed and approved this staff report.

FISCAL IMPACT

None.

RECOMMENDATION

Staff recommends that the City Council appoint one of its members to serve as Mayor Pro Tem for a term beginning on January 1, 2024, and ending on December 31, 2024.
