AGENDA OF THE LAWNDALE CITY COUNCIL REGULAR MEETING REDEVELOPMENT SUCCESSOR AGENCY MEETING

Monday, December 18, 2023 - 6:30 p.m.
Lawndale City Hall Council Chamber
14717 Burin Avenue

Any person who wishes to address the City Council regarding any item listed on this agenda or any other matter that is within its subject matter jurisdiction is invited, but not required, to fill out a Public Meeting Speaker Card and submit it to the City Clerk prior to the oral communications portion of the meeting. The purpose of the card is to ensure that the speaker's name is correctly recorded in the meeting minutes and, where appropriate, to provide contact information for staff follow-up.

How to observe the Meeting:
To maximize public safety while still maintaining transparency and public access, members of the public can now observe the meeting in person. Members of the public are still be able to view the meeting on YouTube "Lawndale CityTV", the City Website, or Lawndale Community Cable Television on Spectrum and Frontier Channel 3.

Copies of this Agenda packet may be obtained prior to the meeting inside the Lawndale City Hall foyer or on the **City Website**. Interested parties may contact the City Clerk Department at (310) 973-3213 for clarification regarding individual agenda items.

This Agenda is subject to revision up to 72 hours before the meeting.

A. CALL TO ORDER AND ROLL CALL

B. CEREMONIALS (Flag Salute and Inspiration)

C. PUBLIC SAFETY REPORT

a. Los Angeles County Sheriff's Department Update

D. ORAL COMMUNICATIONS - ITEMS NOT ON THE AGENDA (Public Comments)

E. COMMENTS FROM COUNCIL

F. CONSENT CALENDAR
Items 1 through 5 will be considered and acted upon under one motion unless a City Councilmember removes individual items for further City Council consideration or explanation.

1. Motion to read by title only and waive further reading of all ordinances listed on the Agenda
Recommendation: that the City Council approve.

2. Accounts Payable Register
Recommendation: that the City Council adopt Resolution No. CC-2312-051 authorizing the payment of certain claims and demands in the amount of $684,423.66.

3. Minutes of the Lawndale City Council Regular Meeting, December 4, 2023
Recommendation: that the City Council approve.

REDEVELOPMENT SUCCESSOR AGENCY

4. Consideration of the Recognized Obligation Payment Schedule (ROPS) 2024-25 and the Administrative Budget for Fiscal Year 2024-25
Recommendation: that the Successor Agency 1) Approve and direct staff to submit to the Los Angeles County Oversight Board and California Department of Finance (DOF) the ROPS 24-25 and Administrative Budget FY 2024-25; and 2) Authorize staff to make any changes requested by the DOF.

Recommendation: that the City Council A.) Hold a public hearing; B.) Approve Resolution No. CC-2312-049 Approving and Certifying the Final Environmental Impact Report; and C.) Adopt Resolution No. CC-2312-048 Approving the General Plan 2045 comprehensive update.

7. Selection of Projects for the Fiscal Year 2024-25 (50th) Program Year of the Community Development Block Grant Program (CDBG)
Recommendation: that the City Council 1.) Conduct a public hearing; 2.) Adopt the FY 2024-25 budget for the CDBG program; and 3.) Adopt Resolution No. CC-2312-047, Approving the City's participation in the FY 2024-25 CDBG Program.

H. ADMINISTRATION

8. Update on Contract with Motorola Solutions, Inc./Vigilant Solutions to be the exclusive provider of Automatic License Plate Recognition cameras for the City of Lawndale
Recommendation: that the City Council choose one of the following options: Option l) Receive and file this staff report; or Option 2) Provide further direction to staff on this matter.

9. Federal Grant Agreement for Youth Development Center Project
Recommendation: that the City Council 1.) Approve the attached FY 2023 Community Project Funding Grant Agreement NO. B-23-CPCA-0257 and authorize the City Manager to sign the funding agreement between the City of Lawndale and United States Department of Housing and Urban Development; or 2.) Provide further direction.

10. Recreation Facility Security Camera Project, Additional Funding Request

Recommendation: that the City Council approve the use of American Rescue Plan Act (ARPA) funding in the amount of $3,433.00 to be paid to Blue Violet Networks for: 1) two DVR cabinets and related electrical work at Hopper and Rudolph parks and; 2) mounting of one existing DVR at Hogan Park and necessary electrical work to complete the State grant-funded Recreation Facility Security Camera Replacement Project.

11. Approve Street Sweeping Services Agreement

Recommendation: that the City Council approve agreement with CleanStreet for citywide street sweeping services for the period of January 1, 2024 through December 31, 2025 at an annual rate of $327,728 plus four hours of special sweeping services for the annual parade (two hours per year) at $163.65 per hour for a total not-to-exceed $656,111 for the two-year term of the agreement.

12. Professional Service Agreement Extension with De Novo Planning Group

Recommendation: that the City Council approve to extend the professional service agreement with De Novo for the General Plan and Hawthorne Boulevard Specific Plan (HBSP) Update.

13. Annual Reorganization of the City Council

Recommendation: that the City Council appoint one of its members to serve as Mayor Pro Tern for a term beginning on January 1, 2024, and ending on December 31, 2024.

I. CITY MANAGER REPORT

J. ITEMS FROM CITY COUNCILMEMBERS

14. Mayor/City Councilmembers Report of Attendance at Meetings and/or Events

K. CLOSED SESSION

15. Conference with Legal Counsel – Anticipated Litigation

The City Council will conduct a closed session, pursuant to Government Code section 54956.9(d)(2), because there is significant exposure to litigation in one (1) case. Facts unknown to the potential plaintiff.

L. ADJOURNMENT

The regular meeting scheduled to be held on January 1, 2024, was cancelled by order of the City Council on October 2, 2023.

The next regularly scheduled meeting of the City Council will be held at 6:30 p.m. on Tuesday, January 16, 2024, in the Lawndale City Hall Council Chamber, 14717 Burin Avenue, Lawndale, California.

It is the intention of the City of Lawndale to comply with the Americans with Disabilities Act (ADA) in all respects. If, as an attendee or a participant at this meeting, you need special assistance beyond what is normally provided, we will attempt to accommodate you in every reasonable manner. Please contact the City Clerk Department (310) 973-3213 prior to the meeting to inform us of your particular needs and to determine if accommodation is feasible. Please advise us at that time if you will need accommodation to attend or participate in meetings on a regular basis.

I hereby certify under penalty of perjury under the laws of the State of California that the Agenda for the regular meeting of the City Council to be held on December 18, 2023, was posted not less than 72 hours prior to the meeting.

/s/ Yvette Hall

DATE: December 18, 2023

TO: Honorable Mayor and City Council

FROM: Yvette Hall, Assistant City Clerk

SUBJECT: Motion Pertaining to the Reading of Ordinances

BACKGROUND

California Government Code reads, in part, as follows:

> "Except when, after reading the title, further reading is waived by regular motion adopted by majority vote, all ordinances shall be read in full either at the time of introduction or passage."

RECOMMENDATION

Staff recommends that the City Council read by title only and waive further reading of all ordinances listed on the agenda.

RESOLUTION NO. CC-2312-051

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA AUTHORIZING CERTAIN CLAIMS AND DEMANDS IN THE SUM OF $684,423.66

THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA, DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

SECTION 1. That in accordance with Sections 37202 and 37209 of the Government Code, the Director of Finance, as certified below, hereby attests to the accuracy of these demands and to the availability of funds for the payment thereof.

SECTION 2. That the following claims and demands have been audited as required by law, and that appropriations for these claims and demands are included in the annual budget as approved by the City Council.

SECTION 3. That the claims and demands paid by check numbers 205217 through 205259 for the aggregate total of $684,423.66 are hereby authorized.

Effective Date: December 18th, 2023

Approved by:

Hrant Manuelian, Director of Finance

Gregory M. Murphy, City Attorney

PASSED, APPROVED AND ADOPTED this 18th day of December 2023.

Robert Pullen-Miles, Mayor

ATTEST:

State of California)
County of Los Angeles) SS
City of Lawndale)

I, Erica Harbison, City Clerk of the City of Lawndale, California, do hereby certify that the City Council of the City of Lawndale duly approved and adopted the foregoing Resolution No. CC-2312-051 at a regular meeting of said Council held on the 18th day of December 2023, by the following roll call vote:

Name	Voting		Present, Not Voting		Absent
	Aye	No	Abstain	Not Participating	
Robert Pullen-Miles, Mayor					
Sirley Cuevas, Mayor Pro Tem					
Pat Kearney					
Rhonda H. Gorman

MINUTES
LAWNDALE CITY COUNCIL REGULAR MEETING
December 4, 2023

A. CALL TO ORDER AND ROLL CALL

Mayor Pullen-Miles called the meeting to order at 6:30 p.m. in the City Hall Council Chamber, 14717 Burin Avenue, Lawndale, California.

Councilmembers Present: Mayor Robert Pullen-Miles, Mayor Pro Tem Sirley Cuevas, Councilmember Rhonda Hofmann Gorman, Councilmember Pat Kearney, Councilmember Bernadette Suarez

Other Participants: City Manager Sean M. Moore, City Attorney Gregory M. Murphy, City Clerk Erica Harbison, Assistant City Clerk Yvette Hall, Deputy City Manager/Director of Human Resources Raylette Felton, Los Angeles County Sheriff's Department Sergeant Justin Smith, Los Angeles County Sheriff's Department Captain Nicole Palomino, Municipal Services Director Michael Reyes, Finance Director Hrant Manuelian, Community Development Manager Jared Chavez, Public Works Director Lea Reis

B. CEREMONIALS

Mayor Pro Tem Cuevas led the flag salute and Pastor Matthew Harbison of Lawndale Wesleyan Church provided the inspiration.

C. PUBLIC SAFETY REPORT

a. Los Angeles County Sheriff's Department Update

Captain Palomino summarized the recent law enforcement activities and announced that there will be a Coffee with a Cop event on December 13, 2023.

b. Los Angeles County Fire Department Update

City Manager Moore gave a summary of recent Fire Department activities provided by the Fire Department.

D. ORAL COMMUNICATIONS - ITEMS NOT ON THE AGENDA (Public Comments)

Ray Hollar, Resident, commented on the City's fast response to graffiti removal, the City's automatic license plate recognition program (ALPR), requested additional information on data access, metrics, how much crime is solved, and how the City will evaluate the ALPR program.

Matthew Harbison, Resident, thanked the City for the Angel Tree Lighting event and commented on recent red-light infractions he has witnessed.

Deena Sopko, Resident, commented in favor of ALPRs and in disapproval of tinted windows.

DRAFT

E. COMMENTS FROM COUNCIL

Councilmember Hofmann Gorman thanked everyone for attending the meeting tonight, asked City Manager Moore to address Resident Hollar's comments on ALPRs, commented on the large attendance at the Angel Tree Lighting event and invited residents to attend the Coffee with a Cop event to discuss their concerns. Councilmember Hofmann Gorman commented in favor of ALPRs.

City Manager Moore responded that Municipal Services Director Reyes will follow up with Resident Hollar regarding the ALPRs.

Councilmember Kearney thanked everyone that spoke at the meeting tonight and commented that the Angel Tree Lighting event was fantastic.

Councilmember Suarez thanked everyone for attending the meeting tonight and commented that she would like to see the ALPR's long-term data and statistics.

Mayor Pro Tem Cuevas thanked everyone that attended tonight's meeting.

Mayor Pullen-Miles thanked everyone that attended tonight's meeting, commented on the graffiti removal program, stated that he would like to see the ALPRs long-term data and statistics and commented on red light infractions.

F. CONSENT CALENDAR

1. Motion to read by title only and waive further reading of all ordinances listed on the Agenda
Recommendation: that the City Council approve.

2. Accounts Payable Register
Recommendation: that the City Council adopt Resolution No. CC-2312-050 authorizing the payment of certain claims and demands in the amount of $308,379.86.

3. Minutes of the Lawndale City Council Regular Meeting, November 20, 2023
Recommendation: that the City Council approve.

A motion was made by Mayor Pro Tem Cuevas and seconded by Councilmember Suarez to approve the Consent Calendar. The motion passed by a vote of 5-0.

G. PUBLIC HEARINGS

4. Selection of Projects for the Fiscal Year 2024-25 (50th) Program Year of the Community Development Block Grant Program (CDBG)
Recommendation: that the City Council 1.) Conduct a public hearing; 2.) Adopt the FY 2024-25 budget for the CDBG program; and 3.) Adopt Resolution No. CC-2312-047 Approving the City's participation in the FY 2024-25 CDBG Program.

DRAFT

City Manager Moore informed the City Council that this item will be rescheduled to the next meeting due to a noticing requirement.

By consensus, the City Council postponed item No. G.4 9 to the next City Council meeting.

5. <u>Case No. 23-19, Consideration and Adoption of a Comprehensive Update to the City's General Plan (2045) and Adoption of an Associated Environmental Impact Report (EIR)</u>

Recommendation: that the City Council A.) Approve Resolution No. CC-2312-49 Approve and Certify the Final Environment Impact Report; and B.) Adopt Resolution No. CC-2312-048 recommending that the City Council approve the General Plan 2045 comprehensive update.

Community Development Manager Chavez introduced Principal Amanda Tropiano and Senior Planner Ashley Brodkin of De Novo Planning Group.

Principal Tropiano and Senior Planner Brodkin presented the staff report and a PowerPoint presentation.

Community Development Manager Chavez presented the staff recommendation.

City Manager Moore noted that adopting the General Plan and the final EIR together is appropriate.

Mayor Pro Tem Cuevas inquired if the 2019 potential build out number is a State of California requirement.

Senior Planner Brodkin responded that the build out numbers are based on the land use element and within the EIR, which is based on requirements.

Mayor Pullen-Miles requested an example of significant and unavoidable environmental impacts related to air quality and greenhouse gases and inquired what the goal is for environmental justice.

Senior Planner Brodkin responded that both air quality and greenhouse gases are viewed as being potentially significant and unavoidable impacts with a programmatic EIR because there is no specific project. She stated that the goal for environmental justice is to mitigate potential environmental justice impact issues by creating better access to healthy foods, better healthcare and public transportation to low income and disadvantaged communities.

Mayor Pro Tem Cuevas asked if a business is sold and the zoning is changed, does the business lose the zoning category.

Community Development Manager Chavez replied that there are no anticipated changes planned for the zoning update. She explained that if the zoning changes for a business, they would keep the same designation, but they would be non-conforming.

DRAFT

Senior Planner Brodkin clarified that the General Plan updated the land use designations.

Mayor Pullen-Miles opened the public hearing at 7:20 p.m.

Ross Donaldson, President and CEO of Critical Innovations LLC, introduced his company, commented on the proposed land use designation updates, requested that the General Plan Update and any future zoning updates continue to allow the currently permitted uses and thanked staff for being responsive to his inquiries.

Mayor Pullen-Miles closed the public hearing at 7:21 p.m.

Councilmember Suarez requested to continue this item to a future meeting to allow more time to review the General Plan and EIR.

City Attorney Murphy commented that a motion is necessary to continue this matter to the next City Council meeting.

A motion was made by Councilmember Suarez and seconded by Councilmember Hofmann Gorman to continue Item G.5. - Case No. 23-19, Consideration and Adoption of a Comprehensive Update to the City's General Plan (2045) and Adoption of an Associated Environmental Impact Report (EIR) to the next City Council meeting of December 18, 2023. The motion passed by a vote of 5-0.

H. ADMINISTRATION

6. Award One-Year On-Call Traffic Engineering Services Contract

Recommendation: that the City Council award an On-Call Traffic Engineering Services agreement to W.G. Zimmerman Engineering, Inc., Advantec Consulting Engineers, Inc., and Transtech Engineers, Inc. for a term of one-year, with an option to extend up to four one-year extensions.

Public Works Director Reis presented the staff report.

Mayor Pro Tem Cuevas asked if traffic related items brought forth will be presented to the City Council.

Public Works Director Reis responded that traffic reports are presented to the Traffic Commission and, when necessary, they will be presented to the City Council for discussion.

A motion was made by Councilmember Kearney and seconded by Councilmember Hofmann Gorman to award an On-Call Traffic Engineering Services agreement to W.G. Zimmerman Engineering, Inc., Advantec Consulting Engineers, Inc., and Transtech Engineers, Inc. for a term of one-year, with an option to extend up to four one-year extensions. The motion passed by a vote of 5-0.

DRAFT

I. CITY MANAGER REPORT

City Manager Moore thanked staff for a great Angel Tree Lighting event and commented that it was well attended.

J. ITEMS FROM CITY COUNCILMEMBERS

7. Discussion of Three (3) Letters Distributed at the November 16, 2023 South Bay Cities Council of Governments Board of Directors' Meeting from Los Angeles County Board of Supervisor Holly J. Mitchell Regarding Metro C-Line (Green) Extension to Torrance Project Funding Gap Requested by Councilmember Kearney

Councilmember Kearney presented the three (3) letters distributed at the November 16, 2023, South Bay Cities Council of Governments (SBCCOG) Board of Directors' Meeting and commented in opposition to the letters.

Mayor Pullen-Miles opened public comments.

Holly Osborne, Redondo Beach Resident, referenced a written comment she submitted in regard to the Metro C-Line (Green) Project.

Mayor Pullen-Miles closed public comments.

8. Mayor/City Councilmembers Report of Attendance at Meetings and/or Events

Councilmember Hofmann Gorman attended the Angel Tree Lighting event and thanked staff for the event.

Councilmember Kearney attended Senator Bradford's Drive Thru Turkey Giveaway, Angel Tree Lighting event, and The Experimentally Structured Museum of Art (ESMoA) Open-House.

Councilmember Suarez attended a Homeless Solutions Standing Committee meeting, and the Angel Tree Lighting event.

Mayor Pro Tem Cuevas attended a Homeless Solutions Standing Committee meeting, ESMoA Open-House, Angel Tree Lighting event, and asked if the snow and skating rink can be kept the day after the Angel tree Lighting event for the community to use. She thanked staff for their outreach efforts on working with the unhoused and for a great Angel Tree Lighting event.

City Manager Moore responded that having the snow and skating rink on the day after the Angel Tree Lighting event can be discussed during the next budget meeting.

Mayor Pullen-Miles attended the ESMoA Open-House, Angel Tree Lighting event, and thanked staff and volunteers for a great event.

Mayor Pro Tem Cuevas announced that Santa's Sleigh will be visiting Lawndale on December 4-8, 2023, and December 11-14, 2023.

DRAFT

K. CLOSED SESSION

9. Conference with Labor Negotiator

The City Council will conduct a closed session, pursuant to Government Code section 54957.6, with the City Manager, the City Attorney, and the City's negotiators, regarding labor negotiations with Local 1895, Council 36, American Federation of State, County and Municipal Employees, AFL-CIO, representing the City's mid-management and classified employees.

City Attorney Murphy read the aforementioned Closed Session matter by title only in conjunction with Closed Session Item No. K.10 and Closed Session Item No. K.11.

10. Conference with Legal Counsel – Existing Litigation

The City Council will conduct a closed session, pursuant to Government Code section 54956.9(d)(1), to discuss existing litigation: Name of Case: Abdul R. Pasta V. The City of Lawndale, Los Angeles Superior Court Case No. 23STLC07381.

11. Public Employee Performance Evaluation

The City Council will hold a closed session, pursuant to Government Code section 54957(b), to conduct an employee evaluation concerning the City Manager.

The City Council convened into closed session at 7:38 p.m.

The City Council reconvened from closed session at 8:56 p.m.

City Attorney Murphy announced that there was no reportable action for Closed Session Item No. K.9. Conference with Labor Negotiator, no reportable action for Closed Session Item No. K.10. Conference with Legal Counsel – Existing Litigation and no reportable action for Closed Session Item No. K.11. Public Employee Performance Evaluation.

L. ADJOURNMENT

There being no further business to conduct, the Mayor adjourned the meeting at 8:56 p.m.

TO: Honorable Chairman and Agency Members

FROM: Sean M. Moore, City Manager

PREPARED BY: Jared Chavez, Community Development Manager
Hrant Manuelian, Finance Director

SUBJECT: **Consideration of the Recognized Obligation Payment Schedule (ROPS) 2024-25 and the Administrative Budget for Fiscal Year 2024-25**

BACKGROUND

ABx1 26 ended redevelopment in California. That legislation, along with AB 1484, sets the rules and procedures for the dissolution of redevelopment agencies. Successor Agencies were created by ABx1 26 to settle the affairs of the dissolved redevelopment agencies.

Under current State law, successor agencies are annually provided with tax increment funds to pay the debts of the former redevelopment agencies. Successor agencies must prepare a recognized obligation payment schedule ("ROPS") annually.

County auditor controllers use the ROPS to determine the amount of tax increment it will give to successor agencies for each annual ROPS period. After a successor agency prepares a ROPS, the payment schedule is reviewed and approved by the successor agency's oversight board and then approved by the California Department of Finance ("DOF").

In prior ROPS periods, the DOF and the Los Angeles County Consolidated Oversight Board for the Successor Agency for the Lawndale Redevelopment Agency have approved the ROPS described below and the Los Angeles County Auditor Controller has provided the funding required for the obligations listed in the following schedules:

- *1st ROPS (January 1, 2012 to June 30, 2012)*
- *2nd ROPS (July 1, 2012 to December 31, 2012)*
- *3rd ROPS (January 1, 2013 to June 30, 2013)*
- *ROPS 13-14A (July 1, 2013 to December 31, 2013)*
- *ROPS 13-14B (January 1, 2014 to June 30, 2014)*
- *ROPS 14-15A (July 1, 2014 to December 31, 2014)*
- *ROPS 14-15B (January 1, 2015 to June 30, 2015)*
- *ROPS 15-16A (July 1, 2015 to December 31, 2015)*
- *ROPS 15-16B (January 1, 2016 to June 30, 2016)*
- *ROPS17-18A (July 1, 2016 to December 31, 2016)*

- *ROPS 17-18 (July 1, 2017 to June 30, 2018)*
- *ROPS 18-19 (July 1, 2018 to June 30, 2019)*
- *ROPS 19-20 (July 1, 2019 to June 30, 2020)*
- *ROPS 20-21 (July 1, 2020 to June 30, 2021)*
- *ROPS 21-22 (July 1, 2021 to June 30, 2022)*
- *ROPS 22-23 (July 1, 2022 to June 30, 2023)*
- *ROPS 23-24 (July 1, 2023 to June 30,2024)*

STAFF REVIEW

The next ROPS 24-25 (July 1, 2024 to June 30, 2025) must be submitted to the DOF by February 1, 2024, after approval by the Oversight Board. The Successor Agency staff has prepared the attached ROPS 24-25, which the Successor Agency is expected to submit ROPS 24-25 to the Oversight Board to allow the Oversight Board to consider this ROPS at it January 16, 2024 meeting. Hence, staff recommends that the Successor Agency submit the proposed ROPS to the Oversight Board, ultimately for submission to the DOF, in order to meet the February 1, 2024 deadline.

Along with the ROPS, an administrative budget must be approved by the Oversight Board and DOF for the July 1, 2024 to June 30, 2025 period (see Attachment B). In this vein, the ROPS 24-25 lists the following Successor Agency obligations:

1. **Bond Debt Service** – debt service payment for the Redevelopment Agency's 2009 bonds.
2. **California I-Bank** – debt service payment for the California Infrastructure Bank loan that was used to improve Hawthorne Boulevard.
3. **Successor Agency Staff and Supplies** (Administrative Allowances) – Fund for staff and supplies needed to operate the Successor Agency.
4. **Successor Agency Audit** – Funding for the preparation of the annual Successor Agency Audit.
5. **Repayment of Loans to the City of Lawndale** – The former Redevelopment Agency borrowed funds from the City. Beginning with the ROPS 14-15B, the Successor Agency began repaying those loans to the City.
6. **Repayment of Debt to the Housing Fund** – The former Redevelopment Agency owed money to its low and moderate income housing fund. The Successor Agency will receive tax increment to pay the housing fund debt. The Lawndale Housing Authority will receive the funding and use it to create affordable housing.

Staff also requests that the Successor Agency authorize staff to change the ROPS 23-24 and/or the Administrative Budget if needed to satisfy any last minute requests of changes from the DOF.

LEGAL REVIEW

The Successor Agency's General Counsel has reviewed the attached resolutions and approved them as to form.

FISCAL IMPACT

None required.

RECOMMENDATION

Staff recommends that the Successor Agency:

- Approve and direct staff to submit to the Los Angeles County Oversight Board and California Department of Finance the ROPS 24-25 and Administrative Budget FY 2024-25, and
- Authorize staff to make any changes requested by the DOF.

Lawndale
Recognized Obligation Payment Schedule (ROPS 24-25) - Notes
July 1, 2024 through June 30, 2025

Item #	Notes/Comments
1	Debt service payments for the Lawndale Redevelopments Agency's 2009 bonds. Approved by DOF on all prior ROPS.
2	Debt service payments for a 2002 California Infrastructure Bank loan to the Redevelopment Agency. Approved by DOF on all prior ROPS.
3	Successor Agency Admin allowance.
28	Audit agreement for preparation of Successor Agency audit, required as a condition of the loan described in #2.
33	On February 20, 2014 the Oversight Board approved Resolution 2014-1, which reactivates a loan provided by the City to the Redevelopment Agency in 2000. The Successor Agency must repay SERAF Housing Fund debt. Started to receive RPTTF for payment on this loan in ROPS 14-15B.
34	On February 20, 2014 the Oversight Board approved Resolution 2014-1, which reactivates a loan provided by the City to the Redevelopment Agency in 2000. The Successor Agency must repay SERAF Housing Fund debt. Started to receive RPTTF for payment on this loan in ROPS 14-15B.
35	On February 20, 2014 the Oversight Board approved Resolution 2014-1, which reactivates a loan provided by the City to the Redevelopment Agency in 2000. The Successor Agency must repay SERAF Housing Fund debt. Started to receive RPTTF for payment on this loan in ROPS 14-15B.
39	2009 Bond SEC Disclosure per bond indenture. Calculation of arbitrage for bonds on line 1 of ROPS.

DRAFT MINUTES OF THE SUCCESSOR AGENCY TO THE LAWNDALE REDEVELOPMENT AGENCY REGULAR MEETING June 5, 2023

A. CALL TO ORDER AND ROLL CALL

Chair Pullen-Miles called the meeting to order at 6:34 p.m. in the City Hall Council Chamber, 14717 Burin Avenue, Lawndale, California. *The board met concurrently with the City Council; therefore, the minutes order and numbering reflect the concurrent meeting.*

Members Present:	Chair Robert Pullen-Miles, Vice Chair Sirley Cuevas, Member Bernadette Suarez, Member Pat Kearney, Member Rhonda Hofmann Gorman
Other Participants:	Executive Director Sean M. Moore, General Counsel Gregory M. Murphy, Secretary Erica Harbison, Assistant Secretary Yvette Hall, Los Angeles County Sheriff's Department Sergeant Justin Smith, Los Angeles County Fire Department Battalion Chief Brian Kane, Municipal Services Director Michael Reyes, Finance Officer Hrant Manuelian, Community Development Manager Jared Chavez, Interim Public Works Director Ahmad Ansari, Community Services Director Mike Estes

B. CEREMONIALS

Vice Chair Cuevas led the flag salute and Pastor George Magdalany of Hope Chapel Hawthorne provided the inspiration.

E. ORAL COMMUNICATIONS - ITEMS NOT ON THE AGENDA (Public Comments)

No public comment provided.

G. CONSENT CALENDAR

8. **Minutes of the Successor Agency Meeting, January 6, 2020**
Recommendation: that the Members approve.

9. **Minutes of the Successor Agency Meeting, December 7, 2020**
Recommendation: that the Members approve.

10. **Minutes of the Successor Agency Meeting, June 21, 2022**
Recommendation: that the Members approve.

11. **Minutes of the Successor Agency Meeting, December 5, 2022**
Recommendation: that the Members approve.

A motion was made by Member Kearney and seconded by Vice Chair Cuevas to approve the Consent Calendar. The motion passed by a vote of 5-0.

H. ADMINISTRATION

SUCCESSOR AGENCY/ LAWNDALE HOUSING AUTHORITY

14. Annual Budget Fiscal Year 2023-24

Recommendation: that the Members adopt Resolution No. CC-2306-25, adopting the fiscal year 2023-24 operating and capital improvement budget; which includes the City of Lawndale, Lawndale Housing Authority, and Successor Agency to the Lawndale Redevelopment Agency.

Finance Officer Manuelian presented the staff report, which included a PowerPoint presentation.

Member Suarez requested information for a future budget discussion on how other cities fund their Community Development Department.

Finance Officer Manuelian pointed out that due to an oversight, the following community events were not included in the initial budget book: 1) National Night Out; 2) Neighborhood Watch; and 3) Public Safety Outreach events to be budgeted at $2,000 each.

Member Kearney commented on the uniforms worn by the PWD field staff. He opined that the transportation bus funding should not come from the General Fund. Member Kearney offered $1,000 of his discretionary fund to be used to fund the transportation bus.

Member Suarez commented that the transportation bus funding should come from the General Fund, because the residents will attend a meeting for a major infrastructure project that greatly impacts the City. She also made her discretionary funds available to offset the cost.

Chair Pullen-Miles stated that he concurs with Member Suarez's comments about funding the transportation bus with the City's General Fund and inquired about the estimated cost for the transportation bus.

Member Suarez requested that staff inquire with the City of Redondo Beach to possibly share the cost of the transportation bus for the Metro meeting.

Member Hofmann Gorman commented that she will make her discretionary funds available to offset the transportation cost and would like to ask the City of Redondo Beach if they would like to share this cost so their residents can attend the Metro meeting.

Member Kearney requested that $1,000 of his discretionary funds be allocated to the General Fund for the transportation bus.

Vice Chair Cuevas inquired about the National Night Out, Neighborhood Watch, and Public Safety Outreach events which were not included in the initial budget book.

Municipal Services Director Reyes clarified the costs for the Public Safety Outreach and Coffee with a Cop events. He explained the costs for the Neighborhood Watch event and explained that the cost is $500 per quarter.

Chair Pullen-Miles asked about the cost for the Music Festival and stated that he supports keeping the Blues Festival.
Executive Director Moore commented that the recommendation is to combine both festivals to lower the cost.

Discussion ensued among the Members regarding the Blues Festival, Music Festival, attendees, musical expectations and securing sponsorships for the events.

By consensus, the Members agreed to budget $12,000 for the Blues Festival instead of the Music Festival and requested that a second music event be considered for next fiscal year.

A motion was made by Member Kearney and seconded by Member Suarez to adopt Resolution No. CC-2306-25, adopting the fiscal year 2023-24 operating and capital improvement budget, which includes the City of Lawndale, Lawndale Housing Authority, and Successor Agency to the Lawndale Redevelopment Agency, with an amendment to budget $12,000 for the Blues Festival instead of the Music Festival; and $2,000 each to the National Night Out, Neighborhood Watch, and Public Safety Outreach events. The motion passed 5-0.

E. ADJOURNMENT

There being no further business to conduct, the Chair adjourned the meeting at 9:34 p.m.

PREPARED BY: Jared Chavez, Community Development Manager

SUBJECT: **Case No. 23-19, Consideration, and Adoption of a Comprehensive Update to the City's General Plan (2045) and Adoption of an Associated Environmental Impact Report (EIR).**

SUMMARY

On December 4, 2023 the City Council held a public hearing to consider the adoption of a comprehensive update to the City's General Plan (2045) and the adoption of an associated Environmental Impact Report (EIR).

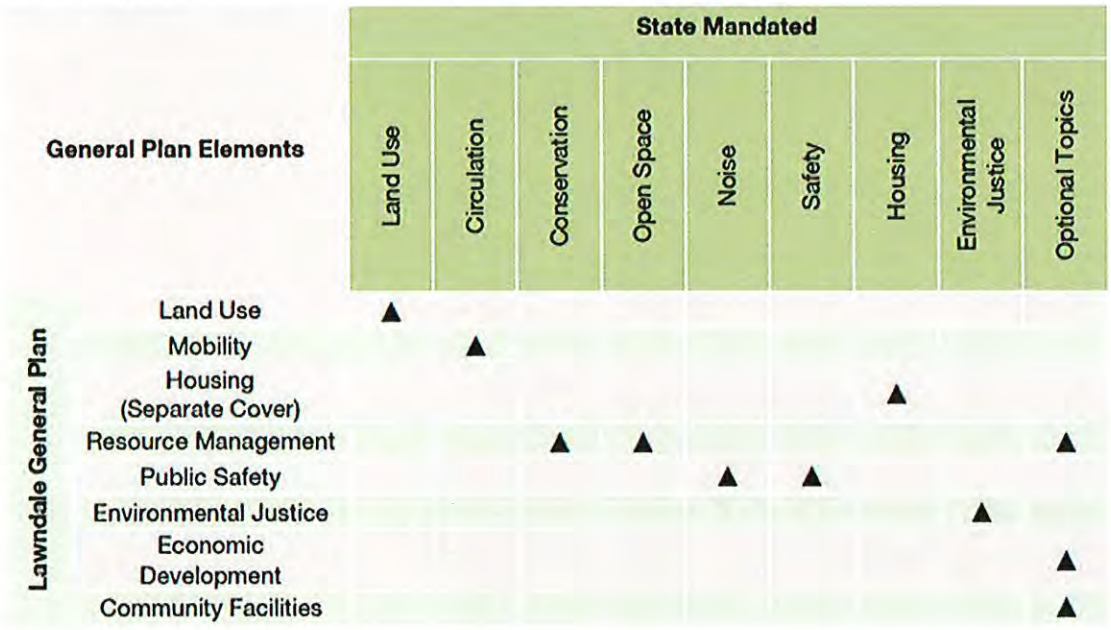
The Council heard the item and opened it to the public for comments. The council then requested additional time to review the document and requested the item be continued to the following City Council hearing on December 18, 2023. A public notice of public hearing continuance was posted outside City hall on the bulletin board.

BACKGROUND

The City is proposing a comprehensive update to the General Plan (2045). As part of the project the City is proposing the adoption of the General Plan Environmental Impact Report (EIR). The update includes the recently updated Housing Element as well as a new element, Environmental Justice, as required by State Law. The City is also currently working on updating the Hawthorne Boulevard Specific Plan and the City's zoning ordinance to be consistent with the General Plan, these updates are expected to be completed and brought forth for City Council review and adoption in early 2024.

The General Plan is a document that serves as the City's guide to achieve the community's vision for the future. The City's General Plan was adopted by City Council on December 17, 1991. The General plan has had minor amendments and a few major updates but not a comprehensive update since adoption in 1991. The most recent update to the General Plan was completed in 2016, which focused on the Safety Element. The City's General Plan is composed of 7 mandatory and 2 optional elements: Land Use, Open Space, Conservation, Housing, Noise, Safety, Economic Development, and Air Quality. As part of the comprehensive update, the elements are being updated and reconfigured to be clearer and easier to read, while still meeting legal requirements.

The Council is aware that the City recently updated the Housing Element of the General Plan. The State requires that the Housing Element be regularly updated for each upcoming housing cycle, identifying sites that may be suitable for housing development. This was the sixth Regional Housing Needs



Assessment cycle update for our Housing Element (2021-2029) . The Housing element (2021-2029) was adopted by City Council on February 7, 2022 and certified by the HCD in October of 2022. Therefore the housing portions of the comprehensive update should already be familiar to you.

ANALYSIS:

The attached comprehensive update to the Lawndale General Plan (2045) will incorporate new local, state, and federal requirements as well as updating the goals and objectives to meet the current needs of the community. The City will implement the General Plan by requiring development, infrastructure improvements, and other projects to be consistent with its policies, and by implementing the actions included in the General Plan Update. The Update includes a set of goals, policies and actions, organized into elements as well as a revised Land Use Map.

The General Plan has 9 elements which have been updated to meet the current and future priorities of the City. The update includes the following elements: Mobility (Circulation), Resource Management (Conservation, Open Space and Air Quality), Public Safety (Safety and Noise), Environmental Justice, Economic Development, and Community Facilities. The diagram below identifies the elements included in the Lawndale General Plan and the corresponding requirement in State Law.

Relationship Between General Plan Elements and State Requirements

General Plan Objectives

The General Plan maintained its goals and objectives consistent with the previous General Plan's objectives as requested by the community. The General Plan objectives include:

- Reflect the current goals and vision expressed by City residents, businesses, decision makers, and other stakeholders;

- Address issues and concerns identified by City residents, businesses, decision-makers, and other stakeholders;

- Protect Lawndale's existing residences, character, and sense of community;
- Proactively plan for and accommodate local and regional growth in a responsible manner;
- Encourage mixed-use development patterns along major corridors that promote vibrant commercial and residential areas;
- Allow for a range of high-quality housing options;
- Attract and retain businesses and industries that provide jobs for local residents;
- Continue to maintain and improve multimodal transportation opportunities;
- Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
- Address new requirements of State law; and
- Address emerging transportation, housing, and employment trends.

Community Outreach

Staff conducted 10 public outreach workshops beginning on February 2021. The community was informed about the General Plan and the proposal to complete a comprehensive update. Each workshop included an overview of the General Plan, its history, why it's important and activities and questions to solicit input from the residents. The City also conducted a number of surveys and polls asking questions both in English and Spanish. The City received a total of 99 responses to the survey.

The community commented on the concerns regarding the existing uses in the City and about issues that are important for the community. The City received several comments about keeping the small town feel of the City intact. Some of the comments received include: appropriate parking requirements for new developments; lower density is preferred; continue with landscaping requirements and offer incentives for drought tolerant landscaping; outline more specified requirements for residential facades to deter "box like" buildings while maximizing utilization; mixed-use projects within Hawthorne Boulevard are desired to enhance the City and its image; request for affordable housing incentives; improve parkways that are not being maintained; to restrict car dealerships, bars, car title loan offices; liquor stores, adult shops, pawn shops, furniture stores, payday loan office and automotive uses, especially when close to parks; bring in uses to generate more sales tax for the City; incentives to attract quality businesses; attract more small-scale businesses; add more green space/community space in commercial development to create places for people to gather; add walkable streets and courtyards in other areas of the city besides Hawthorne Boulevard; approve or encourage more small locally owned businesses. The residents also brought up the fact that there are a lot of uses, such as automotive uses, within the City which are underutilized sites for housing.

Hawthorne Boulevard Specific Plan and Zoning Ordinance

The city is currently undertaking a comprehensive update to its Hawthorne Boulevard Specific Plan (HBSP) and Zoning Ordinance. The General Plan includes a program to ensure that the ongoing updates

reflect the development potential identified through implementation of the two new overlay zones, and that the General Plan and Specific Plan are consistent with the Housing Element.

The city will need to adopt two new housing overlays with different maximum density standards to adequately accommodate its RHNA. One overlay will be located within the Hawthorne Boulevard Specific Plan ("HBSP") area. The other overlay will be outside the HBSP area.

The new development standards for the overlay will be part of the zoning ordinance and HBSP update to be presented and adopted later in 2024.

General Plan EIR (Environmental Impact Report)

A Draft Environmental Impact Report was prepared by the City's consultant De Novo Planning Group, as required by the California Environmental Quality Act (CEQA) Sections 15126, 15175 and 15176 of the CEQA Guidelines. The EIR was prepared concurrently with the General Plan policy document to facilitate the development of the General Plan that is largely self-mitigating.

The City circulated a Notice of Preparation (NOP) of an EIR for the proposed project on December 6, 2022 to January 5, 2023. A scoping meeting was held on December 15, 2022. The Notice of Availability was posted for public review and the Draft EIR was available for public review from August 15 to October 2, 2023. Comments were received and responded to on the Final EIR (attached).

PUBLIC REVIEW

A notice was published in the *Daily Breeze* on November 16, 2023. Additionally, notices were posted on the message board outside City of Lawndale's City Hall pursuant to Government Code Section 65091 (a)(5)(B).

PLANNING COMMISSION REVIEW

At a public hearing held on November 15, 2023, the Planning Commission held a special hearing, reviewed the draft and approved Resolution 23-07 and 23-08 recommending that the City Council Approve and Certify the Final Environmental Impact Report, and Approve the General Plan 2045 comprehensive update.

LEGAL REVIEW

The City Attorney has reviewed Resolutions No. CC-2312-48 & CC-2312-049 and has approved them as to form.

RECOMMENDATION

It is recommended that the City Council do the following;

A. Hold a public hearing; and
B. Approve Resolution No. CC-2312-49 Approving and Certifying the Final Environmental Impact Report; and
C. Adopt Resolution No. CC-2312-048 approving the General Plan 2045 comprehensive update.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA ADOPTING FINDINGS OF FACT AND A STATEMENT OF OVERRIDING CONSIDERATIONS PERSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA), CERTIFYING THE GENERAL PLAN UPDATE FINAL ENVIRONMENTAL IMPACT REPORT (SCH #202212088).

WHEREAS, the City of Lawndale (the "City") proposes the Lawndale General Plan 2045 (the "Project), a comprehensive update to the City's existing General Plan; and

WHEREAS, the Project amends and modifies the overarching policy document that guides land use, housing, transportation, open space, public safety, community services, and other policy decisions through the City; and

WHEREAS, pursuant to section 210067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14 Section 15000 et. Se.), the City of Lawndale is the lead agency for the proposed Project; and

WHEREAS, prior to the development of the project or environmental documents, the City conducted extensive public outreach hosted 10 public workshops beginning in February 2021 through December 2021. Public workshops included 9 virtual workshops and 1 in person interactive workshop, and

WHEREAS, in accordance with CEQA and the State CEQA Guidelines, the City determined that a Program Environmental Impact Report ("EIR") should be prepared in order to analyze all potential adverse environmental impacts that could potentially result from the adoption and implementation of the proposed Project; and 4.1.a Packet Pg. 70 Attachment: Planning Commission Resolution 23-07 (Lawndale General Plan 2045)

WHEREAS, in accordance with State CEQA Guidelines section 15082, on December 6, 2022, the City sent to the Office of Planning and Research and each responsible and trustee agency a Notice of Preparation ("NOP") stating that an Environmental Impact Report (State Clearinghouse Number #202212088 would be prepared; and

WHEREAS, pursuant to Public Resources Code section 21083.9 and State CEQA Guidelines sections 15082(c) and 15083, the City held a duly noticed Scoping Meeting on December 15, 2022, to solicit comments on the scope of the environmental review of the proposed Project, however, no comments were received during the Scoping Meeting; and

WHEREAS, a Draft Program EIR ("Draft EIR") was prepared, incorporating comments received in response to the NOP ("Exhibit A"); and

WHEREAS, the Draft EIR concluded that the proposed Project would result in significant and unavoidable impacts individual projects anticipated by the General Plan update would be required to implement their own environmental review, and

WHEREAS, in accordance with State CEQA Guidelines section 15085, a Notice of Completion was prepared and filed with the Office of Planning and Research on November 30, 2022; and

WHEREAS, as required by State CEQA Guidelines section 15087(a), the City provided Notice of Availability of the Draft EIR to the public to the Office of Planning and Research, on August 15, 2023; and

WHEREAS, during the public comment period, copies of the Draft EIR and technical appendices were available for review and inspection at City Hall, the City Library, on the City's website, and published in the Press Enterprise; and

WHEREAS, pursuant to State CEQA Guidelines section 15087(e), the Draft EIR was circulated for at least a 45-day public review and comment period from August 15, 2023 to October 2, 2023; and

WHEREAS, during the public review and comment period, the City consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies, and others pursuant to State CEQA Guidelines section 15086; and

WHEREAS, pursuant to Public Resources Code section 21092.5, the City provided copies of its responses to commenting public agencies at least ten (10) days prior to the City's consideration of the Final EIR on October 30, 2023; and

WHEREAS, on October 30, 2023, the City released the Final EIR ("Final EIR"), which consists of the Draft EIR, all technical appendices prepared in support of the Draft EIR, all written comment letters received on the Draft EIR, written responses to all written comment letters received on the Draft EIR, and errata to the Draft EIR and technical appendices; and

WHEREAS, on November 15, 2023, the Planning Commission conducted the public hearing to consider the Draft EIR for the Project and solicited comments on the document. After hearing all relevant testimony from staff, the public and the City's consultant team, the Planning Commission voted to recommend that the City Council certify the EIR for the Project; and

WHEREAS, the "EIR" consists of the Final EIR and its attachments and appendices, as well as the Draft EIR and its attachments and appendices, comments thereto, and responses to comments; and

WHEREAS, all potentially significant adverse environmental impacts were sufficiently analyzed in the EIR; and

WHEREAS, as contained herein, the City has endeavored in good faith to set forth the basis for its decision on the Project; and

WHEREAS, all of the requirements of the Public Resources Code and the State CEQA Guidelines have been satisfied by the City in connection with the preparation of the EIR which is

sufficiently detailed so that all of the potentially significant environmental effects of the Project have been adequately evaluated; and

WHEREAS, the EIR prepared in comection with the Project sufficiently analyzes the Project's potentially significant envirommental impacts and the EIR analyzes a range of feasible alternatives capable of reducing these effects to an even lesser level of significance; and

WHEREAS, the City has made certain findings of fact, as set forth in Exhibit A of this resolution, attached hereto and incorporated herein, based upon the oral and written evidence presented to it as a whole and the entirety of the administrative record for the Project, which are incorporated herein by this reference; and

WHEREAS, the City finds that environmental impacts that are identified in the EIR as less than significant and do not require mitigation are described in in the attached exhibit.

WHEREAS, the City finds that there are no environmental impacts that are identified in the EIR that are less than significant with incorporation of mitigation measures as described in Section III of Exhibit A; and

WHEREAS, the City finds that even with the incorporation of all feasible mitigation measures, the environmental impacts that are identified in the EIR that are significant and unavoidable are described in Section IV of Exhibit A; and

WHEREAS, the cumulative impacts of the Project identified in the EIR and set forth herein, are described in Section V of Exhibit A; and

WHEREAS, the potential significant irreversible environmental changes that would result from the proposed Project identified in the EIR and set forth herein, are described in Section VI of Exhibit A; and

WHEREAS, the existence of any growth-inducing impacts resulting from the proposed Project identified in the EIR and set forth herein, are described in Section VII of Exhibit A; and

WHEREAS alternatives to the proposed Project that might further reduce the already less than significant environmental impacts are described in Section VIII of Exhibit A; and

WHEREAS, because the EIR identified significant and unavoidable impacts, the City explains its reasoning for recommending the adoption of the Project despite those impacts in the Statement of Overriding Considerations, as set forth in Section IX of Exhibit A; and

WHEREAS, no comments made in the public hearings conducted by the Planning Commission and no additional information submitted to the City have produced substantial new information requiring recirculation of the EIR or additional environmental review of the Project under Public Resources Code section 21092.1 and State CEQA Guidelines section 15088.5; and

WHEREAS, prior to taking action, as recommended by the Planning Commission on November 15, 2023 the City Council has heard, been presented with, reviewed and considered all of the information

and data in the administrative record, (including but not limited to the EIR) and all oral and written evidence presented to it during all meetings and hearings; and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. The City Council finds and determines that the recitals above are true and correct.

Section 2. The City Council hereby finds that it has been presented with the EIR which it has reviewed and considered, and further finds that the EIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines.

Section 3. The City Council has certified the Final EIR pursuant to the California Environmental Quality Act and adopted Findings of Fact and a Statement of Overriding Considerations for the General Plan 2045. The City Council hereby incorporates by reference as if fully set forth herein, the Resolution certifying the Final EIR and adopting the Findings of Fact, and Statement of Overriding Considerations for the General Plan 2045.

Section 4. City Council adopts Resolutions No. CC2312-048 approving the "CEQA Findings of Fact" where were prepared in accordance with State CEQA Guidelines sections 15091 and which are attached hereto as Exhibit A and incorporated herein by this reference.

Section 5. The City Council hereby certifies that the Final Environmental Impact Report is accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines and reflects the independent judgment and analysis of the City; and it declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by the State CEQA Guidelines Section 15088.5 has been received by the City after circulation of the Draft EIR that would require recirculation. Therefore, the City Council certifies the EIR based on the entirety of the record of proceedings.

Section 6. The City Council hereby directs staff to prepare and file a Notice of Determination with the County Clerk of the County of Los Angeles within five working days of the execution of this Resolution and approval of the Project as well as with the State of California's Office of Planning and Research.

PASSED, APPROVED AND ADOPTED this 18th day of December, 2023

EXIBIT A

CEQA Findings of Fact

EXHIBIT A
CEQA FINDINGS OF FACT

The California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.) ("CEQA") requires that public agencies shall not approve or carry out a project for which an environmental impact report ("EIR") has been certified that identifies one or more significant adverse environmental effects of a project unless the public agency makes one or more written Findings for each of those significant effects, accompanied by a brief explanation of the rationale for each Finding (State CEQA Guidelines [Cal. Code Regs., tit. 14, § 15000 et seq.], § 15091). This document presents the CEQA Findings of Fact made by the City of Lawndale, in its capacity as the CEQA lead agency, regarding the Lawndale General Plan ("General Plan"), evaluated in the Draft Environmental Impact Report ("Draft EIR") and Final Environmental Impact Report ("Final EIR") for the Project.

SECTION I
INTRODUCTION

Public Resources Code section 21002 states that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" Section 21002 further states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Pursuant to section 21081 of the Public Resources Code, a public agency may only approve or carry out a project for which an EIR has been completed that identifies any significant environmental effects if the agency makes one or more of the following written finding(s) for each of those significant effects accompanied by a brief explanation of the rationale for each finding:

1. Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effects on the environment.

2. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency.

3. Specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the environmental impact report.

As indicated above, section 21002 requires an agency to "avoid or substantially lessen" significant adverse environmental impacts. Thus, mitigation measures that "substantially lessen" significant environmental impacts, even if not completely avoided, satisfy section 21002's mandate. (*Laurel Hills Homeowners Assn. v. City Council* (1978) 83 Cal.App.3d 515, 521 ["CEQA does not mandate the choice of the environmentally best feasible project if through the imposition of feasible mitigation measures alone the appropriate public agency has reduced environmental damage from a project to an acceptable level"]; *Las Virgenes Homeowners Fed., Inc. v. County of*

Los Angeles (1986) 177 Cal. App. 3d 300, 309 ["[t]here is no requirement that adverse impacts of a project be avoided completely or reduced to a level of insignificance . . . if such would render the project unfeasible"].)

While CEQA requires that lead agencies adopt feasible mitigation measures or alternatives to substantially lessen or avoid significant environmental impacts, an agency need not adopt infeasible mitigation measures or alternatives. (Pub. Resources Code, § 21002.1(c) [if "economic, social, or other conditions make it infeasible to mitigate one or more significant effects on the environment of a project, the project may nonetheless be carried out or approved at the discretion of a public agency"]; see also State CEQA Guidelines, § 15126.6(a) [an "EIR is not required to consider alternatives which are infeasible"].) CEQA defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Pub. Resources Code, § 21061.1.) The State CEQA Guidelines add "legal" considerations as another indicia of feasibility. (State CEQA Guidelines, § 15364.) Project objectives also inform the determination of "feasibility." (*Jones v. U.C. Regents* (2010) 183 Cal. App. 4th 818, 828-829.) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 401, 417; see also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715.) "Broader considerations of policy thus come into play when the decision making body is considering actual feasibility[.]" (*Cal. Native Plant Soc'y v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000 ("*Native Plant*"); see also Pub. Resources Code, § 21081(a)(3) ["economic, legal, social, technological, or other considerations" may justify rejecting mitigation and alternatives as infeasible] (emphasis added).)

Environmental impacts that are less than significant do not require the imposition of mitigation measures. (*Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337, 1347.)

The California Supreme Court has stated, "[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced." (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576.) In addition, perfection in a project or a project's environmental alternatives is not required; rather, the requirement is that sufficient information be produced "to permit a reasonable choice of alternatives so far as environmental aspects are concerned." Outside agencies (including courts) are not to "impose unreasonable extremes or to interject [themselves] within the area of discretion as to the choice of the action to be taken." (*Residents Ad Hoc Stadium Com. v. Board of Trustees* (1979) 89 Cal.App.3d 274, 287.)

SECTION II
FINDINGS REGARDING ENVIRONMENTAL IMPACTS NOT REQUIRING MITIGATION

The City Council hereby finds that the following potential environmental impacts of the General Plan are less than significant and therefore do not require the imposition of Mitigation Measures.

A. AESTHETICS

1. Scenic Vistas

Threshold: Would the project have a substantial adverse effect on a scenic vista?

Finding: Less than significant. (Draft EIR, Impact AES-1, pages 5.1-7 through 5.1-9)

Explanation: Scenic views within the Planning Area include long-range views of the Palos Verdes Hills, Santa Monica Mountains, and San Gabriel Mountains. Implementation of the Project would result in new development and intensification of existing urban uses along major corridors, including Hawthorne Boulevard. While the Project does not include any specific development proposals, the Project could facilitate future development projects at higher densities and intensities than currently exist. The City's Zoning Code would regulate development within the City, including building heights, setbacks, massing, and design and architectural regulations.

Pursuant to Lawndale Municipal Code Chapter 17.30, future residential development projects would be reviewed for conformance with the City's established design criteria. Each future development project would be subject to the City's development standards, site plan and/or design review process to ensure conformance with the General Plan Update and the City's established development standards. Future development within the Sphere of Influence (SOI) that is under the County's land use control would be subject to the County's entitlement requirements, regulations, and review processes.

The General Plan Update goals, policies, and actions are intended to ensure that new development and intensification of existing urban uses within the Planning Area would not result in substantial adverse effects on a scenic vista. Proposed Land Use Element Policy LU-3.1 requires that the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area be considered during the development review process. Policy LU-3.3 requires land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or

administrative procedures that manage the form and relationship of projects and uses. Policy LU-3.3 requires that the scale and massing of new development provide appropriate transitions in building height and bulk that are sensitive to the physical and visual character of adjacent lower density neighborhoods. Policy LU-4.2 directs the development and enforcement of development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic. Policy LU-4.3 requires that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses. Action LU-3a directs the City to prepare and adopt Objective Design Standards applicable to all new multi-family residential and mixed-use development. Action LU-3b ensures all projects are reviewed and processed per CEQA Guidelines. Action LU-4e implements the City's existing development standards, or where not in place, creates new standards (either through an update to the Zoning Code or update to the Hawthorne Boulevard Specific Plan or other regulating tool) to regulate new construction and revisions to existing buildings. In particular, new development standards would be created for higher density stand-alone residential projects and mixed-use projects to ensure that quality infill developments can be created within the areas identified for focused growth.

Although the potential for new residential development at higher densities could occur within the Planning Area, scenic vistas and resources do not readily occur within the Planning Area and long-range views are limited due to the existing topography and urbanized nature of the area. Thus, the Project would not have a substantial adverse effect on a scenic vista and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Policy LU-3.3: Code Compliance. Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

Policy LU-3.5: Scale and Massing. Require that the scale and massing of new development provide appropriate transitions in building height and bulk that are sensitive to the physical and visual character of adjacent lower density neighborhoods.

Action LU-3a: Prepare and adopt Objective Design Standards applicable to all new multi-family residential and mixed-use development.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

Policy LU-4.2: Standards and Guidelines. Develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic.

Policy LU-4.3: Site Planning. Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Action LU-4e: Continue to implement the City's existing development standards, or create new standards, if appropriate, to regulate new construction and revisions to existing buildings. New development standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill development

2. Scenic Resources

Threshold: Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Finding: No Impact. (Draft EIR, Impact AES-2, page 5.1-9)

Explanation: There are no Eligible or Designated State Scenic Highways within the Planning Area. The nearest officially designated State Scenic Highway is a portion of State Highway 2, located approximately 25 miles northeast of the Project site. Due to this distance, the Planning Area is not within the viewshed of this State Scenic Highway. The nearest eligible State Scenic Highway is a portion of State Highway 1, located approximately nine miles northwest of the Planning Area. Due to the distance and relatively flat intervening topography, the Planning Area is not within the viewshed of State Highway 1. As there are no officially designated or eligible scenic highways located within the viewshed of the Planning Area, implementation of the General Plan Update would not substantially damage scenic resources within a State scenic highway. No impact would occur in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

3. Visual Character

Threshold: In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Finding: Less than significant. (Draft EIR, Impact AES-3, pages 5.1-9 through 5.1-13)

Explanation: Public Resources Code Section 21071 defines an "Urbanized area" as an incorporated city that meets either of the following criteria: has a population of at least 100,000 persons; or has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons. According to the California Department of Finance, the City has a current (2023) population of 30,882. The adjacent City of Torrance has a population of 143,057. Combined, the cities have a population of 173,939, which exceeds 100,000 persons; thus, the City qualifies as being within an "Urbanized Area." Therefore, a significant impact would occur if a future development project associated with implementation of the Project conflicts with applicable zoning and other regulations governing scenic quality.

All construction activities related to the General Plan Update would be temporary in nature and all construction equipment would ultimately be removed from individual project sites following completion of construction activities. Therefore, changes to local visual character and quality associated with construction of future development would be temporary, and impacts would be less than significant.

The General Plan Update would support additional development beyond existing conditions. In general, the General Plan Update Land Use Element proposes an increase in building density and intensity areas along major corridors, including Hawthorne Boulevard, in accordance with State and regional housing and climate change goals. The General Plan Update incorporates consistent and compatible development intensities that would maintain and enhance the overall visual character/quality of the Planning Area. Specifically, the Land Use Element includes policies and actions, maps, and diagrams to control and direct the general distribution, location, and extent of land uses within the Planning Area. For example, Policy LU-1.1 requires the provision of an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures

compatibility between uses consistent with the land use designations identified in the Land Use Element and Land Use Map. Policy LU-4.2 directs the City to develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic. Action LU-1a directs the City to create consistency between the City's Zoning Code and Zoning Map as appropriate to ensure consistency with the Land Use Element and designations shown on the Land Use Map. Action LU-1b ensures the City updates the Hawthorne Boulevard Specific Plan as appropriate to ensure consistency with the Land Use Element, designations shown on the Land Use Map, and the City's adopted 2021-2029 Housing Element. Action LU-1c directs the City to review the Zoning Code and update as appropriate to reflect Land Use goals, policies, and implementation actions included in the General Plan Update. Action LU-4e directs the implementation the City's existing development standards, or where not in place, creates new standards to regulate new construction and revisions to existing buildings. Guiding future growth and development based on the General Plan Update would ensure future development complements and protects the quality of the existing environment.

All future development would also be subject to conformance with applicable requirements in the Lawndale Municipal Code. The City's Zoning Code (Title 17) would regulate maximum building height, building setbacks, parking and garage/carport placement, landscaping and screening requirements, and other development characteristics in place in each zoning district to protect the City's long-term visual character. Pursuant to Chapter 17.30, future residential development projects would be subject to project-specific design review to ensure compatibility with the site surrounding area, and consistency with design standards and guidelines. Future development within the SOI that is under the County's land use control would be subject to the County's entitlement requirements, regulations, and review processes. Additionally, applicable future land use and development review applications would undergo environmental review on a project-by-project basis prior to consideration by the decision-making authority. If necessary, mitigation would be recommended to reduce potential impacts to a less than significant level.

The implementation of policies and actions contained in the General Plan Update and compliance with the Lawndale Municipal Code would ensure that new development in the Planning Area would be designed to enhance the visual quality of the area and be visually compatible with existing development and open space resources. Therefore, implementation of the General Plan Update would not substantially degrade the existing visual character or quality of public views or conflict with applicable zoning and other regulations governing scenic quality. Impacts would be less than

significant in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Action LU-1a: Create consistency between the City's Zoning Code and Zoning Map and General Plan.

Action LU-1b: Update the Hawthorne Boulevard Specific Plan as appropriate to ensure consistency with this Land Use Element, designations shown on Figure LU-1, and the City's adopted 2021-2029 Housing Element.

Action LU-1c: Review the Zoning Code and update as appropriate to reflect Land Use goals, policies, and implementation actions included in this Plan.

Action LU-1d: As part of development review process, ensure that residential and non-residential developments fall within the minimum and maximum density requirements and/or allowed floor-area-ratios stipulated on the Land Use Map and included within the Land Use Descriptions. Projects shall also be reviewed for consistency with the development standards and density requirements established by any applicable Specific Plan governing the area in question.

Policy LU-3.3: Code Compliance. Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

Policy LU-3.9: Interagency Cooperation. Establish and maintain an ongoing liaison with Caltrans, LA Metro, utility companies, adjacent cities, and other major government and private agencies to help minimize the traffic, noise, and visual impacts of their facilities and operations.

Policy LU-4.2: Standards and Guidelines. Develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic.

Policy LU-4.3: Site Planning. Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways)

that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Action LU-4e: Continue to implement the City's existing development standards, or create new standards if appropriate, to regulate new construction and revisions to existing buildings. New standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill developments.

4. Light and Glare

Threshold: Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Finding: Less than significant. (Draft EIR, Impact AES-4, pages 5.1-13 through 5.1-14)

Explanation: Future development accommodated through implementation of the General Plan Update could introduce new sources of light or glare with the potential to adversely affect day or nighttime views. Light and glare impacts could result from new light sources such as street lighting, interior and exterior building lighting (including for safety purposes), vehicle headlights, illuminated signage, and new glare sources such as reflective building materials, roofing materials, and windows. All lighting installed in future development projects as a result of the implementation of the General Plan Update would be subject to conformance with applicable Zoning Code requirements and guided by the General Plan Update Land Use Element, which includes policies and actions to reduce potential light and glare impacts. Land Use Element Policy LU-3.7 requires new uses to provide buffers between existing uses where potential adverse impacts could occur, such as decorative walls, setbacks and landscaping, restricted vehicular access, parking enclosures, and lighting control. Action LU-3c directs the City to evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods. Action LU-3d requires that the City review the Zoning Code, and amend it if necessary to create standards addressing appropriate treatments to buffer nonresidential uses from residential and other sensitive uses. Action LU-3e requires as part of the development review process, the analysis of land use compatibility to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks. In addition, pursuant to Section 17.72.071, *Improvement of Parking Areas*, projects abutting a residential zone or residential project must direct lighting to illuminate parking areas away from adjoining residential premises and adequately shield headlight glare. Therefore, implementation of the General Plan Update would not result in adverse light and glare impacts. Impacts would be less than significant in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-3.7: Development Buffers. Require new uses to provide buffers between existing uses where potential adverse impacts could occur, such as decorative walls, setbacks and landscaping, restricted vehicular access, parking enclosures, and lighting control.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Action LU-3d: Review the Zoning Code, and amend it if necessary, to create standards addressing appropriate treatments to buffer nonresidential uses from residential and other sensitive uses.

Action LU-3e: Analyze land use compatibility through the development review process to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks.

B. AGRICULTURAL RESOURCES

1. Farmland Conversion

Threshold: Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Finding: No Impact. (Draft EIR, Impact AG-1, page 5.2-6)

Explanation: The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The Farmland Mapping and Monitoring Program (FMMP) classifies the Planning Area as Urban and Built-Up Land. The Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP. Additionally, there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map. Therefore, the Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use. No impact would occur in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

2. Williamson Act Lands

Threshold: Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

Finding: No Impact. (Draft EIR, Impact AG-2, pages 5.2-6 through 5.2-7)

Explanation: Although the General Plan Update does not include any zone changes at this time, a future zoning update is anticipated to bring zoning into compliance with the General Plan Update. However, since the City does not have any zoning districts exclusive to agriculture uses, the General Plan Update, and subsequent zoning code update, would not conflict with existing zoning for agricultural use.

The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The Planning Area does not contain land under agricultural production, nor are any parcels within the Planning Area under a Williamson Act contract. Therefore, the Project would not conflict with existing zoning for agricultural use or conflict with a Williamson Act contact. No impact would occur in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

3. Other Changes

Threshold: Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Finding: No Impact. (Draft EIR, Impact AG-3, page 5.2-7)

Explanation: There are no forest lands within the Planning Area, nor are there suitable environmental conditions for forest land to be developed; therefore, implementation of the proposed Project will not result in the conversion of forest land to non-forest use.

The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP; there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map; and the Planning Area does not contain land under agricultural production. Thus, the General Plan Update would not result in conversion of farmland to non-agricultural use or conversion of forest land to non-forest use. No impact would occur in

this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

4. Forestland Zoning and Loss of Forest Land

Threshold: Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g), or result in the loss of forest land or conversion of forest land to non-forest use?

Finding: No Impact. (Draft EIR, page 5.2-6)

Explanation: There are no forest lands or timber lands located within the Planning Area. There are also no parcels that are currently zoned as forest land, timber, or timber production. Therefore, implementation of the proposed General Plan Update would have no impact on forest land, timber, or timber production.

C. AIR QUALITY

1. Air Quality Plans

Threshold: Would the project conflict with or obstruct implementation of the applicable air quality plan?

Finding: Less than significant. (Draft EIR, Impact AQ-1, pages 5.3-26 through 5.3-35)

Explanation: The Southern California Air Quality Management District (SCAQMD) has adopted a series of Air Quality Management Plans (AQMPs) to lead the Air Basin into compliance with several criteria air pollutant standards and other Federal requirements, while taking into account construction and operational emissions associated with population and economic growth projections provided by the Southern California Association of Government's (SCAG's) 2020 RTP/SCS. CEQA requires that general plans be evaluated for consistency with the AQMP. Indicators of consistency include control strategies and growth projections.

Construction Emissions

Future development of individual projects under the General Plan Update would be required to comply with CARB's requirements to minimize short-term emissions from on-road and off-road diesel equipment, including the ATCM to limit heavy-duty diesel motor vehicle idling to no more than five minutes at any given time, and with SCAQMD's regulations such as Rule

403 for controlling fugitive dust and Rule 1113 for controlling VOC emissions from architectural coatings. Furthermore, as applicable to the type of growth, individual projects under the proposed General Plan Update would comply with fleet rules to reduce on-road truck emissions (i.e., 13 CCR, Section 2025 (CARB Truck and Bus regulation)). Compliance with these measures and requirements would be consistent with and meet or exceed the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. Therefore, the construction anticipated by the proposed would be consistent with the AQMP under the control strategies indicator.

Implementation of the General Plan Update would result in an increase in short-term employment compared to existing conditions. However, these jobs would be temporary in nature. Therefore, the construction jobs generated by future development accommodated by the General Plan Update would not conflict with the long-term employment or population projections upon which the AQMPs are based.

Operational Emissions

Future development under the General Plan Update would be required to comply with CARB motor vehicle standards, SCAQMD regulations for stationary sources and architectural coatings, Title 24 energy efficiency standards, and, to the extent applicable, the 2020 RTP/SCS.

Additionally, the location, design, and land uses of the growth anticipated by the General Plan Update would implement land use and transportation strategies related to reducing vehicle trips for residents and employees of the City by increasing commercial and residential density near public transit. The land uses allowed under the proposed General Plan provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area. The availability of public transportation and the focus on increasing density relative to the existing public transportation, enables implementation of the General Plan Update to potentially reduce vehicle trips, VMT, and associated transportation-related emissions per capita, compared to the existing conditions. Therefore, the proposed Project would be consistent with the AQMP under the control strategies indicator.

Future development in the City of Lawndale that is consistent with the General Plan Update could increase vehicle trips and VMT that would result in emissions of ozone precursors and particulate matter. Individual projects under the General Plan Update would be required to undergo subsequent environmental review pursuant to CEQA, and would be required to demonstrate compliance with the AQMP. Individual projects would also be required to demonstrate compliance with SCAQMD rules and regulations governing air quality

The City of San Lawndale continues to coordinate with SCAQMD and SCAG to ensure Citywide growth projections, land use planning efforts, and local development patterns are accounted for in the regional planning and air quality planning processes. Additionally, the General Plan Update includes policies and actions to further minimize potential impacts to air quality in support of the AQMP. The proposed Resource Management Element includes Goal RM-4 of the General Plan Update Resources Management Element addresses potential air quality impacts by improving air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions. Also, Policy LU-1.1 of the General Plan Update Land Use Element promotes a land use pattern that would reduce pollution and air quality impacts. Therefore, the operation of the proposed General Plan Update would not conflict with or obstruct the implementation of the applicable air quality plan and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.4: Commercial Corridors. Encourage development of well-maintained, functional, and appropriate commercial, retail, and employment opportunities in stand-alone and mixed-use formats, particularly along Hawthorne Boulevard, major arterials, and at major intersections where there is maximum visibility and access.

Policy LU-1.6: Uses to Meet Daily Needs. Encourage uses that meet daily needs, such as grocery stores, local-serving restaurants, and other businesses and activities, within walking distance of residences to reduce the frequency and length of vehicle trips.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

MOBILITY ELEMENT

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: Multimodal Connectivity. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Action M-3a When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.3: Transit Facilities. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Action M-5a Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Policy M-6.1: Bicycle Master Plan. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: Local Travel Network. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.3: Hawthorne Boulevard Sidewalks. Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.

Policy M-6.4: Sidewalk and Bikeway Gaps. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: Bicycle/Pedestrian Facilities at New Developments. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: Effects of New Technologies on Active Transportation. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.
Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.2: Transportation Demand Management. Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Action M-9b Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: Air Quality and Greenhouse Gas Emissions. Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: Regional Cooperation. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: Measurement and Enforcement. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: GHG Emissions. Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: Sensitive Receptors. Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: Mitigation. Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: GHG Reduction. Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: Mitigation. Public Engagement. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet EPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NO_X emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: Energy Resources. A community that safely manages its energy resources.

Policy RM-5.1: Compliance with State Legislation. Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: Green Building Standards Code. Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: Renewable Energy. Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: Energy-Efficient Materials. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: Energy Conservation. Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: Energy Needs. Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: Business Community. Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: Public Education. Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: Promote Energy Conservation in Existing Building Stock. Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

2. Other Adverse Emissions

Threshold: Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Finding: Less than significant. (Draft EIR, Impact AQ-4, pages 5.3-42 through 5.3-43)

Explanation: According to the SCAQMD's *CEQA Air Quality Handbook*, construction equipment is not a typical source of odors. Odors from the combustion of diesel fuel would be minimized by complying with the CARB ATCM that limits diesel-fueled commercial vehicle idling to five minutes at any given location, which was adopted in 2004. Future development accommodated by the General Plan Update would also comply with SCAQMD Rule 402 (Nuisance), which prohibits the emissions of nuisance air contaminants or odorous compounds. Through adherence with mandatory compliance with SCAQMD Rules and State measures, construction activities and materials would not create objectionable odors. Construction of future development would not be expected to generate nuisance odors at nearby air quality sensitive receptors. Therefore, impacts with respect to odors would be less than significant.

According to the SCAQMD's *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. Potential operational airborne odors could be created by commercial and industrial uses developed under the General Plan Update. However, compliance with the City's Municipal Code, including Section 6.24.040 which prohibits animal premises from being a source of offensive odors, and SCAQMD's Rule 402 (Nuisance), which prohibits the emissions of nuisance air contaminants or odorous compounds would reduce potential impacts. The other potential source of odors would be new waste receptacles within the Planning Area. The receptacles would be stored in areas and in containers, as required by City Municipal Code Chapter 8.32, *Garbage Collection and Disposal*, and be emptied on a regular basis, before potentially substantial odors have developed. Additionally, the policies included as part of the General Plan Update would reduce mobile and stationary source emissions and odors associated with diesel fuel by focusing on land use patterns that improve air quality, reduce air pollution from stationary sources, and encourage/enable increased transit behavior. Consequently, implementation of the General Plan Update would not create operational-related objectionable odors affecting a substantial number of people within the City. Impacts would be less than significant in this regard.

D. BIOLOGICAL RESOURCES

1. Candidate, Sensitive, or Special Status Species

Threshold: Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or

regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Finding: Less than significant. (Draft EIR, Impact BIO-1, pages 5.4-12 through 5.4-14)

Explanation: The Planning Area is located within an urbanized area and currently developed with residential and non-residential land uses. Pursuant to the special-status species search, four special-status plant species and nine special-status animal species have been identified within one mile of the Planning Area and are considered candidate, sensitive, or special status under FESA, CESA and/or CNPS/CRPR designation. There are no sensitive natural communities within the nine-quad search area.

Implementation of the General Plan Update would result in new development and intensification of existing urban uses primarily along major corridors including Hawthorne Boulevard and Redondo Beach Boulevard. The Project would redesignate seven acres of land which are existing public-school sites designated as Open Space in the 1992 General Plan to the Public Facilities land use designation. The General Plan Update would not modify the Open Space Land Use designation and would continue to provide for public parks, parks that are part of school sites, public and private outdoor recreational facilities, and landscaped open space areas. While the Project does not include any specific development proposals and would not result in significant direct impacts to existing biological resources, subsequent development projects under the proposed General Plan Update could result in direct impacts to certain species found present on an individual project site. For instance, future development within the City could involve the removal of trees, which may have the potential to impact nesting migratory birds. Proposed removal of any street trees or trees on public property within the City would be reviewed in accordance with Municipal Code Chapter 12.28 and would be required to comply with the requirements for removal. Future development projects would be required to adhere to applicable Federal, State, and local regulations that provide for sensitive species as part of the discretionary approval process for site-specific development projects

Compliance with applicable regulations at the time of future development would minimize adverse impacts to sensitive species. Additionally, the General Plan Update includes policies and actions to preserve and protect biological resources within the Planning Area. The proposed Resource Management Element Policy RM-1.1 requires that the City provide for public recreational lands, trails, and open space. Policy RM-1.3 requires new residential development to incorporate on-site open areas or greenspace for resident use. Policy RM-1.7 directs the City to provide for the use of street trees along sidewalks and property frontages, consistent with the City's Master Street Tree program. Policy RM-1.8 encourages the

development of innovative non-traditional public and semi-public open space such as community gardens, parkways, and green space. Action RM-1b directs the City to pursue funding for parkland acquisition, development, and maintenance. Action RM-1c directs the City to prepare and adopt a Master Parks Plan to set policies and standards for City parks and open space. Policy RM-6.3 encourages the City to work with the Los Angeles County Public Works Department and the Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. The proposed Public Safety Element Policy PS-7.3 directs the City to coordinate with Federal, State, and local agencies to establish ecological recovery programs. Adherence to these policies and actions during the discretionary review of future development projects would serve to minimize impacts to sensitive species. Compliance with Federal, State, and local regulations, and implementation of General Plan Update policies and actions, would reduce potential impacts to sensitive species to a less than significant level.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Goal RM-1: Parks, Recreation and Open Space. A community with attractive, safe and accessible parks, recreation, and open space areas.

Policy RM-1.1: Recreation Types. Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.3: Open Space for Private Developments. Require new private residential development to incorporate on-site open areas, greenspace, or recreational facilities for resident use.

Policy RM-1.7: Street Trees. Provide for the consistent use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program.

Policy RM-1.8: Creative Open Space and Parks. Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-6.3: Riparian Habitat. Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-7.3: Ecological Recovery. Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

2. Riparian Habitat & Wetlands

Threshold: Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?

Would the project have a substantial adverse effect on state or federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Finding: Less than significant. (Draft EIR, Impact BIO-2, pages 5.4-14 through 5.4-16)

Explanation: The Planning Area is largely built-out and consists of a mixture of impervious surfaces and native and non-native species, typical of urban habitats. There are no sensitive natural communities within the nine-quad search area according to the California Natural Diversity Database. While not always documented as a sensitive natural community, streams, rivers, wet meadows, and vernal pools are of high concern because they provide unique aquatic habitat for many endemic species, including special status plants, birds, invertebrates, and amphibians. These aquatic habitats oftentimes qualify as protected wetlands or jurisdictional waters and are protected from disturbance through the Clean Water Act. There are no large water bodies or creeks within the Planning Area and no known vernal pools have been identified. A portion of the Dominguez Channel, a 15.7-mile-long channelized watercourse, flows through the eastern portion of the Planning Area. No other aquatic resources exist within the Planning Area.

The General Plan Update is a planning document that enables additional development consistent with the proposed Land Use Map, but does not include any site-specific development proposals; therefore, adoption of the General Plan Update would not directly impact the environment. However, the Project could have an indirect change on the physical environment through subsequently approved projects that are consistent with the buildout under the General Plan Update. Individual projects within the Planning Area would require a detailed and site-specific review of the site to determine the presence or absence of water features. If water features are present and disturbance is required, Federal and State laws require measures to reduce, avoid, or compensate for impacts to these resources. The requirements of these Federal and State laws are implemented through the permit process. Additionally, the General Plan Update Resource Management Element includes policies and actions intended to protect sensitive natural communities and aquatic resources from adverse effects associated with future development and improvement projects within the Planning Area. The proposed Resource Management Element Policy RM-6.3 directs the City to work with the Los Angeles County Public Works Department and the Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels, such as the Dominguez Channel. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment.

Adherence to these policies and actions during the discretionary review of future development projects would serve to minimize impacts to sensitive species.

Compliance with Federal, State, and local regulations, and implementation of General Plan Update policies and actions, would reduce potential impacts to aquatic resources to a less than significant level. Thus, the Project would not have a substantial adverse effect on sensitive natural communities, including riparian habitat, or on State or Federally protected wetlands and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.3: Riparian Habitat. Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

3. Wildlife Movement

Threshold: Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Finding: Less than significant. (Draft EIR, Impact BIO-3, pages 5.4-16 through 5.4-18)

Explanation: The City and surrounding area are highly urbanized and generally developed with urban uses. The Planning Area consists of developed and/or disturbed land that has been developed, paved, or landscaped, and existing

vegetation consists of primarily ornamental and/or nonnative plant species. Thus, the Planning Area does not provide for habitat linkages. The portion of the Dominguez Channel that flows through the eastern portion of the Planning Area is concrete-lined and considered to have low habitat value. Although the channel could be used for wildlife movement, the Project does not propose site-specific development activities, nor does it involve any changes or modifications to the channel. Thus, the Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites

The proposed General Plan Resource Management Element includes policies and actions intended to preserve ecological and biological resources. The proposed Resource Management Element Policy RM-1.1 directs the City to provide for public recreational lands, trails, and open space. Policy RM-1.3 requires new residential development to incorporate on-site open areas or greenspace for resident use. Policy RM-1.7 directs the City to provide for the use of street trees along sidewalks and property frontages, consistent with the City's Master Street Tree program. Policy RM-1.8 encourages the development of innovative non-traditional public and semi-public open space such as community gardens, parkways, and green space. Action RM-1b encourages the City to pursue funding for parkland acquisition, development, and maintenance. Action RM-1c directs the City to prepare and adopt a Master Parks Plan to set policies and standards for City parks and open space. Policy RM-6.3 directs the City to work with Los Angeles County Public Works Department and the Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. The proposed Public Safety Element Policy PS-7.3 directs the City to coordinate with Federal, State, and local agencies to establish ecological recovery programs. Adherence to these policies and actions would serve to protect potential biological resources and provide for trees and other vegetation consistent with wildlife habitat recovery. Thus, through compliance with Federal, State, and local regulations, and General Plan Update goals, policies, and actions, future development under the General Plan Update would have a less than significant impact associated with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or the use of native wildlife nursery sites.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Goal RM-1: Parks, Recreation and Open Space. A community with attractive, safe and accessible parks, recreation, and open space areas.

Policy RM-1.1: Recreation Types. Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.3: Open Space for Private Developments. Require new private residential development to incorporate on-site open areas, greenspace, or recreational facilities for resident use.

Policy RM-1.7: Street Trees. Provide for the consistent use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program.

Policy RM-1.8: Creative Open Space and Parks. Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-6.3: Riparian Habitat. Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-7.3: Ecological Recovery. Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

4. Local Policies and Ordinances

Threshold: Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Finding: Less than significant. (Draft EIR, Impact BIO-4, page 5.4-18 through 5.4-19)

Explanation: Future development under the General Plan Update would be subject to all applicable Federal, State, regional, and local policies and regulations related to the protection of biological resources as outlined above. The City does not have a tree preservation policy or ordinance; however, Lawndale Municipal Code Chapter 12.28, *Street Trees*, addresses the City's tree planting and master street tree plan and requires authorization for the planting, spraying, pruning, or removal of street trees or trees on public property. In addition, the General Plan Resource Management Element includes policies and actions intended to provide for additional trees within the City. For instance, Policy RM-1.7 requires the City to provide for the use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program. Future development projects would be assessed for consistency with the Lawndale Municipal Code and General Plan Update goals, policies, and actions. Thus, the General Plan Update would not conflict with any local policies or ordinances protecting biological resources and impacts would be less than significant tin this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.7: Street Trees. Provide for the consistent use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program.

5. Habitat Conservation Plans

Threshold: Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Finding: No impact. (Draft EIR, Impact BIO-5, pages 5.4-19)

Explanation: The Planning Area is urbanized and is not located within the boundaries of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Thus, the Project would not conflict with any of these plans and no impact would occur.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no General Plan Update goals, policies, or actions specific to habitat conservation plans.

E. CULTURAL RESOURCES

1. Historical Resources

Threshold: Would the project cause a substantial adverse change in the significance of a historical resource pursuant to State CEQA Guidelines, § 15064.5?

Finding: Less than significant. (Draft EIR, Impact CUL-1, pages 5.5-11 through 5.5-13)

Explanation: Known historic resource sites are located throughout the Planning Area and undiscovered or potentially eligible sites may be located in various areas of the Planning Area. According to officially recorded resources and other databases that were researched for the Project, 25 historic built environment resources are located within the City. While the General Plan Update does not directly propose any changes to any historic resources, future development allowed under the General Plan Update could cause a substantial adverse change in the significance of known historical resources or unknown historical resources which have not yet been identified. The General Plan Update Resource Management Element includes goals, policies, and actions addressing heritage resources, including historical resources. Proposed Policy RM-3.1 requires the City to protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-

3.2 encourages the City to promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations. Policy RM-3.4 directs the City to include the public in efforts to preserve cultural assets, including techniques, incentives, and legal requirements for preservation. Policy RM-3.6 directs the City to evaluate the condition of historical buildings, the costs of rehabilitation, and the feasibility of preservation or conservation alternatives when considering the demolition or movement of historic structures. Policy RM-3.7 encourages the City to seek funding and support from public and private sources that aim to protect cultural and historic resources within the City. Action RM-3a requires the assessment of development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to CEQA. Action RM-3b directs the City to evaluate the feasibility of implementing a local historic registry program that provides incentives for retrofitting and building maintenance, as well as public recognition, of the local resource. Action RM-3c directs the City to consider conducting a historic properties inventory that takes into consideration buildings, neighborhoods, and other features of historic, architectural, or cultural significance. Action RM-3d requires, for structures that potentially have historic significance, that a study be conducted by a professional archaeologist or historian to determine the actual significance of the structure and potential impacts of the proposed development in accordance with CEQA Guidelines Section 15064.5. The City may require modification of the project and/or mitigation measures to avoid any impact to a historic structure, when feasible, such as retaining or rehabilitating historic buildings or relocating the historic building as feasible.

As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the City's General Plan, Municipal Code, and other applicable State and local regulations relative to historic and potentially historic resources. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. For structures that potentially have historical significance, the City would require preparation of a study by a qualified professional archaeologist or historian to determine the significance of the structure and potential impacts of the proposed development in compliance with CEQA. Therefore, compliance with the General Plan Update policies and actions and existing regulations, would not cause a substantial adverse change in the significance of a historical resource and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.2: Documentation. Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

Policy RM-3.3: Cultural Reminders. Seek to incorporate reminders of the City's culture through adaptive reuse, signage, markers, cultural events, and other reminders of Lawndale's community identity and local history.

Policy RM-3.4: Public Education. Educate and actively involve the public in preserving cultural assets, including techniques, incentives, and legal requirements for preservation.

Policy RM-3.6: Historic Preservation. Evaluate the condition of historical buildings, the costs of rehabilitation, and the feasibility of preservation or conservation alternatives when considering the demolition or movement of historic structures; when possible, encourage the adaptive re-use of the historic structure.

Policy RM-3.7: Funding. With input and involvement of stakeholder groups, seek adequate funding and support from public and private sources that aim to protect cultural and historic resources within the City.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3b: Evaluate the feasibility of implementing a local historic registry program that provides incentives for retrofitting and building maintenance, as well as public recognition, of the local resource.

Action RM-3c: Consider conducting a historic properties inventory that takes into consideration buildings, neighborhoods, and other features of historic, architectural, or cultural significance.

Action RM-3d: For structures that potentially have historic significance, the City shall require that a study be conducted by a professional archaeologist or historian to determine the actual significance of the structure and potential impacts of the proposed development in accordance with CEQA Guidelines Section 15064.5. The City may require modification of the project and/or mitigation measures to avoid any impact to a historic structure, when feasible, such as retaining or rehabilitating historic buildings or relocating the historic building as feasible.

Action RM-3e: For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

2. Archeological Resources

Threshold: Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Finding: Less than significant. (Draft EIR, Impact CUL-2, pages 5.5-13 through 5.5-14)

Explanation: Although the records search conducted as part of the Project identifies no previously-recorded archaeological resources within the City, the Cultural Study concludes the lack of identifies resources is likely to be a consequence of development occurring prior to the implementation of CEQA, rather than a lack of archaeological sites. Effects on archaeological resources deemed to be significant could be considered adverse if they involve physical demolition, destruction, or alteration of the resource or its immediate surroundings such that the significance of a resource would be materially impaired. While the General Plan Update does not directly propose site-specific development with the potential to directly impact archaeological resources, future development allowed under the General Plan Update could cause a substantial adverse change in the significance of previously undiscovered archaeological resources.

The General Plan Update Resource Management Element includes goals, policies, and actions addressing heritage resources, including archaeological resources. Proposed Policy RM-3.1 requires the City protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.2 encourages the City to promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations. Policy RM-3.4 directs the City to include the public in efforts to preserve cultural assets, including techniques, incentives, and legal requirements for preservation. Policy RM-3.7 encourages the City to seek funding and support from public and private sources that aim to protect cultural and historic resources within the City. Action RM-3a requires that development proposals be assessed for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to CEQA. Action RM-3e requires, for all development proposals within areas with the potential to contain

prehistoric/historic resources, a study to be conducted by a professional archaeologist to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

Archaeological resources are protected under Federal, State, and local regulations and implementation of General Plan Update policies and actions would reduce potential adverse impacts to archaeological resources associated with future development. Subsequent discretionary development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. Compliance with the General Plan Update policies and actions and existing regulations would not cause a substantial adverse change in the significance of an archaeological resource and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.2: Documentation. Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

Policy RM-3.4: Public Education. Educate and actively involve the public in preserving cultural assets, including techniques, incentives, and legal requirements for preservation.

Policy RM-3.7: Funding. With input and involvement of stakeholder groups, seek adequate funding and support from public and private sources that aim to protect cultural and historic resources within the City.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3e: For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be

modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

3. Human Remains

Threshold: Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Finding: Less than significant. (Draft EIR, Impact CUL-3, pages 5.5-16 through 5.5-17)

Explanation: Future construction projects within the Planning Area could have the potential to disturb or destroy buried Native American human remains as well as other human remains, including those interred outside of formal cemeteries. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the City's General Plan, Municipal Code, and other applicable State and local regulations. Subsequent discretionary development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. The General Plan Update Resource Management Element includes policies and actions addressing the potential discovery of human remains. Proposed Policy RM-3.1 requires the City protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.5 requires consultation with Native American tribes that may be impacted by proposed development and land use policy changes, in accordance with State, local, and Tribal intergovernmental consultation requirements. Action RM-3g requires, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, that the City halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains is permitted until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site. Compliance with the General Plan Update policies and actions and existing regulations, including Health and Safety Code Section 7050.5, CEQA Guidelines Section 15064.5(e), and PRC Section 5097.98, would ensure that potential impacts associated with the inadvertent discovery of human remains would be reduced to less than

significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.5: Tribal Consultation. In accordance with State, local, and Tribal intergovernmental consultation requirements, consult with Native American tribes that may be impacted by proposed development and land use policy changes, as necessary.

Action RM-3g: In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, the City shall halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

F. ENERGY

1. Energy

Threshold: Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation, or conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Finding: Less than significant. (Draft EIR, Impact EN-1 pages 5.6-9 through 5.6-18)

Explanation: Buildout of the General Plan Update would use energy resources for the operation of buildings (electricity and natural gas), for on-road vehicle trips (e.g., gasoline and diesel fuel), and from off-road construction activities (e.g. diesel fuel) associated with 2045 buildout of the General Plan Update. Each of these activities would require the use of energy resources. Developers of individual projects within the Planning Area would be responsible for conserving energy, to the extent feasible, and would rely heavily on reducing per capita energy consumption to achieve this goal,

including through Statewide and local measures. Buildout of the General Plan Update would be in compliance with all applicable Federal, State, and local regulations regulating energy usage. The General Plan Update would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing energy use or increasing the use of renewable energy. This is a less than significant impact in this regard.

The General Plan Update includes policies and actions to support energy conservation and renewable energy, as well as reducing energy use. Specifically, Goal RM-5 promotes a community that safely manages its energy resources. Policy RM-5.1 requires the City to comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy. Policy RM-5.2 ensures that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code. Policy RM-5.3 requires the City to promote the development and use of renewable energy resources to reduce dependency on fossil fuels. Policy RM-5.4 requires the City to promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure. Policy RM-5.5 requires the City to promote energy conservation and recycling by the public and private sectors. Policy RM-5.6 requires the City to collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways. Policy RM-5.7 requires the City to support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations. Policy RM-5.8 requires the City to promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy. Policy RM-5.9 requires the City to promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers. Action RM-5a requires the City to implement energy conservation measures in public buildings through the following actions. Action RM-5b requires that during the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design. Action RM-5 requires the City to continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code. Action RM-5d requires the City to promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings. Action RM-5e requires the City to identify and reduce

government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times. Action RM-5f requires the City to consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives. Action RM-5g requires the City to use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs. Further, Action RM-5h requires the City to partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

As a result, the General Plan Update would not result in any significant adverse impacts related to Project energy requirements, energy use inefficiencies, and/or the energy intensiveness of materials by amount and fuel type for during General Plan Update buildout, including during construction, operations, maintenance, and/or removal. The City of Lawndale would comply with all existing energy standards and would not result in significant adverse impacts on energy resources. For the reasons stated above, buildout of the General Plan Update would not be expected to cause an inefficient, wasteful, or unnecessary use of energy resources nor conflict with or obstruct a State or local plan for renewable energy or energy efficiency. This is a less than significant impact.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: Air Quality and Greenhouse Gas Emissions. Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: Regional Cooperation. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: Measurement and Enforcement. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: GHG Emissions. Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: Sensitive Receptors. Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: Mitigation. Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: GHG Reduction. Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: Public Engagement. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.

2. Potential exposure of sensitive receptors to toxic air contaminants.

3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.

4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet EPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel

Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NOx emissions during construction activities.

- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: Energy Resources. A community that safely manages its energy resources.

Policy RM-5.1: Compliance with State Legislation. Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: Green Building Standards Code. Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: Renewable Energy. Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: Energy-Efficient Materials. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: Energy Conservation. Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: Energy Needs. Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: Business Community. Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: Public Education. Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: Promote Energy Conservation in Existing Building Stock. Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

G. GEOLOGY AND SOILS

1. Seismic Hazards

Threshold: Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides?

Finding: Less than significant. (Draft EIR, Impact GS-1 pages 5.7-14 through 5.7-16)

Explanation: The Planning Area is situated within a seismically active region as the result of being located near the active margin between the North American and Pacific tectonic plates. There are no designated Alquist-Priolo fault zones within the Planning Area. While there are no major active faults within the Planning Area, major active and potentially active faults exist in the vicinity of the Planning Area, including the Newport-Inglewood Fault, San Andreas Fault, and Palos Verdes Fault. There are no areas within the Planning Area designated by the California Geological Survey as having the potential for liquefaction. Further, the City's LHMP does not identify the Planning Area as being located within an area that is susceptible to liquefaction. Additionally, there are no earthquake-induced landslide seismic hazard zones mapped within the Planning Area.

Future development projects would be required to comply with the provisions of the California Building Standards Code (CBSC), which requires development projects to perform geotechnical investigations in accordance with State law, engineer improvements to address potential seismic and ground failure issues, and use earthquake-resistant construction techniques to address potential earthquake loads when constructing buildings and improvements. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the CBSC, General Plan, Lawndale Municipal Code, and other regulations. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan Update Public Safety Element includes goals, policies and actions to address potential impacts associated with seismic activity. Policy PS-2.1 requires that geotechnical hazard data is incorporated into in future land use decision-making, site design, and construction standards. Policy PS-2.2 requires the enforcement of State

seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities. Policy PS-2.3 ensures that mitigation measures are monitored and enforced to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibits development in areas where seismic and geologic hazards cannot be mitigated. Policy PS-2.4 encourages the City to educate the community to mitigate potential injury and damage associated with earthquakes. Action PS-2a directs the City to review and update the City's geologic and seismic hazards maps at least annually. Action PS-2b ensures development proposals are reviewed to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind. Action PS-2c ensures adoption and implementation of the latest version of the building codes adopted by the State. Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Action PS-2e requires feasible mitigation measures for development projects to reduce the risk to the community from hazards related to geologic conditions and seismic activity.

Future development projects associated with implementation of the General Plan Update would be reviewed to identify and assess seismic safety issues and would be required to design and construct improvements in compliance with the applicable building codes and standards in place at the time to reduce the potential adverse effects associate with strong seismic ground shaking. With the implementation of the policies and actions in the General Plan, as well as applicable State and City codes, potential impacts associated with strong seismic ground shaking would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-2: Geologic and Seismic Hazards. A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Policy PS-2.1: Geologic Hazard Identification. Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

Policy PS-2.2: Earthquake Protection. Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

Policy PS-2.3: Development Projects. Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

Policy PS-2.4: Seismic Hazard Education. Continue to seek out opportunities to educate and encourage the community on ways to implement measures to mitigate potential injury and damage associated with earthquakes.

Action PS-2a: Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

Action PS-2b: Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

Action PS-2c: Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Action PS-2e: Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

2. Soil Erosion

Threshold: Would the project result in substantial soil erosion or the loss of topsoil?

Finding: Less than significant. (Draft EIR, Impact GS-2, pages 5.7-16 through 5.67-18)

Explanation: Implementation of the General Plan Update would provide for development and improvement projects that would involve some land clearing, mass grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. Construction-related erosion could result in the loss of a substantial amount of nonrenewable topsoil and could adversely affect water quality in nearby surface waters. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the CBSC, General Plan, Lawndale Municipal Code, and other relevant regulations. In compliance with NPDES Permit regulations, the State of California requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a stormwater pollution prevention and monitoring plan (SWPPP), which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. Further, the General Plan Update includes a range of policies and actions related to best management practices, NPDES requirements, and minimizing discharge of materials (including eroded soils) into the storm drain system. Proposed Resource Management Element Policy RM-6-2 encourages all landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6a requires new development and redevelopment projects to implement BMPs to reduce soil erosion and pollutants in urban runoff. Proposed Public Safety Element Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Policy PS-5.6 directs the City to maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property. With the implementation of the policies and actions in the General Plan Update, as

well as applicable State and City requirements, potential impacts associated with erosion and loss of topsoil would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Policy PS-5.4: Best Management Practices. Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.6: Local Storm Drainage Infrastructure. Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

3. Unstable Soils

Threshold: Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result

in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Finding: Less than significant (Draft EIR, Impact GS-3, pages 5.7-18 through 5.7-21)

Explanation: Future development anticipated by the General Plan Update could result in the exposure of people and structures to conditions that have the potential for adverse effects associated with ground instability or failure. The Planning Area is not susceptible to lateral spreading, subsidence, or liquefaction. The potential for landslide within the Planning Area is low. The General Plan Update includes policies and actions to address geologic conditions within the Planning Area. Public Safety Element Policy PS-2.1 requires that geotechnical hazard data be incorporated in future land use decision-making, site design, and construction standards. Policy PS-2.2 enforces State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities. Policy PS-2.3 requires mitigation measures be monitored and enforced to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibits development in areas where seismic and geologic hazards cannot be mitigated. Policy PS-2.4 encourages the City to educate the community to mitigate potential injury and damage associated with earthquakes. Action PS-2a directs the City to review and update the City's geologic and seismic hazards maps at least annually. Action PS-2b ensures development proposals are reviewed to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind. Action PS-2c ensures adoption and implementation of the latest version of the building codes adopted by the State. Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Action PS-2e requires feasible mitigation on development projects to reduce the risk to the community from hazards related to geologic conditions and seismic activity

Future development and improvement projects would be required to prepare site-specific geotechnical studies to identify geologic and soil conditions specific to the site and provide design recommendations consistent with the requirements of State and City codes. Implementation of CBSC and the Municipal Code requirements related to seismic and geologic conditions and the General Plan Update policies and actions would ensure that future development projects are evaluated for potential geologic and seismic risks

and that potential risks are adequately addressed. With the implementation of the policies and actions in the General Plan Update, as well as applicable State and City codes, potential impacts associated with unstable geologic conditions would be reduced to less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-2: Geologic and Seismic Hazards. A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Policy PS-2.1: Geologic Hazard Identification. Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

Policy PS-2.2: Earthquake Protection. Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

Policy PS-2.3: Development Projects. Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

Policy PS-2.4: Seismic Hazard Education. Continue to seek out opportunities to educate and encourage the community on ways to implement measures to mitigate potential injury and damage associated with earthquakes.

Action PS-2a: Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

Action PS-2b: Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

Action PS-2c: Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Action PS-2e: Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the

California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

4. Expansive Soils

Threshold: Would the project be located on expansive soil, as defined in Tables 18-1-D of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Finding: Less than significant. (Draft EIR, Impact GS-4, pages 5.7-21 through 5.7-23)

Explanation: The majority of the Planning Area has 'Low to Medium' expansive soils. The areas with 'Low to High' expansive soils are in proximity to Dominguez Channel, within the City's Sphere of Influence. The proposed Public Safety Element of the General Plan Update includes policies and actions that are designed to protect the City from geologic hazards, including expansive soils. Policy PS-2.1 incorporates geotechnical hazard data in future land use decision-making, site design, and construction standards. Policy PS-2.2 enforces State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities. Policy PS-2.3 monitors and enforces mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibits development in areas where seismic and geologic hazards cannot be mitigated. Action PS-2a directs the City to review and update the City's geologic and seismic hazards maps at least annually. Action PS-2b ensures development proposals are reviewed to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind. Action PS-2c ensures adoption and implementation of the latest version of the building codes adopted by the State. Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Action PS-2e reduces the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects.

Future development and infrastructure projects considered by the City, would be evaluated for conformance with the CBSC, the General Plan Update policies and actions, Lawndale Municipal Code, and other regulations. Subsequent development and infrastructure projects requiring discretionary review would also be analyzed for potential environmental

impacts, consistent with the requirements of CEQA. Future development and improvement projects would be required to prepare site-specific geotechnical studies to identify geologic and soil conditions specific to the site, including the potential for expansive soils. A site-specific geotechnical investigation would identify the potential for damage related to expansive soils and non-uniformly compacted fill and engineered fill. If a risk is identified, design criteria and specification options may include removal of the problematic soils, and replacement, as needed, with properly conditioned and compacted fill material that is designed to withstand the forces exerted during the expected shrink-swell cycles and settlements. Design criteria and specifications set forth in the design-level geotechnical investigation would ensure impacts from problematic soils are minimized. Thus, implementation of CBSC and the Municipal Code requirements related to on-site soil conditions and the General Plan Update policies and actions would ensure that future development projects are evaluated for potential risks associated with development on expansive soils, and that potential risks are adequately addressed. Therefore, this impact is considered less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-2: Geologic and Seismic Hazards. A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Policy PS-2.1: Geologic Hazard Identification. Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

Policy PS-2.2: Earthquake Protection. Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

Policy PS-2.3: Development Projects. Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

Action PS-2a: Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

Action PS-2b: Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

Action PS-2c: Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Action PS-2e: Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

5. Septic Tanks

Threshold: Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

Finding: Less than significant. (Draft EIR, Impact GS-5, pages 5.7-23)

Explanation: Wastewater service is provided to the Planning Area by the City and the Los Angeles County Sanitation Districts (LACSD). Local wastewater produced in the City connects to sewer mains maintained by the LACSD. LACSD owns, operates, and maintains sewer lines that form the backbone of the regional wastewater conveyance system. Future development within the Planning Area would be required to connect to the existing sewer system and would not involve the use of septic tanks or alternative wastewater disposal systems. As such, no impact would occur.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no General Plan Update goals, policies, or actions specific to septic tanks or alternative waste water disposal systems.

6. Paleontological Resources

Threshold: Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Finding: Less than significant. (Draft EIR, Impact GS-6, pages 5.7-23 through 5.7-25)

Explanation: The City is underlain by two geologic units (Old alluvium and Old eolian deposits) that are considered to have a high paleontological sensitivity at surface and at depth. Although fossil localities have not been recorded within the Planning Area, deposits from the Pleistocene Epoch have produced two fossil localities within three miles of the Planning Area. Therefore, it is possible that undiscovered paleontological resources could

be encountered during ground-disturbing activities. Damage to or destruction of a paleontological resource would be considered a potentially significant impact under local, State, or Federal criteria. The proposed General Plan Update Resource Management Element includes policies and actions to protect significant paleontological resources within the Planning Area. Policy RM-3.1 requires the protection areas containing paleontological resources. Action RM-3a requires the City assess development proposals for potential impacts to sensitive historic, archaeological, and paleontological resources pursuant to CEQA. Action RM-3f requires an assessment of the potential for development proposals to significantly impact paleontological resources pursuant to CEQA. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation.

With implementation of the General Plan Update policies and actions, potential impacts to paleontological resources associated with future development anticipated by the General Plan Update would be reduced to less than significant

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3f: The City shall require an assessment of the potential for development proposals to significantly impact paleontological resources pursuant to the California Environmental Quality Act Guidelines. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation.

H. HAZARDS AND HAZARDOUS MATERIALS

1. Transport, Use, and Disposal of Hazardous Materials

Threshold: Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Finding: Less than significant. (Draft EIR, Impact HAZ-1, pages 5.9-14 through 5.9-19)

Explanation: Implementation of the General Plan Update would accommodate the future development of both residential and non-residential uses within the Planning Area. Increased development could result in an increase in the routine transport, use, and storage of hazardous materials in the City, potentially resulting in accidental releases. Exposure of persons to hazardous materials could also occur through the operations of future developments associated with the improper handling of hazardous materials/wastes; transportation accident; environmentally unsound disposal methods; or fire, explosion, or other emergencies. The use, transportation, and disposal of hazardous materials is regulated and monitored by local fire departments, CUPAs, Cal OSHA, and the DTSC consistent with the requirements of Federal, State, and local regulations and policies. Facilities that store hazardous materials on-site are required to maintain a Hazardous Materials Business Plan in accordance with State regulations. In addition to the requirements associated with Federal, State, and local regulations, the General Plan Update includes policies and actions to address potential impacts associated with hazardous materials among other issues. Proposed Mobility Element Policy M-7.1 directs the City to maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads. Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 directs the City to coordinate with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the Los Angeles County Fire Department (LACoFD) to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Policy PS-3.6 promotes the routing of vehicles transporting hazardous

materials to transportation corridors posing the minimum risk to the public and prohibits the parking of vehicles transporting hazardous materials on City streets. Policy PS-3.7 requires new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible. Policy PS-3.8 directs the City to coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail. Policy PS-3.9 encourages the City to educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c protects the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Action PS-3d directs the City to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home, and to provide informational materials about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline. The General Plan Update also includes policies and actions to ensure that the City has adequate emergency response plans and measures to respond in the event of an accidental release of a hazardous substance. Policy PS-1.3 requires the implementation emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses. Policy PS-1.5 directs the City to support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1b directs the City to implement and update (as necessary) the City's EOP. Compliance with the requirements of Federal, State, and local laws and regulations regarding the use and storage of hazardous materials would ensure that risks resulting from the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes associated with implementation of the General Plan Update would be less than significant

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

MOBILITY ELEMENT

Policy M-7.1: Local Truck Routes. Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.3: Hazardous Waste. Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

PUBLIC SAFETY ELEMENT

Goal PS-1: Emergency Operations. A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.1: Citywide Safety. Support projects, programs, policies, and regulations that help to mitigate potential impacts associated with natural and man-made hazards.

Policy PS-1.2: Critical Facilities. Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.3: Emergency Preparedness and Response. Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

Policy PS-1.4: Local Hazard Mitigation. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.5: Resources. Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Policy PS-1.6: Emergency Access. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Policy PS-1.7: Public Safety Education. Promote public safety education programs to educate on emergency preparedness, reduce accidents, injuries, and fires, and to train members of the public to respond to emergencies.

Policy PS-1.8: Cooperation. Collaborate with the school district, businesses, nonprofit organizations, and community members/groups to maintain safety throughout the City.

Action PS-1a: Regularly review and coordinate emergency response procedures with Los Angeles County and State emergency response procedures.

Action PS-1b: Continue to implement and update (when relevant) the City's Emergency Operations Plan.

Action PS-1c: Continue to implement and update (at least every five years) the City's Local Hazard Mitigation Plan.

Action PS-1d: Coordinate with local agencies and organizations to develop and distribute informational brochures and give presentations to civic groups and local schools to educate residents and businesses about appropriate actions to take during an emergency situation.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

Action PS-1f: Promote after school programs, volunteer programs, and Business and Neighborhood Watch programs to help maintain a safe environment.

Goal PS-3: Hazardous Materials. A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: Compatible Land Uses. Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: Safe Residential Uses. Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: Emergency Operations. Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: Cleanup Sites. Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: Monitoring. Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Policy PS-3.6: Transportation. Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

Policy PS-3.7: Pipelines. Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

Policy PS-3.8: Rail Lines. Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

Policy PS-3.9: Public Education. Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Action PS-3d: Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

Action PS-3e: Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

2. Hazardous Materials Release

Threshold: Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Finding: Less than significant. (Draft EIR, Impact HAZ-2, pages 5.9-19 through 5.9-24)

Explanation: *Short-Term Construction-Related Accidental Release of Hazardous Materials*

The General Plan Update would enable development of new residential and non-residential uses within the Planning Area. Construction activities associated with new development could result in upset and/or accident conditions involving the release of hazardous materials into the environment. Future development accommodated through implementation of the General Plan Update could involve the demolition of existing structures and buildings as areas within the City are redeveloped. The presence of lead-based paint, asbestos-containing materials (ACM), and/or other contaminants are likely present in some structures. All demolition that could result in the release of ACMs or lead-based paint would be conducted according to federal and State regulations. In accordance with SCAQMD Rule 1403, if ACM material is found, abatement of asbestos would be required prior to any demolition activities. If paint is separated from building materials (chemically or physically) during demolition of the structures, the paint waste would be required to be evaluated independently from the building material by a qualified Environmental Professional in accordance with California Code of Regulations Title 8, Section 1532.1. If lead-based paint is found, abatement would be required to be completed by a qualified Lead Specialist prior to any demolition activities. Compliance with existing regulations related to ACM and lead-based paint would reduce potential impacts to a less than significant level.

Future development accommodated through implementation of the General Plan Update could involve grading and excavation activities which could expose construction workers and the public to previously unknown hazardous substances present in the soil or groundwater. The public could also be exposed to hazardous materials if new development or redevelopment were to be located on a current or historical hazardous material site. Future development associated with implementation of the General Plan Update would be reviewed at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities that may occur on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the regulatory agencies, such as DTSC and the Los Angeles RWQCB. In addition to the requirements associated with Federal, State, and local regulations, the General Plan Update includes policies and actions to address potential impacts associated with potentially contaminated sites. Proposed Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs

the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Compliance with General Plan Update goals, policies, and actions, and existing regulations would reduce potential impacts involving the release of hazardous materials into the environment as a result of on-site contamination to a less than significant level.

Long-Term Operations-Related Accidental Release of Hazardous Materials

Long-term operation activities associated with new development could result in upset and/or accident conditions involving the release of hazardous materials into the environment. The transport, storage, and handling of hazardous materials by developers, contractors, business owners, and others are required to comply with Federal, State, and local regulations during project construction and operation. Facilities that use hazardous materials are required to obtain permits from the EPA under the RCRA, which gives the EPA the authority to control the generation, transportation, treatment, storage, and disposal of hazardous waste. Additionally, the hazardous materials regulations included in Federal law govern the transportation of hazardous materials. Locally, the LACoFD Health Hazardous Materials Division is the CUPA for Los Angeles County and is responsible for consolidating, coordinating, and making consistent the administrative requirements, permits, inspections, and enforcement activities of State standards regarding the transportation, use, and disposal of hazardous materials in Los Angeles County, including the Planning Area. The General Plan Update includes policies and actions to address potential accidental exposure of individuals as a consequence of unknown existing environmental contaminants. Proposed Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 coordinates with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers

coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Policy PS-3.6 promotes the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibits the parking of vehicles transporting hazardous materials on City streets. Policy PS-3.7 requires new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible. Policy PS-3.8 directs the City to coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail. Policy PS-3.9 encourages the City to educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Action PS-3d directs the City to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home, and to provide informational materials about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline. Proposed Resource Management Element Policy RM-2.3 promotes the proper disposal of hazardous waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal. Mobility Element Policy M-7.1 directs the City to maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads. Compliance with all applicable Federal, State, and local laws related to the transport, storage, and handling of hazardous materials would reduce the likelihood and severity of accidents, and impacts involving the release of hazardous materials into the environment would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

MOBILITY ELEMENT

Policy M-7.1: Local Truck Routes. Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.3: Hazardous Waste. Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

PUBLIC SAFETY ELEMENT

Goal PS-3: Hazardous Materials. A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: Compatible Land Uses. Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: Safe Residential Uses. Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: Emergency Operations. Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: Cleanup Sites. Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: Monitoring. Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Policy PS-3.6: Transportation. Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

Policy PS-3.7: Pipelines. Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

Policy PS-3.8: Rail Lines. Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

Policy PS-3.9: Public Education. Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Action PS-3d: Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

Action PS-3e: Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

3. Hazards Near Schools

Threshold: Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Finding: Less than significant. (Draft EIR, Impact HAZ-3, pages 5.9-24 through 5.9-27)

Explanation: Future development within the Planning Area could potentially emit or handle hazardous materials within one-quarter mile of an existing or proposed school. In addition to the requirements associated with Federal, State, and local regulations, the General Plan Update includes policies and

actions to address potential impacts associated with hazardous materials. Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 directs the City to coordinate with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Policy PS-3.6 promotes the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibits the parking of vehicles transporting hazardous materials on City streets. Policy PS-3.7 requires new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible. Policy PS-3.8 directs the City to coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail. Policy PS-3.9 educates residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Action PS-3d directs the City to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home, and to provide informational materials about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline. Mobility Element Action M-7a directs the City to review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the

City. Implementation of the safety procedures and regulations mandated by applicable Federal, State, and local laws and the General Plan Update policies and actions would ensure that potential risks resulting from the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes in proximity to a school associated with implementation of the General Plan Update would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

MOBILITY ELEMENT

Policy M-7.1: Local Truck Routes. Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.3: Hazardous Waste. Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

PUBLIC SAFETY ELEMENT

Goal PS-3: Hazardous Materials. A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: Compatible Land Uses. Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: Safe Residential Uses. Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: Emergency Operations. Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: Cleanup Sites. Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: Monitoring. Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Policy PS-3.6: Transportation. Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

Policy PS-3.7: Pipelines. Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

Policy PS-3.8: Rail Lines. Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

Policy PS-3.9: Public Education. Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Action PS-3d: Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

Action PS-3e: Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

4. Waste Sites

Threshold: Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Finding: Less than significant. (Draft EIR, Impact HAZ-4, pages 5.9-27 through 5.9-29)

Explanation: There are no active hazardous waste facilities cleanup sites within the Planning Area listed in the EnviroStor database. There are three open LUST sites undergoing remediation within the Planning Area. Additionally, the Planning Area contains one active facility listed in the SWIS database. These sites comprise the Cortese list, compiled pursuant to Government Code Section 65962.5. Future development associated with implementation of the General Plan Update would be evaluated at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities occurring on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the DTSC and the Los Angeles RWQCB prior to construction. The General Plan Update includes policies and actions to address potential impacts associated with hazardous materials sites. Proposed Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 directs the City to coordinate with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Compliance with General Plan Update goals, policies, and actions, and existing regulations would reduce potential impacts involving the hazardous materials sites.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-3: Hazardous Materials. A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: Compatible Land Uses. Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: Safe Residential Uses. Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: Emergency Operations. Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: Cleanup Sites. Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: Monitoring. Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

5. Public Airports

Threshold: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Finding: Less than significant. (Draft EIR, Impact HAZ-5, pages 5.9-29)

Explanation: There are no airports within the Planning Area. The closest airports to the Planning Area are the Hawthorne Municipal Airport, located approximately 1.5 miles to the northeast, and LAX, located approximately 2.5 miles to the northwest. According to the Los Angeles County ALUC, Lawndale is not located within the Hawthorne Municipal Airport Influence Area or the LAX Airport Influence Area. While the Planning Area is within two miles of a public use airport, it is not within the area identified in an airport land use plan as being adversely affected (i.e., within the Airport Influence Area). As such, impacts with regard to safety hazards to people residing or working in the Planning Area would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no General Plan Update goals, policies, or actions specific to airports

6. Emergency Plans

Threshold: Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Finding: Less than significant. (Draft EIR, Impact HAZ-6, pages 5.9-29 through 5.9-32)

Explanation: The General Plan Update would allow a variety of new residential and non-residential development, which would result in increased jobs and population in the Planning Area. The County OAERP addresses the planned response to extraordinary situations associated with natural disasters and/or human caused incidents, including wildfires, and outlines mutual aid provisions within the Los Angeles County OA. The City's EOP addresses the City's planned response to natural or human-caused disasters and describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support. The EOP does not provide a specific evacuation route map, as evacuation measures would be implemented based on the specific emergency and area affected. The General Plan Update incorporates the City's EOP by reference into the City of Lawndale's Public Safety Element

The General Plan Update identifies major arterials as the primary routes for evacuation; however, evacuation routes would depend upon the emergency event and area affected. The General Plan Update includes policies and actions to address emergency response and evacuation. Proposed Public Safety Element Policy PS-1.3 requires the implementation emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses. Policy PS-1.5 encourages the support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1b directs the City to implement and update (as

necessary) the City's EOP.

Future development within the Planning Area is not anticipated to result in the substantial modification of roadways surrounding specific development sites or the placement of any permanent physical barriers on adjacent roadways. There is the potential that traffic lanes located immediately adjacent to a development site may be temporarily closed or controlled by construction personnel during construction activities. However, any temporary construction activity would adhere to Municipal Code Section 17.36.220, which requires sidewalks, public streets, and, alleys adjacent to construction sites to be kept free of debris or other materials that could interfere with circulation for the duration of construction activities, as well as sixty days following substantial completion of such construction. Additionally, the applicant of any proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. LACoFD would review the proposed development for access requirements, minimum driveway widths, fire apparatus access roads, fire lanes, signage, access devices and gates, access walkways, among other requirements to ensure adequate emergency access would be provided to and within the site. The proposed development would be required to comply with all applicable Building and Fire Code requirements and would submit construction plans to the Fire Department's Engineering Building Plan Check Unit for review and approval prior to issuance of any building permit. Approval by the Fire Department would ensure that construction and operation of future projects associated with implementation of the General Plan Update would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan.

Primary access to all major roads would be maintained during construction of future developments within the Planning Area. As part of the site plan and design review process, future development projects would be reviewed for adequate infrastructure and access as well as consistency with adopted emergency and evacuation plans among many other environmental issues in order to ensure the safety of City residents and the physical environment. Therefore, impacts associated with adopted emergency response or evacuation plans would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-1: Emergency Operations. A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.1: Citywide Safety. Support projects, programs, policies, and regulations that help to mitigate potential impacts associated with natural and man-made hazards.

Policy PS-1.2: Critical Facilities. Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.3: Emergency Preparedness and Response. Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

Policy PS-1.4: Local Hazard Mitigation. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.5: Resources. Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Policy PS-1.6: Emergency Access. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Policy PS-1.7: Public Safety Education. Promote public safety education programs to educate on emergency preparedness, reduce accidents, injuries, and fires, and to train members of the public to respond to emergencies.

Policy PS-1.8: Cooperation. Collaborate with the school district, businesses, nonprofit organizations, and community members/groups to maintain safety throughout the City.

Action PS-1a: Regularly review and coordinate emergency response procedures with Los Angeles County and State emergency response procedures.

Action PS-1b: Continue to implement and update (when relevant) the City's Emergency Operations Plan.

Action PS-1c: Continue to implement and update (at least every five years) the City's Local Hazard Mitigation Plan.

Action PS-1d: Coordinate with local agencies and organizations to develop and distribute informational brochures and give presentations to civic groups and local schools to educate residents and businesses about appropriate actions to take during an emergency situation.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

Action PS-1f: Promote after school programs, volunteer programs, and Business and Neighborhood Watch programs to help maintain a safe environment.

7. Wildland Fires

Threshold: Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Finding: Less than significant. (Draft EIR, Impact HAZ-7, pages 5.9-32 through 5.9-33)

Explanation: The Planning Area is not located within a designated Fire Hazard Severity Zone (FHSZ) in State Responsibility Areas (SRA) or Local Responsibility Areas (LRA). The Planning Area is predominantly flat, built-out, and surrounded by highly urbanized development. Urbanized land does not typically facilitate the spread of wildfire in the same manner as vegetated, open space areas.

The General Plan Update Public Safety Element includes goals and policies to address public safety and emergency services, including fire protection services. Proposed Public Safety Element Policy PS-4.1 directs the City to coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards. Action PS-4a requires all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Future development allowed under the General Plan Update would be required to comply with the provisions of Federal, State, and local requirements related to wildland fire hazards, including State fire safety regulations associated with wildland-urban interfaces, fire-safe building standards, and defensible space requirements. As future development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with wildland fire hazards as required under CEQA. Therefore, through compliance with existing Federal, State, and local laws and regulations related to wildland fire hazards and implementation of the General Plan Update goals, policies, and actions, impact regarding the exposure of people or structures to significant loss, injury, or death involving wildland fires would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-4: Fire Hazards. A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: Fire Protection Services. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: Development Review. Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.3: Emergency Access. Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

Policy PS-4.4: Building Fire Codes. Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Policy PS-4.5: Hazard Mitigation Plans. Coordinate with local, State, and Federal agencies to update emergency, evacuation, and hazard mitigation plans, as necessary.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Action PS-4b: Work with LACoFD to disseminate educational programs for residents on fire hazard risks and fire safety measures.

I. HYDROLOGY AND WATER QUALITY

1. Water Quality Standards

Threshold: Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Finding: Less than significant. (Draft EIR, Impact HWQ-1, pages 5.10-17 through 5.10-21)

Explanation: Grading, excavation, removal of vegetation cover, and loading activities associated with future construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion impacts that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. The General Plan Update sets policies and actions for build-out of the City, but it does not envision or authorize any specific development project.

Because of this, the site-specific details of potential future development projects are currently unknown and analysis of potential impacts of such projects is not feasible and would be speculative. However, each future project must include detailed project specific drainage plans that control storm water runoff and erosion, both during and after construction. The RWQCB would require a project-specific SWPPP to be prepared for each future project that disturbs an area one acre or larger. The SWPPPs would include project-specific best management measures that are designed to control drainage and erosion. For projects disturbing less than one acre, Lawndale Municipal Code Section 13.12.070 would require compliance with minimum BMPs to reduce the discharge of pollutants.

Future development projects within the Planning Area would be required to be consistent with the MS4 Permit and Lawndale Municipal Code Chapter 3.16, which contains a number of requirements to control stormwater pollution, including post-construction runoff pollution reduction BMPs implemented through the SUSMP, including LID structural and non-structural BMPs to effectively reduce the amount of impervious area of a completed project site and promote the use of infiltration and other controls that reduce runoff; source control BMPs prevent runoff contact with pollutant materials that would otherwise be discharged to the MS4; and structural and non-structural BMPs for specific types of uses. Waters that are listed under Section 303(d) of the CWA are known as “impaired.” The Planning Area includes a portion of the Dominguez Channel (lined portion above Vermont Avenue), which is listed on the Section 303(d) list as a Category 5 water body. Continued compliance with the Dominguez Channel Watershed Management Area EWMP, which in part requires the implementation of BMPs to reduce discharge of pollutants in stormwater to the maximum extent practicable, would help address water quality priorities and ensure compliance with the established regulatory framework, including the CWA. Storm drain infrastructure in the City is jointly owned and operated by the City and County. The provision and maintenance of stormwater detention facilities, as needed, would reduce runoff rates and peak flows

The General Plan Update proposes goals, policies, and actions that aim to enhance stormwater quality and infiltration, as well as ensure development projects are reviewed to identify potential stormwater and drainage impacts and require development to include measures to confirm off-site runoff is not increased beyond pre-development levels. Proposed Resource Management Element Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Policy RM-6.4 directs the City to work cooperatively with local

water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Proposed Community Facilities Element Policy CF-4.1 encourages LACFCD to maintain sufficient levels of storm drainage service and improve flood control facilities and channel segments. Policy CF-4.2 encourages stormwater to be directed towards permeable surfaces to allow for more percolation of stormwater into the ground. Policy CF-4.3 promotes BMPs and LID measures to treat stormwater before discharge from the site. Policy CF-4.4 directs the City to participate in regional programs to implement the NPDES program. Action CF-4a ensures the City continues to implement the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA. Action CF-4b directs the City to work with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Action CF-4d ensures City review of development projects to identify potential storm drain and drainage impacts and requires developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. Existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, WQMPs, SWPPPs, and to implement BMPs. These regulatory requirements are intended to ensure that water quality does not degrade to levels that would violate water quality standards. Through implementation of the General Plan Update policies and actions, implementation of the Municipal Code requirements identified above, compliance with mandatory Federal and State regulations, and compliance with the existing regulations for the Dominguez Channel Watershed, future development projects associated with implementation of the General Plan Update would not violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: Stormwater. Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

COMMUNITY FACILITIES ELEMENT

Policy CF-4.1: Maintain Capacity. Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

Policy CF-4.2: Stormwater Runoff. Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

Policy CF-4.3: Stormwater Treatments. Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

Policy CF-4.4: National Programs. Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Action CF-4a: Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

Action CF-4b: Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

Action CF-4c: Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

2. Groundwater Supplies

Threshold: Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Finding: Less than significant. (Draft EIR, Impact HWQ-2, pages 5.10-21 through 5.10-24)

Explanation: The Planning Area is underlain by the West Coast Basin of the Coastal Plain of the Los Angeles Groundwater Basin. The West Coast Basin is an adjudicated basin; groundwater extraction is monitored by the court-appointed Watermaster, who administers and enforces the terms of the West Coast Basin Judgment and reports annually to the Court on significant groundwater-related events that occur in the Basin. Potable water in the Planning Area is provided by the Golden State Water Company (GSWC) Southwest System. GSWC Southwest uses adjudicated groundwater supplies from the Central Basin and West Coast Basin for use in its service area.

Project implementation would provide opportunities for residential and non-residential development and is expected to result in increased population growth in the Planning Area, and a corresponding increase in the

demand for additional water supplies. However, the West Coast Basin Adjudication and Central Basin Adjudication limit the volumes of water that each party may extract from the respective basin through an Allowed Pumping Allocation (APA). The Watermaster is charged with monitoring and reporting the basins' conditions in order to ensure groundwater overdraft and sea water intrusion do not occur. Although Project implementation could result in an increased demand for water supplies, which have not been accounted for in the Urban Water Management Plan (UWMP), the Project would not cause GSWC to pump additional groundwater supplies beyond its allocation or beyond the APA authorized through the adjudication of each basin. Thus, the Project would not substantially decrease groundwater supplies that would impede sustainable groundwater management of the basin.

Although future development activities have the potential to increase impervious areas, these areas are limited and do not provide for substantial groundwater recharge within the Planning Area. Recharge to the West Coast Basin's groundwater supply is mostly underflow from the Central Basin, through the Newport-Inglewood fault zone, and injection into the West Coast Basin; natural sources of groundwater recharge from percolation of precipitation, irrigation return flow from fields and lawns, and other applied surface waters are relatively minor. Development activities associated with implementation of the Project would consist of infill and redevelopment on currently urbanized sites. Given that future development associated with implementation of the Project would not appreciably add to the volume of imperious surfaces in the Planning Area, potential impacts to groundwater recharge such that the Project may impede sustainable groundwater management of the basin would be less than significant.

The General Plan Update includes policies and actions that support water conservation, groundwater management, and coordination with local water districts when planning for adequate capacity to accommodate future growth. Proposed Resource Management Element Policy RM-6.1 promotes water conservation strategies using innovative strategies and contemporary best practices. Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6b calls for the City to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Under Action RM-6c, the City will work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping;

expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy CF-2.1 directs City coordination with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. Action CF-2c directs the City to cooperate with the State, regional, and local water agencies and suppliers to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Implementation of the General Plan policies, combined with continued management of the West Coast and Central Basins, would further ensure that future development anticipated by the General Plan Update would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.1: Conservation. Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;

- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Policy CF-2.1: Water Supply Needs. Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: Use of Recycled Water. Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: Climate Change Impacts. Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

3. Erosion, Siltation, Flooding, and Runoff

Threshold: Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: result in substantial erosion or siltation on- or off-site; substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or

provide substantial additional sources of polluted runoff; or impede or redirect flood flows?

Finding: Less than significant. (Draft EIR, Impact HWQ-3, pages 5.10-24 through 5.10-29)

Explanation: *Erosion and Siltation*

Implementation under the General Plan Update would result in new development and redevelopment projects with the potential to increase the area of impervious surfaces and/or result in alteration of existing drainage patterns. Future development under the General Plan Update would be subject to NPDES permit requirements that address the control of erosion and siltation. This includes the Construction General Permit, which requires a SWPPP and the effective implementation of erosion control measures for projects greater than one acre in size (or part of a larger plan of development). The Los Angeles RWQCB conducts inspections and enforces the Construction General Permit at construction sites. Additionally, Lawndale Municipal Code Section 13.12.070 requires applicants for grading or building permits within the City to provide satisfactory proof of compliance with the Construction General Permit, including a SWPPP, when applicable. Applicants that are not required to comply with the Construction General Permit are required to implement a grading and construction activity runoff control program.

Development under the General Plan Update would also be subject to the post-construction requirements of the MS4 NPDES permit. Lawndale Municipal Code Section 13.16.060 requires applicable development and redevelopment projects to submit a SUSMP for City review and approval, which is required to be incorporated into the applicant's project plans. The SUSMP ensures that implementing project designs have incorporated LID BMPs for the effective treatment of pollutants of concern in stormwater runoff from a design storm event. Section 13.16.070 requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110 requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects.

Further, the General Plan Update Public Safety Element and Resource Management Element includes goals, policies, and actions that address erosion and siltation from the addition of impervious surfaces and alteration of existing drainage patterns. Proposed Resource Management Element Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Policy RM-6.4

directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Policy CF-4.3 promotes BMPs and LID measures to treat stormwater before discharge from the site. Policy CF-4.4 directs the City to participate in regional programs to implement the NPDES program. Action CF-4a ensures the City continues to implement the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA. Action CF-4b directs the City to work with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. Through implementation of the General Plan Update policies and existing regulations, erosion/siltation impacts from changes to the existing drainage patterns and increasing impervious surfaces would be less than significant.

Surface Runoff

The Planning Area is primarily developed, with limited areas of pervious surfaces. Although future development activities have the potential to slightly increase impervious areas within the Planning Area, the majority of development activities associated with implementation of the Project would consist of infill and redevelopment on currently urbanized sites. Federal, State, and local regulations would require individual projects to provide the on-site storm drain infrastructure and any off-site infrastructure improvements to ensure stormwater runoff associated with the proposed development would be adequately captured and conveyed into the City's storm drain system and LACFCD facilities. Therefore, implementation of the Project would not substantially increase the rate or amount of surface runoff which would result in flooding on- or offsite or create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems. Impacts would be less than significant in this regard.

The General Plan Update contains policies and actions to provide adequate stormwater infrastructure for flood control and to reduce run-off quantity. Proposed Resource Management Element Policy RM-6.4 directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Proposed Community Facilities Element Policy CF-4.1 encourages LACFCD to maintain sufficient levels

of storm drainage service and improve flood control facilities and channel segments. Policy CF-4.2 encourages stormwater to be directed towards permeable surfaces to allow for more percolation of stormwater into the ground. Policy CF-4.3 promotes BMPs and LID measures to treat stormwater before discharge from the site. Policy CF-4.4 directs the City to participate in regional programs to implement the NPDES program. Action CF-4a ensures the City continues to implement the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA. Action CF-4b directs the City to work with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Action CF-4d ensures City review of development projects to identify potential storm drain and drainage impacts and requires developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. Additionally, Lawndale Municipal Code Chapter 17.88, Water Efficient Landscape, establishes requirements and standards for water efficient landscapes in new and substantially altered or expanded existing development projects, including the integration of stormwater BMPs into landscape design plans to minimize runoff and to increase on-site rainwater retention and infiltration. Through implementation of the General Plan Update Plan policies and actions and existing Federal, State, and local regulations discussed above, runoff would not exceed the capacity of drainage systems, provide substantial additional sources of polluted runoff, or cause flooding impacts from changes to the existing drainage patterns and increased impervious surfaces. Therefore, impacts would be less than significant.

Flood Flows

The Planning Area is highly urbanized and primarily developed with residential and non-residential uses. The Dominguez Channel is a channelized watercourse that runs through the eastern portion of the Planning Area. The Project does not propose any changes to the Dominguez Channel and would not result in the alteration of the course of a river or stream. There are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard. The General Plan Update sets policies and actions for buildout of the City, but does not envision or authorize any specific development project. The General Plan Update contains policies and actions designed to reduce runoff flows and flood risk in the City. Proposed Public Safety Element Policy PS-5.1 coordinates with local, State, and Federal agencies so that the City's regulations related to flood control comply with Federal, State, and Local standards. Policy PS-5.3 requires development projects to adhere to the latest building, site, and design codes to avoid or minimize the

risk of flooding hazards in the community. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Policy PS-5.6 directs the City to maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property. Action PS-5a directs the City to monitor changes in Federal and State laws and regulations related to local flood protection, including the NFIP, and incorporates necessary changes into the Municipal Code and building codes as required. Action PS-5c directs the City to review County, State, and Federal flood control best practices and incorporates appropriate standards into the Municipal Code. The City has adopted the California Building Code, which contains flood resistant construction requirements. Future development projects would be required to adhere to applicable Federal, State, and local flood-related regulations. Additionally, construction of storm drainage improvements would occur as part of an overall development or infrastructure project, and would be considered in the environmental review associated with the specific project being proposed. With implementation of General Plan Update goals, policies, and implementation and compliance with existing regulations, the General Plan Update would not impede or redirect flood flows; impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: Stormwater. Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution

Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-5.1: Flood Control Regulations. Coordinate with local, state, and Federal agencies so that the City's regulations related to flood control are in compliance with Federal, State, and Local standards.

Policy PS-5.3: Site Design. Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

Policy PS-5.4: Best Management Practices. Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.5: Changing Conditions. Coordinate with the Los Angeles County Flood Control and Waterworks Districts on changing flood conditions associated with climate change and extreme weather.

Policy PS-5.6: Local Storm Drainage Infrastructure. Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

Action PS-5a: Monitor changes in Federal and State laws and regulations related to local flood protection, including the National Flood Insurance Program and incorporate necessary changes into the Municipal Code and building codes as required.

Action PS-5b: Communicate with FEMA annually regarding updates to Flood Insurance Rate Maps and Letter of Map Revisions.

Action PS-5c: Periodically review County, State, and Federal flood control best practices and incorporate appropriate standards into the Municipal Code.

COMMUNITY FACILITIES ELEMENT

Policy CF-4.1: Maintain Capacity. Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

Policy CF-4.2: Stormwater Runoff. Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

Policy CF-4.3: Stormwater Treatments. Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

Policy CF-4.4: National Programs. Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Action CF-4a: Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

Action CF-4b: Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

Action CF-4c: Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

4. Flood Hazard, Tsunami, and Seiche Zones

Threshold: Would the project, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Finding: Less than significant. (Draft EIR, Impact HWQ-4, pages 5.10-29 through 5.10-32)

Explanation: There are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard. Pursuant to the CWA, each subsequent development project or improvement project that disturbs more than one acre would be required to obtain NPDES coverage under the Construction General Permit, which would require an approved SWPPP that includes BMPs for grading and preservation of topsoil. SWPPPs are designed to control storm water quality degradation to the extent practicable using BMPs during and after construction. Further, the General Plan Update includes policies and actions to reduce the risk of flooding and ensure compliance with regulatory requirements. Proposed Public Safety Element Policy PS-5.1 coordinates with local, State, and Federal agencies so that the City's regulations related to flood control comply with Federal, State, and Local standards. Policy PS-5.2 coordinates with FEMA so that Federal Insurance Rate Maps correctly depict flood hazards in the City. Policy PS-5.3 requires development projects to adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Policy PS-5.5 coordinates with LACFCD on changing flood conditions associated with climate change and extreme weather. Policy PS-5.6 directs the City to maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property. Action PS-5a directs the City to monitor changes in Federal and State laws and regulations related to local flood protection, including the NFIP, and incorporates necessary changes into the Municipal Code and building codes as required. Action PS-5c directs the City to review County, State, and Federal flood control best practices and incorporates appropriate standards into the Municipal Code. Proposed Resource Management Element Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment.

The Planning Area is approximately three miles inland of the Pacific Ocean and is not located within a mapped Tsunami Hazard Area. There are no dams with the potential to inundate the Planning Area according to the Division of Safety of Dams Dam Breach Inundation Maps. There is a man-made lake in Alondra Park, within close proximity to the Planning Area; however, due to its size and the flat topography of the area, this lake would not generate a significant seiche risk to the Planning Area. As a result, tsunamis and seiches do not pose hazards to the Planning Area

With implementation of General Plan Update policies and actions, and implementation and compliance with existing regulations, impacts associated with the risk of pollutants from seiches and flooding that may

result from adoption and implementation of the General Plan Update would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: Stormwater. Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-5.1: Flood Control Regulations. Coordinate with local, state, and Federal agencies so that the City's regulations related to flood control are in compliance with Federal, State, and Local standards.

Policy PS-5.2: Flood Maps. Coordinate with Federal Emergency Management Agency (FEMA) so that Federal Insurance Rate Maps correctly depict flood hazards in the City.

Policy PS-5.3: Site Design. Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

Policy PS-5.4: Best Management Practices. Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.5: Changing Conditions. Coordinate with the Los Angeles County Flood Control and Waterworks Districts on changing flood conditions associated with climate change and extreme weather.

Policy PS-5.6: Local Storm Drainage Infrastructure. Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

Action PS-5a: Monitor changes in Federal and State laws and regulations related to local flood protection, including the National Flood Insurance Program and incorporate necessary changes into the Municipal Code and building codes as required.

Action PS-5b: Communicate with FEMA annually regarding updates to Flood Insurance Rate Maps and Letter of Map Revisions.

Action PS-5c: Periodically review County, State, and Federal flood control best practices and incorporate appropriate standards into the Municipal Code.

5. Water Quality Control Plan and Groundwater Management Plan

Threshold: Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Finding: Less than significant. (Draft EIR, Impact HWQ-5, pages 5.10-32 through 5.10-35)

Explanation: The local water quality control plan (Basin Plan) is maintained by the Los Angeles RWQCB. When permittees and projects comply with the provisions of applicable NPDES permits and water quality permitting, they are consistent with the Basin Plan. The General Plan Update includes policies to implement NPDES requirements and enforcement of said regulations, such as: Action RM-6a, which ensures projects of one acre or more complete a SWPPP in compliance with State law and the City's MS4 permit; Action CF-4a, which implements the Watershed Control Measures identified in the EWMP for the Dominguez Channel WMA Group; and Action CF-4b, which works with the Los Angeles RWQCB, LACFCD, and Dominguez Channel WMA Group to meet the requirements of the MS4 Permit. Through implementation of existing regulations and the General Plan Update policies and actions, implementation of the General Plan Update would not conflict or obstruct a water quality control plan. Therefore, impacts in this regard will be less than significant.

The Planning Area receives water from the GSWC Southwest System, which receives groundwater from the Central Basin and West Coast Basin. In compliance with the Central Judgment and West Coast Judgment, the Watermasters submit an annual report to the Los Angeles County Superior Court, which has jurisdiction to monitor ongoing management of the basins. The Central and West Coast Basins were designated as very low priority

basins. The SGMA exempts adjudicated groundwater basins from the requirements of designating a Groundwater Sustainability Agency and developing a Groundwater Sustainability Plan. The Central Judgment and West Coast Judgment provide for the legal and practical means of ensuring that the waters of each Basin are sustainably managed and put to maximum beneficial use. New development and redevelopment projects accommodated by the General Plan Update would be subject to the Central Basin Judgment West Coast Basin Judgment. Subsequent development projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Therefore, the General Plan Update would not conflict with implementation of a sustainable groundwater management plan.

The General Plan Update includes policies to support water conservation and responsible management of groundwater resources which is consistent with the tasks of the Watermaster. Proposed Resource Management Element Policy RM-6.1 promotes water conservation strategies using innovative strategies and contemporary best practices. Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6b calls for the City to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Under Action RM-6c, the City will work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy directs City coordination with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. Thus, adoption and implementation of the General Plan Update will not conflict or obstruct a sustainable groundwater management plan and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.1: Conservation. Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: Stormwater. Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;

- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Policy CF-2.1: Water Supply Needs. Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: Use of Recycled Water. Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: Climate Change Impacts. Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

Policy CF-4.2: Stormwater Runoff. Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

Policy CF-4.3: Stormwater Treatments. Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

Policy CF-4.4: National Programs. Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

Action CF-4a: Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

Action CF-4b: Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez

Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

Action CF-4c: Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

J. LAND USE AND PLANNING

1. Established Communities

Threshold: Would the project physically divide an established community?

Finding: Less than significant. (Draft EIR, Impact LU-1, pages 5.11-1 through 5.11-13)

Explanation: The proposed General Plan Update establishes the City's vision for future growth and development. Goal LU-1 of the General Plan Update aims to achieve "*A community with a fiscally sustainable mix of land uses that meets the diverse needs of Lawndale residents, offers a variety of housing, employment opportunities, and support the provision of public services.*" The land uses allowed under the proposed General Plan provide opportunities for cohesive new growth at infill locations primarily within

the Hawthorne Boulevard Specific Plan area, but would not create physical division within the community. The Project does not introduce new roadways or new or significantly expanded infrastructure that would divide an established community. The General Plan Update Land Use Element includes policies and actions to support cohesive development that would not physically divide an established community. Specifically, Policy LU-2.1 would encourage the preservation of the basic pattern of existing land uses, preserving residential neighborhoods, while providing for the enhancement of mixed-use corridors. Policy LU-3.1 considers as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area. Action LU-3c, through the development review process, evaluates development proposals for land use and transportation network compatibility with existing surrounding or abutting development or neighborhoods. The proposed General Plan would have a less than significant impact associated with the physical division of an established community.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-2.1: Existing Land Use Pattern. Strive to maintain the basic pattern of existing land uses, preserving residential neighborhoods, while providing for enhancement of mixed-use corridors to accommodate desirable redevelopment plans and improve economic sustainability.

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Policy LU-4.3: Site Planning. Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways)

that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Action LU-4e: Implement the City's existing development standards, or where not in place, create new standards (either through an update to the Zoning Code or update to the Hawthorne Boulevard Specific Plan or other regulating tool) to regulate new construction and revisions to existing buildings. In particular, new development standards shall be created for higher density stand-alone residential projects and mixed-use projects to ensure that quality infill developments can be created within the areas identified for focused growth.

2. Conflicts With Plans

Threshold: Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Finding: Less than significant. (Draft EIR, Impact LU-2, pages 5.11-13 through 5.11-24)

Explanation: The proposed General Plan Update was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection. Discussion of the proposed General Plan's consistency with State regulations, plans, and policies associated with specific environmental issues (e.g., air quality, transportation, water quality, etc.) is provided in the relevant chapters of the Draft EIR. The State would continue to have authority over any State-owned lands in the vicinity of the City and the proposed General Plan Update would not conflict with continued application of State land use plans, policies, and regulations adopted to avoid or mitigate environmental effects. The General Plan Update would be consistent with SCAG's regional planning efforts and a less than significant impact would occur in this regard. As set forth by State law, the General Plan serves as the primary planning document for the City and subordinate documents and plans would be updated to be consistent with the General Plan. Similar to the existing General Plan, the proposed General Plan Update focuses on a balanced land use pattern, creating a community where new development blends with existing neighborhoods, and promoting the City as a desirable place to live and work. The proposed General Plan Update carries forward and enhances policies and measures from the City's existing General Plan that were intended for environmental protection, and would not remove or conflict with City plans, policies, or regulations adopted for environmental protection. The proposed General Plan Update would require modifications to the City's Zoning Code to provide consistency between the General Plan and zoning; however, these modifications will not remove or adversely alter portions of the Lawndale Municipal Code that were adopted to mitigate an environmental effect. Subsequent development and infrastructure projects

would be required to be consistent with all applicable policies, standards, and regulations, including those land use plans, policies, and regulations adopted to mitigate environmental effects by the City as well as those adopted by agencies with jurisdiction over components of future development projects. The policies listed below would ensure that the General Plan Update does not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.6: Uses to Meet Daily Needs. Encourage uses that meet daily needs, such as grocery stores, local-serving restaurants, and other businesses and activities, within walking distance of residences to reduce the frequency and length of vehicle trips.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.2: Focused Areas for New Development. Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Policy LU-4.3: Site Planning. Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Policy LU-4.4: Pedestrian-Scale Amenities. Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

Policy LU-4.7: Landscaping. Encourage, to the maximum extent feasible, project and streetscape landscaping be designed to include drought tolerant, native California plant species and the use of a drip, micro-spray or other low-flow irrigation systems.

Action LU-4e: Continue to implement the City's existing development standards, or create new standards if appropriate, to regulate new construction and revisions to existing buildings. New standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill developments.

Action LU-4f: Seek grant funding ("greening" grants) to help offset the cost of landscape improvements along community corridors, with a focus on Hawthorne Boulevard.

MOBILITY ELEMENT

Policy M-1.7: Traffic Calming on Local Streets. Encourage traffic calming strategies, such as diverters, median islands, and speed humps, and incorporation of traffic calming design in residential and school areas to slow traffic and promote safety, while not reducing parking supply.

Action M-1e: Monitor cut-through traffic on local streets, especially along residential areas and schools, and where appropriate evaluate the applicability of traffic calming tools and implement improvements as necessary.

Policy M-2.2: Agency Coordination. Coordinate with neighboring cities, telecom companies, and regional agencies such as County of Los Angeles, South Bay Cities Council of Governments, and Metro to meet the mobility needs of people living in, working in, or visiting Lawndale.

Policy M-2.3: Facility Connections. Plan and implement vehicular facilities, roadway treatments, active transportation facilities, transit routes, and goods movement network to relate to those in neighboring jurisdictions.

Action M-2a: Participate in regional planning forums to ensure that the City's concerns are considered at the regional level.

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: Multimodal Connectivity. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-3.3: Streetscape Improvements. Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

Policy M-3.6: Safe Routes to School. Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.1: Transit Use. Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2: Improve Local Public Transit Service. Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: Transit Facilities. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Policy M-5.4: C (Green) Line Service. Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

Policy M-5.5: C (Green) Line Stations. Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

Policy M-5.6: Effects of New Technologies on Transit Use. Monitor the development of new mobility technologies and the potential effects on transit demand and how users access public transit.

Action M-5a: Continue on-going coordination with transit authorities toward the expansion of transit facilities.

ActionM-5b: Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

Policy M-6.1: Bicycle Master Plan. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: Local Travel Network. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.4: Sidewalk and Bikeway Gaps. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: Bicycle/Pedestrian Facilities at New Developments. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: Effects of New Technologies on Active Transportation. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-7.1: Local Truck Routes. Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Policy M-7.2: Roadway Design. Maintain roadway design standards to facilitate access to light industrial and manufacturing areas along designated truck routes.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

Policy M-9.2: Transportation Demand Management. Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Policy M-9.3: Regional Coordination. Encourage regional agencies such as Metro, the South Coast Air Quality Management District (SCAQMD), and the South Bay Cities

Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

Policy M-9.4: New Development. Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

Action M-9a: Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.

Action M-9b: Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.9: Active Transportation Trails. Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

Policy RM-1.10: Service Area Radius. Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-2.4: Source Reduction and Recycling Efforts. Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

Policy RM-2.5: Organic Waste. Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

Action RM-2a: On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste

disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

Policy RM-4.1: Regional Cooperation. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: Measurement and Enforcement. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: GHG Emissions. Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.8: Mitigation. Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: GHG Reduction. Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: Public Engagement. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade

these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NOx emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Policy RM-5.1: Compliance with State Legislation. Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: Green Building Standards Code. Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: Renewable Energy. Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: Energy-Efficient Materials. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: Energy Conservation. Promote energy conservation and recycling by the public and private sectors.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through state programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

PUBLIC SAFETY ELEMENT

Policy PS-7.1: Community Preparedness. Promote a well-prepared City that can effectively overcome natural disasters and scarcity of resources due to climate change.

Policy PS-7.2: Collaboration. Collaborate with local, regional, State and/or Federal jurisdictions and agencies on climate resiliency and adaptation strategies.

Policy PS-7.3: Ecological Recovery. Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

Policy PS-7.4: Air Pollution. Work with responsible Federal, State, and County agencies to decrease air pollution emissions occurring within the air basin to reduce the risk posed by air pollution.

Policy PS-7.5: Energy Supply. Promote plans and programs that increase sustainable energy sources.

Policy PS-7.6: Drought Preparation. Implement necessary actions and programs to improve drought preparation and response for the most vulnerable community members.

Policy PS-7.7: Cooling Centers. Designate public buildings, specific private buildings, or institutions with air conditioning as public cooling shelters; extend hours at air-conditioned sites during periods of extreme heat or power outage (if the site is supported by a backup generator).

Policy PS-7.8: Storms. Provide access to flood protection resources and services (signage, sandbags, etc.) as feasible at designated public facilities during and after extreme weather events.

Policy PS-7.9: Special Assistance. Address the needs of individuals with limited mobility or limited access to transportation for access to safe and comfortable shelter during extreme heat events or other severe weather events.

Policy PS-7.10: Leadership. Demonstrate leadership in local climate planning efforts through a range of tangible actions and policies at the municipal operations level.

Policy PS-7.11: Greenhouse Gas Reductions. Reduce communitywide greenhouse gas emissions locally by actively supporting regional efforts to reduce greenhouse gases throughout the county.

Policy PS-7.12: Extreme Heat Vulnerabilities. Require that new developments, major remodels, and redevelopments address urban heat island issues and reduce urban heat island effects for the proposed project site and adjacent properties.

Policy PS-7.13: Ongoing Monitoring. Monitor climate change-related effects with local, regional, state, and/or Federal partners to provide information of effectiveness of existing infrastructure and programs.

Action PS-7a: Provide information and resources to the public and businesses regarding steps the City is taking to address the issue of climate change.

Action PS-7b: Expand the use of energy-efficient lighting, such as LEDs for City-owned light facilities.

Action PS-7c: Consider purchasing only electric or alternative-energy vehicles for the City vehicle fleet, as appropriate, based on the intended use of the vehicle.

Action PS-7d: Evaluate the feasibility for government-constructed and/or -operated new development to exceed the California Green Building Standards Code CalGreen Tier 1, or successor program, standards.

Action PS-7e: Promote the use of sustainable and carbon-neutral energy sources in new development.

Action PS-7f: Explore using renewable energy and clean generation technologies such as solar, wind, biogas, or fuel cells to power City facilities where appropriate.

K. MINERAL RESOURCES

1. Regional and Statewide Mineral Resources

Threshold: Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Finding: Less than significant. (Draft EIR, Impact MR-1, page 5.12-3)

Explanation: The City has no known or identified mineral resources of regional or Statewide importance. The Planning Area is designated as MRZ-1 and MRZ-3. MRZ-1 classifies areas where adequate information indicates that no significant mineral deposits are present. MRZ-3 indicates that the significance of the mineral deposits is undetermined. The land within MRZ-3 is currently developed and is within a highly urbanized area. Given that this land has already been disturbed and developed, and that the Project does not propose any site-specific development, there is no potential for resource extraction from the MRZ-3 area. There are no known mineral deposits or resources in the Planning Area that are of significant value to the region or the State. Therefore, implementation of the proposed General Plan Update would have a less than significant impact on this environmental topic, and

no mitigation is required.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

2. Locally-Important Mineral Resource

Threshold: Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Finding: No impact. (Draft EIR, Impact MR-2, page 5.12-3 through 5.12-4)

Explanation: The Planning Area does not contain any "locally important mineral resource recovery sites." The Planning Area does not contain a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan. Implementation of the General Plan Update would not result in the loss of a designated mineral recovery site and as such, no impact would occur.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

L. NOISE

1. Ambient Noise Levels

Threshold: Would the project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Finding: Less than significant. (Draft EIR, Impact NOI-1, pages 5.13-20 through 5.13-29)

Explanation: *Transportation Noise Impacts*

Transportation noise includes noise from aircraft, railways, and roadways. The Planning Area is outside of any airport 65 dBA CNEL contours and therefore, there is no aircraft impact. One freight rail line runs through the City. The General Plan Update would not increase railway operations within the Planning Area; however, existing buildings are about 50 feet from the centerline of the railway and include primarily residential uses. Therefore, there is the potential for sensitive uses to be exposed to railway noise.

The primary noise source in the Planning Area by the year 2045 would continue to be vehicle traffic. By the year 2045, existing land uses adjacent

to the studied roadways would be exposed to noise levels that exceed the City's exterior standards of 65 dBA CNEL for sensitive uses. A significant impact would occur if the Project resulted in levels higher than 65 dBA CNEL and increased the overall roadway noise level by 3 dBA CNEL, which is a noticeable change in noise level. Compared to existing traffic noise levels, 2045 without Project traffic volumes are expected to be up to 0.8 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise along the analyzed roadways. Compared to existing traffic noise levels, 2045 with Project traffic volumes are expected to be up to 0.9 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise. Implementation of the Project would therefore result in a less than significant impact to roadway noise levels.

Where future development projects under the General Plan Update may be exposed to noise levels that exceed the land use compatibility criteria, such as residential developments within the Hawthorne Boulevard Specific Plan area or sensitive land uses developed adjacent to the existing rail line, impacts could be mitigated to a level that is less than significant with the implementation of noise control measures, such as relocating residential outdoor recreational areas away from 60 dBA CNEL or greater areas or shielding outdoor areas using noise barriers. Additionally, the General Plan Update Public Safety Element includes policies and actions intended to minimize exposure to excessive noise, including noise associated with traffic. Specifically, proposed Policies PS-6.1 through PS-6.4 and proposed Action PS-6c would reduce potential noise impacts associated with transportation. Policy PS-6.1 requires adherence to the latest standards related to noise in the most current edition of the California Building Code to avoid or minimize noise pollution in the community. Policy PS-6.2 requires consistency with the land use compatibility standards contained in proposed Table PS-1 and the Lawndale Municipal Code. Policy PS-6.3 requires the use of best practices in new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code. Policy PS-6.4 requires acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses, and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in the proposed Public Safety Element. Action PS-6c requires new development and transportation projects be reviewed for compliance with the noise requirements established in the proposed General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code, and, where necessary, mitigate excessive noise through best practices. Following conformance with the existing regulatory framework, including the General Plan and Lawndale Municipal Code, impacts would be less than significant in this regard

Stationary Noise Sources

Implementation of the General Plan Update could result in the future development of land uses that generate noise levels in excess of applicable City noise standards for non-transportation noise sources. While the General Plan Update does not explicitly propose any new noise-generating uses, the proposed Land Use Map would allow for the development of mixed-uses, increased residential development at higher densities, and new commercial development, which may result in new noise sources along major corridors, including Hawthorne Boulevard. Specific development projects and the details of future noise generating land uses that may be located in the City in the future are not known at this time. While no specific development projects are proposed under the General Plan Update, changes in land use may allow for more intensive noise-generating uses in closer proximity to noise-sensitive uses. Where this occurs, detailed noise studies would be required to ensure that noise control measures are implemented into the project design. Such measures could include the redesign of stationary noise sources away from sensitive uses, construction of sound walls or berms between noise generating uses and sensitive uses, using buildings to create additional buffer distance and screening, or other site design measures to ensure that non-transportation (stationary) noise sources do not cause exterior and interior noise levels to exceed allowable standards at sensitive receptors. The General Plan Update Public Safety Element includes policies and actions that are intended to reduce noise associated with stationary sources. Specifically, proposed Policies PS-6.3, PS-6.4, PS-6.8, and proposed Actions PS-6c, PS-6d, and PS-6e would reduce noise associated with stationary sources. Policy PS-6.3 requires the use of best practices in new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code. Policy PS-6.4 requires acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses, and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in the proposed Public Safety Element. Policy PS-6.8 requires the use of noise attenuation measures for all new commercial development expected to produce excessive noise. In existing cases where the City's noise standards are exceeded, Policy PS-6.8 directs Code Enforcement to require compliance. Action PS-6c requires new development and transportation projects be reviewed for compliance with the noise requirements established in the proposed General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code, and, where necessary, mitigate excessive noise through best practices. Action PS-6d requires acoustical studies for all new discretionary projects, including those related to development and transportation, which have the potential to generate noise impacts which exceed the standards identified in the proposed General Plan. The studies must include representative noise

measurements, estimates of existing and projected noise levels, and mitigation measures necessary to facilitate compliance with the proposed Public Safety Element. Action PS-6e requires review of locations of proposed projects with the potential to generate stationary noise in relation to sensitive receptors through the discretionary project review process, and limits delivery or service hours for stores and businesses with loading areas, docks, or trash bins that front, side, border, or gain access on driveways next to residential and other noise sensitive areas. Exceptions may only be approved if full compliance with the nighttime limits of the noise regulations is achieved. Implementation of the proposed policies and actions of the General Plan Update would reduce noise impacts from stationary noise sources to a less than significant level

Construction Noise

Individual projects associated with implementation of the General Plan Update would result in short-term noise impacts associated with construction activities, both on- and off-site. Construction crew commute and the transport of construction equipment and materials to the site for future development projects would incrementally increase noise levels on access roads leading to the site. Truck traffic associated with project construction would be limited to within the permitted construction hours, as listed in the City's Municipal Code Section 8.20.070(A). Short-term construction-related impacts associated with worker commute and equipment transport on local streets leading to the project site would result in a less than significant impact on noise-sensitive receptors along the access routes. The site preparation phase of on-site construction activities, which includes grading and paving, tends to generate the highest noise levels since the noisiest construction equipment is earthmoving equipment. Site-specific construction activities associated with future development is expected to require the use of scrapers, bulldozers, motor graders, and water and pickup trucks. Potential impacts would be site-specific, depending on the equipment used and distances to sensitive receptors. The General Plan Update Public Safety Element includes policies and actions intended to reduce exposure to excessive noise, including construction noise. Policy PS-6.9 requires construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices. Action PS-6f requires all construction activity to comply with the limits (maximum noise levels, hours and days of allowed activity) established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible. With implementation of the General Plan Update policies and actions, and compliance with Section 8.20.070(A) of the Lawndale Municipal Code, impacts would be less than significant in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

General Plan Public Safety Element Table PS-1, *Land Use Compatibility for Community Noise Exposure*, presents a land use compatibility chart for community noise derived from a similar table originally prepared by the California Office of Noise Control (2017). This table is proposed to be included in the General Plan Update Public Safety Element. The table identifies "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable" exterior noise levels for various land uses. A "conditionally acceptable" designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a "normally acceptable" designation indicates that standard construction can occur with no special noise reduction requirements.

PUBLIC SAFETY ELEMENT

Policy PS-6.1: California Building Code. Adhere to the latest standards related to noise in the most current edition of the California Building Code to avoid or minimize noise pollution in the community.

Policy PS-6.2: Noise Exposure. Consider the noise compatibility of existing and future development when making land use planning decisions. Require development and infrastructure projects to be consistent with the land use compatibility standards contained in Table PS-1 and the Lawndale Municipal Code to facilitate acceptable noise exposure levels for existing and future development.

Policy PS-6.3: Noise Mitigation. Require new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials.

Policy PS-6.4: Acoustical Studies. Require acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses such as schools, hospitals, libraries, care facilities, and residential areas; and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in this element. For projects that are required to prepare an acoustical study, the following mobile and stationary noise source criteria shall be used to determine the significance of those impacts.

A. Mobile Noise Sources:

- Where existing traffic noise levels are within or below the "normally acceptable" noise criteria at the affected land use (see Table PS-1), a readily perceptible 5 dBA CNEL or greater increase in roadway noise will be considered significant;

- Where existing traffic noise levels falls within the "conditionally acceptable" noise criteria at the sensitive land use, a +3 dBA CNEL or greater increase in roadway noise levels will be considered significant; and
- Where existing traffic noise levels exceed the "conditionally acceptable" noise criteria at the sensitive land use, a + 1.5 dBA CNEL or greater increase in roadway noise levels will be considered significant

B. Stationary and Non-Transportation Noise Sources

- A significant impact will occur if the project results in an exceedance of the noise level standards contained in this element, or the project will result in an increase in ambient noise levels by more than 3 dB, whichever is greater.

Policy PS-6.8: Commercial Noise. Require the use of noise attenuation measures, including screening and buffering techniques, for all new commercial development expected to produce excessive noise; in existing cases where the City's noise standards are exceeded, work with Code Enforcement to require compliance.

Policy PS-6.9: Construction Noise. Require construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices.

Action PS-6c: Review new development and transportation projects for compliance with the noise requirements established in this General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code. Where necessary, require new development to mitigate excessive noise through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials such as rubberized asphalt.

Action PS-6d: Require acoustical studies for all new discretionary projects, including those related to development and transportation, which have the potential to generate noise impacts which exceed the standards identified in this General Plan. The studies shall include representative noise measurements, estimates of existing and projected noise levels, and mitigation measures necessary to facilitate compliance with this element.

Action PS-6e: Review the locations of proposed projects with the potential to generate stationary noise in relation to sensitive receptors through the discretionary project review process. Limit delivery or service hours for stores and businesses with loading areas, docks, or trash bins that front, side, border, or gain access on driveways next to residential and other noise sensitive areas. Only approve exceptions if full compliance with the nighttime limits of the noise regulations is achieved.

Action PS-6f: Require all construction activity to comply with the limits (maximum noise levels, hours and days of allowed activity) established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible.

2. Groundborne Vibration and Groundborne Noise Levels

Threshold: Would the project result in the generation of excessive groundborne vibration or groundborne noise levels?

Finding: Less than significant. (Draft EIR, Impact NOI-2, pages 5.13-29 through 5.13-32)

Explanation: The main sources of vibration in the Planning Area are related to vehicles, railways and construction. Typical roadway traffic, including heavy trucks, rarely generates vibration amplitudes high enough to cause structural or cosmetic damage. Although not specifically within Lawndale, there have been cases in which heavy trucks traveling over potholes or other discontinuities in the pavement have caused vibration high enough to result in complaints from nearby residents. These types of issues typically can be resolved by smoothing the roadway surface.

One freight rail line runs through the City of Lawndale. Existing buildings are about 50 feet from the centerline of the railway and include primarily residential uses. The General Plan Update would not increase railway operations within the Planning Area. Additionally, the Project does not include any specific development proposals. The General Plan Update includes proposed Action PS-6h, which would require future residential projects located adjacent to railroad lines to follow Federal Transit Administration vibration screening distance criteria to prevent residential uses from being exposed to vibrations exceeding 72 VdB for frequent events (more than 70 events per day), 75 VdB for occasional events (30-70 events per day), or 80 VdB for infrequent events (less than 30 events per day). With implementation of proposed Action PS-6h, this impact would be reduced to less than significant.

Construction activities that produce vibration that can be felt by adjacent land uses include the use of vibratory equipment, large bulldozers, and pile drivers. The primary sources of vibration during construction are usually vibratory rollers and large bulldozers. Construction activities in the Planning Area have the potential to result in significant impacts related to groundborne vibration associated with construction activities. This impact would be reduced to less than significant with the implementation of the General Plan Update Public Safety Element Policy PS-6.14 and Action PS-6k, which require vibration impact studies when construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Policy PS-6.14: Vibration Studies. Require vibration impact studies for new discretionary development and transportation improvements whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings.

Action PS-6h: Require new residential projects located adjacent to railroad lines to follow the FTA vibration screening distance criteria to prevent residential uses from being exposed to vibrations exceeding 72 VdB for frequent events (more than 70 events per day), 75 VdB for occasional events (30-70 events per day), or 80 VdB for infrequent events (less than 30 events per day).

Action PS-6k: Require vibration impact studies for all new discretionary projects, including those related to development and transportation, whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. The studies shall include a detailed mitigation plan to avoid any potential significant impacts to existing structures due to groundborne vibrations, based on the California Department of Transportation's Construction Vibration Guidance Manual.

3. Airport Noise

Threshold: For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise?

Finding: No Impact. (Draft EIR, Impact NOI-3, page 5.13-32)

Explanation: Hawthorne Municipal Airport, also known as Jack Northrop Field, is an FAA-designated general aviation reliever airport owned by the City of Hawthorne. The airport is located approximately 1.4-miles northeast of the northeastern-most portion of the Planning Area. The City of Hawthorne General Plan Noise Element provides noise contours (Figures 5A and 5B) for Hawthorne, which include the airport. The noise contours associated with the airport do not extend beyond the municipal boundaries of the City of Hawthorne. The Planning Area is not located within any adopted airport land use plan and is located outside of any airport 65 dBA CNEL contours. As such, there are no impacts related to private airports, public airports, airstrips, or adopted airport land use plans.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: There are no relevant proposed General Plan Update goals, policies, and actions.

M. POPULATION AND HOUSING

1. Population Growth

Threshold: Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure?

Finding: Less than significant. (Draft EIR, Impact POP-1, pages 5.14-8 through 5.14-11)

Explanation: The City and surrounding area, are highly urbanized and considered to be built-out. While there is the potential for infrastructure improvements within the Planning Area associated with site-specific development and overall development growth, General Plan implementation would not require the extension of roads or other infrastructure into an area that is not already served. At buildout, the General Plan Update would accommodate approximately 3,942 new housing units and 808,864 square feet of new non-residential building square footage within the Planning Area compared to existing conditions. This new growth may increase the City's population by approximately 9,482 residents and 2,738 jobs compared to the existing condition. Given the historical and current population, housing, and employment trends, growth in the City, as well as the entire State, is inevitable. The primary factors that account for population growth are natural increase and net migration. Other factors that affect growth include the cost of housing, the location of jobs, the economy, the climate, and transportation. Residential growth within the City would continue to occur based primarily on the demand of the housing market.

Potential growth inducing impacts are also assessed based on a project's consistency with adopted plans that have addressed growth management from a local and regional standpoint. SCAG is the responsible agency for developing and adopted regional housing, population, and employment growth forecasts for local Los Angeles County governments, among other counties. SCAG provides household, population, and employment projection estimates in five-year increments through 2045. SCAG projects that the City's population will reach 34,400 persons by 2045. The General Plan Update is projected to result in a population of approximately 47,948 persons by 2045. The City's projected population would be approximately 39.4 percent greater than SCAG's forecast. Similarly, the City's projected housing stock and employment would be approximately 38.4 percent and 10.9 percent greater than SCAG forecasts, respectively. The General Plan Update growth projections would exceed SCAG's 2045 population, housing stock, and employment projections for the City of Lawndale. General Plan Update growth projections form the basis of SCAG's planning and policy documents, including regional growth forecasts. Thus, the growth anticipated with the General Plan Update would be considered in SCAG's updated growth forecasts for the City. In addition, the proposed

Project is intended to implement the City's 2021-2029 Housing Element; SCAG's Connect SoCal growth forecasts through 2045 do not consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. The regional housing needs would be included as part of SCAG's future growth forecasts.

The proposed General Plan Update includes policies and actions that mitigate environmental impacts associated with growth, such as air quality, noise, traffic, water supply, and water quality effects. Further, the General Plan Update accounts for the proposed Project's anticipated population growth and establishes goals, policies, and actions to accommodate such growth. The proposed Land Use Element Goal LU-2 seeks to manage and direct growth so that the community and its neighborhoods are protected and enhanced. With implementation of General Plan Update policies and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the proposed General Plan Update, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds beyond those disclosed and analyzed throughout the Draft EIR. Therefore, population and housing growth associated with the proposed General Plan Update would result a less than significant impact, as there are no additional potential environmental impacts beyond those analyzed and disclosed in the Draft EIR that would result from growth accommodated by the proposed project.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Goal LU-2: Managed Growth. A City that manages and directs growth to strategic locations so that the community and its neighborhoods are protected and enhanced.

Policy LU-2.2: Focused Areas for New Development. Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

2. Displacement of Housing

Threshold: Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Finding: Less than significant. (Draft EIR, Impact POP-2, pages 5.14-10 through 5.14-11)

Explanation: The General Plan Update will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. Overall, the proposed Project would provide new development opportunities to support the vision for development consistent with the General Plan Update and the State's Housing Element Law, including accommodating the City's 2021-2029 RHNA.

The Project does not propose any site-specific development at this time; therefore, no existing residents would be displaced. The General Plan Update establishes goals, policies, and actions to ensure the compatibility of new and existing development, including housing. The proposed Land Use Element Goal LU-2 seeks to manage and direct growth so that the community and its neighborhoods are protected and enhanced. Goal LU-3 supports new development to be sensitively integrated with existing development. Policy LU-3.1 ensures the City considers the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area. Therefore, impacts of the proposed General Plan Update on the displacement of people or housing are considered less than significant and no mitigation is required. The policies listed below would further ensure that a range of housing types are provided

in the City, and that housing conditions are evaluated as the housing supply ages.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Goal LU-2: Managed Growth. A City that manages and directs growth to strategic locations so that the community and its neighborhoods are protected and enhanced.

Policy LU-2.2: Focused Areas for New Development. Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-2.3: Hawthorne Boulevard Specific Plan. Facilitate the redevelopment of Hawthorne Boulevard through implementation of the Hawthorne Boulevard Specific Plan which encourages a mixture of quality multi-family housing development, local- and destination-type commercial uses, eateries, and civic uses such as cultural and performing art facilities in innovative development formats.

Action LU-2e: Implement the Hawthorne Boulevard Specific Plan to guide future development in this area. This includes reviewing and revising the implementation strategies identified in the Specific Plan as part of the Specific Plan's comprehensive update, and prioritizing the most critical actions for funding and staff resources.

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Policy LU-3.3: **Code Compliance**. Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

Policy LU-3.4: Residential Uses. Require that new residential development be designed to protect residents from potential conflicts with adjacent land uses, and other features including transportation facilities.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Action LU-3e: Analyze land use compatibility through the development review process to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks.

N. PUBLIC SERVICES

1. Fire Protection

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire Protection and Emergency Services?

Finding: Less than significant. (Draft EIR, Impact PS-1, pages 5.15-9 through 5.15-13)

Explanation: Development accommodated under the General Plan Update would result in additional residents and businesses in the City. 2045 buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units, an additional population of 9,482 people, an additional 808,864 square feet of non-residential building square footage, and an additional 2,738 jobs within the Planning Area. According to LACoFD, there are no plans to expand Station 21 and/or develop a new fire station for Lawndale. Future development projected in the General Plan Update may result in the need for additional LACoFD resources (i.e., additional staffing, equipment, expanded/new facilities). At this time, it is unknown whether LACoFD would need to expand or construct new facilities to meet the demand of future development in the Planning Area. Future development is assumed to occur over time through 2045; thus, any increase in demand for fire protection services would occur gradually as additional development and associated population growth is added to the City. The General Plan Update includes a range of policies and actions to ensure that fire protection and emergency services are provided in a timely fashion, are adequately funded, are coordinated between the City and the LACoFD, and that new development funds its fair share of services. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in

conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Public Safety Element Policy PS-1.5 supports policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1e directs the investigation and pursuit of available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment. Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 directs the collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a promotes the coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region. LACoFD would continue to regularly monitor fire department resources to ensure that adequate facilities, staffing, and equipment are available to serve existing and future development and population increases. Further, as development occurs, a proportional increase in property tax, charges for LACoFD services, and other funding sources would increase and offset impacts of new development on LACoFD's existing resources in the City.

Future site-specific development would be required to comply with applicable City, County, and State code and ordinance requirements for fire protection. The Lawndale Municipal Code Chapter 15.20, *Fire Code*, adopts and incorporates the California Fire Code, as amended by Title 32 the Los Angeles County Fire Code, by reference. As part of the development review process, site-specific development proposals would be required to comply with standard LACoFD conditions of approval. LACoFD Fire Prevention Division reviews site plans to ensure that access and water system requirements, which would enhance the proposed development's fire protection, are adequate.

The environmental effect of providing the fire protection and emergency services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects anticipated under the General Plan Update. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of fire protection and emergency services are less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.5: Public Services for Quality of Life. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

PUBLIC SAFETY ELEMENT

Policy PS-1.5: Resources. Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

Policy PS-4.1: Fire Protection Services. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: Development Review. Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.4: Building Fire Codes. Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: Regional Issues. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: Cost Sharing. Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: Regional Services Providers. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: Capital Improvement Planning. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

2. Police Protection

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Law Enforcement Services?

Finding: Less than significant. (Draft EIR, Impact PS-2, pages 5.15-13 through 5.15-16)

Explanation: Development accommodated under the General Plan Update would result in additional residents and businesses in the City, which would increase demand for police protection services provided by the Los Angeles County Sheriff's Department (LASD). Additional facilities, personnel, and equipment may be required to maintain adequate levels of police protection within the City. Development assumed by the General Plan Update is expected to occur gradually over time through 2045; thus, any increase in demand for police protection services would similarly occur gradually as additional development and associated population growth is added to the Planning Area, which also depends on the economic market demands. As individual projects are proposed within the Planning Area, LASD service levels and staffing requirements would be evaluated on an annual basis to determine if additional staffing and/or facilities would be required. If the General Plan Update is adopted, LASD would utilize the projected growth in population, dwelling units, and nonresidential development to effectively plan for increases in population and police protection service demand. The

General Plan Update includes a range of policies and actions, to ensure that adequate police protection services are provided to serve growth associated with implementation of the General Plan Update. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Public Safety Element Policy PS-1.5 supports policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1e directs the investigation and pursuit of available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 ensures collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a directs the coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

The environmental effect of providing police protection services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. If new police facilities are needed to serve growth associated with future development anticipated by the General Plan Update, the facilities would most likely be provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan Update. Any future development under the

General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of police protection services are less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.5: Public Services for Quality of Life. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

PUBLIC SAFETY ELEMENT

Policy PS-1.5: Resources. Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: Regional Issues. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: Cost Sharing. Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: Regional Services Providers. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: Capital Improvement Planning. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

3. Schools

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Schools?

Finding: Less than significant. (Draft EIR, Impact PS-3, pages 5.15-16 through 5.15-20)

Explanation: Implementation of the General Plan Update could result in the development of up to 3,942 housing units over existing conditions. Assuming all new development anticipated under the proposed General Plan Update occurs within the LESD and CVUHSD's school boundary, the Project would generate approximately 2,760 students (1,971 elementary/middle school students and 789 high school students). As mentioned above, the CVUHSD presumes that school facilities have a useful life span of 20 years before modernization is needed in order to maintain the same level of service as previously existed; therefore, the costs of modernized/expanded school facilities are based on anticipated 20-year growth generated by new development within the CVUHSD district area.

The exact location of future development and associated student generation is currently unknown. However, future development projected within the General Plan Update is anticipated to occur gradually through 2045 and would be largely based on market demand. Thus, any increase in demand for school services would occur gradually as additional development occurs in the Planning Area. The General Plan Update includes policies and actions, to ensure that adequate services are provided to serve growth associated with implementation of the General Plan Update. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 ensures collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a directs coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to

participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region. Policy PF-6.1 encourages the maintenance of high-quality schools and diverse educational opportunities in Lawndale. Policy PF-6.3 directs the City to work with developers and the school districts to ensure the payment of fees, construction, and expansion of school facilities to address expected increases in school-age population. Action PF-6a directs the City to work with school districts to ensure adequate school facilities are provided and maintained in the community. This includes consultation with school districts during the processing of development proposals and requiring the mitigation of impacts to schools in compliance with State law.

School districts assess development impact fees against residential and non-residential development to mitigate impacts resulting from the increase in demand for school related services. Individual development projects in accordance with the General Plan Update would be required to pay the statutory fees, so that school facilities can be constructed/expanded, if necessary, at the nearest sites to accommodate the impact of project-generated students, reducing impacts to a less than significant level.

The environmental effect of providing school services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development of new or expanded school facilities. If the school districts serving the City determine that new school facilities are needed to serve growth associated with future development anticipated by the General Plan Update, the schools would most likely be provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan Update. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and development of school facilities would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of schools are less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.5: Public Services for Quality of Life. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: Regional Issues. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: Cost Sharing. Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: Regional Services Providers. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: Capital Improvement Planning. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy PF-6.1: Education and Learning. Continue to encourage the maintenance of high-quality schools and diverse educational opportunities in Lawndale.

Policy PF-6.2: Lifelong Learning. Proactively cooperate with the Lawndale Elementary School District and Centinela Valley Union High School District to encourage the provision of lifelong learning opportunities for persons living and working in Lawndale.

Policy PF-6.3: School Facilities. Work with developers and the school districts to ensure the payment of fees, construction, and expansion of school facilities to address expected increases in school-age population.

Action PF-6a: Continue to work with the school districts to ensure adequate school facilities are provided and maintained in the community. Specifically, the City should:

- During the processing of residential and non-residential development proposals, ensure the school districts are consulted regarding the potential impact of the project on educational services and facilities. When proposed developments cannot be served by existing facilities and services, the City shall work with the developer and the school district in exploring options for service provision and facility funding.
- Prior to approving a project that is likely to generate students, require the applicant to mitigate school impacts to the full extent permitted by State law through land dedications, payment of fees, participation in a special assessment district, or any combination of the above.
- Cooperate with school districts to update population projections, student generation formulas, potential school sites, and facilities improvement plans.

4. Libraries

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Library Facilities?

Finding: Less than significant. (Draft EIR, Impact PS-4, pages 5.15-20 through 5.15-23)

Explanation: Development accommodated under the General Plan Update would result in additional residents and businesses in the City, which would potentially increase the demand for public services, including library services. The Lawndale Library is a part of, and is operated by, the LA County Library system. Future development anticipated by the General Plan Update may result in the need for additional LA County Library resources (i.e., additional staffing, equipment, expanded/new facilities). At this time, it is unknown whether LA County Library would need to expand or construct new facilities to meet the demand of future development in the Planning Area. The General Plan Update includes policies and actions to ensure that library services are adequately funded, are coordinated between the City and the LA County Library, and that new development funds its fair share of services. Proposed Land Use Element Policy LU-1.5 directs the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the DOF, SCAG, and County in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Community Facilities Element Policy PF-1.1 requires that the capital improvement program be maintained and financed to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy PF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Policy PF-1.10 ensures collaboration with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development. Action PF-1a directs coordination with outside service providers and other agencies regarding their public facility plans and provides local input on goals, objectives, and projects. Action PF-1d requires any new development or major redevelopment that would put local

and/or regional facilities at or near capacity to upgrade those facilities. Action PF-1e directs the City to participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region. Policy PF-6.6 directs the City to work with the LA County Library system to provide library facilities and services necessary to meet the needs of all segments of the community. Action PF-6b directs the City to work with the LA County Library system to ensure that library development keeps pace with overall City development and population growth.

The environmental effect of providing library services is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan Update does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan Update. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provision of library services are less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.5: Public Services for Quality of Life. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

COMMUNITY FACILITIES ELEMENT

Goal PF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy PF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy PF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy PF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy PF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy PF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy PF-1.8: Regional Issues. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy PF-1.9: Cost Sharing. Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy PF-1.10: Regional Services Providers. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy PF-1.11: Capital Improvement Planning. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action PF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action PF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action PF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action PF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action PF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy PF-6.6: Libraries. Work closely with the Los Angeles County Library system to provide library facilities and services necessary to meet the needs of all segments of the community.

Action PF-6b: Continue to work with the Los Angeles County Library system to ensure that library development keeps pace with overall City development and population growth.

O. PARKS AND RECREATION

1. Increased Use of Parks/Recreation Facilities

Threshold: Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Finding: Less than significant. (Draft EIR, Impact PR-1, pages 5.16-4 through 5.16-8)

Explanation: 2045 buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units, resulting in an additional population of 9,482 people within the Planning Area. These new residents are expected to use park and recreational facilities, and this additional use may result in greater demands on parks and recreational facilities in the Planning Area such that deterioration of these facilities could occur or be accelerated. The additional demand on existing parks and recreational facilities would increase the need for maintenance and improvements. These improvements could have environmental impacts, although the exact impacts cannot be determined since the potential improvements are currently unknown.

The City does not currently have an adopted standard of parkland acreage to residents. However, the General Plan Update does include the adoption of a parkland standard of 3.0 acres of parkland per 1,000 residents. The provision of new parks and recreation facilities would help to reduce the potential for adverse impacts and physical deterioration of existing parks and recreation facilities, by providing additional facilities to accommodate the demand for parks and recreation facilities. These new facilities would be provided at a pace and in locations appropriate to serve new development.

Development under the General Plan Update could indirectly lead to the construction of new parks and recreation facilities to serve new growth and

to meet existing parks and recreation needs. The General Plan Update supports the creation of new parks and recreation facilities to accommodate a wide range of activities for all age groups. Proposed Resource Management Element Policy RM-1.1 strives to provide residents with a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities. Policy RM-1.2 strives to achieve a minimum parkland standard of three acres per 1,000 City residents. Policy RM-1.4 directs the City to actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs. Policy RM-1.5 directs City collaboration with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public. Policy RM-1.8 recognizes the value of non-traditional public and semi-public open space and encourages creativity and innovation during the development and provision of additional open space or parks to supplement the City's green space and parks. Action RM-1a directs the City to periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development. Action RM-1b directs the City to pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance. Action RM-1c directs the creation of a Master Parks Plan to guide the provision and maintenance of parkland in the City. Action RM-1d works with the Lawndale Elementary School District to maximize the joint use of facilities and pursues additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

The General Plan Update does not specifically propose any development projects, including parks. As a result, site-specific physical impacts of future park development and construction cannot be determined until projects are brought forward for review. As future parks and recreation projects are considered by the City, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Parks and recreation projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

In addition to ensuring that new and expanded parks and recreation facilities are provided to accommodate new growth, the General Plan Update includes policies and actions to ensure that parks and recreation facilities are adequately maintained and improved to serve both existing and planned growth. Proposed Land Use Element Policy LU-1.5 requires the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to regularly review and adjust

population assumptions and forecasts in order to adequately plan for growth. Proposed Community Facilities Element Policy CF-1.1 maintains and finances the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy CF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Action CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Although implementation of the General Plan Update would cause an incremental increase in demand for parks in the future, this increase could be reduced to a less than significant level by the provision of public parkland and private on-site recreational amenities and through the payment of park fees, as established in Municipal Code Chapter 12.34. Compliance with and the implementation of applicable General Plan Update policies and actions and compliance with the City Municipal Code would ensure parks and recreational facilities would not be overused to the point of substantial deterioration.

The General Plan Update does not propose or approve the construction or expansion of parks or recreational facilities. Any new parks or recreational facilities that may be constructed in the future would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the parks and recreational facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan. Any future development under the General Plan Update would be required to comply with regulations, policies, and standards included in the General Plan Update, and would be subject to CEQA review as appropriate. Therefore, impacts to parks and recreational facilities associated with implementation of the General Plan Update would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.5: Public Services for Quality of Life. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.1: Recreation Types. Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.2: Parkland Standard. Achieve a minimum parkland standard of 3 acres per 1,000 City residents.

Policy RM-1.4: Parkland Funding. Actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs.

Policy RM-1.5: Partnerships and Joint-Use Agreements. Collaborate with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public.

Policy RM-1.8: Creative Open Space and Parks. Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

Action RM-1a: Periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1d: Continue to work with the Lawndale Elementary School District to maximize the joint use of facilities and pursue additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy CF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy CF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

2. Construction and Expansion of Parks/Recreation Facilities

Threshold: Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Parks?

Finding: Less than significant. (Draft EIR, Impact PR-2, pages 5.16-8 through 5.16-11)

Explanation: No site-specific projects are proposed under the General Plan Update. 2045 buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units and an additional population of 9,482 people. Based on the General Plan Update's proposed standard of three acres per 1,000 residents, the increase in population due to implementation of the Project would require approximately 96.1 acres of additional parkland, for a total of 122.3 acres of parkland. Construction of these future parks could result in environmental impacts. At the time future parks are proposed, they would require a separate environmental review and compliance with regulations in existence at that time, which would address potential environmental impacts related to the construction and operation of new parks. Furthermore, these future parks would be subject to General Plan Update policies and actions intended to protect the environment and the programmatic mitigation framework established in the Draft EIR. Proposed Land Use Element Policy LU-1.5 requires the City to maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community. Action LU-1e directs the City to regularly review and adjust population assumptions and forecasts in order to adequately plan for growth. Policy LU-2.6 provides notification to adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and takes appropriate action to consider and respond to their concerns. Proposed Resource Management Element Policy RM-1.1 strives to provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities. Policy RM-1.4 directs the City to actively pursue financing for parkland acquisition and maintenance, and allocates sufficient funding to park development to support the community's recreational needs. Policy RM-1.5 directs City collaboration with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public. Action RM-1a directs the City to periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development. Action RM-1b directs the City to pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance. Action RM-1c directs the creation of a Master Parks Plan to guide the provision and maintenance of parkland in the City. Action RM-1d works with the Lawndale Elementary School District to maximize the joint use of facilities and pursues additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs. Proposed Community Facilities Element Policy CF-1.1 maintains and finances the capital improvement program to ensure the timely

implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements. Policy CF-1.2 ensures that new development and major redevelopment provides for and funds its fair share of the costs for the expansion of public infrastructure, public services, and other public facilities. Action CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Therefore, upon compliance with environmental regulations established at the time future park and recreational projects are proposed, and adherence to General Plan Update policies and actions, the environmental impacts associated with the construction or expansion of recreational facilities would less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.5: Public Services for Quality of Life. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.1: Recreation Types. Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.4: Parkland Funding. Actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs.

Policy RM-1.5: Partnerships and Joint-Use Agreements. Collaborate with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public.

Action RM-1a: Periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1d: Continue to work with the Lawndale Elementary School District to maximize the joint use of facilities and pursue additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy CF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy CF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

P. TRANSPORTATION

1. Circulation System Conflicts

Threshold: Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities?

Finding: Less than significant. (Draft EIR, Impact TR-1, pages 5.17-19 through 5.17-24)

Explanation: *Circulation System*

No specific development projects are proposed as part of the Lawndale General Plan Update, but the update will accommodate future growth in the City. The General Plan Update Mobility Element does not propose any roadway changes or increases in roadway capacity. The Mobility Element developed as part of the General Plan Update contain goals, policies, and actions that support access to and the performance of the circulation system. Specifically, proposed Mobility Element Goal M-1 promotes a safe circulation system for the Planning Area. Policy M-1.5 ensures that new developments in the City provide appropriate and feasible improvements to improve traffic flow and roadway operations. Policy M-1.7 encourages the development of traffic calming strategies to slow traffic and promote safety. Action M-1b directs the City to continue to update and implement projects in the City's Capital Improvement Plan to maintain the roadway network. As a result, implementation of the General Plan Update would not conflict with applicable plans, polices, or ordinances related to vehicle circulation, and its impact on the City's circulation system is considered less than significant.

Bicycle and Pedestrian Circulation

The proposed Mobility Element references and incorporates the South Bay Bicycle Master Plan and the SBCCOG Local Travel Network, which include bicycling and walking improvements, and facilities that will improve non-motorized accessibility and connectivity throughout the City. The proposed Mobility Element includes new planned bike facilities on several key roadways. Implementation of the General Plan Update would also enhance the pedestrian experience by providing a more walkable and denser environment, especially in the HBSP area. The Mobility Element developed as part of the General Plan Update contains goals, policies, and actions that support access to and the performance of bicycle and pedestrian facilities. Specifically, Mobility Element Policy M-3.1 requires the City to

apply Complete Street principals, which are streets that are designed to provide safe travels for all modes of travel, to all transportation improvement projects. Policy M-6.4 directs the City to identify and eliminate gaps in sidewalks and bikeways to create a more complete active transportation network. Policy M-6.5 requires new developments in the City to provide bicycle and pedestrian facilities. Action M-6b directs the City to implement the South Bay Bicycle Master Plan during roadways projects as funding allows. The implementation of policies and actions contained in the General Plan Update would ensure that the Project would not conflict with a program plan, ordinance, or policy addressing bicycle facilities. Therefore, the Project's impact is considered less than significant.

Public Transit System

The City does not have defined measures of effectiveness for public transit service and circulation. The proposed General Plan Update would be expected to increase demand for travel via public transit given the proposed development and expected increase in residents and employees. This population and job growth within the City could increase the demand for public transit but also result in increased levels of vehicular traffic which could slow transit operations and impact transit reliability. The Mobility Element developed as part of the General Plan Update includes policies to support and enhance transit service. Specifically, Mobility Element Policy M-5.2 encourages the City to coordinate with local public transit provides to plan and improve local transit service and transit facilities. Policy M-5.3 requires that new developments construct transit facilities when appropriate. The implementation of policies and actions contained in the General Plan Update would ensure that the Project would not conflict with a program plan, ordinance, or policy addressing the public transit system. Therefore, the Project's impact is considered less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-4.4: Pedestrian-Scale Amenities. Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

MOBILITY ELEMENT

Goal M-1: Local Circulation System. A community served by a safe circulation system with adequate traffic flow on arterial roadways and minimized adverse traffic effects on residential neighborhoods.

Policy M-1.5: Development-Related Traffic Impacts. Impose conditions on new development to provide appropriate and feasible improvements to enhance and/or prevent the impediment to traffic flow, parking, ADA accessibility and roadway operations.

Policy M-1.7: Traffic Calming on Local Streets. Encourage traffic calming strategies, such as diverters, median islands, and speed humps, and incorporation of traffic calming design in residential and school areas to slow traffic and promote safety, while not reducing parking supply.

Action M-1a: Periodically review and assess the vehicular level of service along City facilities to determine, what, if any, improvements are warranted to maintain a safe and efficient flow of traffic throughout the City of Lawndale. Based on a thorough review of facility operations and funding availability, improvements should be included in the City's Capital Improvement Plan and/or required as part of project approval through the development review process.

Action M-1b: Continue to update and implement projects in the City's Capital Improvement Plan to maintain and repair roadways; construct and improve roadways to build out the roadway network to ensure adequate levels of service.

Action M-1e: Monitor cut-through traffic on local streets, especially along residential areas and schools, and where appropriate evaluate the applicability of traffic calming tools and implement improvements as necessary.

Policy M-2.3: Facility Connections. Plan and implement vehicular facilities, roadway treatments, active transportation facilities, transit routes, and goods movement network to relate to those in neighboring jurisdictions.

Goal M-3: Complete Streets. A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: Multimodal Connectivity. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-3.3: Streetscape Improvements. Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

Policy M-3.6: Safe Routes to School. Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.1: Transit Use. Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2: Improve Local Public Transit Service. Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: Transit Facilities. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Policy M-5.4: C (Green) Line Service. Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

Policy M-5.5: C (Green) Line Stations. Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

Policy M-5.6: Effects of New Technologies on Transit Use. Monitor the development of new mobility technologies and the potential effects on transit demand and how users access public transit.

Action M-5a: Continue on-going coordination with transit authorities toward the expansion of transit facilities.

ActionM-5b: Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

Goal M-6: Active Transportation. A community with a comprehensive network of pedestrian and bicycle facilities that encourages active transportation.

Policy M-6.1: Bicycle Master Plan. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: Local Travel Network. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.4: Sidewalk and Bikeway Gaps. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: Bicycle/Pedestrian Facilities at New Developments. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: Effects of New Technologies on Active Transportation. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.9: Active Transportation Trails. Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

Policy RM-1.10: Service Area Radius. Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure

the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

ECONOMIC DEVELOPMENT ELEMENT

Policy ED-4.2: Streetscape Improvements. Enhance aesthetics and "curb appeal" of the Hawthorne corridor with strategic investments such as landscaping, outdoor lighting, wayfinding, entry and building façade improvements, and other initiatives that increase its attractiveness for businesses and consumers.

Policy ED-4.3: Accessibility. Enhance City and regional connectivity by supporting multimodal transportation options along Hawthorne Boulevard and other major City thoroughfares.

Action ED-4c: Implement strategies and actions in the Mobility Element and the Hawthorne Specific Boulevard Plan that promote infrastructure improvements and land use policies that will enhance economic activity and accessibility.

2. CEQA Guidelines Section 15064.3(b)

Threshold: Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Finding: Less than significant. (Draft EIR, Impact TR-2, pages 5.17-24 through 5.17-29)

Explanation: Future conditions with the Project would result in decreased VMT per employee and VMT per capita in comparison to existing conditions. The

2045 Project VMT per capita is approximately 28 percent less than the existing Los Angeles countywide average VMT per capita and the 2045 Project VMT per employee is approximately 18 percent less than the existing Los Angeles countywide average VMT per employee. Thus, the proposed General Plan Update would not exceed 15 percent below the existing Los Angeles countywide average VMT per capita or VMT per employee and therefore would result in a less than significant Project VMT impact. The Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG's 2020 RTP/SCS goals. Therefore, the Project's cumulative impacts related to VMT would be less than significant.

The Land Use and Mobility elements developed as part of the General Plan Update includes policies to support the reduction of VMT, including increasing the balanced mix of residential and employment opportunities within the City with the proposed land uses. Overall, implementation of the Project would result in reductions in VMT per capita and VMT per employee compared to 2023 existing conditions; impact thresholds would not be exceeded. Therefore, with respect to consistency with CEQA Guidelines Section 15064.3, subdivision (b), the impact of the Project would be less than significant and no mitigation would be required.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-2.2: Focused Areas for New Development. Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

Policy LU-4.4: Pedestrian-Scale Amenities. Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

MOBILITY ELEMENT

Goal M-3: Complete Streets. A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: Multimodal Connectivity. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-3.3: Streetscape Improvements. Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

Policy M-3.6: Safe Routes to School. Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.1: Transit Use. Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2: Improve Local Public Transit Service. Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: Transit Facilities. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Policy M-5.4: C (Green) Line Service. Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

Policy M-5.5: C (Green) Line Stations. Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active

transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

Action M-5a: Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Action M-5b: Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

Goal M-6: Active Transportation. A community with a comprehensive network of pedestrian and bicycle facilities that encourages active transportation.

Policy M-6.1: Bicycle Master Plan. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: Local Travel Network. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.4: Sidewalk and Bikeway Gaps. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: Bicycle/Pedestrian Facilities at New Developments. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: Effects of New Technologies on Active Transportation. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.1: Vehicle Miles Traveled Guidelines. Require vehicle miles traveled (VMT) analysis for the purposes of environmental review under the California Environmental Quality Act (CEQA). The City shall continue to maintain Level of Service (LOS) standards for the purposes of planning and designing street improvements.

Policy M-9.2: Transportation Demand Management. Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Policy M-9.3: Regional Coordination. Encourage regional agencies such as Metro, the South Coast Air Quality Management District (SCAQMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

Policy M-9.4: New Development. Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

Action M-9a: Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.

Action M-9b: Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.9: Active Transportation Trails. Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

Policy RM-1.10: Service Area Radius. Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

3. Design Features

Threshold: Would the project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Finding: Less than significant. (Draft EIR, Impact TR-3, pages 5.17-25 through 5.29-31)

Explanation: The Project does not propose changes to the Citywide roadway network and configuration. The City's design and construction standards and specifications provide for coordinated and standardized development of city facilities, including roadways. As individual projects would undergo review by the City for approval and construction and would have to meet design guidelines, potential safety design hazards associated with land development projects would be addressed and result in less than significant impacts. Prior to implementation, any improvements would be subject to a detailed review and future consideration by the City's Public Works engineering staff and other relevant City departments. An evaluation of the roadway alignments, intersection geometrics, and traffic control features would be needed at the project design level. Roadway improvements would have to be made in accordance with the City's roadway design guidelines and meet design guidelines in the California Manual of Uniform Traffic Control Devices and the Caltrans Roadway Design Manual.

The types of uses included as part of the General Plan Update are generally similar to existing and surrounding uses and thereby are compatible with the existing uses in the Planning Area and in the surrounding area. In addition, the Mobility Element developed as part of the General Plan Update contains policies in support of roadway network safety and reducing design hazards. This includes proposed Mobility Element Policy M-3.5 and Action M-3e which promotes managing and improving the City's transportation network to be safe, accessible and consistent with ADA and to include ADA accessible features as part of roadway infrastructure projects. Proposed Mobility Element M-3.4 encourages roadway design to include traffic calming measures to maintain safe vehicular speeds. Proposed Land Use Element Policy LU-3.1 considers the compatibility of

new development with surrounding uses when reviewing development proposals. The implementation of goals, policies and actions contained in the General Plan Update and compliance with the Lawndale Municipal Code would ensure that new development in the Planning Area would not substantially increase hazards due to geometric design features or incompatible uses. Therefore, the impact of the Project with respect to design and incompatible use hazards would be considered less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Goal LU-3: Land Use Compatibility. A community where new development is sensitively integrated with existing development, including residential neighborhoods, and minimizes impacts on surrounding land uses.

Policy LU-3.1: Surrounding Uses. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Policy LU-3.4: Residential Uses. Require that new residential development be designed to protect residents from potential conflicts with adjacent land uses, and other features including transportation facilities.

Action LU-3b: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods

MOBILITY ELEMENT

Goal M-3: Complete Streets. A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.4: Traffic Calming on Residential Streets. Encourage traffic calming strategies and incorporation of traffic calming design in residential areas to slow traffic and promote safety.

Policy M-3.5: ADA Accessibility. Implement a transportation network that is safe, accessible, and consistent with the Americans with Disabilities Act (ADA), to allow mobility-impaired users, such as disabled persons and seniors, to safely travel within the City.

Policy M-3.6: Safe Routes to School. Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

Action M-3a: When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Action M-3e: Include ADA-accessible facilities as part of roadway infrastructure projects

4. Emergency Access

Threshold: Would the project result in inadequate emergency access?

Finding: Less than significant. (Draft EIR, Impact 5.17-31, page 5.17-33)

Explanation: The Project does not propose site-specific development; emergency accessibility is typically assessed at the project level. Future development within the Planning Area is not anticipated to result in the substantial modification of roadways surrounding specific development sites or the placement of any permanent physical barriers on adjacent roadways. There is the potential that traffic lanes located immediately adjacent to a development site may be temporarily closed or controlled by construction personnel during construction activities. However, any temporary construction activity would adhere to Municipal Code Section 17.36.220, Temporary Storage of Construction Materials, which requires sidewalks, public streets, and, alleys adjacent to construction sites to be kept free of debris or other materials that could interfere with circulation for the duration of construction activities, as well as sixty days following substantial completion of such construction. Additionally, the applicant of any proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. LACoFD would review the proposed development for access requirements, minimum driveway widths, fire apparatus access roads, fire lanes, signage, access devices and gates, access walkways, among other requirements to ensure adequate emergency access

would be provided to and within the site. The proposed development would be required to comply with all applicable Building and Fire Code requirements and would submit construction plans to the Fire Department's Engineering Building Plan Check Unit for review and approval prior to issuance of any building permit. Approval by the Fire Department would ensure that construction and operation of future projects associated with implementation of the General Plan Update would not result in inadequate emergency access. In addition, the Public Safety and Mobility Elements developed as part of the General Plan Update contains policies in support of emergency access along local roads.

The proposed Mobility Element Goal M-3 promotes striving to maintain sufficient access and mobility for all modes of travel and users of the roadway network. The proposed Public Safety Element Policy PS-1.6 encourages improvements to emergency access and circulation throughout the community. Policy PS-4.3 requires all new developments to provide adequate access for emergency vehicles and evacuation as part of the development review process. The implementation of goals, policies and actions contained in the General Plan Update and compliance with the Lawndale Municipal Code would ensure that new development in the Planning Area would not result in inadequate emergency access. Therefore, the impact of the General Plan Update with respect to emergency access would be considered less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

MOBILITY ELEMENT

Policy M-2.1: Freeway Interchanges. Coordinate with Caltrans to develop appropriate configurations and operations at Interstate 405 interchange intersections to minimize congestion on City streets and create safe conditions.

Policy M-2.2: Agency Coordination: Coordinate with neighboring cities, telecom companies, and regional agencies such as County of Los Angeles, South Bay Cities Council of Governments, and Metro to meet the mobility needs of people living in, working in, or visiting Lawndale.

Goal M-3: Complete Streets. A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users.

Policy M-3.5: ADA Accessibility. Implement a transportation network that is safe, accessible, and consistent with the Americans with Disabilities Act (ADA), to allow mobility-impaired users, such as disabled persons and seniors, to safely travel within the City.

Action M-3e: Include ADA-accessible facilities as part of roadway infrastructure projects.

PUBLIC SAFETY ELEMENT

Policy PS-1.6: Emergency Access. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Policy PS-4.3: Emergency Access. Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

Q. TRIBAL CULTURAL RESOURCES

1. Tribal Cultural Resources

Threshold: Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Finding: Less than significant. (Draft EIR, Impacts TCR-1, pages 5.18-8 through 5.18-10)

Explanation: No archeological or tribal cultural resources have been identified within the City. The Cultural Resources Assessment concludes the lack of identified resources is likely to be a consequence of development occurring prior to the implementation of CEQA, rather than a lack of archaeological sites. The Planning Area is located within the traditional territory of the Gabrielino or Tongva Indians. At the time of publication of the Draft EIR, no Tribal Organizations have requested formal consultation with the City with regards to the Project. Grading of original in situ soils could expose buried tribal cultural resources and features including sacred sites. While the General Plan Update does not directly propose site-specific development with the potential to directly impact a tribal cultural resource, future development allowed under the General Plan Update could cause a substantial adverse change in the significance of previously undiscovered tribal cultural resources.

The General Plan Update Resource Management Element includes policies and actions addressing tribal cultural resources. Proposed Policy RM-3.1 requires the protection of areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.2 encourages the City to promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations. Policy RM-3.5 requires consultation with Native American tribes that may be impacted by proposed development and land use policy changes, in accordance with State, local, and Tribal intergovernmental consultation requirements. Action RM-3a requires the City to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to CEQA. Action RM-3e requires, for all development proposals within areas with the potential to contain prehistoric/historic resources, a study to be conducted by a professional archaeologist to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery. Action RM-3g requires, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, that the City halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains is permitted until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

Potential impacts to tribal cultural resources associated with future development would be reduced through implementation of General Plan Update policies and actions. Subsequent development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. Subsequent discretionary projects implemented in accordance with

the General Plan Update would be subject to the provisions of AB 52 and may require tribal consultation with California Native American tribes that are traditionally and culturally affiliated with the Planning Area and who have previously requested AB 52 consultations with the City. Future AB 52 consultation may identify tribal cultural resources not yet found and formally recorded that could be impacted by subsequent projects. Compliance with the General Plan Update policies and actions and existing regulations would not cause a substantial adverse change in the significance of a tribal cultural resource and impacts would be less than significant

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.2: Documentation. Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

Policy RM-3.5: Tribal Consultation. In accordance with State, local, and Tribal intergovernmental consultation requirements, consult with Native American tribes that may be impacted by proposed development and land use policy changes, as necessary.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3e: For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

Action RM-3g: In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, the City shall halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human

remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

R. UTILITIES AND SERVICE SYSTEMS

1. Utilities and Service Systems

Threshold: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Finding: Less than significant. (Draft EIR, Impact USS-1, pages 5.19-26 through 5.19-35)

Explanation: *Water*

In regard to water facilities, the General Plan Update is expected to result in population and employment growth within the Planning Area, and thus, an overall increase in demand on water supply, which would necessitate construction of future water supply infrastructure. Buildout under the General Plan Update could yield a net change over existing conditions of an additional 3,942 housing units, an additional population of 9,482 people, an additional 808,864 square feet of non-residential building square footage, and an additional 2,738 jobs within the Planning Area. This increased demand for water infrastructure would be located within areas that are already developed and serviced by the GSWC. Since no specific development projects are proposed as part of the General Plan Update, the environmental effects from constructing or expanding facilities are unknown at this time. All water infrastructure construction activities associated with future development would be subject to compliance with existing local, State, and Federal laws, ordinances, and regulations, which would ensure impacts are reduced to less than significant levels. The City would continue to coordinate with GSWC to ensure adequate water distribution facilities are available to serve future development. Lawndale Municipal Code Section 3.14.090 imposes a tax on water users in the City and would help fund necessary infrastructure improvements. Furthermore, these future water facilities would be subject to General Plan Update policies and actions intended to ensure the provision of water and that potential environmental impacts associated with the implementation of new or expanded infrastructure would be reduced. Proposed Resource Management Element Policy RM-6.1 promotes residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices. Action RM-6c directs the City to work with local water agencies and service providers to: implement

groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-2.1 coordinates with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded water facilities to a level that is less than significant.

Wastewater

In regard to wastewater, the General Plan Update is expected to result in increased population and employment growth within the Planning Area, and thus, an overall increase in demand on the existing sewer system associated with increased sewage flows. Buildout under the General Plan Update could yield a net change over existing conditions of an additional population of 9,482 people within the Planning Area. Using the wastewater generation rate of 83 gpcd from LACSD's 2012 Clearwater Program Master Facilities Plan, growth associated with implementation of the General Plan Update would generate 3.9 MGD of wastewater within the Planning Area, a net increase of 0.8 MGD (25.8 percent) over existing conditions. According to LACSD's Clearwater Program Master Facilities Plan, it is estimated that 12.1 miles of City-used Joint Outfall trunk sewers would need to be hydraulically relieved by 2050. No set timeline has been established for when those lines would be improved. The LACSD continues to monitor and adjust its projected flows and would expand conveyance infrastructure and

treatment capacity as needed based on these updates. As the regional sewage conveyance agency, LACSD would take the lead in conducting any additional analyses and development of any necessary improvement plans. At such time, LACSD would utilize SCAG's population projection data as part of its projections, such that any change in the City's land use plans or population projections would ultimately be incorporated into any future analysis depending on the timing of such data updates.

The General Plan Update does not include specific development proposals; therefore, the environmental effects of future wastewater collection systems are unknown at this time. At the time future projects are proposed, they would be required to ensure sufficient local and trunk sewer capacity exists to serve the specific development. Pursuant to Lawndale Municipal Code Section 13.08.070, a building permit would not be issued if the anticipated sewage from a proposed project is found by the City Engineer to exceed the capacity available in the public sewer. Lawndale Municipal Code Chapter 13.08 provides for sewer connection and facilities expansion fees for the City's local wastewater transmission lines. Additionally, LACSD charges annual wastewater sewer fees through its Wastewater Treatment Surcharge Program, as well as sewer connection fees through its Connection Fee Program, in order to maintain and expand LACSD's wastewater services. The General Plan Update includes policies and actions to ensure adequate wastewater services and facilities are available, and that potential environmental impacts associated with the implementation of new or expanded infrastructure would be reduced. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-3.1 directs the City to work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development. Policy CF-3.2 directs coordination with the CSMD to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained. Policy CF-3.3 proposes the City take a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness. Policy CF-3a directs the City to require that sufficient wastewater infrastructure capacity is available to serve proposed

development prior to approval of the project; ensure the project applicant has paid the required fees prior to occupancy of any new development; and to periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded wastewater facilities to a level that is less than significant.

Stormwater

The Planning Area is primarily developed, with limited areas of pervious surfaces. Although future development activities have the potential to slightly increase impervious areas within the Planning Area, the majority of development activities under the proposed General Plan Update would consist of infill and redevelopment on currently urbanized sites. Therefore, implementation of the Project would not substantially increase the rate or amount of surface runoff. Federal, State and local regulations would require individual projects to provide necessary on-site storm drain infrastructure and any off-site infrastructure improvements. The specific impacts of providing new and expanded drainage facilities cannot be determined at this time, as the Project does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities.

Stormwater drainage and conveyance facilities would be evaluated at the project-level in association with subsequent development projects. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan. As future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. As such, this is a less than significant impact and no additional mitigation is required.

The General Plan Update policies and actions would further ensure that there is adequate stormwater drainage and flood control infrastructure to serve future development under the General Plan Update, and would ensure that future drainage and flood control infrastructure projects do not result in adverse environmental impacts. Proposed Resource Management Element Policy RM-6.4 directs the City to work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy. Proposed Community

Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Action CF-4d reviews development projects to identify potential storm drain and drainage impacts and requires developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. Action CF-4e requires project designs to minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize LID strategies, and utilize BMPs to reduce stormwater runoff. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded stormwater facilities to a level that is less than significant.

Electrical, Natural Gas, and Telecommunications

In regard to electrical, natural gas, and telecommunication services, the Planning Area is within the service areas of SCE, SoCalGas, and various telecommunication providers. The Planning Area is generally developed and existing electrical, natural gas, and telecommunications infrastructure exists within the Planning Area. New growth anticipated by the General Plan Update would require increased electrical, natural gas, and telecommunications services, potentially resulting in the new construction or relocation of facilities. The environmental effects of future expansions of electrical, natural gas, and telecommunication facilities would be evaluated with each development proposal and would require a separate environmental review related to the construction and operation of new electrical, natural gas, and telecommunications infrastructure. Future implementing projects under the General Plan Update would have to coordinate with each utility provider to establish service, provide any necessary extensions of facilities, and comply with regulations in existence at that time. As future development and infrastructure projects are considered by the City, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Furthermore, these future facilities would be subject to General Plan Update policies and actions intended to ensure adequate provision of services and facilities and that potential environmental impacts associated with the implementation of new or expanded electrical, natural gas, and

telecommunications infrastructure would be reduced. Proposed Resource Management Element Policy RM-5.4 promotes the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure. Action RM-5a implements energy conservation measures in public buildings. Action RM-5b encourages innovative building design, layout, and orientation techniques to minimize energy use. Action RM-5c directs the City to review development projects to ensure compliance with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-5.1 directs the City to work cooperatively with utility providers to promote the provision of adequate telecommunications services and facilities to serve the needs of existing and future residents and businesses. Action CF-5a directs the City to confer with telecommunications providers regarding major development plans and participate in the planning of the extension of utilities. The implementation of existing regulations and General Plan Update policies and actions would reduce impacts associated with the relocation or construction of new or expanded electrical, natural gas, and telecommunications facilities to a level that is less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

RESOURCE MANAGEMENT ELEMENT

Policy RM-5.4: Energy-Efficient Materials. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: Energy Conservation. Promote energy conservation and recycling by the public and private sectors.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Policy RM-6.1: Conservation. Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Policy RM-6.4: Stormwater. Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.2: Fair Share. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

Policy CF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.4: Revenue Sources. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

Policy CF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy CF-1.8: Regional Issues. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy CF-1.9: Cost Sharing. Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

Policy CF-1.10: Regional Services Providers. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy CF-1.11: Capital Improvement Planning. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action CF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action CF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy CF-2.1: Water Supply Needs. Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: Use of Recycled Water. Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: Climate Change Impacts. Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

Policy CF-3.1: Wastewater System. Work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development.

Policy CF-3.2: Adequate Infrastructure. Coordinate with the County of Los Angeles Consolidated Sewer Maintenance District to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained.

Policy CF-3.3: Integrated Systems Planning. Develop a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness.

Action CF-3a: Through the development review process, continue to cooperate with the County of Los Angeles Consolidated Sewer Maintenance District to ensure adequate wastewater facilities are provided and maintained in the community. Specifically, the City should:

- Require that sufficient wastewater infrastructure capacity is available to serve the development prior to approval of the project;
- Ensure the project applicant has paid the required fees prior to occupancy of any new development; and
- Periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities.

Policy CF-4.1: Maintain Capacity. Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

Action CF-4d: Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

Action CF-4e: Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

Policy CF-5.1: Cooperation with Utilities Providers. Work cooperatively with utility providers to promote the provision of adequate telecommunications services and facilities to serve the needs of existing and future residents and businesses.

Action CF-5a: Confer with telecommunications providers regarding major development plans and participate in the planning of the extension of utilities.

2. Water Supplies

Threshold: Would the Project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Finding: Less than significant. (Draft EIR, Impact USS-2, pages 3.19-35 through 5.19-38)

Explanation: The General Plan Update is expected to result in increased population and employment growth within the Planning Area, and a corresponding increase in the demand for additional water supplies. Buildout under the General Plan Update could yield a total of 15,405 housing units, a population of 47,430 people, 5,351,026 square feet of non-residential building square footage, and 9,208 jobs within the Planning Area. This represents development growth over existing conditions of an additional 3,942 housing units, an additional population of 9,482 people, an additional 808,864 square feet of non-residential building square footage, and an additional 2,738 jobs within the Planning Area. Water service in the Planning Area is provided by the GSWC. GSWC's 2020 UWMP indicates that GSWC can meet projected water demands under normal-, single dry-, and multiple dry-year conditions through 2045. However, the General Plan Update is expected to result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies, which have not been accounted for in the UWMP. The General Plan Update would result in a water demand of approximately 8.0 AFY within the Planning Area, which would be a net increase of 1.6 AFY (25 percent) over existing conditions. Future updates to the UWMP will account for future residential growth associated with the City's 2021-2029 RHNA and the additional residential and non-residential growth opportunities provided by Project implementation, and would identify short-term and long-term water demand management measures to meet growing water demands during normal, dry, and multiple-dry years.

As site-specific development is not currently proposed, there is the potential that for future qualifying projects, a Water Supply Assessment would be required pursuant to SB 610. A Written Verification of Supply per SB 221 is prepared as a condition of approval for a subdivision map of 500 units or more. Depending on the project, one or both of these analyses may be required. Development proposals that may not warrant a Water Supply Assessment and/or Written Verification of Supply, but meet the definition of a project under CEQA, would still require an analysis of sufficient water supplies in the CEQA process. The Lawndale Municipal Code includes several provisions related to water conservation, including: Chapter 8.40, which allows the City Council to declare voluntary and mandatory water restrictions, as appropriate to water supply conditions; Chapter 15.28, which adopts CALGreen's regulations to improve water efficiency and

conservation; and Chapter 17.88, which promotes water-efficient landscaping in new and substantially altered or expanded existing development projects. Additionally, the General Plan Update includes goals, policies, and actions directed towards water conservation to ensure that adequate water supply, treatment, and distribution capacity is available to meet the needs of future development without negatively impacting the existing community. These actions would result in reduced water consumption on a per capita basis that would help offset the increased demand from additional development within the Planning Area. Proposed Resource Management Element Policy RM-6.1 promotes water conservation strategies using innovative strategies and contemporary best practices. Policy RM-6.2 encourages all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6b ensures City participation in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Action RM-6c directs the City to work with local water agencies and service providers to: implement groundwater recharge programs; participate in water conservation programs; establish water conservation education programs; require water efficient landscaping; expand the production and use of reclaimed water; and require water conservation devices in new development and rehabilitation projects. Proposed Community Facilities Element Policy CF-2.1 coordinates with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth. Policy CF-2.2 encourages the use and expansion of recycled water. Policy CF-2.3 considers the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands. Action CF-2a requires the development review process to ensure sufficient water supply and water infrastructure capacity is available to serve the proposed development prior to approval of the project. Action CF-2c directs the City to cooperate with the State, regional, and local water agencies and suppliers to participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Through implementation of existing Federal, State, and local regulations and the General Plan Update goals, policies, and actions, the environmental impacts to water supplies would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.1: Conservation. Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

Policy RM-6.2: Landscaping. Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Action RM-6b: In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

Action RM-6c: Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

COMMUNITY FACILITIES ELEMENT

Policy CF-2.1: Water Supply Needs. Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

Policy CF-2.2: Use of Recycled Water. Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

Policy CF-2.3: Climate Change Impacts. Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

Policy CF-2a: Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

Policy CF-2c: In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

3. Wastewater Capacity

Threshold: Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Finding: Less than significant. (Draft EIR, Impact USS-3, pages 5.19-38 through 5.19-41)

Explanation: The City's local sewers discharge into the LACSD facilities and are conveyed for treatment at LACSD's JWPCP. The JWPCP has a capacity of 400 MGD and treats approximately 260 MGD of wastewater, resulting in a remaining capacity of 140 MGD. LACSD projects an average flow of 423 MGD at the JWPCP for 2050, which exceeds the plant's current permitted capacity by 23 MGD. The LACSD continues to monitor and adjust its projected flows and would expand treatment capacity as needed based on these updates. No current plant expansion is being planned, as ongoing water conservation efforts throughout the region continue to lower current wastewater flows. Buildout under the General Plan Update could yield a net change over existing conditions of an additional population of 9,482 people within the Planning Area. Using the wastewater generation rate of 83 gpcd from LACSD's 2012 Clearwater Program Master Facilities Plan, growth associated with implementation of the General Plan Update would generate 3.9 MGD of wastewater within the Planning Area, a net increase of 0.8 MGD (25.8 percent) over existing conditions.

The General Plan Update enables additional development but does not include specific development proposals. At the time future projects are proposed, they would require a separate environmental review and compliance with regulations in existence at that time to ensure adequate wastewater treatment capacity exists. LACSD charges annual wastewater sewer fees through its Wastewater Treatment Surcharge Program, as well as sewer connection fees through its Connection Fee Program, in order to maintain and expand LACSD's wastewater services. Additionally, the General Plan Update includes goals, policies, and actions to ensure adequate wastewater facilities capacity to serve the Project's projected demand. Proposed Land Use Element Policy LU-2.6 would notify adjacent

jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them. Proposed Community Facilities Element Policy CF-1.3 directs the City to maintain and implement public facility master plans, in collaboration with appropriate regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale. Policy CF-1.8 directs City participation in the preparation of plans and programs addressing regional infrastructure and public services issues. Action CF-1a directs City coordination with outside service providers and other agencies regarding their public facility plans and to provide local input on goals, objectives, and projects. Policy CF-1d requires any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities. Policy CF-3.1 directs the City to work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development. Policy CF-3.2 directs coordination with the CSMD to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained. Policy CF-3.3 proposes the City take a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness. Policy CF-3a directs the City to require that sufficient wastewater infrastructure capacity is available to serve proposed development prior to approval of the project; ensure the project applicant has paid the required fees prior to occupancy of any new development; and to periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities. The implementation of existing Federal, State, and local regulations and the General Plan Update policies and actions would ensure adequate wastewater treatment capacity and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Action LU-1e: Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

Policy LU-2.6: Regional Growth. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

COMMUNITY FACILITIES ELEMENT

Goal CF-1: Infrastructure and Public Services. A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

Policy CF-1.1: Capital Improvements. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

Policy CF-1.3: Public Facility Plans. Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

Policy CF-1.5: Infrastructure Rehabilitation. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

Policy CF-1.8: Regional Issues. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

Policy CF-1.10: Regional Services Providers. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

Policy CF-1.11: Capital Improvement Planning. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

Action CF-1a: Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

Action CF-1b: Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

Action CF-1c: Study mechanisms for funding and phasing of new infrastructure.

Action CF-1d: Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

Action CF-1e: Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

Policy CF-3.1: Wastewater System. Work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development.

Policy CF-3.2: Adequate Infrastructure. Coordinate with the County of Los Angeles Consolidated Sewer Maintenance District to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained.

Policy CF-3.3: Integrated Systems Planning. Develop a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness.

Action CF-3a: Through the development review process, continue to cooperate with the County of Los Angeles Consolidated Sewer Maintenance District to ensure adequate wastewater facilities are provided and maintained in the community. Specifically, the City should:

- Require that sufficient wastewater infrastructure capacity is available to serve the development prior to approval of the project;
- Ensure the project applicant has paid the required fees prior to occupancy of any new development; and
- Periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities.

4. Solid Waste Generation

Threshold: Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Finding: Less than significant. (Draft EIR, Impact USS-4, page 5.19-41 through 5.19-43)

Explanation: Future development of projects as contemplated under the General Plan Update may increase the population within the Planning Area by an additional 9,482 people. The City has achieved a disposal rate of 2.1 PPD per resident in 2021. Assuming these disposal rates remain constant throughout the life of the General Plan Update, the new growth under General Plan buildout would result in a net increase of approximately 19,912.2 PPD of solid waste over existing conditions, which equals 9.6 net TPD or 3,634.0 net tons of solid waste per year. The City's projected increase in solid waste generation associated with 2045 buildout under the General Plan Update is within the permitted capacity of the Olinda Alpha Landfill, Sunshine Canyon Landfill, and El Sobrante Landfill, where the vast majority of waste from the City was disposed of in 2019. Conservatively assuming the Olinda Alpha Landfill and Sunshine Canyon Landfill reach full capacity during the 20-year planning horizon of the General Plan Update, the El Sobrante Landfill would have adequate

capacity to accommodate the City's projected solid waste generation under buildout of 49.8 TPD. Further, it is more likely that future solid waste would be distributed to the other landfills serving the City.

All future development would be required to comply with the mandatory commercial and multifamily recycling requirements of AB 341, thus reducing the amount of landfill waste. Furthermore, the General Plan Update includes policies and actions to responsibly manage and reduce solid waste. Proposed Resource Management Element Policy RM-2.1 ensures compliance with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting. Policy RM-2.2 supports efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services in the City, and periodically reviews waste collection performance to verified adequacy of service. Policy RM-2.3 directs City participation in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and to ensure adequate landfill capacity in the region. Policy RM-2.5 directs the City to work with appropriate service providers to collect and compost green waste to distribute for use in parks, medians, and other municipal areas. Policy RM-2.6 directs the City to work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery. Policy RM-2.7 promotes Citywide educational programs related to recycling. Action RM-2a ensures solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan. Action RM-2c requires standard language is included in request for services and in City agreements requiring contractors to use BMPs to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates. Action RM-2e encourages recycling, reuse, and appropriate disposal of hazardous materials through increased participation in single-family and multi-family residential curbside recycling programs; increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and reduced yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques. Through the implementation of existing regulations and the General Plan Update policies and actions, this is a less than significant impact

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.1: Compliance with State Legislation. Comply with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting.

Policy RM-2.2: Solid Waste Collection. Support efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services for present and future residents and businesses, and periodically review waste collection performance to verified adequacy of service.

Policy RM-2.4: Source Reduction and Recycling Efforts. Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

Policy RM-2.5: Organic Waste. Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

Policy RM-2.6: Fees and Funding. Work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery.

Policy RM-2.7: Public Education. Promote Citywide educational programs to inform residents of the benefits of recycling and appropriate recycling options and locations.

Action RM-2a: On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

Action RM-2c: Include standard language in request for services and in City agreements requiring contractors to use best management practices to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates.

Action RM-2e: Encourage recycling, reuse, and appropriate disposal of hazardous materials, including the following:

- Increased participation in single-family and multi-family residential curbside recycling programs;
- Increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and
- Reduce yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

5. Solid Waste Regulations

Threshold: Would the Project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Finding: Less than significant. (Draft EIR, Impact USS-5, pages 5.19-43 through 5.19-45)

Explanation: Chapter 8.32 of the Lawndale Municipal Code establishes mandatory solid waste and recycling collection to comply with the requirements of AB 939 and AB 341. The City has also established disposal and mandatory recycling requirements for commercial facilities, single family residential, and multifamily residential premises to comply with State law diversion requirements. As permitted by AB 939, the City authorizes a private solid waste franchisee (i.e., Republic Services) to handle the City's solid waste and requires Republic to cooperate in the preparation of solid waste disposal characterization studies and the preparation of waste stream audits. Republic and the City work together to submit information to meet the reporting requirements of AB 939, or any other law or regulation, to reach the solid waste and recycling goals mandated by AB 939.

The General Plan Update includes policies and actions to responsibly manage and reduce solid waste in compliance with Federal, State, and local regulations. Proposed Resource Management Element Policy RM-2.1 ensures compliance with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting. Policy RM-2.2 supports efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services in the City, and periodically reviews waste collection performance to verified adequacy of service. Policy RM-2.3 directs City participation in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and to ensure adequate landfill capacity in the region. Policy RM-2.5 directs the City to work with appropriate service providers to collect and compost green waste to distribute for use in parks, medians, and other municipal areas. Policy RM-2.6 directs the City to work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery. Policy RM-2.7 promotes Citywide educational programs related to recycling. Action RM-2a ensures solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan. Action RM-2c requires standard language is included in request for services and in City agreements requiring contractors to use BMPs to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates. Action RM-2e encourages recycling, reuse, and appropriate disposal of hazardous materials through increased participation in single-family and multi-family residential curbside recycling programs; increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and reduced yard and

landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques. Through the implementation of existing regulations and the General Plan Update policies and actions, future development implemented by the General Plan Update would continue to comply with management and reduction statutes and regulations related to solid waste and impacts would be less than significant.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.1: Compliance with State Legislation. Comply with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting.

Policy RM-2.2: Solid Waste Collection. Support efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services for present and future residents and businesses, and periodically review waste collection performance to verified adequacy of service.

Policy RM-2.4: Source Reduction and Recycling Efforts. Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

Policy RM-2.5: Organic Waste. Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

Policy RM-2.6: Fees and Funding. Work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery.

Policy RM-2.7: Public Education. Promote Citywide educational programs to inform residents of the benefits of recycling and appropriate recycling options and locations.

Action RM-2a: On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

Action RM-2c: Include standard language in request for services and in City agreements requiring contractors to use best management practices to maximize diversion of waste from the landfill in order to meet the City’s specified diversion rates.

Action RM-2e: Encourage recycling, reuse, and appropriate disposal of hazardous materials, including the following:

- Increased participation in single-family and multi-family residential curbside recycling programs;
- Increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and
- Reduce yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

S. WILDFIRE

1. Response Plans

Threshold: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Finding: No impact. (Draft EIR, Impact WF-1, pages 5.20-10 through 5.20-12)

Explanation: The Planning Area is not located within an State Responsibility Area (SRA) or within a Very High Fire Hazard Severity Zone (VHFHSZ) within a Local Responsibility Area (LRA). Therefore, although the General Plan Update would allow for a variety of new development within the Planning Area, no future development within the Planning Area would be located within a FHSZ in SRA or LRA. Any future development would be required to comply with all City and LACoFD requirements for fire prevention and safety measures, including site access. Additionally, implementation of the General Plan Update would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. While the Project does not propose site-specific development, infrastructure improvements would occur gradually to accommodate the new growth. Future development would be designed, constructed, and maintained in accordance with applicable standards, including vehicular access to ensure that adequate emergency access and evacuation would be maintained. Pursuant to Municipal Code Chapter 15.20, construction activities that may temporarily restrict fire apparatus access would be required to implement appropriate measures to facilitate the passage of fire apparatus and emergency vehicles through/around any effected roadways, as part of the building permit process. The General Plan Update identifies major arterials as the primary routes for evacuation; however, evacuation routes would depend upon the emergency event and area affected. Future development within the Planning Area is not anticipated to result in the substantial modification of roadways surrounding specific development sites or the placement of any permanent physical barriers on adjacent roadways. There

is the potential that traffic lanes located immediately adjacent to a development site may be temporarily closed or controlled by construction personnel during construction activities. However, any temporary construction activity would adhere to Municipal Code Section 17.36.220, which requires sidewalks, public streets, and, alleys adjacent to construction sites to be kept free of debris or other materials that could interfere with circulation for the duration of construction activities, as well as sixty days following substantial completion of such construction. Thus, the Project would not substantially impair an adopted emergency response plan or emergency evacuation plan

The General Plan Update includes policies and actions to address public safety and emergency evacuation. Proposed Public Safety Element Goal PS-1, and subsequent policies and actions, pertains to emergency operations. Policy PS-1.3 implements emergency preparedness and response measures in coordination with the County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses. Policy PS-1.4 requires the Lawndale Local Hazard Mitigation Plan to be regularly maintained and updated. Policy PS-1.6 seeks opportunities to improve emergency access and circulation throughout the community. Action PS-1a reviews County and State emergency response procedures that must be coordinated with City procedures. Action PS-1b continues to implement and update (when relevant) the City's EOP. Policy PS-4.2 continues involvement of the LACoFD in the development review process to ensure fire safety is addressed in new and modified developments. Policy PS-4.3 ensures all new development provides adequate access for emergency vehicles and evacuation. With adherence to Municipal Code regulations and General Plan Update policies, implementation of the Project would not substantially impair an adopted emergency response plan or emergency evacuation plan and no impact would occur.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-1: Emergency Operations. A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.2: Critical Facilities. Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.3: Emergency Preparedness and Response. Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

Policy PS-1.4: Local Hazard Mitigation. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.6: Emergency Access. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Action PS-1a: Regularly review County and State emergency response procedures that must be coordinated with City procedures.

Action PS-1b: Continue to implement and update (when relevant) the City's Emergency Operations Plan.

Policy PS-4.2: Development Review. Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.3: Emergency Access. Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

2. Pollutant Concentrations

Threshold: Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Finding: No impact. (Draft EIR, Impact WF-2, pages 5.20-12 through 5.20-13)

Explanation: The Planning Area does not contain lands classified as FHSZs, nor is the Planning Area located within an SRA. The Planning Area is predominantly flat, built-out, and surrounded by highly urbanized development, which typically does not facilitate the spread of wildfire in the same manner as vegetated, open space areas. The Project would allow for a variety of new development within the Planning Area, but does not propose any site-specific development. Implementation of the General Plan Update would not substantially alter the slope, prevailing winds, or other factors that would increase exposure Lawndale residents, employees or visitors to increased pollutant concentrations from wildfire or result in the uncontrollable spread of a wildfire. Future development is not anticipated to exacerbate wildfire risks. The General Plan Update includes policies and actions to address public safety and emergency services, including fire protection services. Proposed Public Safety Element Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards. Action PS-4a

requires all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City. Therefore, with implementation of the applicable General Plan Update goals, policies and actions, and compliance with fire codes, no impact would occur.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Policy PS-1.4: Local Hazard Mitigation. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.6: Emergency Access. Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Goal PS-4: Fire Hazards. A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: Fire Protection Services. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: Development Review. Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.4: **Building Fire Codes.** Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Action PS-4b: Work with LACoFD to disseminate educational programs for residents on fire hazard risks and fire safety measures.

3. Infrastructure Risks

Threshold: Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Finding: No impact. (Draft EIR, Impact WF-3, pages 5.20-13 through 5.20-15)

Explanation: The City is highly urbanized and existing infrastructure generally exists within the Planning Area. While no site-specific development is currently proposed, future development anticipated by the General Plan Update could require the eventual construction and installation of new infrastructure or

maintenance of existing infrastructure, including roads, water and sewer, and power lines to serve increased growth and development. The Planning Area does not contain lands classified as FHSZs, nor is the Planning Area located within an SRA.

The General Plan Update includes provisions for emergency access, fire protection services, and fire safe design site standards. Proposed Public Safety Element Policy PS-1.2 directs coordination with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery. Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

Future development of utility infrastructure would be subject to the requirements established in Public Resources Code Section 4292, which requires clearing of flammable fuels for a minimum 10-foot radius from the outer circumference of poles and towers; and Section 4293, which sets basic requirements for clearances around electrical conductors. Furthermore, future development would be required to meet vegetation clearance requirements outlined in Title 14, Section 1104.1(d) of the California Code of Regulations for single overhead facilities.

Maintenance of existing infrastructure and the potential installation of new infrastructure for future projects in the Planning Area would be required to comply with Fire Code requirements found in the Municipal Code (Chapter 15.20). Proposed development would be reviewed by the LACoFD to determine the specific fire requirements applicable to ensure compliance with the Fire Code. The potential for future projects to impact environmental resources to meet compliance with fire development standards such (as fuel breaks and clearance requirements) would require site specific environmental evaluation under CEQA to identify any site-specific impacts. In addition, any development in the City would need to comply with the California Building Code, Public Resource Code, and the City Municipal Code to ensure that new developments have access to necessary utilities, and any additional utility construction complies with all code requirements. Implementation of the General Plan Update policies and actions, combined with local and State requirements, would ensure that

potential wildland fire hazards would not be exacerbated by the installation or maintenance of local infrastructure, and no impact would occur.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Policy PS-1.2: Critical Facilities. Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.4: Local Hazard Mitigation. Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.5: Resources. Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Goal 4: Fire Hazards. A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: Fire Protection Services. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: Development Review. Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Policy PS-4.4: Building Fire Codes. Require that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

4. Runoff Risks

Threshold: Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Finding: No impact. (Draft EIR, Impact WF-4, pages 5.20-15 through 5.20-17)

Explanation: The General Plan Update would allow development and improvement projects that would involve some land clearing, grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. There are no designated FHSZs within the Planning Area. Additionally, the Planning Area is predominantly flat, built-out, and surrounded by highly urbanized development.

There are no mapped flood hazard zones located within the Planning Area; the entire Planning Area is located within an area of minimal flood hazard. Future development resulting from implementation of the General Plan

Update could increase the potential for localized flooding in low spots or where infrastructure is unable to accommodate peak flows during a storm event. However, all future development and redevelopment projects would be required to comply with applicable Federal, State, regional, and local plans, policies, and regulations to address site-specific drainage and potential flooding risks. Specifically, future site-specific development would be required to comply with Municipal Code Chapter 13.12 and 13.16. Municipal Code Chapter 13.12 establishes required BMPs during operational phase of projects. Municipal Code Chapter 13.12 also indicates that each person applying to the City for a grading or building permit must submit satisfactory proof to the City that a SWPPP has been prepared, before the City issues any grading or building permit on the construction project. Municipal Code Chapter 13.16 requires subject new development and redevelopment projects to comply with SUSMP conditions assigned by the City, consisting of LID structural and non-structural BMPs; source control BMPs; and structural and non-structural BMPs for specific types of uses. Section 13.16.060 requires applicable development and redevelopment projects to submit a SUSMP for City review and approval, which is required to be incorporated into the applicant's project plans. Section 13.16.070 requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Per Section 13.16.110, applicants for new subject development and redevelopment projects must agree to maintain any structural or treatment control BMPs. These regulations would minimize danger to life and property due to the hazards of flood, soil erosion, seepage and destruction of natural topography and plant material. Further, subsequent development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Construction of storm drainage improvements would occur as part of an overall development or infrastructure project, and would be considered in the environmental review associated with the specific project being proposed.

The General Plan Update includes policies and actions to address public safety, which would limit risks to people and structures within the City. Proposed Public Safety Element Policy PS-1.2 directs coordination with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery. Policy PS-4.1 coordinates fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services. Policy PS-4.2 involves LACoFD in the development review process so that fire safety is addressed in new and modified developments. Policy PS-4.4 requires that all buildings and facilities within the City comply with local, State, and Federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards. Policy PS-5.3 adheres to the latest building,

site, and design codes to avoid or minimize the risk of flooding hazards in the community. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Compliance with local, State, and Federal regulations, and General Plan Update goals, policies, and actions would reduce potential exposure of people or structures to significant risks resulting from runoff, post-fire slope instability, or drainage changes. No impact would occur in this regard.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

PUBLIC SAFETY ELEMENT

Goal PS-1: Emergency Operations. A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.2: Critical Facilities. Coordinate with service providers to ensure the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Goal 4: Fire Hazards. A community protected from loss of life or injury and damage to property due to fire hazards.

Policy PS-4.1: Fire Protection Services. Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

Policy PS-4.2: Development Review. Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

Action PS-4a: Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

Goal PS-5: Flood Hazards. A community that is protected from flood hazards.

Policy PS-5.3: Site Design. Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

Policy PS-5.4: Best Management Practices. Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.6: Local Storm Drainage Infrastructure. Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

SECTION III
IMPACTS THAT ARE LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

There are no impacts that require mitigation above and beyond implementation of the policies and actions included in the General Plan.

SECTION IV
IMPACTS THAN CANNOT BE FULLY MITIGATED TO A LESS THAN SIGNIFICANT LEVEL

The City Council hereby finds that, despite the incorporation of General Plan goals, policies, and actions identified in the EIR and in these Findings, the following environmental impacts cannot be fully mitigated to a less than significant level and a Statement of Overriding Considerations is therefore included herein:

A. AIR QUALITY

1. Cumulatively Considerable Pollutant Emissions

Threshold: Would the project result in cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under the applicable federal or state ambient air quality standard?

Finding: Significant and Unavoidable. (Draft EIR, Impact AQ-2, pages 5.3-36 through 5.3-39)

Explanation: The SCAQMD has established numerical significance thresholds for regional emissions during construction and operation. Daily emissions were estimated for the construction of the land uses provided in the General Plan Update. The calculations used to develop construction emissions incorporate compliance with applicable dust control measures required to be implemented during each phase of construction by SCAQMD Rule 403 (Control of Fugitive Dust), and fugitive VOC control measures required to be implemented by architectural coating emission factors based on SCAQMD Rule 1113 (Architectural Coatings); however, the construction-related daily emissions would exceed the SCAQMD significance thresholds for volatile organic compounds (VOCs), NO_X, CO, PM_{10}, and $PM_{2.5}$. Therefore, short-term regional construction emissions would be potentially significant. Additionally, operation of future development accommodated by the General Plan Update would generate criteria air pollutant emissions from project-generated vehicle trips traveling within the City, energy sources such as natural gas combustion, and area sources such as landscaping equipment and consumer products usage. Operational emissions for future development accommodated by the General Plan Update would exceed regulatory thresholds for VOC, NO_X, CO, PM_{10}, and $PM_{2.5}$. While these thresholds are the only thresholds available for

numerically determining significance, it should be noted that these thresholds were specifically developed for use in determining significance for individual projects and not for program-level documents, such as the General Plan Update. However, as emissions for VOC, NOx, CO, PM_{10}, and $PM_{2.5}$ exceed regulatory thresholds, the regional operational emissions would be potentially significant.

The proposed policies and actions of the General Plan Update would potentially reduce emissions, which could potentially address impacts related to exceeding air quality regulatory thresholds. These policies and actions are oriented toward the reduction of the air quality impacts of individual projects. Action RM-4k requires that future development projects implemented under the General Plan Update would be required to demonstrate consistency with SCAQMD construction threshold emissions. With respect to operational emissions, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the General Plan Update's policies and actions. Policy RM-4.2 of the General Plan Update Resources Management Element requires the City to coordinate with CARB and SCAQMD to enforce the standards of the Clean Air Act. Policy RM-4.6 encourages and incentivizes higher density and mixed-use development opportunities to lessen the impacts of traffic congestion on local air quality. Policy RM-4.8 requires the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts. Action RM-5c provides for the continue review of development projects to ensure that all new public and private development complies with Title 24 energy standards, as well as the energy efficiency standards established by the General Plan Update and the Municipal Code. However, as there is no way to determine the effectiveness of such regulations, policies, and actions for individual projects, it is impossible to determine if potential impacts would be reduced to below regulatory thresholds. As project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. While implementation of these policies and actions would reduce criteria pollutant emissions resulting from implementation of the General Plan Update, the extent to which the impacts are reduced would need to be determined on a project-by-project basis, as necessary. Therefore, this impact is significant and unavoidable.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple

transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.4: Commercial Corridors. Encourage development of well-maintained, functional, and appropriate commercial, retail, and employment opportunities in stand-alone and mixed-use formats, particularly along Hawthorne Boulevard, major arterials, and at major intersections where there is maximum visibility and access.

Policy LU-1.6: Uses to Meet Daily Needs. Encourage uses that meet daily needs, such as grocery stores, local-serving restaurants, and other businesses and activities, within walking distance of residences to reduce the frequency and length of vehicle trips.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

MOBILITY ELEMENT

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: Multimodal Connectivity. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Action M-3a When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.3: Transit Facilities. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Action M-5a Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Policy M-6.1: Bicycle Master Plan. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: Local Travel Network. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.3: Hawthorne Boulevard Sidewalks. Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.

Policy M-6.4: Sidewalk and Bikeway Gaps. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: Bicycle/Pedestrian Facilities at New Developments. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: Effects of New Technologies on Active Transportation. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.
Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.2: Transportation Demand Management. Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Action M-9b Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: Air Quality and Greenhouse Gas Emissions. Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: Regional Cooperation. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: Measurement and Enforcement. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: GHG Emissions. Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: Sensitive Receptors. Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: Mitigation. Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: GHG Reduction. Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: Mitigation. Public Engagement. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual

projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet EPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NO_X emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: Energy Resources. A community that safely manages its energy resources.

Policy RM-5.1: Compliance with State Legislation. Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: Green Building Standards Code. Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: Renewable Energy. Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: Energy-Efficient Materials. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: Energy Conservation. Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: Energy Needs. Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: Business Community. Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: Public Education. Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: Promote Energy Conservation in Existing Building Stock. Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

2. Sensitive Receptors

Threshold: Would the project expose sensitive receptors to substantial pollutant concentrations?

Finding: Significant and Unavoidable. (Draft EIR, Impact AQ-3, pages 3.3-39 through 3.3-42)

Explanation: Criteria air pollutant emissions have the potential to result in health impacts on sensitive receptors located near new development within the Planning Area. Based on the nature and extent of new development, nearby sensitive receptors could be exposed to levels of toxic air contaminants that could result in a potential increase in cancer, acute, and/or chronic risk. Because the exact nature, location, and operation of the future developments are unknown, and because health risk impacts from TACs are cumulative over the life of the nearby receptors, quantification of potential health risks would be speculative. However, as construction and operation of these future developments would occur within close proximity to sensitive receptors, there is the potential for risk to exceed regulatory levels. Additionally, without knowing the exact specifications for all projects that may be developed under the General Plan Update, there is no way to accurately calculate the potential for health impacts from the overall General Plan Update. Individual projects would be required to provide their own environmental assessments to determine health impacts from the construction and operation of their projects. Because there is no way to determine the potential for these projects to affect health of sensitive receptors within the City of Lawndale, the proposed Project would result in potentially significant health impacts. The proposed policies of the General Plan Update would potentially reduce emissions, which could potentially reduce impacts related to exceeding regulatory thresholds of criteria air

pollutant emissions. Goal RM-4 of the General Plan Update Resources Management Element addresses potential air quality impacts by improving air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions. Specifically, Policy RM-4.7 addresses potential air quality impacts to sensitive receptors. Policy LU-1.1 of the General Plan Update Land Use Element promotes a land use pattern that would reduce pollution and air quality impacts. With respect to local air quality emissions, toxic air contaminant emissions, and health impacts, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. Implementation of the General Plan Update policies and actions would mitigate and reduce such emissions. However, the exact location, type, nature, and size of future projects that may expose sensitive receptors to pollutant concentrations cannot be calculated at this time, as the details of potential future projects are not currently known. As such, there is no way to determine the extent to which these regulations will be, or need to be, implemented, and it is impossible to determine if potential impacts would be reduced to below regulatory thresholds. As project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. Therefore, localized operational impacts, construction and operational health, and toxic air impacts would remain significant and unavoidable.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS: Refer to the General Plan Update goals, policies and actions cited above.

B. GREENHOUSE GAS EMISSIONS

1. Generation of Greenhouse Gas Emissions

Threshold: Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Finding: Significant and Unavoidable. (Draft EIR, Impact GHG-1, pages 5.8-20 through 5.8-38)

Explanation: Implementation of the proposed Project would contribute to increases of GHG emissions that are associated with global climate change. Estimated GHG emissions attributable to future development would be primarily associated with increases of CO_2 and other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O), from mobile sources and utility usage. Potential future development associated with implementation of the

General Plan Update would generate GHGs during the construction and operational phases of the Project. Project construction-related activities would generate a maximum of approximately 36,584 $MTCO_2e$ of GHG emissions in a single year. Total GHG emissions construction-related activities would be approximately 677,483, over the entire course of construction (assumed to start in year 2023 and end in year 2045). Project operational GHG emissions would total approximately 203,504 $MTCO_2e$ annually. The Lawndale General Plan Update includes goals, policies, and actions to reduce GHG emissions, as provided below. The proposed Project would provide for more residential, commercial, and mixed-use development in proximity to each other, as well as in proximity to transit. Further, Project implementation would provide for a denser urban environment with improved amenities that support active (non-motorized) transportation opportunities within the Planning Area. Accordingly, the Project is consistent with plans and policies designed to achieve the State's GHG reduction goals. However, it cannot be guaranteed that construction and operational emissions would result in a less than significant impact with regards to GHG impacts.

Proposed General Plan Update Resources Management Element Action RM-4a would require the City to implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts, as well as to develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions, and work with the SBCCOG and/or other local, regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures. While the reduction of GHG emissions puts the City on the path to achieve its long-term emissions targets, since the CAP was developed in 2017, prior to AB 1279, the City would need additional actions to keep the City on a path that aligns with the State of California's longer-term goal for 2045. The CARB 2022 Scoping Plan identifies additional GHG reduction measures necessary to achieve the 2030 target, as well as to achieve the State's target of carbon neutrality by year 2045. The Project would not conflict with any of the provisions of the 2022 Scoping Plan and would support four of the action categories through energy efficiency, water conservation, recycling, and landscaping. However, although the Project would not conflict with the 2022 Scoping Plan, this is not sufficient to ensure that individual development projects associated with the proposed Project would be consistent with the net zero greenhouse gas emissions target encapsulated by AB 1279. Therefore, since full consistency between the proposed Project and AB 1279 cannot be ensured at this programmatic level of analysis, implementation of the proposed Project could result in a significant impact on the environment due to the release of GHGs.

The 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020 RTP/SCS), adopted by SCAG in 2020, is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. SCAG's 2020 RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15. The Project would be consistent with the 2020 RTP/SCS through various polices. The General Plan Update's goals, policies, and actions would support development that is encouraged by the 2020 RTP/SCS to reduce VMT and expand multi-modal transportation options in order for the region to achieve GHG reductions from the land use and transportation sectors required by SB 375, which, in turn, advances the State's long-term climate policies. By furthering implementation of SB 375, the General Plan Update supports regional land use and transportation GHG reductions consistent with State regulatory requirements. Therefore, the Project would be consistent with the GHG reduction-related actions and strategies contained in the 2020 RTP/SCS. Compliance with applicable State standards would ensure consistency with State and regional GHG reduction planning efforts. Therefore, the proposed Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

In order to further reduce GHG emissions associated with buildout of the General Plan Update, the City has included numerous goals, policies and actions in the General Plan Update aimed at reducing GHG emissions and promoting sustainability in the Planning Area. The General Plan Update proposes goals, policies and actions that are specifically relevant to climate change and GHG emissions and energy consumption within the Planning Area. Specifically, the General Plan Update Resources Management Element includes Policy RM-4.1, which supports regional efforts, including those organized through the SCAQMD, SCAG, the SBCCOG, and CARB to implement the regional AQMP. Policy RM-4.3 aligns the City's local GHG reduction targets with the statewide GHG reduction targets of AB 32, and aligns the City's GHG reduction goal with the Statewide GHG reduction goal of Executive Order S-03-05. Policy RM-4.9 requires the City to consider and adopt new local policies and programs that would help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan. Additionally, Action RM-4a requires the City to Implement the local GHG reduction measures identified in the City of Lawndale CAP, participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts, develop a Climate Action Team to support and guide the City's efforts to conserve energy and

reduce emissions, and work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Furthermore, numerous policies and programs in the General Plan Update address sustainable development, which influence operational mobile, energy, and area-source emissions in the Planning Area. For example, the proposed Resource Management Element Policy RM-4.6 encourages and incentivizes higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. Additional policies and actions throughout the Land Use and Mobility Elements promote reductions in VMT through the mix and density of land uses, walkable neighborhood design, bicycle facilities and infrastructure, the expansion of trail networks, and public transportation facilities and infrastructure. Specifically, the proposed Land Use Element includes Policy LU-1.1 which promotes an appropriate land use plan that promotes efficient development and multiple transportation options. The proposed Mobility Element contains Policy M-3.1, which requires the City to apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities); Policy M-3.2, which requires the City to pursue multi-modal connectivity; Policy M-5.3, which requires new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage; Policy M-6.1, which requires the City to implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles; Policy M-6.2, which requires the City to coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities; Policy M-6.3, which requires the City to allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision. While these policies and actions would further assist the City in reducing GHG emissions, the associated reduction of GHG emissions are not quantifiable. Because of this, the City cannot state with certainty whether implementation of the General Plan Update would meet the 2030 and 2045 community emissions targets.

Overall, the proposed Project would be required to comply with regulations imposed by the State of California and the SCAQMD aimed at the reduction of air pollutant emissions. While compliance with relevant regulations and implementation of the proposed General Plan Updates' goals, policies and actions would reduce GHG emissions, the associated reductions of GHG emissions are not quantifiable. Therefore, it cannot be guaranteed that the implementation of the General Plan Update, as well as the individual

development projects associated with implementation of the proposed Project, would generate emissions consistent with the State's long-term goals for reducing GHG emissions in the State of California, particularly the net-zero target as promulgated under AB 1279. As such, the City cannot state with certainty whether implementation of the General Plan Update would meet the State's community emissions target. The proposed Project would have a cumulatively significant and unavoidable adverse impact in regards to greenhouse gas emissions.

GENERAL PLAN UPDATE GOALS, POLICIES, AND ACTIONS:

LAND USE ELEMENT

Policy LU-1.1: Sustainable Land Use Pattern. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2: Balance Jobs and Housing. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.4: Commercial Corridors. Encourage development of well-maintained, functional, and appropriate commercial, retail, and employment opportunities in stand-alone and mixed-use formats, particularly along Hawthorne Boulevard, major arterials, and at major intersections where there is maximum visibility and access.

MOBILITY ELEMENT

Policy M-3.1: Complete Streets for Roadway Projects. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: Multimodal Connectivity. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-5.1 Transit Use. Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2 Improve Local Public Transit Services. Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: Transit Facilities. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Action M-5a Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Policy M-6.1: Bicycle Master Plan. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: Local Travel Network. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.3: Hawthorne Boulevard Sidewalks. Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.

Policy M-6.4: Sidewalk and Bikeway Gaps. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: Bicycle/Pedestrian Facilities at New Developments. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: Effects of New Technologies on Active Transportation. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaced, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.2: Transportation Demand Management. Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Policy M-9.3: Regional Coordination. Encourage regional agencies such as Metro, South Coast Air Quality Management District (SCQAMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

Policy M-9.4: New Development. Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

Action M-9a: Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.

Action M-9b: Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: Air Quality and Greenhouse Gas Emissions. Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: Regional Cooperation. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: Measurement and Enforcement. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: GHG Emissions. Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: Transportation Options. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: Walkability. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: Land Use Planning. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: Sensitive Receptors. Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: Mitigation. Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: GHG Reduction. Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: Public Engagement. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24

standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NO_X emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option

to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: Energy Resources. A community that safely manages its energy resources.

Policy RM-5.1: Compliance with State Legislation. Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: Green Building Standards Code. Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: Renewable Energy. Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: Energy-Efficient Materials. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: Energy Conservation. Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: Energy Needs. Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: Business Community. Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: Public Education. Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: Promote Energy Conservation in Existing Building Stock. Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

SECTION V
CUMULATIVE IMPACTS

Regarding the General Plan's potential to result in cumulative impacts, the City hereby finds as follows:

A. AESTHETICS

Threshold: Would the project, combined with other related cumulative projects, have a substantial adverse effect on a scenic vista?

Finding: Less than significant. (Draft EIR, Section 5.1.6, pages 5.1-14 through 5.1-15)

Explanation: The Planning Area does not contain any scenic vistas or scenic resources; long-range views of the Palos Verdes Hills, Santa Monica Mountains, and San Gabriel Mountains are limited and primarily provided along major north-south corridors due to the existing development within the City and surrounding area. The Planning Area, and the surrounding areas, are developed and within an urbanized area. Development and/or redevelopment of the Planning Area would be subject to the regulations and requirements of the City's Zoning Code, including building heights, setbacks, massing, and design and architectural regulations, while projects in the SOI would be subject to the County's standards and requirements. Future development projects in the City would be subject to the City's development standards, site plan and/or design review process to ensure conformance with City's established development standards. Although the potential for new development at higher densities/intensities could occur with implementation of the Project, scenic vistas and resources do not readily occur within the City and long-range views are limited due to the existing topography and urbanized nature of the area. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to aesthetics. With implementation of the adopted policies and regulations, the proposed General Plan Update would not considerably contribute to permanent changes in visual character, such as obstruction of scenic views. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on visual character to a less-than-significant level. Thus, the Project's incremental effects involving the potential for substantial adverse effects on a scenic vista would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Finding: No impact. (Draft EIR, Section 5.1.6, pages 5.1-15)

Explanation: As there are no officially designated or eligible scenic highways located within the viewshed of the Planning Area, future development and cumulative development associated with implementation of the General Plan Update would not substantially damage scenic resources within a State scenic highway. Thus, the Project's incremental effects involving the potential for substantial damage to scenic resources within a State scenic highway would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, conflict with applicable zoning and other regulations governing scenic quality?

Finding: Less than significant. (Draft EIR, Section 5.1.6, pages 5.1-15 through 5.1-16)

Explanation: Future development and cumulative development are located within the Planning Area and are therefore within an "Urbanized Area." Implementation of the General Plan Update would result in new development and intensification of existing urban uses along major corridors. While the Project does not include any specific development proposals, the Project could facilitate future development projects within these areas at higher densities and intensities than currently exist. Development within the City is subject to the Lawndale Zoning Code, which provides for project-specific design review of future development proposals, which would ensure that development is consistent with the General Plan Update goals, policies, and actions, and the Zoning Code. Individual development projects are reviewed subject to the specific zoning district and development being proposed. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to scenic quality. The proposed Project would not conflict with applicable zoning and other regulations governing scenic quality. Thus, the Project's incremental effects involving potential conflicts with applicable zoning and other regulations governing scenic quality would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Finding: Less than significant. (Draft EIR, Section 5.1.6, pages 5.1-19 through 5.1-20)

Explanation: Future development associated with the General Plan Update and development in the surrounding communities could introduce new sources

of light or glare with the potential to adversely affect day or nighttime views. All lighting installed in future development projects would be subject to conformance with the General Plan Update and applicable Zoning Code requirements. Additionally, pursuant to Chapter 17.30, future residential development projects would be reviewed for conformance with the City's established design criteria, including project illumination. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to aesthetics. With implementation of the adopted policies and regulations, the proposed General Plan Update would not considerably contribute to permanent changes in visual character, such as increased lighting resulting in a substantial degradation. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on lighting and glare to a less-than-significant level. Thus, through compliance with the City's established regulatory requirements, the Project's incremental effects involving the potential to create a new source of substantial light or glare which would adversely affect day or nighttime views in the area would not be cumulative considerable.

B. AGRICULTURAL RESOURCES

Threshold: Would the project, combined with other related cumulative projects, convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Finding: No impact. (Draft EIR, Section 5.2.5, pages 5.2-7 through 5.2-8)

Explanation: The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The FMMP classifies the Planning Area as Urban and Built-Up Land. The Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP. Additionally, there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map and the Planning Area does not contain land under agricultural production. Therefore, the proposed Project would have no impact involving the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use and as a result would not contribute to a potential cumulative impact in this regard.

Threshold: Would the project, combined with other related cumulative projects, conflict with existing zoning for agricultural use, or a Williamson Act contract?

Finding: No impact. (Draft EIR, Section 5.2.5, page 5.2-8 through 5.2-9)

Explanation: The Planning Area, along with the cumulative project sites, is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The Planning Area does not contain land under agricultural production, nor are any parcels within the Planning Area under a Williamson Act contract. Because the City does not have any zoning districts exclusive to agriculture uses, the General Plan Update, and subsequent zoning code update, would not conflict with existing zoning for agricultural use. Therefore, the proposed Project would have no impact involving a conflict with existing zoning for agricultural use, or a Williamson Act contract, and as a result would not contribute to a potential cumulative impact in this regard.

Threshold: Would the project, combined with other related cumulative projects, involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Finding: No impact. (Draft EIR, Section 5.2.5, page 5.2-8 through 5.2-9)

Explanation: The Planning Area, along with the cumulative project sites, is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. There are no forest lands within the Planning Area, nor are there suitable environmental conditions for forest land to be developed; therefore, implementation of the proposed Project will not result in the conversion of forest land to non-forest use. The Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP; there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map; and the Planning Area does not contain land under agricultural production. Therefore, the proposed Project would have no impact involving the conversion of farmland to non-agricultural use or conversion of forest land to non-forest use, and as a result would not contribute to a potential cumulative impact in this regard.

C. AIR QUALITY

Threshold: Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of the applicable air quality plan?

Finding: Less than significant. (Draft EIR, Section 5.3.6, pages 5.3-43)

Explanation: The City of Lawndale continues to coordinate with SCAQMD and SCAG to ensure Citywide growth projections, land use planning efforts, and local development patterns are accounted for in the regional planning and air quality planning processes. Additionally, the General Plan Update includes

policies and actions to further minimize potential impacts to air quality in support of the AQMP. Therefore, the operation of the proposed General Plan Update would not conflict with or obstruct the implementation of the applicable air quality plan and impacts would be less than significant.

Threshold: Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of the applicable air quality plan, or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or state ambient air quality standard?

Finding: Significant and Unavoidable. (Draft EIR, Section 5.3.6, pages 5.3-43 through 5.3-44)

Explanation: Construction-related daily emissions would exceed the SCAQMD significance thresholds for VOCs, NOx, CO, PM10, and PM2.5. Potential operational emissions for the proposed Project would also exceed regulatory thresholds (for VOC, NOx, CO, PM10, and PM2.5). Feasible mitigation measures are incorporated into the policies and actions included within the General Plan Update. However, there are no feasible criteria air pollutant reduction measures beyond those identified within the policies and actions identified that would reduce impacts. While implementation of these policies and actions would reduce criteria pollutant emissions, the extent to which impacts would be generated by future development and infrastructure projects have to be determined on a project-by-project basis, as necessary. Moreover, with respect to local air quality emissions, toxic air contaminant emissions, and health impacts, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. Implementation of the policies and actions listed above would mitigate and reduce such emissions. However, as there is no way to determine the extent to which these regulations would be, or need to be, implemented, it is impossible to determine if potential impacts would be reduced to below regulatory thresholds because the details and potential emissions levels of future development projects is not known at this time, as there are no specific development projects proposed as part of the General Plan Update. Additionally, there are no known feasible mitigation measures beyond the policies and actions listed above. Therefore, localized operational impacts, construction and operational health, and toxic air impacts would remain significant and unavoidable.

With respect to other emissions, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. However, as there is no way to determine the extent to which these regulations would be, or need to be, implemented, it is impossible to determine if potential impacts would be reduced to below

regulatory thresholds. As project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. Based on these impacts, the General Plan Update would contribute to a cumulative impact with regard to air quality in the region and within the air basin (i.e. the South Coast Air Basin) as a whole. Therefore, this impact is considered a cumulatively considerable and significant and unavoidable impact.

Threshold: Would the project, combined with other related cumulative projects, expose sensitive receptors to substantial pollutant concentrations?

Finding: Significant and Unavoidable. (Draft EIR, Section 5.3.6, pages 5.3-44 through 5.3-45)

Explanation: With respect to local air quality emissions, toxic air contaminant emissions, and health impacts, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. Implementation of the General Plan Update policies and actions listed above would mitigate and reduce such emissions. However, the exact location, type, nature, and size of future projects that may expose sensitive receptors to pollutant concentrations cannot be calculated at this time, as the details of potential future projects are not currently known. As such, there is no way to determine the extent to which these regulations will be, or need to be, implemented, and it is impossible to determine if potential impacts would be reduced to below regulatory thresholds. Additionally, as project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. Therefore, this impact is considered a cumulatively considerable and significant and unavoidable impact.

Threshold: Would the project, combined with other related cumulative projects, result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Finding: Less than Significant. (Draft EIR, Section 5.3.6, pages 5.3-45)

Explanation: With respect to potential sources that may emit odors during construction and operations, future developments under the General Plan Update would be required to comply with the CARB requirements, SCAQMD rules, the City's Municipal Code, and the proposed General Plan Update policies and actions. As a result, the implementation of the General Plan Update would not result in a cumulatively considerable contribution to cumulative odor impacts. Additionally, adherence to SCAQMD rules and regulations would alleviate potential impacts related to cumulative conditions on a project-by-project basis. Project implementation would not contribute to a

cumulatively considerable objectionable odors affecting a substantial number of people within the City; impacts would be less than significant in this regard.

D. BIOLOGICAL RESOURCES

Threshold: Would the project, combined with other related cumulative projects, have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Would the project, combined with other related cumulative projects, a have substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Would the project, combined with other related cumulative projects, have a substantial adverse effect on state or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Finding: Less than significant. (Draft EIR, Section 5.4.6, pages 5.4-19 through 5.4-21)

Explanation: The City is highly urbanized and is not known to support any significant wildlife or native planning communities or species. The potential for the Project to have a substantial adverse effect on any special status species, riparian habitat or sensitive natural community or wetlands is less than significant as these resources do not generally occur within the Planning Area. Future development within the City could involve the removal of trees, which may have the potential to impact nesting migratory birds. Proposed removal of any street trees or trees on public property within the City would be reviewed in accordance with Municipal Code Chapter 12.28 and would be required to comply with the requirements for removal. Future development projects would be required to adhere to applicable Federal, State, and local regulations that provide for sensitive species as part of the discretionary approval process for site-specific development projects. Any future development would be assessed for consistency with local policies and ordinances, including the Municipal Code and General Plan goals and policies, and adopted regulations pertaining to biological resources, as appropriate. With implementation of the adopted policies and regulations described above, the proposed General Plan Update would not considerably contribute to adverse effects to biological resources, including special status plant or wildlife species, riparian habitat or other sensitive natural community, or any State or Federally protected wetlands. The polices and

actions included within the General Plan Update and compliance with existing regulations would reduce the cumulative effect of the General Plan Update on biological resources to a less than significant level. Thus, the proposed Project's incremental effects involving special status plant or wildlife species, riparian habitat or other sensitive natural community, or any State or Federally protected wetlands would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Finding: Less than significant. (Draft EIR, Section 5.4.6, page 5.4-21)

Explanation: The Planning Area, along with the surrounding region, are predominantly developed or paved and any landscaping consists primarily of ornamental and/or non-native plant species and do not provide for habitat linkages. The Dominguez Channel is concrete-lined and considered to have low habitat value. Although the channel could be used for wildlife movement, the Project as well as the cumulative projects do not involve any direct or indirect physical changes or modifications to the channel. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to biological resources. The proposed General Plan Update would not considerably contribute to interference of wildlife movement or impede the use of native wildlife nursery sites. Thus, the proposed Project's incremental effects involving the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impeding the use of native wildlife nursery sites would not be cumulatively considerable

Threshold: Would the project, combined with other related cumulative projects, conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Finding: Less than significant. (Draft EIR, Section 5.4.6, pages 5.4-21 through 5.4-22)

Explanation: Site-specific development is not currently proposed as part of the Project; however, future development associated with implementation of the Project would be assessed for consistency with local policies and ordinances, including the Municipal Code and General Plan Update goals and policies, as appropriate. Proposed removal of any street trees or trees on public property within the City would be reviewed in accordance with Municipal Code Chapter 12.28 and would be required to comply with the requirements

for removal. Similarly, cumulative development within the region would be required to comply with any agency-specific policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Future development within the City and cumulative development would be assessed for consistency with the agency-specific Municipal Code and General Plan Update goals, policies, and actions. Since the Project would not conflict with any local policies or ordinances protecting biological resources, the Project's incremental effects would not be cumulatively considerable in this regard.

Threshold: Would the project, combined with other related cumulative projects, conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Finding: Less than significant. (Draft EIR, Section 5.4.6, page 5.4-22)

Explanation: The Planning Area is not located within the boundaries of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Thus, the Project's incremental effects involving a conflict with any of these plans would not be cumulatively considerable.

E. CULTURAL RESOURCES

Threshold: Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Finding: Less than significant. (Draft EIR, Section 5.5.6, page 5.5-17)

Explanation: Previously recorded historic built environment resources have been identified within the City. Additionally, due to the age of development within the City, there is the potential for eligible historical resource sites to be located within the Planning Area. Future development and cumulative development within the Planning Area has the potential to impact known and potentially eligible historical resources. As with the Project, the related cumulative projects would undergo environmental review pursuant to CEQA to evaluate potential impacts to historical resources. This would include studies of historical resources that are present or could be present within a development site. Where significant or potentially significant impacts are identified, implementation of all feasible site-specific mitigation would be required to avoid or reduce impacts. Additionally, the General Plan Update Resource Management Element includes policies and actions that would address historical resources. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General

Plan Update on historical resources to a less than significant level. Based on the above, the Project's incremental contribution to cumulative historical resource impacts would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Finding: Less than significant. (Draft EIR, Section 5.5.6, pages 5.5-17 through 5.5-18)

Explanation: No previously recorded cultural resources have been identified within the City; however, undiscovered archeological sites may be located within the Planning Area. Future development and cumulative development within the Planning Area has the potential to impact previously undiscovered archaeological resources. As with the Project, the related cumulative projects would undergo environmental review pursuant to CEQA to evaluate potential impacts to archaeological resources. This would include studies of archaeological resources that are present or could be present within a development site. Additionally, related projects would be subject to compliance with the established Federal, State, and local regulatory framework concerning the protection of cultural resources on a project-by-project basis. Where significant or potentially significant impacts are identified, implementation of all feasible site-specific mitigation would be required to avoid or reduce impacts. Additionally, the General Plan Update Resource Management Element includes policies and actions that would address archeological resources. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on archeological resources to a less than significant level. Based on the above, the Project's incremental contribution to cumulative archaeological resource impacts would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, disturb any human remains, including those interred outside of dedicated cemeteries?

Finding: Less than significant. (Draft EIR, Section 5.5.6, page 5.5-18)

Explanation: Although unlikely, there is the potential that previously undiscovered human remains could be encountered during construction activities associated with future development within the Planning Area. Future development projects would be required to comply with the established State regulatory framework regarding human remains. Related cumulative projects would undergo environmental review on a project-by-project basis to evaluate the site-specific archaeological sensitivity. Additionally, related projects would be subject to compliance with the established State and local

regulatory framework, including the General Plan Update policies and actions, concerning the discovery of human remains on a project-by-project basis. The proposed Project's compliance with the regulatory framework regarding the discovery of human remains would reduce potential Project impacts to a less than significant level; thus, the Project's incremental contribution to cumulative impacts to human remains would be less than cumulatively considerable.

F. ENERGY

Threshold: Would the project, combined with other related cumulative projects, result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Finding: Less than significant. (Draft EIR, Section 5.6.6, page 5.6-18)

Explanation: As future development projects are received and reviewed by the City in subsequent years, those projects would be reviewed for consistency with the General Plan Update and all relevant State-level programs and requirements. All future projects must implement the most current version of the Title 24 energy efficiency requirements, as required by State law. Consistency with the General Plan Update and other mandatory State-level programs would ensure that future project-level contributions to inefficient, wasteful or unnecessary energy use would be less than significant. Moreover, as identified above, buildout of the General Plan Update would not be expected to cause an inefficient, wasteful, or unnecessary use of energy resources nor conflict with or obstruct a state or local plan for renewable energy or energy efficiency. As a result, the proposed General Plan Update's incremental contribution to cumulative energy impacts would be less than cumulatively considerable.

G. GEOLOGY AND SOILS

Threshold: Would the project, combined with other related cumulative projects, directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Finding: Less than significant. (Draft EIR, Section 5.7.6, page 5.7-26)

Explanation: There are no designated Alquist-Priolo fault zones within the Planning Area. Future development and cumulative development would be required to comply with CBSC, and each project within the City would be evaluated for conformance with the CBSC, General Plan, Lawndale Municipal Code,

and other regulations. Therefore, the proposed Project would not contribute to cumulative impacts related to potential adverse effects involving rupture of a known earthquake fault and impacts in this regard are not cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking or seismic-related ground failure, including liquefaction?

Finding: Less than significant. (Draft EIR, Section 5.7.6, pages 5.7-26 through 5.7-27)

Explanation: The Project proposes a comprehensive update to the City's General Plan, including a revised Land Use Map. Buildout associated with the General Plan Update Land Use Map would allow for new or increased residential and non-residential development within specific areas of the City when compared to existing conditions, potentially exposing people to strong seismic ground shaking or seismic-related ground failure. The Planning Area is not located within a mapped liquefaction zone, as delineated by the CGS. Future development and cumulative development would generally experience similar ground shaking associated with seismic activity. Future development within the Planning Area and cumulative projects would be required to conduct a site-specific geotechnical study to determine the geotechnical feasibility of the specific development being proposed at that time. Any recommendations presented in the geotechnical study would be required to be incorporated into the design and construction of the future development. Future development and cumulative development would be required to comply with all applicable regulations in the most recent CBSC, which includes design requirements to mitigate the effects of potential hazards associated with seismic ground shaking and liquefaction. The Lawndale Building and Safety Services Division would review construction plans for compliance with the CBSC and Lawndale Municipal Code, as well as the geotechnical study's recommendations. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to geologic hazards. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on geologic hazards to a less-than-significant level. Therefore, the Project's incremental effects involving exposure of people and structures to potential substantial adverse effects involving strong seismic ground shaking or seismic-related ground failure, including liquefaction would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects result in substantial soil erosion or the loss of topsoil?

Finding: Less than significant. (Draft EIR, Section 5.7.6, pages 5.7-27 through 5.7-28)

Explanation: Future development sites and cumulative development sites within the City and surrounding areas may contain soils that have erosion potential. Implementation of the construction activities associated with Project implementation and cumulative development projects would involve some land clearing, mass grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. However, the Planning Area is primarily urbanized with limited pervious areas; new development would primarily occur through infill development and redevelopment of sites that are currently developed and do not contain significant amounts of pervious area. Due to the limited pervious areas that occur within the Planning Area, it is not anticipated that Project implementation would increase impervious areas resulting in increased runoff when compared to existing conditions. Site specific geology and soil conditions would be evaluated on a project-by-project basis. All future residential development associated with the proposed Project and cumulative projects within the region would be required to comply with stormwater runoff and pollution control requirements required by the RWQCB and implemented by the specific jurisdiction in which the development occurs. Construction activities within the City would be required to comply with the Lawndale Municipal Code which implements erosion and siltation control measures of the Construction General Permit, reducing potential impacts associated with soil erosion or the loss of topsoil during construction activities. Additionally, future development and cumulative development would be required to comply with postconstruction runoff pollution reduction BMPs implemented through the SUSMP. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to stormwater runoff and other causes of soil erosion. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on soil erosion and loss of topsoil to a less-than-significant level. Thus, the Project's incremental effects involving substantial soil erosion or the loss of top soil would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse or be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Finding: Less than significant. (Draft EIR, Section 5.7.6, page 5.7-28)

Explanation: Due to the generally flat topography within the City and surrounding area, the potential for lateral spreading within the Planning Area is considered to be low. Further, the Planning Area is not identified as having the potential for subsidence. The geotechnical and soil characteristics of future development associated with the Project and any cumulative development within the City would be evaluated on a project-by-project basis and appropriate mitigation measures would be required to reduce potential impacts associated with unstable geologic units or soils. Future development associated with implementation of the proposed Project would be required to prepare a geotechnical study for the specific site being proposed for development. The Lawndale Building and Safety Services Division would review construction plans for compliance with the CBSC and City Municipal Code, as well as the geotechnical study's recommendations. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to geologic hazards. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on geologic hazards to a less-than-significant level. Therefore, the Project's incremental effects involving unstable geologic units or soils would not be cumulatively considerable

Threshold: Would the project, combined with other related cumulative projects, have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

Finding: No impact. (Draft EIR, Section 5.7.6, page 5.7-29)

Explanation: Future development within the Planning Area would be required to connect to the existing sewer system and would not involve the use of septic tanks or alternative wastewater disposal systems. As such, no impact would occur. Therefore, the Project's incremental effects involving soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Finding: Less than significant. (Draft EIR, Section 5.7.6, page 5.7-29)

Explanation: The Planning Area has the potential to contain paleontological resources. Compliance with the City's Municipal Code and implementation of General Plan Update policies and actions would reduce potential impacts to

paleontological resources associated with future construction activities in the Planning Area to a less than significant level. There is also the potential for cumulative project sites within the region to have soils that contain paleontological resources. Construction activities associated with the cumulative projects have the potential to directly or indirectly destroy paleontological resources specific to those development sites. However, these potential impacts are site-specific and generally do not result in cumulative effects. Additionally, individual projects would undergo environmental review on a project-by-project basis pursuant to CEQA to evaluate potential impacts to paleontological resources. Where significant or potentially significant impacts are identified, implementation of all feasible site-specific mitigation would be required to avoid or reduce impacts. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to paleontological resources. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on paleontological resources to a less than significant level. Therefore, the Project's incremental effects involving paleontological resources would not be cumulatively considerable.

H. GREENHOUSE GAS EMISSIONS

Threshold: Would the Project, combined with other related cumulative projects, generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Finding: Significant and Unavoidable. (Draft EIR, Section 5.8.6, page 5.8-38 through 5.8-39)

Explanation: The topic of GHG emissions is inherently a cumulative impact. Though significance thresholds can be developed by air districts, as well as State and Federal regulatory agencies, these thresholds and their related goals are ultimately designed to effect change at a global level. As demonstrated in the analysis provided above, it cannot be guaranteed that the proposed Project would be consistent with the 2045 GHG target for the State of California and would therefore have a significant and unavoidable impact, even with the implementation of General Plan Update goals, policies and actions.

I. HAZARDS AND HAZARDOUS MATERIALS

Threshold: Would the project, combined with other related cumulative projects, create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Finding: Less than significant. (Draft EIR, Section 5.9.6, pages 5.9-33 through 5.9-34)

Explanation: Construction activities associated with future development and development associated with the cumulative projects may involve the routine transport, use, or disposal of hazardous materials. Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, State, and Federal law. Implementation of the Project would result in new development and intensification of existing urban uses along major corridors, including Hawthorne Boulevard. The General Plan Update does not introduce new industrial uses or allow for the intensification of existing industrial uses. The land uses anticipated by the Project and cumulative development projects do not typically involve the use or storage of hazardous substances other than limited quantities of hazardous materials such as solvents, fertilizers, pesticides, and other materials used for regular maintenance of buildings and landscaping. The quantities of these materials would not typically be at an amount that would pose a significant hazard to the public or the environment. Adherence to existing regulations would ensure compliance with safety standards related to the use and storage of hazardous materials, and the safety procedures mandated by applicable Federal, State, and local laws and regulations, which would ensure that risks involving the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes would be less than significant. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Thus, the Project's incremental effects involving hazards associated with the routine transport, use, or disposal of hazardous materials would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Finding: Less than significant. (Draft EIR, Section 5.9.6, pages 5.9-34 through 5.9-35)

Explanation: Future development sites associated with implementation of the Project and cumulative development sites within the City could create a significant hazard to the public or the environment through upset and accident conditions involving the release of hazardous materials into the environment. Implementation of construction activities associated with

Project implementation and cumulative development projects would involve some demolition, mass grading, excavation, and other ground-disturbing activities that could temporarily create a significant hazard to the public or the environment through release of hazardous materials. Future site-specific development would be reviewed at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities that may occur on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the regulatory agencies, such as DTSC and the Los Angeles RWQCB. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Thus, the Project's incremental effects involving hazards associated with the reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Finding: Less than significant. (Draft EIR, Section 5.9.6, page 5.9-35)

Explanation: Future development sites associated with implementation of the Project and cumulative development sites within the City may emit hazardous emissions or handle hazardous materials within one-quarter mile of an existing or proposed school during construction phases. All future use, storage, transport, and disposal of hazardous materials associated with the proposed Project and cumulative projects within the City and region would be would be governed by existing regulations of several agencies, including DTSC, EPA, U.S. DOT, Cal/OSHA, and the LACoFD Health Hazardous Materials Division. Site-specific development would adhere to standard construction practices to ensure that any hazardous materials released are appropriately contained and remediated as required by local, State, and Federal law. Compliance with applicable laws and regulations governing the use, storage, transportation, and disposal of hazardous materials would ensure all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. All development within the City is required to adhere to existing regulations which ensure compliance with safety standards related to the use and storage of hazardous materials, and the safety procedures mandated by applicable Federal, State, and local laws and regulations would reduce

potential impacts to schools within the area. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Thus, the Project's incremental effects involving emission of hazardous materials within a one-quarter mile of a school would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Finding: Less than significant. (Draft EIR, Section 5.9.6, pages 5.9-35 through 5.9-36)

Explanation: Future development associated with implementation of the Project and cumulative projects would be evaluated at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities occurring on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of Federal, State, and local regulations, including the DTSC and the Los Angeles RWQCB, prior to construction. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to hazards and hazardous materials. Implementation of the General Plan Update policies and actions would reduce potential impacts to ensure the General Plan Update would not considerably contribute to significant hazards to the public. Therefore, the Project's incremental effects involving exposure of people and structures to potential substantial adverse effects involving hazardous materials sites would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Finding: Less than significant. (Draft EIR, Section 5.9.6, pages 5.9-36 through 5.9-37)

Explanation: Future development associated with Project implementation and cumulative development could impair implementation of or physically interfere with an adopted emergency response plan. Implementation of construction activities associated with Project implementation and cumulative development projects could temporarily interfere with emergency response

plans or emergency evacuation plans. Major arterials within the City generally serve as the primary routes for evacuation. However, evacuation routes would depend upon the emergency event and location. While all residential developments currently meet City evacuation standards, the City would continue to coordinate with LACoFD and the County Sheriff to provide ongoing education to residents about how to safely evacuate in the event of an emergency.

As site-specific development is not currently proposed, it is unknown if implementation of the Project would involve the removal of existing driveways or the construction of new driveways or any associated improvements, such as curb, gutter, and sidewalks. Proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. The proposed development would be required to comply with all applicable Building and Fire Code requirements and would submit construction plans to the Fire Department's Engineering Building Plan Check Unit for review and approval prior to issuance of any building permit. Approval by the LACoFD would ensure that construction and operation would not impair implementation of or physically interfere with the City's EOP or emergency evacuation plan. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to emergency response and evacuation. Thus, the Project's incremental effects involving interface of emergency plans would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, combined with other related cumulative projects, result in significant cumulative impacts with respect to wildfire?

Finding: Less than significant. (Draft EIR, Section 5.9.6, page 5.9-37)

Explanation: The Project's incremental contribution to cumulative wildfire hazard impacts would not be significant. The City is highly urbanized and future development and redevelopment activities in the City would occur in areas that have been previously developed. As a result, the degree of wildland fire hazard, including secondary hazards such as post-fire flooding and debris flow, would not substantially change with adoption of the General Plan Update, and current hazards would not significantly increase. There are no SRA or FHSZs mapped within the Planning Area. New development would be required to comply with the Fire Code and would be reviewed by LACoFD to ensure fire safety is addressed. Additionally, the General Plan includes policies and programs to address public safety and emergency services, including fire protection. Accordingly, the Project's incremental contribution to cumulative wildfire impacts would be less than cumulatively considerable.

J. HYDROLOGY AND WATER QUALITY

Threshold: Would the project, combined with other related cumulative projects, violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Finding: Less than significant. (Draft EIR, Section 5.10-6, page 5.10-36)

Explanation: Future development associated with implementation of the Project and cumulative development within the City and surrounding areas may involve future construction activities that could temporarily increase runoff, erosion, and sedimentation. Future development and cumulative development would be required to comply with NPDES Permit regulations, which requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. For projects within the City disturbing less than one acre, Lawndale Municipal Code Section 13.12.070 would require compliance with minimum BMPs to reduce the discharge of pollutants. Regional projects disturbing less than one acre would be required to comply with the SUSMP and/or applicable jurisdictional-level BMPs to reduce the discharge of pollutants.

Additionally, future Project development and cumulative development could increase impervious areas resulting in increased stormwater runoff when compared to existing site conditions. Future development and cumulative development would be required to be consistent with the MS4 Permit and Lawndale Municipal Code Section 13.16.060, which requires post-construction runoff pollution reduction BMPs implemented through the SUSMP, including LID BMPs. Section 13.16.070, Control of Erosion of Slopes and Channels, requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110, Maintenance of Best Management Practices, requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects. Other existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SWPPPs, and to implement BMPs.

Future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update

on hydrology and water quality to a less-than-significant level. Thus, the proposed Project's incremental effects involving a violation of water quality standards or waste discharge requirements, or a substantial degradation of surface water or groundwater quality, would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Finding: Less than significant. (Draft EIR, Section 5.10-6, page 5.10-37)

Explanation: The General Plan Update does not include any site-specific development, but would enable future residential and non-residential development and is expected to result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies. The Basin is managed by an adjudication and subject to the Judgment managed by the Watermaster, which ensures ongoing management of the Basin and assures the Basin will be capable of supplying sufficient water to meet local needs, including future growth and development. The Planning Area and surrounding area is primarily urbanized with limited pervious areas anticipated for development. Although future development and cumulative development have the potential to increase impervious areas, these areas are limited and do not provide for substantial groundwater recharge within the Planning Area and surrounding areas. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including water conservation measures and LID BMPs. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on groundwater to a less than significant level. Therefore, the proposed Project's incremental effects involving a substantial decrease in groundwater supplies or substantial interference with groundwater recharge is not cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: result in substantial erosion or siltation on- or off-site; substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or impede or redirect flood flows?

Finding: Less than significant. (Draft EIR, Section 5.10-6, pages 5.10-37 through 5.10-39)

Explanation: *Erosion and Siltation*

Future development associated with implementation of the Project and cumulative development within the City and surrounding areas may involve future construction activities that could temporarily increase runoff, erosion, and sedimentation. Future development and cumulative development would be required to comply with NPDES Permit regulations, which requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a SWPPP and monitoring plan, which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. For projects disturbing less than one acre, Lawndale Municipal Code Section 13.12.070 would require compliance with minimum BMPs to reduce the discharge of pollutants. Regional projects disturbing less than one acre would be required to comply with the SUSMP and/or applicable jurisdictional-level BMPs to reduce the discharge of pollutants.

Additionally, future development could increase impervious areas resulting in increased stormwater runoff when compared to existing site conditions. Future development and cumulative development would be required to be consistent with the MS4 Permit and Lawndale Municipal Code Section 13.16.060, which requires post-construction runoff pollution reduction BMPs implemented through the SUSMP, including LID BMPs. Section 13.16.070 requires BMPs to be used on slopes or channels in subject new development or redevelopment projects. Section 13.16.110 requires ongoing maintenance of structural or treatment control BMPs by subject development and redevelopment projects. Other existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SWPPPs, and to implement BMPs. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs and implementation of LID BMPs. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on hydrology and water quality to a less-than-significant level. Therefore, the proposed Project's incremental effects involving erosion and siltation is not cumulatively considerable.

Surface Runoff and Water Quality

The Planning Area is primarily urbanized with limited pervious areas anticipated for development. Although future development and cumulative development have the potential to increase impervious areas, Federal, State, and local regulations would require individual projects to provide the on-site storm drain infrastructure and any off-site infrastructure improvements to ensure stormwater runoff associated with future and cumulative development would be adequately captured and conveyed into the City's storm drain system and LACFCD facilities. Therefore, implementation of the Project would not substantially increase the rate or amount of surface runoff which would result in flooding on- or offsite or create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems. Impacts would be less than significant in this regard. Therefore, the proposed Project's incremental effects involving or contributing runoff water which would exceed the capacity of existing or planned stormwater drainage systems is less than cumulatively considerable.

Future Project development and cumulative development within the City and surrounding areas may involve future construction activities that could temporarily increase runoff, erosion, and sedimentation. Lawndale Municipal Code Chapter 17.88 promotes establishes requirements and standards for water efficient landscapes in new and substantially altered or expanded existing development projects, including the integration of stormwater BMPs into landscape design plans to minimize runoff and to increase on-site rainwater retention and infiltration. Existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, SUSMPs, SWPPPs, and to implement BMPs. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs and implementation of LID BMPs. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on hydrology and water quality to a less-than-significant level. Therefore, the proposed Project's incremental effects involving substantial additional sources of polluted runoff would be less than cumulatively considerable.

Flood Flows

The Planning Area is highly urbanized and primarily developed with residential and non-residential uses. The Project does not propose any changes to the Dominguez Channel and would not result in the alteration of the course of a river or stream. Flood impacts are site specific and generally do not combine to result in cumulative impact. Additionally, there are no

mapped flood hazard zones located within the Planning Area. Pursuant to the CWA, each subsequent development project or improvement project that disturbs more than one acre would be required to obtain NPDES coverage under the Construction General Permit, which would require an approved SWPPP that includes BMPs for grading and preservation of topsoil. Additionally, construction of storm drainage improvements would occur as part of an overall development or infrastructure project. Therefore, the proposed Project's incremental effects involving impeding or redirecting flood flows would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Finding: Less than significant. (Draft EIR, Section 5.10-6, pages 5.10-39 through 5.10-40)

Explanation: Flood impacts are site specific and generally do not combine to result in cumulative impacts. There are no mapped flood hazard zones located within the Planning Area. The Planning Area is approximately three miles inland of the Pacific Ocean and is not located within a mapped Tsunami Hazard Area. There are no dams with the potential to inundate the Planning Area according to the Division of Safety of Dams Dam Breach Inundation Maps. Although there is a man-made lake within close proximity to the Planning Area, the lake does not generate a significant seiche risk to the Planning Area due to its size and the flat topography of the area. As a result, tsunamis and seiches do not pose hazards to the Planning Area. Additionally, construction of storm drainage improvements would occur as part of an overall development or infrastructure projects. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs and implementation of LID BMPs, which would reduce the risk of release of pollutants due to inundation within the Planning Area. Therefore, the proposed Project's incremental effects involving the risk of release of pollutants due to project inundation would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Finding: Less than significant. (Draft EIR, Section 5.10-6, pages 5.10-40 through 5.10-41)

Explanation: The local water quality control plan (Basin Plan), maintained by the Los Angeles RWQCB, specifies the State's water quality standards (i.e.,

beneficial uses, water quality objectives, and antidegradation policy) and serves as the basis for the RWQCB's regulatory programs. Future development and cumulative development projects would be required to comply with the provisions of applicable NPDES permits and water quality permitting, consistent with the Basin Plan. Therefore, the proposed Project's incremental effects involving implementation of a water quality control plan is less than cumulatively considerable.

The Planning Area is located entirely within the West Coast Basin and subject to the West Coast Judgment. The West Coast Judgment provides for the legal and practical means of ensuring that the waters of the Basin are sustainably managed and put to maximum beneficial use. The Project does not propose site-specific development. Future development and cumulative development projects would be subject to the West Coast Judgment. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to hydrology and water quality, including compliance with construction BMPs, implementation of LID BMPs, and water conservation measures. Therefore, the proposed Project's incremental effects involving obstruction of implementation of a sustainable groundwater management plan is less than cumulatively considerable.

K. LAND USE AND PLANNING

Threshold: Would the project, combined with other related cumulative projects, physically divide an established community?

Finding: Less than significant. (Draft EIR, Section 5.11.5, page 5.11-25)

Explanation: Development of cumulative projects in the City of Lawndale would be required to mitigate land use impacts on a project-by-project basis. Each project would be evaluated for consistency with the project site's General Plan land use designation and zoning, adopted General Plan goals, policies, and actions, and other applicable regional land use plans, such as SCAG's RTP/SCS. The proposed General Plan Update would result in less than significant impact related to land use and relevant planning. Therefore, the incremental impact of the proposed Project, when considered in combination with development within the City and region, would not result in cumulatively considerable land use impacts. The land uses allowed under the proposed General Plan provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area, but would not create physical division within the community. The proposed General Plan Update does not include any new roadways, infrastructure, or other features that would divide existing communities. Each individual development project would be reviewed to determine its consistency and compatibility with the surrounding area and its potential to physically divide an established community. As the Project would not

physically divide an established community, the Project's incremental effects would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Finding: Less than significant. (Draft EIR, Section 5.11.5, pages 5.11-25 through 5.11-26)

Explanation: The proposed General Plan Update was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection. As demonstrated throughout the Draft EIR, the proposed Project would not cause a significant environmental impact due to a conflict with a land use plan, policy, or regulation adopted for the purposes of avoiding or mitigating an environmental effect. The proposed General Plan Update carries forward and enhances policies and measures from the City's existing General Plan that were intended for environmental protection, and would not remove or conflict with City plans, policies, or regulations adopted for environmental protection. The proposed General Plan Update would require modifications to the City's Zoning Code to provide consistency between the General Plan and zoning; however, these modifications will not remove or adversely alter portions of the Lawndale Municipal Code that were adopted to mitigate an environmental effect. Similar to future development associated with the proposed Project, cumulative development projects would be evaluated for consistency with the project site's General Plan land use designation and zoning; General Plan goals, policies, and actions; and other applicable plans for the purpose of avoiding or mitigating an environmental effect. As analyzed in the Draft EIR, the proposed Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Thus, the proposed Project's incremental effects would not be cumulatively considerable.

L. MINERAL RESOURCES

Threshold: Would the project, combined with other relative cumulative projects, result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Finding: Less than significant. (Draft EIR, Section 5.12.5, page 5.12-4)

Explanation: The majority of land within the Planning Area is designated as MRZ-1, land where no significant mineral deposits are present, with a smaller portion designated as MRZ-3, land for which the significance of mineral resources

cannot be determined. The land within the MRZ-3 is currently developed and is within a highly urbanized area, indicating there is little to no potential for resource extraction from the MRZ-3 area. Further, there are no known mineral deposits or resources in the Planning Area that are of significant value to the region or the State. Therefore, implementation of the proposed General Plan Update, in combination with other relevant cumulative projects, would not contribute to cumulative impacts and impacts in this regard are not cumulatively considerable.

Threshold: Would the project, combined with other relative cumulative projects, result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Finding: No impact. (Draft EIR, Section 5.12.5, page 5.12-4)

Explanation: The Planning Area does not contain any locally-important mineral resource recovery sites delineated on local general plans, specific plans and other land use plans. As such, future development projects, in combination with other relative cumulative projects, would not result in the loss of availability of a locally-important mineral resource recovery site. Impacts would not be cumulatively considerable.

M. NOISE

Threshold: Would the project, combined with other related cumulative projects, generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Finding: Less than significant. (Draft EIR, Section 5.13.6, pages 5.13-32 through 5.13-34)

Explanation: *Transportation Noise Impacts*

Table 5.13-11 in the Draft EIR shows the cumulative noise levels associated with traffic on the local roadway network, including projects within the Planning Area. Cumulative conditions include traffic due to 2045 buildout of the General Plan Update in addition to pass-through traffic from other jurisdictions. Table 5.13-12 in the Draft EIR shows the estimated noise level increases which may occur under cumulative conditions. As shown in Table 5.13-11 and Table 5.13-12 in the Draft EIR, by the year 2045, existing land uses adjacent to the studied roadways would be exposed to noise levels that exceed the City's exterior standards of 65 dBA CNEL for sensitive uses. A significant impact would occur if the Project resulted in levels higher than 65 dBA CNEL and increased the overall roadway noise level by 3 dBA CNEL, which is a noticeable change in noise level. As shown in Table 5.13-

12 in the Draft EIR, compared to existing traffic noise levels, 2045 without Project traffic volumes are expected to be up to 0.8 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise along the analyzed roadways. Compared to existing traffic noise levels, 2045 with Project traffic volumes are expected to be up to 0.9 dBA CNEL louder than existing ambient noise levels at existing land uses and would result in inaudible increases in ambient noise. Implementation of the Project would therefore not result in a cumulatively considerable impact relative to traffic noise.

Stationary Noise

While the Project does not explicitly propose any new noise-generating uses, implementation of the Project could result in the future development of land uses that generate noise levels in excess of applicable City noise standards for non-transportation noise sources. Implementation of land use planning and policies and actions can minimize cumulative noise impacts related to stationary sources by avoiding the placement of noise generating equipment near noise-sensitive land uses and where unavoidable, including design measures to the degree practicable to avoid violating the noise criteria presented in Table PS-1 of the General Plan Update and the Lawndale Municipal Code. The General Plan Update includes policies and actions that are intended to reduce noise associated with stationary sources. Applicants of future development projects would be required to demonstrate compliance with the City's Noise Ordinance and the policies and actions in the proposed General Plan Update Public Safety Element, including proposed Policies PS-6.3, PS-6.4, PS-6.8, and proposed Actions PS-6c, PS-6d, and PS-6e. Conformance with the existing regulatory framework would reduce cumulative noise impacts from stationary noise sources to a less than significant level. Therefore, the proposed Project's incremental contribution to cumulative impacts associated with stationary noise would not be cumulatively considerable.

Construction Noise

Short-term construction noise and vibration is a localized activity and would affect only land uses that are immediately adjacent to a specific project site. Each construction project would have to comply with the local noise ordinance and General Plan Update policies and actions, including Policy PS-6.9,which requires construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices, and Action PS-6f, which requires all construction activity to comply with the limits established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible. Additionally, projects would comply with mitigation measures that may be prescribed pursuant to CEQA provisions that require significant

impacts to be reduced to the extent feasible. Further, it is unlikely that all construction projects would occur simultaneously within the City. Therefore, the proposed Project's incremental contribution to cumulative impacts associated with construction noise would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, generate excessive groundborne vibration or groundborne noise levels?

Finding: Less than significant. (Draft EIR, Section 5.13.6, page 5.13-34)

Explanation: Short-term construction noise and vibration is a localized activity and would affect only land uses that are immediately adjacent to a specific project site. The General Plan Update includes policies and actions that are intended to reduce groundborne vibration and groundborne noise levels. In order to reduce potentially significant impacts related to groundborne vibration associated with construction activities of future site-specific development, project applicants would be required to comply with proposed General Plan Update Public Safety Element Policy PS-6.14 and Action PS-6k, which require vibration impact studies when construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. The vibration impact studies would be required to include a detailed mitigation plan to avoid any potential significant impacts to existing structures due to groundborne vibrations. With implementation of the General Plan Update, potential significant impacts associated with the proposed Project related to construction vibration would be reduced to less than significant. Cumulative development projects within the City would also be reviewed to ensure project-specific construction activities would not generate excessive groundborne vibration or noise levels. If it is determined that site-specific development associated with the cumulative projects would result in groundborne vibration or noise impacts, mitigation measures would be required to reduce the impact. As the Project's potential for vibration impacts would be reduced to a less than significant level, the proposed Project's incremental contribution to cumulative impacts associated with construction vibration would not be cumulatively considerable.

Threshold: For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project, combined with other related cumulative projects, expose people residing or working in the project area to excessive noise?

Finding: No impact. (Draft EIR, Section 5.13.6, pages 5.13-34 through 5.13-35)

Explanation: The noise contours associated with the airport do not extend beyond the municipal boundaries of the City of Hawthorne. The Planning Area is not

located within any adopted airport land use plan and is located outside of any airport 65 dBA CNEL contours. As such, there are no impacts related to private airports, public airports, airstrips, or adopted airport land use plans. Therefore, proposed Project's incremental contribution to cumulative impacts associated with airport noise would not be cumulatively considerable.

N. POPULATION AND HOUSING

Threshold: Would the project, combined with other related cumulative projects, induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes, and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Finding: Less than significant. (Draft EIR, Section 5.14.6, page 5.14-13)

Explanation: Although implementation of the General Plan Update would provide for increased population growth within the Planning Area when compared to SCAG's growth forecasts, the proposed Project is intended to accommodate the City's fair share of statewide housing needs, which are allocated by SCAG, based on regional numbers provided by HCD on a regular basis (every five to eight years). SCAG's Connect SoCal growth forecasts through 2045 do not currently consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. However, the regional housing needs and associated General Plan growth projections will be included as part of SCAG's future growth forecasts. The land uses allowed under the proposed General Plan Update provide opportunities for infill development in the Planning Area, primarily in the Hawthorne Boulevard Specific Plan area, but would not create physical division within existing communities. New development and redevelopment projects would be designed to complement the character of existing neighborhoods and provide connectivity between existing development and new development within the cumulative analysis area. The proposed General Plan Update does not include any new roadways, infrastructure, or other features that would divide existing communities. Moreover, with implementation of General Plan Update policies and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the proposed General Plan Update, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds, beyond those disclosed and analyzed throughout the Draft EIR. Therefore, the proposed General Plan Update's incremental contribution to cumulative population impacts would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Finding: Less than significant. (Draft EIR, Section 5.14.6, page 5.14-14)

Explanation: Implementation of the General Plan Update would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. Sites designated with the Housing Opportunity Overlay have existing non-residential uses. The Project does not propose any site-specific development at this time; therefore, no existing residents would be displaced. Development and redevelopment of the identified parcels would occur gradually over time. The General Plan Update establishes goals, policies, and actions to ensure the compatibility of new and existing development, including housing. Therefore, the proposed General Plan Update's incremental contribution to cumulative impacts associated with displacement of people or housing would be less than cumulatively considerable.

O. PUBLIC SERVICES

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire Protection and Emergency Services?

Finding: Less than significant. (Draft EIR, Section 5.15.5, pages 5.15-23 through 5.15-24)

Explanation: LACoFD provides fire protection services to the Planning Area. In addition, cumulative projects within the City would receive fire protection services from LACoFD. Similar to future development associated with Project implementation, cumulative development projects would be required to comply with standard LACoFD conditions of approval. LACoFD Fire Prevention Division reviews site plans to ensure that access and water system requirements, which would enhance the proposed development's fire protection, are adequate. Project implementation may require new or the expanded fire protection facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded fire protection facilities. However, it is anticipated that if new facilities or expansion of facilities are determined necessary, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new

development projects under the Project. Thus, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts. Future development within the City and LACoFD service area would be reviewed to determine whether the development being proposed would require new or expanded facilities with the potential for causing significant environmental impacts. The provision of specific facilities or the expansion of facilities would undergo review pursuant to CEQA. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services, including fire protection, and fire hazards. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of fire facilities to a less than significant level. Thus, the Project's incremental impacts to the provision of fire protection services would not be cumulatively considerable.

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Police Protection?

Finding: Less than significant. (Draft EIR, Section 5.15.5, pages 5.15-24 through 5.15-25)

Explanation: LASD provides police protection services to the Planning Area. In addition, cumulative projects within the City would receive police protection services from LASD. Similar to future development associated with the Project, the LASD would review cumulative development projects development plans and applicants would be required to comply with any specific conditions related to safety and security specified by the LASD. Project implementation may require new or the expanded police protection facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded police facilities. However, it is anticipated that if new facilities or expansion of facilities are determined necessary, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development projects under the Project. Thus, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered

police facilities, or the need for new or physically altered police facilities, the construction of which could cause significant environmental impacts. Future development within the City would be reviewed to determine whether the development being proposed would require new or expanded facilities with the potential for causing significant environmental impacts. The provision of specific facilities or the expansion of facilities would undergo review pursuant to CEQA. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services, including police protection. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of sheriffs' facilities to a less than significant level. Thus, the Project's incremental impacts to the provision of police protection services would not be cumulatively considerable.

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Schools?

Finding: Less than significant. (Draft EIR, Section 5.15.5, pages 5.15-25 through 5.15-26)

Explanation: Students generated by the implementation of the Project, combined with other relevant cumulative projects within the City and LESD and CVUHSD service areas would combine to result in increased demand on schools within the area. The exact location of future development and associated student generation is currently unknown. Future development associated with the Project is anticipated to occur gradually through 2045 and would be largely based on market demand. Thus, any increase in demand for school services would occur gradually as additional development occurs in the Planning Area. Future residential development associated with implementation of the Project would be required to comply with SB 50, which would fully mitigate potential impacts related schools. Similarly, the cumulative development projects would be required to pay the statutory fees, so that school facilities can be constructed/expanded, if necessary, to accommodate future students. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of school facilities to a less-than-significant level. Therefore, the Project's

incremental impacts relative to the provision of schools would not be cumulatively considerable.

Threshold: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Other Public Facilities?

Finding: Less than significant. (Draft EIR, Section 5.15.5, pages 5.15-23 through 5.15-24)

Explanation: Future Project development and cumulative development may result in the need for additional LA County Library resources and other public facilities. Future development is assumed to occur over time through 2045; thus, any increase in demand for public services would occur gradually as additional development and associated population growth is added to the City. The General Plan Update includes policies to ensure that library services are adequately funded, are coordinated between the City and the LA County Library, and that new development funds its fair share of services. Similar to the Project, cumulative development projects within the City would be required to comply with the General Plan Update policies and the established regulatory framework regarding the payment of fees. Any future development of library facilities or other public facilities to serve demand associated with implementation of the proposed Project and cumulative projects would be required to comply with applicable regulations, policies, and standards, and would be subject to CEQA review as appropriate. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to the provision of public services. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on the provision of libraries and other public facilities to a less than significant level. Thus, the Project's incremental impacts relative to the provision of other public facilities would not be cumulatively considerable.

P. PARKS AND RECREATION

Threshold: Would the project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Parks?

Would the Project, combined with other relevant cumulative projects, increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Would the Project, combined with other relevant cumulative projects, include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Finding: Less than significant. (Draft EIR, Section 5.16.5, pages 5.16-11 through 5.16-12)

Explanation: Future development associated with the General Plan Update, combined with other relevant cumulative projects, would bring new residents to the Planning Area. These new residents are expected to use existing park and recreational facilities, and this additional use may result in greater demands on parks and recreational facilities in the Planning Area such that deterioration of these facilities could occur or be accelerated. Additionally, the additional demand on existing parks and recreational facilities would increase the need for maintenance and improvements. These improvements could have potential environmental impacts, although the exact impacts cannot be determined since the potential improvements are currently unknown. As future parks and recreation projects are considered by the City, each project will be evaluated for conformance with the General Plan Update, Municipal Code, and other applicable regulations. Parks and recreation projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Although implementation of the Project would cause an increase in demand for parks in the future, potential impacts could be reduced to a less than significant level through the payment of park fees, as established in Municipal Code Chapter 12.34, and adherence to local regulations established in the Municipal Code and General Plan Update policies and actions, which support the creation of new parks and recreation facilities, to accommodate a wide range of activities for all age groups. Similarly, cumulative development projects would be required to comply with Municipal Code and General Plan Update policies regarding parks and recreation facilities, including compliance with CEQA associated with any site-specific development of parks or recreational facilities. Thus, the Project's incremental impacts associated with parks and recreational facilities would not be cumulatively considerable.

Q. TRANSPORTATION

Threshold: Would the project, combined with other related cumulative projects, conflict with a program, plan, ordinance, or policy addressing the

circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Finding: Less than significant. (Draft EIR, Section 5.17.6, page 5.17-33)

Explanation: The Project is a programmatic land use plan and is not proposing any changes to the circulation system. Any future development within the City would be assessed for consistency with local policies and ordinances, including the Municipal Code and General Plan goals and policies, as appropriate. Therefore, the Project's incremental contribution to cumulative impacts related to transit, roadway, bicycle, and pedestrian facilities would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Finding: Less than significant. (Draft EIR, Section 5.17.6, pages 5.17-33 through 5.17-34)

Explanation: As described in Section 5.17 of the Draft EIR, with implementation of the General Plan Update under the City's cumulative buildout conditions, the 2045 Project VMT per capita is approximately 28 percent less than the existing Los Angeles countywide average VMT per capita and the 2045 Project VMT per employee is approximately 18 percent less than the existing Los Angeles countywide average VMT per employee. With implementation of the Project, the City's VMT per capita would not exceed 15 percent below the Los Angeles countywide average. Implementation of the Project would therefore not result in a cumulatively considerable impact relative to VMT. A significant cumulative VMT impact would occur if the Project threshold is exceeded or if the Project is determined to be inconsistent with the 2020 RTP/SCS. As discussed, the Project would be consistent with the SCAG's 2020 RTP/SCS and would contribute toward furthering the goals of SCAG's 2020 RTP/SCS. As the Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG's 2020 RTP-SCS goals, the proposed Project's incremental contribution to cumulative VMT impacts would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Finding: Less than significant. (Draft EIR, Section 5.17.6, page 5.17-34)

Explanation: The types of uses that would be allowed as part of Project implementation

are generally similar to existing and surrounding uses and thereby are compatible with the existing uses in the Planning Area and in the surrounding area. Additionally, site-specific developments would be reviewed by the City to ensure adequate ingress and egress would be provided and site distance standards would be implemented. Implementation of the Project would therefore not contribute to a cumulatively considerable impact relative to an increase in hazards due to a geometric design feature.

Threshold: Would the project, combined with other related cumulative projects, result in inadequate emergency access?

Finding: Less than significant. (Draft EIR, Section 5.17.6, pages 5.17-34 through 5.17-35)

Explanation: A cumulatively significant project impact would occur if implementation of the Project with cumulative projects would result in inadequate emergency access. As noted, the Project does not propose site-specific development; emergency accessibility is typically assessed at the project level. The Project does not propose changes to the citywide roadway network and configuration that would affect local emergency access. The proposed Project along with the cumulative development projects could result in the temporary closure or control of traffic lanes located immediately adjacent to a development site during construction activities. Any temporary closure would be required to comply with the Lawndale Municipal Code. Similarly, the applicant of any proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. LACoFD would review all development projects for access requirements, minimum driveway widths, fire apparatus access roads, fire lanes, signage, access devices and gates, access walkways, among other requirements to ensure adequate emergency access would be provided to and within the site. Therefore, the proposed Project's incremental contribution to cumulative impacts relative to emergency access would not be cumulatively considerable.

R. TRIBAL CULTURAL RESOURCES

Threshold: Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Finding: Less than significant. (Draft EIR, Section 5.18.6, page 5.18-10 through 5.18-11)

Explanation: Tribal cultural resource impacts are site specific and generally do not combine to result in cumulative impacts. Construction of the individual development projects allowed under the land use designations of General Plan Update may result in the discovery and removal of tribal cultural resources. The General Plan Update policies and actions, as well as Federal, State, and local regulations, would reduce the risk to tribal cultural resources in the region. Site-specific development with the potential to impact tribal cultural resources would require a resource assessment and coordination with the tribes to determine the potential for tribal cultural resources and identification of mitigation measures to reduce potential impacts associated with the proposed development. Adherence to the General Plan Update policies and actions, and existing Federal, State and local regulations would avoid and/or minimize a cumulative loss of tribal cultural resources. Therefore, the General Plan Update's incremental contribution to cumulative tribal cultural resource impacts would be less than cumulatively considerable.

S. UTILITIES AND SERVICE SYSTEMS

Threshold: Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects, or have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Finding: Less than significant. (Draft EIR, Section 5.19.6, pages 5.19-46 through 5.19-47)

Explanation: Water service in the Planning Area is provided by the GSWC. In addition to the Project, cumulative projects within the City would receive water service from GSWC. Similar to future development associated with Project implementation, cumulative development projects would be located within areas that are already developed and serviced by the GSWC. Additionally, Lawndale Municipal Code Section 3.14.090 imposes a tax on water users in the City and would help fund necessary infrastructure improvements. The specific impacts of providing new and expanded facilities cannot be

determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded water facilities. Cumulative development projects are anticipated to occur gradually as development occurs in the Planning Area and would be required to pay applicable development impact fees to ensure water facilities can be constructed/expanded, if necessary. Further, the General Plan Update includes policies and actions related to the provision of utilities and water conservation. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on water facilities to a less than significant level. Thus, the Project's incremental impacts to water facilities would not be cumulatively considerable.

Project implementation may result in increased population growth in the Planning Area, and a corresponding increase in the demand for additional water supplies. Similar to future development associated with Project implementation, cumulative development projects would require an analysis of sufficient water supplies through provisions in SB 610 and/or the CEQA process. Additionally, future development associated with the Project and cumulative projects would be required to comply with existing Federal, State, and local regulations, including the Municipal Code, to conserve water and ensure the efficient use of available water supplies. Further, the General Plan Update includes policies and actions related to the provision of utilities and water conservation. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on water supplies to a less than significant level. Thus, the Project's incremental impacts to water supplies would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects, or result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Finding: Less than significant. (Draft EIR, Section 5.19.6, pages 5.19-47 through 5.19-48)

Explanation: The City and LACSD provide wastewater services to the Planning Area. In addition to the Project, cumulative projects within the City would be provided wastewater services by the City and LACSD. Similar to future development associated with Project implementation, cumulative development projects would be located within areas that are already developed and serviced by the City and LACSD. The City would review

each site to determine if sufficient local and trunk sewer capacity exists to serve each specific development project. Pursuant to Lawndale Municipal Code Section 13.08.070, a building permit would not be issued if the anticipated sewage from a proposed project is found by the City Engineer to exceed the capacity available in the public sewer. Lawndale Municipal Code Chapter 13.08 provides for sewer connection and facilities expansion fees for the City's local wastewater transmission lines. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the Project does not propose or authorize development nor does it designate specific sites for new or expanded wastewater facilities. Cumulative development projects are anticipated to occur gradually as development occurs in the Planning Area and would be required to pay applicable development impact fees to ensure wastewater facilities can be constructed/expanded, if necessary, to ensure adequate capacity to serve the proposed development. Further, the General Plan Update includes policies and actions related to the provision of utilities. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on wastewater facilities to a less-than-significant level. Thus, the Project's incremental impacts to wastewater facilities would not be cumulatively considerable.

Project implementation may result in increased population growth in the Planning Area, and a corresponding increase in the flow of wastewater requiring treatment. The Project enables additional development but does not include specific development proposals. At the time future projects are proposed, they would be required to ensure adequate wastewater treatment capacity exists. Additionally, LACSD charges annual wastewater sewer fees through its Wastewater Treatment Surcharge Program, as well as sewer connection fees through its Connection Fee Program, in order to maintain and expand wastewater services, including wastewater treatment. Thus, the Project's incremental impacts to wastewater would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded stormwater facilities, the construction or relocation of which could cause significant environmental effects?

Finding: Less than significant. (Draft EIR, Section 5.19.6, page 5.19-48)

Explanation: Storm drain infrastructure in the Planning Area is owned and operated by the City and the LACFCD. The Planning Area is primarily developed, with limited areas of pervious surfaces. Similar to the Project, cumulative projects have the potential to slightly increase impervious areas within specific areas of the Planning Area. However, due to the urbanized nature of the Planning Area, the majority of development activities associated with

cumulative development would consist of infill and redevelopment on currently urbanized sites and would not substantially increase the rate or amount of surface runoff. Federal, State and local regulations would require individual projects to provide necessary on-site storm drain infrastructure and any off-site infrastructure improvements.

The specific impacts of providing new and expanded drainage facilities cannot be determined at this time, as the Project does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities. Stormwater drainage and conveyance facilities would be evaluated at the project-level in association with subsequent development projects. However, the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development under the proposed Project. As future development and cumulative development projects are considered by the City, each project would be evaluated for conformance with the Municipal Code, and other applicable regulations. Further, the General Plan Update includes policies and actions related to the provision of public facilities. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on stormwater facilities to a less than significant level. Thus, the Project's incremental impacts to stormwater would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded electrical, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Finding: Less than significant. (Draft EIR, Section 5.19.6, pages 5.19-48 through 5.19-49)

Explanation: The City is within the service areas of SCE, SoCalGas, and various telecommunication providers. The Planning Area is primarily developed and includes existing electrical, natural gas, and telecommunications infrastructure. Similar to the Project, cumulative projects have the potential to increase demand for electrical, natural gas, and telecommunications services, potentially resulting in the new construction or relocation of facilities. The specific impacts of providing new and expanded electrical, natural gas, and telecommunications services cannot be determined at this time, as the Project does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities. The environmental effects of future expansions of electrical, natural gas, and telecommunication facilities would be evaluated with each development proposal and would require a separate environmental review, as required, related to the construction and operation of new electrical, natural gas, and telecommunications infrastructure. Future development

associated with the Project and cumulative projects would have to coordinate with each utility provider to establish service, provide any necessary extensions of facilities, and comply with regulations in existence at that time. As future development and cumulative development projects are considered by the City, each project would be evaluated for conformance with the Municipal Code, and other applicable regulations, including the General Plan Update. The General Plan Update includes policies and actions related to the provision of utilities. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on natural gas, electrical, and telecommunications facilities to a less than significant level. Thus, the Project's incremental impacts to electrical, natural gas, or telecommunications would not be cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals, and comply with Federal, state, and local management and reduction statutes and regulations related to solid waste?

Finding: Less than significant. (Draft EIR, Section 5.19.6, pages 5.19-49 through 5.19-50)

Explanation: Similar to the Project, cumulative projects have the potential to increase solid waste generated within the Planning Area. The Lawndale Municipal Code, Chapter 8.28 establishes mandatory solid waste and recycling collection to comply with the requirements of AB 939 and AB 341. As permitted by AB 939, the City authorizes a private solid waste franchisee (i.e., Republic Services) to handle the City's solid waste and cooperate in the preparation of solid waste disposal characterization studies and the preparation of waste stream audits. Republic and the City work together to submit information to meet the reporting requirements of AB 939, or any other law or regulation, to reach the solid waste and recycling goals mandated by the AB 939. Future development associated with the Project and cumulative projects would be required to implement existing regulations, including the Municipal Code, to comply with regulations related to solid waste and ensure the permitted capacity of landfills serving the City is not exceeded. Further, the General Plan Update includes policies and actions related to solid waste, including source reduction. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on solid waste to a less than significant level. Thus, the Project's incremental impacts to solid waste would not be cumulatively considerable.

T. WILDFIRE

Threshold: Would the project, combined with other related cumulative projects, substantially impair an adopted emergency response plan or emergency evacuation plan?

Finding: Less than significant. (Draft EIR, Section 5.20.5, pages 5.20-17 through 5.20-18)

Explanation: The Planning Area and immediately surrounding area is highly urbanized and not located within an SRA or FHSZ per CAL FIRE and County regulatory maps. Therefore, future development associated with implementation of the Project and cumulative projects would not be developed in an SRA or FHSZ. Additionally, future development associated with implementation of the Project and cumulative projects would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. The County OAERP addresses the planned response to extraordinary situations associated with natural disasters and/or human caused incidents, including wildfires, and outlines mutual aid provisions within the Los Angeles County OA. The City's EOP addresses the City's planned response to natural or human-caused disasters and describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support. Future development associated with implementation of the Project and cumulative projects would be subject to similar fire protection development standards and would be required to comply with each jurisdiction's established regulatory framework, including the respective municipal code and General Plan policies and programs to assist in protecting life and property in the event of a wildfire. The Project's would not contribute to cumulative wildfire hazard impacts. Thus, the Project and cumulative development projects' incremental effects involving an adopted emergency response plan or emergency evacuation plan would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Finding: Less than significant. (Draft EIR, Section 5.20.5, page 5.20-18)

Explanation: The Planning Area and immediately surrounding area is highly urbanized and not located within an SRA or FHSZ per CAL FIRE and County regulatory maps. Therefore, future development associated with implementation of the Project and cumulative projects would not be developed in an SRA or FHSZ. Urbanized land does not typically facilitate the spread of wildfire in the same manner as vegetated, open space areas. Future development and cumulative development would be required to

comply with the Fire Code, which would further minimize and reduce impacts related to wildfire. Additionally, the General Plan Update includes policies and programs to address public safety and emergency services. As part of the City's development review process, the LACoFD would review all projects for related fire hazards. Wildfire risks would not change with adoption of the General Plan Update, and exposure to pollutant concentrations from wildfire for occupants in the Planning Area would not significantly increase. Accordingly, the Project's incremental contribution to wildfire risks exposing project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Finding: Less than significant. (Draft EIR, Section 5.20.5, page 5.20-18 through 5.20-19)

Explanation: The Planning Area and immediately surrounding area is highly urbanized and not located within an SRA or FHSZ per CAL FIRE regulatory maps. Therefore, future development associated with implementation of the Project and cumulative projects would not be developed in an SRA or FHSZ. Future development and cumulative development could require the eventual construction and installation of new infrastructure or maintenance of existing infrastructure, including roads, water and sewer, and power lines to serve increased growth and development. Maintenance of existing infrastructure and the potential installation of new infrastructure for future development and cumulative development would be required to comply with Fire Code requirements and would be reviewed by the LACoFD to determine the specific fire requirements applicable to ensure compliance with the Fire Code. Additionally, the General Plan Update includes policies and programs to address public safety and emergency services. Thus, the Project's incremental contribution involving potential wildland fire hazards due to the installation or maintenance of local infrastructure would be less than cumulatively considerable.

Threshold: Would the project, combined with other related cumulative projects, expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Finding: Less than significant. (Draft EIR, Section 5.20.5, page 5.20-19 through 5.20-20)

Explanation: Future development associated with implementation of the Project and cumulative projects would be subject to similar fire protection development standards and would be required to comply with each jurisdictions established regulatory framework, including the respective municipal code and General Plan policies and programs to assist in protecting life and property in the event of a fire. The Project's incremental contribution to cumulative wildfire hazard impacts would not be significant. The City is highly urbanized and future development and redevelopment activities in the City under would occur in areas that have been previously developed. As a result, the degree of wildland fire hazard, including secondary hazards such as post-fire flooding and landslides, would not substantially change with adoption of the General Plan Update, and current hazards would not significantly increase. Additionally, there are no SRA or FHSZs mapped within the Planning Area. As such, the General Plan Update does not approve, propose, or authorize development in an SRA or FHSZ per CAL FIRE and County regulatory maps. New development would be required to comply with the Fire Code, which would further minimize and reduce impacts related to potential fires within the City. As part of the City's development review process, the LACoFD would review all projects for fire related hazards. Additionally, the General Plan Update includes policies and programs to address public safety and emergency services. Accordingly, the Project's incremental contribution involving significant risks as a result of runoff, post-fire slope instability, or drainage changes would be less than cumulatively considerable.

SECTION VI
FINDINGS REGARDING SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Sections 15126(c) and 15126.2(d) of the CEQA Guidelines require that an EIR address any significant irreversible environmental changes that would occur should the project be implemented. Determining whether the proposed Project would result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed such that there would be little possibility of restoring them. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

Consumption of Nonrenewable Resources

Future development would consume limited, slowly renewable and non-renewable resources. This consumption would occur during each individual project's construction phase and would continue throughout its operational lifetime. Future development would require a commitment of resources that would include: (1) building materials; (2) fuel and operational materials/resources; and (3) the transportation of goods and persons to and from individual development sites. Construction would require the consumption of resources that are not renewable or which may renew so slowly as to be considered non-renewable. These resources would include the following construction supplies: lumber and other forest products; aggregate materials used in concrete and asphalt; metals; and water. Fossil fuels such as gasoline and oil would also be consumed to power construction vehicles and equipment.

The operational activities of new development accommodated through implementation of the General Plan Update would consume resources which would be similar to those currently consumed within the City (i.e., energy resources such as electricity and natural gas, petroleum-based fuels required for vehicle-trips, fossil fuels, and water). Fossil fuels would represent the primary energy source associated with both construction and ongoing operation, and the existing, finite supplies of these natural resources would be incrementally reduced. Future development operations would occur in accordance with California Code of Regulations (CCR) Title 24, Part 6, which sets forth conservation practices that would limit energy consumption. Nonetheless, the proposed Project's energy requirements would represent a long-term commitment of essentially non-renewable resources.

Construction activities associated with implementation of the General Plan Update could release hazardous materials into the environment through reasonably foreseeable upset and accident conditions; refer to Section 5.9 in the Draft EIR. All potential demolition, grading, and excavation activities would be subject to the established regulatory framework to ensure that hazardous materials are not released into the environment. Compliance with the established regulatory framework and mitigation measures would protect against a significant and irreversible environmental change resulting from the accidental release of hazardous materials. In addition, there is the potential that individual future development projects would use and store limited amounts of potentially hazardous materials typical. All future development activities requiring the routine use, storage, transport, or disposal of hazardous materials would be subject to all applicable Federal, State, and local regulations and standards in place for hazardous materials. Compliance

with these regulations and standards would protect against significant and irreversible environmental changes due to the accidental release of hazardous materials.

In conclusion, future construction and operations would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources, which would limit the availability of these resource quantities for future generations or for other uses during the life of the individual developments. It is noted that the continued use of such resources would be on a relatively small scale in a regional context.

Irretrievable Commitments/Irreversible Physical Changes

Implementation of the General Plan Update would result in a commitment of land uses designated for the foreseeable future. Land use and development consistent with the Project would result in irretrievable commitments by designating land for development that is more intense, in some instances, than current designations allow. Additionally, residential development would be allowed on land not currently designated for residential development. Development would physically change the environment in terms of aesthetics, air emissions, noise, and traffic. These physical changes are irreversible after development occurs. Therefore, the Project would result in changes in land use within the Planning Area that would commit future generations to these uses.

In summary, the General Plan Update includes an extensive policy framework that is designed to address land use and environmental issues to the greatest extent feasible, while allowing growth and economic prosperity for the City. Construction and operation of future development projects associated with Project implementation would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources that would limit the availability of these resource quantities for future generations or for other uses during the life of the Project. However, the Planning Area is an urbanized area and already uses such resources. Additionally, the continued use of such resources would be on a relatively small scale in a regional context. As such, although irreversible environmental changes would result from the Project, such changes would not be considered significant.

SECTION VII
GROWTH-INDUCING IMPACTS

Section 15126.2(e) of the CEQA Guidelines requires a Draft EIR to evaluate the growth-inducing impacts of a proposed action. The State CEQA Guidelines do not provide specific criteria for evaluating growth inducement. Growth-inducing impacts fall into two general categories: direct or indirect. Direct growth-inducing impacts are generally associated with new residences or businesses that could induce population growth directly. Indirect growth-inducing impacts provide urban services, such as the extension or roads or other infrastructure, to an undeveloped area that could induce population growth indirectly.

In general, a project may foster spatial, economic, or population growth in a geographic area if it results in any of the following:

- Removal of an impediment to growth (e.g., establishment of an essential public service and provision of new access to an area);
- Fostering of economic expansion or growth (e.g., changes in revenue base and employment expansion);
- Fostering of population growth (e.g., construction of additional housing), either directly or indirectly;
- Establishment of a precedent-setting action (e.g., an innovation, a change in zoning and general plan amendment approval); or
- Development of or encroachment on an isolated or adjacent area of open space (being distinct from an infill project).

Should a project meet any one of the above-listed criteria, it may be considered growth inducing.

The Planning Area and surrounding area are fully developed and urbanized. Transportation and infrastructure exists to serve the range of residential and non-residential uses within the surrounding area. The General Plan Update does not introduce new roadways or new or significantly expanded infrastructure that would provide for additional development within the surrounding area. Potential infrastructure improvements associated with future site-specific development would not remove obstacles to growth since the Planning and surrounding area are already served by existing utility providers and potential improvements would be to serve the specific development being proposed. As the General Plan Update would not establish an essential public service or provide new access to an area, the proposed Project would not be considered growth-inducing.

In addition to residential uses, the Project anticipates the development of commercial uses within the Planning Area. The construction of future development projects would result in construction-related jobs. However, construction activities and durations would vary depending upon the specific development and would be temporary in respect to each individual development site and therefore, would not be considered growth-inducing.

Project operations would introduce new residents and jobs to the Planning Area. Future development associated with implementation of the General Plan Update would primarily consist of infill development and redevelopment of already developed sites. New residential development could occur and greater densities, providing additional housing opportunities that would further support commercial and retail uses within the City. Additional non-residential development would provide for new employment opportunities. Residents and employees would seek shopping, entertainment, employment, and other economic opportunities in the City and surrounding area. This could create an increased demand for goods and services that would encourage the creation of new businesses or the expansion of existing businesses. Although economic growth is anticipated within the Planning Area, significant economic growth resulting in the potential to significantly affect the environment is not anticipated as the surrounding area is urbanized.

As shown in Table 3-4 of the Draft EIR buildout of the General Plan Update through 2045 could yield up to 3,942 new housing units and 808,864 square feet of new non-residential building square footage within the Planning Area. Project implementation would exceed the population projections anticipated by SCAG's growth forecasts. While Project growth projections are anticipated to exceed SCAG's 2045 population, SCAG's projections, which are compiled using a number of sources including adopted plans, historical trends, and interviews with local jurisdictions, tend to be more accurate on a regional level than on a local or city level. Discrepancies between Project and regional forecasts can also be attributed to the RHNA process. The General Plan Update is intended to implement the City's 2021-2029 Housing Element; SCAG's Connect SoCal growth forecasts through 2045 do not consider the regional housing need for the 2021-2029 period, as jurisdictional allocations were not known at the time of SCAG's Connect SoCal adoption. The regional housing needs and associated General Plan growth projections will be included as part of SCAG's future growth forecasts.

Although the Project would allow for currently unplanned population growth anticipated in the existing General Plan and by SCAG, the Draft EIR identifies General Plan Update goals, policies, and actions, where appropriate, that would serve to reduce or eliminate potentially significant impacts associated with specific environmental issues associated with growth. Sections 5.1 through 5.20 in the Draft EIR provide a discussion of environmental effects associated with development allowed under the General Plan Update. With implementation of General Plan Update goals, policies, and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the General Plan Update, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds. Therefore, population and housing growth associated with the General Plan Update would result a less than significant impact.

The General Plan is a long-term plan intended to accommodate projected population, housing, and employment growth, including the appropriate balance among these factors with the necessary public services and infrastructure. The proposed General Plan Update would serve as a comprehensive, long-term plan for the physical development of Lawndale. The proposed General Plan Update would only regulate future land development within the Planning Area and would not induce growth within areas outside of the City's jurisdiction. Any future development within the Planning Area would be reviewed in light of the General Plan and this General Plan Update EIR

pursuant to CEQA on a project-by-project basis. Future development would be required to comply with the goals, policies, and actions intended to reduce potential environmental impacts associated with future site-specific development. Thus, Project implementation would not involve a precedent-setting action that could significantly impact the environment.

The Planning Area is located within an urbanized area. Park and open space resources within the City are limited and primarily associated with parks and schools. The Project does not propose modifications to these existing resources and would not result in encroachment into these areas. The Project would not be growth-inducing with respect to development or encroachment into an isolated or adjacent area of an existing open space.

SECTION VIII
ALTERNATIVES

A. BACKGROUND

The Draft EIR analyzed two alternatives to the Project as proposed and evaluated these alternatives for their ability to avoid or reduce the Project's significant environmental effects while also meeting the majority of the Project's objectives. This section sets forth the potential alternatives to the Project analyzed in the EIR and evaluates them in light of the Project objectives, as required by CEQA.

Where significant impacts are identified, section 15126.6 of the State CEQA Guidelines requires EIRs to consider and discuss alternatives to the proposed actions. Subsection (a) states:

> (a) An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision-making and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason.

Subsection 15126.6(b) states the purpose of the alternatives analysis:

> (b) Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.

In subsection 15126.6(c), the State CEQA Guidelines describe the selection process for a range of reasonable alternatives:

> (c) The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the Project and could avoid or substantially lessen one or more of the significant effects. The EIR should briefly describe the rationale for selecting the alternatives to be discussed. The EIR should also identify any alternatives that were considered by the lead agency but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination.

> Additional information explaining the choice of alternatives may be included in the administrative record. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.

The range of alternatives required is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed Project. Alternatives are limited to ones that would avoid or substantially lessen any of the significant effects of the Project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the Project.

B. PROJECT OBJECTIVES

The following objectives have been established for the Project (Draft EIR, pages 3-5 through 3-6):

1. Reflect the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders;
2. Address issues and concerns identified by City residents, businesses, decision-makers, and other stakeholders;
3. Protect Lawndale's existing residences, character, and sense of community;
4. Proactively plan for and accommodate local and regional growth in a responsible manner;
5. Encourage mixed-use development patterns that promote vibrant commercial and residential areas;
6. Allow for a range of high-quality housing options;
7. Attract and retain businesses and industries that provide jobs for local residents;
8. Continue to maintain and improve multimodal transportation opportunities;
9. Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
10. Address new requirements of State law; and
11. Address emerging transportation, housing, and employment trends.

C. ALTERNATIVES CONSIDERED BUT REJECTED FROM DETAILED ANALYSIS

Section 15126.6(c) of the State CEQA Guidelines specifies that an EIR should (1) identify alternatives that were considered by the lead agency but were eliminated from detailed consideration because they were determined to be infeasible during the scoping process; and (2) briefly explain the reasons underlying the lead agency's determination. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives; (ii) infeasibility; and/or (iii) inability to avoid significant environmental impacts.

There were no alternatives considered but rejected from detailed analysis in the EIR.

D. EVALUATION OF ALTERNATIVES SELECTED FOR ANALYSIS

The alternatives selected for further detailed review within the EIR focus on alternatives that could potentially reduce the Project's significant environmental impacts, while still meeting most of the basic Project objectives. Those alternatives include:

- **Alternative 1: No Project Alternative/Existing General Plan** (Draft EIR, pages 7-4 through 7-15)
- **Alternative 2: Reduced Growth Alternative** (Draft EIR, pages 7-15 through 7-25)

1. Alternative 1: No Project Alternative

Description: Under Alternative 1, the City would continue to implement the existing General Plan and no changes would be made to address updated OPR General Plan Guidelines, or the requirements of State law. Since adoption of the existing General Plan, State legislation has been passed requiring the City to address new safety and circulation requirements in the General Plan and to further address greenhouse gas emissions. Additionally, the City recently updated its 2021-2029 Housing Element (adopted in February 2022), and the existing General Plan does not conform to State requirements regarding planning for future housing growth. The General Plan goals, policies, and actions, as well as the Land Use Map, would not be updated to address the vision and concerns of the City's residents, property owners, decision-makers, and other stakeholders that actively participated in the visioning and goal and policy development process.

Alternative 1 would result in the continuation of existing conditions and development levels. New growth would be allowed as envisioned under the existing General Plan, with land uses required to be consistent with the existing General Plan Land Use Map. Alternative 1 (No Project/Existing General Plan Alternative) would result in less development within the Planning Area compared to the proposed Project. Under Alternative 1, the existing General Plan policy framework would still be in effect, which would constitute a status quo approach to land use regulation in the City. The Proposed Land Use Map, along with the policy framework proposed by the General Plan Update, encourages and aims to achieve a community with a balanced land use pattern that meets the City's long-term housing, employment, and civic needs. The land uses allowed under the General Plan Update provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area. A balanced land use pattern would create a community where new development blends with existing neighborhoods. The proposed General Plan Update carries forward and enhances policies and measures from the City's existing General Plan that were intended for environmental protection. The proposed General Plan Update was prepared in conformance with State laws and regulations associated with the preparation of general plans, including requirements for environmental protection.

Alternative 1 would not include updated policies, particularly those related to housing,

greenhouse gases, hazards, complete streets, and environmental justice to address environmental health concerns for disadvantaged communities, as required by State law. This alternative would not include policies proposed in the General Plan Update to ensure protection of environmental resources, both at a project level and under cumulative conditions, consistent with the objectives of CEQA.

Impacts: As shown in Draft EIR Table 7-4, Alternative 1 would result in the same impacts as the proposed Project for the environmental issues of: Agricultural Resources, Hydrology and Water Quality, Mineral Resources, Transportation, and Wildfire. Alternative 1 would result in reduced impacts to Air Quality, Energy, Greenhouse Gas Emissions, Noise, Public Services and Recreation, Utilities and Service Systems, and Irreversible Effects. Alternative 1 would result in increased impacts to Aesthetics, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Land Use and Planning, Population and Housing, and Tribal Cultural Resources. This alternative would fail to reduce any significant and unavoidable impacts to a less than significant level.

Attainment of Project Objectives: This alternative would not meet most of the Project objectives, including the following: reflect the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders; address issues and concerns identified by city residents, businesses, decision-makers, and other stakeholders; proactively plan for and accommodate local and regional growth in a responsible manner; encourage mixed-use development patterns that promote vibrant commercial and residential areas; allow for a range of high-quality housing options; attract and retain businesses and industries that provide jobs for local residents; continue to maintain and improve multimodal transportation opportunities; address new requirements of State law; and address emerging transportation, housing, and employment trends.

Finding: The City Council rejects Alternative 1: No Project Alternative/Existing General Plan, on the following grounds, which provides sufficient justification for rejection of this alternative: (1) the alternative fails to meet most of the Project objectives; (2) the alternative fails to avoid or reduce the Project's significant and unavoidable impacts to a less than significant level; (3) this alternative fails to comply with State law specific to General Plan requirements; and (4) this alternative would not provide the necessary residential densities for housing development to allow the City to meet its RHNA obligations and could be cause for HCD's approval of the Housing Element to be rescinded.

2. Alternative 2: Reduced Growth Alternative

Description: Alternative 2 (Reduced Growth Alternative) continues to allow for new development in mixed-use opportunities, like those included in the proposed Project, but at lower densities that are more consistent with those allowed under the current General Plan. The goals, policies, and actions of the General Plan Update would apply to subsequent development, planning, and infrastructure projects under this alternative. This Alternative was developed to reduce the severity of potential impacts related to air quality and greenhouse gas emissions, as overall development of residential uses within the Planning Area would be less than what could under the proposed Project.

Alternative 2 would result in approximately 1,603 fewer housing units and 3,639 fewer residents within the Planning Area when compared to the proposed General Plan Land Use Map. Nonresidential development potential and employment opportunities would remain the same under this alternative when compared to the proposed General Plan Update. In the 2021-2029 Housing Element, the City introduced two new mechanisms to allow for residential development to be created to implement the Housing Element on sites considered viable for housing development. The first is "Housing Overlay 100", which will be applied to 16 nonresidential sites outside of the Hawthorne Boulevard Specific Plan area and allow for residential densities of up to 100 dwelling units per acre. The second is "Housing Overlay 150" which will be applied to 68 nonresidential sites inside the Hawthorne Boulevard Specific Plan area, will allow for residential densities up to 150 dwelling units per acre. This Alternative assumes that the 2021-2029 Housing Element would be in non-compliance, since it would not implement these mechanisms at the planned densities.

Impacts: As shown in Draft EIR Table 7-4, Alternative 2 would result in the same impacts as the proposed Project for the environmental issues of: Aesthetics, Agricultural Resources, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, Mineral Resources, Population and Housing, Tribal Cultural Resources, and Wildfire. Alternative 2 would result in reduced impacts to Air Quality, Energy, Greenhouse Gas Emissions, Land Use and Planning, Noise, Public Services and Recreation, Utilities and Service Systems, and Irreversible Effects. Alternative 2 would result in increased impacts to Transportation. This alternative would fail to reduce any significant and unavoidable impacts to a less than significant level.

Attainment of Project Objectives: Alternative 2 would not meet some of the Project objectives, including: proactively plan for and accommodate local and regional growth in a responsible manner; allow for a range of high-quality housing options; address new requirements of State law; and address emerging transportation, housing, and employment trends.

Finding: The City Council rejects Alternative 2: Reduced Growth Alternative, on the following ground, which provides sufficient justification for rejection of this alternative: (1) the alternative fails to meet all of the Project objectives; (2) the alternative fails to avoid or reduce the Project's significant and unavoidable impacts to a less than significant level; and (3) this alternative would not be consistent with the planned residential densities in the 2021-2029 Housing Element and could be cause for HCD's approval of the Housing Element to be rescinded.

E. ENVIRONMENTALLY SUPERIOR ALTERNATIVE

Section 15126.6(e)(2) of the State CEQA Guidelines indicates that an analysis of alternatives to a proposed Project shall identify an environmentally superior alternative among the alternatives evaluated in an EIR. Based on the alternatives analysis contained within the Draft EIR, Alternative 2 (Reduced Growth Alternative) is identified as the Environmentally Superior Alternative.

Alternative 2 (Reduced Growth Alternative) is the environmentally superior alternative as it is the most effective in terms of overall reductions of impacts compared to the proposed General Plan Update and Alternative 1 (No Project Alternative/Existing General Plan). Alternative 2 meets most of the Project objectives. Like the proposed Project, Alternative 2 reflects the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders; addresses issues and concerns identified by City residents, businesses, decision-makers, and other stakeholders; protects Lawndale's existing residences, character, and sense of community; encourages mixed-use development patterns that promote vibrant commercial and residential areas; attracts and retains businesses and industries that provide jobs for local residents; continues to maintain and improve multimodal transportation opportunities; and maintains strong fiscal sustainability and continues to provide efficient and adequate public services. However, the alternative fails to meet several Project objectives, including: proactively plan for and accommodate local and regional growth in a responsible manner; allow for a range of high-quality housing options; address new requirements of State law; and address emerging transportation, housing, and employment trends. In addition, Alternative 2 fails to avoid or reduce the Project's significant and unavoidable impacts to a less than significant level and would not be consistent with the planned residential densities in the 2021-2029 Housing Element and could be cause for HCD's approval of the Housing Element to be rescinded. Therefore, City Council rejects the environmentally superior alternative.

SECTION IX
ADOPTION OF STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to State CEQA Guidelines Section 15093(a), the City Council must balance, as applicable, the economic, legal, social, technological, or other benefits of the Project against its unavoidable environmental risks in determining whether to approve the Project. If the specific benefits of the Project outweigh the unavoidable adverse environmental effects, those environmental effects may be considered acceptable.

Having reduced the adverse significant environmental effects of the Project to the extent feasible through the implementation of the General Plan Update goals, policies, and actions; having considered the entire administrative record on the Project; the City Council has weighed the benefits of the Project against its unavoidable adverse impacts after mitigation in regards to air quality and greenhouse gas emissions. While recognizing that the unavoidable adverse impacts are significant under CEQA thresholds, the City Council nonetheless finds that the unavoidable adverse impacts that will result from the Project are acceptable and outweighed by specific social, economic and other benefits of the Project.

In making this determination, the factors and public benefits specified below were considered. Any one of these reasons is sufficient to justify approval of the Project. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the City Council would be able to stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this section, and in the documents found in the Records of Proceeding.

The City Council therefore finds that for each of the significant impacts which are subject to a finding under CEQA Section 21081(a)(3), that each of the following social, economic, and environmental benefits of the Project, independent of the other benefits, outweigh the potential significant unavoidable adverse impacts and render acceptable each and every one of these unavoidable adverse environmental impacts:

1. The General Plan Update promotes more compact, environmentally-sustainable, and equitable development through goals, policies, and actions that balance the need for adequate infrastructure, housing, economic vitality, and environmental justice with the need for resource management, environmental protection, and preservation of quality of life for Lawndale residents.

2. The General Plan Update implements principles of sustainable growth by concentrating new development and intensification of existing urban uses primarily along key commercial and transportation corridors, thereby providing opportunities for a diverse mix of uses while maintaining the City's residential neighborhoods.

3. The General Plan Update provides a land use map that accounts for existing development, physical constraints, economic development, hazards, and incompatible uses, and assigns densities and use types accordingly to enhance the safety, livability, and economic vitality of Lawndale.

4. The General Plan Update improves mobility options through the development of a multi-modal transportation network that enhances connectivity, supports community development patterns, limits traffic congestion, promotes public and alternative transportation methods, and supports the goals of adopted regional transportation plans.

5. The General Plan Update addresses adverse environmental effects associated with global climate change by facilitating sustainable development, promoting energy efficiency, conserving water resources, and promoting compact development patterns that reduce greenhouse gas emissions.

6. The General Plan Update enhances the local economy and provides opportunities for future jobs and business development commensurate with forecasted growth by planning for a mix of residential and commercial development near existing urbanized areas and transportation corridors.

7. The General Plan Update is the product of a comprehensive public planning effort driven by members of the public, city stakeholders, the Planning Commission and the City Council through a series of public meetings, hearings, and workshops that resulted in a thoughtful balance of community, economic, social, and environmental interests.

Attachment B

Resolution No. CC-2312-048 Adopting of General Plan

RESOLUTION NO. CC-2312-048

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA ADOPTING THE CITY'S GENREAL PLAN 2045.

WHEREAS, state law requires the City of Lawndale ("City") to adopt and maintain a General Plan that contains certain mandatory elements, describes the City's long-term goals and develops policies and programs to achieve those goals; and

WHEREAS, State law allows that the City periodically amend the General plan to ensure that it is consistent with the conditions, values, expectations and needs of its residents, businesses and other stakeholders; and

WHEREAS, the City's General Plan was originally adopted in 1998 and has been updated and amended since adoption in order to address certain changes such as economic, environmental, social, and legal as well as the above-mentioned needs and expectations of stakeholders;

WHEREAS, in conformance with Government Code Section 65300 et sec. the City commenced a comprehensive update to the City of Lawndale General plan; and

WHEREAS, Section 15126, 15417 and 15176 of the California Government Code sets forth the specific components to be contained within the General Plan; and

WHEREAS, California Government Code 65302 requires that all General Plans include 8 State-mandated elements, including land use, circulation, housing, conservation, open space, noise, environmental justice, and safety elements,

WHEREAS, the City's Planning Department staff, with the assistance of a consultant, has prepared the update to the Lawndale General Plan 2045 and Final Environmental Impaet Report ("Project"), which document was previously reviewed by the Planning Commission and

WHEREAS, the City is currently undertaking an update to its Hawthorne Boulevard Specific Plan and its zoning codes to establish new land use strategies to accommodate the City's 6th Cycle RHNA and implement the Housing Programs of the 2021-2029 Housing Element which updates will include changes to reflect the Project; and

WHEREAS, the City Council has certified the Final Environmental Impact Report for the Project, and

WHEREAS, a public hearing before the City Council for the Project was properly noticed on November 18, 2023 and set for December 4, 2023; and

WHEREAS, the public hearing was continued by City Council to December 18, 2023; and

WHEREAS, at that public hearing evidence was heard and presented from all persons interested in affecting said Project, from all persons protesting the same and from members of the City staff and the City Council, having reviewed, analyzed and studied said proposal.

WHEREAS, the City Council now desires to adopt the comprehensive update to the City's General Plan 2045, and

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF LAWNDALE, CALIFORNIA, DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. The City Council finds and determines that the recitals above are true and correct.

Section 2. The City Council hereby adopts and approves the City's General Plan 2045 comprehensive update.

Section 3. The City Council has certified the Final EIR pursuant to the California Environmental Quality Act and adopted Findings of Fact and a Statement of Overriding Considerations for the General Plan 2045. The City Council hereby incorporates by reference as if fully set forth herein, the Resolution certifying the Final EIR and adopting the Findings of Fact, and Statement of Overriding Considerations for the General Plan 2045.

Section 4. The City Council based on substantial evidence in the record, hereby makes the following findings in support of adoption of the General Plan 2045:

A. State law requires that each city adopt a general plan to describe its long-term goals and policies and programs to achieve those goals. The general plan is often referred to a city's "constitution" for future growth and development as land use decisions, the Zoning Code, development approvals, and other policies of the City must be consistent with the General Plan. The General Plan 2045 outlines a vision for the City's long-term physical and economic development and community enhancement and sets forth goals and policies that will allow this vision to be accomplished. The General Plan 2045 also provides the basis for establishing City priorities for implementing plans and programs.

B. It is in the best interest of public health, safety, and welfare to update the City's General Plan to incorporate current conditions and community goals and to extend the planning horizon to 2045.

C. The General Plan 2045 is consistent with the requirements of the California Government Code regarding General Plans and the General Plan guidelines in effect as of the date of this Resolution, and the General Plan is internally consistent with all of the objectives, policies, general land uses, programs, and actions of all elements of the General Plan 2045. The General Plan 2045 is a comprehensive update of the City's General Plan and includes an update of the existing elements as well as the addition of new elements. The General Plan 2045 addresses all state-mandated elements.

D. The General Plan 2045 is in compliance with the provisions of CEQA. A Final EIR has been prepared for the General Plan 2045 that provides a description of potential environmental impacts of the General Plan 2045, includes mitigation measures to reduce impacts to less than significant levels where feasible, and evaluates alternatives to the General Plan 2045. All interested parties and members of the public were permitted to comment on the Draft EIR during the 45-day public

comment period, and the City prepared written responses to comments in accordance with CEQA, which were included in the Final EIR. Neither the changes to the Proposed Project nor the Final EIR constitute significant new information triggering recirculation of the EIR. Pursuant to CEQA Guidelines 15092 and 15093, the City Council finds that it may approve the Proposed Project despite the remaining significant effects on the environment that are unavoidable as the City Council has determined in its Resolution Certifying the EIR for the General Plan 2045 that any remaining significant effects on the environment that are unavoidable are acceptable due to overriding considerations.

E. The General Plan 2045 will promote the public health, safety, and welfare by establishing goals and policies to guide the City's development within the Planning Area, to ensure an attractive built environment, to protect the natural environment and promote sustainability, and to ensure provision of adequate infrastructure and services.

Section 5. The City Council hereby approves the General Plan 2045 in accordance with the Planning Commissions November 15,2023 recommendation, set forth in the Planning Commission Resolutions No. 23-07 and 23-08, and has not made substantial modifications to the General Plan 2045 from the Planning Commission's recommendation.

Section 6. The Resolution shall take effect immediately upon its adoption by the City Council, and the Clerk of the Council shall attest to and certify the vote adopting the Resolution.

PASSED, APPROVED AND ADOPTED this 18th day of December 2023

Robert Pullen-Miles, Mayor

ATTEST:

State of California)
County of Los Angeles) SS
City of Lawndale)

I, Erica Harbison, City Clerk of the City of Lawndale, California, do hereby certify that the City Council of the City of Lawndale duly approved and adopted the foregoing Resolution No. CC-2312-048 at a regular meeting of said Council held on the 18th day of December 2023, by the following roll call vote:

Name	Voting		Present, Not Voting		Absent
	Aye	No	Abstain	Not Participating

APPROVED AS TO FORM:

Greg Murphy, City Attorney

Attachment C

Planning Commission Resolutions

RESOLUTION NO. 23-07

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LAWNDALE, CALIFORNIA RECOMMENDING THAT THE CITY COUNCIL APPROVE AND CERTIFY THE UPDATE TO LAWNDALE GENERAL PLAN 2045.

WHEREAS, the Planning Commission is charged with the responsibility of reviewing proposed amendments to the City's General Plan; and

WHEREAS, the City's General Plan was originally adopted in 1991 and has been updated and amened to address certain changes such as economic, environmental, social, and legal;

WHEREAS, in conformance with Government Code Section 65300 et se. the City commenced a comprehensive update to the City of Lawndale General plan; and

WHEREAS, Section 15126, 15417 and 15176 of the California Government Code sets forth the specific components to be contained within the General Plan; and

WHEREAS, California Government Code 65302 requires that all General Plans include 8 state mandated elements including land use, circulation, housing, conservation, open space, noise, environmental justice, and safety elements,

WHEREAS, the City's Planning Department staff, with the assistance of a consultant, has prepared the update to the Lawndale General Plan 2045 and Final Environmental Impact Report ("Project"), which document was previously reviewed by the Planning Commission and

WHEREAS, State law allows that the City periodically amend the General plan to ensure that it is consistent with the conditions, values, expectations and needs of its residents, businesses and other stakeholders; and

WHEREAS, the City is currently undertaking an update to its Hawthorne Boulevard Specific Plan and zoning codes to establish new land use strategies to accommodate the City's 6th Cycle Regional Housing Needs Assessment ("RHNA") and implement the Housing Programs of the 2021-2029 Housing Element; and

WHEREAS, the Planning Commission recommends that the City Council pursuant to the California Environmental Quality Act ("CEQA") (Public Resources Code § 21000 *et seq.*), the City certified the Final EIR for the City General Plan 2045, and

WHEREAS, the Planning Commission has considered all information concerning the Project, Case No. 23-19, as set forth in the General Plan and staff reports; and

WHEREAS, Case No. 23-19 was properly noticed and set for public hearing before the Planning Commission on November 15, 2023, and

WHEREAS, evidence was heard and presented from all persons interested in affecting said proposal, from all persons protesting the same and from members of the City staff and the Planning Commission, having reviewed, analyzed and studied said proposal.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF LAWNDALE, CALIFORNIA, DOES HEREBY RESOLVE AND RECOMMEND AS FOLLOWS:

Section 1. That the recitals set forth above are true and correct and are incorporated into this resolution by reference.

Section 2. That the Planning Commission intends to address the City's changing needs by implementing the required policies, procedures, and programs contained in the 2045 update to the General Plan, attached hereto and incorporated herein as Exhibit "A."

Section 3. the Planning Commission recommends that the City Council pursuant to the California Environmental Quality Act ("CEQA") (Public Resources Code § 21000 *et seq.*), certifies the Final EIR for the City General Plan 2045

PASSED, APPROVED AND ADOPTED THIS 15th DAY OF NOVEMBER 2023.

Ni Kal Price, Chairperson
Lawndale Planning Commission

ATTEST:

State of California)
County of Los Angeles) SS
City of Lawndale)

I, Jared Chavez, Community Development Manager for the City of Lawndale, California, do hereby certify that the foregoing **Resolution No. 23-07** was duly approved and adopted by the Planning Commission of the City of Lawndale at a regular meeting of said Commission held on the **15th day of November 2023** by the following roll call vote:

AYES: **Martinez, Price, Sitka, Smith**
NOES:
ABSENT: **Urrutia**
ABSTAIN:

Jared Chavez,

RESOLUTION NO. 23-08

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF LAWNDALE, CALIFORNIA RECOMMENDING THAT THE CITY COUNCIL ADOPT FINDINGS OF FACT AND A STATEMENT OF OVERRIDING CONSIDERATIONS PERSUANT TO THE CALIFONRIA ENVIRONEMENTAL QUALITY ACT (CEQA), CERTIFY THE GENERAL PLAN UPDATE FINAL ENVRIONMENTAL IMPACT REPORT (SCH #202212088), AND APPROVE GENERAL PLAN 2045, AND APPROVING THE PROJECT

WHEREAS, the City of Lawndale (the "City") proposes the Lawndale General Plan 2045 (the "Project), a comprehensive update to the City's existing General Plan; and

WHEREAS, the Project sets the overarching policy document that guides land use, housing, transportation, open space, public safety, community services, and other policy decisions through the City; and

WHEREAS, pursuant to section 210067 of the Public Resources Code, and section 15367 of the State CEQA Guidelines (Cal. Code Regs., tit. 14 Section 15000 et. Se.), the City of Lawndale is the lead agency for the proposed Project; and

WHEREAS, prior to the development of the project or environmental documents, the City conducted extensive public outreach hosted 10 public workshops beginning in February 2021 through December 2021. Public workshops included 9 virtual workshops and 1 in person interactive workshop, and

WHEREAS, in accordance with CEQA and the State CEQA Guidelines, the City determined that a Program Environmental Impact Report ("EIR") should be prepared in order to analyze all potential adverse environmental impacts that could potentially result from the adoption and implementation of the proposed Project; and 4.1.a Packet Pg. 70 Attachment: Planning Commission Resolution 23-07 (Lawndale General Plan 2045)

WHEREAS, in accordance with State CEQA Guidelines section 15082, on December 6, 2022, the City sent to the Office of Planning and Research and each responsible and trustee agency a Notice of Preparation ("NOP") stating that an Environmental Impact Report (State Clearinghouse Number #202212088 would be prepared; and

WHEREAS, pursuant to Public Resources Code section 21083.9 and State CEQA Guidelines sections 15082(c) and 15083, the City held a duly noticed Scoping Meeting on December 15, 2022, to solicit comments on the scope of the environmental review of the proposed Project, however, no comments were received during the Scoping Meeting; and

WHEREAS, a Draft Program EIR ("Draft EIR") was prepared, incorporating comments received in response to the NOP ("Exhibit A"); and

WHEREAS, the Draft EIR concluded that the proposed Project would result in significant and unavoidable impacts individual projects anticipated by the General Plan update would be required to implement their own environmental review, and

WHEREAS, in accordance with State CEQA Guidelines section 15085, a Notice of Completion was prepared and filed with the Office of Planning and Research on November 30, 2022; and

WHEREAS, as required by State CEQA Guidelines section 15087(a), the City provided Notice of Availability of the Draft EIR to the public to the Office of Planning and Research, on August 15, 2023; and

WHEREAS, during the public comment period, copies of the Draft EIR and technical appendices were available for review and inspection at City Hall, the City Library, on the City's website, and published in the Press Enterprise; and

WHEREAS, pursuant to State CEQA Guidelines section 15087(c), the Draft EIR was circulated for at least a 45-day public review and comment period from August 15, 2023 to October 2, 2023; and

WHEREAS, during the public review and comment period, the City consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies, and others pursuant to State CEQA Guidelines section 15086; and

WHEREAS, pursuant to Public Resources Code section 21092.5, the City provided copies of its responses to commenting public agencies at least ten (10) days prior to the City's consideration of the Final EIR on October 30, 2023; and

WHEREAS, on October 30, 2023, the City released the Final EIR ("Final EIR"), which consists of the Draft EIR, all technical appendices prepared in support of the Draft EIR, all written comment letters received on the Draft EIR, written responses to all written comment letters received on the Draft EIR, and errata to the Draft EIR and technical appendices; and

WHEREAS, on November 15, 2023, the Planning Commission conducted the public hearing to consider the Draft EIR for the Project and solicited comments on the document. After hearing all relevant testimony from staff, the public and the City's consultant team, the Planning Commission voted to recommend that the City Council certify the EIR for the Project; and

WHEREAS, the "EIR" consists of the Final EIR and its attachments and appendices, as well as the Draft EIR and its attachments and appendices (as modified by the Final EIR); and

WHEREAS, all potentially significant adverse environmental impacts were sufficiently analyzed in the EIR; and

WHEREAS, as contained herein, the City has endeavored in good faith to set forth the basis for its decision on the Project; and

WHEREAS, all of the requirements of the Public Resources Code and the State CEQA Guidelines have been satisfied by the City in connection with the preparation of the EIR which is sufficiently detailed so that all of the potentially significant environmental effects of the Project have been adequately evaluated; and

WHEREAS, the EIR prepared in connection with the Project sufficiently analyzes the Project's potentially significant environmental impacts and the EIR analyzes a range of feasible alternatives capable of reducing these effects to an even lesser level of significance; and

WHEREAS, the City has made certain findings of fact, as set forth in Exhibit C to this Resolution, attached hereto and incorporated herein, based upon the oral and written evidence presented to it as a whole and the entirety of the administrative record for the Project, which are incorporated herein by this reference; and

WHEREAS, the City finds that environmental impacts that are identified in the EIR as less than significant and do not require mitigation are described in in the attached Exhibit C.

WHEREAS, the City finds that there are no environmental impacts that are identified in the EIR that are less than significant with incorporation of mitigation measures as described in Section III of Exhibit C; and

WHEREAS, the City finds that even with the incorporation of all feasible mitigation measures, the environmental impacts that are identified in the EIR that are significant and unavoidable are described in Section IV of Exhibit C; and

WHEREAS, the cumulative impacts of the Project identified in the EIR and set forth herein, are described in Section V of Exhibit C; and

WHEREAS, the potential significant irreversible environmental changes that would result from the proposed Project identified in the EIR and set forth herein, are described in Seetion VI of Exhibit C; and

WHEREAS, the existence of any growth-inducing impacts resulting from the proposed Project identified in the EIR and set forth herein, are described in Section VII of Exhibit C; and

WHEREAS alternatives to the proposed Project that might further reduce the already less than significant environmental impacts are described in Section VIII of Exhibit C; and

WHEREAS, because the EIR identified significant and unavoidable impacts, the City explains its reasoning for recommending the adoption of the Project despite those impacts in the Statement of Overriding Considerations, as set forth in Section IX of Exhibit C; and

WHEREAS, prior to taking action, the Planning Commission has heard, been presented with, reviewed and considered all of the information and data in the administrative record, (including but not limited to the EIR) and all oral and written evidence presented to it during all meetings and hearings; and

WHEREAS, the Planning Commission recommends the EIR reflects the independent judgment of the City and is deemed adequate for purposes of making decisions on the merits of the Project; and

WHEREAS, no comments made in the public hearings conducted by the Planning Commission and no additional information submitted to the City have produced substantial new information requiring recirculation of the EIR or additional environmental review of the Project under Public Resources Code section 21092.1 and State CEQA Guidelines section 15088.5; and

WHEREAS, on November 15, 2023, the Planning Commission conducted a duly noticed public hearing on this Resolution, at which time all persons wishing to testify were heard and the Project was fully considered; and Attached Planning Commission Resolution 23-07 (Lawndale General Plan 2045); and

WHEREAS, all other legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, THE PLANNING COMMISSION OF THE CITY OF LAWNDALE, CALIFORNIA, DOES HEREBY RESOLVE AND RECOMMEND AS FOLLOWS:

SECTION 1. The above recitals are true and correct and incorporated herein by reference.

SECTION 2. The Planning Commission hereby finds that it has been presented with the EIR which it has reviewed and considered, and further finds that the EIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines. The Planning Commission finds that the EIR reflects the independent judgment and analysis of the City. The Planning Commission declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by State CEQA Guidelines section 15088.5, has been received by the City after circulation of the Draft EIR that would require recirculation. Therefore, the Planning Commission recommends the City Council certifies the EIR based on the entirety of the record of proceedings.

SECTION 3. The Planning Commission recommends the City Council adopt Resolutions No. CC2312-048 and CC-2312-049 and adopt the "CEQA Findings of Fact" where were prepared in accordance with State CEQA Guidelines sections 15091 and which are attached hereto as Attaehment C and incorporated herein by this reference.

SECTION 4. The Planning Commission recommends the City Council adopt Resolutions No. CC2312-048 and CC-2312-049 certifying that the EIR is an accurate and objective statement that has been completed in full compliance with CEQA and the State CEQA Guidelines; reflects the independent judgment and analysis of the City; declares that no evidence of new significant impacts or any new information of "substantial importance" as defined by State CEQA Guidelines section 15088.5, has been received by the City after circulation of the Draft EIR that would require recirculation. Therefore, certifies the EIR based on the entirety of the record of proceedings.

SECTION 5. The Planning Commission recommends the City Council adopt Resolution 23-07 approving City of Lawndale General Plan 2045.

SECTION 6. Based upon the entire record before it, including the EIR, Findings of Fact, and all written and oral evidence presented, the Planning Commission recommends the City Council approve the proposed Project.

PASSED, APPROVED AND ADOPTED THIS 15th DAY OF NOVEMBER, 2023.

Ni Kal Price, Chairperson
Lawndale Planning Commission

ATTEST:

State of California)
County of Los Angeles) SS
City of Lawndale)

I, Jared Chavez, Community Development Manager for the City of Lawndale, California, do hereby certify that the foregoing **Resolution No. 23-08** was duly approved and adopted by the Planning Commission of the City of Lawndale at a regular meeting of said Commission held on the **15th day of November 2023** by the following roll call vote:

AYES: **Martinez, Price, Sitka, Smith**
NOES:
ABSENT: **Urrutia**
ABSTAIN:

Jared Chavez,
Community Development Manager

Introduction

Since its historic founding in 1905, the City of Lawndale has grown from a small agrarian society into a thriving residential community characterized by its small-town feel, support for local businesses, and convenient location in the heart of the South Bay region of Los Angeles County.

In 2023, over 32,000 people call Lawndale home. Looking forward over the next 20 years, the City will continue to value its existing residents while planning for a prosperous and sustainable future by embracing smart growth and economic development. New opportunities for residential, commercial, and mixed-use development are envisioned alongside quality public services, facilities, and infrastructure. The *Lawndale General Plan* embodies community principles. Through thoughtful planning, Lawndale is prepared to make decisions that support the community's long-term goals, as defined here in the General Plan.

The *Lawndale General Plan* is a dynamic policy document that identifies the community's vision for the future and provides a framework to guide the City's long-term growth and development. The General Plan reflects the community's values and desires and addresses important issues such as land use and urban design; mobility; housing; resource management; public safety; environmental justice; economic development; community facilities and services; and public health. Although it may be updated periodically to reflect changing market conditions, new legislative requirements, and modern local opportunities, the intent of the *Lawndale General Plan* is to lay the foundation for long-term decision-making that stands the test of time.

The Lawndale General Plan is supported and implemented by important complementary plans and programs, including the Hawthorne Boulevard Specific Plan, Zoning Ordinance, and Climate Action Plan. While the General Plan provides high-level guidance on local issues and priorities, these plans and programs implement the General Plan and provide more specific direction regarding critical topics, such as the redevelopment of Hawthorne Boulevard, which serves as the City's primary transportation route, corridor of economic activity, and community focal point; expectations on permitted uses throughout the City; and the City's strategy to support a more resilient and sustainable future. Taken together with the General Plan, these plans and programs chart the path forward for Lawndale for the next 20 years.

What is a General Plan?

The general plan serves as a "blueprint" for future development of a city or county. It establishes land use designations and policies to assist decision makers as they review proposals for new development or consider changes to city ordinances. The general plan addresses issues that impact the entire city, such as how land is used, where buildings are built, the locations of roads and parks, safety, noise, and more.

Purpose of the General Plan

In California, all cities and counties are required to adopt a general plan. The general plan is a comprehensive policy document that shapes the long-term physical development of a jurisdiction's planning area. The planning area is the geographic area for which the general plan provides a framework for long-term growth and resource conservation. State law requires the planning area for the general plan to include all territory within the incorporated area as well as "any land outside its boundaries which in the planning agency's judgment bears relation to its planning" (California Government Code Section 65300).

The general plan must include eight state-mandated elements including land use, circulation, housing, conservation, open space, noise, environmental justice, and safety elements, as specified in Government Code Section 65302, to the extent that the issues identified by State law exist in the City's planning area. Additional elements that relate to the physical development of the city may also be addressed in the general plan. The degree of specificity and level of detail of the discussion of each general plan element need only reflect local conditions and circumstances. The *Lawndale General Plan* has been prepared consistent with the requirements of State law and addresses the relevant items addressed in Government Code Section 65300 et seq.

General Plan Objectives

The General Plan is more than just the legal basis for all local land use decisions; it is the vision for how the City will evolve, reflecting the community's objectives. The objectives of the *Lawndale General Plan* include:

- Reflect the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders;
- Address issues and concerns identified by City residents, businesses, decision-makers, and other stakeholders;
- Protect Lawndale's existing residences, character, and sense of community;
- Proactively plan for and accommodate local and regional growth in a responsible manner;
- Encourage mixed-use development patterns along major corridors that promote vibrant commercial and residential areas;
- Allow for a range of high-quality housing options;
- Attract and retain businesses and industries that provide jobs for local residents;
- Continue to maintain and improve multimodal transportation opportunities;
- Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
- Address new requirements of State law; and
- Address emerging transportation, housing, and employment trends.

A general plan is:

Comprehensive

A general plan is comprehensive in nature, covering a wide range of topics such as land use, housing, economic development, infrastructure, public safety, recreation, and natural resources.

Long Range

A general plan provides guidance on achieving a long-range vision of the future for a city or county. To reach this envisioned future, the general plan includes goals, policies, and implementation programs that address both near-term and long-term needs. The City of Lawndale's General Plan looks ahead approximately 20 years—to the year of 2040. At the same time, the General Plan will provide policy direction that allows for flexibility to respond to changes in the marketplace and in technology, positioning the City for long-term success.

Consistent

A general plan must be internally ("horizontally") consistent, meaning it cannot contradict itself. A general plan uses a consistent set of assumptions and projections to assess future demands for housing, employment, public services, and infrastructure and must fully integrate its separate parts and relate them to each other without conflict. Additionally, all adopted portions (elements) of a general plan have equal weight. None may supersede another, so the general plan must resolve conflicts among the provisions of each element. Finally, all other plans, ordinances, and policies must be consistent with the general plan. This "vertical" consistency helps resolve conflicts between local specific plans, the City's Zoning Code, and the General Plan.

Scope and Content of the General Plan

General Plan Policy Document

The General Plan policy document contains the goals and policies that will guide future decisions within the City and identifies action items (implementation measures) to ensure the vision and goals of the General Plan are carried out. Two important documents support the General Plan: the Existing Conditions Report and the General Plan Environmental Impact Report (EIR). Both are intended to be used in conjunction with this General Plan and to serve as companions to this policy document. The Hawthorne Boulevard Specific Plan (HBSP) provides detailed policies, standards, and criteria for the corridor's development, consistent with the direction provided in the General Plan policy document and as analyzed in the General Plan EIR.

The *Lawndale General Plan* also contains a land use diagram (map), which serves as a general guide to the distribution of land uses throughout the City. The *Lawndale General Plan* addresses all of the elements required by State law, in addition to a range of optional topics and elements that the City has decided to include. The table below identifies the elements included in the *Lawndale General Plan* and the corresponding requirement in State law.

Relationship Between General Plan Elements and State Requirements

		State Mandated								
	General Plan Elements	Land Use	Circulation	Conservation	Open Space	Noise	Safety	Housing	Environmental Justice	Optional Topics
Lawndale General Plan	Land Use	▲								
	Mobility		▲							
	Housing (Separate Cover)							▲		
	Resource Management			▲	▲					▲
	Public Safety					▲	▲			
	Environmental Justice								▲	
	Economic Development									▲
	Community Facilities									▲

Organization of the General Plan Elements

Each element (i.e., chapter) of the General Plan is organized into a set of goals, policies, and implementation actions. Each goal is supported by a particular set of policies and actions to implement and achieve that goal.

Planning Process

The last comprehensive update to the General Plan occurred in 1992. Since then, substantial changes to the planning context of the City have occurred, including shifts in the community's demographics and new ways of thinking about sustainability, public health, and placemaking. In light of these changes, the City undertook a comprehensive update of the General Plan (*Lawndale General Plan*) as an opportunity to reassess its long-term vision and identify new challenges, opportunities, and approaches to make that vision a reality. The update process began in 2020 and included the following steps.

Public Participation

The *Lawndale General Plan* was developed with community input and reflects the community's vision for Lawndale. A summary of the community outreach and public participation process is provided below.

Outreach Objectives

Objectives established for the comprehensive outreach program were to:

- Conduct an open and transparent process.
- Engage the full spectrum of Lawndale community members, residents, business owners, landowners, and other stakeholders in the General Plan Update process; enhance public awareness of the project and its importance.
- Gather meaningful community input, ideas, and feedback to shape the vision, alternatives, and policies to be included in the *Lawndale General Plan*.
- Build a framework to develop community consensus throughout the process.
- Strengthen and expand relationships and trust between the City and community members.

Lawndale General Plan Outreach

For all public workshops and meetings, the City of Lawndale conducted extensive bilingual outreach (English and Spanish), using a wide variety of methods and tools, to inform and encourage the community to participate in the update process. The following is a list of methods and tools used to inform the public of meetings, workshops, and the status of the work efforts.

- **General Plan Website**: A website devoted to informing the public about, and encouraging participation in, the update process has been maintained throughout the general plan update process. The website includes workshop materials, background information, and draft and final work products.
- **Focus Group Briefings**: The City held briefings with interested focus groups including representatives from the development community and community health and wellness stakeholders.
- **E-mail distribution list**: The list was developed and maintained over time, and included email contacts for agencies, organizations, stakeholders, and individuals.

Visioning Workshops

The City hosted eight workshops (February through December 2021), addressing a different topic of focus each month. Each workshop was conducted in a bilingual environment (English and Spanish) to minimize barriers to participation. Each workshop included a brief overview of the General Plan, including why it's important and why the City is updating its Plan, some background information on the evening's topic, and a series of facilitated activities to solicit input on key topics or ideas.

Workshop 1: Values, Issues, and Opportunities

The first General Plan Visioning Workshop was held virtually on February 2, 2021 (English) and March 9, 2021 (Spanish). The focus of this Visioning workshop was to introduce the General Plan and Hawthorne Boulevard Specific Plan Update, and ask for input from residents on what they value in Lawndale, what they see as challenges, and what their vision is for the future of the City. After a brief presentation on the General Plan and Hawthorne Boulevard Specific Plan Update, the City held a discussion and answered questions from the community.

During this workshop there was approximately 26 attendees for the English workshop and 3 Spanish speakers.

Workshop 2: Land Use

The second workshop was held virtually on March 23, 2021 (English) and April 26, 2021 (Spanish). The workshop included a presentation followed by a discussion with the community. During this workshop staff explained to what Land Use is and the types of Land Uses withing a community. Residential, Commercial, Institutional, Open Space and Industrial uses were described. During this workshop there was a public comment period where staff interacted with the community to obtain public opinions on the existing and desired land uses. There was approximately 16 attendees at this meeting's conclusion.

Workshop 3: Land Use and Transportation

The third workshop was held virtually on April 27, 2021 (English) and May 18, 2021 (Spanish). The focus of the last Workshop was on land use and transportation. As part of the overview presentation, the group considered the interface between transportation and land use planning in Lawndale. This meeting also recapped the desirable and undesirable land uses as proposed by the residents.

Workshop 4: General Plan and Land Use

The fourth workshop was held telephonically on May 17, 2021. This event gave the community an opportunity to call in and ask questions, as well as provide comments and suggestions on the General Plan and Hawthorne Boulevard Specific Plan Update. During this workshop there was no attendees.

Workshop 5: Virtual Community Workshop

The fifth workshop was held virtually on May 20, 2021. The workshop included a presentation followed by a discussion with the community. Staff discussed the Environmental Justice element and explained its importance. Staff also took some public comments. There were approximately 8 attendees at the meeting's conclusion.

Workshop 6: Virtual Community Workshop

The sixth workshop was held virtually on June 22, 2021. The workshop included a presentation that provided a recap on the General Plan Elements and Hawthorne Boulevard Specific Plan, followed by a discussion with the community. This workshop focused on obtaining public opinions on the future of the City.

Workshop 7: Virtual Community Workshop

The seventh workshop was held virtually on August 4, 2021. The focus of this workshop was the Housing Element and Fair Housing Act. The workshop included a presentation followed by a discussion with the

community. The Housing element was explained, residential sites inventory was presented. During the workshop staff discussed potential sites suitable for housing to accommodate all future housing from the Regional Housing Needs Assessment provided by California Department of Housing and Development.

Workshop 8: Interactive Community Workshop

The eighth workshop was held virtually on August 31, 2021. The workshop included a presentation followed by a discussion with the community. Staff prepared an in person workshop. There were several interactive activities including setting up desired density locations, choosing desired and undesired land uses, going over all elements and providing public comments. There were 7 attendees at this in person workshop.

Workshop 9: Virtual Community Workshop

The nineth workshop was held virtually on November 17, 2021. The workshop included a presentation followed by a discussion with the community. During this workshop staff presented the housing sites chosen for the housing element. Staff presented types of density and locations where they would be placed during the next RHNA cycle. Staff took notes on the public comments and responded to questions.

Workshop 10: Virtual Community Workshop

The tenth workshop was held virtually on December 15, 2021. The focus of this workshop was the Housing Element, including proposed sites. The workshop included a presentation followed by a discussion with the community. This was the final workshop, which was a whole recompilation review of the General Plan Update and what the intent of the workshops were.

Online Surveys and Polls

In order to capture as much input from the community as possible, including input from those who may not have participated in workshop community engagement opportunities, the project team designed two online surveys that were open to all and available throughout the outreach phase of the project. The surveys were administered online via the SurveyMonkey web platform and were available in English and Spanish. Survey #1 focused on visioning, values and living conditions in Lawndale as well as demographic questions. Survey #2 focused on community priorities and existing conditions related to housing. The City received a total of 99 responses to the surveys. The survey responses provide insight into the demographics and opinions of Lawndale community members concerning goals and topics related to the update of the City's General Plan.

Community Vision Statement

A Vision Statement is a collection of aspirational statements framing community needs and desires. Vision Statements are important to help guide the creation of the General Plan. The Lawndale Community Vision—illustrated on the following pages—was developed to reflect the meaningful community input received at the *Lawndale 2020 General Plan* workshops, online surveys, from key community members and stakeholders, and elected and appointed officials.

LAWNDALE Community Vision 2020

Lawndale is an energetic, small but highly urbanized place with a small-town feel characterized by its well-established neighborhoods and local businesses. Strategically-located within the central South Bay, Lawndale's exceptional climate and location provide exciting redevelopment opportunities that offer inviting spaces to live, work, learn, shop, and socialize. The City takes pride in collaborating with our residents, businesses, and local organizations to meet our long-term social and economic needs. Together, we promote a safe, healthy, vibrant, and diverse community that grows stronger every year.

WE ARE A TIGHT-KNIT COMMUNITY THAT CARES FOR ITS RESIDENTS

Lawndale celebrates its strong neighborhood connections and community culture, including its history, diversity, inclusivity, and family-friendly atmosphere. High-quality community services, facilities, and events create a lifestyle that residents value. Residents are represented by a responsive and effective local government that cultivates relationships with local organizations, the business community, and other local and regional partners to maintain our outstanding quality of life.

WE ARE A COMMUNITY WITH QUALITY HOUSING OPPORTUNITIES FOR ALL

Lawndale offers diverse housing options for persons of all incomes and lifestyles, including homeowners, renters, families, retirees, and young people. Established residential neighborhoods are quiet, well-maintained, and safe and make-up the backbone of our community. Mixed-use development that includes multifamily housing is focused along Hawthorne Boulevard.

WE HAVE A MIXED-USE ACTIVITY CENTER ALONG HAWTHORNE BLVD WHERE PEOPLE CAN LIVE, WORK, SHOP, AND SOCIALIZE

Hawthorne Boulevard features a successful mix of businesses, residences, and amenities within an attractive, walkable environment. The active streetscape supports a variety of complementary uses that welcome enhanced pedestrian activity, social interactions, and window shopping. Characteristics of Hawthorne Boulevard include appropriately-scaled buildings, well-kept landscaping, safe pedestrian crossings, and distinctive sense of place.

WE ARE SUPPORTED BY A ROBUST, RESILIENT LOCAL ECONOMY

Lawndale provides for a diversity of businesses that support and are supported by the local community. Businesses cater to the daily needs of residents and attract visitors from outside the area. Lawndale's premier location and business-friendly environment is able to attract and retain high-quality employers that create good jobs and economic opportunities within the City. Lawndale maintains a robust, diverse, and resilient local economy that provides long-term fiscal sustainability.

WE CHOOSE

SUSTAINABLE DEVELOPMENT PATTERNS

THAT PROMOTE A HEALTHY AND ACTIVE COMMUNITY

Lawndale contributes to improved environmental quality and public health outcomes by promoting compact and sustainable infill development practices. Healthy community priorities are promoted through enhanced access to housing, jobs, and lifelong learning opportunities. Air quality is improved and greenhouse gas emissions are reduced through the promotion of green building techniques, multi-modal transportation options, and renewable and efficient energy sources. Our residents have increased access to public transportation and infrastructure improvements that promote walking, biking, and ride-sharing.

Applying the General Plan

The General Plan is intended for use by a broad range of persons, including City decision-makers, City staff, developers, and community members, to serve the following purposes:

- To identify land use patterns, growth, transportation, environmental, economic, and community goals and policies as they relate to land use, conservation, development, and provision of community services and facilities.
- To articulate a vision and strategy for the future development of Lawndale and its residents.
- To enable the City Council and Planning Commission to establish long-range land use, transportation, services, conservation, and growth goals and policies.
- To provide a basis for judging whether specific private development proposals and public projects are in harmony with these goals and policies.
- To inform citizens, developers, decision makers, and other jurisdictions of the policies that will guide development and resource conservation within Lawndale.

Key Terms

Goal: A description of the general desired condition that the community seeks to create.

Policy: A specific statement that guides decision-making as the City works to achieve the various goals. Once adopted, policies represent statements of City regulations.

Action: An action, procedure, implementation technique, or specific program to be undertaken by the City to help achieve a specified goal or implement an adopted policy.

The General Plan applies to lands in the incorporated area of the City, to the extent allowed by Federal and State law. Under State law, many actions, such as development projects, specific plans, master plans, community plans, zoning, subdivisions, public agency projects, and other decisions must be consistent with the General Plan. State law requires that the City's ordinances regulating land use be consistent with the General Plan. The Zoning Code, individual project proposals, and other related plans and ordinances must be consistent with the goals and policies in the General Plan.

Interpreting the General Plan

In reading the General Plan, one should infer that the goals, policies, and implementation measures are limited to the extent that it is financially feasible and appropriate for the City to carry them out and to the extent legally permitted by Federal and State law. For example, policies and measures which indicate that the City will “provide,” “support,” “ensure,” or otherwise require or carry them out do not indicate an irreversible commitment of City funds or staff resources to those activities, but rather, that the City will support them when the City deems that it is financially feasible and appropriate to do so. In some cases, the City will carry out various policies and measures by requiring development, infrastructure, and other projects to be consistent with the policies and actions of the General Plan. In other cases, the City may include General Plan items in the Capital Improvement Program, annual budget, or other implementation mechanisms, as the City deems appropriate.

How to Read Lawndale's General Plan

As the guide for future development and desired conditions, residents, property owners, and business owners should also familiarize themselves with how to read this document. Each element contains a brief introduction, several goals and related policies, and a description of related actions to help implement the City's vision.

Goals

A goal in the General Plan is the broadest statement of community values. It is a generalized ideal which provides a sense of direction for action. Goals are overall statements of desired future conditions.

Policies and Implementation Actions

The essence of the General Plan is contained within its policies. Policies are statements which further refine the goals, and guide the course of action the City must take to achieve the goals in the plan. It is important to note that policies are guides for decision makers, not decisions themselves. Policies and implementation measures must be clear to be useful. However, policies may range in terms of commitment of resources, importance, and expected results. Therefore, it is important for readers to understand the distinctions between various levels of policy and implementation action. The following is a list of common terms used in policies and implementation measures, and how to interpret its usage in the General Plan. In cases where other terms are used (and not defined below), an equivalent to the closest applicable term can be used.

Shall: Absolute commitment to the policy or action, and indicate that the policy must be adhered to in all cases.

Should: Policy will be followed in most cases, but exceptions are acceptable for good reasons.

Ensure: Policy indicates that the City plays a role in making sure something happens, often times in partnership with other agencies or as part of other City programs and processes.

Encourage: Policy is highly recommended and/or desired, and should be pursued when feasible.

Allow: Policy will be supported within certain parameters and certain guidelines.

Coordinate: Policy will occur in conjunction with another entity, and the City will carry its share of the responsibility.

Explore: Effort will be taken to investigate the subject at hand, to discover whether or not further commitment is relevant.

Consider: Policy may or may not be followed, depending upon the results of analysis that will be completed.

Limit: Effort will be taken to keep the subject within certain limits, or will at least make undesired change more difficult.

Restrict: Effort will be taken to keep the undesired action to a minimum.

Amending the General Plan

The General Plan is not static, but rather is a dynamic and multi-faceted document that defines and addresses the changing needs of the City. It is based on an on-going assessment and understanding of existing and projected community needs. The City's decision-makers have broad discretion in interpreting the General Plan and its purposes, and are allowed to weigh and balance the various goals and policies when applying them. Recognizing the need for the General Plan to remain current and reflective of local issues and policies, State law allows the City to periodically amend the General Plan to ensure that it is consistent with the conditions, values, expectations, and needs of its residents, businesses, and other stakeholders. The General Plan may be amended in accordance with State law. While specific findings may be applied on a project-by-project basis, at a minimum the following standard findings shall be made for each proposed General Plan amendment:

1. The amendment is deemed to be in the public interest;
2. The amendment is consistent and/or compatible with the rest of the General Plan;
3. The potential impacts of the amendment have been assessed and have been determined not to be detrimental to the public health, safety, or welfare; and
4. The amendment has been processed in accordance with the applicable provisions of the California Government Code, the California Environmental Quality Act (CEQA), and the City's Municipal Code.

City-initiated amendments, as well as amendments requested by other parties, are subject to the same basic process described above to ensure consistency and compatibility with the General Plan. This includes appropriate environmental review, public notice, and public hearings, leading to an official action by the City Council.

Timing

Under State law, mandatory elements of the General Plan may be amended up to four times in each calendar year. The City Council or any citizen may initiate consideration of a General Plan Amendment. State law further requires that the Housing Element be reviewed and updated at least once every eight years.

Exemptions

The State Legislature has recognized that occasions arise which require the local jurisdiction to have some flexibility in amending the General Plan. As set forth in the California Government Code, the following are exempt from the General Plan amendment schedule:

- Amendments to optional elements.
- Amendments requested and necessary for affordable housing (Section 65358(c)).
- Any amendment necessary to comply with a court decision in a case involving the legal adequacy of the general plan (Section 65358(d)(1)).
- Amendments to bring a general plan into compliance with an airport land use plan (Section 65302.3).

Annual Reporting

Given the long-term nature of the General Plan, it is critical to periodically evaluate its effectiveness and to document the implementation status of the various policies and actions that it contains. State law provides direction on how cities and counties can maintain the General Plan as a useful policy guide. State law also requires the City to annually report "the status of the plan and progress in its implementation" (California Government Code Section 65400(b)) to the City Council. The Action items in each Element identifies each measure to be carried out by the General Plan.

Introduction to Land Use

The Land Use Element is a guide to land use planning in Lawndale and provides a framework for the economic, environmental, and infrastructure issues examined in the other General Plan elements. The Land Use Element, which includes the Land Use Map (Figure LU-1), identifies how and where land will be used in the future—for housing, commercial and industrial uses, public facilities, parks, open space, and transportation. The Land Use Element identifies the range of allowed uses and development densities and intensities permitted by the Land Use Plan. Overall, this element is designed to:

- Preserve and protect the City's existing residential neighborhoods,
- Direct future growth to key opportunity areas along the City's primary transportation corridors,
- Support quality expanded housing and employment opportunities, and
- Promote a strong sense of place and identity in Lawndale.

Organization of Element

The Land Use Element goals and policies address each of the following topics as they relate to Lawndale:

- Land Use Mix
- Managed Growth
- Land Use Compatibility
- Community Character and Design

Overview

The Land Use Element provides for a development and resource conservation pattern that preserves and protects Lawndale's unique small-town character while promoting opportunities for expanded housing opportunities, economic development, and local job growth. Ensuring that Lawndale has sufficient capacity and flexibility to support a diverse mix of land uses is essential to the community's ability to thrive and be economically sustainable over time; the Economic Development Element provides important complementary policy direction to support the City's land use priorities.

State law requires the Land Use Element to address the following, to the extent they are locally relevant:

- Proposed general distribution, general location and extent of the uses of the land for housing, business, industry, open space, including agriculture, natural resources, recreation, and enjoyment of scenic beauty, education, public buildings and grounds, solid and liquid waste disposal facilities, and other categories of public and private uses of land;
- Population density and building intensity; and
- Areas subject to flooding (the Lawndale General Plan addresses this topic within the context of its Public Safety Element).

Background information regarding land use is presented in Chapter 2 of the General Plan Update Existing Conditions Report.

Planning Area Boundaries

City Limits

The *City Limits* include all area within the City's corporate boundary, over which the City exercises land use authority and provides public services.

Sphere Of Influence

A *Sphere of Influence* (SOI) is the probable physical boundary and service area of a local agency, as adopted by a Local Agency Formation Commission (LAFCO). A SOI may include both incorporated and unincorporated areas within which a city or special district will have primary responsibility for the provision of public facilities and services. Lawndale's SOI extends east of City Limits into the Los Angeles County unincorporated community of El Camino Village. El Camino Village is primarily a densely developed, single-family residential community with commercial uses along Crenshaw Boulevard. Although parts of El Camino Village share a Lawndale zip code, the City has historically not provided services to the community.

Planning Area

The *Planning Area* is the geographic area for which the General Plan provides a framework for long-term growth and resource conservation. State law requires the General Plan to include all territory within Lawndale's incorporated area as well as "any land outside its boundaries which in the planning agency's judgment bears relation to its planning" (California Government Code Section 65300). The Planning Area, as shown in Figure LU-2, includes the entire city limits (approximately 917 acres) as well as the City of Lawndale's SOI (approximately 229 acres); the entire Planning Area is approximately 1,146 acres.

Specific Plan Area

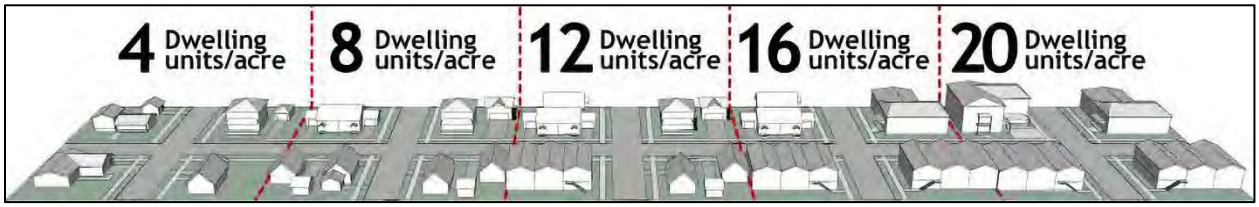
A city will often have neighborhoods or areas that are unique and/or important in ways that require special consideration. A specific plan is a major planning document that includes land use and development policies specific to an area. For Lawndale, the Hawthorne Boulevard Specific Plan (HBSP) regulates and guides the development of the Hawthorne Boulevard corridor and the north side of both Artesia Boulevard and Redondo Beach Boulevard. The HBSP acts as a tool for implementing the goals and policies of the General Plan through the regulation of use, density, height, and other design standards to achieve the overall vision for the area. The Specific Plan was originally adopted in June 1999 and has undergone various amendments since its adoption. A key action item of this Land Use Element is to update the HBSP to implement the goals and policies included in the City's updated General Plan.

The purpose of the HBSP is to help facilitate the successful redevelopment of the Specific Plan area into a thriving mixed-use activity center featuring high-quality multifamily housing choices, dynamic commercial options, and inviting public spaces. The Specific Plan is important to the City and its residents because it emphasizes economic growth along Hawthorne Boulevard and other significant transportation corridors, and accounts for the unique conditions along these corridors when providing detailed development guidance.

The boundaries of the HBSP are depicted on Figure LU-3.

Land Use Designations

The Land Use Designations in this General Plan specify the type of allowed uses associated with each designation. Zoning, specific plans, and individual development projects must be consistent with the intensities allowed under the General Plan.



Land Use Classification System

The Land Use Map (Figure LU-1) illustrates the various types and distribution of land uses planned for the community. The land use classification system includes nine land use designations. Land use designations identify the types and nature of development allowed in particular locations depicted on the Land Use Map (Figure LU-1).

The residential category includes three land use designations and an overlay designation that allow for a range of housing types and densities. The nonresidential grouping includes a variety of jobs-generating designations (Commercial and Industrial) as well as designations that serve the public good, including Public Facilities and Open Space. Finally, the Hawthorne Boulevard Specific Plan designation indicates that the Hawthorne Boulevard Specific Plan guides future land use and zoning decisions for that area of the City.

Density

Density refers to the intensity of residential uses in terms of a range, from a minimum to a maximum, of dwelling units per gross acre. Various building configurations representing different densities are shown below.

Buildout Potential

State General Plan law requires that the Land Use Element indicate the maximum densities and intensities permitted within the Land Use Plan. The land use designations shown on the Land Use Map are described in detail in this Element. Table LU-1 lists each of the land use designations shown on the Land Use Map and provides a corresponding indication of maximum density or intensity of allowable development. Maximum allowable development on individual parcels of land is governed by these measures of density or intensity. The table also includes the effective overall level of development within each land use designation within the City. These effective levels of development represent an anticipated overall density and intensity of development for Lawndale and are, therefore, less than the absolute maximum allowed for an individual parcel of land. For various reasons, many parcels in the community have not been developed to maximum density or intensity and, in the future, maximum development as described in this Element can be expected to occur only on a limited number of parcels. Actual future development would depend on future real estate and labor market conditions, property owner preferences and decisions, site-specific constraints, land turnover, and other factors. Additionally, new development and growth are largely dictated by existing development conditions. Very few communities in California actually develop to the full potential allowed in their respective General Plans during the planning horizon.

The overall future development in Lawndale is anticipated to occur at the expected level of density or intensity indicated in Table LU-1. Development at an intensity or density between the expected and maximum levels is desired when projects offer exceptional design quality, important public amenities or benefits, or other factors that promote important goals and policies of the General Plan. For the residential land use designations, projects are expected to build to a density at least as high as the lowest density allowed by the respective designation.

Residential Land Use Designations

Low Density Residential (LDR); 0 – 8.9 du/ac

The Low Density Residential land use designation provides for the development of single-family dwellings. This designation allows a density of 0–8.9 du/ac.

Medium Density Residential (MDR); 9.0 – 17.4 du/ac

The Medium Density Residential land use designation allows for a range of housing types including single-family detached and attached units and duplexes, condominiums, and townhouses. This designation allows a density of 9.0–17.4 du/ac.

High Density Residential (HDR); 17.5 – 33 du/ac

The High Density Residential land use designation provides for a variety of small-lot single-family dwelling units and multi-family dwelling units including: courtyard homes, patio homes, duplex, condominiums, townhouses, apartments, and manufactured homes. This designation allows a density of 17.5–33 du/ac.

Housing Opportunity Overlay (HOO); 20.0 – 100 du/ac

The Housing Opportunity Overlay, which applies to select sites outside of the Hawthorne Boulevard Specific Plan, provides opportunity for the development of high density housing in single-use and mixed-use formats at a density of 20.0–100.0 du/ac. New residential development at HOO sites, including residential development as part of a mixed-use project, must meet a minimum residential density of at least 20.0 du/ac, regardless of the underlying land use designation. For new nonresidential development, all standards related to the underlying land use designation shall continue to apply.

Non-Residential Land Use Designations

Commercial (C)

The Commercial land use designation provides for a variety of retail and service-oriented business activities, restaurants, services and office uses to meet the daily needs of residents. There is no minimum or maximum building intensity.

Industrial (I)

The Industrial designation permits light manufacturing, assembly, packaging, fabrication and processing of materials into finishing products rather than the conversion of raw materials. The industrial activity shall be conducted primarily within structures and outside storage areas and assembly activity should be limited. There is no minimum or maximum building intensity.

Open Space (OS)

The Open Space designation includes public parks, parks that are part of school sites, public and private outdoor recreational facilities, and landscaped open space areas.

Public Facilities (PF)

The Public Facilities designation provides for publicly owned properties and facilities including, schools, fire stations, police stations, community centers, utility substations, water facilities, administrative offices and City government office complexes. Other uses that are determined to be compatible with primary uses may also be allowed. There is no minimum or maximum building intensity.

Hawthorne Boulevard Specific Plan

Hawthorne Boulevard Specific Plan (HBSP); Densities and Intensities Vary

The Hawthorne Boulevard Specific Plan designation provides detailed policies, standards, and criteria for the area's development. Land uses within the Specific Plan area are detailed in the Specific Plan document. The Specific Plan serves as the land use and zoning map for the Specific Plan area. Any future amendments to the land uses identified in the Specific Plan will not require a revision to the General Plan (General Plan Amendment).

Table LU-1 General Plan Land Use 2045 Potential Buildout Summary

Land Use Designation	Acres[1]	Allowed Density and/or Building Intensity	Assumed Density and/or Building Intensity[2]	Units	Population	Non-Residential Square Feet	Jobs
RESIDENTIAL LAND USES							
Low Density Residential	49	0-8.9 du/ac	8.5 du/ac	420	1,537	-	-
Medium Density Residential	460	9-17.4 du/ac	12 du/ac	5,534	18,404	-	-
High Density Residential	115	17.5-33 du/ac	30 du/ac	3,464	9,418	-	-
Housing Opportunity Overlay[3]		20-100 du/ac	50 du/ac			-	-
Residential Subtotal		-	-			-	-
NON-RESIDENTIAL LAND USES							
Commercial	38	No max	0.5	311	706	4,904,877	1,673
Industrial	21	No max	0.5	-	-	459,130	612
Public Facilities	172	No max	0.15	-	-	1,124,243	1,124
Open Space	14	-	-	27	62	-	-
Non-Residential Subtotal		-	-				
SPECIFIC PLAN LAND USES							
Hawthorne Boulevard Specific Plan Area[4]	95	Varies	24-75 du/ac and 0.6	3,931	11,017	2,484,823	4,970
Specific Plan Subtotal	*95*	-	-	3,931	11,017	2,484,823	4,970
Totals	**1,195**	**-**	**-**	15,405	47,430	5,351,026	9,208

1. Acres are given as adjusted gross acreages, which do not include the right-of-way for major roadways, flood control facilities, or railroads.
2. Density/building intensity includes both residential density, expressed as dwelling units per acre, and nonresidential intensity, expressed as floor area ratio (FAR), which is the amount of building square feet in relation to the size of the lot. While no minimum or maximum building intensities apply to land uses within Lawndale, an assumed building intensity) is used in Table LU-1 to establish potential buildout totals. Historically, citywide buildout levels do not achieve the maximum allowable density/intensity on every parcel, and are, on average, lower than allowed by the General Plan. Accordingly, the projections in this General Plan do not assume buildout at the maximum density or intensity but are adjusted downward to account for variations in development.
3. Acreage and the development potential of the Housing Opportunity Overlay is not included in the total acreage; figures associated with development of these areas are included within the underlying base designations. The assumed density for all sites designated with the HOO is 50 du/ac, regardless of the underlying base designation.
4. Parcels within the Hawthorne Boulevard Specific Plan that are identified in the City's 2021-2029 Housing Element as Housing Overlay 150 sites shall have a maximum density of 150 du/ac. The buildout estimate for the Hawthorne Boulevard Specific Plan uses an assumed density of 75 du/ac for sites in the Specific Plan area identified in the City's Housing Sites Inventory. All other sites where residential uses are allowed have an assumed density of 24 du/ac.

GOAL LU-1 LAND USE MIX

A community with a fiscally sustainable mix of land uses that meets the diverse needs of Lawndale residents, offers a variety of housing, employment opportunities, and supports the provision of public services.

Every community requires a mixture of land uses: residential land to provide housing; commercial and industrial land to provide goods and services, tax revenue, employment opportunities; public and institutional land to provide public services and infrastructure; and parks and open space for the enjoyment of all. A desirable community provides a balance of land uses that responds to and anticipates its residents' current and future needs.

LU-1 Policies

LU-1.1 **Sustainable Land Use Pattern**. Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

LU-1.2 **Balance Jobs and Housing**. Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

LU-1.3 **Diversity of Residential Options**. Strive to maintain a reasonable balance between rental and ownership housing opportunities across all residential types, including single family detached homes and senior housing, by maintaining a range of allowable land use densities.

LU-1.4 **Commercial Corridors**. Encourage development of well-maintained, functional, and appropriate commercial, retail, and employment opportunities in stand-alone and mixed-use formats, particularly along Hawthorne Boulevard, major arterials, and at major intersections where there is maximum visibility and access.

LU-1.5 **Public Services for Quality of Life**. Maintain appropriate sites for institutional and public facility uses that can accommodate the infrastructure and facilities needed to serve the community.

LU-1.6 **Uses to Meet Daily Needs**. Encourage uses that meet daily needs, such as grocery stores, local-serving restaurants, and other businesses and activities, within walking distance of residences to reduce the frequency and length of vehicle trips.

LU-1.7 **Public Gathering Spaces**. Support the provision of attractive outdoor public gathering places such as plazas, green space, and squares to strengthen social engagement and provide visual relief throughout the City.

LU-1 Actions

LU-1a Create consistency between the City's Zoning Code and Zoning Map and General Plan.

LU-1b Update the Hawthorne Boulevard Specific Plan as appropriate to ensure consistency with this Land Use Element, designations shown on Figure LU-1, and the City's adopted 2021-2029 Housing Element.

LU-1c Review the Zoning Code and update as appropriate to reflect Land Use goals, policies, and implementation actions included in this Plan.

LU-1d As part of development review process, ensure that developments fall within the minimum and maximum density requirements stipulated on the Land Use Map and included within the Land Use Descriptions. Projects shall also be reviewed for consistency with the development standards and density requirements established by any applicable Specific Plan governing the area in question.

LU-1e Initiate a coordinated process to regularly review and adjust population assumptions and forecasts in conjunction with the Department of Finance, Southern California Association of Governments (SCAG), and the County of Los Angeles in order to adequately plan for growth, including jobs-housing balance projections.

GOAL LU-2 MANAGED GROWTH

A City that manages and directs growth to strategic locations so that the community and its neighborhoods are protected and enhanced.

Population growth in Lawndale and the Los Angeles metropolitan region is expected to continue, accompanied by a variety of new development that has the potential to impact community character. While recognizing that change is inevitable, the community can strategically plan and guide future development to specific locations most suitable for redevelopment to support the provision of new residential and employment opportunities, while protecting and enhancing the existing character of Lawndale and its neighborhoods.

LU-2 Policies

LU-2.1 **Existing Land Use Pattern**. Strive to maintain the basic pattern of existing land uses, preserving residential neighborhoods, while providing for enhancement of mixed-use corridors to accommodate desirable redevelopment plans and improve economic sustainability.

LU-2.2 **Focused Areas for New Development**. Encourage new development to be focused within the Hawthorne Boulevard Specific Plan area and within the City's Housing Opportunity Overlay sites to preserve the character of the community's existing single-family uses, promote active transportation options, and create vibrant mixed-use activity nodes.

LU-2.3 **Hawthorne Boulevard Specific Plan**. Facilitate the redevelopment of Hawthorne Boulevard through implementation of the Hawthorne Boulevard Specific Plan which encourages a mixture of quality multi-family housing development, local- and destination-type commercial uses, eateries, and civic uses such as cultural and performing art facilities in innovative development formats.

LU-2.4 **Developable Parcels**. Encourage the consolidation of small lots into larger developable parcels (at least 0.50 acres), particularly in the Hawthorne Boulevard Specific Plan area, to create new opportunities for financially viable development that supports the City's desired land use mix.

LU-2.5 **Homeownership Opportunities**. Encourage the development of for-sale housing to expand local homeownership opportunities.

LU-2.6 **Regional Growth**. Notify adjacent jurisdictions and agencies of proposed land use actions within the Planning Area that may affect them and take appropriate action to consider and respond to their concerns.

LU-2.7 **Unincorporated Areas**. Respect the history of the unincorporated neighborhoods in Lawndale's planning area and continue to provide land use direction for those areas in accordance with applicable local, regional, and State regulations.

LU-2 Actions

LU-2a Prepare a General Plan Status Report annually as required by California Government Code. This includes reviewing the General Plan Land Use planning objectives and General Plan Land Use Map to ensure they continue to support the community's long-term land use vision and amend the text and map as necessary to maintain a modern land use planning perspective.

LU-2b Conduct outreach to commercial center owners to discuss strategies, benefits, and opportunities for lot consolidation, parcel assemblage, and parking/reciprocal access agreements.

LU-2c Evaluate the feasibility of providing administrative incentives, such as expedited processing, for lot consolidations, especially in the Hawthorne Boulevard Specific Plan area and Housing Opportunity Overlay sites.

LU-2d Investigate possible incentives for new pedestrian-friendly anchor development at important road intersections to attract retail clientele and increase foot traffic.

LU-2e Implement the Hawthorne Boulevard Specific Plan to guide future development in this area. This includes reviewing and revising the implementation strategies identified in the Specific Plan as part of the Specific Plan's comprehensive update, and prioritizing the most critical actions for funding and staff resources.

GOAL LU-3 LAND USE COMPATIBILITY

A community where new development is sensitively integrated with existing development, including residential neighborhoods, and minimizes impacts on surrounding land uses.

Lawndale is primarily a residential community and will continue to have a substantial portion of its land devoted to housing. While the City requires a comprehensive circulation system and revenue generated by commercial, office, and industrial uses to support the needs of the community, these roadways and non-residential land uses must be compatible with the existing community and neighborhoods.

LU-3 Policies

LU-3.1 **Surrounding Uses**. Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

LU-3.2 **Use Configuration**. Permit a mixture of compatible land uses on a single site or within a single development project in a vertical or horizontal configuration.

LU-3.3 **Code Compliance**. Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

LU-3.4 **Residential Uses**. Require that new residential development be designed to protect residents from potential conflicts with adjacent land uses, and other features including transportation facilities.

LU-3.5 **Scale and Massing**. Require that the scale and massing of new development provide appropriate transitions in building height and bulk that are sensitive to the physical and visual character of adjacent lower density neighborhoods.

LU-3.6 **Mixed-Use Design Integration.** Require that residential and nonresidential portions of mixed-use buildings and sites be integrated through site and building design to ensure compatibility among uses.

LU-3.7 **Development Buffers**. Require new uses to provide buffers between existing uses where potential adverse impacts could occur, such as decorative walls, setbacks and landscaping, restricted vehicular access, parking enclosures, and lighting control.

LU-3.8 **Telecommunications Facilities**. To the extent legally possible, regulate and ensure that telecommunications facilities such as cell towers, radio towers, and other appurtenances do not block, impede, or impair the visual quality of Lawndale.

LU-3.9 **Interagency Cooperation**. Establish and maintain an ongoing liaison with Caltrans, LA Metro, utility companies, adjacent cities, and other major government and private agencies to help minimize the traffic, noise, and visual impacts of their facilities and operations.

LU-3 Actions

LU-3a Prepare and adopt Objective Design Standards applicable to all new multi-family residential and mixed-use development.

LU-3b Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

LU-3c Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

LU-3d Review the Zoning Code, and amend it, if necessary, to create standards addressing appropriate treatments to buffer nonresidential uses from residential and other sensitive uses.

LU-3e Analyze land use compatibility through the development review process to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks.

LU-3f Work with Southern California Edison (SCE) to improve compatibility of its facilities with other development and scenic resources. On an ongoing basis and through the development review process, the City shall:

- Request SCE improve transmission line corridors with attractive ornamental plantings, landscape screening, and trails.
- Require new development to underground all utility lines needed to serve the development.

GOAL LU-4 COMMUNITY CHARACTER AND DESIGN

A visually attractive community that helps create a unique sense of place.

As a built-out, primarily residential community, Lawndale respects existing neighborhoods that comprise the community character. It is important that new development and redevelopment activities be planned and designed in a manner that enhances the community's identity and quality of life. Comprehensive policies, standards, and guidelines that encourage thoughtful community design and foster a sense of place should be implemented.

LU-4 Policies

LU-4.1 **Local Identity**. Enhance Lawndale's local identity, distinct from its South Bay neighbors, through implementation of attractive high-quality gateways, city entry signs and design features, cohesive street signs, and other design features at public gathering spaces and other areas.

LU-4.2 **Standards and Guidelines**. Develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic.

LU-4.3 **Site Planning**. Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

LU-4.4 **Pedestrian-Scale Amenities**. Support the installation of pedestrian-scale amenities throughout the City that contribute to a high-quality living environment, such as street furniture, fountains, pedestrian-scaled signs and lighting, murals or public art, landscaping, and sidewalk improvements.

LU-4.5 **Gathering Places**. Encourage the integration of on-site plazas or gathering spaces in new multi-family and mixed-use developments, and explore ways to creatively integrate outdoor dining, seating, or other activity-generating features into project design.

LU-4.6 **Older Neighborhoods and Businesses**. Develop or participate in programs to rehabilitate older residential neighborhoods and commercial centers to prevent blight and maintain the quality of the built environment.

LU-4.7 **Landscaping**. Encourage, to the maximum extent feasible, project and streetscape landscaping be designed to include drought tolerant, native California plant species and the use of a drip, micro-spray or other low-flow irrigation systems.

LU-4.8 **Arts in Public Places**. Promote art in public places to provide a diverse and culturally rich environment for Lawndale's residents and visitors.

LU-4.9 **Undergrounding of Utilities**. Encourage and assist, where possible, with the undergrounding of utility lines consistent with City regulations established in the Municipal Code.

LU-4 Actions

LU-4a Create a master streetscape plan addressing landscaping, signage, lighting, gateway design, and special design features along enhanced corridors and at key entryways to the City. The plan should identify selected features and amenities that will create separate identities in different parts of the City.

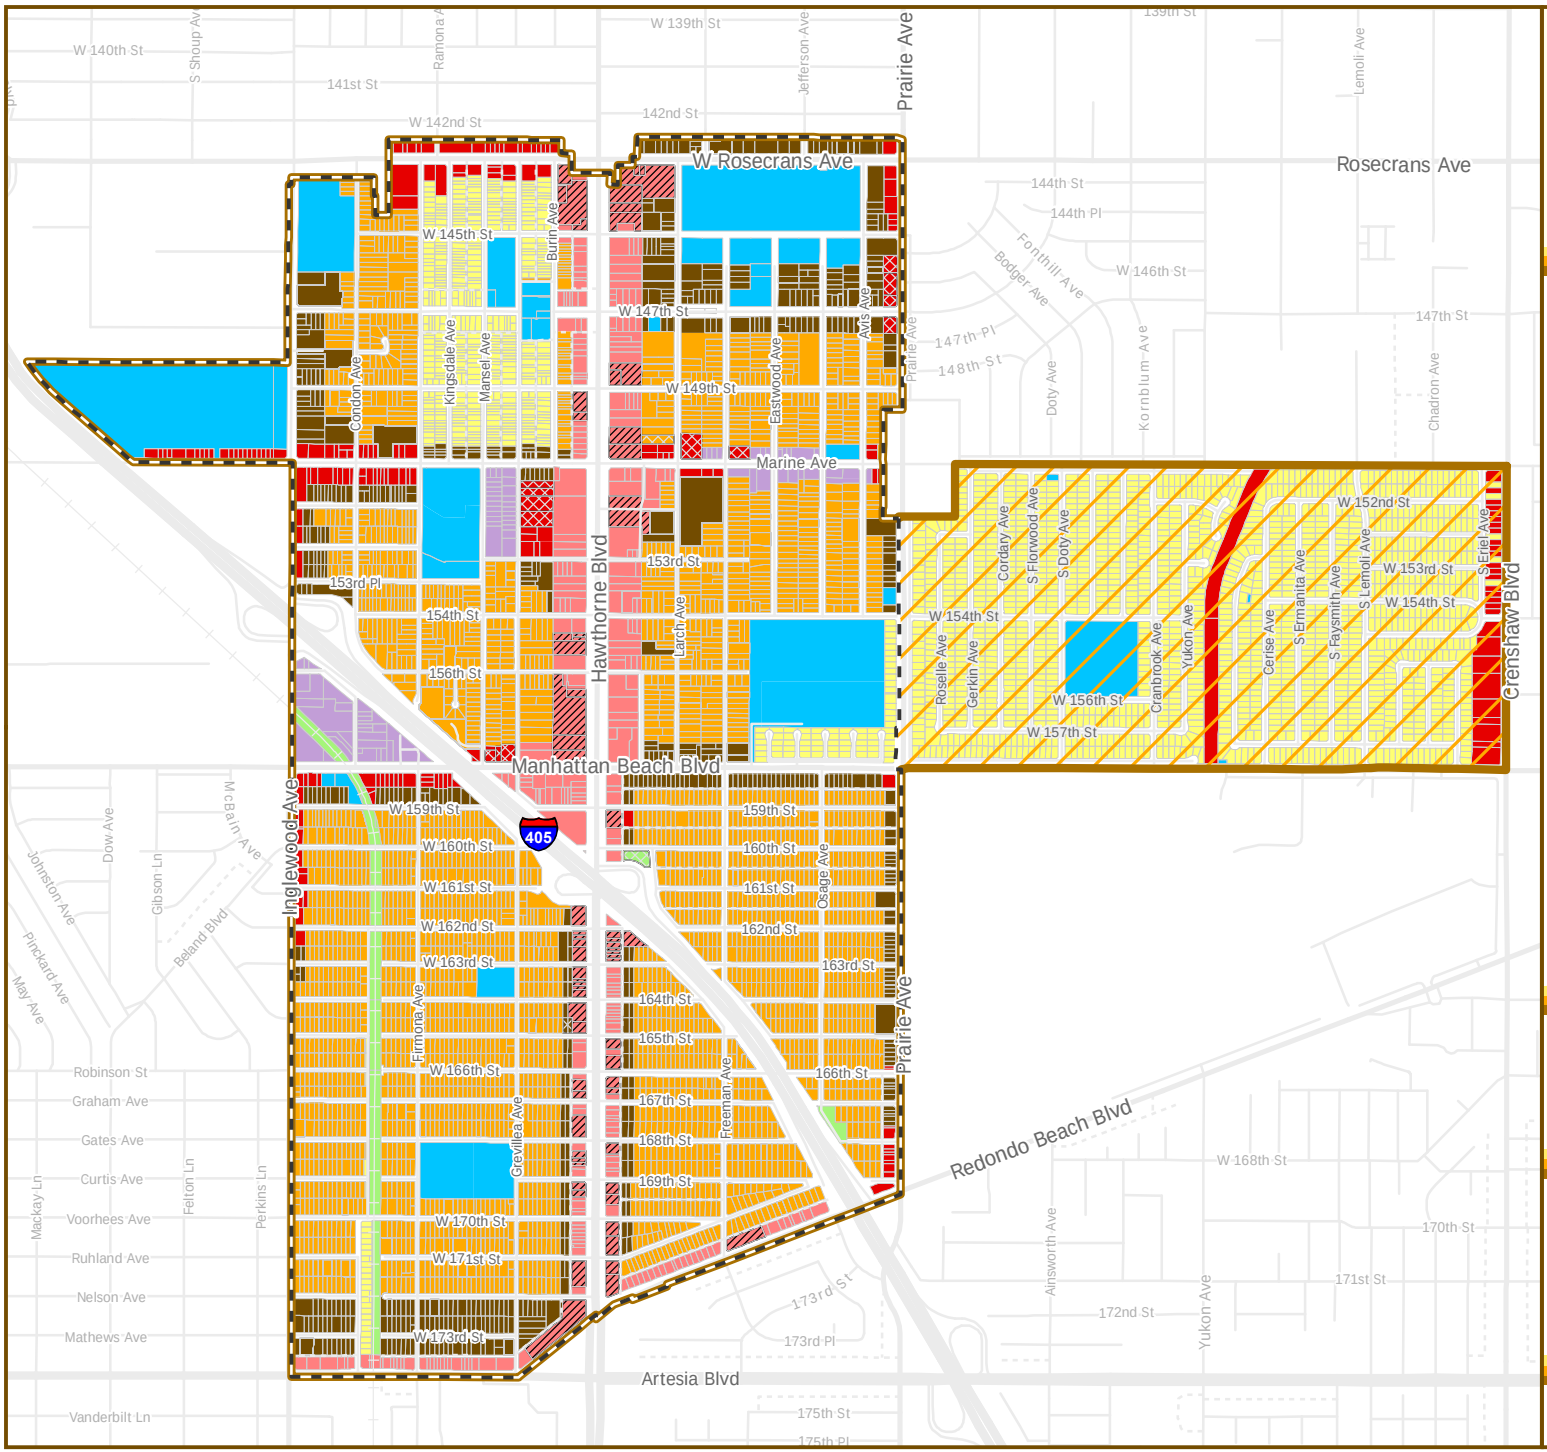
LU-4b Meet with Caltrans to stay informed regarding ongoing freeway improvements and to develop a strategy to create enhanced landscaping at the City's interchanges.

LU-4c Create a process to consider community-generated requests in the formulation of the annual Capital Improvement Program budgeting process.

LU-4d Research and evaluate the possibility of creating a façade improvement program to encourage property owners to improve upon and reinvest in their businesses.

LU-4e Continue to implement the City's existing development standards, or create new standards if appropriate, to regulate new construction and revisions to existing buildings. New standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill developments.

LU-4f Seek grant funding ("greening" grants) to help offset the cost of landscape improvements along community corridors, with a focus on Hawthorne Boulevard.



LU-4g Work with local nurseries to make tress more easily available.

LU-4h Continue to implement the City's Art in Public Spaces ordinance, collect impact fees, and install art as appropriate.

LU-4i Work with SCE to coordinate the undergrounding of new utilities with the undergrounding of existing utilities whenever financially and physically feasible.

Introduction to Mobility

The City of Lawndale consists of approximately 65 miles of roadway. With only 1.97 square miles, the City is bordered by Redondo Beach, Hawthorne, Torrance and the unincorporated area of El Camino Village LA County, all connected by a vast network of roadways. The Mobility Element provides the framework for decisions concerning the City's multimodal transportation system, which includes all users of streets, roads and highways, including bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and parking, plus goods movement and parking. The Mobility Element provides for coordination with the Los Angeles County Metropolitan Transportation Authority (Metro), which serves as the coordinating agency for transportation funding for Los Angeles County.

State law (California Government Code Section 65302(b)) mandates that the Mobility Element contain the general location and extent of existing and proposed major thoroughfares, transportation routes, terminals, military airports and ports, and other public utilities and facilities, to the extent these items exist in the planning area.

The Mobility Element reflects the City's desire to provide complete street, bicycle, and pedestrian facilities to serve residents, employees and visitors to the City. The City's transportation infrastructure is included as a main component for mobility, and is impacted by growing developments, population, business, recreational activities, and more. This element will incorporate policies and actions that will maintain and/or improve safety, walkability and connectivity within and through the City, accommodating these expectations for economic growth.

Organization of Element

The Mobility Element will address each of the topics below as they relate to the City of Lawndale. The goals and policies of this element are organized around the following topics:

- Local Circulation System
- Regional Circulation
- Complete Streets
- Parking
- Transit
- Active Transportation
- Goods Movement
- Funding
- Transportation Management

GOAL M-1 LOCAL CIRCULATION SYSTEM

A community served by a safe circulation system with adequate traffic flow on arterial roadways and minimized adverse traffic effects on residential neighborhoods.

The circulation system includes a hierarchy of roadways, railways, and off-street paths and trails that serve mobility and local access needs for those who live in, work in, or visit the City. The circulation system allows individuals to travel safely and conveniently to, from, and through the City by vehicle, transit, bicycles, foot, and other methods. Figure M-1 depicts the City of Lawndale's Local Transportation network and presents the roadway Functional Classifications. These are defined by the vehicle volume and number of vehicular lanes provided, and may include other features such as raised medians, center turn lanes, on-street parking, and bike lanes; the City's roadway Functional Classifications are defined as follows:

- ***Major Arterials*** serve as high-capacity inter-city thoroughfares, and generally carry the majority of traffic traveling through the City, and provide regional travel and access to freeways. Their primary function is to move vehicles. Major Arterials are designed to carry high traffic volumes at higher speeds. Major Arterials serve to collect traffic entering or exiting the 405 Freeway. They consist of four to eight travel lanes (two to four in each direction) and a raised or painted median with a center turn lane. Typical posted speeds may range from 35 to 45 miles per hour.
- ***Collectors*** are intended to carry low to moderate capacity traffic between the arterial street network and local streets. They serve commercial, residential, or public uses, and consist of two travel lanes (one in each direction) and are undivided (with or without centerline striping). Typical posted speeds may range from 25 to 35 miles per hour.
- ***Local Streets*** provide intra-city direct access and parking to adjacent land uses. Local Streets are not intended to serve through-traffic. They typically consist of two travel lanes (one in each direction) and are undivided (with or without centerline striping). Typical posted speeds are 25 miles per hour.

M-1 Policies

M-1.1 **Arterial Roadway Network**. Implement the roadway network based on the classifications mapped in Figure M-1. Implementation will require a plan to accommodate existing and future needs due to land use growth and shifts in travel patterns.

M-1.2 **Vehicle Level of Service (LOS).** Maintain vehicular LOS "D" along major City intersections (two major arterials intersecting) whenever possible. Certain intersections may be exempt from the LOS "D" target as determined on a case-by-case basis determined by right-of-way constraints, community goals and complete street objectives.

M-1.3 **Traffic System Management.** Facilitate the efficient movement of vehicles and minimize delay utilizing existing roadway facilities.

M-1.4 **Rail Crossings Traffic Operations.** Collaborate with Metro and the California Public Utilities Commission (CPUC) to provide adequate intersection operations at at-grade crossing locations to minimize delays and con gestion and to create safe crossings for all users.

M-1.5 **Development-Related Traffic Impacts.** Impose conditions on new development to provide appropriate and feasible improvements to enhance and/or prevent the impediment to traffic flow, parking, ADA accessibility and roadway operations.

M-1.6 **Effects of New Technologies on Traffic Flow**. Maximize technologies and services such as ride-hailing, autonomous vehicles, electric bicycles, scooters, and other mobility devices, without adversely affecting the City's transportation network, such as added traffic on roads and sidewalks.

M-1.7 **Traffic Calming on Local Streets.** Encourage traffic calming strategies, such as diverters, median islands, and speed humps, and incorporation of traffic calming design in residential and school areas to slow traffic and promote safety, while not reducing parking supply.

M-1 Actions

M-1a Periodically review and assess the vehicular level of service along City facilities to determine, what, if any, improvements are warranted to maintain a safe and efficient flow of traffic throughout the City of Lawndale. Based on a thorough review of facility operations and funding availability, improvements should be included in the City's Capital Improvement Plan and/or required as part of project approval through the development review process.

M-1b Continue to update and implement projects in the City's Capital Improvement Plan to maintain and repair roadways; construct and improve roadways to build out the roadway network to ensure adequate levels of service.

M-1c As part of the development review process, require new developments to conduct traffic impact studies and construct, as a condition of approval, all feasible roadway and intersection improvements warranted by the new development. These studies shall be reviewed by the City Engineer or his designated representative. For development that will increase the traffic demand along SR 107 (Hawthorne Boulevard), SR 91 (Artesia Boulevard), and I-405 (San Diego Freeway), traffic studies shall be submitted to Cal trans District 7 for approval.

M-1d Monitor the development of new mobility technologies and the potential local effects on vehicular, bicycle, pedestrian and transit facilities and operations and seek funding to invest in associated infrastructure and technologies such as Traffic System Management (TSM) and traffic signal synchronization.

M-1e Monitor cut-through traffic on local streets, especially along residential areas and schools, and where appropriate evaluate the applicability of traffic calming tools and implement improvements as necessary.

GOAL M-2 REGIONAL CIRCULATION

A City that facilities the movement of people, services and goods between neighboring jurisdictions and agencies to promote consistent and efficient regional circulation.

The circulation system includes a comprehensive network of roadways that provide regional connections for people and for goods movement. Because these regionally significant connections serve transportation needs for people across the County and beyond, these facilities need to be planned and maintained in coordination with other agencies.

M-2 Policies

M-2.1 **Freeway Interchanges**. Coordinate with Caltrans to develop appropriate configurations and operations at Interstate 405 interchange intersections to minimize congestion on City streets and create safe conditions.

M-2.2 **Agency Coordination**. Coordinate with neighboring cities, telecom companies, and regional agencies such as County of Los Angeles, South Bay Cities Council of Governments, and Metro to meet the mobility needs of people living in, working in, or visiting Lawndale.

M-2.3 **Facility Connections.** Plan and implement vehicular facilities, roadway treatments, active transportation facilities, transit routes, and goods movement network to relate to those in neighboring jurisdictions.

M-2.4 **Local Facility Utilization.** Discourage pass-through traffic on City streets and the use of City streets by those users not doing business in the City.

M-2 Actions

M-2a Participate in regional planning forums to ensure that the City's concerns are considered at the regional level.

M-2b Advocate for the completion of planned regional transportation projects that would improve traffic conditions on City streets.

M-2c Monitor land use, circulation planning, and the development review process of neighboring jurisdictions, so that the City has an opportunity to recommend that impacts to Lawndale are considered by those jurisdictions.

GOAL M-3 COMPLETE STREETS

A community with a well-designed and built transportation network that is safe, accessible, comfortable, and convenient for all transportation modes and users.

Complete streets are streets that are designed to provide safe travel for everyone – people driving, riding transit, walking, biking, or using any other means of travel. Planning for and designing complete streets starts with policies that promote consideration for all users within all facility types.

M-3 Policies

M-3.1 **Complete Streets for Roadway Projects**. Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

M-3.2 **Multimodal Connectivity**. Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

M-3.3 **Streetscape Improvements**. Require roadway, sidewalk, and median improvements that enhance the visual character of the roadway system and promote pedestrian and bicycle safety.

M-3.4 **Traffic Calming on Residential Streets.** Encourage traffic calming strategies and incorporation of traffic calming design in residential areas to slow traffic and promote safety.

M-3.5 **ADA Accessibility**. Implement a transportation network that is safe, accessible, and consistent with the Americans with Disabilities Act (ADA), to allow mobility-impaired users, such as disabled persons and seniors, to safely travel within the City.

M-3.6 **Safe Routes to School**. Provide infrastructure improvements, enforcement and incentives to support Safe Route to School programs and promote walking and bicycling to local schools.

M-3 Actions

M-3a When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

M-3b Periodically review and update the City's standard street plans to ensure that the plans reflect the City's goals and policies for the circulation system.

M-3c Partner with Lawndale school administrators to improve traffic and parking conditions in school areas, especially during school drop off and pick-up periods.

M-3d Develop strategies and guidelines to set curb use priorities that consider the needs of through traffic, transit stops, bus turnouts, passenger drop-off/pick-up, deliveries, and short-term/long-term parking, especially along major corridors and in the Hawthorne Boulevard Specific Plan Area.

M-3e Include ADA-accessible facilities as part of roadway infrastructure projects.

GOAL M-4 PARKING

A community with an adequate parking supply to support business vibrancy and a high quality of life and regulations to support safe and convenient parking for residents and businesses.

Adequate off- and on-street parking is necessary to accommodate people who rely upon vehicles to travel to homes, businesses, recreation, and other uses. Effectively planning for and managing both public and private parking supply provides a balance between meeting demand and efficiently using space.

M-4 Policies

M-4.1 **New Development Parking Supply**. Ensure new residential and non-residential developments provide adequate parking supply to meet demand and reduce spillover to surrounding areas.

M-4.2 **Effects of New Technologies on Parking Demand**. Monitor the development of mobility new technologies and the potential effects on parking demand.

M-4.3 **Parking Demand and Supply Trends**. Monitor trends in the region pertaining to reduced parking demand for transit-oriented developments, mixed-use developments, and other high activity areas and the allocation of parking for shared vehicles, alternative energy vehicles, bicycles, and other modes of transportation.

M-4 Actions

M-4a Maintain and enforce City parking regulations as set in the Municipal Code.

M-4b Periodically review the City's parking code to address new types and patterns of development and new technologies which may have an impact on parking supply and/or demand in the City.

M-4c Maintain and manage the parking supply to ensure efficient and safe utilization through the employment of parking management strategies, such as shared parking in mixed-use areas and preferential parking districts in residential areas.

M-4d Review the feasibility of the development of a parking management plan to ensure developments within the Hawthorne Boulevard Specific Plan provide adequate parking supply to meet demand in the area. The plan may include flexible parking principles, such as shared parking, and may consider timing and pricing strategies, and adding supply with the development of parking structures.

GOAL M-5 TRANSIT

A community with a comprehensive public transportation system.

Transit is part of a comprehensive transportation network. It is a critical mode of transportation for those who cannot drive or do not have access to a vehicle, and also supplements other modes such as bicycle and pedestrian travel.

M-5 Policies

M-5.1 **Transit Use**. Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

M-5.2 **Improve Local Public Transit Service**. Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

M-5.3 **Transit Facilities**. Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

M-5.4 **C (Green) Line Service**. Work with Metro to ensure C (Green) Line service (including headways and service hours) are sufficient to meet the needs of transit commuters to and from Lawndale.

M-5.5 **C (Green) Line Stations**. Work with Metro to ensure the planned C (Green) Line extension project implementation is consistent with the City's Complete Streets, active transportation, and parking policies, and that it provides pedestrian and bicycle connectivity between neighborhoods within Lawndale and future stations.

M-5.6 **Effects of New Technologies on Transit Use**. Monitor the development of new mobility technologies and the potential effects on transit demand and how users access public transit.

M-5 Actions

M-5a Continue on-going coordination with transit authorities toward the expansion of transit facilities.

M-5b Work with Metro to increase transit service frequency, speed, and reliability and increase ridership and to strengthen linkages and access to the C line rail stations.

GOAL M-6 ACTIVE TRANSPORTATION

A community with a comprehensive network of pedestrian and bicycle facilities that encourages active transportation.

A network of supportive infrastructure can encourage travel by non-motorized transportation. The City has existing pedestrian and bicycle paths that support active transportation. Connecting gaps and providing supportive infrastructure benefits users and promotes these travel modes.

M-6 Policies

M-6.1 **Bicycle Master Plan**. Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

M-6.2 **Local Travel Network**. Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

M-6.3 **Hawthorne Boulevard Sidewalks**. Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.

M-6.4 **Sidewalk and Bikeway Gaps**. Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

M-6.5 **Bicycle/Pedestrian Facilities at New Developments**. Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

M-6.6 **Effects of New Technologies on Active Transportation**. Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

M-6 Actions

M-6a As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

M-6b Implement the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

M-6c Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

GOAL M-7 GOODS MOVEMENT

A community that integrates safe and efficient goods movement into the local transportation network.

Planning for a transportation system to facilitate goods movements is necessary to anticipate regional and local needs for the safe and efficient movement of goods and people, while minimizing negative impacts on local circulation and sensitive land uses.

M-7 Policies

M-7.1 **Local Truck Routes**. Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

M-7.2 **Roadway Design**. Maintain roadway design standards to facilitate access to light industrial and manufacturing areas along designated truck routes.

M-7 Actions

M-7a Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

M-7b Monitor e-commerce trends and develop regulations and guidance to address potential adverse effects of goods movement deliveries, including increased truck traffic and increased demand for curbside loading.

GOAL M-8 FUNDING

A community with a well-funded and fiscally sound transportation system that utilizes a variety of funding methods.

Funding and financing sources are available at the regional, state, and federal level to help realize the City's transportation vision and mobility plan. These funds can complement the City's resources to plan, design and implement circulation and access improvements and promote the General Plan's goals.

M-8 Policies

M-8.1 **Innovative Funding.** Research and pursue innovative funding sources at the federal, state, regional, and county level to implement transportation projects.

M-8.2 **Regional Funding.** Encourage regional agencies to continue to provide adequate transportation funding to local jurisdictions such as Metro's Measure R and Measure M to fund capital projects and programs.

M-8.3 **Development Fees.** Ensure that new development projects contribute their appropriate fair share to transportation network improvements.

M-8 Actions

M-8a Develop and support a flexible financing program to fund the construction, maintenance, and improvement of the roadway system.

M-8b Monitor federal, State, and Metro funding programs to identify potential sources of funds for transit programs, to implement the City bikeway system, to improve crosswalks and transit facilities improvements in the City in Lawndale. Pursue any potential funding through the identified programs.

GOAL M-9 TRANSPORTATION MANAGEMENT

A community with transportation management strategies that contributes to achieving regional and statewide greenhouse gas emission targets.

Recent state legislation has shifted to focus land use and transportation planning on reducing vehicle miles traveled (VMT), in alignment with a goal to reduce greenhouse gas emissions (GHG) and address climate change. Transportation management strategies that promote alternatives to single-occupancy vehicle travel can be employed to guide land use and transportation decisions in support of these environmental goals.

M-9 Policies

M-9.1 **Vehicle Miles Traveled Guidelines.** Require vehicle miles traveled (VMT) analysis for the purposes of environmental review under the California Environmental Quality Act (CEQA). The City shall continue to maintain Level of Service (LOS) standards for the purposes of planning and designing street improvements.

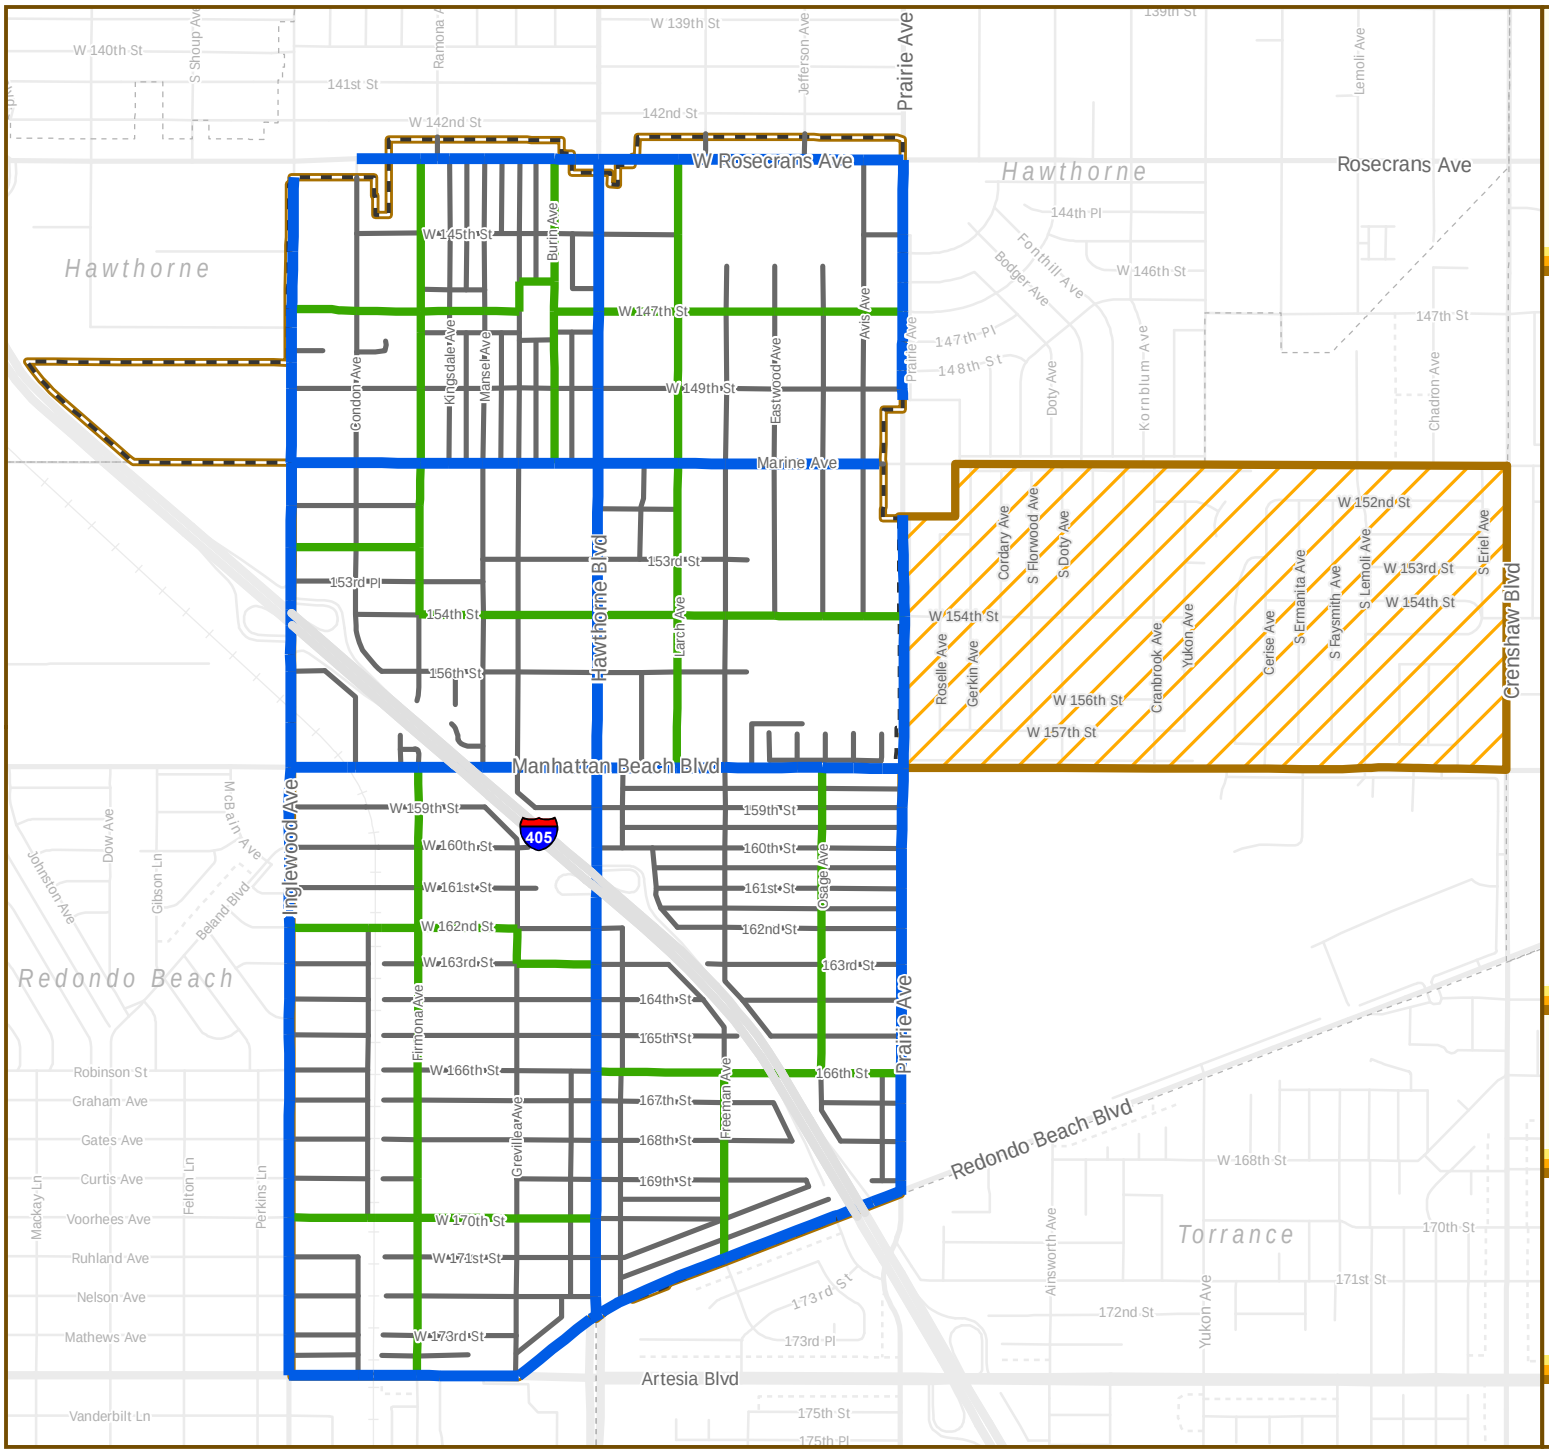
M-9.2 **Transportation Demand Management.** Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

M-9.3 **Regional Coordination.** Encourage regional agencies such as Metro, the South Coast Air Quality Management District (SCAQMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

M-9.4 **New Development.** Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

M-9 Actions

M-9a Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.



M-9b Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

M-9c Consider adoption of vehicle miles traveled (VMT) guidelines and thresholds for transportation analysis for the purposes of environmental review under the California Environmental Quality Act (CEQA).

Introduction to Resource Management

The focus of this Element is to deliver the goals, policies and actions to preserve and protect the City of Lawndale's invaluable resources. Preservation and improvement of these resources require careful planning and effective management. These resources may be natural (such as biological resources) or man-made (such as energy infrastructure). Together, the City's resources form part of the City's unique character. The Resource Management Element provides strategies to maintain the City's character that serves to enhance the residents' and visitors' quality of life through a variety of open spaces, services, and the continued effort to conserve natural resources.

Organization of Element

The Resource Management Element will address each of the topics below as they relate to Lawndale. The goals and policies of this element are organized around the following topics:

- Parks, Recreation, and Open Space
- Solid Waste Management and Recycling
- Cultural Resources
- Air Quality and Greenhouse Gas Emissions
- Energy Resources
- Water Conservation

GOAL RM-1 PARKS, RECREATION, AND OPEN SPACE

A community with attractive, safe and accessible parks, recreation, and open space areas.

Parks, recreation, and open space facilities provide innumerable benefits that enrich a community. There are two forms of parkland provided in the City – parks that are City-owned and parks that are contracted through a Joint Powers Agreement with the Lawndale Elementary School district for City utilization. The City operates the Harold E. Hofmann Community Center and the Dan McKenzie Community Garden. The City strives to provide well-planned, welcoming, and safe opportunities for recreation to all members of the community.

RM-1 Policies

RM-1.1 **Recreation Types**. Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

RM-1.2 **Parkland Standard.** Achieve a minimum parkland standard of 3 acres per 1,000 City residents.

RM-1.3 **Open Space for Private Developments**. Require new private residential development to incorporate on-site open areas, greenspace, or recreational facilities for resident use.

RM-1.4 **Parkland Funding**. Actively pursue financing for parkland acquisition and maintenance, and allocate sufficient funding to park development to support the community's recreational needs.

RM-1.5 **Partnerships and Joint-Use Agreements.** Collaborate with school districts, local and regional agencies, and private developers to create partnerships and joint-use agreements that broaden the range of recreation facility options available to the public.

RM-1.6 **Non-Residential Open Space**. Encourage outdoor gathering spaces, such as mini-parks and plazas, be incorporated into private non-residential development to encourage social interaction, create experience-oriented centers, and enhance the visual character of the community.

RM-1.7 **Street Trees**. Provide for the consistent use of street trees along all sidewalks and property frontages.

RM-1.8 **Creative Open Space and Parks.** Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

RM-1.9 **Active Transportation Trails.** Provide safe and accessible bicycle and pedestrian trails for the City's residents by improving and promoting the establishment of trails utilizing alleys, streets, sidewalks, railroad right-of-way, and other open space areas.

RM-1.10 **Service Area Radius**. Focus new park facilities in areas that are outside a 1/2-mile walking radius from an existing or proposed park or bike trail, and enhance options for residents to access these facilities through safe walking, bicycling, and transit routes. Physical barriers such as I-405 should also be considered when evaluating service area and access.

RM-1.11 **CPTED**. Utilize "Crime Prevention Through Environmental Design" (CPTED) principles in the design and renovation of new and existing parks and open space facilities.

RM-1 Actions

RM-1a Periodically review and update the park development fee ordinance as necessary to better reflect current costs and needs to address park demand generated by infill development.

RM-1b Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

RM-1c Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

RM-1d Continue to work with the Lawndale Elementary School District to maximize the joint use of facilities and pursue additional partnerships with public and private entities, including adjacent jurisdictions, for the joint use of and expanded access to, regional parks, open space, and recreational programs.

RM-1e Advertise recreational programs and promote the use of the Civic Center and Prairie Avenue Community Center facilities to promote a strong, healthy, and active community.

RM-1f Encourage commercial recreational uses to locate in Lawndale by advertising on City-owned bulletin boards and through development incentives such as, deferred or reduced development fees, and/or streamlined development review processes.

RM-1g Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

RM-1h Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

RM-1i Periodically review and update parks, recreational facilities, and community center facility rental fees as necessary to better reflect current costs to maintain and provide the facilities.

GOAL RM-2 SOLID WASTE MANAGEMENT AND RECYCLING

A community with a cost-effective, integrated waste management system that meets or exceeds recycling and waste diversion mandates and community expectations

The State of California requires communities to be proactive in addressing waste management by developing solid waste diversion and recycling programs to meet gradually increasing performance standards. The City understands that proactive waste management practices are important to protect the environment and it supports an integrated waste management approach that includes waste prevention (or "source reduction"), recycling and composting, and proper disposal of waste.

RM-2 Policies

RM-2.1 **Compliance with State Legislation.** Comply with local, Regional and State regulations regarding waste diversion, source reduction, recycling and composting.

RM-2.2 **Solid Waste Collection.** Support efforts of the solid waste service provider to maintain adequate waste disposal, recycling and refuse services for present and future residents and businesses, and periodically review waste collection performance to verified adequacy of service.

RM-2.3 **Hazardous Waste.** Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

RM-2.4 **Source Reduction and Recycling Efforts.** Participate in source reduction and recycling techniques to reduce the amount of solid waste sent to landfills and ensure adequate landfill capacity in the region.

RM-2.5 **Organic Waste**. Work with appropriate service providers to collect and compost green waste, including landscaping, Christmas trees, composting and mulch, and other sources of organic waste, to distribute for use in parks, medians, and other municipal areas.

RM-2.6 **Fees and Funding**. Work with appropriate service providers to periodically review collection, recycling, and disposal fees to achieve State and Federal mandates, meet community expectations, and reflect cost efficiencies or increases for service delivery.

RM-2.7 **Public Education**. Promote Citywide educational programs to inform residents of the benefits of recycling and appropriate recycling options and locations.

RM-2 Actions

RM-2a On an ongoing basis and in compliance with State law, ensure solid waste collection activities, facility siting and construction of transfer and/or disposal facilities, operation of waste reduction and recycling programs, and household hazardous waste disposal and education programs are consistent with the Los Angeles Countywide Integrated Waste Management Plan.

RM-2b Regularly monitor the level of services provided by waste and recycling collection contractors to ensure that service levels meet the terms of the contract.

RM-2c Include standard language in request for services and in City agreements requiring contractors to use best management practices to maximize diversion of waste from the landfill in order to meet the City's specified diversion rates.

RM-2d Encourage local businesses to provide electronic waste (e-waste) drop-off services and encourage residents and businesses to properly dispose of, or recycle, e-waste.

RM-2e Encourage recycling, reuse, and appropriate disposal of hazardous materials, including the following:

- Increased participation in single-family and multi-family residential curbside recycling programs;
- Increased participation in commercial and industrial recycling programs for paper, cardboard, and plastics; and
- Reduce yard and landscape waste through methods such as composting, grass recycling, and using resource efficient landscaping techniques.

GOAL RM-3 CULTURAL RESOURCES

A community that promotes the preservation and rehabilitation of cultural resources that are significant to the Lawndale community because of their age, architecture, history, or symbolism.

The City's paleontological, archeological, historical, and tribal resources help define the community and offer opportunities for cultural, educational, and community enrichment through community events, holiday celebrations and historic preservation. The City encourages and insists on the ongoing protection and enhancement of these resources for generations to come.

RM-3 Policies

RM-3.1 **Preservation**. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

RM-3.2 **Documentation**. Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

RM-3.3 **Cultural Reminders**. Seek to incorporate reminders of the City's culture through adaptive reuse, signage, markers, cultural events, and other reminders of Lawndale's community identity and local history.

RM-3.4 **Public Education**. Educate and actively involve the public in preserving cultural assets, including techniques, incentives, and legal requirements for preservation.

RM-3.5 **Tribal Consultation.** In accordance with State, local, and Tribal intergovernmental consultation requirements, consult with Native American tribes that may be impacted by proposed development and land use policy changes, as necessary.

RM-3.6 **Historic Preservation**. Evaluate the condition of historical buildings, the costs of rehabilitation, and the feasibility of preservation or conservation alternatives when considering the demolition or movement of historic structures; when possible, encourage the adaptive re-use of the historic structure.

RM-3.7 **Funding**. With input and involvement of stakeholder groups, seek adequate funding and support from public and private sources that aim to protect cultural and historic resources within the City.

RM-3 Actions

RM-3a Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

RM-3b Evaluate the feasibility of implementing a local historic registry program that provides incentives for retrofitting and building maintenance, as well as public recognition, of the local resource.

RM-3c Consider conducting a historic properties inventory that takes into consideration buildings, neighborhoods, and other features of historic, architectural, or cultural significance.

RM-3d For structures that potentially have historic significance, the City shall require that a study be conducted by a professional archaeologist or historian to determine the actual significance of the structure and potential impacts of the proposed development in accordance with CEQA Guidelines Section 15064.5. The City may require modification of the project and/or mitigation measures to avoid any impact to a historic structure, when feasible, such as retaining or rehabilitating historic buildings or relocating the historic building as feasible.

RM-3e For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

RM-3f The City shall require an assessment of the potential for development proposals to significantly impact paleontological resources pursuant to the California Environmental Quality Act Guidelines. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation.

RM-3g In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, the City shall halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

RM-3h Prior to adopting any general plan, specific plan, or any amendment thereto, the City shall notify appropriate tribes of the opportunity for consultation for the purpose of preserving, or mitigating impacts to, cultural places located on land within the City's jurisdiction that may be affected by the proposed plan or amendment.

RM-3i Prior to the adoption or substantial amendment of a general plan or specific plan, the City shall refer the proposed action to those tribes that are on the NAHC contact list and have traditional lands located within the City's jurisdiction for a 45-day comment period.

GOAL RM-4 AIR QUALITY AND GREENHOUSE GAS EMISSIONS

Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Improved air quality within the City means a higher quality of life for residents, workers, and visitors. Air quality is especially important due to the City's location in the South Coast Air Basin (SCAB), which does not meet State and Federal air quality standards. Regional cooperation among all agencies in the basin is necessary to achieve desired improvements to air quality. Lawndale can assist in reducing local emissions through proper planning for land use and transportation.

RM-4 Policies

RM-4.1 **Regional Cooperation**. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

RM-4.2 **Measurement and Enforcement**. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

RM-4.3 **GHG Emissions**. Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

RM-4.4 **Transportation Options**. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

RM-4.5 **Walkability**. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

RM-4.6 **Land Use Planning**. Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

RM-4.7 **Sensitive Receptors**. Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

RM-4.8 **Mitigation**. Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

RM-4.9 **GHG Reduction**. Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

RM-4.10 **Public Engagement**. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

RM-4 Actions

RM-4a Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

RM-4b As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

RM-4c Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

RM-4d Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

RM-4e Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

RM-4f Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

RM-4g Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

RM-4h Establish programs that encourage community car-sharing and carpooling.

RM-4i Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

RM-4j Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation

or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

RM-4k Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NOx emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

RM-4l Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

GOAL RM-5 ENERGY RESOURCES

A community that safely manages its energy resources.

Future development within the City will result in increased energy demands for the operation of businesses, homes, and transportation facilities. To reduce greenhouse gas emissions, pollutants, and ensure that there are adequate energy resources for future generations, safe management and conservation methods need to be implemented.

RM-5 Policies

RM-5.1 **Compliance with State Legislation**. Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

RM-5.2 **Green Building Standards Code.** Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

RM-5.3 **Renewable Energy**. Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

RM-5.4 **Energy-Efficient Materials**. Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

RM-5.5 **Energy Conservation**. Promote energy conservation and recycling by the public and private sectors.

RM-5.6 **Energy Needs**. Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

RM-5.7 **Business Community.** Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

RM-5.8 **Public Education**. Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

RM-5.9 **Promote Energy Conservation in Existing Building Stock**. Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

RM-5 Actions

RM-5a Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

RM-5b During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

RM-5c Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

RM-5d Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

RM-5e Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

RM-5f Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

RM-5g Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

RM-5h Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

GOAL RM-6 WATER CONSERVATION

A community that protects and conserves limited water resources.

Water is an indispensable resource that is integral to Lawndale's prosperity and growth. The City embraces an integrated water management approach in order to preserve these precious resources for years to come.

RM-6 Policies

RM-6.1 **Conservation.** Promote residential, commercial and institutional water conservation strategies using multiple innovative strategies and contemporary best practices.

RM-6.2 **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

RM-6.3 **Riparian Habitat.** Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

RM-6.4 **Stormwater.** Work cooperatively with local water agencies to effectively and efficiently manage stormwater runoff as part of the City's multi-pronged water conservation strategy.

RM-6.5 **Reclaimed Water.** Promote the expanded use of reclaimed (recycled) water, where feasible.

RM-6.6 **Education and Appreciation**. With community partners, support a range of educational programs that cultivate an appreciation of Lawndale's urban and natural habitats and biological resources.

RM-6 Actions

RM-6a To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

RM-6b In cooperation with the State, Regional and local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted. Cooperate with these agencies to establish standards and regulations for the use of recycled water in development projects.

RM-6c Work with local water agencies and service providers, regional wholesalers, and private developers to encourage water conservation in the following ways:

- Implementing groundwater recharge programs;
- Participating in water conservation programs operated by the local and Regional water districts;
- Establishing water conservation education programs;
- Requiring Water-Efficient Landscaping for public and private areas, including parks and recreational facilities, in accordance with the Water-Efficient Landscape requirements;
- Expanding the production and use of reclaimed (recycled) water;
- Requiring the incorporation of water conservation devices, including low flush toilets, flow restriction devices, and water conserving appliances in both new public and private development projects and rehabilitation projects.

This page intentionally left blank.

Introduction to Public Safety

The goal of Lawndale's Public Safety Element is to reduce the risk of death, injury, property damage, economic loss, and harm due to natural and manmade hazards. An effective response to natural and human-caused disasters requires planning, education, coordination and training by multiple government agencies and the public. A resilient community has the capacity to maintain critical functions during hazard events as well as adapt to and reduce future hazard risks.

This Element establishes goals, policies, and actions to minimize and address these potential hazards as well as support an adequate and coordinated response. The goals are statements of the City's desires and consist of broad statements of purpose and direction. The policies serve as guidelines for reducing risk associated with natural and human activity hazards. The policies also serve to direct and maximize community emergency preparedness. The actions explain how the goals and policies will be achieved and implemented.

The Public Safety Element supports the City's participation in regional and subregional planning efforts including the Lawndale Local Hazard Mitigation Plan, County of Los Angeles All-Hazards Mitigation Plan, and the Lawndale Climate Action Plan.

Organization of Element

The Public Safety Element will address each of the topics below as they relate to Lawndale. The goals and policies of this element are organized around the following topics:

- Emergency Operations
- Geologic and Seismic Hazards
- Hazardous Materials
- Fire Hazards
- Flood Hazards
- Noise
- Climate Change and Resiliency Planning

Related Plans, Programs, and Regulations

The following Plans, Programs, and Regulations are incorporated by reference into the City of Lawndale's Public Safety Element.

City of Lawndale

- **General Plan:** Lawndale's General Plan is a broad, long-range policy document that serves as a blueprint for future development in the City. It includes the Public Safety Element, as well as the Land Use, Mobility, Housing, Resource Management, Environmental Justice, Economic Development, and Community Facilities Elements.
- **Zoning Code:** The City's Zoning Code implements the goals and policies of the City's General Plan by regulating the uses of land and structures within Lawndale. The Zoning Code is codified in Title 17 of the Municipal Code.
- **Fire Code:** The Fire Code establishes requirements consistent with nationally recognized good practices to safeguard the public health, safety and general welfare from the hazards of fire, explosion or dangerous conditions in new and existing buildings, structures and premises, and provides safety and assistance to fire fighters and emergency responders during emergency operations. Lawndale adopts the County of Los Angeles Fire Codes every three years. The City's Fire Code is codified in Chapter 15.20 of the Municipal Code.
- **Building Code:** The Building Code regulates construction and property use to ensure safe, healthy, efficient, and accessible environments for human occupancy and habitation. Lawndale adopts the County of Los Angeles Building and Safety Codes every three years. The City's Building Code is codified in Title 15 of the Municipal Code.
- **Local Hazard Mitigation Plan (LHMP):** The City adopted the LHMP in 2016 to assess natural hazard risk and incorporate mitigation strategies to reduce the potential impact from hazards. It complies with the Federal Disaster Mitigation Act (2000), and Federal Register 44 CFR Parts 201 and 206. The City's Emergency Preparedness Coordinator managed preparation of the LHMP in cooperation with the City's other departments, community stakeholders, partner jurisdictions, agencies and organizations, and members of the public.
- **Emergency Operations Plan (EOP):** The City adopted the EOP in 2011, which was updated in 2015. The EOP addresses the City's planned response to natural or human-caused disasters, provides an overview of operational concepts, and identifies components of the City's emergency/disaster management organization within the Standardized Emergency Management System (SEMS), the National Incident Management System (NIMS) and the Incident Command System (ICS). The EOP also describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support.
- **Climate Action Plan (CAP):** The City, in cooperation with the South Bay Cities Council of Governments (SBCCOG), developed a Climate Action Plan (CAP) which was adopted in 2017. The CAP includes measures to reduce human-caused greenhouse gas emissions and enhance carbon storage, or sequestration, as a local response to mitigate global climate change and comply with State and Federal legislation.

Los Angeles County

- **County of Los Angeles All-Hazard Mitigation Plan (AHMP):** The AHMP was adopted in 2014 and conforms to the requirements of Federal Emergency Management Agency (FEMA) Disaster Mitigation Act of 2000. The County developed the AHMP to cover mitigation responsibilities of County departments (including Los Angeles County Sheriff's Department (LASD)). It helps ensure the most effective allocation of resources for the maximum benefit and protection of the public in time of emergency.
- **Los Angeles County Operational Area Emergency Response Plan (OAERP):** The OAERP was adopted in 2012 and establishes the coordinated emergency management system, which includes prevention, protection, response, recovery, and mitigation within the Los Angeles County Operational Area (OA). The OA is defined as the County and all political subdivisions within the County.
- **Los Angeles County Fire Department 2020 Strategic Fire Plan:** The Strategic Fire Plan outlines goals focused on enhancing the protection of lives, property, and natural resources from wildland fire, as well as improving environmental resilience to wildland fires through local, State, Federal, and private partnerships. The 2020 Plan is focused on three primary goals: emergency operations, public service, and organizational effectiveness.

Los Angeles County Fire District Facilities Master Plan: The Master Plan was prepared in 2020 as a collaborative effort between the LA County Fire District and the LA County Chief Executive Office. The Plan evaluates the current capacity, condition, and functionality of the Fire District's facilities and then projecting future capacity deficits utilizing Southern California Association of Governments (SCAG) population growth projections and methodologies.

GOAL PS-1 EMERGENCY OPERATIONS

A community prepared to provide effective response and recovery efforts in the event of an emergency.

Advanced emergency planning and preparedness is essential in responding to natural and human-caused disasters. The City supports multi-jurisdictional and -agency cooperation and communication for emergency planning and response management. Public safety services in Lawndale are provided by the Los Angeles County Sheriff's Department (LASD) South Los Angeles Station and the Los Angeles County Fire Department (LACoFD) Kenny Hahn Memorial Fire Station No. 21.

The City will continue to coordinate with LASD and LACoFD to provide ongoing education to residents about how to safely evacuate in the event of an emergency. While the California Government Code requires jurisdictions to identify residential developments in hazard areas that do not have at least two emergency evacuation routes, there are not any hazard areas within the boundary of Lawndale and therefore this analysis is not warranted. Major arterials serve as the primary routes for evacuation; however, evacuation routes will depend upon the emergency event and area affected. Law enforcement will identify the appropriate routes and assist residents leaving the City in the event an evacuation of all or part of the City is required.

PS-1 Policies

PS-1.1 **Citywide Safety.** Support projects, programs, policies, and regulations that help to mitigate potential impacts associated with natural and man-made hazards.

PS-1.2 **Critical Facilities.** Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

PS-1.3 **Emergency Preparedness and Response.** Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

PS-1.4 **Local Hazard Mitigation.** Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

PS-1.5 **Resources.** Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

PS-1.6 **Emergency Access.** Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

PS-1.7 **Public Safety Education.** Promote public safety education programs to educate on emergency preparedness, reduce accidents, injuries, and fires, and to train members of the public to respond to emergencies.

PS-1.8 **Cooperation.** Collaborate with the school district, businesses, nonprofit organizations, and community members/groups to maintain safety throughout the City.

PS-1 Actions

PS-1a Regularly review and coordinate emergency response procedures with Los Angeles County and State emergency response procedures.

PS-1b Continue to implement and update (when relevant) the City's Emergency Operations Plan.

PS-1c Continue to implement and update (at least every five years) the City's Local Hazard Mitigation Plan.

PS-1d Coordinate with local agencies and organizations to develop and distribute informational brochures and give presentations to civic groups and local schools to educate residents and businesses about appropriate actions to take during an emergency situation.

PS-1e Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

PS-1f Promote after school programs, volunteer programs, and Business & Neighborhood Watch programs to help maintain a safe environment.

GOAL PS-2 GEOLOGIC AND SEISMIC HAZARDS

A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Lawndale is within the northern margin of the Peninsular Ranges. The topography of Lawndale is relatively flat with an elevation of approximately 59 feet above sea level. Like most cities in the Southern California region, Lawndale is subject to risks associated with potentially destructive earthquakes. Although there are no designated Alquist-Priolo fault zones within the City, regional fault zones may have an impact on the City if the rupture is of a significant magnitude. There are numerous earthquake faults within 15 miles of the City. The most active faults near the City are the Palos Verdes fault located to the south and the Newport-Inglewood fault to the northeast.

As detailed in the Existing Conditions Report, there are no areas within the City designated as having the potential for liquefaction, in addition Lawndale does not have areas susceptible to earthquake-induced landslides and other slope failures. Most areas in the City are considered to have a low potential for erosion. Generally, erosion potential within the City increases to the south. The majority of the City has 'Low to Medium' expansive soils. Only a small portion of the City has areas with 'Low to High' expansive soils and potential for non-seismically induced landslides. The City of Lawndale does not have any historic or current U.S. Geological Survey-recorded subsidence. Because existing soil types are well-drained and permeability is moderate to slow, the risk for collapsible soils is low. According to the California Geological Survey, there is no naturally occurring asbestos mapped within the City. Lawndale is not within a tsunami or seiche hazard area. Risk of exposure to natural hazards can be reduced through careful land use planning, building construction practices, and implementation of the following policies and actions.

PS-2 Policies

PS-2.1 **Geologic Hazard Identification.** Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

PS-2.2 **Earthquake Protection**. Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

PS-2.3 **Development Projects**. Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

PS-2.4 **Seismic Hazard Education.** Continue to seek out opportunities to educate and encourage the community on ways to implement measures to mitigate potential injury and damage associated with earthquakes.

PS-2 Actions

PS-2a Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

PS-2b Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

PS-2c Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

PS-2d During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

PS-2e Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

GOAL PS-3 HAZARDOUS MATERIALS

A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Certain types of development and uses within the City utilize hazardous materials, such as gas stations and automobile repair shops. These uses make Lawndale susceptible to hazards from spills of toxic materials. Accidents can occur in the production, use, storage, transport, and disposal of hazardous materials. This danger is mitigated, however, by various State and federal legislation regulating the use, storage, and transportation of hazardous materials and the strict enforcement of these regulations. The Los Angeles County Fire Department (LACoFd) Health Hazardous Materials Division maintains an emergency response team that would respond in the event of a hazardous materials spill or other environmental health emergencies.

The Los Angeles County Department of Public Health, Environmental Health Division enforces the provisions of the Hazardous Waste Control Law of the State of California as set forth in the California Health and Safety Code and the California Code of Regulations. The City coordinates with the Los Angeles County Department of Public Health, Environmental Health Division to effectively manage hazardous materials and waste as well as implement educational programs.

LACoFD maintains the mandatory disclosure file on use (or non-use), handling, and storage practices of hazardous materials and hazardous wastes annually of all businesses. Inventories of hazardous materials are data-processed for immediate availability to fire, police, and other first-responder (i.e. first at the scene of an incident) departments. These potential risks are carefully monitored and controlled through annual inspection.

PS-3 Policies

PS-3.1 **Compatible Land Uses.** Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

PS-3.2 **Safe Residential Uses.** Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

PS-3.3 **Emergency Operations.** Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

PS-3.4 **Cleanup Sites.** Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

PS-3.5 **Monitoring.** Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

PS-3.6 **Transportation.** Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

PS-3.7 **Pipelines**. Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

PS-3.8 **Rail Lines**. Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

PS-3.9 **Public Education.** Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

PS-3 Actions

PS-3a As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

PS-3b Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

PS-3c Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

PS-3d Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

PS-3e Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

GOAL PS-4 FIRE HAZARDS

A community protected from loss of life or injury and damage to property due to fire hazards.

There are no Fire Hazard Severity Zones located within Lawndale and no threat of wildland fire. Due to the urbanized character of the City, fires would primarily be associated with structures, trash/debris, and vehicle fires. Structure fires, including homes, industrial and commercial buildings, and other facilities are of the greatest concern due to the potential for loss of life as well as property. Generally, the risk of injury and damage is greater for higher occupancy structures, such as condominiums, apartment buildings, hotels, and churches. In addition, higher density areas are of increased concern due to the large number of people residing within a concentrated area and the potential for fires to spread from one structure to another. Lawndale is one of the most densely populated areas within Los Angeles County. Development of the City has resulted in small lot development with multiple structures on single lots and narrow streets. Emergency access is limited between the closely spaced structures and along the narrow streets that occur throughout the City. On-street parking, especially during the evening hours, further restricts the access and maneuverability of fire equipment. Due to the nature of the development that has occurred, many structures do not meet current emergency access requirements.

PS-4 Policies

PS-4.1 **Fire Protection Services.** Coordinate fire protection services with LACoFD so that sufficient capacity, stations, personnel, and equipment are available to meet needs in Lawndale for fire protection and related emergency services.

PS-4.2 **Development Review.** Involve LACoFD in the development review process so that fire safety is addressed in new and modified developments.

PS-4.3 **Emergency Access.** Require all new developments provide adequate access for emergency vehicles and evacuation as part of the development review process.

PS-4.4 **Building Fire Codes.** Require that all buildings and facilities within the City comply with local, State, and federal regulatory standards such as the California Building and Fire Codes, as well as other applicable fire safety standards.

PS-4.5 **Hazard Mitigation Plans**. Coordinate with local, State, and federal agencies to update emergency, evacuation, and hazard mitigation plans, as necessary.

PS-4 Actions

PS-4a Require all new habitable structures be designed in accordance with the most recent California Building and Fire Code with local amendments adopted by the City.

PS-4b Work with LACoFD to disseminate educational programs for residents on fire hazard risks and fire safety measures.

GOAL PS-5 FLOOD HAZARDS

A community that is protected from flood hazards.

The City has been designated on the Flood Insurance Rate Map (FIRM), as being in Zone X, which is a Non-Special Flood Hazard Area. Zone X includes areas that are:

- Outside the 1% annual flood risk floodplain
- Of 1% annual shallow flooding risk where average depths are less than 1 foot
- Of 1% annual stream flooding risk where the contributing drainage area is less than 1.0 square mile
- Protected by levees from the 1% annual flood risk

These areas are not in any immediate danger from flooding caused by overflowing rivers or hard rains. However, it is noted that structures within a Non-Special Flood Hazard Areas are still at risk, particularly to localized flooding. The City is not in a dam inundation zone so is not as risk of flooding from dam or reservoir failure.

PS-5 Policies

PS-5.1 **Flood Control Regulations.** Coordinate with local, state, and federal agencies so that the City's regulations related to flood control are in compliance with Federal, State, and Local standards.

PS-5.2 **Flood Maps.** Coordinate with Federal Emergency Management Agency (FEMA) so that Federal Insurance Rate Maps correctly depict flood hazards in the City.

PS-5.3 **Site Design.** Adhere to the latest building, site, and design codes to avoid or minimize the risk of flooding hazards in the community.

PS-5.4 **Best Management Practices.** Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

PS-5.5 **Changing Conditions.** Coordinate with the Los Angeles County Flood Control and Waterworks Districts on changing flood conditions associated with climate change and extreme weather.

PS-5.6 **Local Storm Drainage Infrastructure.** Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

PS-5 Actions

PS-5a Monitor changes in Federal and State laws and regulations related to local flood protection, including the National Flood Insurance Program and incorporate necessary changes into the Municipal Code and building codes as required.

PS-5b Communicate with FEMA annually regarding updates to Flood Insurance Rate Maps and Letter of Map Revisions.

PS-5c Periodically review County, State, and Federal flood control best practices and incorporate appropriate standards into the Municipal Code.

GOAL PS-6 NOISE

An environment where excessive or harmful noise pollution is limited.

Noise levels within the community can affect the quality of life experienced by people living and working in Lawndale. High noise levels can create stress and irritation. The following policies and actions address other potential sources of excessive noise by creating effective strategies to reduce and limit the community's exposure to loud sources of noise.

PS-6 Policies

PS-6.1 **California Building Code.** Adhere to the latest standards related to noise in the most current edition of the California Building Code to avoid or minimize noise pollution in the community.

PS-6.2 **Noise Exposure**. Consider the noise compatibility of existing and future development when making land use planning decisions. Require development and infrastructure projects to be consistent with the land use compatibility standards contained in Table PS-1 and the Lawndale Municipal Code to facilitate acceptable noise exposure levels for existing and future development.

PS-6.3 **Noise Mitigation**. Require new development to mitigate excessive noise to the standards indicated in Table PS-1 and the Lawndale Municipal Code through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials.

PS-6.4 **Acoustical Studies**. Require acoustical studies for new discretionary developments and transportation improvements that have the potential to affect existing noise-sensitive uses such as schools, hospitals, libraries, care facilities, and residential areas; and for projects that would introduce new noise-sensitive uses into an area where existing noise levels may exceed the thresholds identified in this element. For projects that are required to prepare an acoustical study, the following mobile and stationary noise source criteria shall be used to determine the significance of those impacts.

A. Mobile Noise Sources:

- Where existing traffic noise levels are within or below the "normally acceptable" noise criteria at the affected land use (see Table PS-1), a readily perceptible 5 dBA CNEL or greater increase in roadway noise will be considered significant;
- Where existing traffic noise levels falls within the "conditionally acceptable" noise criteria at the sensitive land use, a +3 dBA CNEL or greater increase in roadway noise levels will be considered significant; and
- Where existing traffic noise levels exceed the "conditionally acceptable" noise criteria at the sensitive land use, a + 1.5 dBA CNEL or greater increase in roadway noise levels will be considered significant

B. Stationary and Non-Transportation Noise Sources

A significant impact will occur if the project results in an exceedance of the noise level standards contained in this element, or the project will result in an increase in ambient noise levels by more than 3 dB, whichever is greater.

PS-6.5 **Roadway Noise**. Encourage nonmotorized transportation alternatives for local trips and the implementation of noise sensitivity measures in the public realm, including traffic-calming road design, lateral separation, natural buffers, and setbacks to decrease excessive motor vehicle noise.

PS-6.6 **Freeway Noise**. Coordinate with the California Department of Transportation (Caltrans) to achieve maximum noise abatement in the design of new freeway projects or improvements along I-405.

PS-6.7 **Railroad Noise**. Coordinate with Burlington Northern and Santa Fe Rail (BNSF) to support and maintain reasonable limits on the use of bells and whistles, and the speed and hours of rail operation in affected areas of the City and maintain adequate setbacks and buffer zones along rail lines to reduce adverse noise impacts on sensitive receptors.

PS-6.8 **Commercial Noise**. Require the use of noise attenuation measures, including screening and buffering techniques, for all new commercial development expected to produce excessive noise; in existing cases where the City's noise standards are exceeded, work with Code Enforcement to require compliance.

PS-6.9 **Construction Noise**. Require construction activities to reduce noise impacts on adjacent uses to the criteria identified to the maximum extent feasible by complying with Chapter 8.20 of the Lawndale Municipal Code and use best practices.

PS-6.10 **Special Events**. Temporary special events which generate noise in excess of local noise standards including, but not limited to, festivals, concerts, parades, and other similar activities may be considered on a case-by-case basis through issuance of a temporary use permit.

PS-6.11 **Temporary Emergency Operations and Emergency Equipment Usage**. Temporary emergency operations or emergency equipment usage are exempt from noise standard criteria set by this element.

PS-6.12 **Interjurisdictional and Multiagency Coordination**. Coordinate with neighboring cities and transportation providers such as Caltrans to minimize noise conflicts between land uses along the City's boundaries.

PS-6.13 **Community Education**. Provide education to the community regarding potential noise sources and how to reduce them or report violations.

PS-6.14 **Vibration Studies.** Require vibration impact studies for new discretionary development and transportation improvements whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings.

PS-6 Actions

PS-6a Monitor changes in the California Building Code and other Federal and State laws and regulations related to noise and incorporate necessary changes into the Municipal Code and building codes as required.

PS-6b Review the Lawndale Municipal Code and update as necessary so that the noise standards are consistent with this General Plan, including Table PS-1, and to require new residential, mixed-use with a residential component, and other noise-sensitive development to be designed to minimize noise exposure to noise sensitive uses through incorporation of site planning and architectural techniques. The update shall also include noise standards for residential uses within a mixed-use development, which may differ from other adopted residential noise standards.

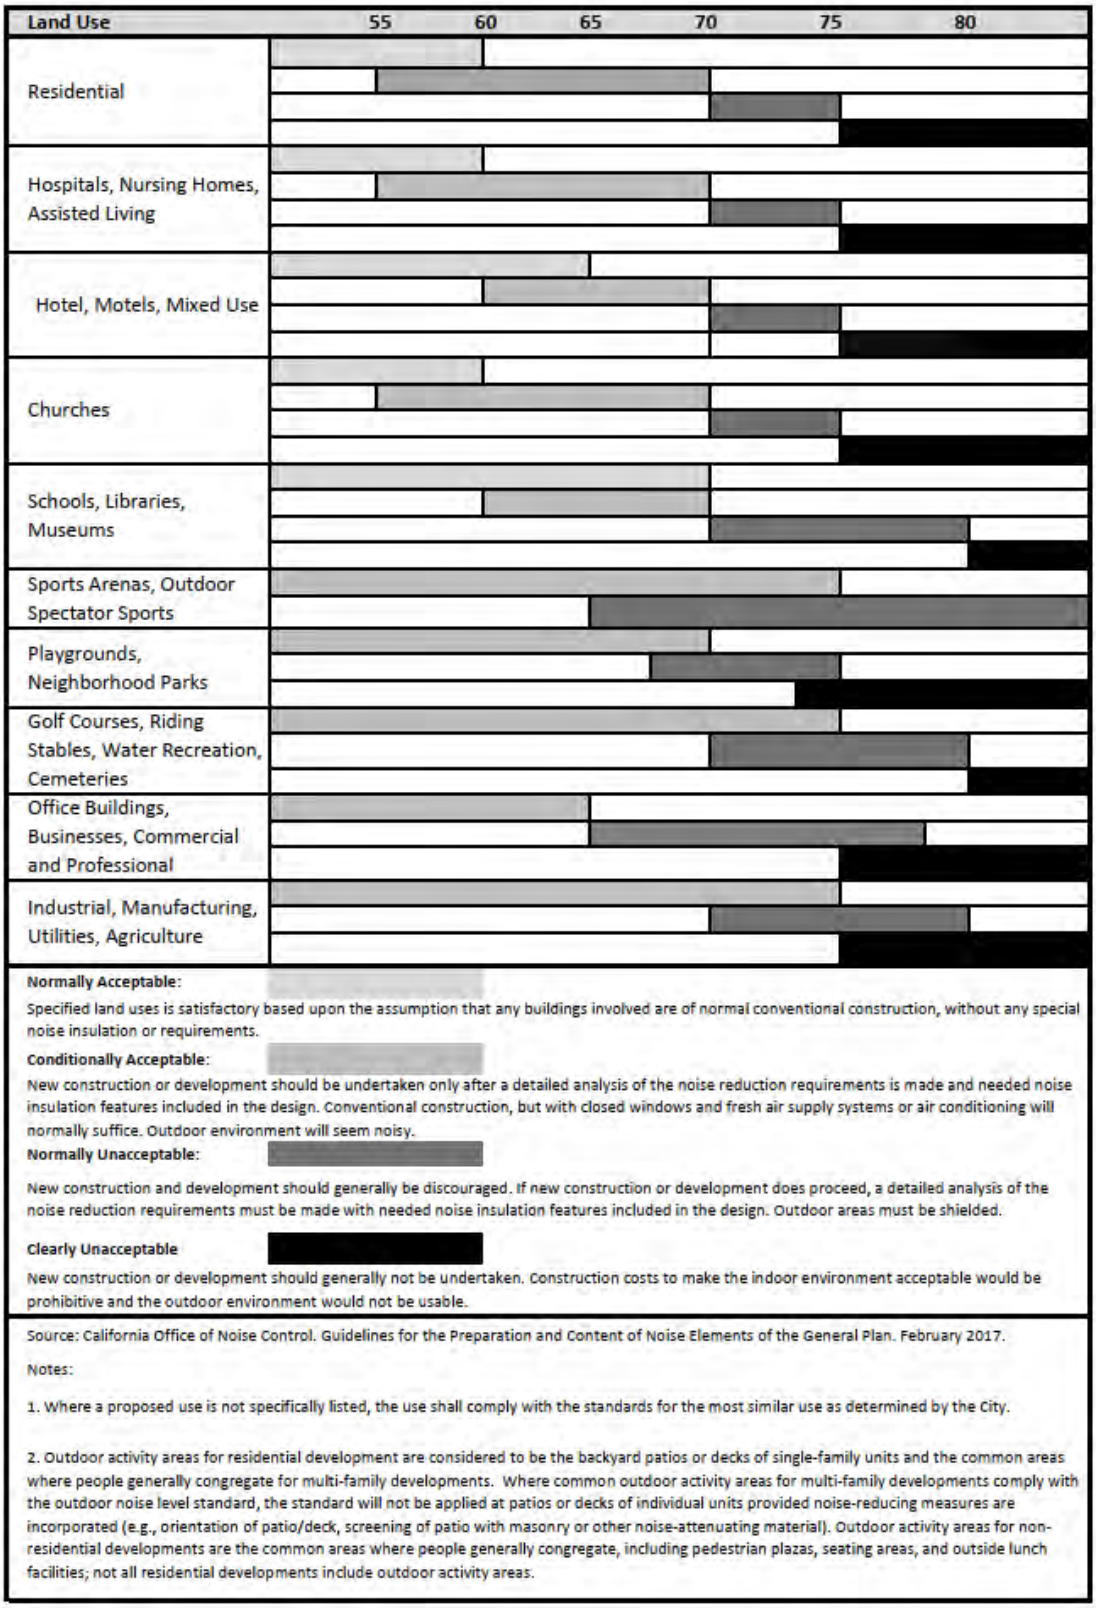
PS-6c Review new development and transportation projects for compliance with the noise requirements established in this General Plan, including the standards established in Table PS-1 and the Lawndale Municipal Code. Where necessary, require new development to mitigate excessive noise through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials such as rubberized asphalt.

PS-6d Require acoustical studies for all new discretionary projects, including those related to development and transportation, which have the potential to generate noise impacts which exceed the standards identified in this General Plan. The studies shall include representative noise measurements, estimates of existing and projected noise levels, and mitigation measures necessary to facilitate compliance with this element.

PS-6e Review the locations of proposed projects with the potential to generate stationary noise in relation to sensitive receptors through the discretionary project review process. Limit delivery or service hours for stores and businesses with loading areas, docks, or trash bins that front, side, border, or gain access on driveways next to residential and other noise sensitive areas. Only approve exceptions if full compliance with the nighttime limits of the noise regulations is achieved.

PS-6f Require all construction activity to comply with the limits (maximum noise levels, hours and days of allowed activity) established in the Lawndale Municipal Code in order to reduce impacts associated with temporary construction noise to the extent feasible.

PS-6g Actively enforce the standards identified within the Lawndale Municipal Code to reduce impacts to the extent feasible. Update and amend the Lawndale Municipal Code as appropriate. Provide a link on the City's website for those to file complaints against activities and uses that may be violating the Municipal Code.



PS-6h Require new residential projects located adjacent to railroad lines to follow the FTA vibration screening distance criteria to prevent residential uses from being exposed to vibrations exceeding 72 VdB for frequent events (more than 70 events per day), 75 VdB for occasional events (30-70 events per day), or 80 VdB for infrequent events (less than 30 events per day).

PS-6i Enforce the provisions of the most current California Motor Vehicle Code regarding muffler maintenance and exhaust systems.

PS-6j Limit truck traffic in noise sensitive areas.

PS-6k Require vibration impact studies for all new discretionary projects, including those related to development and transportation, whose construction utilizes pile drivers within 200 feet of existing buildings or vibratory rollers within 50 feet of existing buildings. The studies shall include a detailed mitigation plan to avoid any potential significant impacts to existing structures due to groundborne vibrations, based on the California Department of Transportation's Construction Vibration Guidance Manual.

Table PS-1: Land Use Compatibility for Community Noise Exposure (dBA, CNEL)

Source: California Office of Noise Control. Guidelines for the Preparation and Content of Noise Elements of the General Plan. February 2017.

Notes:

1. Where a proposed use is not specifically listed, the use shall comply with the standards for the most similar use as determined by the City.

2. Outdoor activity areas for residential development are considered to be the backyard patios or decks of single-family units and the common areas where people generally congregate for multi-family developments. Where common outdoor activity areas for multi-family developments comply with the outdoor noise level standard, the standard will not be applied at patios or decks of individual units provided noise-reducing measures are incorporated (e.g., orientation of patio/deck, screening of patio with masonry or other noise-attenuating material). Outdoor activity areas for non-residential developments are the common areas where people generally congregate, including pedestrian plazas, seating areas, and outside lunch facilities; not all residential developments include outdoor activity areas.

GOAL PS-7 CLIMATE CHANGE AND RESILIENCY PLANNING

A resilient, sustainable, and equitable community where risks to life, property, the economy, and the environment resulting from climate change are minimized.

The impacts of climate change pose an increasing and growing challenge to the safety and well-being of the residents of Lawndale. California will continue to experience effects of climate change in different ways, including increased likelihood of drought, heat waves, severe weather, flooding, and wildfires. In addition to climate change planning becoming necessary on its own merits, Senate Bill 379 requires Lawndale to update the Public Safety Element to address climate change adaptation and resilience strategies applicable to the City.

Lawndale developed a Climate Action Plan (CAP) in cooperation with the South Bay Cities Council of Governments in 2017. The CAP serves as a guide for action by setting GHG emission reduction goals and establishing strategies and policy to achieve desired outcomes over the next 20 years.

Lawndale's Local Hazard Mitigation Plan (LHMP) assesses climate change vulnerability and identifies risks that climate change pose to the City. The following policies are informed by, and intended to supplement, the CAP and LHMP.

PS-7 Policies

PS-7.1 **Community Preparedness.** Promote a well-prepared City that can effectively overcome natural disasters and scarcity of resources due to climate change.

PS-7.2 **Collaboration.** Collaborate with local, regional, State and/or Federal jurisdictions and agencies on climate resiliency and adaptation strategies.

PS-7.3 **Ecological Recovery.** Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

PS-7.4 **Air Pollution.** Work with responsible Federal, State, and County agencies to decrease air pollution emissions occurring within the air basin to reduce the risk posed by air pollution.

PS-7.5 **Energy Supply.** Promote plans and programs that increase sustainable energy sources.

LOOKING AHEAD

As Lawndale looks to the future, State law requires the City to consider climate impacts facing California as well as methods to adapt and increase resiliency to climate change effects. As a result of climate change, Lawndale may experience more intense and frequent heat waves, drought, and wildfires, and more severe storms and extreme weather events.

Emissions scenarios used in the General Plan and Environmental Impact Report are the same as those used by the Intergovernmental Panel on Climate Change's Sixth Assessment Report and are called Representative Concentration Pathways, or RCPs. There are five RCPs: SSP1-1.9, SSP1-2.6, SSP2-4.5, SSP3-7.0, and SSP5-8.5. Each represents a set of possible underlying socioeconomic conditions, policy options, and technological considerations, spanning from a low-end scenario that requires significant emissions reductions resulting in zero global emissions by 2050 (RCP 1.9) to a high-end, "business-as-usual," fossil-fuel-intensive emissions scenario (RCP 8.5). The low-end scenario is most closely aligned with California's ambitious greenhouse gas reduction targets and the aspirational goals of the United Nations Framework Convention on Climate Change 2015 Paris Agreement. Thus far, global emissions continue to follow the business-as-usual trajectory.

PS-7.6 **Drought Preparation.** Implement necessary actions and programs to improve drought preparation and response for the most vulnerable community members.

PS-7.7 **Cooling Centers.** Designate public buildings, specific private buildings, or institutions with air conditioning as public cooling shelters; extend hours at air-conditioned sites during periods of extreme heat or power outage (if the site is supported by a backup generator).

PS-7.8 **Storms.** Provide access to flood protection resources and services (signage, sandbags, etc.) as feasible at designated public facilities during and after extreme weather events.

PS-7.9 **Special Assistance.** Address the needs of individuals with limited mobility or limited access to transportation for access to safe and comfortable shelter during extreme heat events or other severe weather events.

PS-7.10 **Leadership.** Demonstrate leadership in local climate planning efforts through a range of tangible actions and policies at the municipal operations level.

PS-7.11 **Greenhouse Gas Reductions.** Reduce communitywide greenhouse gas emissions locally by actively support regional efforts to reduce greenhouse gases throughout the region.

PS-7.12 **Extreme Heat Vulnerabilities.** Require that new developments, major remodels, and redevelopments address urban heat island issues and reduce urban heat island effects for the proposed project site and adjacent properties.

PS-7.13 **Ongoing Monitoring.** Monitor climate change-related effects with local, regional, state, and/or federal partners to provide information of effectiveness of existing infrastructure and programs.

PS-7 Actions

PS-7a Provide information and resources to the public and businesses regarding steps the City is taking to address the issue of climate change.

PS-7b Expand the use of energy-efficient lighting, such as LEDs, for City-owned light facilities.

PS-7c Consider purchasing only electric or alternative-energy vehicles for the City vehicle fleet, as appropriate, based on the intended use of the vehicle.

PS-7d Evaluate the feasibility for government-constructed and/or -operated new development to exceed the California Green Building Standards Code CalGreen Tier 1, or successor program, standards.

PS-7e Promote the use of sustainable and carbon-neutral energy sources in new development.

PS-7f Explore using renewable energy and clean generation technologies such as solar, wind, biogas, or fuel cells to power City facilities where appropriate.

Introduction to Environmental Justice

The Environmental Justice Element seeks to reduce disproportionate impacts on vulnerable populations in Lawndale and promote equal distribution of resources. Senate Bill 1000 (SB 1000), the Planning for Healthy Communities Act, was signed into law by then Governor Jerry Brown, on September 24, 2016. It mandates that cities and counties with Environmental Justice Communities (described below) adopt an Environmental Justice Element or integrate appropriate goals, objectives, and policies into other elements of their general plans, with the intent to create healthier places. The City of Lawndale has chosen to prepare a separate element so that all Environmental Justice-related goals, policies, and actions are conveniently located in one document for easy reference.

Environmental Justice Communities

Environmental Justice Communities are described by the California Communities Environmental Health Screening Tool (CalEnviroScreen) as areas (i.e., census tracts) of a city or county that have higher environmental burdens and vulnerabilities than other areas. Based on data from CalEnviroScreen Version 4.0 and the California Air Resources Board (CARB) Priority Populations Mapping Tool, all seven census tracts in the Planning Area are considered to be Environmental Justice Communities (Figure EJ-1). The methodology is described in more detail in the Existing Conditions Report. This Environmental Justice Element supports continued improvements for areas identified as Environmental Justice Communities as well as neighborhoods throughout the City, as a whole.

Organization of Element

The Environmental Justice Element will address each of the topics below as they relate to Lawndale. The goals and policies of this element are organized around the following topics:

- Pollution Exposure and Air Quality
- Access to Public Facilities
- Healthy Food Access
- Safe and Sanitary Homes
- Physical Activity
- Civic Engagement
- Improvement and Programs

GOAL EJ-1 POLLUTION EXPOSURE AND AIR QUALITY

Pollution exposure is reduced and air quality is enhanced through land use and development patterns, especially in Environmental Justice Communities.

Pollution exposure occurs when people come into direct contact with air, food, water, and soil contaminants and is often the result of incompatible land uses sited adjacent to each other. Sensitive populations (such as children, the elderly, and those with compromised immune systems) and sensitive land uses (such as schools, day cares and hospitals) are the most susceptible to pollution exposure. Environmental Justice Communities are often disproportionately burdened by multiple sources of pollution exposure. Pollution can come from many sources including storage tanks leaking hazardous chemicals into soil and groundwater, agricultural land uses applying pesticides, mobile sources such as vehicles emitting exhaust, and stationary sources such as diesel engines emitting exhaust.

EJ-1 Policies

EJ-1.1 **Emission Sources.** Encourage existing sources of emissions to use feasible measures to minimize air quality impacts in Environmental Justice Communities and avoid new sources of significant emissions in these communities, as feasible.

EJ-1.2 **Green Industry.** Attract non-polluting industry and green technology companies to the City.

EJ-1.3 **Traffic-Related Emissions**. Support strategies to reduce traffic-related emissions such as timed-signals and vegetative barriers.

EJ-1.4 **Bicycle and Pedestrian Facilities**. Encourage development of bicycle and pedestrian facilities to reduce dependency on transportation options that emit pollutants. *(See Mobility Element)*

EJ-1 Actions

EJ-1a Coordinate with South Coast Air Quality Management District (SCAQMD) and California Air Resources Board (CARB) to ensure enforcement of air quality permits.

EJ-1b Collaborate with local and regional partners to identify strategies for reducing the asthma rate in the City.

EJ-1c Create a plan to clean up identified contaminated groundwater sites (Leaking Underground Storage Tank Sites, Department of Defense Sites, Cleanup Program Sites) in the City.

EJ-1d Work with the community to identify gaps in the bicycle and pedestrian network and research and apply for grants to help fill the identified gaps.

GOAL EJ-2 ACCESS TO PUBLIC FACILITIES

Public facilities and services are equitably distributed throughout the City of Lawndale and are easily available to residents of Environmental Justice Communities.

The adequate provision of public facilities is a critical component to the current and future prosperity of a community. Under State law (SB 1000), "public facilities" is an umbrella term that includes "public improvements, public services, and community amenities". This covers a wide spectrum of publicly provided uses and services including infrastructure, school facilities, parks, and transportation and emergency services. These amenities and services act to improve the health, safety, and well-being of a community by either enhancing the public sphere or providing services that are available to every resident. Insufficient public facilities can have significant impacts to the health and quality of life of residents, and historically, Environmental Justice Communities have struggled with insufficient access to public facilities and substandard amenities more than other communities.

EJ-2 Policies

EJ-2.1 **Convenient Access**. Consider the ease of accessibility of public facilities in relation to Environmental Justice Communities during the review and evaluation of public facility expansion, replacement, and construction.

EJ-2.2 **Prioritize Resources**. Support opportunities to meet parks, recreation, and open space needs in underserved areas of the City that have a demonstrably greater need for these amenities.

EJ-2.3 **Keep Pace with Development**. Ensure that the development of parks and recreation facilities and services keep pace with development and growth within the City. *(See Resource Management Element)*

EJ-2.4 **Coordination.** Coordinate with partnering agencies that provide public facilities and services within the City to ensure effective, efficient, and equitable service delivery.

EJ-2.5 **Local Transit.** Encourage local transit providers to establish and maintain routes and services that provide the community with convenient access to jobs, shopping, schools, parks, and healthcare facilities, where feasible.

EJ-2 Actions

EJ-2a Explore areas to add enhanced safety features at crosswalks.

EJ-2b Coordinate with the Police Department to address safety in parks and along walking/biking routes.

EJ-2c Investigate the possibility of adding more recreation classes to meet the needs of the community.

EJ-2d Consider distributing City events across multiple public spaces, as feasible.

GOAL EJ-3 HEALTHY FOOD ACCESS

Healthy food and nutritional choices are accessible for all community members.

Food plays a critical role in the health of a community. Therefore, it is essential that all residents have access to food that is healthy, affordable, and culturally appropriate. Environmental Justice Communities may face constraints related to accessibility to nutritional food, and this lack of accessibility has a direct impact on personal health and well-being. Food access is not only associated with the physical accessibility of affordable and culturally appropriate food, but also with food security, defined as access by all people at all times to *enough* food for an active, healthy life. Food security includes the availability of nutritionally adequate and safe foods as well as the ability to acquire foods.

EJ-3 Policies

EJ-3.1 **Incentivize Healthy Food Supply**. Encourage retailers to improve the quality and selection of healthy foods and nutritional information and to stock fresh and healthy food at affordable prices by providing incentive programs, technical assistance, or other services.

EJ-3.2 **Access to Healthy Food**. Strive to locate healthy food establishments so that all residences are within walking distance (quarter to a half-mile) of a store with healthy options, where feasible and appropriate.

EJ-3.3 **Options for Healthy Food**. Prioritize healthy food supplies in economic development efforts and encourage the establishment and operation of farmers' markets, farm stands, ethnic markets, mobile health food markets, and convenience/corner stores that sell healthy foods, including fresh produce.

EJ-3.4 **Community Gardens**. Support opportunities for neighborhood-run community gardens including coordination with local school districts and non-profits.

EJ-3.5 **Organic Waste Diversion.** Support policies and programs to divert organic waste from landfills into recycling activities and food recovery organizations that help provide healthy food to the local community.

EJ-3 Actions

EJ-3a Set an example in City facilities and at City-sponsored events by providing healthy food and beverage options.

EJ-3b Encourage local markets, restaurants, and food recovery organizations to donate surplus food to residents in need.

EJ-3c Prepare and distribute information on the benefits of healthy eating and on the availability of food assistance programs.

EJ-3d Encourage local organizations and community groups to provide free or reduced cost lunches after the school year ends.

EJ-3e Encourage and support the establishment of a regular farmer's market in the City.

GOAL EJ-4 SAFE AND SANITARY HOMES

A community with healthy living conditions for all residents, particularly those in Environmental Justice Communities.

The housing conditions of homes in a community have direct health implications for those who live in the homes. Many residents in Environmental Justice Communities live in dwellings that were built before standards and regulations were established to ensure that new homes are free from pollutants such as lead and asbestos. The proportion of older homes in Environmental Justice Communities are usually higher than in non-environmental justice areas and thus residents in Environmental Justice Communities are disproportionately exposed to these health threats. Older housing often has other problems such as poor ventilation, which leads to uncomfortable indoor temperatures and mold-producing moisture, and pest and vermin infestation.

Overcrowded housing is another issue that affects the safety and cleanliness of homes. Overcrowding is typically measured by determining the persons-per-room in a dwelling unit, with more than one person per room considered overcrowded. Housing affordability also influences whether homes in a community are safe and sanitary. When a tenant or homeowner spends more than 30 percent of their income toward housing (including utilities), they are generally considered to be cost-burdened. When a household is cost-burdened, there is less money for housing maintenance or other needs such as healthcare and healthy food. These issues are further discussed and addressed in the Housing Element of this General Plan.

EJ-4 Policies

EJ-4.1 **Code Enforcement**. Focus code enforcement efforts in Environmental Justice Communities to improve unsafe and unsanitary conditions, focusing on overcrowding; parking on lawns; unpermitted garage conversions, additions, and accessory-dwelling units; unpermitted plumbing and electrical; deferred property maintenance, and trash and dumping.

EJ-4.2 **Lead-Based Paint**. Raise awareness about the risks associated with lead-based paint and other housing hazards, including by distributing information about remediation of lead and best practices to reduce and eliminate other housing hazards.

EJ-4.3 **Indoor Air Quality.** Encourage measures to reduce indoor air quality impacts (e.g., air filtration systems, kitchen range hood exhaust fans, low-VOC paint and carpet) for new developments.

EJ-4.4 **Absentee Owner Outreach.** Support the upkeep and maintenance of rental properties throughout the City, including in Environmental Justice Communities.

EJ-4.5 **Tenant Rights**. Distribute information with City newsletters and/or other periodical publications about protecting tenant rights, so they are not penalized for reporting or living in a dwelling unit that does not meet health and safety standards.

EJ-4.6 **Capital Improvements**. Support capital improvements such as sewer, water, street, and electrical improvements that facilitate the provision of safe, decent, and sanitary housing.

EJ-4 Actions

EJ-4a Distribute information about remediation of lead and best practices to reduce and eliminate other housing hazards.

EJ-4b Conduct periodic absentee owner outreach in Environmental Justice Communities to inform owners of their legal requirements to maintain and upkeep their rental properties.

EJ-4c Distribute information with City newsletters and/or other periodical publications about protecting tenant rights, so they are not penalized for reporting or living in a dwelling unit that does not meet health and safety standards.

EJ-4d Apply for funds for housing rehabilitation resources as feasible.

GOAL EJ-5 PHYSICAL ACTIVITY

Land use and development patterns encourage physical activity and improve multimodal access and connectivity to employment, shopping, services, schools, parks, and other destinations.

Physical activity is a large contributor to the physical and mental health of Lawndale residents. Research by Centers for Disease Control and Prevention shows that physically active people tend to live longer and have lower risk for heart disease, stroke, type 2 diabetes, depression, and some cancers. Physical activity is promoted by the built environment by providing places that encourage walking, biking, and other forms of exercise. These places include parks, open space, trails, urban green spaces, areas with robust tree canopies, and active transportation networks. An important component of environmental justice is distributing facilities that promote physical activity equitably throughout the community so there are equal opportunities for all residents to be physically active.

EJ-5 Policies

EJ-5.1 **Physical Activity Opportunities.** Prioritize increasing opportunities for physical activity within Environmental Justice Communities.

EJ-5.2 **Eliminate Barriers**. Update the Zoning Ordinance and Hawthorne Boulevard Specific Plan to eliminate any barriers to facilitating the development of complete neighborhoods with access to retail and recreation resources within walking distance of homes.

EJ-5.3 **Accessibility**. Endeavour to provide parks that are easily accessible to the surrounding neighborhood and beyond, and are as barrier-free as possible, particularly for those with limited mobility.

EJ-5.4 **Physical Activity.** Promote physical activity programs and education offered by the City and community partners and encourage residents to regularly participate in physical activity and active lifestyles.

EJ-5.5 **Partnerships**. Form partnerships with non-profit organizations, healthcare organizations, and regional governmental agencies to foster and participate in efforts promoting healthy lifestyles, physical activity, and positive health outcomes.

EJ-5 Actions

EJ-5a Promote programs that encourage walking and/or biking to work and school such as walk-a-thons, marathons, and bike-a-thons.

EJ-5b Coordinate with adjacent jurisdictions to explore options for creating cross-jurisdictional bike lanes.

GOAL EJ-6 CIVIC ENGAGEMENT

Accessible and culturally appropriate opportunities for all people to engage in the decision-making process.

Civic, or community, engagement is an important goal across all local planning and decision-making processes. It can help foster a strong sense of place within a neighborhood and can deepen the investment of stakeholders in working toward neighborhood improvements. Environmental Justice issues will be more effectively identified and resolved if accessible and culturally appropriate opportunities to engage in local decisions are created for low-income, minority, and linguistically isolated stakeholders. Effective civic engagement not only provides the City with an opportunity to strengthen its relationship with the community but provides for sound investment in better decision-making by ensuring decisions are informed by community needs and aspirations.

EJ-6 Policies

EJ-6.1 **Equitable Civic Engagement**. Support an equitable and comprehensive approach to civic engagement and public outreach on all aspects of City governance and delivery of services.

EJ-6.2 **Community Events**. Promote, sponsor, and support a variety of community events to strengthen social cohesion and the overall identity of the City.

EJ-6.3 **City Information**. Distribute City information in Environmental Justice Communities, such as numbers to call for code enforcement, programs offered through the City, housing needs, and general City information.

EJ-6.4 **Partnerships**. Partner with and support the efforts of any community-based organizations or non-profits that focus on programs and activities for the Environmental Justice Communities.

EJ-6.5 **Representation.** Specifically invite residents from traditionally underrepresented demographic groups to become board, commission, and committee members as openings occur.

EJ-6 Actions

EJ-6a Survey community values periodically to encourage more involvement from residents and to determine if the General Plan and other City documents are fulfilling the residents' goals for a desirable and attractive community. The survey should occur every five years.

EJ-6b Promote meaningful cross-cultural participation in local planning and decision-making processes by:

a. Continuing to provide City-sponsored material in multiple languages.

b. Organizing outreach events and conducting surveys directly to specific demographic groups.

c. Partnering with community-based organizations that have relationships, trust, and cultural competency with target communities to conduct outreach for local initiatives and issues.

d. Tailoring activities and the venues where they take place to accommodate the cultural preferences of different racial/ethnic groups.

EJ-6c Make meetings and other public engagement forums accessible to a wide range of residents and encourage greater attendance by:

a. Ensuring any materials are distributed far enough in advance of meetings to allow sufficient time for review and comment.

b. Using communication methods that convey complex or technical information in an easily understandable manner.

c. Facilitating meetings using diverse methods that can engage all participants and can appeal to multiple styles of learning.

d. Focusing on methods to effectively engage younger residents.

GOAL EJ-7 IMPROVEMENTS AND PROGRAMS

Public improvements and programs address the needs of Environmental Justice Communities.

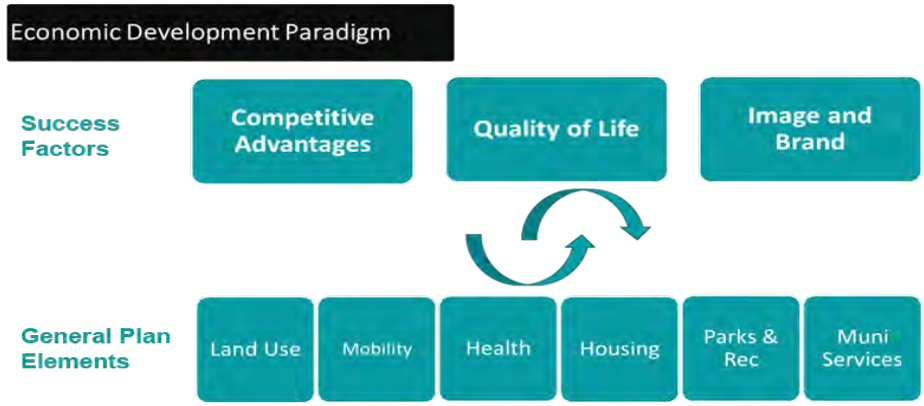
An important component of Environmental Justice is prioritizing projects, programs, and investments that directly serve and benefit residents within areas experiencing higher levels of environmental burdens. Effective prioritization requires coordination and alignment across departments, agencies, and shared jurisdictional partners along with consistent and sustained engagement with community stakeholders. Environmental Justice Communities typically have specific needs that arise from past geographic and procedural inequities. This requires taking targeted actions that will improve existing conditions in these communities. Many of these actions will not be applicable across the entire City but will be applicable only to Environmental Justice Communities due to their special circumstances.

EJ-7 Policies

EJ-7.1 **Prioritize Spending**. Where possible, prioritize spending of funds for air quality and other environmental improvements, public infrastructure improvements, recreation, and community programming in Environmental Justice Communities, and make fiscal decisions based on this priority.

EJ-7.2 **Public Amenities.** Promote the equitable provision of public amenities such as sidewalks, street trees, crosswalks, paving, streetlights, bike lanes, and other amenities as specified in other sections of this Environmental Justice Element.

EJ-7.3 **Coordination.** Coordinate with relevant utility providers to provide adequate and appropriate levels of service and promote the maintenance of water, sewer, stormwater, and electrical facilities serving Environmental Justice Communities.



EJ-7 Actions

EJ-7a Seek grants that will specifically help with the issues in Environmental Justice Communities such as safe housing, air quality and environmental concerns, increased tree coverage, recreational resources, and other issues.

EJ-7b Engage with the community to identify desired programs that would benefit targeted segments of the population such as youth, women, and small business owners.

Introduction to Economic Development

The Economic Development Element is intended to guide the City's future policy decisions in service of growing and strengthening the local economy. The Economic Development Element is not a required element for a General Plan, but the City has decided to include it in recognition that promoting economic vibrancy and resiliency is a central aspect of planning for Lawndale's future. While presented as a separate chapter, the policies contained within the Economic Development Element are intertwined with those found in the other Elements of the General Plan. Decisions made around the topics of these other elements, such as land use, housing, mobility, open space, and health and wellness, necessarily impact economic development, and vice-versa.

Organization of Element

Given market conditions and trends in Lawndale and its location in the region, this Element has identified key areas in which the City has the greatest opportunity for economic growth and development. The goals and policies identified in the Economic Development Element are focused on these areas of opportunity and underscore the City's commitment to being a place where workers, residents, visitors, and businesses can thrive, today and into the future. The Element is organized into five topics, as follows:

- Economic Diversification
- Support and Expand Business Community
- Workforce Development and Retention
- Create a Vibrant Hawthorne Boulevard
- Fiscal Sustainability

GOAL ED-1 ECONOMIC DIVERSIFICATION

A City with a strong and diversified economic base that promotes job growth, economic stability, and fiscal sustainability.

A diversified economy makes cities stronger and more resilient in the face of changing economic trends. Businesses in today's economy are highly mobile, and firms consider a variety of factors when deciding where to locate or re-locate. These factors include the ease with which a firm can establish itself and operate in the City, and the level of a city's investment in and responsiveness to its business community. Creating such an environment requires intentional work and coordination from the City. To foster a healthy economic climate, Lawndale should position itself to accommodate and expand on its current strengths. The City can leverage new residential growth to drive the development of retail and office spaces. New hotels can additionally expand opportunities for visitor-serving businesses.

ED-1 Policies

ED-1.1 **Mixed-Use Growth.** Leverage allowed mixed-use growth as a tool for drawing in a greater range of businesses that can take advantage of a growing local labor market and consumer base.

ED-1.2 **Targeted Development**. Encourage the development of multifamily and mixed-use spaces that incorporate office, retail, and residential uses in high-activity/high-traffic corridors and areas.

ED-1.3 **Targeted Business Attraction**. Identify and target outreach to businesses in industries that align with the City's existing industry clusters, land use patterns, and community needs while expanding business attraction to include higher-paying industry sectors.

ED-1.4 **Visitor-Serving Businesses.** Support development of hotels and visitor-serving businesses that leverage the City's proximity to Los Angeles International Airport (LAX) and regional attractions.

ED-1 Actions

ED-1a Create a five-year economic development strategic plan to design, manage, and implement short- and medium-term economic development priorities for the City.

ED-1b Perform a baseline analysis to identify industry niches that are well-suited for the City and periodically update this analysis based on local and regional trends.

ED-1c Identify market surpluses and leakages in the City's local economy to better understand which industries are present and/or absent compared to peer cities and to inform targeted business attraction activities.

ED-1d Identify vacant, underdeveloped, or underutilized sites and buildings in targeted corridors that represent redevelopment opportunity, and improve their redevelopment potential by engaging with and educating property owners, finding strategic opportunities for parcel consolidation, and facilitating investor "matchmaking" through a public online inventory and other efforts.

ED-1e Coordinate with neighboring cities and regional partners to host regional events and trade shows to broaden the City's visibility and promote local visitor-serving businesses.

ED-1f Explore public-private partnerships and/or catalytic development projects to anchor and spur growth that builds on the City's economic, physical, and cultural assets.

GOAL ED-2 SUPPORT AND EXPAND THE BUSINESS COMMUNITY

A community that supports, collaborates with, and fosters local business development.

One of the City's most important assets in promoting economic growth is its existing economic base. Supporting existing local businesses so that they can thrive, grow, and adapt to changing economic conditions will not only help those businesses and their employees, but also demonstrate to investors that the City is a desirable place to locate to. This support extends to residents, workers, students, and new entrepreneurs who may be looking to establish or grow a business in the City.

ED-2 Policies

ED-2.1 **Support the Existing Business Community**. Help retain and expand existing businesses through supportive and responsive policies and programs.

ED-2.2 **Partnerships.** Create and maintain avenues through which Lawndale's business community, elected officials, City staff, and civic organizations can discuss economic development issues.

ED-2.3 **Marketing.** Market the City's central South Bay location and excellent regional access to attract new businesses and industries.

ED-2.4 **Processes.** Streamline support for local businesses and remove potential barriers to economic development.

ED-2.5 **Resources.** Provide the business community with easily accessible information on available resources for growth and development, including those aimed at entrepreneurship and small businesses.

ED-2.6 **Entrepreneurship.** Educate and support entrepreneurs in establishing and expanding small and local businesses.

ED-2.7 **Infrastructure.** Identify and address infrastructure needs that support commercial development.

ED-2 Actions

ED-2a Meet regularly with representatives of the City's business community, including the Lawndale Chamber of Commerce, to solicit feedback on how to improve the business environment, cement effective relationships, and help businesses overcome challenges.

ED-2b Support collaborative partnerships and networks between and among businesses to create a robust business ecosystem that supports entrepreneurship through reoccurring roundtable events and other platforms that enable flexible participation.

ED-2c Develop and implement a creative marketing plan that attracts new employers to the City.

ED-2d Review and maintain a Development Code that supports investment and innovation in the City.

ED-2e Identify ways to simplify and streamline permitting for new and expanding businesses and implement the changes as feasible.

ED-2f Use local revenue sources as well as State and Federal grants and other financing tools to fund capital improvements and the redevelopment of targeted commercial areas.

ED-2g Maintain and regularly update the City's public-facing sources of information on economic development resources, including webpages, social media, and other platforms to offer accessible and up-to-date information for the business community.

GOAL ED-3 WORKFORCE DEVELOPMENT AND RETENTION

A City that invests in the economic success of its community and people.

The presence of a workforce aligned with the needs of the local economy, particularly growth sectors, is a major component in business retention and expansion. City residents are primarily employed in some of the region's lowest-paying industries, with a small proportion working in higher-paying industries such as finance and insurance, information, and professional/scientific/technical services. In addition to diversifying the local job base, the City should look to enhance education and workforce development opportunities for residents. In doing so, the City can improve residents' social mobility while bolstering its economic vibrancy. Aligning the resident workforce's skills with the needs of the businesses of today and tomorrow will have a critical impact on expansion and diversification of the City's economy.

ED-3 Policies

ED-3.1 **Workforce as an Economic Driver**. Pursue strategies and programs for enhancing education and workforce skills aligned with local industries targeted for retention, expansion, and attraction.

ED-3.2 **Workforce as Social Mobility.** Promote training, education, and labor support programs that enhance the City's labor force, assist residents in obtaining new employment opportunities, and grow median incomes.

ED-3.3 **Housing Choices**. Develop land use policies that facilitate development of housing affordable to a range of household types and incomes, to help diversify the local labor force and promote long-term stable residency.

ED-3 Actions

ED-3a Partner with regional education institutions and local secondary schools to strengthen the workforce pipeline.

ED-3b Develop and implement strategies to attract higher-paying industries to locate in the City, including outreach to targeted businesses and industry organizations, and investment in infrastructure and branding of major commercial centers such as the Hawthorne Boulevard corridor.

ED-3c Convene major local and regional employers to solicit guidance on how the City can support partnerships and develop policies and programs to create a strong workforce pipeline.

GOAL ED-4 CREATE A VIBRANT HAWTHORNE BOULEVARD

A community with a successful corridor for commerce, mixed-use development, and social activity.

Major commercial activity corridors have the potential to drive economic diversification, anchor business activity, and generally open the City to increased economic opportunity. By enhancing the City's primary commercial corridor along Hawthorne Boulevard, Lawndale can promote economic activity that serves the needs of residents, workers, and visitors. Enabling more intense development of mixed-use spaces along the Corridor and investing in the Corridor's businesses, marketing, and infrastructure can generate employment and daytime activity that can support a wide range of businesses with an established customer base. These opportunities in turn will enhance the City's overall economic base and prospects.

ED-4 Policies

ED-4.1 **Intensification**. Promote mixed-use development along Hawthorne Boulevard that will attract visitors from across the region, support the local needs of residents, and build a sense of place.

ED-4.2 **Streetscape Improvements.** Enhance aesthetics and "curb appeal" of the Hawthorne corridor with strategic investments such as landscaping, outdoor lighting, wayfinding, entry and building façade improvements, and other initiatives that increase its attractiveness for businesses and consumers.

ED-4.3 **Accessibility.** Enhance City and regional connectivity by supporting multimodal transportation options along Hawthorne Boulevard and other major City thoroughfares.

ED-4.4 **Branding Strategy**. Create and cultivate a distinctive Lawndale/Hawthorne Boulevard brand that attracts investors and update it periodically.

ED-4 Actions

ED-4a Encourage development of mixed-use spaces in high-activity areas and corridors through zoning changes and incentive programs (e.g., density bonuses and other concessions).

ED-4b Implement strategies and actions in the Housing Element that promote the development of diverse housing options in targeted areas along the Corridor to enhance economic activity and accessibility for residents.

ED-4c Implement strategies and actions in the Mobility Element and the Hawthorne Specific Boulevard Plan that promote infrastructure improvements and land use policies that will enhance economic activity and accessibility.

ED-4d Pursue funding from Local, State, and Federal sources to support storefront and streetscape improvements.

ED-4e Conduct and implement a branding study that is consistent with and reinforces the marketing efforts, streetscape improvements, and other initiatives described herein.

GOAL ED-5 FISCAL SUSTAINABILITY

A City that pursues fiscal sustainability through sound financial management and balanced growth.

The fiscal health of the City is dependent on long-term sustainability of the City's finances and operations, measured by the City's revenues, spending per capita, and its ability to provide services. Each of these in turn effect the ability of the City to plan, manage, and pay for public services and investments, including many of the economic development initiatives described herein. A diverse set of revenue sources helps protect a city's budget in downturns in revenue-generating activities. Lawndale, like most cities in California, relies on a handful of revenues sources—such as property, sales, and transient occupancy taxes—to fund day-to-day municipal operations. Enabling further development and attracting a range of real estate development and business types will prevent the City from becoming overly dependent on any one sector of the market and economy. Simultaneously, new residential development and new residents will require additional costs related to city services and infrastructure, and the City will need to plan for these needs through strong financial management and fiscal policies.

ED-5 Policies

ED-5.1 **Revenue Sources.** Consider opportunities to expand municipal revenue sources that diversify the City's tax base, particularly those that can support infrastructure needs for future growth.

ED-5.2 **Impacts of New Development.** Pursue strategies that ensure new development adequately and fairly mitigates its impacts on City infrastructure and service costs.

ED-5.3 **Retail Support.** Promote additional retail development to increase sales tax revenues and expand retail amenities available to residents, employers, and visitors.

ED-5.4 **Hotels.** Encourage the development of new hotels to serve the regional visitor population and generate additional transient occupancy tax.

ED-5.5 **Funding.** Pursue a range of public, private, and non-profit funding sources to fund community revitalization and economic development activities.

ED-5.6 **Cost Control**. Carefully manage City costs through judicious expansion of municipal services and infrastructure.

ED-5 Actions

ED-5a Assess peer cities tax and fee structures and rates to evaluate Lawndale's own structure and revise tax and fee structures as appropriate.

ED-5b Identify the estimated costs and potential funding sources for each proposed Capital Improvement Plan project.

ED-5c Support new retail development by maintaining mixed-use zoning at strategic nodes as allowed by the Land Use Element and Hawthorne Boulevard Specific Plan, supporting the chamber of commerce and other business associations, facilitating community engagement with property owners, and developing retail-specific marketing strategies.

ED-5d Support development of new hotel and visitor-serving establishments by developing tourism marketing initiatives, coordinating with hospitality industry representatives, and ensuring access to developable land aligned with appropriate zoning regulations.

ED-5e Require analysis of fiscal implications of new development and request fiscal mitigations as needed to ensure adequate public service levels can be provided over the long term.

ED-5f Continue to investigate and pursue revenue sources, such as state and federal funding programs, that do not add to the tax burden of residents or local businesses.

Introduction to Community Facilities

The City and various local utilities, agencies, and districts provide a range of community services and facilities that are integral to providing a high quality of life for Lawndale's residents. The future public facility and infrastructure needs of new projects must be carefully considered when evaluating new opportunities for growth to ensure that existing residents and businesses continue to receive adequate services and new developments have the necessary facilities and infrastructure to support long-term viability.

While not specifically required by State law for inclusion in the General Plan, this Community Services and Facilities Element is a critical component in meeting the infrastructure and public services needs of Lawndale. This Element works collaboratively with the topics addressed in all other General Plan Elements, specifically the City's Land Use, Resource Management, Public Safety, and Environmental Justice Elements.

Organization of Element

The Community Services and Facilities Element will address each of the topics below as they relate to Lawndale. The goals and policies of this element are organized around the following topics:

- Infrastructure and Public Services
- Water System
- Wastewater System
- Stormwater Management
- Telecommunications
- Health and Human Resources

CF

GOAL CF-1 INFRASTRUCTURE AND PUBLIC SERVICES

A community with adequate, reliable public and quasi-public infrastructure and services to support existing and future development.

A number of public and private agencies provide essential public goods and services to Lawndale. Infrastructure provides the physical and organizational means of production and distribution for essential services required for community function. The City actively plans for the provision and financing of infrastructure and public services to maintain quality of life.

CF-1 Policies

CF-1.1 **Capital Improvements**. Maintain and finance the capital improvement program to ensure the timely implementation of the General Plan and the adequate and efficient provision of public facility and municipal improvements.

CF-1.2 **Fair Share**. Require that new development and major redevelopment provide for and fund its fair share of the costs for the expansion of public infrastructure and services, recreational amenities and facilities, and other public facilities.

CF-1.3 **Public Facility Plans.** Maintain and implement public facility master plans, in collaboration with appropriate Regional, State, and Federal laws, to identify infrastructure needs, funding sources, and implement improvements for public facilities and services in Lawndale.

CF-1.4 **Revenue Sources**. Identify and proactively pursue all available sources of revenue to meet public infrastructure and services, recreational amenities and facilities, and other public facilities needs.

CF-1.5 **Infrastructure Rehabilitation**. Regularly maintain and rehabilitate public facilities and critical infrastructure to extend its useful life; prioritize infrastructure improvements in areas targeted for near-term redevelopment and in areas designated as lower-income and/or disadvantaged communities.

CF-1.6 **Preventive Street Maintenance.** Maintain and improve streets, sidewalks, and other public rights-of-way to provide a reliable network for circulation through a proactive preventive maintenance program.

CF-1.7 **Facility Sharing**. Promote the clustering of public and quasi-public facilities (e.g., schools, parks, activity centers, etc.), the joint use of facilities, and agreements for sharing costs and operational responsibilities among users.

CF-1.8 **Regional Issues**. Continue to participate in the preparation of plans and programs addressing regional infrastructure and public services issues.

CF-1.9 **Cost Sharing**. Explore equitable methods for sharing the costs of facilities or services that serve multiple jurisdictions in the South Bay Cities Council of Governments and/or Los Angeles County.

CF-1.10 **Regional Services Providers**. Collaborate with the various regional facility and service providers to deliver high levels of service to Lawndale residents, and to plan for new development.

CF-1.11 **Capital Improvement Planning**. Encourage agencies to carry out long-range capital improvement planning, which includes funding methods for the construction of projects that are compatible with regional land use planning goals and objectives.

CF-1.12 **Undergrounding of Facilities.** Continue to require that all new utility lines are installed underground where feasible and promote the undergrounding of existing overhead facilities, including poles and lines.

CF-1 Actions

CF-1a Regularly coordinate with outside service providers and other agencies regarding their public facility plans and provide local input on goals, objectives, and projects.

CF-1b Maintain records regarding the quality and status of public facilities and critical infrastructure and use this information to inform the capital improvement planning process.

CF-1c Study mechanisms for funding and phasing of new infrastructure.

CF-1d Require any new development or major redevelopment that would put local and/or regional facilities at or near capacity to upgrade those facilities.

CF-1e Participate in regional and sub-regional planning forums that may address matters affecting the quality of life in Lawndale and the region.

CF-1f Require the undergrounding of utility lines in new development, and as areas are redeveloped, except where infeasible for operational reasons.

GOAL CF-2 WATER SYSTEM

A community with a safe and reliable water supply, storage, and distribution system to meet the needs of existing and future users.

The City is served by the Golden State Water Company (an investor-owned public utility company) Southwest System. The City is underlain by potable and non-potable water infrastructure owned and maintained by GSWC and West Basin Municipal Water District (WBMWD), respectively. Golden State Water Company's potable water supplies consist of groundwater pumped from the West Coast Basin and Central Basin groundwater systems and imported water purchased from Central Basin Municipal Water District and the West Basin Municipal Water District.

CF-2 Policies

CF-2.1 **Water Supply Needs**. Coordinate with local water districts when considering land use changes in order to assist the districts in planning for adequate capacity to accommodate future growth.

CF-2.2 **Use of Recycled Water**. Encourage the use of recycled water in development projects and landscaping; implement best practices (e.g., dual plumbing) to expand recycled water use when safe, financially feasible, and available.

CF-2.3 **Climate Change Impacts.** Consider the impacts of climate change in projections used to establish which water supply, distribution facilities, and conservation efforts are necessary to sustain future water demands.

CF-2.4 **Drought Planning**. Support the implementation of drought contingency plans to support the availability of adequate water during drought, including emergency water connections and related measures.

CF-2 Actions

CF-2a Through the development review process, require that sufficient water supply and water infrastructure capacity is available to serve the development prior to approval of the project, pursuant to Water Code Section 10910 and Government Code Section 66473.7.

CF-2b Work with water districts to expedite the improvement and expansion of water and reclaimed water facilities when necessary.

CF-2c In cooperation with the State, Regional, and Local water agencies and suppliers, participate in programs that seek to expand the availability and use of recycled water for irrigation where feasible and legally permitted.

GOAL CF-3 WASTEWATER SYSTEM

A community with a well-maintained wastewater system that properly disposes of waste and safely transports it to regional facilities.

Wastewater management systems protect public health and the environment by collecting and treating municipal wastewater (sewage). Wastewater generated in Lawndale is conveyed via local and regional infrastructure to the Los Angeles County Sanitation Districts' treatment facilities. Sewer collection system infrastructure serving the City is owned and maintained by three separate entities: the City, Los Angeles County Department of Public Works (LACDPW), and the Los Angeles County Sanitation Districts (LACSD).

CF-3 Policies

CF-3.1 **Wastewater System**. Work with appropriate service providers to promote safe and reliable wastewater collection and treatment infrastructure to serve existing and future development.

CF-3.2 **Adequate Infrastructure**. Coordinate with the County of Los Angeles Consolidated Sewer Maintenance District to encourage facilities to provide sufficient capacity for Lawndale, and that wastewater infrastructure within the City is adequately monitored and maintained.

CF-3.3 **Integrated Systems Planning**. Develop a comprehensive approach to water infrastructure that integrates sewer system planning with potable and recycled water systems, stormwater systems, and increased conservation awareness.

CF-3.4 **Statewide Requirements**. Comply with current Statewide General Waste Discharge requirements concerning the operation and maintenance of the City's wastewater collection system.

CF-3 Actions

CF-3a Through the development review process, continue to cooperate with the County of Los Angeles Consolidated Sewer Maintenance District to ensure adequate wastewater facilities are provided and maintained in the community. Specifically, the City should:

- Require that sufficient wastewater infrastructure capacity is available to serve the development prior to approval of the project;
- Ensure the project applicant has paid the required fees prior to occupancy of any new development; and
- Periodically review the fee schedules for sewer connections and revise fees as necessary to cover the cost of related services and facilities.

CF-3b Work with the County of Los Angeles Consolidated Sewer Maintenance District to expedite the improvement and expansion of sewer facilities when necessary.

CF-3c Develop a Citywide Sewer Facilities Master Plan to identify existing and future wastewater treatment needs, implement needed improvements, and identify potential funding sources, as funding is available.

GOAL CF-4 STORMWATER MANAGEMENT

A community with an efficient, well-maintained stormwater management system that protects from flooding and enhances water quality.

Storm drains convey excess water from rain and outdoor water uses away from urban areas. As urban areas have less vegetation and more impervious surfaces, less water is able to infiltrate into the ground, and more runoff is generated. Lawndale supports an integrated stormwater management approach that includes storm drains and Low Impact Development (LID) measures designed to mitigate the increase in runoff volumes and velocities to downstream areas to prevent flooding and protect downstream areas from water pollution. The City of Lawndale is responsible for managing the public storm drain system within Lawndale's limits and ensuring that an adequate level of service is provided to protect the public from excessive surface flooding conditions. Los Angeles County Flood Control District (LACFCD) infrastructure conveys stormwater out of City limits via its regional infrastructure systems.

CF-4 Policies

CF-4.1 **Maintain Capacity.** Encourage the Los Angeles County Flood Control District (LACFCD) to maintain sufficient levels of storm drainage service, improve flood control facilities and channel segments, and implement other best practices in order to protect the community from flood hazards.

CF-4.2 **Stormwater Runoff**. Encourage stormwater be directed towards permeable surfaces to allow for more percolation of stormwater into the ground.

CF-4.3 **Stormwater Treatments**. Promote Best Management Practices (BMPs) and Low Impact Development measures (LID) to treat stormwater before discharge from the site.

CF-4.4 **National Programs**. Cooperate in regional programs to implement the National Pollutant Discharge Elimination System program.

CF-4 Actions

CF-4a Continue to implement the Watershed Control Measures identified in the Enhanced Watershed Management Program (EWMP) for the Dominguez Channel Watershed Management Area Group. Review and update as needed.

CF-4b Work with the Los Angeles Regional Water Quality Control Board (RWQCB), Los Angeles County Flood Control District (LACFCD), and Dominguez Channel Watershed Management Area (DCWMA) Group to meet the requirements of Municipal Separate Storm Sewer System (MS4) Permit Order R4-2012-0175.

CF-4c Encourage new developments and/or public roadway projects to incorporate recommendations from the Dominguez Watershed Management Master Plan, including:

- Use of pervious pavement during development and redevelopment;
- Install and maintain catch basin inserts in high priority areas;
- Reduce green waste to storm drains;
- Create grassy swales and/or vegetated areas to treat urban runoff;
- Perform roadway improvements using vegetated medians, buffers and/or parkways;
- Use water-wise landscaping;
- Use and expansion of the recycled water system; and
- Installation of rainwater harvesting systems and cisterns.

CF-4d Continue to review development projects to identify potential storm drain and drainage impacts and require developments to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events.

CF-4e Project designs shall minimize drainage concentrations, minimize impervious coverage, utilize pervious paving materials, utilize low impact development (LID) strategies, and utilize Best Management Practices (BMPs) to reduce stormwater runoff.

GOAL CF-5 TELECOMMUNICATIONS

A community with an efficient and reliable telecommunications system that improves economic development and equitable access.

The telecommunications system involves technologies that allow for the exchange of information over long distances, such as telephone, television, and internet. Lawndale is proactive in its plans to ensure fast and reliable telecommunications services for all.

CF-5 Policies

CF-5.1 **Cooperation with Utilities Providers.** Work cooperatively with utility providers to promote the provision of adequate telecommunications services and facilities to serve the needs of existing and future residents and businesses.

CF-5.2 **Service.** Support telecommunications providers that provide efficient, reliable, affordable, and state-of-the-art service.

CF-5.3 **Future Technologies**. Proactively explore the viability of new communication technologies for their relevancy and implementation in Lawndale.

CF-5.4 **Access for All.** Encourage the installation of public use wireless broadband access points throughout Lawndale.

CF-5.5 **Appropriate Siting and Design.** Coordinate with service providers in the siting and design of telecommunication facilities to minimize environmental, aesthetic, and safety impacts.

CF-5.6 **Co-location of Facilities**. Encourage the co-location of telecommunications facilities between different services and providers, when feasible.

CF-5.7 **Undergrounding of Facilities.** Continue to require that all new telecommunication lines are installed underground where feasible and promote the undergrounding of existing overhead facilities.

CF-5 Actions

CF-5a Confer with telecommunications providers regarding major development plans and participate in the planning of the extension of utilities.

CF-5b Require the undergrounding of telecommunication lines in new development, and as areas are redeveloped, except where infeasible for operational reasons.

CF-5c Periodically review and revise existing City ordinances regulating the placement, maintenance, and operation of telecommunication facilities.

GOAL CF-6 HEALTH AND HUMAN RESOURCES

A community that enhances the quality of life for all its residents through the provision of health and educational resources including quality schools, libraries, medical, and other community services and facilities.

Education and medical services are important for every stage of life. Lawndale supports the provision of high-quality human services that enhance the health and well-being of all. Lawndale is a proud community with strong support for public schools. Primary education (grades kindergarten through 12) in the Planning Area is provided mainly by two school districts – Lawndale Elementary School District (LESD) and Centinela Valley Union High School District (CVUHSD). The City is also served by the Lawndale Library, which is part of the Los Angeles County Library system.

CF-6 Policies

CF-6.1 **Education and Learning.** Continue to encourage the maintenance of high-quality schools and diverse educational opportunities in Lawndale.

CF-6.2 **Lifelong Learning.** Proactively cooperate with the Lawndale Elementary School District and Centinela Valley Union High School District to encourage the provision of lifelong learning opportunities for persons living and working in Lawndale.

CF-6.3 **School Facilities.** Work with developers and the school districts to ensure the payment of fees, construction, and expansion of school facilities to address expected increases in school-age population.

CF-6.4 **Early Childhood Development**. Encourage community organizations and schools to provide expanded opportunities for early childhood care (0–5 years) and development.

CF-6.5 **Occupational Training**. Partner with regional occupational boards and local educational institutions to implement career pathway and job training programs for youth and adults.

CF-6.6 **Libraries**. Work closely with the Los Angeles County Library system to provide library facilities and services necessary to meet the needs of all segments of the community.

CF-6.7 **Senior Services**. Provide facilities, programs, and services for seniors to participate in opportunities for physical activity, social interaction, and mental stimulation.

CF-6.8 **Health Care Services.** Work with neighboring jurisdictions and service providers to provide high-quality health care services to Lawndale residents.

CF-6 Actions

CF-6a Continue to work with the school districts to ensure adequate school facilities are provided and maintained in the community. Specifically, the City should:

- During the processing of residential and non-residential development proposals, ensure the school districts are consulted regarding the potential impact of the project on educational services and facilities. When proposed developments cannot be served by existing facilities and services, the City shall work with the developer and the school district in exploring options for service provision and facility funding.
- Prior to approving a project that is likely to generate students, require the applicant to mitigate school impacts to the full extent permitted by State law through land dedications, payment of fees, participation in a special assessment district, or any combination of the above.
- Cooperate with school districts to update population projections, student generation formulas, potential school sites, and facilities improvement plans.

CF-6b Continue to work with the Los Angeles County Library system to ensure that library development keeps pace with overall City development and population growth.

CF-6c Continue to support the provision of low- or no-cost community services to seniors and special-needs communities, including but not limited to, senior health and wellness programs, meal and emergency food assistance programs, and senior transit programs, as funding is available.

CF-6d Explore feasibility of partnering with local schools, the Lawndale Chamber of Commerce, and local community colleges to coordinate educational support programs and services offered to Lawndale residents.

CF-6e Explore opportunities to use the Lawndale Community Center to provide low- or no-cost health and educational resources accessible to every resident.

CF-6f Partner with churches and other local organizations to provide additional youth and senior programs and services.

1.0 INTRODUCTION

This Final Environmental Impact Report (Final EIR or FEIR) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines (Section 15132). The City of Lawndale is the lead agency for the environmental review of the City of Lawndale General Plan Update (General Plan, General Plan Update, or Project) and has the principal responsibility for approving the Project. This Final EIR assesses the expected environmental impacts resulting from approval and adoption of the General Plan Update and responds to comments received on the Draft EIR.

The Lawndale General Plan is the overarching policy document that guides land use, housing, transportation, open space, public safety, community services, and other policy decisions throughout the City of Lawndale and the Sphere of Influence (collectively referred to as the Planning Area). The General Plan includes the eight elements mandated by State law, to the extent that they are relevant locally, including: land use, circulation, housing, conservation, open space, noise, environmental justice, and safety elements. The City has chosen to combine the topics of Conservation and Open Space into one Element: Resource Management. The topic of Noise is included in the Public Safety Element. General plans must also address the topics of climate change and resiliency planning, either as separate elements or as part of other required elements. At the discretion of each jurisdiction, the general plan may combine these elements and may add optional elements relevant to the physical features of the jurisdiction. The City may also address other topics of interest; this General Plan includes elements related to Economic Development and Community Facilities. The General Plan Update sets out the goals, policies, and actions in each of these areas, serves as a policy guide for how the City will make key planning decisions in the future, and guides how the City will interact with the broader Los Angeles County, surrounding cities, and other local, regional, State, and Federal agencies.

The General Plan Update contains the goals and policies that will guide future decisions within the Planning Area. It also identifies implementation programs, in the form of actions, that will ensure the goals and policies in the General Plan Update are carried out. As part of the General Plan Update, the City and the consultant team prepared several support documents that serve as the building blocks for the General Plan Update and analyze the environmental impacts associated with implementing the General Plan Update.

Refer to Section 3.0, *Project Description* of the Draft EIR for a more comprehensive description of the details of the proposed Project.

1.1 PURPOSE AND INTENDED USES OF THE EIR

CEQA REQUIREMENTS FOR A FINAL EIR

This Final EIR for the Lawndale General Plan Update has been prepared in accordance with the California Environmental Quality Act (CEQA) and State CEQA Guidelines. State CEQA Guidelines Section 15132 requires that a Final EIR consist of the following:

- The Draft Environmental Impact Report (Draft EIR) or a revision of the draft;
- Comments and recommendations received on the Draft EIR, either verbatim or in summary;

- A list of persons, organizations, and public agencies commenting on the Draft EIR;
- The responses of the lead agency to significant environmental concerns raised in the review and consultation process; and
- Any other information added by the lead agency.

In accordance with State CEQA Guidelines Section 15132(a), the Draft EIR is incorporated by reference into this Final EIR.

An EIR must disclose the expected environmental impacts, including impacts that cannot be avoided, growth-inducing effects, impacts found not to be significant, and significant cumulative impacts, as well as identify mitigation measures and alternatives to the proposed project that could reduce or avoid its adverse environmental impacts. CEQA requires government agencies to consider and, where feasible, minimize environmental impacts of proposed projects, and obligates them to balance a variety of public objectives, including economic, environmental, and social factors.

PURPOSE AND USE

The City of Lawndale, as the lead agency, has prepared this EIR to provide the public and responsible and trustee agencies with an objective analysis of the potential environmental impacts resulting from adoption of the General Plan Update and subsequent implementation of projects consistent with the General Plan Update. The environmental review process enables interested parties to evaluate the proposed Project in terms of its environmental consequences, to examine and recommend methods to eliminate or reduce potential adverse impacts, and to consider a reasonable range of alternatives to the project. While CEQA requires that consideration be given to avoiding adverse environmental effects, the lead agency must balance adverse environmental effects against other public objectives, including the economic and social benefits of a project, in determining whether a project should be approved.

This EIR will be used as the primary environmental document to evaluate all subsequent planning and permitting actions associated with the General Plan Update. This EIR may also be used by other agencies within Los Angeles County. Responsible and trustee agencies that may use the EIR are identified in Section 2.0, *Introduction and Purpose* of the Draft EIR.

1.2 ENVIRONMENTAL REVIEW PROCESS

The review and certification process for the EIR has involved, or will involve, the following general procedural steps:

NOTICE OF PREPARATION

The City of Lawndale circulated a Notice of Preparation (NOP) of an EIR for the Project on December 6, 2022 to trustee and responsible agencies, the State Clearinghouse, and the public. A scoping meeting was held on December 15, 2022 at 6:30 p.m. at the Harold E. Hofmann Community Center located at 14700 Burin Avenue in the City of Lawndale. No public or agency comments on the NOP related to the EIR analysis were presented or submitted during the scoping meeting. During the 30-day public review period for the NOP, which ended on January 5, 2023, four written comment letters were received on the NOP. A summary of the NOP comments is provided in Section 2.8 of the Draft EIR. The NOP and all comments received on the NOP are presented in Appendix A of the Draft EIR.

NOTICE OF AVAILABILITY AND DRAFT EIR

The City of Lawndale published a public Notice of Availability (NOA) for the Draft EIR on August 15, 2023, inviting comment from the general public, agencies, organizations, and other interested parties. The NOA was filed with the State Clearinghouse (SCH# 2022120088) and was published in the *Daily Breeze* pursuant to the public noticing requirements of CEQA. The Draft EIR was available for public review from August 15, 2023 through October 2, 2023. The Public Draft General Plan Update was also available for public review and comment during this time period.

The Draft EIR contains a description of the Project, description of the environmental setting, identification of the Project's direct and indirect impacts on the environment and General Plan policies and actions to reduce impacts to the extent feasible, as well as an analysis of Project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. The Draft EIR identifies issues determined to have no impact or a less than significant impact, and provides detailed analysis of potentially significant and significant impacts. Comments received in response to the NOP were considered in preparing the analysis in the Draft EIR.

RESPONSE TO COMMENTS/FINAL EIR

The City of Lawndale received seven comment letters regarding the Draft General Plan and Draft EIR from public agencies, organizations, and members of the public during the 45-day review period.

In accordance with CEQA Guidelines Section 15088, this Final EIR responds to the written comments received on the Draft EIR. This document and the Draft EIR, as amended herein, constitute the Final EIR.

CERTIFICATION OF THE EIR/PROJECT CONSIDERATION

The Lawndale City Council will review and consider the Final EIR. If the City Council finds that the Final EIR is "adequate and complete," then it may certify it in accordance with CEQA. The rule of adequacy generally holds that an EIR can be certified if:

1) The EIR shows a good faith effort at full disclosure of environmental information; and

2) The EIR provides sufficient analysis to allow decisions to be made regarding the proposed project in contemplation of environmental considerations.

Upon review and consideration of the Final EIR, the Lawndale City Council may take action to approve, revise, or reject the Project. A decision to approve the Lawndale General Plan Update, for which this EIR identifies significant environmental effects, must be accompanied by written findings in accordance with State CEQA Guidelines Sections 15091 and 15093.

Policies and actions to mitigate potential environmental impacts have been incorporated into the Project, to the extent feasible. No additional mitigation is feasible or available, as described in Sections 5.1 through 6.0 of the Draft EIR. The annual report on general plan status required pursuant to the Government Code will serve as the monitoring and reporting program for the Project.

1.3 ORGANIZATION OF THE FINAL EIR

This Final EIR has been prepared consistent with Section 15132 of the State CEQA Guidelines, which identifies the content requirements for Final EIRs. This Final EIR is organized in the following manner:

SECTION 1.0 – INTRODUCTION

Section 1.0 briefly describes the purpose of the environmental evaluation, identifies the lead agency, summarizes the process associated with preparation and certification of an EIR, and identifies the content requirements and organization of the Final EIR.

SECTION 2.0 – COMMENTS ON DRAFT EIR AND RESPONSES

Section 2.0 provides a list of commenters, copies of written comments made on the Draft EIR (coded for reference), and responses to those written comments

2.0 COMMENTS ON DRAFT EIR AND RESPONSES

2.1 INTRODUCTION

In accordance with the California Environmental Quality Act (CEQA) Guidelines, Section 15088, the City of Lawndale, as the lead agency, has evaluated the comments received on the Public Review Draft Lawndale General Plan Update Environmental Impact Report (Draft EIR) (State Clearinghouse No. 2022120088).

CEQA Guidelines Section 15088.5 states that: *New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement.*

Section 2.0 of this Final EIR include information that has been added to the EIR since the close of the public review period in the form of responses to comments and/or errata. As noted below, no new significant information was provided on the Draft EIR during the comment period.

2.2 LIST OF COMMENTERS

Table 2-1 lists the comments on the Draft EIR that were submitted to the City during the 45-day public review period. The assigned comment letter, letter author, affiliation, if presented in the comment letter or if representing a public agency, and letter date are also listed.

Table 2-1
List of Commenters

Response Letter	Individual or Signatory	Affiliation	Date
A	rh@jyrq.com	N/A	8/21/2023
B	Andrew Salas	Gabrieleno Band of Mission Indians – Kizh Nation	8/22/2023
C	Constantin Raether	California Governor's Office of Emergency Services	8/23/2023
D	Sahar Ghadimi	South Coast Air Quality Management District	8/25/2023
E	Ronald M. Durbin	County of Los Angeles Fire Department	9/1/2023
F	Andrew Salas	Gabrieleno Band of Mission Indians – Kizh Nation	9/28/2023
G	Miya Edmonson	State of California Department of Transportation	9/29/2023

2.3 COMMENTS AND RESPONSES

REQUIREMENTS FOR RESPONDING TO COMMENTS ON A DRAFT EIR

CEQA Guidelines Section 15088 requires that lead agencies evaluate and respond to all comments on the Draft EIR that regard an environmental issue. The written response must address the significant environmental issue raised and be detailed, especially when specific comments or suggestions (e.g.,

additional mitigation measures) are not accepted. In addition, the written response must be a good faith and reasoned analysis. However, lead agencies only need to respond to significant environmental issues associated with the project and do not need to provide all the information requested by the commenter, as long as a good faith effort at full disclosure is made in the EIR (CEQA Guidelines Section 15204(a)).

CEQA Guidelines Section 15204 recommends that commenters provide detailed comments that focus on the sufficiency of the Draft EIR in identifying and analyzing the possible environmental impacts of the project and ways to avoid or mitigate the significant effects of the project, and that commenters provide evidence supporting their comments. Pursuant to CEQA Guidelines Section 15064, an effect shall not be considered significant in the absence of substantial evidence.

CEQA Guidelines Section 15088 also recommends that revisions to the Draft EIR be noted as a revision in the Draft EIR or as a separate section of the Final EIR.

RESPONSES TO COMMENT LETTERS

Written comments on the Draft EIR are reproduced on the following pages, along with responses to those comments. To assist in referencing comments and responses, the following coding system is used:

a) Each comment letter is lettered (i.e., Letter A), each comment within each letter is numbered (i.e., A-1, A-2, etc.), and each response is numbered correspondingly (i.e., A-1, A-2, etc.).

PO Box 393 Covina, CA 91723 www.gabrielenoindians@yahoo.com gabrielenoindians@yahoo.com

Response to Comment Letter B

Andrew Salas
Gabrieleno Band of Mission Indians – Kizh Nation
August 22, 2023

B-1 The comment indicates that the Gabrieleno Band of Mission Indians – Kizh Nation does not have any comments on the Project; however, the Tribal government would like to request consultation for all future projects within the Lawndale General Plan Planning Area. Section 5.18, *Tribal Cultural Resources* of the Draft EIR addresses tribal cultural resources. As stated in Section 5.18 of the Draft EIR, the General Plan includes Policy RM-3.5, which requires consultation with Native American tribes that may be impacted by proposed development and land use policy changes, in accordance with State, local, and Tribal intergovernmental consultation requirements. Future projects within the Planning Area would be required to consult with Tribal Organizations, consistent with State law (i.e., AB 52 and SB 18). The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

Subject: City of Lawndale Safety Element Update

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good day,

The California Governor's Office of Emergency Services (Cal OES) Local Hazard Mitigation Planning Team has taken the time to review the proposed updates/changes to your General Plan. Government Code 65302(g)(8) states "before preparing or revising its Safety Element, each city and county shall consult…. the Office of Emergency Services for the purpose of including information known by and available to the department."

The Cal OES Local Hazard Mitigation Planning Team reviews and compares your current Safety Element hazards against those listed in your most recent Federal Emergency Management Agency (FEMA) approved Local Hazard Mitigation Plan (LHMP). **C-1**

Our office has reviewed your proposed Safety Element update posted on CEQA.net and found no substantive changes to your hazard profiles when compared against your most recent FEMA approved LHMP. Our office has no further comments at this time. **C-2**

Should you need further assistance or have questions please email our team at mitigationplanning@caloes.ca.gov.

Response to Comment Letter C

Constantin Raether
California Governor's Office of Emergency Services
August 23, 2023

C-1 These introductory paragraphs state that the California Governor's Office of Emergency Services (Cal OES) has reviewed the proposed updates to the Lawndale General Plan. The comment references Government Code 65302(g)(8), which states "before preparing or revising its Safety Element, each city and county shall consult…. the Office of Emergency Services for the purpose of including information known by and available to the department." The comment further states that Cal OES reviews and compares Safety Element hazards against those listed in the City's most recent Federal Emergency Management Agency (FEMA) approved Local Hazard Mitigation Plan (LHMP). The comment does not contain any information requiring changes to the Draft EIR. No further response is warranted.

C-2 The comment indicates that Cal OES has reviewed the City of Lawndale's proposed Safety Element update and found no substantive changes to the City's hazard profiles when compared against the City's most recent FEMA approved LHMP. The comment indicates that Cal OES does not have any comments on the Project. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

Dear Jared Chavez,

South Coast AQMD staff received the Draft Environmental Impact Report for the City of Lawndale General Plan Update Project (South Coast AQMD Control Number: LAC230823-11). Staff is currently in the process of reviewing the Draft Environmental Impact Report (DEIR). **D-1**

Please provide an electronic copy of any live modeling and emission calculation files (complete files, not summaries) that were used to quantify the air quality impacts from construction and/or operation of the Proposed Project as applicable, including the following: **D-2**

- CalEEMod Dear Phayvanh Nanthavongdouangsy,
  Input Files (.csv files);
- Live EMFAC output files;
- Any emission calculation file(s) (live version of excel file(s); no PDF) used to calculate the Project's emission sources
  (i.e. truck operations).

You may send the above-mentioned files via a Dropbox link in which they may be accessed and downloaded by South Coast AQMD staff by the end of next week. Without all files and supporting documentation, South Coast AQMD staff will be unable to complete a review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.

If you have any questions regarding this request, please contact me.

Thank you.

Response to Comment Letter D

Sahar Ghadimi
South Coast Air Quality Management District
August 25, 2023

D-1 This introductory paragraph states that the South Coast Air Quality Management District (AQMD) received and is in the process of reviewing the Draft EIR. The comment does not contain any information requiring changes to the Draft EIR. No further response is warranted.

D-2 This comment requests an electronic copy of any live modeling and emission calculation files that were used to quantify the air quality impacts from construction and/or operation of the Project. The comment further states that South Coast AQMD staff will be unable to complete a review of the air quality analyses in a timely manner without all files and supporting documentation. The comment is noted. A response to this comment was sent on August 28, 2023 and the requested files were provided to the South Coast AQMD. The comment does not contain any information requiring changes to the Draft EIR. No further response is warranted.

D-3 This comment states that the AQMD received the requested files and after a thorough review, does not have any comments on the Project. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

Response to Comment Letter E

Ronald M. Durbin
County of Los Angeles Fire Department
September 1, 2023

E-1 This introductory paragraph states that the Draft EIR was reviewed by the Planning Division, Land Development Unit, Forestry Division, and Health and Hazardous Materials Division of the County of Los Angeles Fire Department. The comment is introductory in nature and does not contain any information requiring changes to the Draft EIR. No further response is warranted.

E-2 This comment states that the Planning Division of the County of Los Angeles Fire Department does not have any comments on the Project. The comment does not contain any information requiring changes to the Draft EIR. No further response is warranted.

E-3 These introductory paragraphs state that all future development within the City of Lawndale General Plan boundaries must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows and fire hydrants. The introductory paragraphs further state that when involved with subdivision in a City contracting fire protection with the County of Los Angeles Fire Department, Fire Department requirements for access, fire flows and hydrants are addressed during the subdivision tentative map stage. The comment is noted. Section 5.15, *Public Services* of the Draft EIR addresses fire protection and emergency services. As stated in Section 5.15 of the Draft EIR, the General Plan includes policies and actions that require all buildings and facilities in the City to comply with regulatory standards related to fire safety, including the Fire Code. The comment is introductory in nature and does not contain any information requiring changes to the Draft EIR. No further response is warranted.

E-4 This comment repeats the introductory paragraphs referenced above, which state that all future development within the City of Lawndale General Plan boundaries must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows and fire hydrants. The introductory paragraphs further state that when involved with subdivision in a City contracting fire protection with the County of Los Angeles Fire Department, Fire Department requirements for access, fire flows and hydrants are addressed during the subdivision tentative map stage. The comment is noted. Section 5.15, *Public Services* of the Draft EIR addresses fire protection and emergency services. As stated in Section 5.15 of the Draft EIR, the General Plan includes policies and actions that require all buildings and facilities in the City to comply with regulatory standards related to fire safety, including the Fire Code. The comment is introductory in nature and does not contain any information requiring changes to the Draft EIR. No further response is warranted.

E-5 This introductory paragraph states that the statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division include erosion control, watershed management, rare and endangered species, brush clearance, vegetation management, fuel modification for Fire Hazard Severity Zones, archeological and cultural resources, and the County Oak Tree Ordinance. The comment states that the Forestry Division of the County of Los Angeles Fire Department does not

have any comments on the Project. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

E-6 This comment states that the Health Hazardous Materials Division of the County of Los Angeles Fire Department does not have any comments on the Project. The comment does not contain any information requiring changes to the Draft EIR. No further response is warranted.

Comment Letter F

GABRIELENO BAND OF MISSION INDIANS - KIZH NATION
Historically known as The San Gabriel Band of Mission Indians recognized by the State of California as the aboriginal tribe of the Los Angeles basin

September 28,2023

Project Name: City of Lawndale General Plan Update

Thank you for your letter dated August 15, 2023. Regarding the project above. This is to concur that we agree with the General Plan Amendment. However, our Tribal government would like to request consultation for all future projects within this location. **F-1**

Andrew Salas, Chairman
Gabrieleno Band of Mission Indians – Kizh Nation

Response to Comment Letter F

Andrew Salas
Gabrieleno Band of Mission Indians – Kizh Nation
September 28, 2023

F-1 The comment indicates that the Gabrieleno Band of Mission Indians – Kizh Nation does not have any comments on the Project; however, the Tribal government would like to request consultation for all future projects within the Lawndale General Plan Planning Area. The comment does not contain any information requiring changes to the Draft EIR. Section 5.18, *Tribal Cultural Resources* of the Draft EIR addresses tribal cultural resources. As stated in Section 5.18 of the Draft EIR, the General Plan includes Policy RM-3.5, which requires consultation with Native American tribes that may be impacted by proposed development and land use policy changes, in accordance with State, local, and Tribal intergovernmental consultation requirements. Future projects within the Planning Area would be required to consult with Tribal Organizations, consistent with State law (i.e., AB 52 and SB 18). The comment is noted and no further response is warranted.

RE: City of Lawndale General Plan Update
SCH # 2022120088
Vic. LA-405, LA-107. Citywide
GTS # LA-2022-04292-DEIR

Dear Jared Chavez:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced environmental document. The City of Lawndale is preparing a comprehensive update to its existing General Plan. The General Plan Update is intended to be an expression of the community's vision for the City and Planning Area and constitutes the policy and regulatory framework by which future development projects will be reviewed and public improvements will be implemented. The Lawndale General Plan Update includes a comprehensive set of goals, policies, and actions (implementation measures), organized into Elements, as well as a revised Land Use Map. The Lawndale General Plan will include all of the State-mandated elements, and will address two optional topics: Economic Development and Community Facilities.

G-1

On page 29 of Appendix F Transportation Impact Analysis, it indicates the following:

The OPR recommended thresholds for residential and office land uses as follows:

- Residential: A project exceeding a level of 15% below existing VMT per capita for the city or region may indicate a significant transportation impact.
- Office: A project exceeding a level of 15% below existing regional VMT per employee may indicate a significant transportation impact.

G-2

On page 35 of Appendix F Transportation Impact Analysis, it indicates the following:

> Project Threshold: a significant impact would occur if the project's 2045 VMT per capita or VMT per employee exceeds 15 percent below the existing Los Angeles countywide average VM per capita, or VMT per employee, respectively.

OPR Technical Advisory states that "**OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development may be a reasonable threshold**." A conservative approach to preparing a transportation analysis would result in providing substantial evidence to comply with CEQA. Therefore we recommend the City use lower VMT data, Lawndale 2023 Existing Conditions as a base instead of Los Angeles County 2023 Existing Conditions. **G-2**

The transportation analysis should use the Lawndale 2023 Existing Conditions VMT Per Capita/VMT Per Employee as a base threshold while the City data is available. Therefore with 15% reduction, the reduced threshold should be 8.39 (9.87X85%) for VMT Per Capita and 13.82 (16.26X85%) for VMT Per Employee.

Based revised threshold, the Lawndale 2045 Project condition 9.19 VMT Per Capita and 14.78 VMT Per Employee exceeds the revised threshold above. Therefore, the transportation impact would be significant and mitigation would be required. **G-3**

At this time, the project's impacts related to VMT would be significant and unavoidable because no mitigation is proposed. We would recommend the City to consider the following measures for this General Plan and for all future projects:

1. We encourage the Lead Agency to evaluate the potential of Transportation Demand Management (TDM) strategies and Intelligent Transportation System (ITS) applications in order to better manage the transportation network, as well as transit service and bicycle or pedestrian connectivity improvements. For additional TDM options, please refer to the Federal Highway Administration's *Integrating Demand Management into the Transportation Planning Process: A Desk Reference* (Chapter 8). This reference is available online at: **G-4**

   http://ops.fhwa.dot.gov/publications/fhwahop12035/fhwahop12035.pdf

2. For each new development, a post-development VMT analysis to validate and justify Project VMT and future VMT threshold setting should be prepared. Additional mitigation measures should be implemented when the post-development VMT analysis discloses any traffic significant impact. This analysis, which may include interviews with and surveys of project occupants, will provide new traffic data to help validate the City's VMT traffic model results. **G-5**

The collected data can include, among other things, where the trips are coming from, when the trips are taking place, what transportation mode is used, and why those transportation modes were selected. This survey data would be useful 1) to validate existing VMT threshold, 2) to assist in setting future VMT threshold, and 3) to identify suitable TDM to apply as minimization or mitigation measures for the future. These measures could be implemented in the event the post-development VMT analysis discloses any significant traffic impacts. **G-5**

3. Caltrans promotes Smart Growth and recommends the City to balance housing and office developments within the City boundaries. This would be the ultimate approach to reduce VMT. **G-6**

4. VMT Fee Program for all development within the City boundary in which the program has the potential to address transportation funding challenges, promote sustainability, and offer more flexible and equitable approaches to financing and managing transportation systems. Alternatively, the City may consider a new concept of VMT mitigation banks and exchanges. You may learn this new concept from the following link. **G-7**

   https://dot.ca.gov/-/media/dot-media/programs/research-innovation-system-information/documents/research-notes/task3886-rns-5-21-a11y.pdf#:~:text=A%20well%20developed%2C%20carefully%20structured%20VMT%20mitigation%20bank,pay%20for%20VMT%20reductions%20elsewhere%20in%20the%20region.

5. As a reminder for each new development Caltrans has published the VMT-focused Transportation Impact Study Guide (TISG), dated May 20, 2020 and the Caltrans Interim Land Development and Intergovernmental Review (LD-IGR) Safety Review Practitioners Guidance, prepared in On December 18, 2020. You can review those document at the following link: **G-8**

   https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb-743/2020-05-20-approved-vmt-focused-tisg-a11y.pdf

   https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb-743/2020-12-22-updated-interim-ldigr-safety-review-guidance-a11y.pdf

6. For future projects any transportation of heavy construction equipment and/or materials that require the use of oversized transport vehicles on State highways will need a Caltrans transportation permit. Any large-size truck trips be limited to off-peak commute periods. **G-9**

If you have any questions, please feel free to contact Mr. Alan Lin the project coordinator at (213) 269-1124 and refer to GTS # LA-2022-04292-DEIR.

Sincerely,

Miya Edmonson

MIYA EDMONSON
LDR/CEQA Branch Chief

Response to Comment Letter G

Miya Edmonson
State of California Department of Transportation, District 7
September 29, 2023

G-1 This introductory paragraph summaries the proposed Project. The comment is introductory in nature and does not contain any information requiring changes to the Draft EIR. No further response is warranted.

G-2 This comment summarizes the substantiation of the thresholds used in Appendix F, Transportation Impact Analysis of the Draft EIR, based on the recommend thresholds in the California Office of Planning and Research (OPR) Technical Advisory. The comment states that a conservative approach for preparing a transportation analysis would be for the development of a vehicle miles traveled (VMT) threshold using the City, and not the County of Los Angeles as the geographic area to determine baseline conditions. The comment indicates that if the VMT analysis uses the geographic region of the City for Existing Conditions, the reduced threshold should be 8.39 VMT per capita and 13.82 VMT per employee.

The OPR Technical Advisory recommends that a lead agency may consider the average of the City or region as the geographical area to determine a threshold for residential projects. For office projects, OPR recommends the regional average. Per pages 15 and 16 of the OPR Technical Advisory, the thresholds for residential and office projects are:

- *Recommended threshold for residential projects: A proposed project exceeding a level of 15 percent below existing VMT per capita may indicate a significant transportation impact. Existing VMT per capita may be measured as regional VMT per capita or as city VMT per capita. Proposed development referencing a threshold based on city VMT per capita (rather than regional VMT per capita) should not cumulatively exceed the number of units specified in the SCS for that city, and should be consistent with the SCS.*

- *Recommended threshold for office projects: A proposed project exceeding a level of 15 percent below existing regional VMT per employee may indicate a significant transportation impact.*

The use of Los Angeles County as the geographical area to determine the VMT per capita (i.e. regional average) was determined to be appropriate and consistent with the OPR Technical Advisory. The City of Lawndale is part of the larger metropolitan area and the City's size (1.9 square miles), development composition, and location (contiguous to and surrounded by urbanized cities within the County), result in high integration with surrounding communities and the larger region. A significant amount of people that live in Lawndale work outside the City and vice-versa; therefore, many trips originate or end outside the City. Additionally, the use of Los Angeles County as the geographical area to determine VMT is appropriate, since the Project aligns with regional goals. As shown in Table 5.8-5, *Project Consistency with the 2020-2045 RTP/SCS* in the Draft EIR, the Project is consistent with the regional goals in the Southern California Regional Government (SCAG) Regional Transportation Plan/Sustainable Communities Strategies (RTP/SCS),

since the Project would allow for infill development in locations near existing transit routes, goods and services. The availability of public transportation and the focus on increasing density relative to the existing public transportation system, enables Project implementation to reduce VMT per service population. Therefore, the use of Los Angeles County as the geographical area to determine VMT thresholds is better aligned with regional goals in the SCAG 2020-2024 RTP/SCS to promote reductions in VMT.

The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

G-3 The comment from Caltrans states that with the recommended revised threshold the Project conditions VMT per capita and per employee would be significant and mitigation would be required. As discussed under Response G-2, the thresholds used in in Appendix F, Transportation Impact Analysis of the Draft EIR are consistent with the recommendations in OPR's Technical Advisory. Therefore, no revisions to the thresholds would be necessary and no mitigation measures to reduce VMT beyond the reductions identified with the Project are required. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

G-4 The comment recommends that the Lead Agency evaluate Transportation Demand Management (TDM) strategies and Intelligent Transportation System applications in order to better manage the transportation network, as well as transit service, bicycle, and pedestrian connectivity improvements. As discussed in Section 5.17, *Transportation* in the Draft EIR, the Mobility Element developed as part of the General Plan Update includes policies to support the reduction of VMT. This includes, but is not limited to, Policy M-3.1, which requires the City to apply Complete Streets principles to all transportation improvement projects; Policy M-3.2 which directs the City to link activity centers, public facilities, and schools to transit and active transportation facilities; and Policy M-9.2 which requires TDM strategies as mitigation measures for new projects that exceed the City's VMT impact thresholds. The Draft EIR concluded that the Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG RTP/SCS goals. Therefore, the Project's impacts related to VMT would be less than significant. Therefore, no mitigation measures to reduce VMT beyond the reductions identified with the Project are required. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

G-5 This comment states that the City should require a "post-development" VMT analysis to monitor VMT against thresholds and revisit mitigation measures for each new development, and provide new traffic data. As discussed in Section 5.17, *Transportation* in the Draft EIR, the Mobility Element developed as part of the General Plan Update includes policies to encourage cooperation with regional agencies, including Policy M-9.3 which encourages regional agencies such as Metro, the South Coast Air Quality Management District, and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel. The Draft EIR concluded that the Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG RTP/SCS goals. Therefore, the Project's impacts related to VMT would be less

than significant. Therefore, no mitigation measures to reduce VMT beyond the reductions identified with the Project are required. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

G-6 This comment states that Caltrans promotes Smart Growth and recommends that the City balance housing and office developments. As discussed in Section 5.17, *Transportation* in the Draft EIR, the Land Use and Mobility elements developed as part of the General Plan Update includes policies to support the reduction of VMT, including increasing the balanced mix of residential and employment opportunities within the City with the proposed land uses. This includes the proposed Land Use Map, as well as Policy LU-1.1 which directs the City to provide a land use plan that promotes efficient development; and Policy LU-1.2 requires the balance of levels of employment and housing within the community. Additionally, the analysis found that implementation of the Project would result in reductions in VMT per capita and VMT per employee compared to 2023 existing conditions. The Draft EIR concluded that the Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG RTP/SCS goals. Therefore, the Project's impacts related to VMT would be less than significant, and no mitigation measures to reduce VMT beyond the reductions identified with the Project are required. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

G-7 This comment recommends the City develop a VMT fee program for all development. The City currently collects development impact fees, including a traffic impact fee to ensure that development pay a fair share of the cost of capital facilities necessary to accommodate such development. As discussed in Section 5.17, *Transportation* in the Draft EIR, the Mobility Element developed as part of the General Plan Update includes policies and actions to support the reduction of VMT, including Policy M-5.3 which requires new developments to construct, when appropriate, transit facilities; Policy M-6.5 which requires new developments in the City to provide bicycle and pedestrian facilities; Action M-6a which directs the City as part of development review, to review any existing gaps in active transportation that inhibit mobility; and Policy M-9.2 which requires TDM strategies as mitigation measures for new projects that exceed the City's VMT impact thresholds. The Draft EIR concluded that the Project does not exceed the Project VMT threshold and is consistent with the relevant SCAG RTP/SCS goals. Therefore, the Project's impacts related to VMT would be less than significant, and no mitigation measures to reduce VMT beyond the reductions identified with the Project are required. The comment does not contain any information requiring changes to the Draft EIR. The comment is noted and no further response is warranted.

G-8 This comment notes that Caltrans has published the VMT-focused Transportation Impact Study Guide and the Caltrans Interim Land Development and Intergovernmental Safety Review Practitioners Guidance. The comment is noted and no further response is warranted.

G-9 This comment notes that future projects would be required to comply with Caltrans requirements for the transportation of heavy construction equipment and/or materials. The comment is noted and no further response is warranted.

1.0 EXECUTIVE SUMMARY

1.1 PROJECT LOCATION

The City of Lawndale is located in the South Bay area of Los Angeles County, approximately 10 miles southwest of downtown Los Angeles, refer to Figure 3-1, *Regional Location Map* in Section 3.0, *Project Description*. The City is approximately 1.9 square miles (1,241 acres) and is bounded by the City of Hawthorne to the north and west, by unincorporated areas of Los Angeles County and the City of Gardena to the east, by the City of Torrance to the south, and by the City of Redondo Beach to the south and west. Regional access to the City is provided by Interstate 405, a major north-south highway which provides access to Lawndale and the greater Los Angeles region.

The Planning Area is the geographic area for which the General Plan Update provides a framework for long-term growth and resource conservation. State law requires the Planning Area for the General Plan Update to include all territory within Lawndale's incorporated area as well as "any land outside its boundaries which in the planning agency's judgment bears relation to its planning" (California Government Code Section 65300). The General Plan Update Planning Area, as shown in Figure 3-2, *General Plan Planning Area* of Section 3.0, includes the entire City limits (approximately 1,241 acres) as well as the City of Lawndale's Sphere of Influence (approximately 314 acres); the entire Planning Area is approximately 1,555 acres.

1.2 PROJECT BACKGROUND

California Government Code Section 65300 et seq. requires all counties and cities to prepare and maintain a General Plan for the long-term growth, development, and management of the land within the jurisdiction's planning boundaries. The General Plan acts as a "constitution" for development, and is the jurisdiction's lead legal document in relation to growth, development, and resource management issues. Development regulations (e.g., zoning and subdivision standards) are required by law to be consistent with the General Plan.

The General Plan includes the eight elements mandated by State law, including: Circulation, Conservation, Housing, Land Use, Noise, Open Space, Environmental Justice and Safety. General Plans must also address the topics of climate change and resiliency planning, either as separate elements or as part of other required elements. The City's 2021-2029 Housing Element was adopted on February 7, 2022 and is not part of this update. The City may also address other topics of interest; this General Plan includes an element related to Economic Development and Community Facilities.

The California Government Code also requires that a General Plan be comprehensive, internally consistent, and plan for the long term. This General Plan Update plans out to the year 2045.

The City of Lawndale circulated a Notice of Preparation (NOP) of an EIR for the proposed Project on December 6, 2022 to trustee and responsible agencies, the State Clearinghouse, and the public. A scoping meeting was held on December 15, 2022 at the Harold E. Hofmann Community Center in Lawndale. The NOP public review period began on Tuesday, December 6, 2022 and ended on Thursday, January 5, 2023.

1.3 PROJECT OBJECTIVES

The following objectives were identified for the proposed update to the General Plan:

1. Reflect the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders;
2. Address issues and concerns identified by city residents, businesses, decision-makers, and other stakeholders;
3. Protect Lawndale's existing residences, character, and sense of community;
4. Proactively plan for and accommodate local and regional growth in a responsible manner;
5. Encourage mixed-use development patterns that promote vibrant commercial and residential areas;
6. Allow for a range of high-quality housing options;
7. Attract and retain businesses and industries that provide jobs for local residents;
8. Continue to maintain and improve multimodal transportation opportunities;
9. Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
10. Address new requirements of State law; and
11. Address emerging transportation, housing, and employment trends.

1.4 PROJECT CHARACTERISTICS

The City Lawndale is preparing a comprehensive update to its existing General Plan. The updated Lawndale General Plan is expected to be adopted in 2023 and will guide the City's development, growth, and conservation through land use objectives and policy guidance. The General Plan Update is intended to be an expression of the community's vision for the City and Planning Area, and constitutes the policy and regulatory framework by which future development projects will be reviewed and public improvements will be implemented. The City will implement the General Plan Update by requiring development, infrastructure improvements, and other projects to be consistent with its policies, and by implementing the actions included in the General Plan Update.

The Lawndale General Plan Update includes a comprehensive set of goals, policies, and actions (implementation measures), organized into Elements, as well as a revised Land Use Map (refer to Figure 3-5, *General Plan Update Land Use Map* in Section 3.0). The goals and policies provide guidance to the City on how to direct change, manage growth, and manage resources over the 20-year life of the General Plan. In order to ensure that the goals and policies in the General Plan are effectively implemented, a series of actions, or implementation measures have been developed, and are presented in each Element alongside the goals and policies they implement.

The General Plan Update includes the following Elements: Land Use Element; Mobility Element (Circulation); Resource Management Element (Conservation, Open Space and Air Quality); Public Safety Element (Safety and Noise); Environmental Justice Element; Economic Development Element; and Community Facilities Element. Together, they present a consistent policy platform, as required by law.

1.4.1 GENERAL PLAN BUILDOUT ANALYSIS

The maximum density or intensity permitted for an individual parcel is controlled by the land use designation, unless a density bonus pursuant to Lawndale Municipal Code Chapter 17.50, *Density Bonus Provisions for Residential Units* applies. In addition to the land use designation, development of a parcel is influenced by a variety of factors including the physical characteristics of a parcel, compatibility with nearby uses, access and infrastructure limitations, market factors, and previous developments trends.

While no specific development projects are proposed as part of the Lawndale General Plan Update, the General Plan Update will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. The buildout analysis assumes a 20-year planning horizon, and 2045 is to be the full buildout year of the General Plan (the point at which all parcels in the City are developed according to their General Plan land use designation).

Table 1-1, *General Plan Update Growth Assumptions*, summarizes the growth anticipated by the General Plan Update based upon the buildout potential associated with the General Plan Update Land Use Map in 2045 compared to existing on-the-ground conditions by General Plan Update Land Use Designation (refer to Table 3-3, *General Plan 2045 Buildout by Land Use Designation*, of Section 3.0).

Table 1-1
General Plan Update Growth Assumptions

Description	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs
Existing Conditions (2022)	11,463	37,948	4,542,162	6,470
2045 General Plan	15,405	47,430	5,351,026	9,208
Net Change	+3,942	+9,482	+808,864	+2,738

1.5 ENVIRONMENTAL IMPACTS

The City determined that a Program EIR should be prepared pursuant to the California Environmental Quality Act Guidelines (CEQA Guidelines). The environmental issues identified by the City for assessment in the Program EIR are:

- Aesthetics
- Agricultural Resources
- Air Quality

- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

Section 5.0, *Environmental Analysis*, of this EIR provides a description of potential environmental impacts of the General Plan Update. After implementation of the General Plan Update goals, policies, and actions, most of the potentially significant impacts associated with the proposed General Plan Update would be reduced to a less than significant level. However, the impacts listed below could not be feasibly mitigated and would result in a significant and unavoidable impact with implementation of the General Plan Update.

Air Quality

- General Plan implementation would result in a cumulatively considerable net increase of criteria pollutants for which the project region is non-attainment under an applicable Federal or State ambient air quality standard during construction and operational activities.
- General Plan implementation would expose sensitive receptors to substantial pollutant concentrations during construction and operational activities.
- General Plan implementation would result in a cumulatively considerable contribution to significant cumulative air quality impacts with the potential to expose sensitive receptors to substantial pollutant concentrations.

Greenhouse Gas Emissions

- Project implementation would generate greenhouse gas emissions that would not satisfy the Greenhouse Gas reduction targets established by Federal and State law and may have a significant effect on the environment.
- Project implementation would contribute to global climate change through a cumulatively considerable contribution of greenhouse gases. The Project would result in a cumulatively considerable and significant adverse GHG emissions impact.

1.6 SUMMARY OF PROJECT ALTERNATIVES

Pursuant to Section 15126.6 of the CEQA Guidelines, "an EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives." This EIR includes two alternatives as discussed below.

- Alternative 1 – No Project Alternative
- Alternative 2 – Reduced Growth Alternative

Alternative 1: No Project Alternative

As required by CEQA Guidelines Section 15126.6(e), under Alternative 1, the City would not adopt the General Plan Update. The existing Lawndale General Plan would continue to be implemented and no changes to the General Plan, including the Land Use Map, goals, policies, or actions would occur. This Alternative assumes that ultimate development of the 1992 General Plan would occur and the 1992 General Plan would continue to provide outdated information regarding several issues, including projections and policy direction that were identified in the 1990s that are not reflective of the existing socioeconomic data and anticipated development patterns. This Alternative assumes increased residential development opportunities in the Hawthorne Boulevard Specific Plan area and Housing Opportunity Overlay land use designation areas in order to accommodate the City's Regional Housing Needs Allocation (RHNA) as identified in the 2021-2029 Housing Element, would not occur. Subsequent projects, such as updating the Hawthorne Boulevard Specific Plan and amending the Municipal Code (including the zoning map), would not occur. The existing General Plan Land Use Map is shown on Figure 3.3 in Section 3.0.

The development anticipated by the No Project Alternative would result in the following when compared to the General Plan Update:

- 2,019 fewer housing units;
- 8,778 fewer residents;
- 280,047 fewer nonresidential square feet of development; and
- 491 fewer jobs.

Alternative 2: Reduced Growth Alternative

Under Alternative 2, the City would adopt the updated General Plan policy document, but at residential densities lower than those reflected in the proposed General Plan Update. This Alternative is defined by two major changes from the proposed General Plan Update:

1. Reduction in the maximum density associated with the Housing Opportunity Overlay (HOO) land use designation; in Alternative 2, the maximum density for residential development in areas designated with the HOO is reduced from 100 du/ac to 33 du/ac (consistent with the maximum density proposed for the High Density Residential land use designation).
2. Reduction in the maximum density associated with residential development within the Hawthorne Boulevard Specific Plan (HBSP) land use designation; in Alternative 2, the maximum density for residential development in the HBSP is reduced from 150 du/ac to 33 du/ac (consistent with the maximum density proposed for the High Density Residential land use designation).

Under Alternative 2, non-residential development potential and anticipated job growth would remain unchanged from the proposed General Plan Update. This alternative continues to allow for mixed-use opportunities with less residential development potential than allowed under the General Plan Update. It also reflects a maximum residential density of 33 du/ac, consistent with the maximum residential density allowed under the current General Plan. This alternative was developed to potentially reduce the severity of potential impacts related to air quality and greenhouse gas emissions, as overall development of residential uses would be less than what could develop under the proposed Project.

The development anticipated by the Reduced Growth Alternative would result in the following when compared to the General Plan Update:

- 1,603 fewer housing units;
- 3,639 fewer residents;
- Nonresidential development would remain the same; and
- Employment opportunities would remain the same.

1.7 SUMMARY OF ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES

In accordance with the CEQA Guidelines, this EIR focuses on the Project's significant effects on the environment. The CEQA Guidelines defines a significant effect as a substantial adverse change in the physical conditions, which exist in the area affected by the proposed project. A less than significant effect is one in which there is no long or short-term significant adverse change in environmental conditions. Some impacts are reduced to a less than significant level with the implementation of General Plan Update policies and actions, mitigation measures, and/or compliance with regulations.

The environmental impacts of the proposed Project, the impact level of significance prior to mitigation, the proposed mitigation measures to mitigate an impact, and the impact level of significance after mitigation are summarized in Table 1-2, *Summary of Environmental Impacts and Mitigation Measures*.

Table 1-2
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.1 Aesthetics			
Would the project have a substantial adverse effect on a scenic vista?	Land Use Policies 3.1, 3.3, 3.5, 4.2, 4.3. Land Use Actions 3a, 3b, 4e.	No mitigation measures are required.	Less Than Significant Impact
Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	Land Use Policies 1.1, 3.3, 3.9, 4.2, 4.3. Land Use Actions 1a, 1b, 1c, 1d, 4e.	No mitigation measures are required.	Less Than Significant Impact
Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Land Use Policy 3.7. Land Use Actions 3c, 3d, 3e.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, have a substantial adverse effect on a scenic vista?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, conflict with applicable zoning and other regulations governing scenic quality?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
5.2 Agricultural Resources			
Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Implementation of the proposed General Plan Update would have no impact on forest land, timber, or timber production.	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, conflict with existing zoning for agricultural use, or a Williamson Act contract?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	No relevant proposed General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
5.3 Air Quality			
Would the project conflict with or obstruct implementation of the applicable air quality plan?	Land Use Policies 1.1, 1.2, 1.4, 1.6. Land Use Action 3b. Mobility Policies 3.1, 3.2, 5.3, 6.1, 6.2, 6.3, 6.4, 6.5, 6.6, 9.2. Mobility Actions 3a, 5a, 6a, 6b, 6c, 9b. Resource Management Goals 4, 5. Resource Management Policies 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, 4.9, 4.10, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.9. Resource Management Actions 4a, 4b, 4c, 4d, 4e, 4f, 4g, 4h, 4j, 4k, 4l, 5a, 5b, 5c, 5d, 5e, 5f, 5g, 5h.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under the applicable federal or state ambient air quality standard?	Refer to the General Plan Update goals, policies and actions cited above in this section.	There is no feasible mitigation available for this impact.	Significant and Unavoidable Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project expose sensitive receptors to substantial pollutant concentrations?	Refer to the General Plan Update goals, policies and actions cited above in this section.	There is no feasible mitigation available for this impact.	Significant and Unavoidable Impact
Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	No proposed General Plan Update goals, policies, or actions specific to odors.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of the applicable air quality plan?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of the applicable air quality plan, or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Significant and Unavoidable Impact
Would the project, combined with other related cumulative projects, expose sensitive receptors to substantial pollutant concentrations?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Significant and Unavoidable Impact
Would the project, combined with other related cumulative projects, result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.4 Biological Resources			
Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	Resource Management Goal 1. Resource Management Policies 1.1, 1.3, 1.7. 1.8, 6.3. Resource Management Actions 1b, 1c, 1g, 1h, 6a. Public Safety Policy 7.3.	No mitigation measures are required.	Less Than Significant Impact
Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	Resource Management Policy 6.3. Resource Management Action 6a.	No mitigation measures are required.	Less Than Significant Impact
Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	Resource Management Policy 6.3. Resource Management Action 6a.	No mitigation measures are required.	Less Than Significant Impact
Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	Resource Management Goal 1. Resource Management Policies 1.1, 1.3, 1.7. 1.8, 6.3. Resource Management Actions 1b, 1c, 1g, 1h, 6a. Public Safety Policy 7.3.	No mitigation measures are required.	Less Than Significant Impact
Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	Resource Management Element Policy 1.7.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	There are no General Plan Update goals, policies, or actions specific to habitat conservation plans.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, a have substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	No Impact
5.5 Cultural Resources			
Would the project cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	Resource Management Policies 3.1, 3.2, 3.3, 3.4, 3.6, 3.7. Resource Management Actions 3a, 3b, 3c, 3d, 3e.	No mitigation measures are required.	Less Than Significant Impact
Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	Resource Management Policies 3.1, 3.2, 3.4, 3.7. Resource Management Actions 3a, 3e.	No mitigation measures are required.	Less Than Significant Impact
Would the project disturb any human remains, including those interred outside of formal cemeteries?	Resource Management Policies 3.1, 3.5. Resource Management Action 3g.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, disturb any human remains, including those interred outside of dedicated cemeteries?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
5.6 Energy			
Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or conflict with or obstruct a state or local plan for renewable energy or energy efficiency	Resource Management Goals 4, 5. Resource Management Policies 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, 4.9, 4.10, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.9. Resource Management Action 4a, 4b, 4c, 4d, 4e, 4f, 4g, 4h, 4i, 4j, 4k, 4l, 5a, 5b, 5c, 5d, 5e, 5f, 5g, 5h.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
5.7 Geology & Soils			
Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides?	Public Safety Goal 2. Public Safety Policies 2.1, 2.2, 2.3, 2.4. Public Safety Actions 2a, 2b, 2c, 2d, 2e.	No mitigation measures are required.	Less Than Significant Impact
Result in substantial soil erosion of the loss of topsoil?	Resource Management Policy 6.2. Resource Management Action 6a. Public Safety Policies 5.4, 5.6. Public Safety Action 2d.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	Public Safety Goal 2. Public Safety Policies 2.1, 2.2, 2.3, 2.4. Public Safety Actions 2a, 2b, 2c, 2d, 2e.	No mitigation measures are required.	Less Than Significant Impact
Be located on expansive soil, as defined in Tables 18-1-D of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	Public Safety Goal 2. Public Safety Policies 2.1, 2.2, 2.3. Public Safety Actions 2a, 2b, 2c, 2d, 2e.	No mitigation measures are required.	Less Than Significant Impact
Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	There are no General Plan Update goals, policies, or actions specific to septic tanks or alternative waste water disposal systems.	No mitigation measures are required.	No Impact
Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Resource Management Policy 3.1. Resource Management Actions 3a, 3f.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking or seismic-related ground failure, including liquefaction?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects result in substantial soil erosion or the loss of topsoil?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse or be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	There are no General Plan Update goals, policies, or actions specific to septic tanks or alternative waste water disposal systems.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Refer to the General Plan Update goals, policies and actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.8 Greenhouse Gas Emissions			
Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Land Use policies 1.1, 1.2, 1.4. Mobility Policies 3.1, 3.2, 5.1, 5.2, 5.3, 6.1, 6.2, 6.3, 6.4, 6.5, 6.6, 9.2, 9.3, 9.4. Mobility Actions 5a, 6a, 6b, 6c, 9a, 9b. Resource Management Goals 4, 5. Resource Management Policies 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, 4.9, 4.10, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, 5.9. Resource Management Actions 4a, 4b, 4c, 4d, 4e, 4f, 4g, 4h, 4i, 4j, 4k, 4l, 5a, 5b, 5c, 5d, 5e, 5f, 5g, 5h.	There is no feasible mitigation available for this impact.	Significant and Unavoidable Impact
Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	There is no feasible mitigation available for this impact.	Significant and Unavoidable Impact
Would the Project, combined with other related cumulative projects, generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	There is no feasible mitigation available for this impact.	Significant and Unavoidable Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.9 Hazards & Hazardous Materials			
Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Mobility Policy 7.1. Mobility Action 7a. Resource Management Policy 2.3. Public Safety Goals 1, 3. Public Safety Policies 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9. Public Safety Actions 1a, 1b, 1c, 1d, 1e, 1f, 3a, 3b, 3c, 3d, 3e.	No mitigation measures are required.	Less Than Significant Impact
Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Mobility Policy 7.1. Mobility Action 7a. Resource Management Policy 2.3. Public Safety Goal 3. Public Safety Policies 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9. Public Safety Actions 3a, 3b, 3c, 3d, 3e.	No mitigation measures are required.	Less Than Significant Impact
Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	Mobility Policy 7.1. Mobility Action 7a. Resource Management Policy 2.3. Public Safety Goal 3. Public Safety Policies 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 3.9. Public Safety Actions 3a, 3b, 3c, 3d, 3e.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Public Safety Goal 3. Public Safety Policies 3.1, 3.2, 3.3, 3.4, 3.5. Public Safety Actions 3a, 3b, 3c.	No mitigation measures are required.	Less Than Significant Impact
For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	There are no General Plan Update goals, policies, or actions specific to airports.	No mitigation measures are required.	Less Than Significant Impact
Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Public Safety Goal 1. Public Safety Policies 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8. Public Safety Actions 1a, 1b, 1c, 1d, 1e, 1f.	No mitigation measures are required.	Less Than Significant Impact
Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	Public Safety Goal 4. Public Safety Policies 4.1, 4.2, 4.3, 4.4, 4.5. Public Safety Actions 4a, 4b.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, combined with other related cumulative projects, result in significant cumulative impacts with respect to wildfire?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.10 Hydrology			
Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	Resource Management Policies 6.2, 6.4. Resource Management Action 6a. Community Facilities Policies 4.1, 4.2, 4.3, 4.4. Community Facilities Actions 4a, 4b, 4c, 4d, 4e.	No mitigation measures are required.	Less Than Significant Impact
Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	Resource Management Policies 6.1, 6.2. Resource Management Actions 6b, 6c. Community Facilities Policies 2.1, 2.2, 2.3. Community Facilities Actions 2a, 2c.	No mitigation measures are required.	Less Than Significant Impact
Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: • result in substantial erosion or siltation on- or off-site; • substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; • create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or • impede or redirect flood flows?	Resource Management Policies 6.2, 6.4. Resource Management Action 6a. Public Safety Policies 5.1, 5.3, 5.4, 5.5, 5.6. Public Safety Actions 5a, 5b, 5c. Community Facilities Policies 4.1, 4.2, 4.3, 4.4. Community Facilities Actions 4a, 4b, 4c, 4d, 4e.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	Resource Management Policies 6.2, 6.4. Resource Management Action 6a. Public Safety Policies 5.1, 5.2, 5.3, 5.4, 5.5, 5.6. Public Safety Actions 5a, 5b, 5c.	No mitigation measures are required.	Less Than Significant Impact
Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	Resource Management Policies 6.1, 6.2, 6.4. Resource Management Action 6a, 6b, 6c. Community Facilities Policies 2.1, 2.2, 2.3, 4.2, 4.3, 4.4. Community Facilities Actions 4a, 4b, 4c, 4d, 4e.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: • result in substantial erosion or siltation on- or off-site; • substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; • create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or • impede or redirect flood flows?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
5.11 Land Use and Population			
Would the project physically divide an established community?	Land Use Policies 1.1, 2.1, 3.1, 4.3. Land Use Actions 3b, 3c, 4e.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Land Use Policies 1.1, 1.2, 1.6, 2.2, 3.1, 4.3, 4.4, 4.7. Land Use Actions 1e, 3b, 3c, 4e, 4f. Mobility Policies 1.7, 2.2, 2.3, 3.1, 3.2, 3.3, 3.6, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 6.1, 6.2, 6.4, 6.5, 6.6, 7.1, 7.2, 9.2, 9.3, 9.4. Mobility Actions1e, 2a, 3a, 5a, 5b, 6a, 6b, 6c, 7a, 9a, 9b. Resource Management Policies 1.9, 1.10, 2.4, 2.5, 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.8, 4.9, 4.10, 5.1, 5.2, 5.3, 5.4, 5.5. Resource Management Actions 1g, 1h, 2a, 4a, 4b, 4c, 4d, 4e, 4f, 4g, 4h, 4i, 4j, 4k, 4l, 5a, 5b, 5c, 5d, 5e, 5f, 5g, 5h. Public Safety Policies 7.1, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7, 7.8, 7.9, 7.10, 7.11, 7.12, 7.13. Public Safety Actions 7a, 7b, 7c, 7d, 7e, 7f.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, physically divide an established community?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.12 Mineral Resources			
Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	There are no relevant General Plan Update goals, policies, and actions.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	There are no relevant General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project, combined with other relative cumulative projects, result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	There are no relevant General Plan Update goals, policies, and actions.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other relative cumulative projects, result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	There are no relevant General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
5.13 Noise			
Would the project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Public Safety Policies 6.1, 6.2, 6.3, 6.4, 6.8, 6.9. Public Safety Actions 6c, 6d, 6e, 6f.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in the generation of excessive groundborne vibration or groundborne noise levels?	Public Safety Policy 6.14. Public Safety Actions 6c, 6k.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise?	There are no relevant General Plan Update goals, policies, and actions.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, generate excessive groundborne vibration or groundborne noise levels?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
For a project located within the vicinity of a private airstrip land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project, combined with other related cumulative projects, expose people residing or working in the project area to excessive noise?	There are no relevant General Plan Update goals, policies, and actions.	No mitigation measures are required	No Impact
5.14 Population and Housing			
Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure?	Land Use Goal 2. Land Use Policies 1.1, 1.2, 2.2, 3.1. Land Use Actions 1e, 3c.	No mitigation measures are required.	Less Than Significant Impact
Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Land Use Goal 2. Land Use Policies 1.1, 2.2, 2.3, 3.1, 3.3, 3.4. Land Use Actions 2e, 3c, 3e.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes, and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
5.15 Public Services			
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: fire protection and emergency services?	Land Use Policies 1.5, 2.6. Land Use Action 1e. Public Safety Policies 1.5, 4.1, 4.2, 4.4. Public Safety Actions 1e, 4a. Community Facilities Goal 1. Community Facilities Policy 1.1, 1.2, 1.3, 1.4, 1.5, 1.8, 1.9, 1.10, 1.11. Community Facilities Actions 1a, 1b, 1c, 1d, 1e.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: police protection?	Land Use Policies 1.5, 2.6. Land Use Action 1e. Public Safety Policy 1.5. Public Safety Action 1e. Community Facilities Goal 1. Community Facilities Policy 1.1, 1.2, 1.3, 1.4, 1.5, 1.8, 1.9, 1.10, 1.11. Community Facilities Actions 1a, 1b, 1c, 1d, 1e.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: schools?	Land Use Policies 1.5, 2.6. Land Use Action 1e. Community Facilities Goal 1. Community Facilities Policy 1.1, 1.2, 1.3, 1.4, 1.5, 1.8, 1.9, 1.10, 1.11, 6.1, 6.2, 6.3. Community Facilities Actions 1a, 1b, 1c, 1d, 1e, 6a.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: library facilities?	Land Use Policies 1.5, 2.6. Land Use Action 1e. Community Facilities Goal 1. Community Facilities Policy 1.1, 1.2, 1.3, 1.4, 1.5, 1.8, 1.9, 1.10, 1.11, 6.6. Community Facilities Actions 1a, 1b, 1c, 1d, 1e, 6b.	No mitigation measures are required.	Less Than Significant Impact
Would the Project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: fire protection?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.16 Parks and Recreation			
Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Land Use Policy 1.5. Land Use Action 1e. Resource Management Policies 1.1, 1.2, 1.4, 1.5, 1.8. Resource Management Actions 1a, 1b, 1c, 1d, 1h. Community Facilities Goal 1. Community Facilities Policy 1.1, 1.2, 1.3, 1.4, 1.5. Community Facilities Actions 1b, 1c, 1d.	No mitigation measures are required.	Less Than Significant Impact
Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	Land Use Policies 1.5, 2.6. Land Use Action 1e. Resource Management Policies 1.1, 1.4, 1.5. Resource Management Actions 1a, 1b, 1c, 1d. Community Facilities Goal 1. Community Facilities Policy 1.1, 1.2, 1.3, 1.4, 1.5. Community Facilities Actions 1b, 1c, 1d.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: parks?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other relevant cumulative projects, result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Parks?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the Project, combined with other relevant cumulative projects, increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the Project, combined with other relevant cumulative projects, include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.17 Transportation			
Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities?	Land Use Policies 1.1, 1.2, 4.4. Mobility Goals 1, 3, 6. Mobility Policies 1.5, 1.7, 2.3, 3.1, 3.2, 3.3, 3.6, 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 6.1, 6.2, 6.4, 6.5, 6.6. Mobility Actions 1a, 1b, 1e, 3a, 5a, 5b, 6a, 6b, 6c. Resource Management Policies 1.9, 1.10, 4.4, 4.5, 4.6. Resource Management Actions 1g, 1h, 4g, 4h. Economic Development Policies 4.2, 4.3. Economic Development Action 4c.	No mitigation measures are required.	Less Than Significant Impact
Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	Land Use Policies 1.1, 1.2, 2.2, 4.4. Mobility Goals 3, 6. Mobility Policies 3.1, 3.2, 3.3, 3.6, 5.1, 5.2, 5.3, 5.4, 5.5, 6.1, 6.2, 6.4, 6.5, 6.6, 9.1, 9.2, 9.3, 9.4. Mobility Actions 3a, 5a, 5b, 6a, 6b, 6c, 9a, 9b. Resource Management Policies 1.9, 1.10, 4.4, 4.5, 4.6. Resource Management Actions 1g, 1h, 4g, 4h.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Land Use Goal 3. Land Use Policies 1.1, 3.1, 3.4. Land Use Action 3b. Mobility Goal 3. Mobility Policies 3.1, 3.4, 3.5, 3.6. Mobility Actions 3a, 3e.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in inadequate emergency access?	Mobility Element Goal 3. Mobility Element Policies 2.1, 2.2, 3.5. Action 3e. Public Safety Policy 1.6, 4.3.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, substantially increase hazards due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, result in inadequate emergency access?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.18 Tribal Cultural Resources			
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	Resource Management Policies 3.1, 3.2, 3.5. Resource Management Actions 3a, 3e, 3g.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k); or A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
5.19 Utilities and Service Systems			
Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Land Use Policy 2.6. Land Use Action 1e. Resource Management Policies 5.4, 5.5, 6.1, 6.2, 6.4. Resource Management Actions 5a, 5b, 5c, 6b, 6c. Community Facilities Goal 1. Community Facilities Policies 1.1, 1.2, 1.3, 1.4, 1.5, 1.8, 1.9, 1.10, 1.11, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 5.1. Community Facilities Actions 1a, 1b, 1c, 1d, 1e, 2a, 2c, 3a, 4d, 4e, 5a.	No mitigation measures are required.	Less Than Significant Impact
Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	Resource Management Policies 6.1, 6.2. Resource Management Action 6b, 6c. Community Facilities Policies 2.1, 2.2, 2.3. Community Facilities Actions 2a, 2c.	No mitigation measures are required.	Less Than Significant Impact
Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Land Use Policy 2.6. Land Use Action 1e. Community Facilities Goal 1. Community Facilities Policies 1.1, 1.3, 1.5, 1.8, 1.10, 1.11, 3.1, 3.2, 3.3. Community Facilities Actions 1a, 1b, 1c, 1d, 1e, 3a.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Resource Management Policies 2.1, 2.2, 2.4, 2.5, 2.6, 2.7. Resource Management Actions 2a, 2c, 2e.	No mitigation measures are required.	Less Than Significant Impact
Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Resource Management Policies 2.1, 2.2, 2.4, 2.5, 2.6, 2.7. Resource Management Actions 2a, 2c, 2e.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects, or have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects, or result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded stormwater facilities, the construction or relocation of which could cause significant environmental effects?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project, combined with other related cumulative projects, require or result in the relocation or construction of new or expanded electrical, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
Would the project, combined with other related cumulative projects, generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals, and comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	Less Than Significant Impact
5.20 Wildfire			
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?	Public Safety Goal 1. Public Safety Policy 1.2, 1.3, 1.4, 1.6, 4.2, 4.3. Public Safety Action 1a, 1b.	No mitigation measures are required.	No Impact
Would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	Public Safety Goal 4. Public Safety Policies 1.4, 1.6, 4.1, 4.2, 4.4. Public Safety Action 4a, 4b.	No mitigation measures are required.	No Impact
Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	Public Safety Goal 4. Public Safety Policies 1.2, 1.4, 1.5, 4.1, 4.2, 4.4.	No mitigation measures are required.	No Impact

Table 1-2 (continued)
Summary of Environmental Impacts and Mitigation Measures

Environmental Impact	General Plan Update Goals, Policies, and Actions	Mitigation Measures	Level of Significance
Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	Public Safety Goals 1, 4, 5. Public Safety Policies 1.2, 4.1, 4.2, 5.3, 5.4, 5.6. Public Safety Action 4a.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, substantially impair an adopted emergency response plan or emergency evacuation plan?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	No Impact
Would the project, combined with other related cumulative projects, expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	Refer to the General Plan Update Goals, Policies, and Actions cited above in this section.	No mitigation measures are required.	No Impact

This page intentionally left blank.

2.0 INTRODUCTION AND PURPOSE

The California Environmental Quality Act (CEQA) specifies that before a public agency decides to approve a project that could have one or more adverse effects on the physical environment, the agency must inform itself about the Project's potential environmental impacts, give the public an opportunity to comment on the environmental issues, and take feasible measures to avoid or reduce potential harm to the physical environment. The State CEQA Guidelines are located within the California Code of Regulations (CCR), Title 14, Division 6, Chapter 3, Sections 15000-15387, while the CEQA Statute is codified as Public Resources Code Sections 21000-21189.70.10.

2.1 PURPOSE OF THE EIR

The California Environmental Quality Act (CEQA) requires that all State and local agencies consider the potential environmental impacts of projects over which they have discretionary authority. An Environmental Impact Report (EIR) is intended to provide decision-makers and the public with information concerning the potential environmental impacts of a proposed project, possible ways to reduce or avoid the possible significant environmental impacts, and identify alternatives to the project. An EIR must also disclose significant impacts that cannot be avoided; growth inducing impacts; effects found not to be significant; as well as significant cumulative impacts of all past, present, and reasonably anticipated future projects.

The City of Lawndale is the Lead Agency under CEQA and is responsible for preparing this Program EIR for the General Plan Update (State Clearinghouse No. 2022120088). This Program EIR has been prepared in conformance with CEQA (California Public Resources Code Section 21000 et seq.), CEQA Guidelines (California Code of Regulations, Title 14, Section 15000 et seq.), and the rules, regulations, and procedures for implementation of CEQA, as adopted by the City of Lawndale. The principal CEQA Guidelines sections governing content of this document are Sections 15120 through 15132 (Contents of Environmental Impact Reports), and Section 15168 (Program EIR).

The purpose of this Program EIR is to review the existing conditions, analyze potential environmental impacts, identify General Plan Update policies and programs that serve as mitigation, and identify additional mitigation measures to reduce potentially significant effects of the proposed City of Lawndale General Plan Update (General Plan Update). For more detailed information regarding the proposed Project, refer to Section 3.0, *Project Description*.

The City of Lawndale (which has the principal responsibility for processing and approving the Project) and other public (i.e., responsible and trustee) agencies that may use this Program EIR in the decision-making or permit process will consider the information in this Program EIR, along with other information that may be presented during the CEQA process. Environmental impacts are not always able to be mitigated to a level considered less than significant; in those cases, impacts are considered significant and unavoidable impacts. In accordance with Section 15093(b) of the CEQA Guidelines, if a public agency approves a project that has significant impacts that cannot be mitigated (i.e., significant unavoidable impacts), the agency shall state in writing the specific reasons for approving the project, based on the Final EIR and any other

information in the public record for the project. This is termed, per Section 15093 of the CEQA Guidelines, a "statement of overriding considerations."

This document analyzes the environmental effects of the General Plan Update to the degree of specificity appropriate to the current proposed actions, as required by Section 15146 of the CEQA Guidelines. The analysis considers the activities associated with the Project to determine the short-term and long-term effects associated with their implementation. This Program EIR discusses both the direct and indirect impacts of this Project, as well as the cumulative impacts associated with other past, present, and reasonably foreseeable future projects at a programmatic level.

This EIR has been prepared as a Program EIR in accordance with CEQA Guidelines Section 15168, which states the following:

a) *General. A program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:*
   1. *Geographically,*
   2. *As logical parts in the chain of contemplated actions,*
   3. *In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or*
   4. *As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.*

b) *Advantages. Use of a program EIR can provide the following advantages. The program EIR can:*
   1. *Provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action,*
   2. *Ensure consideration of cumulative impacts that might be slighted in a case- by-case analysis,*
   3. *Avoid duplicative reconsideration of basic policy considerations,*
   4. *Allow the Lead Agency to consider broad policy alternatives and program-wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts, and*
   5. *Allow reduction in paperwork.*

c) *Use with Later Activities. Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.*
   1. *If a later activity would have effects that were not examined in the Program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.*
   2. *If the agency finds that pursuant to Section 15162, no new effects could occur or no new mitigation measures would be required, the agency can approve the activity as being within the scope of the project covered by the program EIR, and no new environmental document would be required.*
   3. *An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into subsequent actions in the program.*
   4. *Where the subsequent activities involve site-specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to*

determine whether the environmental effects of the operations were covered in the program EIR.

5. *A program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.*

d) Use with Subsequent EIRs and Negative Declarations. A program EIR can be used to simplify the task of preparing environmental documents on later parts of the program. The program EIR can:

1. *Provide the basis in an Initial Study for determining whether the later activity may have any significant impacts.*
2. *Be incorporated by reference to deal with regional influences, secondary effects, cumulative impacts, broad alternatives, and other factors that apply to the program as a whole.*
3. *Focus an EIR on a subsequent project to permit discussion solely of new effects which had not been considered before.*

2.2 LAWNDALE GENERAL PLAN UPDATE

GENERAL PLAN

The Lawndale General Plan (General Plan Update or Project) is the overarching policy document that guides land use, housing, transportation, open space, public safety, community services, and other policy decisions throughout the City of Lawndale and the Sphere of Influence (collectively referred to as the Planning Area). The General Plan includes the eight elements mandated by State law, to the extent that they are relevant locally, which include: land use, circulation, housing, conservation, open space, noise, environmental justice, and safety elements, as specified in Government Code Section 65302. The City has chosen to combine the topics of Conservation and Open Space into one Element: Resource Management. The topic of Noise is included in the Public Safety Element. General plans must also address the topics of climate change and resiliency planning, either as separate elements or as part of other required elements. At the discretion of each jurisdiction, the general plan may combine these elements and may add optional elements relevant to the physical features of the jurisdiction. The City may also address other topics of interest; this General Plan includes elements related to Economic Development and Community Facilities. The General Plan Update sets out the goals, policies, and actions in each of these areas, serves as a policy guide for how the City will make key planning decisions in the future, and guides how the City will interact with the broader Los Angeles County, surrounding cities, and other local, regional, State, and Federal agencies.

The General Plan Update contains the goals and policies that will guide future decisions within the Planning Area. It also identifies implementation programs, in the form of actions, that will ensure the goals and policies in the General Plan Update are carried out. As part of the General Plan Update, the City and the consultant team prepared several support documents that serve as the building blocks for the General Plan Update and analyze the environmental impacts associated with implementing the General Plan Update.

EXISTING CONDITIONS REPORT

The Existing Conditions Report discusses Lawndale's current (2019-2023) trends and conditions; what is on the ground. It provides a detailed description of a wide range of topics within the City, such as demographic and economic conditions, land use, public facilities, and environmental resources. The Existing Conditions Report provides decision-makers, the public, and local agencies with context for making policy decisions. The Existing Conditions Report also provides information for the environmental setting and description contained within this Draft EIR.

ENVIRONMENTAL IMPACT REPORT

An EIR responds to the requirements of CEQA as set forth in Sections 15126, 15175, and 15176 of the CEQA Guidelines. The Community Development Department and City Council will use the EIR during the General Plan Update process in order to understand the potential environmental implications associated with implementing the General Plan Update. This EIR was prepared concurrently with the General Plan policy document in order to facilitate the development of a General Plan that is largely self-mitigating. In other words, as environmental impacts associated with the new General Plan Update, including the Land Use Map, were identified; policies and actions were incorporated into the General Plan Update policy document in order to reduce or avoid potential environmental impacts.

2.3 INTENDED USES OF THE PROGRAM EIR

The City of Lawndale, as the lead agency, has prepared this EIR to provide the public and responsible and trustee agencies with an objective analysis of the potential environmental impacts resulting from adoption of the General Plan Update and subsequent implementation of projects consistent with the General Plan Update. The environmental review process enables interested parties to evaluate the proposed Project in terms of its environmental consequences, to examine and recommend methods to eliminate or reduce potential adverse impacts, and to consider a reasonable range of alternatives to the project. While CEQA requires that consideration be given to avoiding adverse environmental effects, the lead agency must balance adverse environmental effects against other public objectives, including the economic and social benefits of a project, in determining whether a project should be approved.

This EIR will be used as the primary environmental document to evaluate all subsequent planning and permitting actions associated with the General Plan Update. This EIR may also be used by other agencies within Los Angeles County.

2.4 KNOWN RESPONSIBLE AND TRUSTEE AGENCIES

The term "Responsible Agency" includes all public agencies other than the Lead Agency that have discretionary approval power over the project or an aspect of the project (CEQA Guidelines Section 15381). For the purpose of CEQA, a "Trustee" agency has jurisdiction by law over natural resources that are held in trust for the people of the State of California (CEQA Guidelines Section 15386). While no Responsible Agencies or Trustee Agencies are responsible for approvals associated with adoption of the General Plan Update, implementation of future projects within the Planning Area may require permits and approvals from such agencies, which may include the following:

- California Air Resources Board (CARB);
- California Department of Conservation;
- California Department of Fish and Wildlife (CDFW);
- California Department of Forestry and Fire (CALFIRE);
- California Department of Toxic Substances Control;
- California Department of Transportation (Caltrans);
- California Department of Water Resources;
- California Emergency Management Agency;
- California Energy Commission;
- California Environmental Protection Agency (CalEPA);
- California Office of Emergency Services;
- Golden State Water Company (GSWC) Southwest System;
- West Basin Municipal Water District (WBMWD);
- Central Basin Municipal Water District (CBMWD);
- Native American Heritage Commission;
- Los Angeles County Sanitation Districts (LACSD);
- Los Angeles County Fire Department (LACoFD);
- Los Angeles County Sherriff's Department
- Los Angeles County Flood Control and Water Conservation District;
- Lawndale Elementary School District;
- Centinela Valley Union High School District;
- Los Angeles Regional Water Quality Control Board (RWQCB);
- South Coast Air Quality Management District (SCAQMD);
- Southern California Association of Governments (SCAG);
- U.S. Army Corps of Engineers (ACOE); and
- U.S. Fish and Wildlife Service (USFWS).

2.5 ORGANIZATION AND SCOPE

Sections 15122 through 15132 of the State CEQA Guidelines identify the content requirements for Draft and Final EIRs. An EIR must include a description of the environmental setting, an environmental impact analysis, mitigation measures for any significant impacts, alternatives, significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. The EIR prepared reviews environmental and planning documentation developed for the Project, environmental and planning documentation prepared for recent projects located within the Planning Area, and responses to the Notice of Preparation (NOP).

This Draft EIR is organized in the following manner:

SECTION 1.0 EXECUTIVE SUMMARY

The Executive Summary summarizes the characteristics of the proposed Project, known areas of controversy and issues to be resolved, and provides a concise summary matrix of the Project's

environmental impacts and possible mitigation measures. This chapter identifies alternatives that reduce or avoid at least one significant environmental effect of the proposed Project.

SECTION 2.0 INTRODUCTION

Section 2.0 briefly describes the proposed Project, the purpose of the environmental evaluation, identifies the lead, trustee, and responsible agencies, summarizes the process associated with preparation and certification of an EIR, identifies the scope and organization of the Draft EIR, and summarizes comments received on the NOP.

SECTION 3.0 PROJECT DESCRIPTION

Section 3.0 provides a detailed description of the proposed Project, including the location of land uses, intended objectives, background information, the physical and technical characteristics, including the decisions subject to CEQA, subsequent projects and activities, and a list of related agency action requirements.

SECTION 4.0 BASIS OF CUMULATIVE ANALYSIS

Section 4.0 describes the approach taken and methodology for the cumulative environmental analysis.

SECTION 5.0 ENVIRONMENTAL ANALYSIS

Section 5.0 evaluates the impacts associated with implementation of the General Plan Update. This section is organized according to issue area. Each area includes a description of the environmental and regulatory setting relative to that issue; the CEQA thresholds for the specific issue area; and the environmental impacts of the proposed Project. Implementation of General Plan Update goals, policies, and actions and their ability to reduce potential impacts are described in the Impacts and Mitigation Measures subsection.

Impacts and General Plan Update goals, policies and actions are generally organized according to the topical areas. However, an impact or General Plan Update goals, policies, or actions located within the document should not restrict it from being considered under another issue topic, even though omitted from that section. Many of the impacts relating to the General Plan Update are multi-faceted. Similarly, the goals, policies, and actions may accomplish several objectives and reduce more than one impact. It is important that decision-makers be cognizant of this fact in their consideration and use of this document. If goals, policies, and actions are altered, the affect that would have on other issues should be evaluated.

SECTION 6.0 OTHER CEQA CONSIDERATIONS

Section 6.0 discusses the potential long-term implications of the proposed action and irreversible changes on the environmental that would be caused by the proposed Project, should it be implemented. The Project's growth-inducing impacts, including the potential for economic or population growth are also discussed.

SECTION 7.0 ALTERNATIVES

Section 7.0 describes a reasonable range of alternatives to the Project that could avoid or substantially lessen the Project's significant impacts and still feasibly attain the Project's basic objectives.

SECTION 8.0 REPORT PREPARERS

Section 8.0 identifies all individuals involved in preparing the EIR.

APPENDICES

This section includes all notices and other procedural documents pertinent to the Draft EIR, as well as technical material prepared to support the analysis.

2.6 ENVIRONMENTAL REVIEW PROCESS

The review and certification process for the EIR has involved, or will involve, the following general procedural steps:

NOTICE OF PREPARATION

The City of Lawndale circulated a Notice of Preparation (NOP) of an EIR for the Project on December 6, 2022 to trustee and responsible agencies, the State Clearinghouse, and the public. A scoping meeting was held on December 15, 2022 at 6:30 p.m. at the Harold E. Hofmann Community Center. Information regarding the scoping meeting was included in the NOP, as described above. The intent of the meeting was to share information regarding the proposed Project and the environmental review process and to receive comments regarding the scope and content of the environmental analysis to be addressed in the EIR.

No public or agency comments on the NOP related to the EIR analysis were presented or submitted during the scoping meeting. However, during the 30-day public review period for the NOP, which ended on January 5, 2023, four written comment letters were received on the NOP. A summary of the NOP comments is provided later in this chapter. The NOP and all comments received on the NOP are presented in Appendix A, *NOP and NOP Comment Letters*.

DRAFT EIR

The Draft EIR contains a description of the Project, description of the environmental setting, identification of the Project's direct and indirect impacts on the environment and mitigation measures for impacts found to be significant, as well as an analysis of Project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. This Draft EIR identifies issues determined to have no impact or a less than significant impact, and provides detailed analysis of potentially significant and significant impacts. Comments received in response to the NOP were considered in preparing the analysis in this EIR. Upon completion of the Draft EIR, the City of Lawndale will file the Notice of Completion (NOC) with the State Clearinghouse of the Governor's Office of Planning and Research to begin the public review period.

PUBLIC NOTICE/PUBLIC REVIEW

Coinciding with the NOC, the City of Lawndale will provide a public notice of availability for the Draft EIR, and invite comment from the general public, agencies, organizations, and other interested parties. Consistent with CEQA requirements, the review period for this Draft EIR is forty-five (45) days. Public

comment on the Draft EIR will be accepted in written form. All comments or questions regarding the Draft EIR should be addressed to:

Jared Chavez - Community Development Manager
City of Lawndale
14717 Burin Avenue
Lawndale, CA 90260
Email: jchavez@lawndalecity.org

RESPONSE TO COMMENTS/FINAL EIR

Following the public review period, a Final EIR will be prepared. The Final EIR will respond to both oral and written comments received during the public review period.

CERTIFICATION OF THE EIR/PROJECT CONSIDERATION

The City of Lawndale City Council will review and consider the Final EIR. If the City finds that the Final EIR is "adequate and complete," the City Council may certify the Final EIR in accordance with CEQA. As set forth by CEQA Guidelines Section 15151, the standards of adequacy require an EIR to provide a sufficient degree of analysis to allow decisions to be made regarding the proposed project that intelligently take account of environmental consequences.

Upon review and consideration of the Final EIR, the City Council may take action to approve, revise, or deny the Project. If the EIR determines that the project would result in significant adverse impacts to the environment that cannot be mitigated to less than significant levels, the City Council would be required to adopt a statement of overriding considerations as well as written findings in accordance with State CEQA Guidelines Sections 15091 and 15093. If additional mitigation measures are required (beyond the General Plan Update policies and actions that reduce potentially significant impacts, as identified throughout this EIR), a Mitigation Monitoring and Reporting Program (MMRP) would also be adopted in accordance with Public Resources Code Section 21081.6(a) and CEQA Guidelines Section 15097 for mitigation measures that have been incorporated into or imposed upon the project to reduce or avoid significant effects on the environment. The MMRP would be designed to ensure that these measures are carried out during project implementation, in a manner that is consistent with the EIR.

2.7 INCORPORATED BY REFERENCE

Pertinent documents relating to this EIR have been cited in accordance with CEQA Guidelines Section 15148, which encourages “incorporation by reference” as a means of reducing redundancy and length of environmental reports. The documents listed below, which are available for public review at the City of Lawndale, Community Development Department, at 14717 Burin Avenue, and on the City’s website: www.lawndalecity.org, are hereby incorporated by reference into this EIR. Information contained within these documents has been utilized for each section of this EIR. A brief synopsis of the scope and content of these documents is provided below.

CITY OF LAWNDALE MUNICIPAL CODE

The Lawndale Municipal Code (Municipal Code) consists of all the regulatory and penal ordinances and administrative ordinances of the City of Lawndale. The Municipal Code is one of the City's primary tools to control land uses, in accordance with the General Plan programs and policies. The City's Zoning regulations are incorporated as Title 17, *Zoning*. Zoning regulations are adopted to protect and promote the public health, safety, comfort, convenience, prosperity, and general welfare and to provide the economic and social advantages resulting from an orderly planned use of land resources.

Municipal Code Title 15, *Buildings and Construction*, adopts the 2022 California Building Standards Code, with amendments in consideration of the City's local climactic, geological, and topographical considerations. Other relevant Municipal Code regulations include the following, among others: Title 8, *Health and Safety*; Title 10, *Vehicles and Traffic*; and Title 12, *Streets, Sidewalks, and Public Places*; and Title 13, *Public Services*.

CITY OF LAWNDALE CLIMATE ACTION PLAN

In cooperation with the South Bay Cities Council of Governments, the City of Lawndale developed a Climate Action Plan (CAP) to reduce Greenhouse Gas (GHG) emissions within the City. The City's CAP serves as a guide for action by setting GHG emission reduction goals and establishing strategies and policy to achieve desired outcomes over the next 20 years. The CAP is designed to identify community-wide strategies to lower GHG emissions from a range of sources within the jurisdiction, including transportation, land use, energy generation and consumption, water, and waste. The CAP advances these goals and streamlines City efforts to deploy specific initiatives and programs that target the reduction of GHG emissions, while integrating these efforts with the other priorities such as economic development, regional mobility and connectivity, and improving the local air and water quality.

2.8 COMMENTS RECEIVED ON THE NOTICE OF PREPARATION

The City received four comment letters on the NOP. Copies of these letters are provided in Appendix A of this Draft EIR and the comments are summarized below.

- Southern California Association of Governments: The Southern California Association of Governments (SCAG) provides SCAG Connect SoCal Goals for discussion of consistency, non-consistency, or non-applicability, in the Draft EIR and background regarding demographic and growth forecasts. SCAG also provides mitigation measures for operational air quality impacts that the City should consider in the DEIR.
- South Coast Air Quality Management District: The South Coast Air Quality Management District (SCAQMD) recommends that the SCAQMD's CEQA Air Quality Handbook be used as guidance when preparing the DEIR air quality and greenhouse gas analyses. It is also recommended that the Lead Agency (City of Lawndale) use the CalEEMod land use emissions software to estimate pollutant emissions from typical land use development. SCAQMD recommends that criteria pollutant emissions are quantified and compared to SCAQMD's CEQA regional pollutant emissions significance thresholds and localized significance thresholds (LSTs) to determine the Proposed Project's air quality impacts. Any potential adverse air quality impacts that could occur from all

phases of the Proposed Project, and all air pollutant sources related to the Proposed Project, are to be identified. It is also recommended that the Lead Agency perform a mobile source health risk assessment to disclose the potential health risks.

- Native American Heritage Commission: The Native American Heritage Commission (NAHC) provides information on Assembly Bill (AB) 52 and Senate Bill (SB) 18 tribal consultation requirements. The NAHC recommends conducting tribal consultation early and gives recommendations for Cultural Resources Assessments.
- Rick Hinojos: Mr. Hinojos requested that the Current General Plan Land Use Map be included in the project description.

3.0 PROJECT DESCRIPTION

3.1 PROJECT LOCATION

The City of Lawndale is located in the South Bay area of Los Angeles County, approximately 10 miles southwest of downtown Los Angeles, refer to Figure 3-1, *Regional Location Map*. The City is approximately 1.9 square miles (1,241 acres) and is bounded by the City of Hawthorne to the north and west, by unincorporated areas of Los Angeles County and the City of Gardena to the east, by the City of Torrance to the south, and by the City of Redondo Beach to the south and west. Regional access to the City is provided by Interstate 405, a major north-south highway which provides access to Lawndale and the greater Los Angeles region.

The Planning Area is the geographic area for which the General Plan Update provides a framework for long-term growth and resource conservation. State law requires the Planning Area for the General Plan Update to include all territory within Lawndale's incorporated area as well as "any land outside its boundaries which in the planning agency's judgment bears relation to its planning" (California Government Code Section 65300). The General Plan Update Planning Area, as shown in Figure 3-2, *General Plan Planning Area*, includes the entire City limits (approximately 1,241 acres) as well as the City of Lawndale's Sphere of Influence (approximately 314 acres); the entire Planning Area is approximately 1,555 acres.

3.2 ENVIRONMENTAL SETTING

The City of Lawndale is a city of approximately 30,882 people (Department of Finance 2023). The City was incorporated in 1959, although the community's history dates back to the Rancho Era. The "town" of Lawndale was founded in 1905 and remained a predominantly agricultural community until major growth occurred after the conclusion of World War II. Lawndale incorporated in large part to fend off annexation attempts by adjoining cities and since that time it has essentially been a bedroom community, primarily of single-family homes. However, many older single-family homes have been replaced with duplexes and multi-family developments of three or more units resulting in the City having one of the highest population densities in Los Angeles County.

The City of Lawndale is a small but highly urbanized community that is primarily a residential community with well-established neighborhoods. Lawndale is dominated by single-family low density housing, e.g., single-family detached, duplex/double unit. Commercial activity is concentrated along the City's major arterial roadways, particularly along Hawthorne Boulevard.

CITY OF LAWNDALE GENERAL PLAN

The City's General Plan was last comprehensively updated in 1992, the Housing Element was updated in 2022 (in accordance with State housing law). The City's Existing General Plan Land Use Map (Figure 3-3, *Existing General Plan Land Use Map*) designates land uses within the Planning Area, which includes the City, but does not include its Sphere of Influence. Table 3-1, *Existing General Plan Land Use Designations*, summarizes land uses included in the Existing General Plan (1992 General Plan).

Table 3-1
Existing General Plan Land Use Designations

General Plan Designation	Within City Boundary		Within Sphere of Influence		Total Planning Area	
	Acres	% of Total Acres	Acres	% of Total Acres	Acres	% of Total Acres
Single-Family Low Density	11	<1%	0	0%	11	<1%
Single-Family Medium Density	41	3%	0	0%	41	3%
Multi-Family Low Density	443	36%	0	0%	443	29%
Multi-Family Medium Density	115	9%	0	0%	115	7%
General Commercial	113	9%	0	0%	113	7%
Downtown Commercial	31	3%	0	0%	31	2%
Specialty Commercial	0	0%	0	0%	0	0%
Light Industrial	21	2%	0	0%	21	1%
Open Space	20	2%	0	0%	20	1%
Public Facilities	121	10%	0	0%	121	8%
Public Facilities Overlay	n/a	0%	0	0%	n/a	0%
Other*	0	0%	229	73%	229	15%
Transportation/Utilities Related	325	26%	85	27%	410	26%
Total	***1,241***	***100%***	***314***	***100%***	***1,555***	***100%***

Note: Numbers are rounded to the nearest whole number.

* The SOI area is not included as part of the planning area for the current General Plan, and are included in the Los Angeles County General Plan.

Source: De Novo Planning, *City of Lawndale General Plan Existing Conditions Report*, 2023.

City of Lawndale General Plan Land Use Designations

Single-Family Low Density: Permits a density range of 0-8.9 dwelling units per acre. This category is intended for single-family detached units on a minimum 5,000-square foot lot. Permits single-family detached homes and ancillary uses.

Single-Family Medium Density: Permits a density of 8.9-17.6 dwelling units per acre. This category is only intended to be applied to the areas of Lawndale where the predominate use is existing single-family units on 2,500-square foot lots. Permits single-family detached homes on 2,500-square foot lots and ancillary uses.

Multi-Family Low Density: Permits a density of 8.9 dwelling units per acre to 17.6 dwelling units per acre and allows two units on a minimum 5,000-square foot lot. Permits single-family detached, duplex/double unit, condominiums, townhomes, or any combination of the above and ancillary uses.

Multi-Family Medium Density: Permits a density range of 17.6 dwelling units per acre to 33 dwelling units per acre, on a minimum 5,000-square foot lot. Permits single-family detached, duplex/double unit, condominiums, townhomes, apartments, manufactured housing, or any combination of the above if deemed appropriate and compatible with surrounding land uses, and ancillary uses.

General Commercial: This designation provides the community with a wide variety of retail shops, restaurants, services, and office uses to meet the daily needs of the residents. The permitted floor area ratio, not to exceed 1.0, unless modified by the Hawthorne Boulevard Corridor Specific Plan.

Downtown Commercial: The purpose of this designation is to encourage urban nodes with commercial activity. This designation is applied specifically to the northerly side of the Hawthorne Boulevard and Manhattan Beach Boulevard intersection, and on the southerly side of the Marine Avenue and Hawthorne Boulevard intersection (see Hawthorne Boulevard Corridor Specific Plan).

Specialty Commercial: This designation can apply to sites that are a minimum five (5) acres in size and are located so as to be easily accessible and visible from major transportation corridors. The uses should have a central theme and attract customers from outside the City as well as within Lawndale. Examples of suitable specialty commercial uses are a complex of stores catering to major household purchases, such as furniture, appliances, carpets, etc.; a variety of factory outlet stores; or assorted entertainment and eating establishments. The floor area ratio shall not exceed 0.3.

Light Industrial: This designation permits light manufacturing, assembly, packaging, fabrication, and processing of materials into finished products rather than the conversion of raw materials. The industrial activity shall be conducted primarily within structures and outside storage areas and assembly activity should be limited. The floor area ratio shall not exceed 0.5.

Open Space: This designation includes public parks, parks that are part of school sites, public and private outdoor recreational facilities, and landscaped open space areas.

Public Facilities: This category includes public school sites; Atchison, Topeka and Santa Fe Railroad right-of-way; civic center; public maintenance yards; utility easements; library; and Prairie Avenue Recreation Center uses.

Public Facilities Overlay: This overlay is intended to identify existing and potential sites that are suitable for a public park, recreational facility, or any other public facility building or use. In the area adjacent to the Lawndale Civic Center, this overlay is intended to identify areas where possible expansion of City Hall and/or future public uses can occur.

LOS ANGELES COUNTY GENERAL PLAN (SOI)

East of the City Limits (east of Prairie Avenue) is the Los Angeles County unincorporated community of El Camino Village, which is within the City's Sphere of Influence. El Camino Village is primarily a densely developed, single-family residential community with commercial uses along Crenshaw Boulevard. The

area is approximately 314 acres and is entirely built-out. Although parts of El Camino Village share a Lawndale zip code (90260), the City has historically not provided services to the community.

The SOI area is not included in the planning area for the Current General Plan, and is in unincorporated Los Angeles County. Below are the applicable Los Angeles County General Plan Land Use designations, which are included in the SOI area.

Residential 9 (H9): Single family residences, 0-9 dwelling unit (du)/net acre.

Residential 18 (H18): Single family residences, two family residences, 0-18 du/net acre.

Residential 30 (H30): Single family residences, two family residences, multifamily residence, 0-30 du/net acre.

General Commercial (CG): Local-serving commercial uses, including retail, restaurants, and personal and professional services; single family and multifamily residences; and residential and commercial mixed uses, 0-50 du/net acre.

Public and Semi-Public (P): Public and semi-public facilities and community-serving uses, including public buildings and campuses, schools, hospitals, cemeteries, and fairgrounds; airports and other major transportation facilities.

Water (W): Bodies of water, such as lakes, reservoirs, natural waterways, and man-made infrastructure, such as drainage channels, floodways, and spillways. Includes active trail networks within or along drainage channels.

HAWTHORNE BOULEVARD SPECIFIC PLAN

The Hawthorne Boulevard Specific Plan (HBSP) oversees the development of the Hawthorne Boulevard corridor and the north side of both Artesia Boulevard and Redondo Beach Boulevard (see Figure 3-4, *Hawthorne Boulevard Specific Plan Map*). The HBSP acts as a tool for implementing the goals and policies of the General Plan through the regulation of use, density, height, and other design standards to achieve the overall vision for the area. The Specific Plan was originally adopted in June 1999 and has undergone various amendments since its adoption. The Specific Plan includes General Commercial, Downtown Commercial, Public Facilities and Multi-Family Medium land use designations.

Hawthorne Boulevard serves as the City's primary transportation route, corridor of economic activity, and the community focal point. It has been, and continues to be, the City's central artery for circulation, commerce, employment, and social activity. Hawthorne Boulevard is oriented in a north-south direction, connecting the City of Lawndale with the cities of Hawthorne in the north and Torrance in the south.

CITY OF LAWNDALE ZONING ORDINANCE

The City's Zoning Ordinance is codified as Title 17, Zoning, of the Lawndale Municipal Code. The stated purpose of Title 17 is to designate, regulate, and restrict the location and use of buildings, structures, and land for residence, commerce, trade, industry, or other purposes; to regulate and limit the height, number of stories, and size of buildings and other structures hereafter erected or altered; to regulate and determine the size of yards and other open spaces; and to regulate and limit the density of population

and, for said purposes, to divide the city into zones of such number, shape, and area as may be deemed best suited to carry out these regulations and to provide for their enforcement, in accordance with the comprehensive general plan.

3.3 PROJECT BACKGROUND

California Government Code Section 65300 et seq. requires all counties and cities to prepare and maintain a General Plan for the long-term growth, development, and management of the land within the jurisdiction's planning boundaries. The General Plan acts as a "constitution" for development, and is the jurisdiction's lead legal document in relation to growth, development, and resource management issues. Development regulations (e.g., zoning and subdivision standards) are required by law to be consistent with the General Plan.

The General Plan includes the eight elements mandated by State law, including: Circulation, Conservation, Housing, Land Use, Noise, Open Space, Environmental Justice and Safety. The City's 2021-2029 Housing Element was adopted on February 7, 2022 and is not part of this update. The City may also address other topics of interest; this General Plan includes an element related to Economic Development and Community Facilities.

The California Government Code also requires that a General Plan be comprehensive, internally consistent, and plan for the long term. The General Plan should be clearly written, easy to administer, and available to all those concerned with the community's development.

State planning and zoning law (California Government Code Section 65000 et seq.) establishes that zoning ordinances are required to be consistent with the general plan and any applicable specific plans, area plans, master plans, and other related planning documents. When amendments to the general plan are made, corresponding changes in the zoning ordinance may be required within a reasonable time to ensure consistency between the revised land use designations in the general plan (if any) and the permitted uses or development standards of the zoning ordinance (Gov. Code Section 65860, subd. [c]). Thus, the Lawndale Zoning Ordinance is effectively the principal tool for implementing the City's General Plan, and by State law, must be consistent with the General Plan.

3.4 STATEMENT OF OBJECTIVES

The following objectives were identified for the proposed update to the General Plan:

1. Reflect the current goals and vision expressed by City residents, businesses, decision-makers, and other stakeholders;
2. Address issues and concerns identified by City residents, businesses, decision-makers, and other stakeholders;
3. Protect Lawndale's existing residences, character, and sense of community;
4. Proactively plan for and accommodate local and regional growth in a responsible manner;

5. Encourage mixed-use development patterns that promote vibrant commercial and residential areas;
6. Allow for a range of high-quality housing options;
7. Attract and retain businesses and industries that provide jobs for local residents;
8. Continue to maintain and improve multimodal transportation opportunities;
9. Maintain strong fiscal sustainability and continue to provide efficient and adequate public services;
10. Address new requirements of State law; and
11. Address emerging transportation, housing, and employment trends.

3.5 PROJECT CHARACTERISTICS

The City Lawndale is preparing a comprehensive update to its existing General Plan. The updated Lawndale General Plan is expected to be adopted in 2023 and will guide the City's development, growth, and conservation through land use objectives and policy guidance. The General Plan Update is intended to be an expression of the community's vision for the City and Planning Area, and constitutes the policy and regulatory framework by which future development projects will be reviewed and public improvements will be implemented. The City will implement the General Plan Update by requiring development, infrastructure improvements, and other projects to be consistent with its policies, and by implementing the actions included in the General Plan Update.

The Lawndale General Plan Update includes a comprehensive set of goals, policies, and actions (implementation measures), organized into Elements, as well as a revised Land Use Map (refer to Figure 3-5, *General Plan Update Land Use Map*). The goals and policies provide guidance to the City on how to direct change, manage growth, and manage resources over the 20-year life of the General Plan. In order to ensure that the goals and policies in the General Plan are effectively implemented, a series of actions, or implementation measures have been developed, and are presented in each Element alongside the goals and policies they implement.

- A **goal** is a description of the general desired result that the City seeks to create through the implementation of the General Plan.
- A **policy** is a specific statement that guides decision-making as the City works to achieve its goals. Once adopted, policies represent statements of City regulations. The General Plan's policies set out the standards that will be used by City staff, the Planning Commission, and the City Council in their review of land development projects, resource protection activities, infrastructure improvements, and other City actions. Policies are on-going and require no specific action on behalf of the City.
- An **action** is an implementation measure, procedure, technique, or specific program to be undertaken by the City to help achieve a specified goal or implement an adopted policy. The City

must take additional steps to implement each action in the General Plan. An action is something that can and will be completed.

Additional elements that relate to the physical development of the City will also be addressed in the General Plan Update. The degree of specificity and level of detail of the discussion of each General Plan Update Element need only reflect local conditions and circumstances. The Lawndale General Plan Update will include all of the State-mandated elements, and will address two optional topics: Economic Development and Community Facilities.

The General Plan Update is being prepared to address the requirements of State law and the relevant items addressed in Government Code Section 65300 et seq. The Lawndale General Plan Update is intended to reflect the desires and vision of Lawndale residents, businesses, the Planning Commission, and City Council.

3.5.1 GENERAL PLAN UPDATE ELEMENTS

As part of the General Plan Update, some of the elements have been renamed and reorganized, including combining topical areas, as described and summarized below.

Land Use Element

The Land Use Element designates the general distribution and intensity of residential, commercial, industrial, open space, public, and other categories of public and private land uses. The Land Use Element includes the Land Use Map, which identifies land use designations for each parcel in the Planning Area (Figure 3-5). The Land Use Element provides descriptions of land use designations and policy guidance to address the City's preferred mix of land uses, plans to manage growth, strategies to encourage land use compatibility, conservation of existing character and quality of established neighborhoods, and direction on community character and design.

Mobility Element (Circulation)

The Mobility Element correlates closely with the Land Use Element and identifies the general locations and extent of existing and proposed major thoroughfares, transportation routes, and alternative transportation facilities necessary to support a multi-modal transportation system. This Element is intended to facilitate mobility of people and goods throughout Lawndale by a variety of transportation modes, including bicycle, pedestrian, and transit.

Resource Management Element (Conservation, Open Space and Air Quality)

The Resource Management Element focuses on the cultural, environmental, and man-made resources and the provision of open spaces. The Element combines the State-mandated Open Space, Conservation and Air Quality Elements and provides the foundation for resource conservation in the context of the City's long-term vision for the future and land use map. The Resource Management Element also guides decision making around the community's infrastructure systems, including water supply, wastewater, flood control, solid waste collection and disposal, and storm drainage and water quality. Other public and semi-public community facilities are also addressed in this chapter, including parks and recreation.

Public Safety Element (Safety and Noise)

The Public Safety Element establishes goals, policies and actions to protect the community from risk associated with geologic, fire, and flood hazards, as well as setting standards for emergency preparedness. The Public Safety Element supports the City's participation in the Lawndale Local Hazard Mitigation Plan, County of Los Angeles All-Hazards Mitigation Plan and the Lawndale Climate Action Plan. This Element also addresses the required topics related to noise, including standards and policies to protect the community from the harmful and annoying effects of exposure to excessive noise levels. This Element includes strategies to reduce land use conflicts that may result in exposure to unacceptable noise levels.

Environmental Justice Element

The Environmental Justice Element establishes goals, policies, and actions to improve environmental conditions within the community, especially for sensitive population groups. Environmental Justice Communities are described by the California Communities Environmental Health Screen Tool (CalEnviroScreen) as areas (i.e., census tracts) of a city or county that have higher environmental burdens and vulnerabilities than other areas. The term "disadvantaged community" is a broad designation that includes any community disproportionally affected by environmental, health, and other burdens or low-income areas disproportionally affected by environmental pollution and other hazards. In relation to environmental justice, disadvantaged communities are typically those communities that disproportionately face the burdens of environmental hazards. Environmental issue areas include pollution exposure (including air quality); access to public facilities, such as public improvements, public services and community amenities; access to healthy food; safe and sanitary living conditions; opportunities and access for physical activity; and improved opportunities for civic engagement. This Element includes strategies to reduce public health risks and address environmental justice concerns of those living in disadvantaged communities.

Economic Development Element

The Economic Development Element is intended to guide the City's future policy decisions to support growing and strengthening the local economy and supporting the City's role in the South Bay regional economy. The policies contained within the Element are intertwined with those found in other elements of the General Plan.

Community Facilities Element

The Community Facilities Element guides decision making to meet the infrastructure and public services needs of business and residents. Goals, policies, and actions address the provision of services and facilities, as well as water, wastewater and communications systems, and community safety specific to police and fire services. Health and educational resources are also discussed in this Element.

Housing Element

The Housing Element is the City's primary policy guide for the maintenance, improvement, and development of housing withing Lawndale. The Element provides an indication of the need for housing in the community in terms of affordability, availability, adequacy, and accessibility. It provides a strategy to address housing needs and identifies a series of specific housing program actions to meet community

needs at all income levels for the 6th Cycle Housing Element Planning Period (2021-2029). The City's 2021-2029 Housing Element was adopted on February 7, 2022 and is not part of this update.

Existing and Proposed General Plan Elements

Existing General Plan Elements

- Land Use
- Circulation
- Housing
- Economic Development
- Open Space
- Conservation
- Air Quality Management Plan
- Safety Element
- Noise Element

General Plan Update Elements

- Land Use
- Mobility
- Housing
- Resource Management
- Public Safety
- Environmental Justice
- Economic Development
- Community Facilities

3.5.2 LAND USE DESIGNATIONS

The General Plan Land Use Map identifies land use designations for each parcel within the Planning Area (Figure 3-4). The Land Use Element of the General Plan Update defines various land use designations by their allowable uses and maximum and minimum development densities and intensities. Table 3-2, *Proposed General Plan Land Use Designations*, summarizes land uses included in the General Plan Update.

Table 3-2
Proposed General Plan Land Use Designations

General Plan Land Use Designations	Within City Boundary		Within Sphere of Influence		Total Planning Area	
	Acres	% of Total Acres	Acres	% of Total Acres	Acres	% of Total Acres
Low Density Residential	49	4%	202	64%	251	16%
Medium Density Residential	458	37%	0	0%	458	30%
High Density Residential	115	9%	0	0%	115	7%
Commercial	38	3%	18	6%	56	4%
Industrial	21	2%	0	0%	21	1%
Open Space	13	1%	0	0%	13	1%
Public Facilities	128	10%	10	3%	138	9%
Hawthorne Boulevard Specific Plan	95	8%	0	0%	95	6%
Right-of-Way	324	26%	84	27%	408	26%
Total	***1,241***	***100%***	***314***	***100%***	***1,555***	***100%***
Note: Numbers are rounded to the nearest whole number.						

The following describes the proposed land use designations for the General Plan Update.

Low Density Residential (LDR); 0 – 8.9 du/ac

The Low Density Residential land use designation provides for the development of low density single-family dwellings at a density between 0 and 8.9 dwelling units per acre.

Medium Density Residential (MDR); 9 – 17.4 du/ac

The Medium Density Residential land use designation allows for a range of housing types including single-family attached and detached units and duplex, condominiums, and townhouse at a density of between 9 and 17.4 dwelling units per acre.

High Density Residential (HDR); 17.5 – 33 du/ac

The High Density Residential land use designation provides for a variety of small-lot single-family dwelling units and multi-family dwelling units including: courtyard homes, patio homes, duplex, condominiums, townhomes, apartments, and manufactured homes at a density between 17.5 and 33 dwelling units per acre.

Housing Opportunity Overlay; 20 – 100 du/ac

The Housing Opportunity Overlay is an overlay requiring a minimum residential density of 20 dwelling units per acre and allowing for a maximum density of 100 dwelling units per acre in accordance with 2021-2029 Housing Element. For sites not utilized for Housing Opportunity Overlay uses, the density range or maximum floor-area- ratio shall be as allowed in the primary land use designation.

Commercial (C)

The Commercial land use designation provides a variety of retail and service-oriented business activities, restaurants, services and office uses to meet the daily needs of the residents. There is no minimum or maximum building intensity.

Industrial (I)

The Industrial designation permits light manufacturing, assembly, packaging, fabrication and processing of materials into finishing products rather than the conversion of raw materials. Industrial activity shall be conducted primarily within structures and outside storage areas and assembly activity should be limited. There is no minimum or maximum building intensity.

Open Space (OS)

The Open Space designation includes public parks, parks that are part of school sites, public and private outdoor recreational facilities, and landscaped open space areas.

Public Facilities (PF)

The Public Facilities designation provides for publicly owned properties and facilities including, schools, fire stations, police stations, community centers, utility substations, water facilities, administrative offices and City government office complexes. Other uses that are determined to be compatible with primary uses may also be allowed. There is no minimum or maximum building intensity.

Hawthorne Boulevard Specific Plan (HBSP)

The Hawthorne Boulevard Specific Plan (HBSP) provides detailed policies, standards, and criteria for the area's development. Land uses within the Specific Plan area are detailed in the Specific Plan document. The Specific Plan serves as zoning for the Specific Plan area. The maximum densities and intensities of development are detailed in the Specific Plan.

3.5.3 GENERAL PLAN BUILDOUT ANALYSIS

The maximum density or intensity permitted for an individual parcel is controlled by the land use designation, unless a density bonus pursuant to Lawndale Municipal Code Chapter 17.50, *Density Bonus Provisions for Residential Units* applies. In addition to the land use designation, development of a parcel is influenced by a variety of factors including the physical characteristics of a parcel, compatibility with nearby uses, access and infrastructure limitations, market factors, and previous developments trends.

While no specific development projects are proposed as part of the Lawndale General Plan Update, the General Plan Update will accommodate future growth in Lawndale, including new businesses, expansion of existing businesses, and new residential uses. New growth is anticipated to occur primarily within the Hawthorne Boulevard Specific Plan area. The buildout analysis assumes a 20-year planning horizon, and 2045 is to be the full buildout year of the General Plan (the point at which all parcels in the City are developed according to their General Plan land use designation).

Table 3-3, *General Plan 2045 Buildout by Land Use Designation*, provides a statistical summary of the buildout potential associated with the General Plan Update Land Use Map compared to existing on-the-ground conditions by General Plan Update Land Use Designation. As shown in Table 3-3, buildout of the General Plan could yield a total of up to 15,405 housing units, a population of 47,430 people, approximately 5.35 million square feet of non-residential building square footage, and 9,208 jobs within the Planning Area. As shown in Table 3-4, this represents development growth over existing conditions of up to approximately 3,942 new housing units, 9,482 people, 808,864 square feet of new non-residential building square footage and 2,738 jobs.

Numbers are rounded to the nearest whole number.

This page intentionally left blank.

For each environmental issue addressed in Section 5.0, *Environmental Analysis*, the analysis of the General Plan Update is based on various assumptions regarding existing and future conditions in Lawndale. Unless otherwise stated, the assumptions are as specified in Table 3-4, *General Plan Update Growth Assumptions*, which are based on the General Plan 2045 Buildout shown in Table 3-3.

Table 3-4
General Plan Update Growth Assumptions

Description	Housing Units	Population	Non-Residential Development (Square Feet)	Jobs
Existing Conditions (2022)	11,463	37,948	4,542,162	6,470
2045 General Plan	15,405	47,430	5,351,026	9,208
Net Change	+3,942	+9,482	+808,864	+2,738

3.6 USE OF THE EIR AND REQUIRED AGENCY APPROVALS

This EIR may be used for the following direct and indirect approvals and permits associated with adoption and implementation of the General Plan Update.

3.6.1 CITY OF LAWNDLAE

The City of Lawndale is the lead agency for the proposed Project. The City of Lawndale General Plan Update will be presented to the Planning Commission for review and recommendation and to the City Council for comment, review, and consideration for adoption. The City Council has the sole discretionary authority to approve and adopt the General Plan Update. In order to approve the proposed Project, the City Council would consider the following actions:

- Certification of the General Plan EIR;
- Adoption of required CEQA findings and Statement of Overriding Considerations for the above action, if required;
- Adoption of a Mitigation Monitoring and Reporting Program; and
- Approval of the General Plan Update.

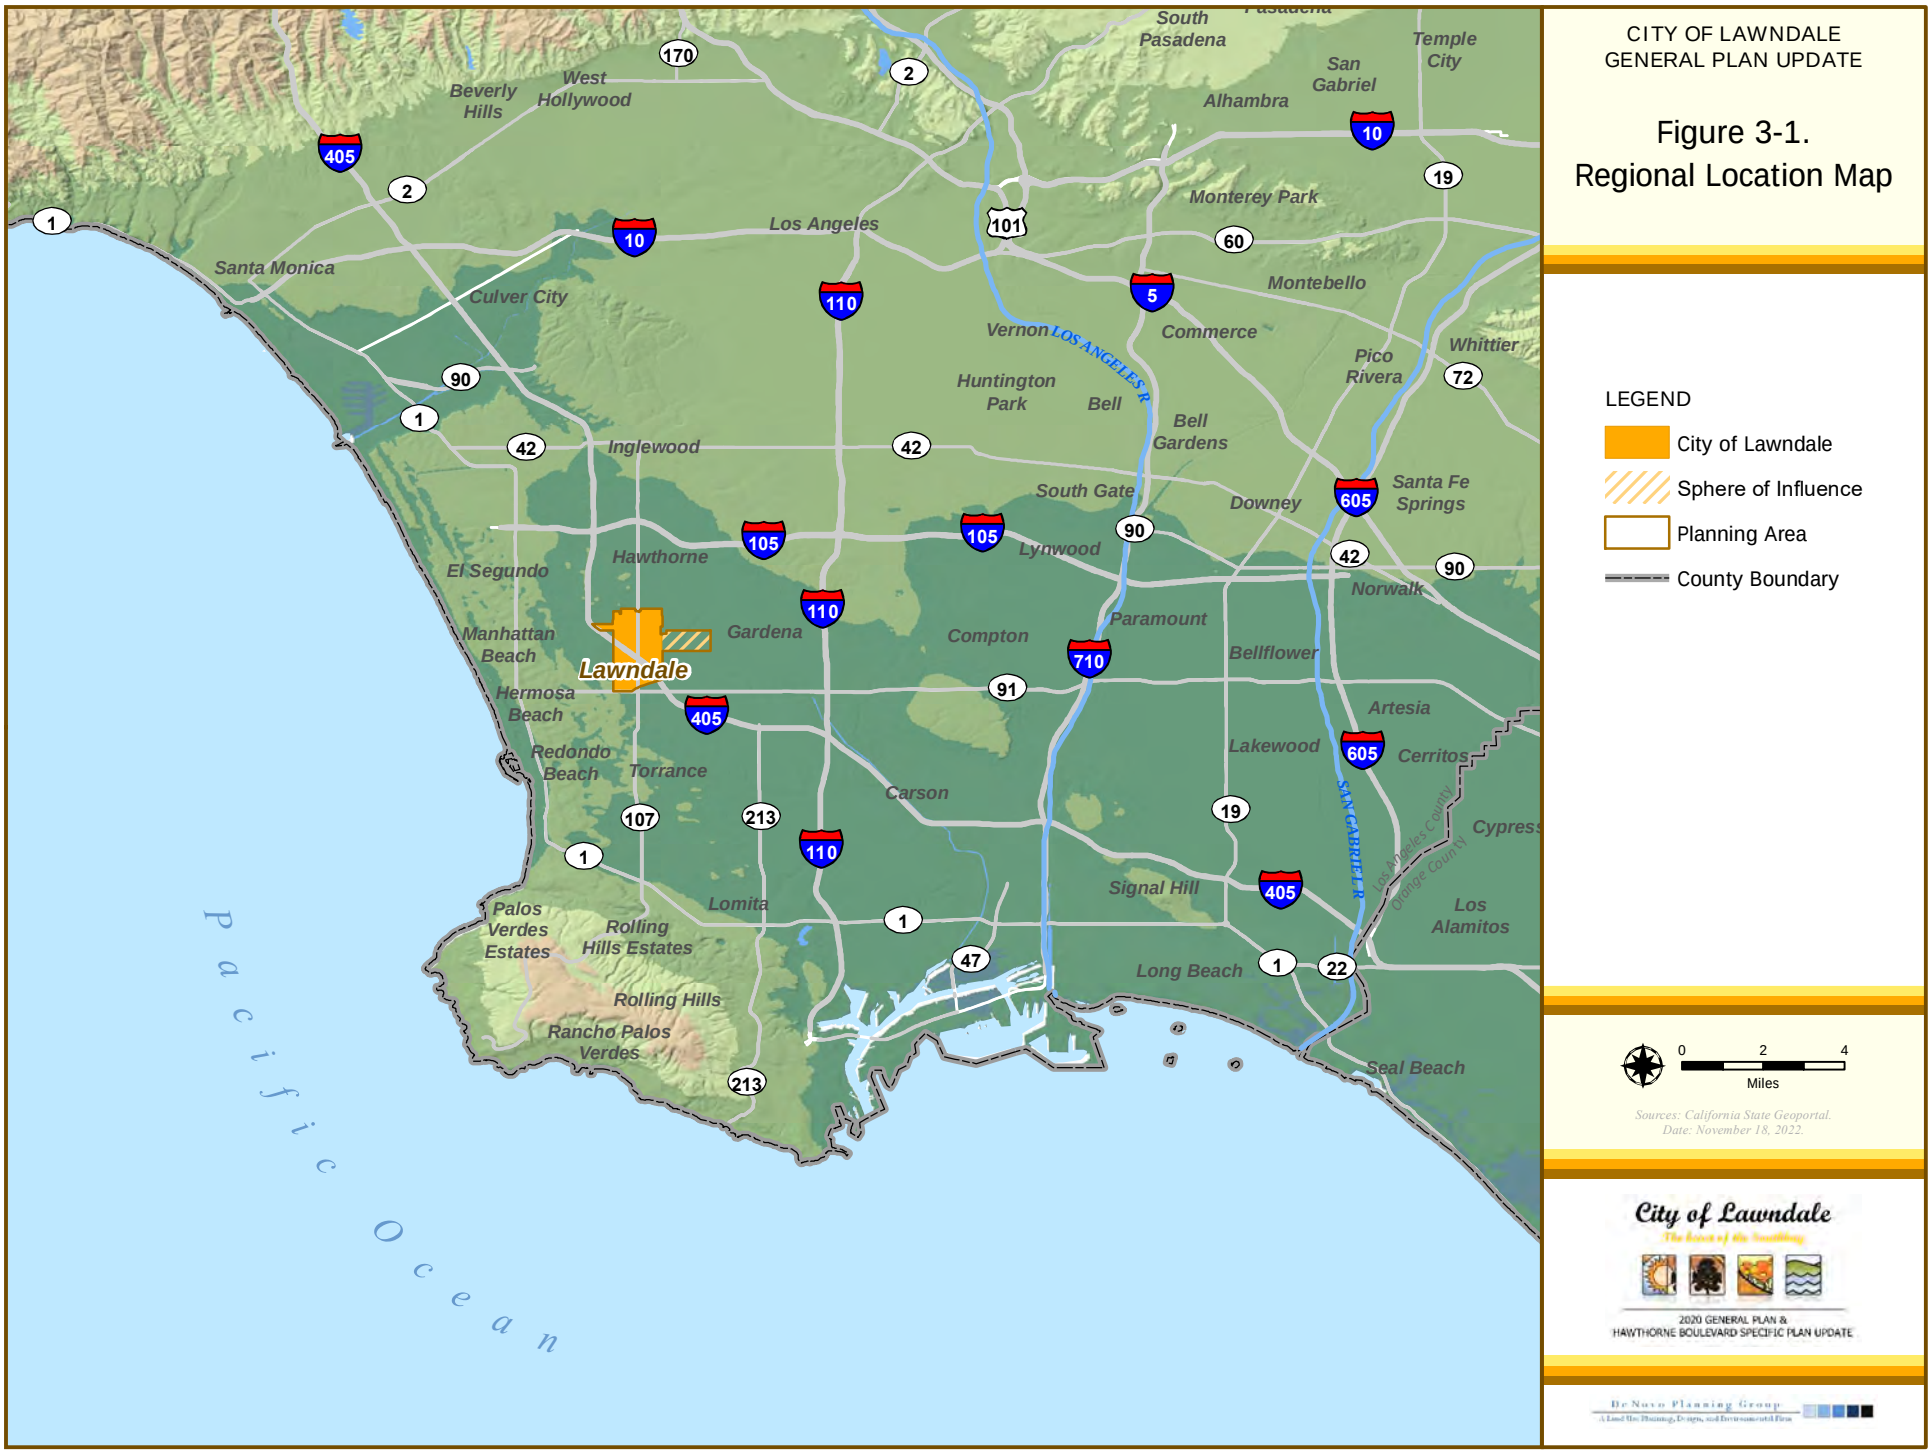
3.6.2 SUBSEQUENT USES OF THE EIR

The policy framework set forth in the proposed General Plan Update would not result in the construction of any new development nor entitlement of any new project. All new development within the Planning Area would continue to be subject to the City's development review and approval processes (with Los Angeles County responsible for the unincorporated SOI area). Elected and appointed officials and City staff will review subsequent project applications for consistency with the General Plan and Zoning

Ordinance, and will prepare appropriate environmental documentation to comply with CEQA and other applicable environmental requirements.

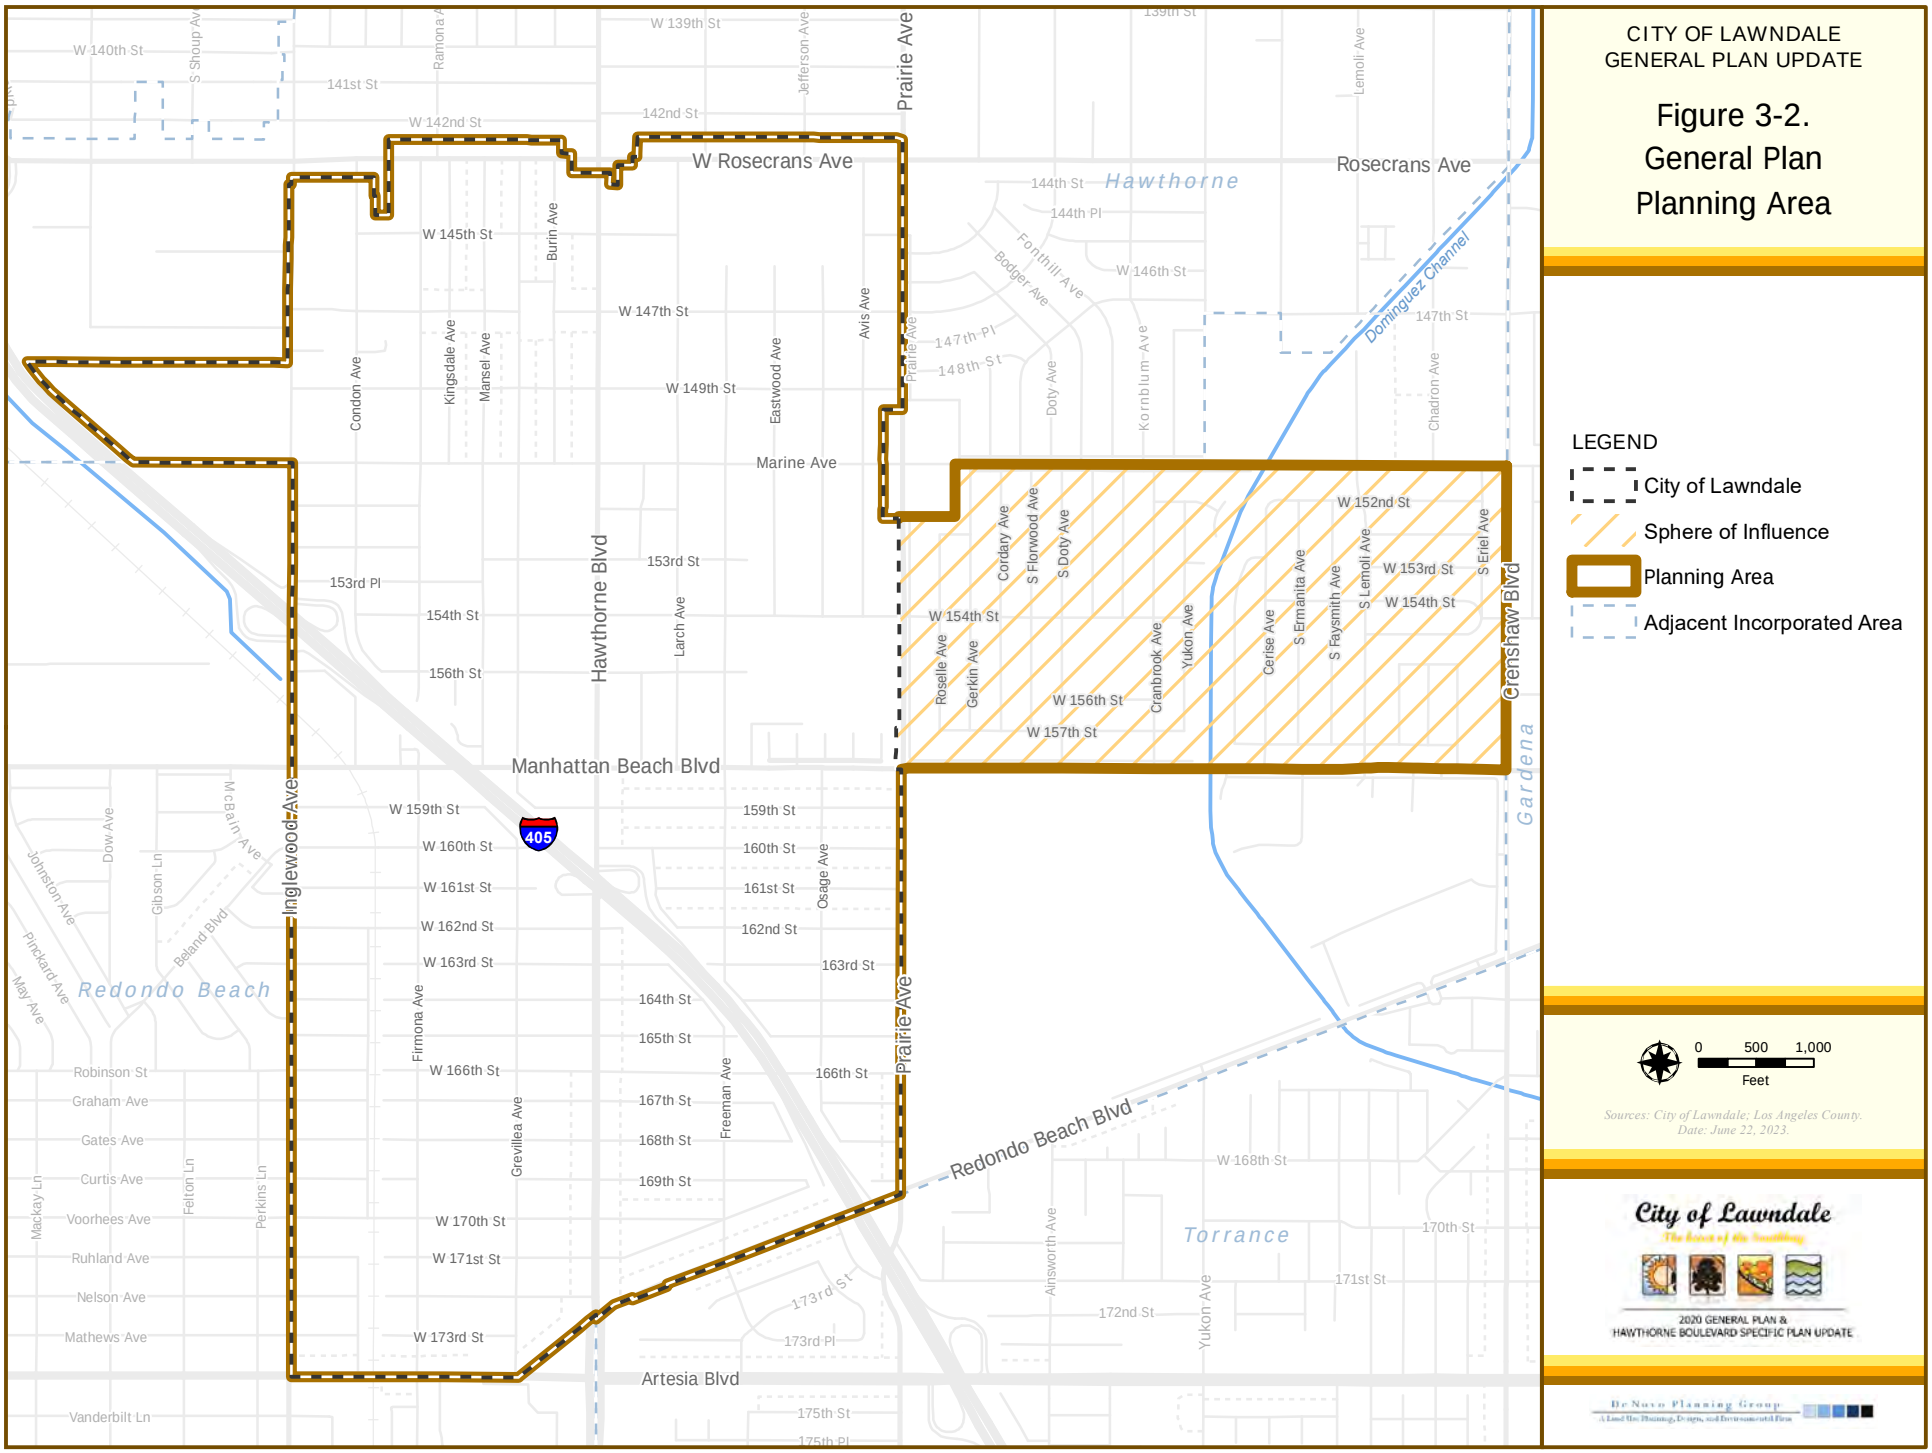
Pursuant to Section 15168 of the State CEQA Guidelines, this EIR is a Program EIR. The goals, policies, actions, land use designations, and other substantive components of the General Plan constitute the "program" evaluated in this Program EIR. This EIR provides a review of environmental effects associated with implementation of the proposed General Plan Update. When considering approval of subsequent activities under the proposed General Plan Update, the City of Lawndale would utilize this EIR as the basis in determining potential environmental effects and the appropriate level of environmental review, if any, of a subsequent activity. Projects or activities successive to this EIR may include, but are not limited to, the following:

- Approval and funding of major projects and capital improvements;
- Future Specific Plan, Planned Unit Development, or Master Plan approvals, including the Hawthorne Boulevard Specific Plan;
- Revisions to the Lawndale Municipal Code (Title 8 – Health and Safety, Title 16 – Subdivisions, and Title 17 – Zoning) Update
- Development plan approvals, such as tentative subdivision maps, variances, conditional use permits, and other land use permits;
- Development Agreements;
- Property rezoning consistent with the General Plan;
- Permit issuances and other approvals necessary for public and private development projects; and
- Issuance of permits and other approvals necessary for implementation of the General Plan.



3.6.3 OTHER GOVERNMENT AGENCY APPROVALS

Subsequent projects and other actions to support implementation of the General Plan Update would require actions, including permits and approvals, by other public agencies that may include, but are not necessarily limited to:



- California Department of Fish and Wildlife (CDFW) approval of potential future streambed alteration agreements, pursuant to Fish and Game Code. Approval of any future potential take of State-listed wildlife and plant species covered under the California Endangered Species Act.
- California Department of Transportation (Caltrans) approval of projects and encroachment permits for projects affecting State highway facilities.
- Regional Water Quality Control Board (RWQCB) approval for National Pollution Discharge Elimination System compliance, including permits and Storm Water Pollution Prevention Plan approval and monitoring.

- U.S. Fish and Wildlife Service (USFWS) approvals involving any future potential take of Federally listed wildlife and plant species and their habitats, pursuant to the Federal Endangered Species Act.

4.0 BASIS OF CUMULATIVE ANALYSIS

4.1 INTRODUCTION

This section analyzes potential impacts resulting from reasonably foreseeable growth, including the Lawndale General Plan Update (Project).

CEQA Guidelines Section 15355 defines cumulative impacts as "…two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." The following elements are necessary in an adequate discussion of cumulative impacts, as noted in Sections 15130(b) through 15130(e) of the CEQA Guidelines:

> *(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the project alone. The discussion should be guided by standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact. The following elements are necessary to an adequate discussion of significant cumulative impacts:*
>
> > *(1) Either:*
> >
> > > *(A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency; or,*
> > >
> > > *(B) A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency.*
> >
> > *(2) When utilizing a list, as suggested in paragraph (1) of subdivision (b), factors to consider when determining whether to include a related project should include the nature of each environmental resource being examined, the location of the project and its type. Location may be important, for example, when water quality impacts are at issue since projects outside the watershed would probably not contribute to a cumulative effect. Project type may be important, for example, when the impact is specialized, such as a particular air pollutant or mode of traffic.*

(3) Lead agencies should define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used.

(4) A summary of the expected environmental effects to be produced by those projects with specific reference to additional information stating where that information is available; and

(5) A reasonable analysis of the cumulative impacts of the relevant projects. An EIR shall examine reasonable, feasible options for mitigating or avoiding the project's contribution to any significant cumulative effects.

(c) With some projects, the only feasible mitigation for cumulative impacts may involve the adoption of ordinances or regulations rather than the imposition of conditions on a project-by-project basis.

(d) Previously approved land use documents such as general plans, specific plans, and regional transportation plans may be used in cumulative impact analysis. A pertinent discussion of cumulative impacts contained in one or more previously certified EIRs may be incorporated by reference pursuant to the provisions for tiering and program EIRs. No further cumulative impacts analysis is required when a project is consistent with a general, specific, master or comparable programmatic plan where the lead agency determines that the regional or areawide cumulative impacts of the proposed project have already been adequately addressed, as defined in section 15152(f), in a certified EIR for that plan.

(e) If a cumulative impact was adequately addressed in a prior EIR for a community plan, zoning action, or general plan, and the project is consistent with that plan or action, then an EIR for such a project should not further analyze that cumulative impact, as provided in Section 15183(j).

4.2 CUMULATIVE ANALYSIS IN THIS EIR

A cumulative impact is an impact created by the combination of the project evaluated in the EIR and other reasonably foreseeable projects or actions. CEQA Guidelines Section 15130 requires an EIR to discuss cumulative impacts of a project when the project's incremental effect is "cumulatively considerable." Used in this context, cumulatively considerable means that the incremental effects of an individual project are considerable when viewed in connection with effects of past projects, other current projects, and probable future projects.

Cumulative impacts may be discussed in terms of impacts resulting from the General Plan Update, in combination with impacts anticipated for future development (including approved and planned development within the Planning Area and surrounding affected area), and impacts associated with growth within the greater region. Where the incremental effect of a project is not "cumulatively considerable," a lead agency need not consider that effect significant but must briefly describe its basis for concluding that the effect is not cumulatively considerable. The geographic area for each impact varies, depending on the nature of the impact, whether it is regional, such as air quality or greenhouse gas emissions, or local, such as noise or aesthetics.

Quantification can pose as a challenge for cumulative impacts, as it requires speculative estimates of impacts including, but not limited to the following: the geographic diversity of impacts (impacts of future development may affect different areas); variations in time of impacts; and data for buildout projections may change following subsequent approvals. However, every attempt has been made herein to make sound qualitative judgments of the combined effects of, and relationship between, land uses and potential environmental impacts.

This EIR assesses the overall environmental effects of the General Plan Update at a program level of detail. This EIR evaluates the overall (cumulative) effects of development in accordance with the community development types, land use assumptions, and all goals and policies contained in the General Plan Update. The environmental analyses in Sections 5.1 through 5.20 of this EIR consider Project impacts in combination with regional impacts, where applicable, that could be expected as other cities within the greater Los Angeles region approach 2045.

In compliance with CEQA Guidelines Section 15130(1)(b), this section of the EIR describes the environmental effects of the General Plan Update in combination with the effects of regional growth, as forecasted in the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy, adopted by SCAG's Regional Council on September 3, 2020. It is important to note that the SCAG projections, which are compiled using a number of sources including adopted plans, historical trends, and interviews with local jurisdictions, tend to be more accurate on a regional level than on a local or city level. It is likely that through a combination of market changes, catalytic projects, updated land use direction in the General Plan Update, and other factors, Lawndale could capture either more or less of expected regional growth than forecasted by SCAG.

Table 4.1, *Los Angeles County Growth Projections*, summarizes household, population, and employment growth forecasts for the County. The Project considers growth patterns for the year 2045, consistent with the SCAG forecasts. Using a consistent buildout year (2045) allows for better growth projection comparisons. As shown in Table 4-1, SCAG forecasts Los Angeles County's population will grow to 11,674,000 persons by 2045, an increase of approximately 19 percent over the existing 2022 population estimate of 9,834,503 persons. The number of households in the Los Angeles County region is projected to increase from approximately 3,446,205 households in 2022 to 4,119,000 households in 2045. Employment numbers are forecasted to increase from approximately 4,739,900 jobs in 2022 to 5,382,000 jobs in 2045 within the County. Section 5.14, *Population and Housing*, further elaborates on projected growth assumptions within the Planning Area as well as within Los Angeles County.

Table 4-1
Los Angeles County Growth Projections

Description	Population	Households	Jobs (Employment)
Existing Conditions (2022)[1]	9,834,503	3,446,205*	4,739,900
SCAG 2045 Forecasts[2]	11,674,000	4,119,000	5,382,000
2045 SCAG: Existing Conditions Difference	+1,839,497	+672,795	+642,100
2045 SCAG: Existing Conditions % Difference	+18.7%	+19.5%	+13.5%

Notes:
*Assumes a vacancy rate of 5.2%
Source:
1: California Department of Finance, Report E-5 Population and Housing Estimates for Cities, and Counties, and the State. January 1, 2023 and California Employment Development Department, Los Angeles County Profile, 2022.
2: Southern California Association of Governments (SCAG), *Connect SoCal, Current Context Demographics and Growth Forecast*, *Table 13 (County Forecast of Population, Households, and Employment*), September 2020.

As indicated in Section 3.0, *Project Description*, the City is forecast to have approximately 15,405 housing units by 2045 buildout, which would result in an approximate population of 47,430 persons. Therefore, the General Plan Update would facilitate the addition of 3,942 housing units through 2045 and would result in a population growth of approximately 9,482 persons in the City.

5.1 AESTHETICS

5.1.1 PURPOSE

This section identifies the existing aesthetic and light/glare conditions withing the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

Because of its inherent subjectivity, difficulties arise in the evaluation of visual quality and the degree of impact that may result from visual change. Additionally, there are limited objectives or quantitative standards to analyze visual quality and individuals respond differently to changes in the visual environment. What may be considered an adverse visual condition to one person may represent an improved visual condition to another.

CONCEPTS AND TERMINOLOGY

When viewing the same landscape, people may have different responses to that landscape and any proposed visual changes, based upon their values, familiarity, concern, or expectations for that landscape and its scenic quality. Since each person's attachment to and value for a particular landscape is unique, visual changes to that landscape inherently affect viewers differently. However, generalizations can be made about viewer sensitivity to scenic quality and visual changes. The visual sensitivity of a landscape is affected by the viewing distances at which it is seen, such as close-up or far away. The visual sensitivity of a landscape also is affected by the travel speed at which a person is viewing the landscape (high speeds on a highway, low speeds on a hiking trail, or stationary at a residence).

The same feature of a project can be perceived differently by people depending on the distance between the observer and the viewed object. When a viewer is closer to a viewed object in the landscape, more detail can be seen, and there is greater potential influence of the object on visual quality because of its form or scale (relative size of the object in relation to the viewer). When the same object is viewed at background distances, details may be imperceptible but overall forms of terrain and vegetation are evident, and the horizon and skyline are dominant. In the middle-ground, some detail is evident (e.g., the foreground), and landscape elements are seen in context with landforms and vegetation patterns (e.g., the background).

The following terms and concepts are used in this EIR section:

- **Scenic vista**. An area that is designated, signed, and accessible to the public for the express purposes of viewing and sightseeing. This includes any such areas designated by a Federal, State, or local agency.
- **Scenic highway**. Any stretch of public roadway that is designated as a scenic corridor by a Federal, State, or local agency.
- **Sensitive receptors**. Viewer responses to visual settings are inferred from a variety of factors, including distance, viewing angle, types of viewers, number of viewers, duration of view, and viewer activities. The viewer type and associated viewer sensitivity are distinguished among project viewers in recreational, residential, commercial, military, and industrial areas. Viewer

activities can range from a circumstance that encourages a viewer to observe the surroundings more closely (such as recreational activities) to one that discourages close observation (such as commuting in heavy traffic). Viewers in recreational areas are considered to have high sensitivity to visual resources. Residential viewers generally have moderate sensitivity but extended viewing periods. Viewers in commercial, military, and industrial areas are considered to have low sensitivity.

- **Viewshed**. The viewshed for a project is defined as the surrounding geographic area from which the project is likely to be seen, based on topography, atmospheric conditions, land use patterns, and roadway orientations.
- **Visual character** typically consists of the landforms, vegetation, water features, and cultural modifications that impart an overall visual impression of an area's landscape. Scenic areas typically include open space, landscaped corridors, and viewsheds. Visual character is influenced by many different landscape attributes including color contrasts, landform prominence, repetition of geometric forms, and uniqueness of textures among other characteristics.
- **Light and Glare.** Lighting effects are associated with the use of artificial light during the evening and nighttime hours. There are two primary sources of light: light emanating from building interiors passing through windows and light from exterior sources (i.e., street lighting, building illumination, security lighting, parking lot lighting, landscape lighting, and signage). Light introduction can be a nuisance. Uses such as residences and hotels are considered light sensitive, since occupants have expectations of privacy during evening hours and may be subject to disturbance by bright light sources. Light spill is typically defined as the presence of unwanted light on properties adjacent to the property being illuminated. With respect to lighting, the degree of illumination may vary widely depending on the amount of light generated, height of the light source, presence of barriers or obstructions, type of light source, and weather conditions.

  Glare is primarily a daytime occurrence caused by the reflection of sunlight or artificial light on highly polished surfaces such as window glass or reflective materials and, to a lesser degree, from broad expanses of light-colored surfaces. Perceived glare is the unwanted and potentially objectionable sensation as observed by a person as they look directly into the light source of a luminaire. Daytime glare generation is common in urban areas and is typically associated with buildings with exterior facades largely or entirely comprised of highly reflective glass. Glare can also be produced during evening and nighttime hours by the reflection of artificial light sources such as automobile headlights. Glare generation is typically related to either moving vehicles or sun angles, although glare resulting from reflected sunlight can occur regularly at certain times of the year. Glare-sensitive uses include residences, hotels, transportation corridors, and aircraft landing corridors.

5.1.2 ENVIRONMENTAL SETTING

The City of Lawndale is located in a highly urbanized area within the South Bay region of southwestern Los Angeles County. The City's topography is relatively flat with an elevation averaging 59 feet above sea level. There are some high points in the southwestern quadrant of the City that reach 100 feet above sea level. Distant mountain ranges, including the Palos Verdes Hills located approximately six miles to the south, the Santa Monica Mountains approximately 20 miles to the north, and the San Gabriel Mountains

approximately 25 miles to the northeast, contribute to the Planning Area's regional identity, while the City itself is primarily developed with limited natural or scenic resources.

The Planning Area's visual character stems largely from its urban form. Streets in the Planning Area are generally oriented in a north-south and east-west grid pattern. The City is bisected by both Interstate 405 (I-405), which runs northwest-southeast through the bottom half of the City, and Hawthorne Boulevard (SR-107), which runs north-south through the center of the City. Other major corridors and arterials generally define the Planning Area's edges. The Planning Area is built out and primarily comprised of established residential neighborhoods. Commercial and light industrial development is generally located along the Planning Area's corridors, particularly Hawthorne Boulevard. The Planning Area is located within an urban setting and surrounded by residential, commercial, and light industrial uses in adjacent jurisdictions, including the cities of Hawthorne, Redondo Beach, Torrance, and other unincorporated areas of Los Angeles County.

SCENIC VISTAS

Scenic views within the Planning Area include long-range views of the Palos Verdes Hills, Santa Monica Mountains, and San Gabriel Mountains. The County of Los Angeles General Plan Conservation and Natural Resources Element identifies scenic resources within the County to include hillsides, scenic viewsheds, and ridgelines, including the Santa Monica Mountains and San Gabriel Mountains (Los Angeles County 2015). As the Planning Area is located a great distance away from these scenic resources, views are highly dependent on atmospheric conditions. Additionally, views of these scenic resources are intermittent from within the Planning Area due to existing development within the Planning Area and surrounding area. Long-range views are primarily provided along the north-south corridors and at elevated locations within the Planning Area, including in the southwestern quadrant of the City, the I-405, and from multi-story buildings. Other features that contribute to the visual character within the Planning Area include public parks, the density and distribution of existing development, and the architecture of the built environment.

SCENIC HIGHWAYS

There are no Eligible or Designated State Scenic Highways within the Planning Area. The nearest officially designated State Scenic Highway is a portion of State Highway 2 that extends through the San Gabriel Mountains, beginning just north of Route 210 and the City of La Cañada Flintridge (Caltrans 2023). The portion of State Highway 2 that is officially designated as a State Scenic Highway is located approximately 25 miles northeast of the Project site. Due to this distance, the Planning Area is not within the viewshed of this State Scenic Highway. The nearest eligible State Scenic Highway is a portion of State Highway 1, just northwest of the intersection at Venice Boulevard, in the Venice Beach neighborhood of the City of Los Angeles. The portion of State Highway 1 that is eligible for designation as a State Scenic Highway is located approximately nine miles northwest of the Planning Area.

LIGHT & GLARE

Sensitive light and glare receptors in and around the Planning Area are generally represented by residential uses. During the day, sunlight reflecting from structures is a primary source of glare, while nighttime light and glare can be divided into both stationary and mobile sources. Stationary sources of nighttime light include structure illumination, interior lighting, decorative landscape lighting, and

streetlights. The principal mobile source of nighttime light and glare is vehicle headlamp illumination. This ambient light environment can be accentuated during periods of low clouds or fog.

The variety of urban land uses in the Planning Area are the main source of daytime and nighttime light and glare. They are typified by single- and multi-family residences, commercial structures, and streetlights. These areas and their associated human activities (inclusive of vehicular traffic) characterize the existing light and glare environment present during daytime and nighttime hours in the Planning Area. Areas along Hawthorne Boulevard and other major corridors in the Planning Area generally have more sources of glare due to increased vehicle traffic and reflective surfaces associated with increased density and building intensity in these areas.

Within the Planning Area, existing light sources generally include buildings, recreational facilities (i.e., sports fields), and nighttime safety lighting along roadways and parking lots. Interior light emanating from a structure; exterior light sources (i.e., security lighting); or, lighting to illuminate features for safety or decorative purposes may be visible within the existing landscape.

Sunlight reflecting off a reflective surface can result in glare effects and unsafe visual conditions that may interfere with the vision of motorists operating vehicles in the area or that may otherwise generally degrade scenic views. Few structures within the Planning Area exhibit highly reflective materials (i.e., taller buildings with extensive glazing), and therefore, potential glare effects are not considered to be of major concern under existing conditions.

5.1.3 REGULATORY SETTING

STATE

California Scenic Highways and Historic Parkways Program

The California Scenic Highways and Historic Parkways Program was created in 1963 to preserve and protect highway corridors located in areas of outstanding natural beauty from changes that would diminish the aesthetic value of the adjacent lands. Caltrans maintains its State Scenic Highways and Historic Parkways Program, through which segments of the State highway system are designated as being of particular scenic value or interest. A highway may be designated scenic depending upon how much of the natural landscape can be seen by travelers, the scenic quality of the landscape, and the extent to which development intrudes upon the traveler's enjoyment of the view. Interstates, State highways, byways, and parkways are eligible for designation or for recognition as eligible for designation. The Program is governed by the regulations found in the California Streets and Highways Code, Section 260 et seq.

California Streets and Highway Code Section 261 requires local government agencies to take the following actions to protect the scenic appearance of the scenic corridor:

- Regulate land use and density of development;
- Provide detailed land and site planning;
- Prohibit offsite outdoor advertising and control of on-site outdoor advertising;

- Pay careful attention to and control of earthmoving and landscaping; and
- Scrutinize the design and appearance of structures and equipment.

California Streets and Highway Code Section 263 allows the California State Legislature the authority to identify highways as eligible for designation as a scenic highway. The government with jurisdiction over land abutting a highway considered to be scenic is required to adopt a "scenic corridor protection program" that restricts development, outdoor advertising, and earthmoving activities along the affected segment or corridor ("Corridor Protection Program"). Caltrans must also indicate that the highway segment meets established criteria for the roadway or segment to be designated as scenic.

California Building Standards Code

Title 24 of the California Building Standards Code serves as the basis for the design and construction of buildings in California. In addition to safety, sustainability, new technology and reliability, the California Building Standards Code addresses light pollution and glare hazards through the establishment of maximum allowable backlight, up light, and glare (BUG) ratings.

LOCAL

City of Lawndale Municipal Code

Title 17 of the City of Lawndale Municipal Code contains the City's Zoning Code, and provides specific development standards that influence the City's scenic views, visual character, and restrict lighting. The Zoning Code implements the General Plan goals and policies by classifying and regulating the specific uses of land and structures within the City. The Zoning Code identifies standards that include, but are not limited to: minimum lot size and lot coverage requirements; maximum building height; minimum building setbacks; automobile storage requirements; open space and landscaping requirements; and lighting requirements.

Chapter 17.28, *Special Use Permit*, regulates the issuance of Special Use Permits (SUP). Land uses that require a SUP generally have a unique and distinct impact on the area in which they are located or are capable of impacts to adjacent properties unless given special review and conditions. SUPs may be approved, conditionally approved, or denied. Before granting a SUP, the approving body must find that the proposed project meets the conditions set forth in Section 17.28.014, *Prerequisite Conditions,* including, but not limited to, the presence of site features required to adjust the proposed use with the land and uses in the neighborhood, and consistency with the General Plan. In addition, all SUPs must meet the standard conditions set forth in Section 17.28.105, *Standard Conditions*, including, but not limited to, the provision of adequate exterior lighting for parking areas, provided such lighting does not disturb surrounding residential or commercial areas.

Chapter 17.30, *Design Review*, establishes a design review evaluation procedure that is intended to support orderly development by ensuring that proposed residential structures meet all aspects of the Zoning Code, are harmonious with the surrounding area within residential zones, and do not pose a threat to the public health, safety and general welfare of the City and its citizens. The design review procedure is decided upon by either the Community Development Director or Planning Commission, depending on the type of development and is decided according to design criteria established in Section 17.30.040,

Design Criteria, which includes, but is not limited to: building height, bulk and other design features; site layout, orientation and location of structures; illumination and landscaping; respect for natural terrain and landscape; and substantial compliance with adopted design guidelines.

Section 17.36.220, *Temporary Storage of Construction Materials*, provides aesthetic-related standards for worksites and construction staging areas, including that such areas are kept clear of trash, dirt, and debris; are adequately screened; and that, following completion of construction, the property is restored to the same or an improved condition to that which existed prior to the contractor's use for the temporary office and/or storage of materials and equipment.

Section 17.72.071, *Improvement of Parking Areas*, requires that projects abutting a residential zone or residential project must direct lighting to illuminate parking areas away from adjoining residential premises and adequately shield headlight glare.

Sections 17.48.203, *Construction Standards Regulating Apartment Houses*, and 17.48.273, *Construction Standards Regulating Apartment Houses*, provides standards applicable to apartments within the R-3 and R-4 zones, respectively. Said standards include a provision that lighting used to illuminate the premises be directed away from adjacent properties.

Section 17.60.020, *P Parking Zone—Conditions and Development Standards*, provides that lighting to illuminate parking areas be so arranged as to reflect the light away from any residential zone.

Section 17.76.140, *Commercial and Industrial Zones*, contains provisions to restrict lighting and illumination of all signs in commercial and industrial zones, and to legal, nonresidential uses in residential zones. In these zones, signs with internal or external illumination are allowed, subject to a maximum of forty watts; however, flashing, moving or sequential operation is prohibited. Additionally, all exterior lighting fixtures must be directed onto the subject property with no direct glare visible from adjoining residentially zoned and/or developed properties. The maximum allowable illumination at the subject property line is one-half foot candle.

City of Lawndale Residential Development Standards and Design Guidelines

Adopted in 2019, the City of Lawndale Residential Development Standards and Design Guidelines contains both residential development standards and design guidelines intended to improve the quality of life throughout the City's residential neighborhoods; ensure that new development is compatible with surrounding developments; and assists the public in understanding and implementing principles of design.

5.1.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to aesthetics and light/glare. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Have a substantial adverse effect on a scenic vista (refer to Impact Statement AES-1);
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway (refer to Impact Statement AES-2);

- In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings and/or in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality (refer to Impact Statement AES-3); and/or
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area (refer to Impact Statement AES-4).

5.1.5 IMPACTS AND MITIGATION MEASURES

AES-1: Would the project have a substantial adverse effect on a scenic vista?

Impact Analysis: Scenic views within the Planning Area include long-range views of the Palos Verdes Hills, Santa Monica Mountains, and San Gabriel Mountains. Due to the Planning Area's relatively flat topography and distance from these scenic resources, views are highly dependent on atmospheric conditions. Additionally, views of these scenic resources are intermittent from within the Planning Area due to existing development within and surrounding the area. Long-range views are primarily provided along the north-south corridors and at elevated locations within the Planning Area.

Implementation of the Project would result in new development and intensification of existing urban uses along major corridors, including Hawthorne Boulevard. While the Project does not include any specific development proposals, the Project could facilitate future development projects at higher densities and intensities than currently exist. The City's Zoning Code would regulate development within the City, including building heights, setbacks, massing, and design and architectural regulations. Pursuant to Chapter 17.30, *Design Review*, future residential development projects would be reviewed for conformance with the City's established design criteria. Each future development project would be subject to the City's development standards, site plan and/or design review process to ensure conformance with the General Plan Update and the City's established development standards. Future development within the Sphere of Influence (SOI) that is under the County's land use control would be subject to the County's entitlement requirements, regulations, and review processes.

The General Plan Update goals, policies, and actions are intended to ensure that new development and intensification of existing urban uses within the Planning Area would not result in substantial adverse effects on a scenic vista. Proposed Land Use Element Policy LU-3.1 requires that the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area be considered during the development review process. Policy LU-3.3 requires land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses. Policy LU-3.3 requires that the scale and massing of new development provide appropriate transitions in building height and bulk that are sensitive to the physical and visual character of adjacent lower density neighborhoods. Policy LU-4.2 directs the development and enforcement of development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic. Policy LU-4.3 requires that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses. Action LU-3a directs the City to prepare and adopt

Objective Design Standards applicable to all new multi-family residential and mixed-use development. Action LU-3b ensures all projects are reviewed and processed per CEQA Guidelines. Action LU-4e implements the City's existing development standards, or where not in place, creates new standards (either through an update to the Zoning Code or update to the Hawthorne Boulevard Specific Plan or other regulating tool) to regulate new construction and revisions to existing buildings. In particular, new development standards would be created for higher density stand-alone residential projects and mixed-use projects to ensure that quality infill developments can be created within the areas identified for focused growth.

Although the potential for new residential development at higher densities could occur within the Planning Area, scenic vistas and resources do not readily occur within the Planning Area and long-range views are limited due to the existing topography and urbanized nature of the area. Thus, the Project would not have a substantial adverse effect on a scenic vista and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-3.1: **Surrounding Uses.** Consider as part of the development review process the compatibility of new development with surrounding uses and the ability of new development to enhance the character of the surrounding area.

Policy LU-3.3: **Code Compliance.** Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

Policy LU-3.5: **Scale and Massing.** Require that the scale and massing of new development provide appropriate transitions in building height and bulk that are sensitive to the physical and visual character of adjacent lower density neighborhoods.

Action LU-3a: Prepare and adopt Objective Design Standards applicable to all new multi-family residential and mixed-use development.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

Policy LU-4.2: **Standards and Guidelines.** Develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic.

Policy LU-4.3: **Site Planning.** Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Action LU-4e: Continue to implement the City's existing development standards, or create new standards, if appropriate, to regulate new construction and revisions to existing buildings. New development standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill development.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

AES-2: Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Impact Analysis: As discussed above, there are no Eligible or Designated State Scenic Highways within the Planning Area. The nearest officially designated State Scenic Highway is a portion of State Highway 2 that extends through the San Gabriel Mountains, beginning just north of Route 210 and the City of La Cañada Flintridge. The portion of State Highway 2 that is officially designated as a State Scenic Highway is located approximately 25 miles northeast of the Project site. Due to this distance, the Planning Area is not within the viewshed of this State Scenic Highway. The nearest eligible State Scenic Highway is a portion of State Highway 1, just northwest of the intersection at Venice Boulevard, in the Venice Beach neighborhood of the city of Los Angeles. The portion of State Highway 1 that is eligible for designation as a State Scenic Highway is located approximately nine miles northwest of the Planning Area. Due to the distance and relatively flat intervening topography, the Planning Area is not within the viewshed of State Highway 1. As there are no officially designated or eligible scenic highways located within the viewshed of the Planning Area, implementation of the General Plan Update would not substantially damage scenic resources within a State scenic highway. No impact would occur in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

AES-3: In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Impact Analysis:

Public Resources Code Section 21071 defines an "Urbanized area" as:

(a) An incorporated city that meets either of the following criteria:

(1) Has a population of at least 100,000 persons.

(2) Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons.

According to the California Department of Finance, the City has a current (2023) population of 30,882. The adjacent City of Torrance has a population of 143,057. Combined, the cities have a population of 173,939, which exceeds 100,000 persons; thus, the City qualifies as being within an "Urbanized Area." Therefore, a significant impact would occur if a future development project associated with implementation of the Project conflicts with applicable zoning and other regulations governing scenic quality.

VISUAL CHARACTER – SHORT TERM

Construction activities for future development accommodated through implementation of the General Plan Update could temporarily degrade the visual character and quality of the respective development site and/or its immediate surrounding. Visible features associated with construction activities would include exposed building pads and staging areas for grading, excavation, and construction equipment. In addition, temporary structures could be located on the respective development site during various stages of construction, within materials storage areas, or associated with construction debris piles on site. Exposed trenches, roadway bedding, spoils/debris piles, and steel plates would be visible during construction of street and utility infrastructure improvements. These materials could temporarily degrade the existing visual character and quality of the respective development sites and surrounding areas.

All construction activities related to the General Plan Update would be temporary in nature and all construction equipment would ultimately be removed from individual project sites following completion of construction activities. Therefore, changes to local visual character and quality associated with construction of future development would be temporary, and impacts would be less than significant.

VISUAL CHARACTER – LONG TERM

The General Plan Update would support additional development beyond existing conditions. This development could increase residential densities and non-residential land use intensities in specific areas and could impact the City's visual character over the long-term. In general, the General Plan Update Land Use Element proposes an increase in building density and intensity areas along major corridors, including Hawthorne Boulevard, in accordance with State and regional housing and climate change goals. For instance, as shown in Table 3-3, *General Plan 2045 Buildout by Land Use Designation*, the majority of new residential development (3,540 units) is anticipated to occur within the Hawthorne Boulevard Specific Plan (HBSP) area. The HBSP would govern land uses within the HBSP area, including maximum densities and intensities of development, as well as development standards specific to the HBSP area. The proposed Land Use Element also includes the Housing Opportunity Overlay, which allows for a maximum density of 100 dwelling units per acre on sites outside of the HBSP area, in accordance with 2021-2029 Housing Element. The Project is also expected to result in an increase of 808,864 square feet of new non-residential building square footage, the majority of which is anticipated to occur within the proposed Commercial (C) land use designation and HBSP area. Refer to Section 3.0, *Project Description*, for a description of land use designations proposed under the General Plan Update. As shown in Figure 3-3 and Figure 3-5, as part of the General Plan Update, an increase in densities and intensities is proposed generally along Hawthorne Boulevard and Redondo Beach Boulevard.

The General Plan Update incorporates consistent and compatible development intensities that would maintain and enhance the overall visual character/quality of the Planning Area. Specifically, the Land Use Element includes policies and actions, maps, and diagrams to control and direct the general distribution, location, and extent of land uses within the Planning Area. For example, Policy LU-1.1 requires the provision of an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in the Land Use Element and Land Use Map. Policy LU-4.2 directs the City to develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic. Action LU-1a directs the City to create consistency between the City's Zoning Code and Zoning Map as appropriate to ensure consistency with the Land Use Element and designations shown on the Land Use Map. Action LU-1b ensures the City updates the Hawthorne Boulevard Specific Plan as appropriate to ensure consistency with the Land Use Element, designations shown on the Land Use Map, and the City's adopted 2021-2029 Housing Element. Action LU-1c directs the City to review the Zoning Code and update as appropriate to reflect Land Use goals, policies, and implementation actions included in the General Plan Update. Action LU-4e directs the implementation the City's existing development standards, or where not in place, creates new standards to regulate new construction and revisions to existing buildings. Guiding future growth and development based on the General Plan Update would ensure future development complements and protects the quality of the existing environment.

All future development would also be subject to conformance with applicable requirements in the Lawndale Municipal Code. The City's Zoning Code (Title 17) would regulate maximum building height, building setbacks, parking and garage/carport placement, landscaping and screening requirements, and other development characteristics in place in each zoning district to protect the City's long-term visual character. Pursuant to Chapter 17.30, *Design Review*, future residential development projects would be subject to project-specific design review to ensure compatibility with the site surrounding area, and consistency with design standards and guidelines (refer to Impact AES-2). Future development within the SOI that is under the County's land use control would be subject to the County's entitlement requirements, regulations, and review processes. Additionally, applicable future land use and development review applications would undergo environmental review on a project-by-project basis prior to consideration by the decision-making authority. If necessary, mitigation would be recommended to reduce potential impacts to a less than significant level.

The implementation of policies and actions contained in the General Plan Update and compliance with the Lawndale Municipal Code would ensure that new development in the Planning Area would be designed to enhance the visual quality of the area and be visually compatible with existing development and open space resources. Therefore, implementation of the General Plan Update would not substantially degrade the existing visual character or quality of public views or conflict with applicable zoning and other regulations governing scenic quality. Impacts would be less than significant in this regard.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Action LU-1a: Create consistency between the City's Zoning Code and Zoning Map and General Plan.

Action LU-1b: Update the Hawthorne Boulevard Specific Plan as appropriate to ensure consistency with this Land Use Element, designations shown on Figure LU-1, and the City's adopted 2021-2029 Housing Element.

Action LU-1c: Review the Zoning Code and update as appropriate to reflect Land Use goals, policies, and implementation actions included in this Plan.

Action LU-1d: As part of development review process, ensure that residential and non-residential developments fall within the minimum and maximum density requirements and/or allowed floor-area-ratios stipulated on the Land Use Map and included within the Land Use Descriptions. Projects shall also be reviewed for consistency with the development standards and density requirements established by any applicable Specific Plan governing the area in question.

Policy LU-3.3: **Code Compliance.** Require land use compatibility through adherence to the policies, standards, and regulations in the Municipal Code, Zoning Code, and other regulations or administrative procedures that manage the form and relationship of projects and uses.

Policy LU-3.9 **Interagency Cooperation.** Establish and maintain an ongoing liaison with Caltrans, LA Metro, utility companies, adjacent cities, and other major government and private agencies to help minimize the traffic, noise, and visual impacts of their facilities and operations.

Policy LU-4.2: **Standards and Guidelines.** Develop and enforce development standards and objective design guidelines that provide clear direction for achieving quality community design in new development and redevelopment projects consistent with the City's desired aesthetic.

Policy LU-4.3: **Site Planning.** Require that new development use site planning techniques (e.g., the placement of proposed structures, building materials, landscaping, access ways) that consider the physical characteristics of its site and surrounding land uses, maximize access to sunlight and natural airflow between buildings, and optimize energy efficiency.

Action LU-4e Continue to implement the City's existing development standards, or create new standards if appropriate, to regulate new construction and revisions to existing buildings. New standards shall be created for higher density stand-alone residential projects and mixed-use projects to promote quality infill developments.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

AES-4: Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Impact Analysis: Future development accommodated through implementation of the General Plan Update could introduce new sources of light or glare with the potential to adversely affect day or nighttime views. Light and glare impacts could result from new light sources such as street lighting, interior and exterior building lighting (including for safety purposes), vehicle headlights, illuminated signage, and new glare sources such as reflective building materials, roofing materials, and windows. These new sources of light and glare would be most visible from development along adjacent roadways, and to receptors such as residents and traveling motorists.

All lighting installed in future development projects as a result of the implementation of the General Plan Update would be subject to conformance with applicable Zoning Code requirements and guided by the General Plan Update Land Use Element, which includes policies and actions to reduce potential light and glare impacts. Land Use Element Policy LU-3.7 requires new uses to provide buffers between existing uses where potential adverse impacts could occur, such as decorative walls, setbacks and landscaping, restricted vehicular access, parking enclosures, and lighting control. Action LU-3c directs the City to evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods. Action LU-3d requires that the City review the Zoning Code, and amend it if necessary to create standards addressing appropriate treatments to buffer nonresidential uses from residential and other sensitive uses. Action LU-3e requires as part of the development review process, the analysis of land use compatibility to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks. In addition, pursuant to Section 17.72.071, *Improvement of Parking Areas*, projects abutting a residential zone or residential project must direct lighting to illuminate parking areas away from adjoining residential premises and adequately shield headlight glare. Therefore, implementation of the General Plan Update would not result in adverse light and glare impacts. Impacts would be less than significant in this regard.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-3.7: **Development Buffers.** Require new uses to provide buffers between existing uses where potential adverse impacts could occur, such as decorative walls, setbacks and landscaping, restricted vehicular access, parking enclosures, and lighting control.

Action LU-3c: Through the development review process, evaluate development proposals for land use and transportation network compatibility with existing surrounding or abutting development and neighborhoods.

Action LU-3d: Review the Zoning Code, and amend it if necessary, to create standards addressing appropriate treatments to buffer nonresidential uses from residential and other sensitive uses.

Action LU-3e: Analyze land use compatibility through the development review process to require adequate buffers and/or architectural enhancements that protect sensitive receptors from intrusion of development activities that may cause unwanted nuisances and health risks.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.1.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis,* identifies projected growth within the Planning Area with the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The cumulative projects' setting for aesthetics is the City.

Would the project, combined with other related cumulative projects, have a substantial adverse effect on a scenic vista?

Impact Analysis: The Planning Area does not contain any scenic vistas or scenic resources; long-range views of the Palos Verdes Hills, Santa Monica Mountains, and San Gabriel Mountains are limited and primarily provided along major north-south corridors due to the existing development within the City and surrounding area. The Planning Area, and the surrounding areas, are developed and within an urbanized area. Development and/or redevelopment of the Planning Area would be subject to the regulations and requirements of the City's Zoning Code, including building heights, setbacks, massing, and design and architectural regulations, while projects in the SOI would be subject to the County's standards and requirements. Future development projects in the City would be subject to the City's development standards, site plan and/or design review process to ensure conformance with City's established development standards. Although the potential for new development at higher densities/intensities could occur with implementation of the Project, scenic vistas and resources do not readily occur within the City and long-range views are limited due to the existing topography and urbanized nature of the area. Further, future projects implemented under the General Plan Update would be required to be consistent with the

General Plan Update policies and actions and adopted regulations pertaining to aesthetics. With implementation of the adopted policies and regulations described above, the proposed General Plan Update would not considerably contribute to permanent changes in visual character, such as obstruction of scenic views. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on visual character to a less-than-significant level. Thus, the Project's incremental effects involving the potential for substantial adverse effects on a scenic vista would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Impact Analysis: As there are no officially designated or eligible scenic highways located within the viewshed of the Planning Area, future development and cumulative development associated with implementation of the General Plan Update would not substantially damage scenic resources within a State scenic highway. Thus, the Project's incremental effects involving the potential for substantial damage to scenic resources within a State scenic highway would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects, conflict with applicable zoning and other regulations governing scenic quality?

Impact Analysis: Future development and cumulative development are located within the Planning Area and are therefore within an "Urbanized Area." As discussed above, implementation of the General Plan Update would result in new development and intensification of existing urban uses along major corridors. While the Project does not include any specific development proposals, the Project could facilitate future development projects within these areas at higher densities and intensities than currently exist. Development within the City is subject to the Lawndale Zoning Code, which provides for project-specific design review of future development proposals, which would ensure that development is consistent with the General Plan Update goals, policies, and actions, and the Zoning Code. Individual development projects are reviewed subject to the specific zoning district and development being proposed. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to scenic quality. The

proposed Project would not conflict with applicable zoning and other regulations governing scenic quality. Thus, the Project's incremental effects involving potential conflicts with applicable zoning and other regulations governing scenic quality would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Impact Analysis: Future development associated with the General Plan Update and development in the surrounding communities could introduce new sources of light or glare with the potential to adversely affect day or nighttime views. All lighting installed in future development projects would be subject to conformance with the General Plan Update and applicable Zoning Code requirements. Additionally, pursuant to Chapter 17.30, *Design Review*, future residential development projects would be reviewed for conformance with the City's established design criteria, including project illumination. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions and adopted regulations pertaining to aesthetics. With implementation of the adopted policies and regulations described above, the proposed General Plan Update would not considerably contribute to permanent changes in visual character, such as increased lighting resulting in a substantial degradation. The polices and actions included within the General Plan Update and compliance with the Zoning Code would reduce the cumulative effect of the General Plan Update on lighting and glare to a less-than-significant level. Thus, through compliance with the City's established regulatory requirements, the Project's incremental effects involving the potential to create a new source of substantial light or glare which would adversely affect day or nighttime views in the area would not be cumulative considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.1.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Aesthetics impacts associated with the implementation of the General Plan Update would be less than significant and no significant unavoidable aesthetics impacts would occur as a result of the General Plan Update.

5.2 AGRICULTURE RESOURCES

This section identifies the existing agricultural conditions within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

5.2.1 ENVIRONMENTAL SETTING

AGRICULTURAL RESOURCES

The California Department of Conservation (DOC), Division of Land Resource Protection, identifies important farmland throughout the State through its Farmland Mapping and Monitoring Program (FMMP). The FMMP is non-regulatory and was developed to inventory land and provide categorical definitions of important farmlands; and, provide consistent and impartial data to decision makers for use in assessing present status, reviewing trends, and planning for the future of California's agricultural land resources. The program does not necessarily reflect local General Plan actions, urban needs, changing economic conditions, proximity to market, and other factors, which may be taken into consideration when government considers agricultural land use policies.

Agriculture land, in the form of designated Important Farmlands as defined by the California DOC, makes up zero percent (no acres) of the City's total acreage (DOC 2023a). There are no lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale General Plan Land Use Maps (see Figure 3-2 and Figure 3-5).

IMPORTANT FARMLANDS

The DOC, as part of its FMMP, periodically prepares *Important Farmland Maps*, which are a hybrid of resource quality (soils) and land use information intended to document the suitability of land for agricultural production. The Los Angeles County Important Farmland Map identifies five agriculture-related categories and three non-agricultural categories:

Prime Farmland

Prime Farmland has the most favorable combination of physical and chemical features, enabling it to sustain long-term production of agricultural crops. This land possesses the soil quality, growing season, and moisture supply needed to produce sustained high yields. In order to qualify for this classification, the land must have produced irrigated crops at some point during the two update cycles prior to Natural Resources Conservation Service (NRCS) mapping. The Planning Area does not contain any Prime Farmland.

Farmland of Statewide Importance

Farmland of Statewide Importance is similar to Prime Farmland; however, it possesses minor shortcomings, such as greater slopes and/or less ability to store moisture. In order to qualify for this classification, the land must have produced irrigated crops at some point during the two update cycles prior to NRCS mapping. The Planning Area does not contain any Farmland of Statewide Importance.

Unique Farmland

Unique Farmland is of lesser quality soils used for the production of the State's leading agricultural crops. Unique Farmland includes areas that do not meet the above stated criteria for Prime Farmland or Farmland of Statewide Importance, but that have been used for the production of specific high economic value crops during the two update cycles prior to the mapping date. It has the special combination of soil quality, location, growing season, and moisture supply needed to produce sustained high quality and/or high yields of a specific crop when treated and managed according to current farming methods. This land is usually irrigated, but may include non-irrigated orchards or vineyards, as found in some climatic zones in California. Land must have been farmed at some time during the four years prior to the mapping date. The Planning Area does not contain any land designated as Unique Farmland.

Farmland of Local Importance

Farmland of Local Importance is vital to the local agricultural economy, as determined by the County Board of Supervisors and a local advisory committee. The County defines Farmland of Local Importance as land with the same characteristics as Prime Farmland or Farmland of Statewide Importance, with the exception of irrigation. The Planning Area does not contain any land classified as Farmland of Local Importance.

Grazing Land

Grazing Land is land on which the existing vegetation is suited to the grazing of livestock. This category was developed in cooperation with the California Cattlemen's Association, University of California Cooperative Extension, and other groups interested in the extent of grazing activities. The minimum mapping unit for Grazing Land is 40 acres. The Planning Area does not contain grazing land.

Urban and Built-Up Land

Urban and Built-Up Land consists of land occupied by structures with a building density of at least one unit to one and a half acres, or approximately six structures to a 10-acre parcel. This land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes. The entirety of the Planning Area is considered Urban and Built-Up land. Additionally, nearly all of the surrounding area is also considered Urban and Built-Up land.

Other Land

Other Land consists of land not included in any other mapping category. Common examples include low-density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry, or aquaculture facilities; strip mines and borrow pits; and water bodies smaller than 40 acres. Vacant and non-agricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as Other Land. The Planning Area does not contain land designated as Other Land.

Water

Water consists of perennial water bodies with an extent of at least 40 acres. The Planning Area does not contain any bodies of water recognized by the FMMP.

FARMLAND PRESERVATION

The California Land Conservation Act, also known as the Williamson Act, was adopted in 1965 to encourage the preservation of the State's agricultural lands and to prevent their premature conversion to urban uses. The Williamson Act is described in greater detail in Section 5.2.2, *Regulatory Setting*.

There are no lands within the Planning Area that are currently under a Williamson Act contract.

FORESTRY RESOURCES

Forest land is defined by Public Resources Code Section 12220(g), and includes "land that can support 10 percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits."

Timber land is defined by Public Resources Code Section 4526, and means "land, other than land owned by the Federal government and land designated by the board as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. Commercial species shall be determined by the board on a district basis.

There are no forest lands or timber lands located within the Planning Area.

5.2.2 REGULATORY SETTING

FEDERAL

Farmland Protection Policy Act

The Natural Resources Conservation Service (NRCS), an agency within the U.S. Department of Agriculture, is responsible for implementation of the Farmland Protection Policy Act (FPPA). The purpose of the FPPA is to minimize Federal programs' contribution to the conversion of farmland to non-agricultural uses by ensuring that Federal programs are administered in a manner that is compatible with state, local, and private programs designed to protect farmland. The NRCS provides technical assistance to Federal agencies, state and local governments, tribes, and nonprofit organizations that desire to develop farmland protection programs and policies. The NRCS summarizes FPPA implementation in an annual report to Congress.

Farm and Ranch Lands Protection Program

The NRCS administers the Farm and Ranch Lands Protection Program (FRPP), a voluntary program aimed at keeping productive farmland in agricultural uses. Under the FRPP, the NRCS provides matching funds to state, local, or tribal government entities and nonprofit organizations with existing farmland protection programs to purchase conservation easements. According to the 1996 Farm Bill, the goal of the program is to protect between 170,000 and 340,000 acres of farmland per year. Participating landowners agree

not to convert the land to non-agricultural use and retain all rights to use the property for agriculture. A conservation plan must be developed for all lands enrolled based upon the standards contained in the NRCS Field Office Technical Guide. A minimum of 30 years is required for conservation easements and priority is given to applications with perpetual easements. The NRCS provides up to 50 percent of the fair market value of the easement being conserved. To qualify for a conservation easement, farm or ranch land must meet several criteria. The land must be:

- Prime, Unique, or other productive soil, as defined by NRCS based on factors such as water moisture regimes, available water capacity, developed irrigation water supply, soil temperature range, acid-alkali balance, water table, soil sodium content, potential for flooding, erodibility, permeability rate, rock fragment content, and soil rooting depth;
- Included in a pending offer to be managed by a nonprofit organization, state, tribal, or local farmland protection program;
- Privately owned;
- Placed under a conservation plan;
- Large enough to sustain agricultural production;
- Accessible to markets for the crop that the land produces; and
- Surrounded by parcels of land that can support long-term agricultural production.

STATE

California Department of Conservation (DOC)

The California DOC administers and supports a number of programs, including the Williamson Act, the California Farmland Conservancy Program, the Williamson Act Easement Exchange Program (WAEEP), and the Farmland Mapping and Monitoring Program (FMMP). These programs are designed to preserve agricultural land and provide data on conversion of agricultural land to urban use. The DOC has authority for the approval of agreements entered into under the WAEEP. Key DOC tools available for land conservation planning are conservation grants, tax incentives to keep land in agriculture or open space, and farmland mapping and monitoring.

California Land Conservation Act of 1965 (Williamson Act)

The California Land Conservation Act of 1965, better known as the Williamson Act (California Administrative Code Section 51200 et seq.), creates an arrangement whereby private landowner's contract with local governments to voluntarily restrict land to agricultural or related open space uses. In return, restricted parcels are assessed for property tax purposes, at a rate consistent with their actual use, rather than potential market value, which saves landowners from 20 percent to 75 percent in property tax liability each year. Local governments receive an annual subvention of forgone property tax revenues from the State via the Open Space Subvention Act of 1971 (California Government Code Section 16140-16154). Initially signed for a minimum 10-year period, the contracts are automatically renewed each year for a successive minimum 10-year period unless a notice of non-renewal is filed, or a contract cancellation is approved by the local government.

Farmland Security Zone

A Farmland Security Zone is an area created within an agricultural preserve by a board of supervisors (board) or city council (council) upon request by a landowner or group of landowners. An agricultural preserve defines the boundary of an area within which a city or county will enter into contracts with landowners. The boundary is designated by resolution of the board or council having jurisdiction. Agricultural preserves must generally be at least 100 acres in size. Farmland Security Zone contracts offer landowners greater property tax reduction. Land restricted by a Farmland Security Zone contract is valued for property assessment purposes at 65 percent of its Williamson Act valuation or 65 percent of its Proposition 13 valuation, whichever is lower.

Forest Practice Rules

The California Department of Forestry and Fire Protection (CAL FIRE) implements the laws that regulate timber harvesting on privately-owned lands. These laws are contained in the Z'berg-Nejedly Forest Practice Act of 1973 which established a set of rules known as the Forest Practice Rules to be applied to forest management related activities (i.e., timber harvests, timberland conversions, fire hazard removal, etc.). They are intended to ensure that timber harvesting is conducted in a manner that will preserve and protect fish, wildlife, forests, and streams. Under the Forest Practice Act, a Timber Harvesting Plan (THP) is submitted to CAL FIRE by the landowner outlining what timber is proposed to be harvested, harvesting method, and the steps that will be taken to prevent damage to the environment. If the landowner intends to convert timberland to non-timberland uses, such as a winery or vineyard, a Timberland Conversion Permit is required in addition to the THP. It is CAL FIRE's intent that a THP will not be approved which fails to adopt feasible mitigation measures or alternatives from the range of measures set out or provided for in the Forest Practice Rules, which would substantially lessen or avoid significant adverse environmental impacts resulting from timber harvest activities. THPs are required to be prepared by Registered Professional Foresters who are licensed to prepare these plans. For projects involving Timberland Conversion Permits, CAL FIRE acts as lead agency under CEQA, and the county or city acts as a responsible agency.

5.2.3 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to agricultural and forestry resources. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use (refer to Impact Statement AG-1);
- Conflict with existing zoning for agricultural use, or a Williamson Act contract (refer to Impact Statement AG-2);

- Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526, or timberland zoned Timberland Production (as defined by Government Code section 51104(g));
- Result in the loss of forest land or conversion of forest land to non-forest use; and/or
- Involve other changes in the existing environment which due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use (refer to Impact Statement AG-3).

There are no forest lands or timber lands located within the Planning Area. There are also no parcels that are currently zoned as forest land, timber, or timber production. Therefore, implementation of the proposed General Plan Update would have no impact on forest land, timber, or timber production and these impacts will not be discussed further.

5.2.4 IMPACTS AND MITIGATION MEASURES

AG-1: Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Impact Analysis: The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. As described above, the FMMP classifies the Planning Area as Urban and Built-Up Land. The Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP. Additionally, there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map. Therefore, the Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use. No impact would occur in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

AG-2: Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

Impact Analysis: Although the General Plan Update does not include any zone changes at this time, a future zoning update is anticipated to bring zoning into compliance with the General Plan Update. However, since the City does not have any zoning districts exclusive to agriculture uses, the General Plan Update, and subsequent zoning code update, would not conflict with existing zoning for agricultural use.

The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The Planning Area does not contain land under agricultural production, nor are any parcels within the Planning Area under a Williamson Act contract. Therefore, the Project would not

conflict with existing zoning for agricultural use or conflict with a Williamson Act contact. No impact would occur in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

AG-3: Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Impact Analysis: There are no forest lands within the Planning Area, nor are there suitable environmental conditions for forest land to be developed; therefore, implementation of the proposed Project will not result in the conversion of forest land to non-forest use.

The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. As described above, the Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP; there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map; and the Planning Area does not contain land under agricultural production. Thus, the General Plan Update would not result in conversion of farmland to non-agricultural use or conversion of forest land to non-forest use. No impact would occur in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.2.5 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The cumulative projects' setting for agricultural resources would be the Los Angeles region.

Would the project, combined with other related cumulative projects, convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Impact Analysis: The Planning Area is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. As described above, the FMMP classifies the Planning Area as Urban and Built-Up Land. The Planning Area does not contain any Prime Farmland, Unique Farmland, or

Farmland of Statewide Importance pursuant to the FMMP. Additionally, there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map and the Planning Area does not contain land under agricultural production. Therefore, the proposed Project would have no impact involving the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use and as a result would not contribute to a potential cumulative impact in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects, conflict with existing zoning for agricultural use, or a Williamson Act contract?

Impact Analysis: The Planning Area, along with the cumulative project sites, is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. The Planning Area does not contain land under agricultural production, nor are any parcels within the Planning Area under a Williamson Act contract. Because the City does not have any zoning districts exclusive to agriculture uses, the General Plan Update, and subsequent zoning code update, would not conflict with existing zoning for agricultural use. Therefore, the proposed Project would have no impact involving a conflict with existing zoning for agricultural use, or a Williamson Act contract, and as a result would not contribute to a potential cumulative impact in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects, involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Impact Analysis: The Planning Area, along with the cumulative project sites, is located within an urbanized area and is generally developed with a mix of residential and non-residential uses. There are no forest lands within the Planning Area, nor are there suitable environmental conditions for forest land to be developed; therefore, implementation of the proposed Project will not result in the conversion of forest land to non-forest use. The Planning Area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the FMMP; there are no existing lands within the Planning Area that are designated for agricultural use on the existing or proposed Lawndale Land Use Map; and the Planning Area does not contain land under agricultural production. Therefore, the proposed Project would have no impact involving the conversion of farmland to non-agricultural use or conversion of forest land to non-forest use, and as a result would not contribute to a potential cumulative impact in this regard.

Proposed General Plan Update Goals, Policies, and Actions: There are no relevant proposed General Plan Update goals, policies, and actions.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.2.6 SIGNIFICANT UNAVOIDABLE IMPACTS

Agricultural impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable agricultural impacts would occur as a result of the General Plan Update.

5.3 AIR QUALITY

5.3.1 PURPOSE

This section identifies the existing air quality conditions within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

This section is primarily based upon the air quality emissions analysis and modeling prepared by De Novo Planning Group, and included as Appendix B, *Air Quality, Energy and Greenhouse Gas Emissions Modeling Data*.

One comment was received during the NOP comment period regarding air quality. The comment was received from the South Coast Air Quality Management District (SCAQMD). The SCAQMD provides recommendations on the analysis of potential air quality impacts resulting from the proposed General Plan Update.

5.3.2 ENVIRONMENTAL SETTING

The California Air Resources Board (CARB) divides the State into 15 air basins that share similar meteorological and topographical features. The Planning Area is located within the South Coast Air Basin (SCAB), a 6,600-square mile area bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The SCAB includes the non-desert portions of Los Angeles, San Bernardino, and Riverside Counties, as well as all of Orange County, in addition to the San Gorgonio Pass area of Riverside County.

The extent and severity of the air pollution problem in the Basin is a function of the area's natural physical characteristics (weather and topography), as well as man-made influences (development patterns and lifestyle). Factors, such as wind, sunlight, temperature, humidity, rainfall, and topography, all affect the accumulation and dispersion of air pollutants throughout the Basin.

LOCAL CLIMATE AND METEROLOGY

The topography and climate of southern California combine to make the SCAB an area highly favorable for forming air pollution. A warm air mass frequently descends over the cool, moist marine layer produced by the interaction between the ocean's surface and the lowest layer of the atmosphere. Within the atmosphere, the warm upper layer forms a cap over the cooler surface layer, which traps the pollutants near the ground. Light winds can further limit ventilation. The region also experiences periods of hot, dry winds from the desert, known as Santa Ana winds. If the Santa Ana winds are strong, they can surpass the sea breeze, which blows from the ocean to the land, and carry the suspended dust and pollutants out to the ocean. If the winds are weak, they are opposed by the sea breeze and cause stagnation, resulting in high pollution events.

The annual average temperature varies little throughout much of the Basin, ranging from the low to middle 60s, measured in degrees Fahrenheit (°F). With more pronounced oceanic influence, coastal areas, such as where the Project site is located, show less variability in annual minimum and maximum

temperatures compared to inland areas. The majority of the annual rainfall in the basin occurs between November and April. Summer rainfall is minimal and is generally limited to scattered thunderstorms in the coastal regions and slightly heavier showers in the eastern portion of the basin along the coastal westerly side of the mountains. Year-to-year patterns in rainfall are unpredictable because of fluctuations in the weather.

Temperature inversions limit the vertical depth through which pollution can be mixed. Among the most common temperature inversions in the basin are radiation inversions, which form on clear winter nights when cold air off mountains sink to the valley floor while the air aloft over the valley remains warm. These inversions, in conjunction with calm winds, trap pollutants near the source. Other types of temperature inversions that affect the basin include marine, subsidence, and high-pressure inversions.

Summers are often periods of hazy visibility and occasionally unhealthful air. Strong temperature inversions may occur that limit the vertical depth through which air pollution can be dispersed. Air pollutants concentrate because they cannot rise through the inversion layer and disperse. These inversions are more common and persistent during the summer months. Over time, sunlight produces photochemical reactions within this inversion layer that creates ozone, a particularly harmful air pollutant. Occasionally, strong thermal convections occur which allows the air pollutants to rise high enough to pass over the mountains and ultimately dilute the smog cloudtrap pollutants such as automobile exhaust near their source.

In the winter, light nocturnal winds result mainly from the drainage of cool air off of the mountains toward the valley floor while the air aloft over the valley remains warm. This forms a type of inversion known as a radiation inversion. Such winds are characterized by stagnation and poor local mixing and trap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution “hot spots” in heavily developed coastal areas of the basin, there is not enough traffic to cause any winter air pollution problems.

The temperature and precipitation levels for the Los Angeles International Airport, the closest station with data, are in Table 5.3-1, *Metrological Summary*. Table 5.3-1 shows that August is typically the warmest month and January is typically the coolest month. Rainfall in the Planning Area varies considerably in both time and space. Almost all the annual rainfall comes from the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table 5.3-1
Meteorological Summary

Month	Temperature (˚F)		Average Precipitation (inches)
	Average High	Average Low	
January	65.2	47.5	2.65
February	65.3	48.9	2.67
March	65.3	50.5	1.85
April	67.4	53.0	0.77
May	69.1	56.4	0.17
June	71.9	59.7	0.05
July	75.1	62.9	0.02
August	76.3	63.8	0.07
September	76.0	62.6	0.16
October	73.6	58.5	0.39
November	70.2	52.3	1.40
December	65.9	47.9	1.82
Annual Average	70.1	55.3	12.02

CRITERIA POLLUTANTS

The air pollutants emitted into the ambient air by stationary and mobile sources are regulated by State and Federal laws. These regulated air pollutants are known as "criteria air pollutants" and are categorized into primary and secondary pollutants.

Primary air pollutants are emitted directly from sources. Carbon monoxide (CO), reactive organic gases (ROG), nitrogen oxide (NO_X), sulfur dioxide (SO_2), coarse particulate matter (PM_{10}), fine particulate matter ($PM_{2.5}$), and lead are primary air pollutants. Of these, CO, NO_X, SO_2, PM_{10}, and $PM_{2.5}$ are criteria pollutants. ROG and NO_X are criteria pollutant precursors and form secondary criteria pollutants through chemical and photochemical reactions in the atmosphere. For example, the criteria pollutant O_3 is formed by a chemical reaction between ROG and NO_X in the presence of sunlight. O_3 and nitrogen dioxide (NO_2) are the principal secondary pollutants.

Carbon Monoxide (CO). CO is an odorless, colorless toxic gas that is emitted by mobile and stationary sources as a result of incomplete combustion of hydrocarbons or other carbon-based fuels. In cities, automobile exhaust can cause as much as 95 percent of all CO emissions. CO replaces oxygen in the body's red blood cells. Individuals with a deficient blood supply to the heart, patients with diseases involving heart and blood vessels, fetuses (unborn babies), and patients with chronic hypoxemia (oxygen deficiency) as seen in high altitudes are most susceptible to the adverse effects of CO exposure. People with heart

disease are also more susceptible to developing chest pains when exposed to low levels of carbon monoxide.

Ozone (O_3). O_3 occurs in two layers of the atmosphere. The layer surrounding the earth's surface is the troposphere. The troposphere extends approximately 10 miles above ground level, where it meets the second layer, the stratosphere. The stratospheric (the "good" O_3 layer) extends upward from about 10 to 30 miles and protects life on earth from the sun's harmful ultraviolet rays. "Bad" O_3 is a photochemical pollutant, and needs volatile organic compounds (VOCs), nitrogen oxides (NO_X), and sunlight to form; therefore, VOCs and NO_X are O_3 precursors. To reduce O_3 concentrations, it is necessary to control the emissions of these O_3 precursors. Significant O_3 formation generally requires an adequate amount of precursors in the atmosphere and a period of several hours in a stable atmosphere with strong sunlight. High O_3 concentrations can form over large regions when emissions from motor vehicles and stationary sources are carried hundreds of miles from their origins.

While O_3 in the upper atmosphere (stratosphere) protects the earth from harmful ultraviolet radiation, high concentrations of ground-level O_3 (in the troposphere) can adversely affect the human respiratory system and other tissues. O_3 is a strong irritant that can constrict the airways, forcing the respiratory system to work hard to deliver oxygen. Individuals exercising outdoors, children, and people with pre-existing lung disease such as asthma and chronic pulmonary lung disease are considered to be the most susceptible to the health effects of O_3. Short-term exposure (lasting for a few hours) to O_3 at elevated levels can result in aggravated respiratory diseases such as emphysema, bronchitis and asthma, shortness of breath, increased susceptibility to infections, inflammation of the lung tissue, increased fatigue, as well as chest pain, dry throat, headache, and nausea.

Nitrogen Dioxide (NO_2). NO_X are a family of highly reactive gases that are a primary precursor to the formation of ground-level O_3 and react in the atmosphere to form acid rain. NO_2 (often used interchangeably with NO_X) is a reddish-brown gas that can cause breathing difficulties at elevated levels. Peak readings of NO_2 occur in areas that have a high concentration of combustion sources (e.g., motor vehicle engines, power plants, refineries, and other industrial operations). NO_2 can irritate and damage the lungs and lower resistance to respiratory infections such as influenza. The health effects of short-term exposure are still unclear. However, continued or frequent exposure to NO_2 concentrations that are typically much higher than those normally found in the ambient air may increase acute respiratory illnesses in children and increase the incidence of chronic bronchitis and lung irritation. Chronic exposure to NO_2 may aggravate eyes and mucus membranes and cause pulmonary dysfunction.

Coarse Particulate Matter (PM_{10}). PM_{10} refers to suspended particulate matter, which is smaller than 10 microns or ten one-millionths of a meter. PM_{10} arises from sources such as road dust, diesel soot, combustion products, construction operations, and dust storms. PM_{10} scatters light and significantly reduces visibility. In addition, these particulates penetrate into lungs and can potentially damage the respiratory tract. On June 19, 2003, the California Air Resources Board (CARB) adopted amendments to the statewide 24-hour particulate matter standards based upon requirements set forth in the Children's Environmental Health Protection Act (Senate Bill 25).

Fine Particulate Matter ($PM_{2.5}$). Due to recent increased concerns over health impacts related to fine particulate matter (particulate matter 2.5 microns in diameter or less), both State and Federal $PM_{2.5}$

standards have been created. Particulate matter impacts primarily affect infants, children, the elderly, and those with pre-existing cardiopulmonary disease. In 1997, the U.S. Environmental Protection Agency (EPA) announced new $PM_{2.5}$ standards. Industry groups challenged the new standard in court and the implementation of the standard was blocked. However, upon appeal by the EPA, the United States Supreme Court reversed this decision and upheld the EPA's new standards.

On January 5, 2005, the EPA published a Final Rule in the Federal Register that designates the Basin as a nonattainment area for Federal $PM_{2.5}$ standards. On June 20, 2002, CARB adopted amendments for statewide annual ambient particulate matter air quality standards. These standards were revised/established due to increasing concerns by CARB that previous standards were inadequate, as almost everyone in California is exposed to levels at or above the current State standards during some parts of the year, and the statewide potential for significant health impacts associated with particulate matter exposure was determined to be large and wide-ranging. On July 8, 2016, EPA made a finding that the South Coast has attained the 1997 24-hour and annual $PM_{2.5}$ standards based on 2011-2013 data. However, the Basin remains in nonattainment as the EPA has not determined that California has met the Federal Clean Air Act requirements for redesignating the Basin nonattainment area to attainment.

Sulfur Dioxide (SO_2). Sulfur dioxide (SO_2) is a colorless, irritating gas with a rotten egg smell; it is formed primarily by the combustion of sulfur-containing fossil fuels. Sulfur dioxide is often used interchangeably with SO_X. Exposure of a few minutes to low levels of SO_2 can result in airway constriction in some asthmatics.

Volatile Organic Compounds (VOC). VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not form O_3 to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms VOC and reactive organic gases (ROG), discussed below, are often used interchangeably.

Reactive Organic Gases (ROG). Similar to VOCs, ROGs are also precursors in forming O_3 and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and nitrogen oxides react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant.

TOXIC AIR CONTAMINANTS

Toxic air contaminants (TACs) are airborne substances capable of causing short-term (acute) and/or long-term (chronic) or carcinogenic (i.e., cancer causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. They may be emitted from a variety of common sources including gasoline stations, automobiles, dry cleaners, industrial operations, and

painting operations. The current California list of TACs includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

Hazardous air pollutant (HAP) is a term used in the Federal Clean Air Act (FCAA) and includes a variety of pollutants generated or emitted by industrial production activities. Identified as TACs under the California Clean Air Act (CCAA), ten pollutants have been singled out through ambient air quality data as being the most substantial health risks in California. Direct exposure to these pollutants has been shown to cause cancer, birth defects, brain and nervous system damage, and respiratory disorders.

TACs do not have ambient air quality standards because no safe levels of TACs can be determined. Instead, TAC impacts are evaluated by calculating the health risks associated with a given exposure. The requirements of the Air Toxic "Hot Spots" Information and Assessment Act (Assembly Bill [AB] 2588) apply to facilities that use, produce, or emit toxic chemicals. Facilities subject to the toxic emission inventory requirements of AB 2588 must prepare, submit, and periodically update their toxic emission inventory plans and reports.

Toxic contaminants often result from fugitive emissions during fuel storage and transfer activities, and from leaking valves and pipes. For example, the electronics industry, including semiconductor manufacturing, uses highly toxic chlorinated solvents in semiconductor production processes. Automobile exhaust also contains toxic air pollutants such as benzene and 1,3-butadiene.

Diesel Particulate Matter

Diesel Particulate Matter (DPM) is emitted from both mobile and stationary sources. In California, on-road diesel-fueled engines contribute approximately 24 percent of the Statewide total, with an additional 71 percent attributed to other mobile sources, such as construction and mining equipment, agricultural equipment, and transport refrigeration units. Stationary sources contribute approximately five percent of total DPM in the State. It should be noted that CARB has developed several plans and programs to reduce diesel emissions such as the Diesel Risk Reduction Plan, the Statewide Portable Equipment Registration Program (PERP), and the Diesel Off-Road Online Reporting System (DOORS). PERP and DOORS allow owners or operators of portable engines and certain other types of equipment to register their equipment in order to operate them in the State without having to obtain individual permits from local air districts.

Diesel exhaust and many individual substances contained in it (e.g., arsenic, benzene, formaldehyde, and nickel) have the potential to contribute to mutations in cells that can lead to cancer. Long-term exposure to diesel exhaust particles poses the highest cancer risk of any TAC evaluated by OEHHA. CARB estimates that about 70 percent of the cancer risk that the average Californian faces from breathing toxic air pollutants stems from diesel exhaust particles.

In its comprehensive assessment of diesel exhaust, OEHHA analyzed more than 30 studies of people who worked around diesel equipment, including truck drivers, railroad workers, and equipment operators. The studies showed these workers were more likely to develop lung cancer than workers who were not exposed to diesel emissions. These studies provide strong evidence that long-term occupational exposure to diesel exhaust increases the risk of lung cancer. Using information from OEHHA's assessment, CARB estimates that diesel particle levels measured in California's air in 2000 could cause 540 "excess" cancers in a population of one million people over a 70-year lifetime. Other researchers and scientific

organizations, including the National Institute for Occupational Safety and Health, have calculated cancer risks from diesel exhaust similar to those developed by OEHHA and CARB.

Exposure to diesel exhaust can also have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and can cause coughing, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks.

Diesel engines are a major source of fine particulate pollution. The elderly and people with emphysema, asthma, and chronic heart and lung disease are especially sensitive to fine-particle pollution. Numerous studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems. Because children's lungs and respiratory systems are still developing, they are also more susceptible than healthy adults to fine particles. Exposure to fine particles is associated with increased frequency of childhood illnesses and can also reduce lung function in children. In California, diesel exhaust particles have been identified as a carcinogen.

ODORS

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another.

It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word "strong" to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air.

When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection

threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

SENSITIVE RECEPTORS

Sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases, such as asthma, emphysema, and bronchitis.

Because the proposed Project is a planning document that does not include exact locations, sizes, or land use type for any individual projects that would occur within the City under the General Plan Update, there are no specific sensitive locations identified with respect to the proposed Project. As a conservative estimate of impacts, sensitive receptors are anticipated to be located directly adjacent to new development.

AMBIENT AIR QUALITY

Both the EPA and the CARB have established ambient air quality standards for common pollutants. These ambient air quality standards represent safe levels of contaminants that avoid specific adverse health effects associated with each pollutant.

The Federal and State ambient air quality standards are summarized in Table 5.3-2, *Federal and State Ambient Air Quality Standards* for important pollutants. The Federal and State ambient standards were developed independently, although both processes attempted to avoid health-related effects. As a result, the Federal and State standards differ in some cases. In general, the California standards are more stringent. This is particularly true for ozone, $PM_{2.5}$, and PM_{10}. The EPA signed a final rule for the Federal ozone eight-hour standard of 0.070 ppm on October 1, 2015, and was effective as of December 28, 2015 (equivalent to the State ambient air quality eight-hour standard for ozone).

Table 5.3-2
Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	Federal Primary Standard	State Standard
Ozone	1-Hour 8-Hour	-- 0.070 ppm	0.09 ppm 0.070 ppm
Carbon Monoxide	8-Hour 1-Hour	9.0 ppm 35.0 ppm	9.0 ppm 20.0 ppm
Nitrogen Dioxide	Annual 1-Hour	0.053 ppm 0.100 ppm	0.03 ppm 0.18 ppm
Sulfur Dioxide	Annual 24-Hour 1-Hour	0.03 ppm 0.14 ppm 0.075 ppm	-- 0.04 ppm 0.25 ppm
PM_{10}	Annual 24-Hour	-- 150 ug/m^3	20 ug/m^3 50 ug/m^3
$PM_{2.5}$	Annual 24-Hour	12 ug/m^3 35 ug/m^3	12 ug/m^3 --
Lead	30-Day Avg. 3-Month Avg.	-- 0.15 ug/m^3	1.5 ug/m^3 --

Source: California Air Resources Board, 2023a.
Notes: ppm = parts per million, ug/m3 = Micrograms per Cubic Meter.

Attainment Status

In accordance with the California Clean Air Act (CCAA), the CARB is required to designate areas of the State as attainment, nonattainment, or unclassified with respect to applicable standards. An "attainment" designation for an area signifies that pollutant concentrations did not violate the applicable standard in that area. A "nonattainment" designation indicates that a pollutant concentration violated the applicable standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria.

Depending on the frequency and severity of pollutants exceeding applicable standards, the nonattainment designation can be further classified as serious nonattainment, severe nonattainment, or extreme nonattainment, with extreme nonattainment being the most severe of the classifications. An "unclassified" designation signifies that the data does not support either an attainment or nonattainment status. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The EPA designates areas for ozone, carbon monoxide, and nitrogen dioxide as "does not meet the primary standards," "cannot be classified," or "better than national standards." For sulfur dioxide, areas are designated as "does not meet the primary standards," "does not meet the secondary standards," "cannot be classified," or "better than national standards." However, the CARB terminology of attainment, nonattainment, and unclassified is more frequently used.

Los Angeles County has a State designation Attainment or Unclassified for all criteria pollutants except for ozone, PM_{10} and $PM_{2.5}$. Los Angeles County has a national designation of either Unclassified or Attainment for all criteria pollutants except for Ozone and $PM_{2.5}$. Table 5.3-3, *State and National Attainment Status in Los Angeles County*. Table 5.3-3 presents the state and national attainment status for Los Angeles County.

Table 5.3-3
State and National Attainment Status in Los Angeles County

Criteria Pollutants	State Designations	National Designations
Ozone (O_3)	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Nonattainment	Nonattainment
Carbon Monoxide (CO)	Attainment	Unclassified/Attainment
Nitrogen Dioxide (NO_2)	Attainment	Unclassified/Attainment
Sulfur Dioxide (SO_2)	Attainment	Unclassified/Attainment
Sulfates	Attainment	
Lead	Attainment	Nonattainment
Hydrogen Sulfide	Unclassified	
Visibility Reducing Particles	Unclassified

Separately, Table 5.3-4, *South Coast Air Basin Attainment Status*, lists the attainment status for the criteria pollutants in the South Coast Air Basin.

Table 5.3-4
South Coast Air Basin Attainment Status

Pollutant	Standard[1]	Averaging Time	Designation[2]	Attainment Deadline Date[3]
1-Hour Ozone	NAAQS	1979 1-Hour (0.12 ppm)	Nonattainment (Extreme)	2/6/2023 (not attained)[4]
	CAAQS	1-Hour (0.09 ppm)	Nonattainment	N/A
8-Hour Ozone[5]	NAAQS	1997 8-Hour (0.08 ppm)	Nonattainment (Extreme)	6/15/2024
	NAAQS	2008 8-Hour (0.075 ppm)	Nonattainment (Extreme)	7/20/2032
	NAAQS	2015 8-Hour (0.070 ppm)	Nonattainment (Extreme)	8/3/2038
	CAAQS	8-Hour (0.070 ppm)	Nonattainment	Beyond 2032
CO	NAAQS	1-Hour (35 ppm)	Attainment (Maintenance)	6/11/2007 (attained)
	CAAQS	8-Hour (9 ppm)	Attainment	6/11/2007 (attained)
NO_2[6]	NAAQS	1-Hour (0.1 ppm)	Unclassifiable/Attainment	N/A (attained)
	NAAQS	Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (attained)
	CAAQS	1-hour (0.18 ppm) Annual (0.030 ppm)	Attainment	--
SO_2[7]	NAAQS	1-Hour (75 ppb)	Designations Pending (expect Uncl./Attainment)	N/A (attained)
	NAAQS	24-Hour (0.14 ppm) Annual (0.03 ppm)	Unclassifiable/Attainment	3/19/1979 (attained)
PM_{10}	NAAQS	1987 24-Hour (150 µg/m^3)	Attainment (Maintenance)[8]	7/26/2013 (attained)
	CAAQS	24-Hour (50 µg/m^3) Annual (20 µg/m^3)	Nonattainment	N/A

Table 5.3-4 (continued)
South Coast Air Basin Attainment Status

Pollutant	Standard[1]	Averaging Time	Designation[2]	Attainment Deadline Date[3]
$PM_{2.5}$[9]	NAAQS	2006 24-Hour (35 µg/m^3)	Nonattainment (Serious)	12/31/2019
	NAAQS	1997 Annual (15.0 µg/m^3)	Attainment	8/24/2016
	NAAQS	2021 Annual (12.0 µg/m^3)	Nonattainment (Serious)	12/31/2025
	CAAQS	Annual (12.0 µg/m^3)	Nonattainment	N/A
Lead	NAAQS	3-Months Rolling (0.15 µg/m3)	Nonattainment (Partial)[10]	12/31/2015
Hydrogen Sulfide (H2S)	CAAQS	1-Hour (0.03 ppm/42 µg/m3)	Attainment	--
Sulfates	CAAQS	24-Hour (25 µg/m3)	Attainment	--
Vinyl Chloride	CAAQS	24-Hour (0.01 ppm/26 µg/m3)	Attainment	--

Source: South Coast Air Quality Management District, *National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) Attainment Status for South Coast Air Basin*, September 2018.
Notes:
[1] NAAQS = National Ambient Air Quality Standards, CAAQS = California Ambient Air Quality Standards
[2] EPA often only declares Nonattainment areas; everywhere else is listed as Unclassifiable/Attainment or Unclassifiable.
[3] A design value below the NAAQS for data through the full year or smog season prior to the attainment date is typically required for attainment demonstration.
[4] 1-hour O_3 standard (0.12 ppm) was revoked, effective June 15, 2005 ; however, the Basin has not attained this standard based on 2008-2010 data and is still subject to anti-backsliding requirements.
[5] 1997 8-hour O_3 standard (0.08 ppm) was reduced (0.075 ppm), effective May 27, 2008; the revoked 1997 O_3 standard is still subject to anti-backsliding requirements.
[6] New NO_2 1-hour standard, effective August 2, 2010; attainment designations January 20, 2012; annual NO_2 standard retained.

[7] The 1971 annual and 24-hour SO_2 standards were revoked, effective August 23, 2010; however, these 1971 standards will remain in effect until one year after EPA promulgates area designations for the 2010 SO_2 1-hour standard. Area designations are still pending, with Basin expected to be designated Unclassifiable /Attainment.
[8] Annual PM_{10} standard was revoked, effective December 18, 2006; 24-hour PM_{10} NAAQS deadline was 12/31/2006; SCAQMD request for attainment redesignation and PM_{10} maintenance plan was approved by EPA on June 26, 2013, effective July 26, 2013.
[9] Attainment deadline for the 2006 24-Hour $PM_{2.5}$ NAAQS (designation effective December 14, 2009) is December 31, 2019 (end of the 10th calendar year after effective date of designations for Serious nonattainment areas). Annual $PM_{2.5}$ standard was revised on January 15, 2013, effective March 18, 2013, from 15 to 12 µg/m3. Designations effective April 15, 2015, so Serious area attainment deadline is December 31, 2025.
[10] Partial Nonattainment designation – Los Angeles County portion of Basin only for near-source monitors. Expect redesignation to attainment based on current monitoring data.

Los Angeles County Monitoring

SCAQMD is divided into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The City of Lawndale is in the Southwest Los Angeles County (Area 3). The nearest air monitoring station is the LAX Hastings Station, located at 7201 W. Westchester Parkway, approximately five miles northwest of the Planning Area. Table 5.3-5, *Local Air Quality Levels*, presents the monitored pollutant levels within the vicinity.

The monitoring data presented in Table 5.3-5 shows that ozone and particulate matter (PM_{10}) are the air pollutants of primary concern in the Planning Area, which are detailed below.

Table 5.3-5
Local Area Air Quality Levels

Pollutant (Standard)	Year		
	2019	2020	2021[1]
Ozone:			
Maximum 1-Hour Concentration (ppm)	0.082	0.117	0.059
Days > CAAQS (0.09 ppm)	0	**1**	0
Maximum 8-Hour Concentration (ppm)	0.067	0.074	0.049
Days > NAAQS (0.07 ppm)	0	**2**	0
Days > CAAQS (0.07 ppm)	0	**2**	0
Carbon Monoxide:			
Maximum 1-Hour Concentration (ppm)	1.8	1.6	1.7
Days > NAAQS (20 ppm)	0	0	0
Maximum 8-Hour Concentration (ppm)	1.3	1.3	1.3
Days > NAAQS (9 ppm)	0	0	0
Nitrogen Dioxide:			
Maximum 1-Hour Concentration (ppm)	0.057	0.060	0.063
Days > NAAQS (0.25 ppm)	0	0	0
Sulfur Dioxide:			
Maximum 1-Hour Concentration (ppm)	0.008	0.006	0.008
Days > CAAQS (0.25 ppm)	0	0	0
Inhalable Particulates (PM_{10}):			
Maximum 24-Hour Concentration (ug/m^3)	62	43	33
Days > NAAQS (150 ug/m^3)	0	0	0

Table 5.3-5 (continued)
Local Area Air Quality Levels

Pollutant (Standard)	Year		
	2019	2020	2021[1]
Days > CAAQS (50 ug/m^3)	2 (3%)	0	0
Annual Average (ug/m^3)	19.2	22.5	17.7
Annual > NAAQS (50 ug/m^3)	No	No	No
Annual > CAAQS (20 ug/m^3)	No	**Yes**	No
Ultra-Fine Particulates ($PM_{2.5}$):[2]			
Maximum 24-Hour Concentration (ug/m^3)	--	--	--
Days > NAAQS (35 ug/m^3)	--	--	--
Annual Average (ug/m^3)	--	--	--
Annual > NAAQS (15 ug/m^3)	--	--	--
Annual > CAAQS (12 ug/m^3)	--	--	--

CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million

Notes:
1. Incomplete data due to site closure in September 2021.
2. Pollutant not monitored.

Ozone

During the 2019 to 2021 monitoring period, the State 1-hour concentration standard for ozone was exceeded for one day in 2020 at the LAX Hastings Station. The Federal and State 8-hour ozone standard was exceeded for two days in 2020 over the past three years at the LAX Hastings Station.

Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO_2, which occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of the SCAQMD contribute to the ozone levels experienced at the monitoring station, with the more significant areas being those directly upwind.

Carbon Monoxide

CO is another important pollutant that is due mainly to motor vehicles. The Southwest Los Angeles County LAX Hastings Station did not record an exceedance of the State or Federal 1-hour or 8-hour CO standards for the last three years.

Nitrogen Dioxide

The LAX Hastings Station did not record an exceedance of the State or Federal NO_2 standards for the last three years.

Sulfur Dioxide

The LAX Hastings Station did not record an exceedance of the State SO_2 standards for the last three years.

Particulate Matter

During the 2019 to 2021 monitoring period, the State 24-hour concentration standard for PM_{10} was exceeded for two days (3 percent of sampled days) in 2019 at the LAX Hastings Station. Over the same time period, the Federal 24-hour and annual standards for PM_{10} have not been exceeded at the LAX Hastings.

$PM_{2.5}$ was not monitored at the LAX Hastings Station during the 2019 to 2021 monitoring period.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM_{10} and $PM_{2.5}$). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM_{10} and $PM_{2.5}$. Other groups considered sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive, because many breathe through their mouths during exercise.

5.3.3 REGULATORY SETTING

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: NAAQS for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The EPA is responsible for administering the FCAA. The FCAA requires the EPA to set NAAQS for several problem air pollutants based on human health and welfare criteria. Two types of NAAQS were established: primary standards, which protect public health (with an adequate margin of safety, including for sensitive populations such as children, the elderly, and individuals suffering from respiratory diseases), and secondary standards, which protect the public welfare from non-health-related adverse effects such as visibility reduction.

NAAQS standards define clean air and represent the maximum amount of pollution that can be present in outdoor air without any harmful effects on people and the environment. Existing violations of the ozone and $PM_{2.5}$ ambient air quality standards indicate that certain individuals exposed to these pollutants may experience certain health effects, including increased incidence of cardiovascular and respiratory ailments.

NAAQS standards have been designed to accurately reflect the latest scientific knowledge and are reviewed every five years by a Clean Air Scientific Advisory Committee (CASAC), consisting of seven members appointed by the EPA administrator. Reviewing NAAQS is a lengthy undertaking and includes the following major phases: Planning, Integrated Science Assessment (ISA), Risk/Exposure Assessment

(REA), Policy Assessment (PA), and Rulemaking. The process starts with a comprehensive review of the relevant scientific literature. The literature is summarized and conclusions are presented in the ISA. Based on the ISA, EPA staff perform a risk and exposure assessment, which is summarized in the REA document. The third document, the PA, integrates the findings and conclusions of the ISA and REA into a policy context, and provides lines of reasoning that could be used to support retention or revision of the existing NAAQS, as well as several alternative standards that could be supported by the review findings. Each of these three documents is released for public comment and public peer review by the CASAC. Members of CASAC are appointed by the EPA Administrator for their expertise in one or more of the subject areas covered in the ISA. The committee's role is to peer review the NAAQS documents, ensure that they reflect the thinking of the scientific community, and advise the Administrator on the technical and scientific aspects of standard setting. Each document goes through two to three drafts before CASAC deems it to be final.

Although there is some variability among the health effects of the NAAQS pollutants, each has been linked to multiple adverse health effects including, among others, premature death, hospitalizations and emergency department visits for exacerbated chronic disease, and increased symptoms such as coughing and wheezing. NAAQS standards were last revised for each of the six criteria pollutants as listed below, with detail on what aspects of NAAQS changed during the most recent update:

- Ozone: On October 1, 2015, the EPA lowered the national eight-hour standard from 0.075 ppm to 0.070 ppm, providing for a more stringent standard consistent with the current California state standard.
- CO: In 2011, the primary standards were retained from the original 1971 level, without revision. The secondary standards were revoked in 1985.
- NO_2: The national NO_2 standard was most recently revised in 2010 following an exhaustive review of new literature pointed to evidence for adverse effects in asthmatics at lower NO_2 concentrations than the existing national standard.
- SO_2: On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb.
- PM: the national annual average $PM_{2.5}$ standard was most recently revised in 2012 following an exhaustive review of new literature pointed to evidence for increased risk of premature mortality at lower $PM_{2.5}$ concentrations than the existing standard.
- Lead: The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. In 2016, the primary and secondary standards were retained.

The law recognizes the importance for each state to locally carry out the requirements of the FCAA, as special consideration of local industries, geography, housing patterns, etc. are needed to have full comprehension of the local pollution control problems. As a result, the EPA requires each state to develop a State Implementation Plan (SIP) that explains how each state will implement the FCAA within their jurisdiction. A SIP is a collection of rules and regulations that a particular state will implement to control

air quality within their jurisdiction. The CARB is the state agency that is responsible for preparing and implementing the California SIP.

Transportation Conformity

Transportation conformity requirements were added to the FCAA in the 1990 amendments, and the EPA adopted implementing regulations in 1997. See §176 of the FCAA (42 U.S.C. §7506) and 40 CFR Part 93, Subpart A. Transportation conformity serves much the same purpose as general conformity: it ensures that transportation plans, transportation improvement programs, and projects that are developed, funded, or approved by the United States Department of Transportation or that are recipients of funds under the Federal Transit Act or from the Federal Highway Administration (FHWA), conform to the SIP as approved or promulgated by EPA.

Currently, transportation conformity applies in nonattainment areas and maintenance areas (maintenance areas are those areas that were in nonattainment that have been redesignated to attainment, under the FCCA). Under transportation conformity, a determination of conformity with the applicable SIP must be made by the agency responsible for the project, such as the Metropolitan Planning Organization, the Council of Governments, or a Federal agency. The agency making the determination is also responsible for all the requirements relating to public participation. Generally, a project will be considered in conformance if it is in the transportation improvement plan and the transportation improvement plan is incorporated in the SIP. If an action is covered under transportation conformity, it does not need to be separately evaluated under general conformity.

Transportation Control Measures

One particular aspect of the SIP development process is the consideration of potential control measures as a part of making progress towards clean air goals. While most SIP control measures are aimed at reducing emissions from stationary sources, some are typically also created to address mobile or transportation sources. These are known as transportation control measures (TCMs). TCM strategies are designed to reduce vehicle miles traveled and trips, or vehicle idling and associated air pollution. These goals are achieved by developing attractive and convenient alternatives to single-occupant vehicle use. Examples of TCMs include ridesharing programs, transportation infrastructure improvements such as adding bicycle and carpool lanes, and expansion of public transit.

STATE

California Clean Air Act

The CCAA was first signed into law in 1988. The CCAA provides a comprehensive framework for air quality planning and regulation, and spells out, in statute, the state's air quality goals, planning and regulatory strategies, and performance. CARB is the agency responsible for administering the CCAA. The CARB established ambient air quality standards pursuant to the California Health and Safety Code (CH&SC) [§39606(b)], which are similar to the Federal standards.

California Air Quality Standards

Although NAAQS are determined by the EPA, states have the ability to set standards that are more stringent than the Federal standards. As such, California established more stringent ambient air quality

standards. Federal and State ambient air quality standards have been established for ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, suspended particulates (PM_{10}) and lead. In addition, California has created standards for pollutants that are not covered by Federal standards. Although there is some variability among the health effects of the CAAQS pollutants, each has been linked to multiple adverse health effects including, among others, premature death, hospitalizations and emergency department visits for exacerbated chronic disease, and increased symptoms such as coughing and wheezing. The existing State and Federal primary standards for major pollutants are shown in Table 5.3-2.

Air quality standard setting in California commences with a critical review of all relevant peer reviewed scientific literature. The Office of Environmental Health Hazard Assessment (OEHHA) uses the review of health literature to develop a recommendation for the standard. The recommendation can be for no change, or can recommend a new standard. The review, including the OEHHA recommendation, is summarized in a document called the draft Initial Statement of Reasons (ISOR), which is released for comment by the public, and also for public peer review by the Air Quality Advisory Committee (AQAC). AQAC members are appointed by the President of the University of California for their expertise in the range of subjects covered in the ISOR, including health, exposure, air quality monitoring, atmospheric chemistry and physics, and effects on plants, trees, materials, and ecosystems. The Committee provides written comments on the draft ISOR. The CARB staff next revises the ISOR based on comments from AQAC and the public. The revised ISOR is then released for a 45-day public comment period prior to consideration by the Board at a regularly scheduled Board hearing.

In June of 2002, CARB adopted revisions to the PM_{10} standard and established a new $PM_{2.5}$ annual standard. The new standards became effective in June 2003. Subsequently, staff reviewed the published scientific literature on ground-level ozone and nitrogen dioxide and CARB adopted revisions to the standards for these two pollutants. Revised standards for ozone and nitrogen dioxide went into effect on May 17, 2006 and March 20, 2008, respectively. These revisions reflect the most recent changes to the CAAQS.

CARB Mobile-Source Regulation

The State of California is responsible for controlling emissions from the operation of motor vehicles in the state. Rather than mandating the use of specific technology or the reliance on a specific fuel, CARB's motor vehicle standards specify the allowable grams of pollution per mile driven. In other words, the regulations focus on the reductions needed rather than on the manner in which they are achieved. Towards this end, the CARB has adopted regulations which required auto manufacturers to phase in less polluting vehicles.

CARB Air Quality and Land Use Handbook

CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* addresses the importance of considering health risk issues when siting sensitive land uses, including residential development, in the vicinity of intensive air pollutant emission sources including freeways or high-traffic roads, distribution centers, ports, petroleum refineries, chrome plating operations, dry cleaners, and gasoline dispensing facilities. The CARB Handbook draws upon studies evaluating the health effects of traffic traveling on major interstate highways in metropolitan California centers within Los Angeles (Interstate [I] 405 and I-710), the San Francisco Bay, and San Diego areas. The recommendations identified by CARB, including

siting residential uses a minimum distance of 500 feet from freeways or other high-traffic roadways, are consistent with those adopted by the State of California for location of new schools. Specifically, the CARB Handbook recommends, "Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day."

Tanner Air Toxics Act

California regulates TACs primarily through the Tanner Air Toxics Act (AB 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588). The Tanner Act sets forth a formal procedure for the CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB can designate a substance as a TAC. To date, CARB has identified more than 21 TACs and has adopted EPA's list of HAPs as TACs. Most recently, diesel PM was added to the CARB list of TACs. Once a TAC is identified, CARB then adopts an Airborne Toxics Control Measure (ATCM) for sources that emit that particular TAC. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure below that threshold. If there is no safe threshold, the measure must incorporate Best Available Control Technology (BACT) to minimize emissions.

The AB 2588 requires that existing facilities that emit toxic substances above a specified level prepare a toxic-emission inventory, prepare a risk assessment if emissions are significant, notify the public of significant risk levels, and prepare and implement risk reduction measures. CARB has adopted diesel exhaust control measures and more stringent emission standards for various on-road mobile sources of emissions, including transit buses and off-road diesel equipment (e.g., tractors, generators). In February 2000, CARB adopted a new public-transit bus-fleet rule and emission standards for new urban buses. These rules and standards provide for (1) more stringent emission standards for some new urban bus engines, beginning with 2002 model year engines; (2) zero-emission bus demonstration and purchase requirements applicable to transit agencies; and (3) reporting requirements under which transit agencies must demonstrate compliance with the urban transit bus fleet rule. Other recent milestones include the low-sulfur diesel-fuel requirement, and tighter emission standards for heavy-duty diesel trucks (2007) and off-road diesel equipment (2011) nationwide.

LOCAL

South Coast Air Quality Management District (SCAQMD)

SCAQMD shares responsibility with CARB for ensuring that all State and Federal ambient air quality standards are achieved and maintained over an area of approximately 10,743 square miles. This area includes all of Orange County and Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County.

SCAQMD reviews projects to ensure that they do not (1) cause or contribute to any new violation of any air quality standard; (2) increase the frequency or severity of any existing violation of any air quality standard; or (3) delay the timely attainment of any air quality standard or any required interim emission reductions or other milestones of any Federal attainment plan.

SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout SCAB. In coordination with the Southern California Association of Governments (SCAG), SCAQMD is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for SCAB. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the national and/or California ambient air quality standards.

In 2003, an AQMP was prepared by SCAQMD to bring SCAB, as well as portions of the Salton Sea Air Basin under the SCAQMD jurisdiction, into compliance with the 1-hour ozone and PM_{10} national standards. The 2003 AQMP also replaced the 1997 attainment demonstration for the Federal CO standard and provided a basis for a maintenance plan for CO for the future. It also updated the maintenance plan for the Federal NO_2 standard, which SCAB has met since 1992.

A subsequent AQMP for the Basin was adopted by the SCAQMD on June 1, 2007. The goal of the 2007 AQMP was to lead SCAB into compliance with the national 8-hour ozone and $PM_{2.5}$ standards. The 2007 AQMP outlined a detailed strategy for meeting the national health-based standards for $PM_{2.5}$ by 2015 and 8-hour ozone by 2024 while accounting for and accommodating future expected growth. The 2007 AQMP incorporated significant new emissions inventories, ambient measurements, scientific data, control strategies, and air quality modeling. Most of the reductions were to be from mobile sources, which are currently responsible for about 75 percent of all smog and particulate-forming emissions.

SCAQMD approved the 2012 AQMP on December 7, 2012. The 2012 AQMP incorporated the latest scientific and technological information and planning assumptions, including the 2012–2035 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and updated emission inventory methodologies for various source categories. The 2012 AQMP outlines a comprehensive control strategy that meets the requirement for expeditious progress toward attainment with the 24-hour $PM_{2.5}$ Federal ambient air quality standard with all feasible control measures and demonstrates attainment of the standard by 2014. The 2012 AQMP also updates the 8-hour ozone control plan with new emission reduction commitments from a set of new control measures that implement the 2007 AQMP's Section 182 (e)(5) commitments. The goal of the Final 2012 AQMP is to lead the Basin into compliance with the national 8-hour ozone and $PM_{2.5}$ standards.

SCAQMD approved the Final 2016 AQMP on March 3, 2017. The 2016 AQMP includes transportation control measures developed by SCAG from the 2016–2040 RTP/SCS, as well as the integrated strategies and measures needed to meet the NAAQS. The 2016 AQMP demonstrates attainment of the 1-hour and 8-hour ozone NAAQS as well as the latest 24-hour and annual $PM_{2.5}$ standards.

SCAQMD approved the Final 2022 AQMP on December 2, 2022. The Final 2022 AQMP builds upon measures already in place from previous AQMPs to reduce air pollution and meet the Federal ozone standard established by the EPA in 2015. It includes a variety of additional actions and strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emission emissions technologies, when cost-effective and feasible, and low NO_X technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other Clean Air Act measures to achieve the 2015 8-hour ozone standard.

SCAQMD has also prepared the 2010 Clean Communities Plan (Formerly the Air Toxics Control Plan), the Air Quality Monitoring Network Plan, the Vision for Air: A Framework for Air Quality and Climate Plan.

SCAQMD is responsible for limiting the amount of emissions that can be generated throughout the basin by various stationary, area, and mobile sources. Specific rules and regulations have been adopted by the SCAQMD Governing Board that (1) limit the emissions that can be generated by various uses and activities; and (2) identify specific pollution reduction measures, which must be implemented in association with various uses and activities. These rules regulate the emissions of not only the Federal and state criteria pollutants, but also TACs and acutely hazardous materials. The rules are also subject to ongoing refinement by SCAQMD.

Among the SCAQMD rules that may be applicable to future development projects within the City are Rule 401 (Visible Emissions), Rule 402 (Nuisance), Rule 403 (Fugitive Dust), Rule 1113 (Architectural Coatings), Rule 1138 (Control of Emissions from Restaurant Operations), Rule 1146.2 (Emissions of Oxides of Nitrogen from Large Water Heaters and Small Boilers and Process Heaters), and Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities). Rule 401 restricts the emissions of air contaminants that significantly reduce air opacity. Rule 402 restricts discharges that cause nuisance to the public. Rule 403 requires the use of stringent best available control measures (BACMs) to minimize PM_{10} emissions during grading and construction activities. Rule 1113 requires reductions in the VOC content of coatings. Rule 1138 specifies PM and VOC emissions and odor control requirements for some kinds of commercial cooking operations. Rule 1146.2 restricts the NO_X emissions from natural gas-fired water heaters, boilers, and process heaters as defined by this rule. Compliance with SCAQMD Rule 1403 requires the owner or operator of any demolition or renovation activity to have an asbestos survey performed prior to demolition and to provide notification to the SCAQMD prior to commencing demolition activities.

SCAQMD's CEQA guidelines are voluntary initiatives recommended for consideration by local planning agencies. The CEQA *Air Quality Handbook* (Handbook) published by SCAQMD provides local governments with guidance for analyzing and mitigating project-specific air quality impacts. SCAQMD is currently updating some of the information and methods in the Handbook, such as the screening tables for determining the air quality significance of a project and the on-road mobile source emission factors. While this process is underway, SCAQMD recommends using other approved models to calculate emissions from land use projects, such as CalEEMod.

SCAQMD's *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning* considers impacts on air quality sensitive receptors from TAC-emitting facilities. SCAQMD's siting distance recommendations are the same as those provided by CARB (e.g., a 500-foot siting distance for air quality sensitive receptors proposed in proximity to freeways and high-traffic roads, and the same siting criteria for distribution centers and dry-cleaning facilities).

Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

SCAG is the metropolitan planning organization (MPO) for the region in which the City is located. On September 3, 2020, SCAG's Regional Council approved and fully adopted Connect SoCal (2020 Regional

Transportation Plan/Sustainable Communities Strategy)., which is an update to the previous 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

The 2020RTP/SCS considers the role of transportation in the broader context of economic, environmental, and quality-of-life goals for the future, identifying regional transportation strategies to address mobility needs. The 2020RTP/SCS describes how the region can attain the GHG emission-reduction targets set by CARB by achieving a 19 percent reduction by 2035 compared to the 2005 level. Although the focus of the 2020 RTP/SCS is on GHG emission-reduction, compliance with and implementation of 2020 RTP/SCS policies and strategies would also have co-benefits of reducing per capita criteria air pollutant and TAC emissions associated with reduced per capita vehicle miles traveled (VMT). Improved air quality with implementation of the 2020 RTP/SCS policies would decrease reactive organic gases (ROG) (similar to VOCs), CO, NO_X, and $PM_{2.5}$.

SCAG's 2020RTP/SCS builds on the land use policies that were incorporated into the 2016 RTP/SCS, and provides specific strategies for successful implementation. These strategies include implementing the Sustainable Communities Program (SCP) – Housing and Sustainable Development (HSD) which will both accelerate housing production as well as enable implementation of the Sustainable Communities Strategy of Connect SoCal; encouraging use of active transportation, or human powered transportation such as bicycles, tricycles, wheelchairs, electric wheelchairs/scooters, skates, and skateboards; and supporting alternative fueled vehicles. The 2020 RTP/SCS overall land use pattern reinforces the trend of focusing new housing and employment in infill areas well served by transit.

In addition, the 2020 RTP/SCS includes goals and strategies to promote active transportation and improve transportation demand management (TDM). The 2020 RTP/SCS strategies support local planning and projects that serve short trips, increase access to transit, expand understanding and consideration of public health in the development of local plans and projects, and support improvements in sidewalk quality, local bike networks, and neighborhood mobility areas. The 2020 RTP/SCS proposes to better align active transportation investments with land use and transportation strategies, increase competitiveness of local agencies for Federal and State funding, and to expand the potential for all people to use active transportation.

Los Angeles County General Plan

The Los Angeles County General Plan 2035 provides a comprehensive set of goals, policies, and implementing programs to guide the County's growth. The County's General Plan includes Chapter 8, Air Quality Element, which summarizes air quality issues and outlines the goals and policies in the General Plan to improve air quality and reduce GHG emissions.

City of Lawndale Climate Action Plan

The City of Lawndale, in cooperation with the South Bay Cities Council of Governments, has developed a Climate Action Plan (CAP) to reduce Greenhouse Gas (GHG) emissions within the City. The CAP identifies community-wide strategies to lower GHG emissions from a range of sources within the jurisdiction, including transportation, land use, energy generation and consumption, water, and waste. Chapters 6 and 7 focus on land use and transportation strategies to improve air quality by reducing transportation-related emissions.

5.3.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Consistent with Appendix G of the CEQA Guidelines and the SCAQMD thresholds of significance, the project will have a significant impact on the environment associated with air quality if it will:

- Conflict with or obstruct implementation of the applicable air quality plan (refer to Impact Statement AQ-1);
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard (refer to Impact Statement AQ-2);
- Expose sensitive receptors to substantial pollutant concentrations (refer to Impact Statement AQ-3); and/or
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people (refer to Impact Statement AQ-4).

METHODOLOGY AND ASSUMPTIONS

A brief discussion of the methodology and assumptions used to estimate proposed Project's air pollutant emissions is provided below. For further detail on air emissions modeling parameters and assumptions, and other related calculations; refer to Appendix B, *Air Quality, Energy and Greenhouse Gas Emissions Modeling Data*.

Construction

Construction of the growth anticipated by implementation of the General Plan Update would have the potential to temporarily emit criteria air pollutant emissions through the use of heavy-duty construction equipment, such as excavators, cranes, and forklifts, and through vehicle trips generated from workers and haul trucks traveling to and from project sites. In addition, fugitive dust emissions would result from demolition and various soil-handling activities. Construction emissions of VOC, NO_x, CO, SO_2, PM_{10} and $PM_{2.5}$ are included in this analysis. Construction emissions can vary substantially from day-to-day, depending on the intensity and specific type of construction activity. The maximum daily regional emissions are predicted values for the worst-case day and do not represent the emissions that would actually occur during every day of construction.

The proposed General Plan Update is a planning-level document, and, as such, there are no specific projects, project construction dates, or specific construction plans identified. Therefore, quantification of emissions associated with buildout cannot be specifically determined at this time. However, the type and size of total anticipated growth is known. Construction emissions are based on the type and amount of off-road construction equipment and the scope of future development that could be allowed under the General Plan Update. Therefore, since CalEEMod provides default construction scenarios based on size and land use type, a reasonable worst case annual construction scenario was analyzed to provide an idea of daily emissions that could occur due to construction under the proposed Project.[1] Due to the urbanized

[1] Note that CalEEMod estimates daily emissions based on the size and type of the development, the number of days that would be needed to complete the activity (CalEEMod default), and the amount of equipment that would be needed to accomplish construction (CalEEMod default).

and built-out nature of the City, the relatively flat topography, and that future growth would primarily occur and infill and redevelopment, soil grading activities are anticipated to balance on-site. Buildout of the General Plan Update (based on the land use assumptions provided by the proposed Project) expected to occur by 2045 were modeled in CalEEMod.[2]

Construction was estimated to begin in October of 2023 and continue throughout 2045. Emission calculations assumed construction in 2023 as a conservative peak emissions year. In a year later, construction emissions would be less because cleaner construction equipment and vehicle fleet mix are expected as a result of State regulations that require cleaner construction equipment to be phased-in for heavy-duty equipment. Thus, construction emissions occurring in later years would be less than the impacts disclosed herein.

Construction activities were modeled to include site preparation, excavation/grading, building construction, paving, and architectural coating. CalEEMod defaults were used to determine construction equipment based on the type of construction. Modeling assumed the land uses contained in Table 3-4 of Section 3.0, *Project Description*.

Daily regional criteria air pollutant emissions for the different phases of construction were forecast based on construction activities, on-road and off-road mobile sources, and fugitive dust emission factors associated with the specific construction activity. Off-road mobile source emissions would result from the use of heavy-duty construction equipment such as bulldozers, loaders, and cranes. These off-road mobile sources emit VOC, NO_x, CO, SO_2, PM_{10} and $PM_{2.5}$. The emissions were estimated using CalEEMod (v.2022.1) software, an emissions inventory software program recommended by SCAQMD. CalEEMod is based on outputs from the OFFROAD model and Emission Factor (EMFAC) model, which are emissions estimation models developed by CARB and used to calculate emissions from construction activities, heavy-duty off-road equipment, and on-road vehicles. Activities parameters, such as number of equipment and equipment usage hours were included.

Fugitive dust emissions (using PM_{10} as a surrogate) during construction activities were estimated in CalEEMod, which are based on the methods described in the EPA AP-42 Compilation of Air Pollutant Emission Factors. During the application of architectural coatings, evaporation of solvents contained in surface coatings result in VOC emissions. CalEEMod was used to calculate VOC emissions based on the building surface area and the default VOC content provided by the air district or CARB's statewide limits.

On-road mobile sources during construction also have the potential to generate temporary criteria air pollutant emissions through worker vehicles and haul trucks traveling to and from project sites during construction. Mobile source emissions were calculated using trips and VMT data in the Transportation Impact Assessment developed for the proposed Project (Kittelson & Associates 2023). CalEEMod default trip lengths were used.

[2] For the sake of a conservative analysis, the modeling for both project construction and operational phases account for total development that is projected to exist in the Planning Area at 2045 buildout, which includes both current development and all development that would occur in the Planning Area in year 2045. This acts as a proxy for the 'worst-case scenario' for the purposes of CEQA analysis.

Operational

Operation of development contemplated by the General Plan Update would generate criteria air pollutant emissions from vehicle trips throughout the City, energy sources, such as natural gas combustion, and area sources, such as operation of landscaping equipment and use of consumer products, including solvents used in non-industrial applications which emit VOCs during their product use, such as cleaning supplies, kitchen aerosols, cosmetics, and toiletries. Operational impacts were assessed for the General Plan Update buildout year of 2045, inclusive of all development within Lawndale projected to exist at that time. Daily maximum criteria air pollutant emissions were compared with the SCAQMD operational thresholds to determine the operational impacts of the General Plan Update.

The operational area emissions from the future development accommodated by the General Plan Update were estimated using the CalEEMod software. Area source emissions are based on hearth emissions, architectural coatings, landscaping equipment, and consumer product usage rates provided in CalEEMod. CalEEMod default values were used for area source emissions except that wood stoves and wood fireplaces were removed from the emissions calculations as they are not permitted within SCAQMD's jurisdiction.

Intersection Hot Spots

Operation of the future development accommodated under the General Plan Update has the potential to generate traffic congestion and increase delay times at intersections within the Planning Area. The pollutant of primary concern when assessing the General Plan Update's impacts at local intersections is carbon monoxide because an elevated concentration of CO tends to accumulate near areas of heavy traffic congestion and where average vehicle speeds are low. Tailpipe emissions are of concern when assessing localized impacts of CO along paved roads.

An adverse concentration of CO, known as a "hotspot," would occur if there was an exceedance of the NAAQS or CAAQS. SCAQMD does not currently have guidance for conducting intersection hot spot analysis. However, Caltrans has guidance for evaluating CO hot spots in their Transportation Project-Level Carbon Monoxide Protocol (CO Protocol). Detailed guidance discussing which modeling programs to use, calculating emission rates, receiver placement, calculating 1-hour and 8-hour concentrations, and utilizing background concentrations are provided in the Caltrans' CO Protocol.

The potential for future development accommodated by the General Plan Update to cause or contribute to CO hotspots is evaluated by comparing Project intersections' volume data from the Transportation Impact Assessment (Kittelson & Associates 2023) with prior studies conducted by SCAQMD in support of their AQMPs and considering existing background CO concentrations.

Toxic Air Contaminant Impacts (Construction and Operation)

Construction and operational activities have the potential to result in health risk impacts (cancer, or other acute or chronic conditions) related to TACs exposure from airborne emissions, specifically the emissions of DPM. Health risk from TACs exposure is a cumulative localized impact-based exposure of nearby sensitive receptors to specific construction activities as well as on location to the construction and operational activities that emit TACs. To determine the magnitude of health risks associated with TACs

exposure, a Health Risk Assessment (HRA) is required. HRAs include dispersion modeling of TACs and in order to determine the specific numerical cancer and non-cancer (acute and chronic) risks associated with the TACs on nearby individual receptors (including residences and workers). In order to accurately model the magnitude of TAC exposure on individual receptors, the following information is required:

- Type of TACs emitted during construction and operational activities (e.g. diesel particulate matter, benzene, acrolein, aniline, etc.) (note: there are 187 hazardous air pollutants currently regulated by the EPA that are considered TACs);
- TACs source location(s) and configuration (note: this is typically provided by the project applicant for the operational phase via a site plan and detail on the specific project type, and for the construction phase via construction plans);
- TAC emissions rate(s);
- TAC release height(s); and
- The precise location of nearby residential and workplace receptors.

This information is incorporated into dispersion modeling software (such as AERMOD), which is used in conjunction with facility health risk assessment software (such as the Hotspots Analysis and Reporting Program, otherwise known as HARP-2). The results of such analysis provide a numerical estimate of maximum health risks, which are incorporated into the HRA (with detailed methodology and a list of assumptions provided). However, since the General Plan Update is a long-range planning document and therefore does not provide sufficient detail on specific development projects that would potentially occur as part of implementation of the General Plan Update (such as providing detailed information on the type, location, and sizing of potential sources of TACs such as warehouses, gasoline/diesel refueling stations, light industrial facilities, etc.), there is insufficient information available at this level of analysis to conduct a reasonable or scientifically valid analysis of TACs. Specific development projects in Lawndale that have the potential to generate potentially significant risks associated with the release of TACs are required to undergo an analysis of their potential health risks associated with TACs, based upon the specific details of each individual project.

Overall, because there are no specific development projects identified or approved under the General Plan Update, the location of the development projects, and the exact nature of the development are unknown, determining health risk as this time is speculative. Therefore, the analysis of TAC health risk is discussed qualitatively in this analysis.

5.3.5 IMPACTS AND MITIGATION MEASURES

AQ-1: Would the project conflict with or obstruct implementation of the applicable air quality plan?

Impact Analysis: The following analysis addresses the General Plan Update's consistency with applicable plans and policies that govern air quality. In particular, the analysis addresses consistency with the SCAQMD's AQMP, which is an air quality plan that includes strategies for achieving attainment of applicable ozone, PM_{10}, and $PM_{2.5}$ standards.

As discussed above, SCAQMD has adopted a series of AQMPs to lead the Air Basin into compliance with several criteria air pollutant standards and other Federal requirements, while taking into account construction and operational emissions associated with population and economic growth projections provided by SCAG's 2020 RTP/SCS. SCAQMD recommends that, when determining whether a project is consistent with the relevant AQMPs, the lead agency should assess whether the project would directly obstruct implementation of the plans by impeding SCAQMD's efforts to achieve attainment with respect to any criteria air pollutant for which it is currently not in attainment of the NAAQS and CAAQS (e.g., ozone, PM_{10}, and $PM_{2.5}$) and whether it is consistent with the demographic and economic assumptions (typically land use related, such as employment and population/residential units) upon which the plan is based. SCAQMD guidance indicates that projects whose growth is included in the projections used in the formulation of the AQMP are considered to be consistent with the plan and would not interfere with its attainment.

SCAQMD thresholds for construction and operational emissions are designed for the analysis of individual projects and not for long-term planning documents, such as the General Plan Update, which would be implemented over a 20-year period. Emissions are dependent on the exact size, nature, and location of an individual land use type, combined with reductions in localized impacts from the removal of existing land use types, as applicable (i.e. conversion of light industrial uses). Emissions associated with the operation of individual projects, could exceed project-specific thresholds established by SCAQMD.

CEQA requires that general plans be evaluated for consistency with the AQMP. Because the AQMP strategy is based on projections from local general plans, only new or amended general plan elements, specific plans, or individual projects under the general plan need to undergo a consistency review. Projects considered consistent with the local general plan are consistent with the air quality-related regional plan. Indicators of consistency include:

- Control Strategies: Whether implementation of a project would increase the frequency or severity of existing air quality violations; would cause or contribute to new violations; or would delay the timely attainment of AAQS or interim emissions reductions within the AQMP.
- Growth Projections: Whether implementation of the project would exceed growth assumptions within the AQMP, which in part, bases its strategy on growth forecasts from local general plans.

CONSTRUCTION

Control Strategies

The Air Basin is designated nonattainment for ozone and $PM_{2.5}$ under the CAAQS and NAAQS, and nonattainment for PM_{10} under the CAAQS. Future development accommodated by the General Plan Update involves long-term growth associated with buildout of the City of Lawndale. Therefore, the emissions of criteria pollutants associated with future developments under the General Plan Update could exceed the SCAQMD thresholds for criteria pollutants. Future development of individual projects under the General Plan Update would be required to comply with CARB's requirements to minimize short-term emissions from on-road and off-road diesel equipment, including the ATCM to limit heavy-duty diesel motor vehicle idling to no more than five minutes at any given time, and with SCAQMD's regulations such as Rule 403 for controlling fugitive dust and Rule 1113 for controlling VOC emissions from architectural

coatings. Furthermore, as applicable to the type of growth, individual projects under the proposed General Plan Update would comply with fleet rules to reduce on-road truck emissions (i.e., 13 CCR, Section 2025 (CARB Truck and Bus regulation)). Compliance with these measures and requirements would be consistent with and meet or exceed the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. Therefore, the construction anticipated by the proposed would be consistent with the AQMP under the first indicator.

Growth Projections

Implementation of the General Plan Update would result in an increase in short-term employment compared to existing conditions. Future development accommodated by the General Plan Update would involve construction, but implementation of the General Plan Update would not necessarily create new construction jobs, since construction-related jobs generated by future development would likely be filled by employees within the construction industry within the City of Lawndale and the greater Los Angeles County region. Construction industry jobs generally have no regular place of business, as construction workers commute to job sites throughout a given region, which may change several times a year. Moreover, these jobs would be temporary in nature. Therefore, the construction jobs generated by future development accommodated by the General Plan Update would not conflict with the long-term employment or population projections upon which the AQMPs are based.

OPERATION

Control Strategies

Future development under the General Plan Update would be required to comply with CARB motor vehicle standards, SCAQMD regulations for stationary sources and architectural coatings, Title 24 energy efficiency standards, and, to the extent applicable, the 2020 RTP/SCS.

As discussed above, the 2022 AQMP includes land use and transportation strategies from the 2020 RTP/SCS that are intended to reduce VMT and resulting regional mobile source emissions. The applicable land use strategies include: planning for growth around livable corridors; providing more options for short trips/neighborhood mobility areas; supporting zero emission vehicles and expanding vehicle charging stations; and supporting local sustainability planning. The applicable transportation strategies include: managing through the Transportation Demand Management (TDM) Program and the Transportation System Management (TSM) Plan including advanced ramp metering, and expansion and integration of the traffic synchronization network; promoting active transportation. The majority of the transportation strategies are to be implemented by cities, counties, and other regional agencies such as SCAG and SCAQMD, although some can be furthered by individual development projects.

The location, design, and land uses of the growth anticipated by the General Plan Update would implement land use and transportation strategies related to reducing vehicle trips for residents and employees of the City by increasing commercial and residential density near public transit. The land uses allowed under the proposed General Plan (Figure 3-4 in Section 3.0) provide opportunities for cohesive new growth at infill locations primarily within the Hawthorne Boulevard Specific Plan area. The availability of public transportation and the focus on increasing density relative to the existing public transportation, enables implementation of the General Plan Update to potentially reduce vehicle trips, VMT, and

associated transportation-related emissions per capita, compared to the existing conditions. Therefore, the General Plan Update would result in a less than significant impact associated with air quality. The proposed Project would be consistent with the AQMP under the first indicator.

Growth Projections

The emissions inventory for SCAB is formed, in part, by existing city and county general plans. The AQMP is based on population, employment and VMT forecasts by SCAG. A project might be in conflict with the AQMP if the development is greater than that anticipated in the local general plan and SCAG's growth projections. Future development in the City of Lawndale that is consistent with the General Plan Update could increase vehicle trips and VMT that would result in emissions of ozone precursors and particulate matter. Individual projects under the General Plan Update would be required to undergo subsequent environmental review pursuant to CEQA, and would be required to demonstrate compliance with the AQMP. Individual projects would also be required to demonstrate compliance with SCAQMD rules and regulations governing air quality.

The City of Lawndale continues to coordinate with SCAQMD and SCAG to ensure Citywide growth projections, land use planning efforts, and local development patterns are accounted for in the regional planning and air quality planning processes. Additionally, the General Plan Update includes goals, policies and actions to further minimize potential impacts to air quality in support of the AQMP. The proposed Resource Management Element includes Goal RM-4 of the General Plan Update Resources Management Element addresses potential air quality impacts by improving air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions. Also, Policy LU-1.1 of the General Plan Update Land Use Element promotes a land use pattern that would reduce pollution and air quality impacts. Therefore, the operation of the proposed General Plan Update would not conflict with or obstruct the implementation of the applicable air quality plan and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2 **Balance Jobs and Housing.** Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.4: **Commercial Corridors.** Encourage development of well-maintained, functional, and appropriate commercial, retail, and employment opportunities in stand-alone and mixed-use formats, particularly along Hawthorne Boulevard, major arterials, and at major intersections where there is maximum visibility and access.

Policy LU-1.6: **Uses to Meet Daily Needs.** Encourage uses that meet daily needs, such as grocery stores, local-serving restaurants, and other businesses and activities, within walking distance of residences to reduce the frequency and length of vehicle trips.

Action LU-3b: Ensure all projects are reviewed and processed per the California Environmental Quality Act (CEQA) Guidelines.

MOBILITY ELEMENT

Policy M-3.1: **Complete Streets for Roadway Projects.** Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: **Multimodal Connectivity.** Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Action M-3a When planning roadway facilities, incorporate the concept of complete streets. Complete streets include design elements for all modes that use streets, including autos, transit, pedestrians, and bicycles. Complete streets shall be developed in a context-sensitive manner. For example, it may be more appropriate to provide a Class I bike path instead of bike lanes along a major arterial.

Policy M-5.3: **Transit Facilities.** Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Action M-5a Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Policy M-6.1: **Bicycle Master Plan.** Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: **Local Travel Network.** Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.3: **Hawthorne Boulevard Sidewalks.** Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.

Policy M-6.4: **Sidewalk and Bikeway Gaps.** Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: **Bicycle/Pedestrian Facilities at New Developments.** Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: **Effects of New Technologies on Active Transportation.** Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a: As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b: Implement of the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaces, as funding allows.

Action M-6c: Review and update the City's Municipal Code, as necessary, to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.2: **Transportation Demand Management.** Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Action M-9b Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: **Air Quality and Greenhouse Gas Emissions.** Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: **Regional Cooperation**. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: **Measurement and Enforcement**. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: **GHG Emissions.** Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: **Transportation Options**. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: **Walkability**. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: **Land Use Planning.** Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: **Sensitive Receptors.** Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: **Mitigation.** Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: **GHG Reduction.** Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: **Mitigation. Public Engagement**. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet EPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NO_X emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low

VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: **Energy Resources.** A community that safely manages its energy resources.

Policy RM-5.1: **Compliance with State Legislation.** Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: **Green Building Standards Code.** Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: **Renewable Energy.** Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: **Energy-Efficient Materials.** Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: **Energy Conservation.** Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: **Energy Needs.** Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: **Business Community.** Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: **Public Education.** Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: **Promote Energy Conservation in Existing Building Stock.** Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

AQ-2: Would the project result in cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under the applicable federal or state ambient air quality standard?

Impact Analysis: Ozone, NO_2, VOC and PM_{10} and $PM_{2.5}$ are pollutants of concern, as SCAB has been designated as a nonattainment area for State ozone, PM_{10} and $PM_{2.5}$ and as a Federal nonattainment area for ozone and PM_{10}. SCAB is currently in attainment and/or unclassified for State and Federal CO, SO_x, NO_2, lead and Federal attainment for PM_{10}. SCAQMD has established numerical significance thresholds for regional emissions during construction and operation. The numerical significance thresholds are based on the recognition that the Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health. The General Plan Update would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

Regional construction emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed daily emissions thresholds:

- 75 pounds a day for VOC;
- 100 pounds per day for NO_X;
- 150 pounds per day for PM_{10}; and
- 55 pounds per day for $PM_{2.5}$.

Regional operational emissions exceed any of the following SCAQMD prescribed daily emissions thresholds:

- 55 pounds a day for VOC;
- 55 pounds per day for NO_X;
- 150 pounds per day for PM_{10}; and
- 55 pounds per day for $PM_{2.5}$.

CONSTRUCTION

Construction of the growth anticipated by the proposed General Plan Update has the potential to temporarily emit criteria air pollutant emissions through the use of heavy-duty construction equipment, and through vehicle trips generated by workers and haul trucks. In addition, fugitive dust emissions would result from demolition and various soil-handling activities. Mobile source emissions, primarily NO_x and PM emissions (i.e., PM_{10} and $PM_{2.5}$), would result from the use of diesel-powered on- and off-road vehicles and equipment. Construction emissions can vary substantially from day-to-day, depending on the level of activity and the specific type of construction activity.

Information regarding the specific development projects and location of receptors for those projects is required in order to model specific emissions throughout the buildout horizon. Construction activities are anticipated to occur at various levels throughout the 20-year buildout horizon (2025 to 2045). Since specific projects are unknown at this time, as is the level of intensity of construction over the 20 years,

the analysis provides emissions from an anticipated reasonable worst-case construction scenario. Specifically, emissions were modeled for all development within the Planning Area in buildout year 2045.[3,4]

As detailed in the methodology section above, daily emissions were estimated for the construction of the land uses provided in Table 3-4 of Section 3.0, *Project Description*. Detailed information on modeling parameter inputs is provided in Appendix B of this EIR. The results of the criteria air pollutant calculations are presented in Table 5.3-6, *Maximum Regional Construction Emissions*. The calculations used to develop construction emissions incorporate compliance with applicable dust control measures required to be implemented during each phase of construction by SCAQMD Rule 403 (Control of Fugitive Dust), and fugitive VOC control measures required to be implemented by architectural coating emission factors based on SCAQMD Rule 1113 (Architectural Coatings).

As shown in Table 5.3-6, construction-related daily emissions would exceed the SCAQMD significance thresholds for VOCs, NO_X, CO, PM_{10}, and $PM_{2.5}$. Therefore, short-term regional construction emissions would be potentially significant.

Table 5.3-6
Maximum Regional Construction Emissions

OPERATION

Operation of future development accommodated by the General Plan Update would generate criteria air pollutant emissions from Project-generated vehicle trips traveling within the City, energy sources such as natural gas combustion, and area sources such as landscaping equipment and consumer products usage. The on-road mobile sources related to the operation of future development accommodated by the General Plan Update include passenger vehicles, onsite use of off-road equipment and delivery trucks. VMT data, takes into account ridership, mode, and distance on freeways and local streets as provided in Section 5.17, *Transportation*. Projected emissions resulting from operational activities of future

[3] Note that this approach provides an overestimate of the emissions generated by the proposed Project within the Planning Area (since it models total development that is projected to exist within the Planning Area in 2045, including development that currently exists and would continue to exist in 2045). This approach to estimate proposed project emissions provides a proxy for the 'worst-case scenario' for the purposes of CEQA analysis.
[4] Note that traffic data provided by the traffic consultant (Kittelson & Associates) was unavailable for year 2045. Therefore, traffic data for year 2040 was used as a proxy for year 2045.

development accommodated by the General Plan Update are presented in Table 5.3-7, *Maximum Regional Operational Emissions (pounds/day)*.

Table 5.3-7
Maximum Regional Operational Emissions (pounds/day)

SCAQMD Threshold	55	55	550	150	150	55
Above Threshold?	**Yes**	**Yes**	**Yes**	No	**Yes**	**Yes**
Source: CalEEMod v.2022.1; Kittelson & Associates, 2023.						

As identified in Table 5.3-7, operational emissions for future development accommodated by the General Plan Update would exceed regulatory thresholds for VOC, NO_X, CO, PM_{10}, and $PM_{2.5}$. While these thresholds are the only thresholds available for numerically determining significance, it should be noted that these thresholds were specifically developed for use in determining significance for individual projects and not for program-level documents, such as the General Plan Update. However, as emissions for VOC, NO_X, CO, PM_{10}, and $PM_{2.5}$ exceed regulatory thresholds, the regional operational emissions would be potentially significant.

CONCLUSION

The exact level of construction emissions from the development anticipated by future development accommodated by the General Plan Update cannot be quantified without full detail of the development projects to be implemented and the extent to which mitigation can be applied. Individual projects anticipated by the General Plan Update would be required to implement their own environmental review. The proposed policies and actions of the General Plan Update would potentially reduce emissions, which could potentially address impacts related to exceeding air quality regulatory thresholds. These policies and actions are oriented toward the reduction of the air quality impacts of individual projects. Action RM-4k requires that future development projects implemented under the General Plan Update would be required to demonstrate consistency with SCAQMD construction threshold emissions.

With respect to operational emissions, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the General Plan Update's policies and actions. Policy RM-4.2 of the General Plan Update Resources Management Element requires the City to coordinate with CARB and SCAQMD to enforce the standards of the Clean Air Act. Policy RM-4.6 encourages and incentivizes higher density and mixed-use development opportunities to lessen the impacts of traffic congestion on local air quality. Policy RM-4.8 requires the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts. Action RM-5c provides for the continue review of development projects to ensure that all new public and private development complies with Title 24 energy standards, as well as the energy efficiency standards established by the General Plan Update and the

Municipal Code. However, as there is no way to determine the effectiveness of such regulations, policies, and actions for individual projects, it is impossible to determine if potential impacts would be reduced to below regulatory thresholds.

As project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. While implementation of these policies and actions would reduce criteria pollutant emissions resulting from implementation of the General Plan Update, the extent to which the impacts are reduced would need to be determined on a project-by-project basis, as necessary. Therefore, this impact is significant and unavoidable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan Update goals, policies and actions cited above in AQ-1.

Mitigation Measures: There is no feasible mitigation available for this impact.

Level of Significance: Significant and Unavoidable Impact.

AQ-3: Would the project expose sensitive receptors to substantial pollutant concentrations?

Impact Analysis: Criteria air pollutant emissions have the potential to result in health impacts on sensitive receptors located near new development within the Planning Area. As discussed previously, localized impacts are associated with onsite activities. In addition to these localized impacts, vehicle travel associated with future development accommodated by the General Plan Update has the potential to result in exposure of sensitive receptors to CO emissions from intersection congestion. Based on the nature and extent of new development, nearby sensitive receptors could be exposed to levels of toxic air contaminants that could result in a potential increase in cancer, acute, and/or chronic risk. The proposed Project would potentially cause a significant impact if one of the following would occur:

Localized emissions from NO_2 and CO for future development accommodated by the General Plan Update, when combined with existing ambient concentrations, would exceed the CAAQS.

Localized emissions from PM_{10} and $PM_{2.5}$ would result in exceedance of the following incremental increase thresholds:

- 10.4 µg/m^3 (24-hour) and 1 µg/m^3 of PM_{10} (Annual) for construction;
- 10.4 µg/m^3 (24-hour) of $PM_{2.5}$ for construction;
- 2.5 µg/m^3 (24-hour) and 1.0 µg/m^3 (Annual) of PM_{10} for operations; and
- 2.5 µg/m^3 (24-hour) of $PM_{2.5}$ for operation.

Buildout of the General Plan Update would emit carcinogenic materials or TACs that exceed the maximum incremental cancer risk of ten in one million or an acute or chronic hazard index of 1.0; or if cancer burden corresponds to an increase in more than 0.5 excess cancer cases in areas where the Project-related increase in individual cancer risk exceeds 1 in one million.

LOCAL AIR QUALITY

SCAQMD recommends the evaluation of localized air quality impacts on sensitive receptors in the immediate vicinity of project-specific level proposed projects (following the SCAQMD Localized Significant Threshold, or LST, methodology). However, the SCAQMD explicitly advises that the LST methodology is not applicable to regional projects such as general plans. Therefore, an analysis of localized emissions during construction activities is not provided herein. Because the exact nature, location, and operation of the future developments are unknown, quantification of potential localized operational risk would be speculative. However, as construction and operation of these future developments would occur within close proximity to sensitive receptors, there is the potential for localized emissions to exceed regulatory levels. Therefore, localized construction and operational emissions with respect to the proposed Project would be potentially significant.

INTERSECTION HOT SPOT ANALYSIS

The potential for future development accommodated by the General Plan Update to cause or contribute to CO hotspots is evaluated by comparing Planning Area intersections (both intersection geometry and traffic volumes) with prior studies conducted by the SCAQMD in support of their AQMPs and considering existing background CO concentrations. As discussed below, this comparison demonstrates that the implementation of the General Plan Update would not cause or contribute considerably to the formation of CO hotspots, that CO concentrations at project impacted intersections would remain well below the ambient air quality standards, and that no further CO analysis is warranted or required.

CO levels in the Planning Area are substantially below the Federal and State standards. CO levels decreased dramatically in the Air Basin with the introduction of the catalytic converter in 1975. No exceedances of CO have been recorded at monitoring stations in the Air Basin for some time and the Air Basin is currently designated as a CO attainment area for both the CAAQS and NAAQS. Thus, it is not expected that CO levels within the Planning Area at project-impacted intersections would rise to the level of an exceedance of these standards.

Additionally, SCAQMD conducted CO modeling for the 2003 AQMP for the four worst-case intersections in the Air Basin: (1) Wilshire Boulevard and Veteran Avenue; (2) Sunset Boulevard and Highland Avenue; (3) La Cienega Boulevard and Century Boulevard; and (4) Long Beach Boulevard and Imperial Highway. Based on the intersection volumes identified in the 2003 AQMP, if a project's traffic levels exceed 100,000 vehicles per day at any proposed project-impacted intersection, there would be the potential for significant impacts and dispersion modeling would need to be conducted to determine project level impacts.

Based on the *Lawndale General Plan CEQA Transportation Analysis* prepared by Kittelson & Associates, Inc., dated July 12, 2023 (Appendix F), there are no intersections that would exceed 100,000 vehicles per day within the Planning Area. As a result, CO concentrations are expected to be less than those estimated in the 2003 AQMP, which would not exceed the applicable thresholds. Thus, this comparison demonstrates that implementation of the General Plan Update would not contribute considerably to the formation of CO hotspots and no further CO analysis is required. The proposed Project would result in less than significant impacts with respect to CO hotspots.

TOXIC AIR CONTAMINANTS

Construction and operation of the future development accommodated by the General Plan Update would result in emissions of TACs, predominantly from diesel particulate emissions from on- and off-road vehicles during construction and from the operation of diesel fueled equipment or generators during operational activities. Because the exact nature, location, and operation of the future developments are unknown, and because health risk impacts from TACs are cumulative over the life of the nearby receptors, quantification of potential health risks would be speculative. However, as construction and operation of these future developments would occur within close proximity to sensitive receptors, there is the potential for risk to exceed regulatory levels. Therefore, health risks with respect to the development anticipated by the General Plan Update would be potentially significant.

HEALTH IMPACTS

Because regional emissions exceed the SCAQMD regulatory thresholds during construction and operational activities, there is the potential that these emissions would exceed the CAAQS and NAAQS thus, resulting in a health impact. Without knowing the exact specifications for all projects that may be developed under the General Plan Update, there is no way to accurately calculate the potential for health impacts from the overall General Plan Update. Individual projects would be required to provide their own environmental assessments to determine health impacts from the construction and operation of their projects. Because there is no way to determine the potential for these projects to affect health of sensitive receptors within the City of Lawndale, the proposed Project would result in potentially significant health impacts.

The proposed policies of the General Plan Update would potentially reduce emissions, which could potentially reduce impacts related to exceeding regulatory thresholds of criteria air pollutant emissions. Goal RM-4 of the General Plan Update Resources Management Element addresses potential air quality impacts by improving air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions. Specifically, Policy RM-4.7 addresses potential air quality impacts to sensitive receptors. Policy LU-1.1 of the General Plan Update Land Use Element promotes a land use pattern that would reduce pollution and air quality impacts.

CONCLUSION

With respect to local air quality emissions, toxic air contaminant emissions, and health impacts, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. Implementation of the General Plan Update policies and actions listed above would mitigate and reduce such emissions. However, the exact location, type, nature, and size of future projects that may expose sensitive receptors to pollutant concentrations cannot be calculated at this time, as the details of potential future projects are not currently known. As such, there is no way to determine the extent to which these regulations will be, or need to be, implemented, and it is impossible to determine if potential impacts would be reduced to below regulatory thresholds. As project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the

policies and actions listed above. Therefore, localized operational impacts, construction and operational health, and toxic air impacts would remain significant and unavoidable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan Update goals, policies and actions cited above in AQ-1.

Mitigation Measures: There is no feasible mitigation available for this impact.

Level of Significance: Significant and Unavoidable Impact.

AQ-4: Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impact Analysis: Potential sources that may emit odors during construction activities include the use of architectural coatings and solvents. SCAQMD Rule 1113 (Architectural Coatings) limits the amount of VOCs from architectural coatings and solvents. According to the SCAQMD's *CEQA Air Quality Handbook*, construction equipment is not a typical source of odors. Odors from the combustion of diesel fuel would be minimized by complying with the CARB ATCM that limits diesel-fueled commercial vehicle idling to five minutes at any given location, which was adopted in 2004. Future development accommodated by the General Plan Update would also comply with SCAQMD Rule 402 (Nuisance), which prohibits the emissions of nuisance air contaminants or odorous compounds. Through adherence with mandatory compliance with SCAQMD Rules and State measures, construction activities and materials would not create objectionable odors. Construction of future development would not be expected to generate nuisance odors at nearby air quality sensitive receptors. Therefore, impacts with respect to odors would be less than significant.

According to the SCAQMD's *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. Potential operational airborne odors could be created by commercial and industrial uses developed under the General Plan Update. However, compliance with the City's Municipal Code, including Section 6.24.040 which prohibits animal premises from being a source of offensive odors, and SCAQMD's Rule 402 (Nuisance), which prohibits the emissions of nuisance air contaminants or odorous compounds would reduce potential impacts. The other potential source of odors would be new waste receptacles within the Planning Area. The receptacles would be stored in areas and in containers, as required by City Municipal Code Chapter 8.32, *Garbage Collection and Disposal*, and be emptied on a regular basis, before potentially substantial odors have developed.

Additionally, the policies included as part of the General Plan Update (described above) would reduce mobile and stationary source emissions and odors associated with diesel fuel by focusing on land use patterns that improve air quality, reduce air pollution from stationary sources, and encourage/enable increased transit behavior. Consequently, implementation of the General Plan Update would not create operational-related objectionable odors affecting a substantial number of people within the City. Impacts would be less than significant in this regard.

Proposed General Plan Update Goals, Policies, and Actions: The General Plan Update does not include goals, policies, or actions specific to odors.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.3.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The geographic setting for air quality considers development with the City as well as SCAB.

Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of the applicable air quality plan?

Impact Analysis: As stated under Impact AQ-1, the City of Lawndale continues to coordinate with SCAQMD and SCAG to ensure Citywide growth projections, land use planning efforts, and local development patterns are accounted for in the regional planning and air quality planning processes. Additionally, the General Plan Update includes policies and actions to further minimize potential impacts to air quality in support of the AQMP. Therefore, the operation of the proposed General Plan Update would not conflict with or obstruct the implementation of the applicable air quality plan and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, conflict with or obstruct implementation of the applicable air quality plan, or result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or state ambient air quality standard?

Impact Analysis: Construction of the growth anticipated by the General Plan Update has the potential to temporarily emit criteria air pollutant emissions through the use of heavy-duty construction equipment, and through vehicle trips generated by workers and haul trucks. In addition, fugitive dust emissions would result from demolition and various soil-handling activities. Mobile source emissions, primarily NO_X and PM emissions (i.e., PM_{10} and $PM_{2.5}$), would result from the use of diesel-powered on- and off-road vehicles and equipment. Construction emissions can vary substantially from day-to-day, depending on the level of activity and the specific type of construction activity. As shown in Table 5.3-6, construction-related daily emissions would exceed the SCAQMD significance thresholds for VOCs, NO_x, CO, PM_{10}, and $PM_{2.5}$.

Operation of the future development accommodated by the General Plan Update would generate criteria air pollutant emissions from project-generated vehicle trips traveling within the City, energy sources such as natural gas combustion, and area sources such as landscaping equipment and consumer products usage. As identified in Table 5.3-7, potential operational emissions for the proposed Project would also

exceed regulatory thresholds (for VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$). Feasible mitigation measures are incorporated into the policies and actions included within the General Plan Update. However, there are no feasible criteria air pollutant reduction measures beyond those identified within the policies and actions identified that would reduce impacts. While implementation of these policies and actions would reduce criteria pollutant emissions, the extent to which impacts would be generated by future development and infrastructure projects have to be determined on a project-by-project basis, as necessary.

Moreover, with respect to local air quality emissions, toxic air contaminant emissions, and health impacts, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. Implementation of the policies and actions listed above would mitigate and reduce such emissions. However, as there is no way to determine the extent to which these regulations would be, or need to be, implemented, it is impossible to determine if potential impacts would be reduced to below regulatory thresholds because the details and potential emissions levels of future development projects is not known at this time, as there are no specific development projects proposed as part of the General Plan Update. Additionally, there are no known feasible mitigation measures beyond the policies and actions listed above. Therefore, localized operational impacts, construction and operational health, and toxic air impacts would remain significant and unavoidable.

Lastly, with respect to other emissions, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. However, as there is no way to determine the extent to which these regulations would be, or need to be, implemented, it is impossible to determine if potential impacts would be reduced to below regulatory thresholds. As project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. Based on these impacts, the General Plan Update would contribute to a cumulative impact with regard to air quality in the region and within the air basin (i.e. the South Coast Air Basin) as a whole. Therefore, this impact is considered a cumulatively considerable and significant and unavoidable impact.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: There is no feasible mitigation available for this impact.

Level of Significance: Significant and Unavoidable Impact.

Would the project, combined with other related cumulative projects, expose sensitive receptors to substantial pollutant concentrations?

Impact Analysis: As stated under Impact AQ-3, with respect to local air quality emissions, toxic air contaminant emissions, and health impacts, future development under the General Plan Update would be required to comply with AQMP, SIP, CARB, SCAQMD regulations, Title 24 energy efficiency standards, and the proposed General Plan Update policies and actions. Implementation of the General Plan Update

policies and actions listed above would mitigate and reduce such emissions. However, the exact location, type, nature, and size of future projects that may expose sensitive receptors to pollutant concentrations cannot be calculated at this time, as the details of potential future projects are not currently known. As such, there is no way to determine the extent to which these regulations will be, or need to be, implemented, and it is impossible to determine if potential impacts would be reduced to below regulatory thresholds. Additionally, as project-specific information is not currently known, there are no known feasible mitigation measures that can be identified at this time beyond the policies and actions listed above. Therefore, this impact is considered a cumulatively considerable and significant and unavoidable impact.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: There is no feasible mitigation available for this impact.

Level of Significance: Significant and Unavoidable Impact.

Would the project, combined with other related cumulative projects, result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impact Analysis: As stated under Impact AQ-4, with respect to potential sources that may emit odors during construction and operations, future developments under the General Plan Update would be required to comply with the CARB requirements, SCAQMD rules, the City's Municipal Code, and the proposed General Plan Update policies and actions. As a result, the implementation of the General Plan Update would not result in a cumulatively considerable contribution to cumulative odor impacts. Additionally, adherence to SCAQMD rules and regulations would alleviate potential impacts related to cumulative conditions on a project-by-project basis. Project implementation would not contribute to a cumulatively considerable objectionable odors affecting a substantial number of people within the City; impacts would be less than significant in this regard.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.3.7 SIGNIFICANT UNAVOIDABLE IMPACTS

The General Plan Update would result in a significant unavoidable impact for the following areas:

- General Plan implementation would result in a cumulatively considerable net increase of criteria pollutants for which the project region is non-attainment under an applicable Federal or State ambient air quality standard during construction and operational activities.
- General Plan implementation would expose sensitive receptors to substantial pollutant concentrations during construction and operational activities.

- General Plan implementation would result in a cumulatively considerable contribution to significant cumulative air quality impacts with the potential to expose sensitive receptors to substantial pollutant concentrations.

All other air quality impacts associated with implementation of the General Plan Update would be less than significant.

If the City of Lawndale approves the General Plan Update, the City will be required to make findings in accordance with CEQA Guidelines Section 15091 and prepare a Statement of Overriding Considerations for consideration by the City's decision makers in accordance with CEQA Guidelines Section 15093.

5.4 BIOLOGICAL RESOURCES

5.4.1 PURPOSE

This section describes biological resources within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

KEY TERMS

The following key terms are used throughout this section to describe biological resources and the framework that regulates them:

Hydric Soils: One of the three wetland identification parameters, according to the Federal definition of a wetland, hydric soils have characteristics that indicate they were developed in conditions where soil oxygen is limited by the presence of saturated soil for long periods during the growing season. There are approximately 2,000 named soils in the United States that may occur in wetlands.

Sensitive Natural Community: A sensitive natural community is a biological community that is regionally rare, provides important habitat opportunities for wildlife, is structurally complex, or is in other ways of special concern to local, State, or Federal agencies. The California Environmental Quality Act (CEQA) identifies the elimination or substantial degradation of such communities as a significant impact. The California Department of Fish and Wildlife (CDFW) tracks sensitive natural communities in the California Natural Diversity Database (CNDDB).

Special-Status Species: Special-status species are those plants and animals that, because of their recognized rarity or vulnerability to various causes of habitat loss or population decline, are recognized by Federal, State, or other agencies. Some of these species receive specific protection that is defined by Federal or State endangered species legislation. Others have been designated as "sensitive" on the basis of adopted policies and expertise of State resource agencies or organizations with acknowledged expertise, or policies adopted by local governmental agencies such as counties, cities, and special districts to meet local conservation objectives. These species are referred to collectively as "special status species" in this report, following a convention that has developed in practice but has no official sanction. For the purposes of this assessment, the term “special status” includes those species that are:

- Federally listed or proposed for listing under the Federal Endangered Species Act (50 CFR 17.11-17.12);
- Candidates for listing under the Federal Endangered Species Act (61 FR 7596-7613);
- State listed or proposed for listing under the California Endangered Species Act (14 CCR 670.5);
- Species listed by the USFWS or the CDFW as a species of concern (USFWS), rare (CDFW), or of special concern (CDFW);
- Fully protected animals, as defined by the State of California (California Fish and Game Code Section 3511, 4700, and 5050);

- Species that meet the definition of threatened, endangered, or rare under CEQA (CEQA Guidelines Section 15380);
- Plants listed as rare or endangered under the California Native Plant Protection Act (California Fish and Game Code Section 1900 et seq.); and
- Plants listed by the California Native Plant Society (CNPS) as rare, threatened, or endangered (List 1A and List 2 status plants in Skinner and Pavlik 1994).

Waters of the U.S.: The Federal government defines waters of the U.S. as "lakes, rivers, streams, intermittent drainages, mudflats, sandflats, wetlands, sloughs, and wet meadows" [33 C.F.R. §328.3(a)]. Waters of the U.S. exhibit a defined bed and bank and ordinary high-water mark (OHWM). The OHWM is defined by the U.S. Army Corps of Engineers (USACE) as "that line on shore established by the fluctuations of water and indicated by physical character of the soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas" [33 C.F.R. §328.3(e)].

5.4.2 ENVIRONMENTAL SETTING

BIOREGIONS

Lawndale is located within the Southern California Coast bioregion. This bioregion is bounded on the north by the southern edge of the Los Padres National Forest and the northern base of the San Gabriel and San Bernardino Mountains. This bioregion is bounded on the east by the western edge of the Bureau of Land Management California Desert Conservation Area, and is bordered on the south by the Mexican border. Landscapes in this bioregion range from flatlands to mountains, and ecosystems range from ocean to desert. The region also contains two of California's largest cities (Los Angeles and San Diego). More than any other bioregion in the State, urbanization has caused intense effects of natural resources (SWRCB 2012). Urbanization in the Southern California Coast bioregion has resulted in the loss of habitat, spread of nonnative species, and the loss of native species.

CALIFORNIA WILDLIFE HABITAT RELATIONSHIP SYSTEM

The California Wildlife Habitat Relationship (CWHR) habitat classification scheme has been developed to support the CWHR System, a wildlife information system and predictive model for California's regularly-occurring birds, mammals, reptiles, and amphibians. When first published in 1988, the classification scheme had 53 habitats. At present, there are 59 wildlife habitats in the CWHR System, including: 27 tree, 12 shrub, six herbaceous, four aquatic, eight agricultural, one developed, and one non-vegetated (CDFW 2023).

According to the CWHR System, there is only one cover type (wildlife habitat classification) in the Planning Area out of 59 found in the State; refer to Figure 5.4-1, *Land Cover Types*. This cover type is Urban. However, there are three additional cover types found within the surrounding region. These include: Annual Grassland, Lacustrine, and Pasture.

A brief description of the four cover types are as follows:

Developed Cover Types

Urban habitats are not limited to any particular physical setting. Three urban categories relevant to wildlife are distinguished: downtown, urban residential, and suburbia. The heavily-developed downtown is usually at the center, followed by concentric zones of urban residential and suburbs. There is a progression outward of decreasing development and increasing vegetative cover. Species richness and diversity is extremely low in the inner cover. The structure of urban vegetation varies, with five types of vegetative structure defined: tree grove, street strip, shade tree/lawn, lawn, and shrub cover. A distinguishing feature of the urban wildlife habitat is the mixture of native and exotic species. As stated, the entire Planning Area (approximately 1,555 acres) is identified as urban habitat.

Herbaceous Dominated Cover Types

Annual Grassland habitat occurs mostly on flat plains to gently rolling foothills. Climatic conditions are typically Mediterranean, with cool, wet winters and dry, hot summers. The length of the frost-free season averages 250 to 300 days. Annual precipitation is highest in northern California. Annual grassland habitat is not found within the Planning Area, but is found within the surrounding region (e.g., in open space areas of Alondra Park and utility easement).

Pasture vegetation is a mix of perennial grasses and legumes that normally provide 100 percent canopy closure. Heights of vegetation varies, according to season and livestock stocking levels, from a few inches to two or more feet on fertile soils before grazing. Pasture habitat is not found within the Planning Area, but is found within the surrounding region (e.g., in small patches of undeveloped residential areas).

Aquatic Cover Types

Lacustrine habitats are inland depressions or dammed riverine channels containing standing water. These habitats may occur in association with any terrestrial habitats, Riverine, or Fresh Emergent Wetlands. They may vary from small ponds less than one acre to large areas covering several square miles. Depth can vary from a few inches to hundreds of feet. Typical lacustrine habitats include permanently flooded lakes and reservoirs, and intermittent lakes and ponds (including vernal pools) so shallow that rooted plants can grow over the bottom. Most permanent lacustrine systems support fish life; intermittent types usually do not. Lacustrine habitat is not found within the Planning Area, but is found within the surrounding region (e.g., the artificial pond in Alondra Park).

SPECIAL-STATUS SPECIES

As previously described, special-status species are those plants and animals that, because of their recognized rarity or vulnerability to various causes of habitat loss or population decline, are recognized by Federal, State, or other agencies. The following discussion is based on a background search of special-status species that are documented in the California Natural Diversity Database (CNDDB), the California Native Plant Survey (CNPS) Inventory of Rare and Endangered Plants, and the USFWS endangered and threatened species lists. The background search was regional in scope and focused on documented occurrences within a nine-quad (which includes the following U.S. Geological Survey quadrangles: Beverly Hills, Hollywood, Los Angeles, Venice, Inglewood, South Gate, Redondo Beach, Torrance, and Long Beach), and a one-mile search area; refer to Appendix C, *Biological Resources*.

Special-Status Plants

The search revealed documented occurrences of over 100 special-status plant species within the nine-quad search area. Of these special-status plant species, four species are located within one mile of the Planning Area; refer to Appendix C.

Table 5.4-1, *Special-Status Plants Present or Potentially Present*, provides a list of special-status plant species that are documented within a one-mile search area of the Planning Area, and their current protective status. Figure 5.4-2, *California Natural Diversity Database: One-Mile Search*, illustrates the special-status plant species located within one mile of the Planning Area.

Table 5.4-1
Special-Status Plants Present or Potentially Present

Scientific Name	Common Name	Federal Status	State Status	CRPR*
Orcuttia Californica	California Orcutt Grass	Endangered	Endangered	1B.1
Navarretia Prostrata	Prostrate Vernal Pool Navarretia	None	None	1B.2
Eryngium Aristulatum Var. Parishii	San Diego Button- Celery	Endangered	Endangered	1B.1
Atriplex Coulteri	Coulter's Saltbush	None	None	1B.2

Notes: Nine-quad search area of Lawndale.
*California Rare Plant Rank (CRPR) Key:
1B.1 Plants rare, threatened, or endangered in California and elsewhere; seriously threatened in California.
1B.2 Plants rare, threatened, or endangered in California and elsewhere; fairly threatened in California.

Special-Status Animals

The search revealed documented occurrences of nine special-status animal species within one-mile of the Planning Area; refer to Appendix C. This includes: one bird, four insects, one amphibian, two reptiles, and one mammal. Table 5.4-2, *Special-Status Animals Present or Potentially Present*, provides a list of the special-status animal species that are documented within one mile of the Planning Area, and their current protective status. Figure 5.4-2 illustrates the special-status animal species located within one mile of the Planning Area.

Table 5.4-2
Special-Status Animals Present or Potentially Present

Scientific Name	Common Name	Federal Status	State Status	CDFW Status*
Amphibians				
Spea hammondii	Western spadefoot	None	None	SSC
Birds				
Agelaius tricolor	Tricolored blackbird	None	Threatened	SSC
Insects				
Glaucopsyche lygdamus palosverdesensis	Palos Verdes blue butterfly	Endangered	None	--
Rhaphiomidas terminatus terminatus	El Segundo flower-loving fly	None	None	--
Bombus crotchii	Crotch bumble bee	None	None	--

SSC CDFW Species of Special Concern

Sensitive Natural Communities

The CDFW considers sensitive natural communities to have significant biotic value, with species of plants and animals unique to each community. The CNDDB search found that there are no sensitive natural communities within the nine-quad search area. The Planning Area is largely built-out and consists of a mixture of impervious surfaces and native and non-native species, typical of urban habitats.

Aquatic Resources

There are no large water bodies or creeks within the Planning Area. A portion of the Dominguez Channel, a 15.7-mile-long channelized watercourse, flows through the eastern portion of the Planning Area; refer to Section 5.10, *Hydrology and Water Quality*.

Vernal pools are a temporary wetland that occur as a result of rainwater failing to drain into subsoils and can provide habitat for several sensitive plant and animal species. In California, vernal pools fill in the winter and spring, as water collects in depressions. The water eventually evaporates, leaving a dry depression in the summer and fall. Vernal pools support a range of unique plant and animal species. On some occasions, vernal pools can be connected by small drainages. These connected vernal pools are known as vernal complexes. No known vernal pools that have been identified within Lawndale.

5.4.3 REGULATORY SETTING

FEDERAL

Federal Endangered Species Act

Federally listed threatened and endangered species and their habitats are protected under provisions of the Federal Endangered Species Act (FESA) of 1973. FESA Section 9 prohibits "take" of threatened or endangered species. "Take" under the FESA is defined as to "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any of the specifically enumerated conduct." The presence of any Federally threatened or endangered species that are in a project area generally imposes severe constraints on development, particularly if development would result in "take" of the species or its habitat. Under the regulations of the FESA, the USFWS may authorize "take" when it is incidental to, but not the purpose of, an otherwise lawful act.

"Harm" has been defined by the regulations of the USFWS to include types of "significant habitat modification or degradation." The U.S. Supreme Court, in *Babbit v. Sweet Home*, 515 U.S. 687, ruled that "harm" may include habitat modification "...where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering." Activities that may result in "take" of individuals are regulated by USFWS.

Under the FESA, "Critical Habitat" is also designated at the time of listing or within one year of listing. "Critical Habitat" refers to habitat or a specific geographic area that contains the elements and features that are essential for the survival and recovery of the species. In the event a project may result in take or in adverse effects to a species' designated Critical Habitat, the project proponent may be required to provide mitigation. If the project has a Federal nexus (i.e., occurs on Federal land, is issued Federal permits, or receives any other Federal oversight or funding), the proponent would be required to enter into Section 7 informal and/or formal consultations with the USFWS to obtain, if possible, a biological opinion allowing for incidental take of the species in question. If the project is on private land or would not require any Federal permits, the proponent would be required to prepare a habitat management plan to address the impacts.

The FESA defines as "endangered" any plant or animal species that is in danger of extinction throughout all or a significant portion of its range. A "threatened" species is a species that is likely to become endangered in the foreseeable future. A "proposed" species is one that has been officially proposed by USFWS for addition to the Federal threatened and endangered species list.

USFWS produced an updated list of candidate species for listing in June 2002 (Federal Register: Volume 67, Number 114, 50 CFR Part 17 2002). Candidate species are regarded by USFWS as candidates for addition to the "List of Endangered and Threatened Wildlife and Plants." Although candidate species are not afforded legal protection under the FESA, they typically receive special attention from Federal and State agencies during the environmental review process.

USFWS also uses the label "species of concern," an informal term that refers to species which might be in need of concentrated conservation actions. As the species of concern designated by USFWS do not receive

formal legal protection, the use of the term does not necessarily ensure that the species would be proposed for listing as a threatened or endangered species.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) (16 United States Government Code [USC] 703) makes it unlawful to pursue, capture, kill, or possess or attempt to do the same to any migratory bird or part, nest, or egg of any such bird listed in wildlife protection treaties between the United States, Great Britain, Mexico, Japan, and the countries of the former Soviet Union, and authorizes the U.S. Secretary of the Interior to protect and regulate the taking of migratory birds. It establishes seasons and bag limits for hunted species and protects migratory birds, their occupied nests, and their eggs (16 USC 703; 50 CFR 10, 21).

Bald and Golden Eagle Preservation Act

The Bald and Golden Eagle Protection Act provides for the protection of the bald eagle (Haliaeetus leucocephalus) and the golden eagle (Aquila chrysaetos) by prohibiting, except under certain specified conditions, the taking, possession, and commerce of such birds (16 U.S. Government Code Section 668(a)). "Take" under the Act includes actions which significantly disturb eagles (50 CFR Section 22.3). 1972 amendments increased penalties for violating provisions of the Act and strengthened other enforcement measures. A 1978 amendment authorized the Secretary of the Interior to permit the taking of golden eagle nests that interfere with resource development or recovery operations, and recent amendments authorize USFWS to issue permits for incidental and practically unavoidable take of eagles.

Section 404 of the Clean Water Act

Clean Water Act (CWA) Section 404 requires that a permit be obtained from the United States Army Corps of Engineers (Corps) prior to the discharge of dredged or fill materials into any "waters of the United States or wetlands." Waters of the United States are broadly defined in the Corps regulations (33 CFR 328) to include navigable waterways, their tributaries, lakes, ponds, and wetlands. Wetlands are defined as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that normally do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas" (United States Environmental Protection Agency [EPA], 2021). Wetlands that are not specifically exempt from Section 404 regulations (such as drainage channels excavated on dry land) are considered to be "jurisdictional wetlands." In *Solid Waste Agency of Northern Cook County v. U.S. Army Corps of Engineers*, the Court acted to limit the regulatory jurisdiction of the Corps under CWA Section 404 as it applies to adjacent waters (2001). Specifically, the Court ruled that waters that are non-navigable, isolated, and intrastate are not subject to the Corps jurisdiction (Guzy and Anderson 2001). The Corps is required to consult with the USFWS, EPA, and State Regional Water Quality Control Board (RWQCB), among other agencies, in carrying out its discretionary authority under Section 404.

The Corps grants two types of permits, individual and nationwide. Project-specific individual permits are required for certain activities that may have a potential for more than a minimal impact and necessitate a detailed application. The most common type of permit is a nationwide permit. Nationwide permits authorize activities on a nationwide basis unless specifically limited and are designed to regulate with little delay or paperwork certain activities having minimal impacts. Nationwide permits typically take two to

three months to obtain whereas individual permits can take a year or more. To qualify for a nationwide permit, specific criteria must be met. If the criteria restrictions are met, permittees may proceed with certain activities without notifying the Corps. Some nationwide permits require a pre-construction notification before activities can begin.

Section 401 of the Clean Water Act

Applicants for a Federal license or permit for activities which may discharge to waters of the U.S. must seek Water Quality Certification from the State or Indian tribe with jurisdiction. Such Certification is based on a finding that the discharge would meet water quality standards and other applicable requirements. In California, RWQCBs issue or deny Certification for discharges within their geographical jurisdiction. Water Quality Certification must be based on a finding that the proposed discharge would comply with water quality standards, which are defined as numeric and narrative objectives in each RWQCB's Basin Plan. Where applicable, the State Water Resources Control Board (SWRCB) has this responsibility for projects affecting waters within the jurisdiction of multiple RWQCBs. The RWQCB's jurisdiction extends to all waters of the State and to all waters of the U.S., including wetlands.

CWA Section 401 requires that "any applicant for a Federal permit for activities that involve a discharge to waters of the State, shall provide the Federal permitting agency a certification from the State in which the discharge is proposed that states that the discharge would comply with the applicable provisions under the Federal Clean Water Act." Therefore, before the Corps would issue a Section 404 permit, applicants must apply for and receive a Section 401 water quality certification from the RWQCB.

STATE

California Endangered Species Act (California Fish and Game Code Section 2050 et seq.)

State-listed threatened and endangered species are protected under provisions of the California Endangered Species Act (CESA). Activities that may result in "take" of individuals (defined in CESA as to "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") are regulated by the CDFW. Habitat degradation or modification is not included in the definition of "take" under CESA. Nonetheless, CDFW has interpreted "take" to include the destruction of nesting, denning, or foraging habitat necessary to maintain a viable breeding population of protected species.

The State of California considers an endangered species as one whose prospects of survival and reproduction are in immediate jeopardy. A threatened species is considered as one present in such small numbers throughout its range that it is likely to become an endangered species in the near future in the absence of special protection or management. A rare species is one that is considered present in such small numbers throughout its range that it may become endangered if its present environment worsens. State threatened and endangered species are fully protected against take, as defined above.

The CDFW has also produced a Species of Special Concern list to serve as a species watch list. Species on this list are either of limited distribution or their habitats have been reduced substantially, such that a threat to their populations may be imminent. Species of special concern may receive special attention during environmental review, but they do not have formal statutory protection.

California Environmental Quality Act

CEQA Guidelines Section 15380 independently defines "endangered" and "rare" species separately from the definitions in the CESA. Under CEQA, "endangered" species of plants or animals are defined as those whose survival and reproduction in the wild are in immediate jeopardy, while "rare" species are defined as those who are in such low numbers that they could become endangered if their environment worsens.

Lake and Streambed Alteration Program (California Fish and Game Code Sections 1600 through 1616)

California Fish and Game Code Sections 1600 through 1616 establish a fee-based process to ensure that projects conducted in and around lakes, rivers, or streams do not adversely impact fish and wildlife resources, or, when adverse impacts cannot be avoided, ensures that adequate mitigation and/or compensation is provided.

Fish and Game Code Section 1602 requires any person, State, or local governmental agency or public utility to notify the CDFW before beginning any activity that would do one or more of the following:

- Substantially obstruct or divert the natural flow of a river, stream, or lake;
- Substantially change or use any material from the bed, channel, or bank of a river, stream, or lake; or
- Deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it can pass into a river, stream, or lake.

Fish and Game Code Section 1602 applies to all perennial, intermittent, and ephemeral rivers, streams, and lakes in the State. CDFW's regulatory authority extends to include riparian habitat (including wetlands) supported by a river, stream, or lake regardless of the presence or absence of hydric soils and saturated soil conditions. Generally, the CDFW takes jurisdiction to the top of bank of the stream or to the outer limit of the adjacent riparian vegetation (outer drip line), whichever is greater. Notification is generally required for any project that would take place in or in the vicinity of a river, stream, lake, or their tributaries. This includes rivers or streams that flow at least periodically or permanently through a bed or channel with banks that support fish or other aquatic life and watercourses having a surface or subsurface flow that support or have supported riparian vegetation.

Native Plant Protection Act (Fish and Game Code Sections 1900 through 1913)

Fish and Game Code Sections 1900 through 1913 were developed to preserve, protect, and enhance Rare and Endangered plants in the State of California. The act requires all State agencies to use their authority to carry out programs to conserve Endangered and Rare native plants. Provisions of the Native Plant Protection Act prohibit the taking of listed plants from the wild and require notification of the CDFW at least ten days in advance of any change in land use which would adversely impact listed plants. This allows the CDFW to salvage listed plant species that would otherwise be destroyed.

California Fish and Game Code Sections 3503, 3503.5, 3511, 3513, 4700, 5050, and 5515

The CDFW administers the Fish and Game Code. There are particular sections of the Fish and Game Code that are applicable to natural resource management. For example, Section 3503 of the Code makes it unlawful to destroy the nests or eggs of any birds that are protected under the MBTA. Furthermore, any

birds in the orders Falconiformes or Strigiformes (Birds of Prey, such as hawks, eagles, and owls) are protected under Fish and Game Code Section 3503.5 which makes it unlawful to take, possess, or destroy their nest or eggs. A consultation with CDFW would be required prior to the removal of any bird of prey nest that may occur on a project site. Fish and Game Code Sections 3511, 4700, 5050, and 5515 list fully protected bird, mammal, reptile and amphibian, and fish species, respectively. The CDFW is unable to authorize the issuance of permits or licenses to take these species. Examples of species that are State fully protected include golden eagle and white-tailed kite (Elanus leucurus). Fish and Game Code Section 3513 makes it unlawful to take or possess any migratory nongame bird as designated in the MBTA or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA.

California Native Plant Society Rare or Endangered Plant Species

Vascular plants listed as rare or endangered by the CNPS, but which have no designated status under State and Federal endangered species legislation are defined as follows:

- California Rare Plant Rank
  - 1A. Plants Presumed Extirpated in California and either Rare or Extinct Elsewhere
  - 1B. Plants Rare, Threatened, or Endangered in California and Elsewhere
  - 2A. Plants Presumed Extirpated in California, But More Common Elsewhere
  - 2B. Plants Rare, Threatened, or Endangered in California, But More Common Elsewhere
  - 3. Plants about Which More Information is Needed - A Review List
  - 4. Plants of Limited Distribution - A Watch List
- Threat Ranks
  1. Seriously threatened in California (over 80 percent of occurrences threatened/high degree and immediacy of threat)
  2. Moderately threatened in California (20 to 80 percent occurrences threatened/moderate degree and immediacy of threat)
  3. Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known)

LOCAL

City of Lawndale Municipal Code

The City of Lawndale Municipal Code Chapter 12.28, *Street Trees*, outlines the City's tree planting and master street tree plan. Per Section 12.28.030, *Jurisdiction and Control*, the Director has exclusive jurisdiction over the planting, maintenance, and removal of City trees, plants and other vegetation within streets and on other City property. A permit is required for the planting, spraying, pruning, or removal of street trees or trees on public property.

Municipal Code Section 13.16.050, *Subdivision Design*, requires new development to limit clearing and grading of native vegetation to the minimum extent practicable.

5.4.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to biological resources. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service (refer to Impact Statement BIO-1);
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service (refer to Impact Statement BIO-2);
- Have a substantial adverse effect on Federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means (refer to Impact Statement BIO-2);
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites (refer to Impact Statement BIO-3);
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (refer to Impact Statement BIO-4); and
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan (refer to Impact Statement BIO-5).

CEQA Guidelines Section 15065(a), Mandatory Findings of Significance, states that a project may have a significant effect on the environment if it would have "... *the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of an endangered, rare or threatened species* ..."

An evaluation of whether an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional and/or local context. Substantial impacts would be those that would substantially diminish or result in the loss of, an important biological resource or those that would obviously conflict with local, State, or Federal resource conservation plans, goals, or regulations. Impacts are sometimes locally adverse but not significant because, although they would result in an adverse alteration of existing conditions, they would not substantially diminish or result in the permanent loss of an important resource on a population- or region-wide basis.

CEQA Guidelines Section 15380, *Endangered, Rare or Threatened Species*, states that a lead agency can consider a non-listed species to be Rare, Threatened, or Endangered for the purposes of CEQA if the species can be shown to meet the criteria in the definition of Rare, Threatened, or Endangered. For the purposes of this discussion, the current scientific knowledge on the population size and distribution for

each special-status species was considered according to the definitions for Rare, Threatened, and Endangered listed in CEQA Guidelines Section 15380.

5.4.5 IMPACTS AND MITIGATION MEASURES

BIO-1: Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Impact Analysis: The Planning Area is located within an urbanized area and currently developed with residential and non-residential land uses. The Planning Area consists primarily of developed and/or disturbed land that has been developed, paved, or landscaped, and existing vegetation consists of primarily ornamental and/or nonnative plant species. Pursuant to the special-status species searches presented in Table 5.4-1 and Table 5.4-2, four special-status plant species and nine special-status animal species have been identified within one mile of the Planning Area and are considered candidate, sensitive, or special status under FESA, CESA and/or CNPS/CRPR designation. A CNDDB search revealed no sensitive natural communities within the nine-quad search area (refer to Appendix C).

The Project proposes a comprehensive update to the City's existing General Plan, including a revised Land Use Map. Implementation of the General Plan Update would result in new development and intensification of existing urban uses primarily along major corridors including Hawthorne Boulevard and Redondo Beach Boulevard. In order to be consistent with the existing use, the Project would redesignate seven acres of land which are existing public-school sites designated as Open Space in the 1992 General Plan to the Public Facilities land use designation. The Open Space land being redesignated consists of existing school facilities with a Joint Powers Agreement with the Lawndale Elementary School District for utilization by the City's residents. The General Plan Update would not modify the Open Space Land Use designation and would continue to provide for public parks, parks that are part of school sites, public and private outdoor recreational facilities, and landscaped open space areas. Further, the Project does not include any specific development proposals and would not result in significant direct impacts to existing biological resources. However, subsequent development projects under the proposed General Plan Update could result in direct impacts to certain species found present on an individual project site. For instance, future development within the City could involve the removal of trees, which may have the potential to impact nesting migratory birds. Proposed removal of any street trees or trees on public property within the City would be reviewed in accordance with Municipal Code Chapter 12.28 and would be required to comply with the requirements for removal. Future development projects would be required to adhere to applicable Federal, State, and local regulations that provide for sensitive species as part of the discretionary approval process for site-specific development projects.

Compliance with applicable regulations at the time of future development would minimize adverse impacts to sensitive species. Additionally, the General Plan Update includes policies and actions to preserve and protect biological resources within the Planning Area. The proposed Resource Management Element Policy RM-1.1 requires that the City provide for public recreational lands, trails, and open space. Policy RM-1.3 requires new residential development to incorporate on-site open areas or greenspace for

resident use. Policy RM-1.7 directs the City to provide for the use of street trees along sidewalks and property frontages, consistent with the City's Master Street Tree program. Policy RM-1.8 encourages the development of innovative non-traditional public and semi-public open space such as community gardens, parkways, and green space. Action RM-1b directs the City to pursue funding for parkland acquisition, development, and maintenance. Action RM-1c directs the City to prepare and adopt a Master Parks Plan to set policies and standards for City parks and open space. Policy RM-6.3 encourages the City to work with the Los Angeles County Public Works Department and the Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. The proposed Public Safety Element Policy PS-7.3 directs the City to coordinate with Federal, State, and local agencies to establish ecological recovery programs. Adherence to these policies and actions during the discretionary review of future development projects would serve to minimize impacts to sensitive species. Compliance with Federal, State, and local regulations, and implementation of General Plan Update policies and actions, would reduce potential impacts to sensitive species to a less than significant level.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Goal RM-1: **Parks, Recreation and Open Space.** A community with attractive, safe and accessible parks, recreation, and open space areas.

Policy RM-1.1: **Recreation Types.** Provide residents a variety of useable and accessible public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.3: **Open Space for Private Developments.** Require new private residential development to incorporate on-site open areas, greenspace, or recreational facilities for resident use.

Policy RM-1.7: **Street Trees.** Provide for the consistent use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program.

Policy RM-1.8: **Creative Open Space and Parks.** Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general

policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-6.3: **Riparian Habitat.** Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-7.3: **Ecological Recovery.** Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less than Significant Impact.

BIO-2: Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?

Would the project have a substantial adverse effect on State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Impact Analysis: The CDFW considers sensitive natural communities to have significant biotic value, with species of plants and animals unique to each community. The CNDDB search revealed no sensitive natural communities within the nine-quad search area. The Planning Area is largely built-out and consists of a mixture of impervious surfaces and native and non-native species, typical of urban habitats.

While not always documented as a sensitive natural community in the CNDDB, streams, rivers, wet meadows, and vernal pools are of high concern because they provide unique aquatic habitat for many endemic species, including special status plants, birds, invertebrates, and amphibians. These aquatic habitats oftentimes qualify as protected wetlands or jurisdictional waters and are protected from disturbance through the CWA. There are no large water bodies or creeks within the Planning Area and no known vernal pools have been identified. A portion of the Dominguez Channel, a 15.7-mile-long channelized watercourse, flows through the eastern portion of the Planning Area. No other aquatic resources exist within the Planning Area.

The General Plan Update is a planning document that enables additional development consistent with the proposed Land Use Map, but does not include any site-specific development proposals; therefore, adoption of the General Plan Update would not directly impact the environment. However, the Project could have an indirect change on the physical environment through subsequently approved projects that are consistent with the buildout under the General Plan Update. Individual projects within the Planning Area would require a detailed and site-specific review of the site to determine the presence or absence of water features. If water features are present and disturbance is required, Federal and State laws require measures to reduce, avoid, or compensate for impacts to these resources. The requirements of these Federal and State laws are implemented through the permit process. Additionally, the General Plan Update Resource Management Element includes policies and actions intended to protect sensitive natural communities and aquatic resources from adverse effects associated with future development and improvement projects within the Planning Area. The proposed Resource Management Element Policy RM-6.3 directs the City to work with the Los Angeles County Public Works Department and the Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels, such as the Dominguez Channel. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. Adherence to these policies and actions during the discretionary review of future development projects would serve to minimize impacts to sensitive species.

Compliance with Federal, State, and local regulations, and implementation of General Plan Update policies and actions, would reduce potential impacts to aquatic resources to a less than significant level. Thus, the Project would not have a substantial adverse effect on sensitive natural communities, including riparian habitat, or on State or Federally protected wetlands and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.3: Riparian Habitat. Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less than Significant Impact.

BIO-3: Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Impact Analysis: Habitat loss, fragmentation, and degradation resulting from land use changes or habitat conversion can alter the use and viability of wildlife movement corridors (i.e., linear habitats that naturally connect and provide passage between two or more otherwise disjunct larger habitats or habitat fragments). Wildlife habitat corridors maintain connectivity for daily movement, travel, mate-seeking, and migration; plant propagation; genetic interchange; population movement in response to environmental change or natural disaster; and recolonization of habitats subject to local extirpation or removal. The suitability of a habitat as a wildlife movement corridor is related to, among other factors, the habitat corridor's dimensions (length and width), topography, vegetation, exposure to human influence, and the species in question.

The City and surrounding area are highly urbanized and generally developed with urban uses. The Planning Area consists of developed and/or disturbed land that has been developed, paved, or landscaped, and existing vegetation consists of primarily ornamental and/or nonnative plant species. Thus, the Planning Area does not provide for habitat linkages. The portion of the Dominguez Channel that flows through the eastern portion of the Planning Area is concrete-lined and considered to have low habitat value. Although the channel could be used for wildlife movement, the Project does not propose site-specific development activities, nor does it involve any changes or modifications to the channel. Thus, the Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

The proposed General Plan Resource Management Element includes policies and actions intended to preserve ecological and biological resources. The proposed Resource Management Element Policy RM-1.1 directs the City to provide for public recreational lands, trails, and open space. Policy RM-1.3 requires

new residential development to incorporate on-site open areas or greenspace for resident use. Policy RM-1.7 directs the City to provide for the use of street trees along sidewalks and property frontages, consistent with the City's Master Street Tree program. Policy RM-1.8 encourages the development of innovative non-traditional public and semi-public open space such as community gardens, parkways, and green space. Action RM-1b encourages the City to pursue funding for parkland acquisition, development, and maintenance. Action RM-1c directs the City to prepare and adopt a Master Parks Plan to set policies and standards for City parks and open space. Policy RM-6.3 directs the City to work with Los Angeles County Public Works Department and the Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels. Action RM-6a requires the implementation of BMPs and compliance with the City's MS4 permit to control stormwater runoff and prevent water quality impairment. The proposed Public Safety Element Policy PS-7.3 directs the City to coordinate with Federal, State, and local agencies to establish ecological recovery programs. Adherence to these policies and actions would serve to protect potential biological resources and provide for trees and other vegetation consistent with wildlife habitat recovery. Thus, through compliance with Federal, State, and local regulations, and General Plan Update goals, policies, and actions, future development under the General Plan Update would have a less than significant impact associated with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or the use of native wildlife nursery sites.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Goal RM-1: **Parks, Recreation and Open Space.** A community with attractive, safe and accessible parks, recreation, and open space areas.

Policy RM-1.1: **Recreation Types.** Provide residents a variety of useable public recreational lands, facilities, trails, open space, and amenities.

Policy RM-1.3: **Open Space for Private Developments.** Require new private residential development to incorporate on-site open areas, greenspace, or recreational facilities for resident use.

Policy RM-1.7: **Street Trees.** Provide for the consistent use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program.

Policy RM-1.8: **Creative Open Space and Parks.** Recognize the value of non-traditional public and semi-public open space and encourage creativity and innovation during the development and provision of additional open space or parks, including but not limited to plazas, parklets, pedestrian paths, patios, rooftop gardens, community gardens, parkways, green space integrated into parking structures, and temporary or semi-permanent gathering spaces, to supplement the City's green space and parks.

Action RM-1b: Pursue available resources to fund recreation facilities and parkland acquisition, development, and maintenance, including but not limited to, State and Federal grants, special districts, private donations, gifts, and endowments.

Action RM-1c: Prepare and adopt a Master Parks Plan to guide the provision and maintenance of parkland. The Master Park Plan should be designed to serve as a statement of general policy and desired City standards for location and development of public parks and community open space areas, with definite time frames outlined.

Action RM-1g: Coordinate with LA Metro and associated entities regarding the multi-use trail and/or greenway proposed as part of Metro's C Line (Green) extension project. The City should be actively engaged in the design and implementation of the project to ensure the project reflects community preferences, is compatible with surrounding uses, and maximizes connectivity for active transportation.

Action RM-1h: Consider the creative use of space for the median along Hathorne Boulevard to expand available open space and opportunities for physical fitness, including but not limited to, greenways, parklets, bike or pedestrian paths, and a fitness trail.

Policy RM-6.3: **Riparian Habitat.** Work with Los Angeles County Public Works and Los Angeles County Flood Control District to preserve and/or restore riparian communities along and within established flood control channels such as the Dominguez Channel, if feasible.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Policy PS-7.3: **Ecological Recovery.** Coordinate with Federal, State, and local agencies to establish ecological recovery programs.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

BIO-4: Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Impact Analysis: Future development under the General Plan Update would be subject to all applicable Federal, State, regional, and local policies and regulations related to the protection of biological resources as outlined above. The City does not have a tree preservation policy or ordinance; however, Lawndale

Municipal Code Chapter 12.28, *Street Trees*, addresses the City's tree planting and master street tree plan and requires authorization for the planting, spraying, pruning, or removal of street trees or trees on public property. In addition, the General Plan Resource Management Element includes policies and actions intended to provide for additional trees within the City. For instance, Policy RM-1.7 requires the City to provide for the use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program. Future development projects would be assessed for consistency with the Lawndale Municipal Code and General Plan Update goals, policies, and actions. Thus, the General Plan Update would not conflict with any local policies or ordinances protecting biological resources and impacts would be less than significant tin this regard.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-1.7: Street Trees. Provide for the consistent use of street trees along all sidewalks and property frontages, consistent with the City's Master Street Tree program.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

BIO-5: Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Impact Analysis: The Planning Area is urbanized and is not located within the boundaries of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Thus, the Project would not conflict with any of these plans and no impact would occur.

Proposed General Plan Update Goals, Policies, and Actions: There are no General Plan Update goals, policies, or actions specific to habitat conservation plans.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

5.4.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The cumulative projects' setting for biological resources would be the Los Angeles region.

Would the project, combined with other related cumulative projects, have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a

candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Would the project, combined with other related cumulative projects, a have substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Would the project, combined with other related cumulative projects, have a substantial adverse effect on state or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Impact Analysis: The City is highly urbanized and is not known to support any significant wildlife or native planning communities or species. The Planning Area, along with the surrounding region, are predominately developed or paved and any landscaping consists primarily of ornamental and/or nonnative plant species. Areas having the potential to support significant wildlife or native planning communities or species typically consist of lands designated as open space or for resource protection.

As described above, the potential for the Project to have a substantial adverse effect on any special status species, riparian habitat or sensitive natural community or wetlands is less than significant as these resources do not generally occur within the Planning Area. Future development within the City could involve the removal of trees, which may have the potential to impact nesting migratory birds. Proposed removal of any street trees or trees on public property within the City would be reviewed in accordance with Municipal Code Chapter 12.28 and would be required to comply with the requirements for removal. Future development projects would be required to adhere to applicable Federal, State, and local regulations that provide for sensitive species as part of the discretionary approval process for site-specific development projects.

Any future development would be assessed for consistency with local policies and ordinances, including the Municipal Code and General Plan goals and policies, and adopted regulations pertaining to biological resources, as appropriate. With implementation of the adopted policies and regulations described above, the proposed General Plan Update would not considerably contribute to adverse effects to biological resources, including special status plant or wildlife species, riparian habitat or other sensitive natural community, or any State or Federally protected wetlands. The polices and actions included within the General Plan Update and compliance with existing regulations would reduce the cumulative effect of the General Plan Update on biological resources to a less than significant level. Thus, the proposed Project's incremental effects involving special status plant or wildlife species, riparian habitat or other sensitive natural community, or any State or Federally protected wetlands would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Impact Analysis: The Planning Area, along with the surrounding region, are predominantly developed or paved and any landscaping consists primarily of ornamental and/or non-native plant species and do not provide for habitat linkages. The Dominguez Channel is concrete-lined and considered to have low habitat value. Although the channel could be used for wildlife movement, the Project as well as the cumulative projects do not involve any direct or indirect physical changes or modifications to the channel. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to biological resources. The proposed General Plan Update would not considerably contribute to interference of wildlife movement or impede the use of native wildlife nursery sites. Thus, the proposed Project's incremental effects involving the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impeding the use of native wildlife nursery sites would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Impact Analysis: Site-specific development is not currently proposed as part of the Project; however, future development associated with implementation of the Project would be assessed for consistency with local policies and ordinances, including the Municipal Code and General Plan Update goals and policies, as appropriate. Proposed removal of any street trees or trees on public property within the City would be reviewed in accordance with Municipal Code Chapter 12.28 and would be required to comply with the requirements for removal. Similarly, cumulative development within the region would be required to comply with any agency-specific policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Future development within the City and cumulative development would be assessed for consistency with the agency-specific Municipal Code and General Plan Update goals, policies, and actions. Since the Project would not conflict with any local policies or

ordinances protecting biological resources, the Project's incremental effects would not be cumulatively considerable in this regard.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The Planning Area is not located within the boundaries of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Thus, the Project's incremental effects involving a conflict with any of these plans would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: There are no General Plan Update goals, policies, or actions specific to habitat conservation plans.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.4.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Impacts to biological resources associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable impacts to biological resources would occur as a result of the General Plan Update.

5.5 CULTURAL RESOURCES

5.5.1 PURPOSE

This section identifies existing cultural (including historic and archeological resources) resources within the Planning Area, and provides an analysis of potential impacts associated with implementation of the General Plan Update.

This section is primarily based upon the *Cultural and Paleontological Resource Study for the General Plan Update: City of Lawndale, Los Angeles County* (Cultural Study), prepared by Duke Cultural Resources Management, LLC and dated October 2020 and updated July 2023; refer to Appendix D, *Cultural and Paleontological Resources Study*.

For impacts specific to tribal cultural resources, refer to Section 5.18, *Tribal Cultural Resources*.

5.5.2 ENVIRONMENTAL SETTING

ETHNOGRAPHIC OVERVIEW

The Planning Area is located within the boundaries of Gabrielino or Tongva Indians. The Gabrielino Indians are named because of their association with the Mission San Gabriel Arcángel. The Gabrielino are one of the least known Native American groups in California. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands.

The Gabrielino spoke a dialect of the Cupan group of the Takic language family. This language was part of the larger Uto-Aztecan language stock which migrated west from the Great Basin. The Gabrielino shared this language with their neighboring groups to the south and east.

Groups of Gabrielino lived in villages that were autonomous from other villages. Each village had access to hunting, collecting, and fishing areas. Villages were typically located in protected coves or canyons near water. Acorns were the most important food for the Gabrielino, although the types and quantity of different foods varied by season and locale. Other important sources of food were grass and many other seed types, deer, rabbit, jackrabbit, woodrat, mice, ground squirrels, quail, doves, ducks and other fowl, fish, shellfish, and marine mammals.

Typically, Gabrielino women gathered and men hunted, although work tasks often overlapped. Each village had a chief who controlled religious, economic, and warfare authorities. The chief had an assistant and an advisory council who assisted in important decisions and rituals. Each of these positions was hereditary being passed down from generation to generation. According to mapping of Gabrielino villages undertaken by McCawley, no known villages would be located within the City of Lawndale. The two nearest Gabrielino villages, which may compose large areas rather than just a single location, are Swaanga, approximately 10 miles to the southeast, and Waachnga, approximately five miles to the northwest. The Kirkman-Harriman Pictorial and Historical Map of Los Angeles also does not identify any Gabrielino villages within the City.

HISTORICAL CONTEXT

In California, the historic era is generally divided into three periods: the Spanish or Mission Period (from 1769 to 1821), the Mexican or Rancho Period (from 1821 to 1848), and the American Period (from 1848 to Present). The first Europeans in California were the Spanish. In 1542, Juan Rodriguez Cabrillo entered what was to become known as San Diego Harbor where he met a group of Kumeyaay Indians while on shore. Over the next few hundred years there were several maritime excursions along the California coast, but it would be more than 225 years until the Spanish established a permanent settlement. To protect its interests, Spain sent four excursions into California, two by land and two by sea. The entire expedition was led by Captain Gaspar de Portolá, military commander of California. Portolá came through the Los Angeles basin area in 1769 while travelling from San Diego to Monterey. To fulfill some of the religious goals of the expedition, Father Junípero Serra was sent to California to establish a system of Catholic Missions. It was not until two years later on September 8, 1771 that Mission San Gabriel Arcángel was established by Fathers Pedro Cambon and Angel Somera.

Ten years later on September 4, 1781, Los Angeles was founded. Early settlers farmed and they built a system of *zanjas*, or irrigation ditches, to transport water from the Los Angeles River to plots of land. With Mexican Independence in 1821, Los Angeles and California experienced great economic independence and growth. By 1822, the Mexican government began to grant permits to its citizens along the southern coast for animal pasture. Governor of Alta California, Juan Alvarado, gave the *Rancho Sausal Redondo* land grant to Antonio Ignacio Ávila, son of Spanish soldier Cornelio Ávila, that encompasses the present-day cities of Lawndale, Inglewood, Hawthorne, Redondo Beach, Manhattan Beach, and Hermosa Beach. The total acreage of the land grant was roughly 40,000 acres; but when the United States Land Commission confirmed title, *Rancho Sausal Redondo* was reduced to 22,000 acres. The City of Lawndale is located in what was the southwestern corner of *Rancho Sausal Redondo*. Between 1820 and 1841, the population of Los Angeles tripled to 1,680. California was ceded to the U.S. in 1848 with the signing of the Treaty of Guadalupe Hidalgo.

The Treaty of Guadalupe Hidalgo assured owners that prior, valid land grants would be honored if a claim was filed as required by the Land Act of 1851. Soon after, Antonio Ignacio Ávila filed a claim for *Rancho Sausal Redondo* and was awarded a patent in 1855 by the Public Land Commission. He later died in 1858 and his heirs sold the *Rancho* to pay for the probate costs. In 1868, ten years after his death, a Scottish nobleman named Sir Robert Burnett purchased the land grant from Ávila's heirs. Having also acquired the *Aquaje de la Centinela* parcel, Burnett combined both areas and named it Centinela Ranch. After doing so, Burnett gradually slowed cattle ranching and began to incorporate his prior specialization of sheep raising. In 1873, Burnett leased Centinela Ranch to Daniel and Catherine Freeman and returned to his home in Scotland. The Freeman's continued to raise sheep but after a tumultuous two-year drought from 1875 to 1876, they began to plant barley along with several thousand citrus, almond, olive, and eucalyptus trees. The Freeman's made dry-land farming profitable and exported 3,000,000 bushels of barley and other crops to Liverpool and London well in to the 1880s.

The City of Lawndale

The history of what later would be Lawndale begins with the opening of the Redondo seaport in 1890 and the railroad service created between the port and Los Angeles. By 1902, the Los Angeles and Redondo

railways passed along in what is now Hawthorne Boulevard, extending from Inglewood to Railroad Avenue. In March of 1905, real estate developer Charles B. Hopper subdivided and opened the southern portion of Centinela Ranch and named it Lawndale. It was marketed as an ideal poultry farming location for early settlers, but unfortunately a lack of buyers forced Hopper to change to smaller lots a year later. When the U.S. Census was taken in 1910, the unincorporated town of Lawndale had reached 142 residents. In the 1920s the discovery of oil transformed the Lawndale community into a town that built oil derricks, though the Great Depression muted this economic development. After World War II, Lawndale boomed primarily due to subsidized veteran housing and increased accessibility of the Harbor Freeway (I-110). Also, the Businessman's Group Association created zoning policies to promote and advertise the residential, commercial, and industrial advantages of Lawndale. Amid rapid commercial growth and urbanization of the Centinela Valley in 1958, zoning restrictions officially abolished agriculture in the community. On December 28, 1959, Lawndale was incorporated as a City in Los Angeles County.

CULTURAL RESOURCES

A search of the California Historic Resources Inventory System (CHRIS) at the South Central Coastal Information Center (SSCIC) located at the California State University, Fullerton was conducted on June 9 2020. The records search covered the entire City of Lawndale. In addition, a variety of other sources were consulted, including the California State Historic Property Data File (which includes the National Register of Historic Places, California Register of Historical Resources, California Historical Landmarks, and California Points of Historical Interest), the Built Environment Resource Directory (BERD), California Office of Historic Preservation's Historic Resources Inventory (HRI) directory, as well as a review of known cultural resource surveys, excavation reports, and historic aerial photos and maps. Further, a reconnaissance field survey was conducted in order to gather baseline data on the present state of previously recorded archaeological and historic resources within the Planning Area.

Results of the SCCIC and BERD records search indicate that 12 historic built environment resources are recorded within the City; refer to Table 5.5-1, *Cultural Resources Recorded within the Planning Area*.

*NHRP/CRHP Key
3CS Appears eligible for CR as an individual property through survey evaluation
6Z Found ineligible for NR, CR or Local designation through survey evaluation
7R Identified in Reconnaissance Level Survey: Not evaluated.
U Unknown Information

No archaeological resources have been recorded within the City. This lack of identified resources is likely to be a consequence of development occurring prior to the implementation of CEQA, rather than a lack of archaeological sites.

All historic built environment resources located within the City are surrounded by paved asphalt parking lots, commercial buildings, and/or single-family residential homes. None of the resources were accompanied by any historic archaeological deposits, nor were any prehistoric cultural resources identified. Records for three of the 12 historic built environment resources were provided by the SCCIC. A brief description of the three historic built environment resources which contained records from the SCCIC is provided below.

P-19-188892

According to the SCCIC search, Resource P-19-188892 is the Lawndale High School Campus complex. First constructed in 1959, it was built to accommodate the postwar growing population needs of the newly founded City of Lawndale. The core campus consists of an administration building, a cafeteria, classroom buildings, support buildings, athletic fields, and a parking lot. The original campus was a series of one- and two-story brick and cinder block buildings with low pitched roofs constructed on concrete pads. Windows

consisted of steel framed fixed and casements. The campus complex was recommended as not historically significant.

P-19-188893

According to the SCCIC search, Resource P-19-188893 is the Leuzinger High School complex. It is the earliest high school built in the City in 1930, shortly after the Great Depression. It consisted of a main administration building, a cafeteria, an Olympian gym and a classroom building. It was named in honor of Adolph Leuzinger, who was a member of the Inglewood Union High School District Board of Trustees for 25 consecutive years. The campus was later expanded in 1956 with the addition of a new cafeteria, locker rooms north of the Olympic gymnasium, and classroom buildings 2, 3, 4, and 5. By 1976, a locker room, the Thompson gym, and classroom buildings 6, 7, and 8 had been added. Leuzinger High School was recommended to be considered a significant cultural resource under CEQA, and therefore qualifies as a historical resource eligible for listing in the CRHR. Additionally, it was recommended that any additional alterations or demolition to the Olympic Gymnasium and/or Memorial Garden be avoided while any alterations to the interior of the Main Administration Building be kept to a minimum.

P-19-190021

Located in a commercial zone in the City of Lawndale, 16720 Hawthorne Boulevard is a two-story retail building and a 10-vehicle parking lot first constructed in 1947. Designated as Tract 8293, Lot Number 106 and 107, this 6,000-square-foot retail building measures roughly 50 feet wide by 105 feet long. Much of the construction is reinforced masonry on a concrete foundation and clad with stucco. The building has a flat roof covered with asphalt and gravel. The roof has a stepped parapet and fenestration that consists of an enframed window wall on the front with metal frames that span the length of the building. There are no records of the original site plan or building permit; however, a building permit indicates that by 1970 the building was used for office space by the Mattel Toymakers Federal Credit Union. Building permits show that by 2003 the building was remodeled with the addition of a bathroom, a storefront, and stairs, as well as the demolition of a partition wall. The property does not appear to qualify for the NRHP.

Results of Reconnaissance Field Survey

A reconnaissance-level overview of the City was conducted by Nicholas F. Hearth of Duke CRM on April 29, 2020. The reconnaissance survey consisted of surveying the City to get a general sense of the potential historical nature and visits to locations of built environment resources indicated in the City's existing General Plan (1992 General Plan). The reconnaissance-level survey of the City revealed that land uses within Lawndale are predominantly residential, though commercial development is also present, especially along Hawthorne Boulevard.

The City's 1992 General Plan identifies 32 locations of historic structures. Of these 32 locations, 17 are still extant and were visited during the field survey; refer to Table 5.5-2, *Potential Built Environment Resources Locations Visited during Reconnaissance Survey*. The remaining 15 historic structures noted in the 1992 General Plan appear to be removed or are so altered as to be unrecognizable.

Table 5.5-2
Potential Built Environment Resources Locations Visited during Reconnaissance Survey

BERD No.	Address (approximate)	Notes and Condition
N/A	16700 Prairie Ave.	Single family residence, Extant
N/A	4039 160th St.	Single family residence, Extant
N/A	4061 159th St.	Single family residence, Extant

Source: Duke Cultural Resources Management, 2023.
*NHRP/CRHP Key
6Y Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing.

Twelve built environment resources are recorded at the SCCIC and in the BERD. The City's 1992 General Plan lists 32 historic structures. Through the reconnaissance survey it was determined 17 of the 32 structures are extant, the remaining 15 have either been demolished or are so disturbed so as to be unrecognizable. Four of these 17 were also listed at the SCCIC/BERD bringing the total historic structures recorded in the City to 25. None are listed on the NRHP or CRHR.

5.5.3 REGULATORY SETTING

FEDERAL

National Historic Preservation Act

Enacted in 1966 and amended in 2000, the National Historic Preservation Act (NHPA) declared a national policy of historic preservation and instituted a multifaceted program, administered by the Secretary of the Interior, to encourage the achievement of preservation goals at Federal, State, and local levels. The NHPA authorized the expansion and maintenance of the National Register of Historic Places (NRHP), established the position of State Historic Preservation Officer (SHPO) and provided for the designation of State Review Boards, set up a mechanism to certify local governments to carry out the purposes of the NHPA, assisted Native American tribes to preserve their cultural heritage, and created the Advisory Council on Historic Preservation (ACHP).

Section 106 Process

Through regulations associated with the NHPA, an impact to a cultural resource would be considered significant if government action would affect a resource listed in or eligible for listing in the NRHP. The NHPA codifies a list of cultural resources found to be significant within the context of national history, as determined by a technical process of evaluation. Resources that have not yet been placed on the NRHP, and are yet to be evaluated, are afforded protection under the Act until shown not to be significant.

Section 106 of the NHPA and its implementing regulations (36 Code of Federal Regulations Part 800) state that for a cultural resource to be determined eligible for listing in the NRHP, the resource must meet specific criteria associated with historic significance and possess certain levels of integrity of form, location, and setting. The criteria for listing on the NRHP are applied within an analysis when there is some question as to the significance of a cultural resource. The criteria for evaluation are defined as the quality of significance in American history, architecture, archeology, engineering, and culture. This quality must be present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association. A property is eligible for the NRHP if it is significant under one or more of the following criteria:

- Criterion A: It is associated with events that have made a significant contribution to the broad patterns of our history; or
- Criterion B: It is associated with the lives of persons significant in our past; or
- Criterion C: It embodies the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- Criterion D: It has yielded, or may be likely to yield, information important in prehistory or history.

Criterion D is usually reserved for archaeological resources. Eligible cultural resources must meet at least one of the above criteria and exhibit integrity, measured by the degree to which the resource retains its historical properties and conveys its historical character.

The Section 106 evaluation process does not apply to projects undertaken under City environmental compliance jurisdiction. However, should the undertaking require funding, permits, or other administrative actions issued or overseen by a Federal agency, analysis of potential impacts to cultural resources following the Section 106 process would likely be necessary. The Section 106 process typically excludes cultural resources created less than 50 years ago unless the resource is considered highly significant from the local perspective. Finally, the Section 106 process allows local concerns to be voiced and the Section 106 process must consider aspects of local significance before a judgment is rendered.

Secretary of the Interior's Standards for the Treatment of Historic Properties

Evolving from the Secretary of the Interior's Standards for Historic Preservation Projects with Guidelines for Applying the Standards that were developed in 1976, the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring and Reconstructing Historic Buildings were published in 1995 and codified as 36 Code of Federal Regulations

Part 67. Neither technical nor prescriptive, these standards are "intended to promote responsible preservation practices that help protect our Nation's irreplaceable cultural resources." "Preservation" acknowledges a resource as a document of its history over time, and emphasizes stabilization, maintenance, and repair of existing historic fabric. "Rehabilitation" not only incorporates the retention of features that convey historic character, but also accommodates alterations and additions to facilitate continuing or new uses. "Restoration" involves the retention and replacement of features from a specific period of significance. "Reconstruction," the least used treatment, provides a basis for recreating a missing resource. These standards have been adopted, or are used informally, by many agencies at all levels of government to review projects that affect historic resources.

STATE

California Environmental Quality Act

CEQA requires a lead agency determine whether a project may have a significant effect on historical resources (Public Resources Code Section 21084.1). A historical resource is a resource listed in, or determined to be eligible for listing, in the CRHR, a resource included in a local register of historical resources, or any object building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (State CEQA Guidelines, Section 15064.5[a][1-3]).

A resource is considered historically significant if it meets any of the following criteria:

1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2) Is associated with the lives of persons important in our past;
3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4) Has yielded, or may be likely to yield, information important in prehistory or history.

In addition, if it can be demonstrated that a project would cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that resources cannot be left undisturbed, mitigation measures are required (Public Resources Code Section 21083.2[a], [b], and [c]). Public Resources Code Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

California Register of Historical Resources (CRHR)

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by State and local agencies, private groups, and citizens to identify the State's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change." Certain properties, including those listed in or formally determined eligible for listing in the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys or designated by local landmarks programs, may be nominated for inclusion in the CRHR. A resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the criteria modeled on the NRHP criteria.

Public Resources Code Section 5097 (Related to Cultural Resources)

California Public Resources Code (PRC) Section 5097 addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project; and establishes the California Native American Heritage Commission (NAHC) to resolve disputes regarding the disposition of such remains. It has been incorporated into Section 15064.5(e) of the CEQA Guidelines.

The NAHC, created by statute in 1976 (AB 4239), is a nine-member body, appointed by the Governor to identify, catalog, and protect cultural resources (i.e., places of special religious or social significance to Native Americans, and known graves and cemeteries of Native Americans on private lands) in California. The NAHC is charged with the duty of preserving and ensuring accessibility of sacred sites and burials, the disposition of Native American human remains and burial items, maintaining an inventory of Native American sacred sites located on public lands (i.e., Sacred Lands File), and reviewing current administrative and statutory protections related to these sacred sites.

PRC Sections 5097.9 through 5097.991 establish that no public agency or private party using or occupying public property (or operating on under a public license, permit, grant, lease or contract made after July 1, 1977) shall in any manner interfere with the free expression or exercise of Native American religion as provided in the U.S. Constitution and the California Constitution. It also prohibits such agencies and parties from causing severe or irreparable damage to any Native American sanctified cemetery, place of worship, religious or ceremonial site or sacred shrine located on public property, except on a clear and convincing showing that the public interest and necessity so require it.

These sections also establish the State's NAHC. The NAHC is tasked with working to ensure the preservation and protection of Native American human remains, associated grave goods and cultural resources. Towards this end, the NAHC has a strategic plan for assisting the public, development communities, local and Federal agencies, educational institutions and California Native Americans to better understand problems relating to the protection and preservation of cultural resources and to serve as a tool to resolve these problems. In 2006, PRC Sections 5097.91 and 5097.98 were amended by Assembly Bill 2641 to authorize the NAHC to bring legal action when necessary to prevent damage to

Native American burial grounds or places of worship. It also established more specific procedures to be implemented in the event that Native American remains are discovered.

California Health and Safety Code (Sections 7050.5, 7051, and 7054)

Sections 7050.5, 7051, and 7054 of the California Health and Safety Code collectively address the illegality of interference with human burial remains (except as allowed under applicable sections of the PRC), as well as the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project, treatment of the remains prior to, during and after evaluation, and reburial procedures.

LOCAL

City of Lawndale Municipal Code

The Lawndale Zoning Code Chapter 17.30, *Design Review*, requires design review and approval for applicable development projects. The reviewing body must make the following findings: that the proposed development site plan and the building design features will integrate harmoniously and enhance the character and design of both the immediate neighborhood and the surrounding area; that the site plan and building design will improve the community appearance by preventing extremes of building bulk and mass; that the site plan and design of the buildings, parking areas, landscaping, illumination and other design features demonstrate that proper consideration has been given to both the functional aspects of the site development and the visual effects as seen from public spaces; and that the site plan and building design substantially conform to the City's adopted design guidelines.

Mills Act Program

The City of Lawndale adopted the Mills Act program in December 2010. The Program allows owners of qualified historic properties to apply for a Mills Act contract if they pledge to rehabilitate and maintain the historical and architectural character of their properties for the minimum ten-year life of the contract. Mills Act contracts are executed between a property owner and the City of Lawndale. Because valuations of Mills Act properties are determined by an income approach to value rather than by the standard market approach to determining appraised value, Mills Act participants may realize substantial property tax savings each year.

Historic Plaque Program

Award of a Historic Preservation Plaque recognizes and honors the careful preservation of older homes and other buildings. Eligibility for a plaque is based on the following criteria: the building must be 50 years or older; the building must be in good condition, and the building's exterior must have been preserved, maintained, or rehabilitated (or sensitively enlarged) in accordance with its original architectural style and detailing. Preference will be given to buildings that were either owned by a prominent person or family or are historically significant to the community, as well as those that are good examples of one or more architectural styles. This program is administered free of charge to the property owner by the Lawndale Historical Society and the City of Lawndale.

5.5.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to cultural resources. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5 (refer to Impact Statement CUL-1);
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5 (refer to Impact Statement CUL-2); and/or
- Disturb any human remains, including those interred outside of formal cemeteries (refer to Impact Statement CUL-3).

5.5.5 IMPACTS AND MITIGATION MEASURES

CUL-1: Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?

Impact Analysis: Known historic resource sites are located throughout the Planning Area, as described above, and undiscovered or potentially eligible sites may be located in various areas of the Planning Area. Redevelopment and alteration of existing structures has the potential to impact known and potentially eligible historical resources. A substantial adverse change in the significance of an historic resource is defined in Section 15064.5 (b)(1) of the CEQA Guidelines as the "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired."

According to officially recorded resources and other databases that were researched for the Project, 25 historic built environment resources are located within the City, as documented in Table 5.5-1, and Table 5.5-2. These historic resources are scattered throughout the Planning Area and vary in terms of type, architectural style, condition, and alteration history. While the General Plan Update does not directly propose any changes to any historic resources, future development allowed under the General Plan Update could cause a substantial adverse change in the significance of known historical resources or unknown historical resources which have not yet been identified. This is considered a potentially significant impact.

The General Plan Update Resource Management Element includes goals, policies, and actions addressing heritage resources, including historical resources. Proposed Policy RM-3.1 requires the City to protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.2 encourages the City to promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations. Policy RM-3.4 directs the City to include the public in efforts to preserve cultural assets, including techniques, incentives, and legal requirements for preservation. Policy RM-3.6 directs the City to evaluate the condition of historical buildings, the costs of rehabilitation, and the feasibility of preservation or conservation

alternatives when considering the demolition or movement of historic structures. Policy RM-3.7 encourages the City to seek funding and support from public and private sources that aim to protect cultural and historic resources within the City. Action RM-3a requires the assessment of development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to CEQA. Action RM-3b directs the City to evaluate the feasibility of implementing a local historic registry program that provides incentives for retrofitting and building maintenance, as well as public recognition, of the local resource. Action RM-3c directs the City to consider conducting a historic properties inventory that takes into consideration buildings, neighborhoods, and other features of historic, architectural, or cultural significance. Action RM-3d requires, for structures that potentially have historic significance, that a study be conducted by a professional archaeologist or historian to determine the actual significance of the structure and potential impacts of the proposed development in accordance with CEQA Guidelines Section 15064.5. The City may require modification of the project and/or mitigation measures to avoid any impact to a historic structure, when feasible, such as retaining or rehabilitating historic buildings or relocating the historic building as feasible.

As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the City's General Plan, Municipal Code, and other applicable State and local regulations relative to historic and potentially historic resources. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. For structures that potentially have historical significance, the City would require preparation of a study by a qualified professional archaeologist or historian to determine the significance of the structure and potential impacts of the proposed development in compliance with CEQA. Therefore, compliance with the General Plan Update policies and actions and existing regulations, would not cause a substantial adverse change in the significance of a historical resource and impacts would be less than significant.

Proposed General Plan Update Goals, Policies and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: **Preservation.** Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.2: **Documentation.** Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

Policy RM-3.3: **Cultural Reminders.** Seek to incorporate reminders of the City's culture through adaptive reuse, signage, markers, cultural events, and other reminders of Lawndale's community identity and local history.

Policy RM-3.4: **Public Education.** Educate and actively involve the public in preserving cultural assets, including techniques, incentives, and legal requirements for preservation.

Policy RM-3.6: **Historic Preservation.** Evaluate the condition of historical buildings, the costs of rehabilitation, and the feasibility of preservation or conservation alternatives when

considering the demolition or movement of historic structures; when possible, encourage the adaptive re-use of the historic structure.

Policy RM-3.7: **Funding.** With input and involvement of stakeholder groups, seek adequate funding and support from public and private sources that aim to protect cultural and historic resources within the City.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3b: Evaluate the feasibility of implementing a local historic registry program that provides incentives for retrofitting and building maintenance, as well as public recognition, of the local resource.

Action RM-3c: Consider conducting a historic properties inventory that takes into consideration buildings, neighborhoods, and other features of historic, architectural, or cultural significance.

Action RM-3d: For structures that potentially have historic significance, the City shall require that a study be conducted by a professional archaeologist or historian to determine the actual significance of the structure and potential impacts of the proposed development in accordance with CEQA Guidelines Section 15064.5. The City may require modification of the project and/or mitigation measures to avoid any impact to a historic structure, when feasible, such as retaining or rehabilitating historic buildings or relocating the historic building as feasible.

Action RM-3e For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CUL-2: Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Impact Analysis: Redevelopment and development of previously undeveloped areas have the potential to impact known and unknown archaeological resources. Surface-level and subsurface archaeological sites and deposits can be affected by ground-disturbing activities associated with construction activities.

Although the records search identifies no previously-recorded archaeological resources within the City, the Cultural Study concludes the lack of identifies resources is likely to be a consequence of development occurring prior to the implementation of CEQA, rather than a lack of archaeological sites. Effects on archaeological resources deemed to be significant could be considered adverse if they involve physical demolition, destruction, or alteration of the resource or its immediate surroundings such that the significance of a resource would be materially impaired. While the General Plan Update does not directly propose site-specific development with the potential to directly impact archaeological resources, future development allowed under the General Plan Update could cause a substantial adverse change in the significance of previously undiscovered archaeological resources. This is considered a potentially significant impact.

The General Plan Update Resource Management Element includes goals, policies, and actions addressing heritage resources, including archaeological resources. Proposed Policy RM-3.1 requires the City protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.2 encourages the City to promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations. Policy RM-3.4 directs the City to include the public in efforts to preserve cultural assets, including techniques, incentives, and legal requirements for preservation. Policy RM-3.7 encourages the City to seek funding and support from public and private sources that aim to protect cultural and historic resources within the City. Action RM-3a requires that development proposals be assessed for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to CEQA. Action RM-3e requires, for all development proposals within areas with the potential to contain prehistoric/historic resources, a study to be conducted by a professional archaeologist to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

Archaeological resources are protected under Federal, State, and local regulations as described above and implementation of General Plan Update policies and actions would reduce potential adverse impacts to archaeological resources associated with future development. Subsequent discretionary development and infrastructure projects would be analyzed for potential environmental impacts, consistent with the requirements of CEQA, pursuant to the City's entitlement review process. Compliance with the General Plan Update policies and actions and existing regulations would not cause a substantial adverse change in the significance of an archaeological resource and impacts would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: Preservation. Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.2: **Documentation.** Promote community identity and local history by identifying, documenting, and appropriately archiving tangible and intangible cultural resources so they can be recognized, accessed, and appreciated by future generations.

Policy RM-3.4: **Public Education.** Educate and actively involve the public in preserving cultural assets, including techniques, incentives, and legal requirements for preservation.

Policy RM-3.7: **Funding.** With input and involvement of stakeholder groups, seek adequate funding and support from public and private sources that aim to protect cultural and historic resources within the City.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3e: For all development proposals within areas with the potential to contain prehistoric/historic resources, the City shall require a study to be conducted by a professional archaeologist. The objective of the study will be to determine if significant archaeological resources are potentially present and if the project will significantly impact these resources. If significant impacts are identified, the City may require the project to be modified to avoid the impacts, or require mitigation measures to mitigate the impacts. Mitigation may involve archaeological investigation and resources recovery.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CUL-3: Disturb any human remains, including those interred outside of formal cemeteries?

Impact Analysis: Future construction projects within the Planning Area could have the potential to disturb or destroy buried Native American human remains as well as other human remains, including those interred outside of formal cemeteries.

Health and Safety Code Section 7050.5, CEQA Guidelines Section 15064.5(e), and PRC Section 5097.98 mandate the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. In the event that human remains are discovered during ground disturbing activities, the County coroner must be called in to assess the remains (Section 15064.5[e] of the CEQA Guidelines). If the County coroner determines that the remains are those of a Native American, the Native American Heritage Commission (NAHC) must be contacted within 24 hours, and the provisions for treating or disposing of the remains and any associated grave goods as described in Section 15064.5 of the CEQA Guidelines must be followed.

As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the City's General Plan, Municipal Code, and other applicable State and local regulations. Subsequent discretionary development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Under CEQA, human remains are protected under the definition of archaeological materials as being "any evidence of

human activity." Public Resources Code Section 5097 has specific stop-work and notification procedures to follow in the event that Native American human remains are inadvertently discovered during development activities.

The General Plan Update Resource Management Element includes policies and actions addressing the potential discovery of human remains. Proposed Policy RM-3.1 requires the City protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code. Policy RM-3.5 requires consultation with Native American tribes that may be impacted by proposed development and land use policy changes, in accordance with State, local, and Tribal intergovernmental consultation requirements. Action RM-3g requires, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, that the City halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains is permitted until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site. Compliance with the General Plan Update policies and actions and existing regulations, including Health and Safety Code Section 7050.5, CEQA Guidelines Section 15064.5(e), and PRC Section 5097.98, would ensure that potential impacts associated with the inadvertent discovery of human remains would be reduced to less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: **Preservation.** Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Policy RM-3.5: **Tribal Consultation.** In accordance with State, local, and Tribal intergovernmental consultation requirements, consult with Native American tribes that may be impacted by proposed development and land use policy changes, as necessary.

Action RM-3g: In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, the City shall halt excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been informed and has determined that no investigation of the cause of death is required. If the remains are of Native American origin, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the descendants from the deceased Native Americans have made a recommendation to the landowner or the persons responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains

and any associated grave goods as provided in Public Resources Code section 5097.98, or the Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being granted access to the site.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.5.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to cultural resources may occur. The cumulative projects' regional geologic setting and cultural resource deposit sensitivity would be similar; however, the local geologic setting and historical significance would vary according to the site location and specific conditions.

Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Impact Analysis: Previously recorded historic built environment resources have been identified within the City. Additionally, due to the age of development within the City, there is the potential for eligible historical resource sites to be located within the Planning Area. Future development and cumulative development within the Planning Area has the potential to impact known and potentially eligible historical resources. As with the Project, the related cumulative projects would undergo environmental review pursuant to CEQA to evaluate potential impacts to historical resources. This would include studies of historical resources that are present or could be present within a development site. Where significant or potentially significant impacts are identified, implementation of all feasible site-specific mitigation would be required to avoid or reduce impacts. Additionally, the General Plan Update Resource Management Element includes policies and actions that would address historical resources. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on historical resources to a less than significant level. Based on the above, the Project's incremental contribution to cumulative historical resource impacts would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Impact Analysis: No previously recorded cultural resources have been identified within the City; however, undiscovered archeological sites may be located within the Planning Area. Future development and

cumulative development within the Planning Area has the potential to impact previously undiscovered archaeological resources. As with the Project, the related cumulative projects would undergo environmental review pursuant to CEQA to evaluate potential impacts to archaeological resources. This would include studies of archaeological resources that are present or could be present within a development site. Additionally, related projects would be subject to compliance with the established Federal, State, and local regulatory framework concerning the protection of cultural resources on a project-by-project basis. Where significant or potentially significant impacts are identified, implementation of all feasible site-specific mitigation would be required to avoid or reduce impacts. Additionally, the General Plan Update Resource Management Element includes policies and actions that would address archeological resources. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on archeological resources to a less than significant level. Based on the above, the Project's incremental contribution to cumulative archaeological resource impacts would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, disturb any human remains, including those interred outside of dedicated cemeteries?

Impact Analysis: Although unlikely, there is the potential that previously undiscovered human remains could be encountered during construction activities associated with future development within the Planning Area. Future development projects would be required to comply with the established State regulatory framework regarding human remains. Related cumulative projects would undergo environmental review on a project-by-project basis to evaluate the site-specific archaeological sensitivity. Additionally, related projects would be subject to compliance with the established State and local regulatory framework, including the General Plan Update policies and actions, concerning the discovery of human remains on a project-by-project basis. The proposed Project's compliance with the regulatory framework regarding the discovery of human remains would reduce potential Project impacts to a less than significant level; thus, the Project's incremental contribution to cumulative impacts to human remains would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.5.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Impacts to cultural resources associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable impacts to cultural resources would occur as a result of the General Plan Update.

5.6 ENERGY

5.6.1 PURPOSE

This section identifies the existing energy use conditions withing the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

This section is primarily based upon the air quality emissions analysis and modeling prepared by De Novo Planning Group, and included as Appendix C, *Air Quality, Energy and Greenhouse Gas Emissions Modeling Data*.

5.6.2 ENVIRONMENTAL SETTING

ENERGY CONSUMPTION

Energy in California is consumed from a wide variety of sources. Fossil fuels (including gasoline and diesel fuel and natural gas) are the most widely used form of energy in the State (U.S. Energy Information Administration 2023a). However, renewable sources of energy (such as solar and wind) are growing in proportion to California's overall energy mix. A large driver of renewable sources of energy in California is the State's current Renewable Portfolio Standard (RPS), which requires the State to derive at least 33 percent of electricity generated from renewable resources by 2020, and 60 percent by 2030.

Overall, in 2020, California's per capita energy usage was ranked 48th in the nation at 175 million British thermal units (Btu) per capita (U.S. Energy Information Administration 2023a). Additionally, California's per capita rate of energy usage has been reduced by approximately one third since the 1970s (U.S. Energy Information Administration 2022). Many State regulations since the 1970s, including new building energy efficiency standards, vehicle fleet efficiency measures, as well as growing public awareness, have helped to keep per capita energy usage in the State constrained.

The consumption of nonrenewable energy (primarily gasoline and diesel fuel) associated with the operation of passenger, public transit, and commercial vehicles results in greenhouse gas (GHG) emissions that ultimately result in global climate change. Other fuels such as natural gas, ethanol, and electricity (unless derived from solar, wind, nuclear, or other energy sources that do not produce carbon emissions) also result in GHG emissions and contribute to global climate change.

ELECTRICITY CONSUMPTION

California relies on a regional power system composed of a diverse mix of natural gas, renewable, hydroelectric, and nuclear generation resources. Approximately 70 percent of the electrical power needed to meet California's demand is produced in the State, while the remaining 30 percent is imported from the Pacific Northwest and the Southwest (California Energy Commission 2023a). In 2021, California's in-state generated electricity was derived from natural gas (50.2 percent), nuclear sources (8.5 percent), large hydroelectric resources (6.2 percent), coal (0.2 percent), and renewable resources that include geothermal, biomass, small hydroelectric resources, wind, and solar (34.8 percent). The percentage of

renewable resources as a proportion of California's overall energy portfolio is increasing over time, as directed the State's Renewable Portfolio Standard (RPS).

Southern California Edison (SCE) provides electricity to the Planning Area. SCE, a subsidiary of Edison International, serves approximately 185 cities in 15 counties across central and Southern California (Southern California Edison, 2019). According to the California Energy Commission (CEC), approximately 103,597 million kilowatt-hours (GWh) of electricity were used in SCE's service area in 2020 (California Energy Commission 2023b). This is approximately 38 percent of the State total system electric generation of 272,576 GWh in 2020, which was a two percent decrease from the previous year (California Energy Commission 2023c). Los Angeles County's total electricity consumption in 2020 (residential and non-residential) was approximately 65,650 GWh (California Energy Commission 2023d).

NATURAL GAS

Natural gas supplies are derived from underground sources and brought to the surface at gas wells. Once it is extracted, gas is purified and the odorant that allows gas leaks to be detected is added to the normally odorless gas. Natural gas suppliers, such as Southern California Gas Company (SoCalGas), then send the gas into transmission pipelines, which are usually buried underground. Compressors propel the gas through the pipeline system, which delivers it to homes and businesses.

The State produces approximately 12 percent of its natural gas, while obtaining 22 percent from Canada and 65 percent from the Rockies and the Southwest. In 2020, California produced 144 billion cubic feet of natural gas. SoCalGas provides natural gas for residential, industrial, and agency consumers within the Planning Area.

PETROLEUM

The primary energy source for the United States is petroleum (oil), which is refined to produce fuels like gasoline, diesel, and jet fuel (U.S. Energy Information Administration 2023b). Petroleum is a finite, nonrenewable energy source. California used approximately 524 million barrels of petroleum in 2020, with the majority (433 million barrels) used for the transportation sector (U.S. Energy Information Administration 2023c). This total annual consumption equates to a daily use of approximately 1.4 million barrels of petroleum.

5.6.3 REGULATORY SETTING

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: National ambient air quality standards (NAAQS) for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The U.S. Environmental Protection Agency (EPA) is responsible for administering the FCAA. The FCAA requires the EPA to set NAAQS for several problem air pollutants based on human health and welfare criteria. Two types of NAAQS were established: primary standards, which protect public health, and secondary standards, which protect the public welfare from non-health-related adverse effects such as visibility reduction.

Energy Policy and Conservation Act

The Energy Policy and Conservation Act of 1975 sought to ensure that all vehicles sold in the U.S. would meet certain fuel economy goals. Through this Act, Congress established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the Act, the National Highway Traffic and Safety Administration, which is part of the U.S. Department of Transportation (USDOT), is responsible for establishing additional vehicle standards and for revising existing standards.

Since 1990, the fuel economy standard for new passenger cars has been 27.5 mpg. Since 1996, the fuel economy standard for new light trucks (gross vehicle weight of 8,500 pounds or less) has been 20.7 mpg. Heavy-duty vehicles (i.e., vehicles and trucks over 8,500 pounds gross vehicle weight) are not currently subject to fuel economy standards. Compliance with Federal fuel economy standards is determined on the basis of each manufacturer's average fuel economy for the portion of its vehicles produced for sale in the U.S. The Corporate Average Fuel Economy (CAFE) program, which is administered by the EPA, was created to determine vehicle manufacturers' compliance with the fuel economy standards. The EPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.

Energy Compliance Act of 1992 (EPAct)

The Energy Policy Act of 1992 (EPAct) was passed to reduce the Country's dependence on foreign petroleum and improve air quality. EPAct includes several parts intended to build an inventory of alternative fuel vehicles (AFVs) in large, centrally fueled fleets in metropolitan areas. EPAct requires certain Federal, state, and local government and private fleets to purchase a percentage of light duty AFVs capable of running on alternative fuels each year. In addition, financial incentives are included in EPAct. Federal tax deductions will be allowed for businesses and individuals to cover the incremental cost of AFVs. States are also required by the act to consider a variety of incentive programs to help promote AFVs.

Energy Policy Act of 2005

The Energy Policy Act of 2005 was signed into law on August 8, 2005. Generally, the Act provides for renewed and expanded tax credits for electricity generated by qualified energy sources, such as landfill gas; provides bond financing, tax incentives, grants, and loan guarantees for a clean renewable energy and rural community electrification; and establishes a Federal purchase requirement for renewable energy.

Intermodal Surface Transportation Efficiency Act (ISTEA)

ISTEA (49 U.S.C. § 101 et seq.) promoted the development of intermodal transportation systems to maximize mobility as well as address national and local interests in air quality and energy. ISTEA contained

factors that metropolitan planning organizations (MPOs), were to address in developing transportation plans and programs, including some energy-related factors. To meet the ISTEA requirements, MPOs adopted explicit policies defining the social, economic, energy, and environmental values that were to guide transportation decisions in that metropolitan area. The planning process was then to address these policies. Another requirement was to consider the consistency of transportation planning with Federal, state, and local energy goals. Through this requirement, energy consumption was expected to become a criterion, along with cost and other values that determine the best transportation solution.

STATE

Warren-Alquist Act

The 1975 Warren-Alquist Act established the California Energy Resources Conservation and Development Commission, now known as CEC. The Act established state policy to reduce wasteful, uneconomical, and unnecessary uses of energy by employing a range of measures. The California Public Utilities Commission (CPUC) regulates privately-owned utilities in the energy, rail, telecommunications, and water fields.

Energy Action Plan

The first Energy Action Plan (EAP) emerged in 2003 from a crisis atmosphere in California's energy markets. The State's three major energy policy agencies (CEC, CPUC, and the Consumer Power and Conservation Financing Authority [established under deregulation and now defunct]) came together to develop one high-level, coherent approach to meeting California's electricity and natural gas needs. It was the first time that energy policy agencies formally collaborated to define a common vision and set of strategies to address California's future energy needs and emphasize the importance of the impacts of energy policy on the California environment.

In the October 2005 Energy Action Plan II, CEC and CPUC updated their energy policy vision by adding some important dimensions to the policy areas included in the original EAP, such as the emerging importance of climate change, transportation-related energy issues, and research and development activities. The CEC adopted an update to the EAP II in February 2008 that supplements the earlier EAPs and examines the State's ongoing actions in the context of global climate change.

State of California Energy Action Plan

The CEC is responsible for preparing the State Energy Action Plan, which identifies emerging trends related to energy supply, demand, conservation, public health and safety, and the maintenance of a healthy economy. The current plan is the 1997 California Energy Plan. The plan calls for the State to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for zero-emission vehicles and addressing their infrastructure needs; and encouragement of urban design that reduces vehicle miles traveled (VMT) and accommodates pedestrian and bicycle access.

Assembly Bill 1493

In response to AB 1493, CARB approved amendments to the California Code of Regulations (CCR) adding GHG emission standards to California's existing motor vehicle emission standards. Amendments to CCR Title 13 Sections 1900 (CCR 13 1900) and 1961 (CCR 13 1961), and adoption of Section 1961.1 (CCR 13 1961.1) require automobile manufacturers to meet fleet average GHG emission limits for all passenger cars, light-duty trucks within various weight criteria, and medium-duty passenger vehicle weight classes beginning with the 2009 model year. Emission limits are further reduced each model year through 2016. For passenger cars and light-duty trucks 3,750 pounds or less loaded vehicle weight (LVW), the 2016 GHG emission limits are approximately 37 percent lower than during the first year of the regulations in 2009. For medium-duty passenger vehicles and light-duty trucks 3,751 LVW to 8,500 pounds gross vehicle weight (GVW), GHG emissions are reduced approximately 24 percent between 2009 and 2016.

CARB requested a waiver of Federal preemption of California's Greenhouse Gas Emissions Standards. The intent of the waiver is to allow California to enact emissions standards to reduce carbon dioxide and other greenhouse gas emissions from automobiles in accordance with the regulation amendments to the CCRs that fulfill the requirements of AB 1493. The EPA granted a waiver to California to implement its greenhouse gas emissions standards for cars.

Assembly Bill 1007

Assembly Bill 1007, (Pavley, Chapter 371, Statutes of 2005) directed the CEC to prepare a plan to increase the use of alternative fuels in California. As a result, the CEC prepared the State Alternative Fuels Plan in consultation with the state, Federal, and local agencies. The plan presents strategies and actions California must take to increase the use of alternative non-petroleum fuels in a manner that minimizes costs to California and maximizes the economic benefits of in-state production. The Plan assessed various alternative fuels and developed fuel portfolios to meet California's goals to reduce petroleum consumption, increase alternative fuels use, reduce greenhouse gas emissions, and increase in-state production of biofuels without causing a significant degradation of public health and environmental quality.

Executive Order B-48-18: Zero-Emission Vehicles

In January 2018, Executive Order (EO) B-48-18 was signed into law and requires all State entities to work with the private sector to have at least five million zero-emission vehicles (ZEVs) on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This Executive Order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan (Governor's Interagency Working Group on Zero-Emission Vehicles 2016) to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential uses through the Low Carbon Fuel Standard Program, and recommend how to ensure affordability and accessibility for all drivers.

California Building Energy Efficiency Standards

Title 24, Part 6 of the California Code of Regulations, known as the Building Energy Efficiency Standards (Standards), was established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. On January 1, 2010, the California Building Standards Commission adopted CALGreen and became the first state in the United States to adopt a statewide green building standards code.

The 2022 update to the California Building Energy Efficiency Standards (the current version of the Standards) went into effect on January 1, 2023. The Standards are divided into three basic sets. First, there is a basic set of mandatory requirements that apply to all buildings. Second, there is a set of performance standards – the energy budgets – that vary by climate zone (of which there are 16 in California) and building type; thus, the Standards are tailored to local conditions. Finally, the third set constitutes an alternative to the performance standards, which is a set of prescriptive packages that are basically a recipe or a checklist compliance approach.

Renewable Portfolio Standard

In 2002, the Legislature enacted Senate Bill 1078 (Stats. 2002, ch. 516), which established the Renewables Portfolio Standard program, requiring retail sellers of electricity, including electrical corporations, community choice aggregators, and electric service providers, to purchase a specified minimum percentage of electricity generated by eligible renewable energy resources such as wind, solar, geothermal, small hydroelectric, biomass, anaerobic digestion, and landfill gas. (See Pub. Utilities Code, Section 399.11 et seq. [subsequently amended].) The legislation set a target by which 20 percent of the State's electricity would be generated by renewable sources. (Pub. Utility Code, Section 399.11, subd. (a) [subsequently amended].) As described in the Legislative Counsel's Digest, Senate Bill 1078 required "[e]ach electrical corporation … to increase its total procurement of eligible renewable energy resources by at least one percent per year so that 20 percent of its retail sales are procured from eligible renewable energy resources. If an electrical corporation fails to procure sufficient eligible renewable energy resources in a given year to meet an annual target, the electrical corporation would be required to procure additional eligible renewable resources in subsequent years to compensate for the shortfall, if funds are made available as described. An electrical corporation with at least 20 percent of retail sales procured from eligible renewable energy resources in any year would not be required to increase its procurement in the following year."

In 2006, the Legislature enacted Senate Bill 107 (Stats. 2006, ch. 464), which modified the Renewables Portfolio Standard to require that at least 20 percent of electricity retail sales be served by renewable energy resources by year 2010. (Pub. Utility Code, Section 399.11, subd (a) [subsequently amended].)

Senate Bill X1-2 (Stats. 2011, 1st Ex. Sess., ch. 1) set even more aggressive statutory targets for renewable electricity, culminating in the requirement that 33 percent of the State's electricity come from renewables by 2020. This legislation applies to all electricity retailers in the State, including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must meet renewable energy goals of 20 percent of retail sales from renewables by the end of

2013, 25 percent by the end of 2016, and 33 percent by the end of 2020. (See Pub. Utility Code, Section 399.11 et seq. [subsequently amended].)

SB 350, discussed above, increases the Renewable Portfolio Standard to require 50 percent of electricity generated to be from renewables by 2030. (Pub. Utility Code, Section 399.11, subd (a); see also Section 399.30, subd. (c)(2).) Of equal significance, Senate Bill 350 also embodies a policy encouraging a substantial increase in the use of electric vehicles. As noted earlier, Section 740.12(b) of the Public Utilities Code now states that the PUC, in consultation with CARB and the CEC, must "direct electrical corporations to file applications for programs and investments to accelerate widespread transportation electrification to reduce dependence on petroleum, meet air quality standards, … and reduce emissions of greenhouse gases to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050."

Executive Order, B-16-12, issued in 2012, embodied a similar vision of a future in which zero-emission vehicles (ZEV) will play a big part in helping the State meet its GHG reduction targets. Executive Order B-16-12 directed State government to accelerate the market for in California through fleet replacement and electric vehicle infrastructure. The Executive Order set the following targets:

- By 2015, all major cities in California will have adequate infrastructure and be "ZEV ready";
- By 2020, the State will have established adequate infrastructure to support 1 million ZEVs in California;
- By 2025, there will be 1.5 million ZEVs on the road in California; and
- By 2050, virtually all personal transportation in the State will be based on ZEVs, and GHG emissions from the transportation sector will be reduced by 80 percent below 1990 levels.

In 2018, Senate Bill 100 (Stats. 2018, ch. 312) revised the above-described deadlines and targets so that the State will have to achieve a 50 percent renewable resources target by December 31, 2026 (instead of by 2030) and achieve a 60 percent target by December 31, 2030. The legislation also establishes a State policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045.

In summary, California has set a statutory goal of requiring that, by 2030, 60 percent of the electricity generated in California should be from renewable sources, with increased generation capacity sufficient to allow the mass conversion of the statewide vehicle fleet from petroleum-fueled vehicles to electrical vehicles and/or other ZEVs. By 2045, all electricity must come from renewable resources and other carbon-free resources. Former Governor Brown had an even more ambitious goal for the State of achieving carbon neutrality as soon as possible and by no later than 2045. This goal was reaffirmed in the Final 2022 Scoping Plan, which lays out a path to achieve State targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels no later than 2045. The Legislature is thus looking to California drivers to buy electric cars, powered by green energy, to help the State meet its aggressive statutory goal, created by SB 32, of reducing statewide GHG emissions by 2030 to 40 percent below 1990 levels. Another key prong to this strategy is to make petroleum-based fuels less carbon-intensive. A number of statutes in recent years have addressed that strategy.

Senate Bill 1078 (2002), Senate Bill 107 (2006), Executive Order S-14-08 (2008), Senate Bill 350 (2015), and Senate Bill 100 (2018), Assembly Bill 1279 (2022), Senate Bill 1020 (2022)

SB 1078 established the Renewable Portfolio Standard (RPS) program, which required retail sellers of electricity to provide at least 20 percent of their supply from renewable sources by 2017. This goal has subsequently been accelerated several times. SB 107 changed the target date to 2010 and Executive Order S-14-08 expanded the State's RPS to 33 percent renewable power by 2020. SB 350 expanded the RPS by requiring retail seller and publicly owned utilities to procure 50 percent of their electricity from eligible renewable energy resources by 2030, with interim goals of 40 percent by 2024 and 45 percent by 2027. SB 100 accelerated and expanded the standards set forth in SB 350 by updating the RPS program to 50 percent eligible renewable energy resources by 2025 and 60 percent by 2030. In addition, SB 100 sets a 100 percent clean, zero carbon, and renewable energy policy for California's electricity system by 2045. Additionally, AB 1279, the California Climate Crisis Act, declares the policy of the state both to achieve net zero greenhouse gas emissions as soon as possible, but no later than 2045, and achieve and maintain net negative greenhouse gas emissions thereafter, and to ensure that by 2045, statewide anthropogenic greenhouse gas emissions are reduced to at least 85 percent below the 1990 levels. Lastly, SB 1020 revised state policy to require that eligible renewable energy resources and zero-carbon resources supply 90 percent of all retail sales of electricity to California end-use customers by December 31, 2035, 95 percent of all retail sales of electricity to California end-use customers by December 31, 2040, 100 percent of all retail sales of electricity to California end-use customers by December 31, 2045, and 100 percent of electricity procured to serve all state agencies by December 31, 2035.

LOCAL

City of Lawndale Climate Action Plan

The City of Lawndale, in cooperation with the South Bay Cities Council of Governments, has developed a Climate Action Plan (CAP) to reduce GHG emissions within the City. The City's CAP evaluates energy and other resource consumption within the jurisdiction and serves as a guide for action by setting energy efficiency and GHG emission reduction goals and policies to achieve desired outcomes over a 20-year period (2035). The CAP identifies community-wide strategies to conserve energy and reduce GHG emissions from a range of sources within the jurisdiction, including transportation, land use, energy generation and consumption, water, and waste.

Lawndale Municipal Code

The City of Lawndale Municipal Code Chapter 3.14, *Utility Users Tax*, imposes a tax for users of various utilities within the City in order to fund municipal utility services, including electricity, gas, and telephone.

5.6.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Consistent with Appendix G of the CEQA Guidelines, the project will have a significant impact on the environment associated with energy use if it will:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation (refer to Impact Statement EN-1); and/or

- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency (refer to Impact Statement EN-1).

METHODOLOGY

In order to determine whether or not the proposed Project would result in a significant impact on energy use, this EIR includes an analysis of proposed Project energy use, as provided below. A description of the methodology used to estimate energy emissions is provided within the impact analysis.

The CEQA Guidelines require consideration of the potentially significant energy implications of a project. CEQA requires mitigation measures to reduce "wasteful, inefficient and unnecessary" energy usage (Public Resources Code Section 21100, subdivision [b][3]). According to Appendix G of the CEQA Guidelines, the means to achieve the goal of conserving energy include decreasing overall energy consumption, decreasing reliance on natural gas and oil, and increasing reliance on renewable energy sources. In particular, a project would be considered "wasteful, inefficient, and unnecessary" if it were to violate State and Federal energy standards and/or result in significant adverse impacts related to project energy requirements, energy inefficiencies, energy intensiveness of materials, cause significant impacts on local and regional energy supplies or generate requirements for additional capacity, fail to comply with existing energy standards, otherwise result in significant adverse impacts on energy resources, or conflict or create an inconsistency with applicable plan, policy, or regulation.

5.6.5 IMPACTS AND MITIGATION MEASURES

EN-1: Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Impact Analysis: The proposed Project is the General Plan Update, with a horizon year of 2045. Buildout of the General Plan includes residential, commercial, office, industrial, mixed-use, open space, and other land uses (see Section 3.0, *Project Description* for further detail). The amount of energy used in the Planning Area at buildout would directly correlate to the type and size of development, the energy consumption associated with unit appliances, outdoor lighting, and energy use associated with other buildings and activities. Other major sources of Planning Area energy consumption include fuel used by vehicle trips generated during construction and operational activities, and fuel used by off-road and on-road construction vehicles during construction. The following discussion provides calculated levels of energy use expected for future development accommodated by the General Plan Update, based on commonly used modelling software (i.e. CalEEMod v.2022.1 and the California Air Resource Board's EMFAC2021). The following analysis provides an estimate of the energy consumption in the Planning Area in buildout year 2045.

ELECTRICITY AND NATURAL GAS

At 2045 buildout, the City of Lawndale's electricity and natural gas consumption would be used primarily to power buildings (all types of buildings, including residential, commercial, office, industrial, public, etc.).

Total annual electricity (kWh) and natural gas (kBTU) usage associated with operational activities at General Plan Update buildout are shown in Table 5.6-1, *Maximum Regional Construction Emissions (pounds/day)*, (as provided by CalEEMod). The analysis performed uses a 2045 buildout for a 20-year planning horizon.

Table 5.6-1
Maximum Regional Construction Emissions (pounds/day)

Electricity (kWh/year)	Natural Gas (kBTU/year)
258,114,808	947,517,417
Source: CalEEMod, v2022.1.	

According to CalEEMod's *Appendix A: Calculation Details for CalEEMod*, CalEEMod uses the California Commercial End Use Survey (CEUS) database to develop energy intensity value for non-residential buildings. The energy use from residential land uses is calculated based on the Residential Appliance Saturation Survey (RASS). Similar to CEUS, this is a comprehensive energy use assessment that includes the end use for various climate zones in California.

FUEL CONSUMPTION - ON-ROAD VEHICLES (OPERATION)

Implementation of the General Plan Update would generate vehicle trips during its operational phase. Based on the *Lawndale General Plan CEQA Transportation Analysis* prepared by Kittelson & Associates, Inc., dated July 12, 2023 (Appendix F), future development as a result of implementation of the General Plan Update could generate up to approximately 1,026,827 vehicle miles traveled (VMT) per year; however, the Project itself does not propose any specific development. In order to calculate operational on-road vehicle energy usage and emissions, default trip lengths generated by CalEEMod were used, which are based on the Planning Area location and urbanization level parameters (i.e., "Los Angeles County" and "Urban," respectively). These values are provided by the individual districts or use a default average for the State, depending on the location of the project. Based on Year 2045 gasoline and diesel miles per gallon (MPG) factors for individual vehicle classes as provided by EMFAC2021, a weighted MPG factor was derived for operational on-road vehicles of approximately 29.9 MPG for gasoline vehicles. With this information, as a conservative estimate, it was calculated that on-road vehicle energy usage in the Planning Area at buildout year 2045 would be approximately 34,367 gallons of gasoline per day, on average, or 12,544,095 annual gallons of gasoline fuel annually.

FUEL CONSUMPTION - ON-ROAD VEHICLES (CONSTRUCTION)

2045 buildout of the General Plan Update would also generate on-road vehicle trips during construction activities (from construction workers, vendors, and haulers). Estimates of vehicle fuel consumed were derived based on the assumed construction schedule, vehicle trip lengths, and number of workers per construction phase as provided by CalEEMod (v 2022.1), and Year 2045 gasoline and diesel MPG factors provided by EMFAC2021. Table 5.6-2, *On-Road Mobile Fuel Generated by Project Construction Activities – By Phase*, describes gasoline and diesel fuel used by on-road mobile sources during each phase of the construction schedule. As shown, the vast majority of on-road mobile vehicle fuel used during the

construction activities associated with buildout of the General Plan Update would occur during the building construction phase.

Table 5.6-2
On-Road Mobile Fuel Generated by Project Construction Activities – By Phase

Construction Phase	Total Daily Worker Trips	Total Daily Vendor Trips	Total Daily Hauling Trips	Gallons of Gasoline Fuel	Gallons of Diesel Fuel
Demolition	15	0	0	62,142	0
Site Preparation	18	0	0	74,571	0
Grading	20	0	0	82,857	0
Building Construction	9,990	3,657	0	2,069,342	1,447,872
Paving	15	0	0	62,142	0
Architectural Coating	1,998	0	0	413,868	0
Total	**N/A**	**N/A**	**N/A**	**2,764,922**	**1,447,872**
Source: CalEEMod, v2022.1.					

OFF-ROAD VEHICLES (CONSTRUCTION)

Off-road construction vehicles would use diesel fuel during construction activities. A non-exhaustive list of off-road constructive vehicles expected to be used during construction activities includes: cranes, forklifts, generator sets, tractors, excavators, and dozers. Based on the total amount of CO_2 emissions expected to be generated by buildout of the General Plan Update (as provided by the CalEEMod output in Appendix C, *Air Quality, Energy and Greenhouse Gas Emissions Modeling Data*), and a CO_2 to diesel fuel conversion factor (provided by the U.S. Energy Information Administration), future development as a result of implementation of the General Plan Update could use up to a total of 3,988,127 gallons of diesel fuel for off-road construction vehicles (during the demolition, site preparation and grading phases); however, the Project itself does not propose any specific development.

COMPLIANCE WITH STATEWIDE AND LOCAL ENERGY PLANS

Buildout of the General Plan Update would use energy resources for the operation of buildings (electricity and natural gas), for on-road vehicle trips (e.g., gasoline and diesel fuel), and from off-road construction activities (e.g. diesel fuel) associated with 2045 buildout of the General Plan Update. Each of these activities would require the use of energy resources. Developers of individual projects within the Planning Area would be responsible for conserving energy, to the extent feasible, and would rely heavily on reducing per capita energy consumption to achieve this goal, including through Statewide and local measures.

Buildout of the General Plan Update would be in compliance with all applicable Federal, State, and local regulations regulating energy usage. For example, SCE is responsible for the mix of energy resources used to provide electricity for its customers, and it is in the process of implementing the Statewide Renewable Portfolio Standard (RPS) to increase the proportion of renewable energy (e.g., solar and wind) within its

energy portfolio. In addition, new development would be required to install on-site solar photovoltaic (PV) systems, consistent with the latest version of Title 24; this would greatly reduce the amount of electricity needed to be sent from the grid to the new developments associated with the proposed Project.

SCE is expected to achieve at least 60 percent renewables by 2030, and 100 percent zero-carbon electricity by 2045 (in compliance with Senate Bill 100). Additionally, energy-saving regulations, including the latest State Title 24 building energy efficiency standards ("Part 6"), would be applicable to future development accommodated by the General Plan Update. Other Statewide measures, including those intended to improve the energy efficiency of the statewide passenger and heavy-duty truck vehicle fleet (e.g., the Pavley Bill and the Low Carbon Fuel Standard), would improve vehicle fuel economies, thereby conserving gasoline and diesel fuel. These energy savings would continue to accrue over time. Additionally, building new housing near new job opportunities would reduce commuting time and allow for opportunities for pedestrian transportation such as walking and biking to work, further reducing energy usage. Furthermore, additional project-specific sustainability features that individual development projects could implement would further reduce the energy consumption of individual projects. The General Plan Update would also be in compliance with the planning documents described previously within this section.

The General Plan Update would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing energy use or increasing the use of renewable energy. This is a less than significant impact, in this regard.

CONCLUSION

The General Plan Update includes policies and actions to support energy conservation and renewable energy, as well as reducing energy use. Specifically, Goal RM-5 promotes a community that safely manages its energy resources. Policy RM-5.1 requires the City to comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy. Policy RM-5.2 ensures that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code. Policy RM-5.3 requires the City to promote the development and use of renewable energy resources to reduce dependency on fossil fuels. Policy RM-5.4 requires the City to promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure. Policy RM-5.5 requires the City to promote energy conservation and recycling by the public and private sectors. Policy RM-5.6 requires the City to collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways. Policy RM-5.7 requires the City to support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations. Policy RM-5.8 requires the City to promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy. Policy RM-5.9 requires the City to promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers. Action RM-5a requires the City to implement energy conservation measures in public buildings through the following actions. Action RM-5b requires that during the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage

of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design. Action RM-5 requires the City to continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code. Action RM-5d requires the City to promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings. Action RM-5e requires the City to identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times. Action RM-5f requires the City to consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives. Action RM-5g requires the City to use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs. Further, Action RM-5h requires the City to partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

As a result, the General Plan Update would not result in any significant adverse impacts related to Project energy requirements, energy use inefficiencies, and/or the energy intensiveness of materials by amount and fuel type for during General Plan Update buildout, including during construction, operations, maintenance, and/or removal. The City of Lawndale would comply with all existing energy standards and would not result in significant adverse impacts on energy resources. For the reasons stated above, buildout of the General Plan Update would not be expected to cause an inefficient, wasteful, or unnecessary use of energy resources nor conflict with or obstruct a State or local plan for renewable energy or energy efficiency. This is a less than significant impact.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: **Air Quality and Greenhouse Gas Emissions.** Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: **Regional Cooperation**. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: **Measurement and Enforcement**. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: **GHG Emissions.** Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: **Transportation Options**. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: **Walkability**. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: **Land Use Planning.** Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: **Sensitive Receptors.** Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: **Mitigation.** Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: **GHG Reduction.** Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: **Public Engagement**. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet EPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT)

devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NOx emissions during construction activities.

- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.
- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: **Energy Resources.** A community that safely manages its energy resources.

Policy RM-5.1: **Compliance with State Legislation.** Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: **Green Building Standards Code.** Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: **Renewable Energy.** Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: **Energy-Efficient Materials.** Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: **Energy Conservation.** Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: **Energy Needs.** Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: **Business Community.** Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: **Public Education.** Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: **Promote Energy Conservation in Existing Building Stock.** Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.6.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The cumulative projects' setting for energy would be similar for the region and for projects within the City.

Would the project, combined with other related cumulative projects, result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

Impact Analysis: As future development projects are received and reviewed by the City in subsequent years, those projects would be reviewed for consistency with the General Plan Update and all relevant State-level programs and requirements. All future projects must implement the most current version of the Title 24 energy efficiency requirements, as required by State law. Consistency with the General Plan Update and other mandatory State-level programs would ensure that future project-level contributions to inefficient, wasteful or unnecessary energy use would be less than significant. Moreover, as identified above, buildout of the General Plan Update would not be expected to cause an inefficient, wasteful, or unnecessary use of energy resources nor conflict with or obstruct a state or local plan for renewable energy or energy efficiency. As a result, the proposed General Plan Update's incremental contribution to cumulative energy impacts would be less than cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.6.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Energy use impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable energy use impacts would occur as a result of the General Plan Update.

5.7 GEOLOGY AND SOILS

5.7.1 PURPOSE

This section identifies the existing geology, soils, and seismicity conditions within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

This section is partly based upon the Cultural and Paleontological Resource Study for the General Plan Update: City of Lawndale, Los Angeles County (Cultural Study), prepared by Duke Cultural Resources Management, LLC and dated October 2020 and updated July 2023; refer to Appendix D, *Cultural and Paleontological Resources Assessment*.

5.7.2 ENVIRONMENTAL SETTING

GEOLOGIC CONDITIONS

The City of Lawndale, including the Planning Area, is located within the Peninsular Ranges Geomorphic Province, which extends from Mount San Jacinto in the north to Baja California in the south and includes the Inland Empire, Los Angeles County, Orange County, and San Diego Counties. The Peninsular Ranges Geomorphic Province is located in the southwestern corner of California and is bounded by the Transverse Ranges Geomorphic Province to the north and the Colorado Desert Geomorphic Province to the east. This geomorphic province is characterized by elongated northwest-trending mountain ridges separated by sediment-floored valleys. Many faults to the west of the Salton Trough section of the San Andreas Fault Zone parallel this northwest-southeast trending fault zone and have taken up some of the strain of the San Andreas.

Peninsular Ranges

The Peninsular Ranges Geomorphic Province consists of a series of mountain ranges separated by long valleys, formed from faults branching from the San Andreas Fault. The topographic trend is similar to the Coast Ranges, but the geology is more like the Sierra Nevada, with granitic rocks intruding the older metamorphic rocks. The Los Angeles Basin and the Channel Islands of Santa Catalina, Santa Barbara, San Clemente, and San Nicolas are included in this province. At the northern end of the province, Mount San Jacinto forms the dramatic backdrop to the Coachella Valley more than 10,000 feet below. The Peninsular Ranges extend south across the international border into Baja California, forming the spine of Baja California.

Regional Geology

The geology of southern California formed as a result of complex plate tectonics and fault movement. The most notable fault in southern California, the San Andreas Fault, is a right lateral strike-slip (or transform) fault that marks the boundary between the Pacific tectonic plate and the North American tectonic plate. Both plates are moving northward, but the Pacific plate is moving at a faster rate than the North American plate and the relative difference in the two rates results in movement along the San Andreas Fault. Northwest of the Los Angeles basin, where the southern San Joaquin Valley meets the San Emigdio and Tehachapi Mountains, the orientation of the San Andreas Fault changes from generally

northwest to west-northwest. This portion of the fault system is known as the "Big Bend." Another large fault in southern California, the left-lateral Garlock Fault, intersects the San Andreas Fault system at this location. This bend in the San Andreas Fault system results in transpressional forces between the two tectonic plates, a geologic result of which was the uplift of the Transverse Ranges, including the San Gabriel Mountains.

The City of Lawndale is located within the northern margin of the Peninsular Ranges. The topography of Lawndale is relatively flat with an elevation of approximately 59 feet above sea level. The City is located in the southwestern portion of Los Angeles County. Los Angeles County varies greatly in topography, bounded by the Pacific Ocean to the west and high mountain ranges to the east. The topography in the County varies significantly, from beaches on the west, to mountains and then desert to the east. Much of the topography in between consists of mesas intersected by canyons.

FAULTS

Faults are classified as Historic, Holocene, Late Quaternary, Quaternary, and Pre-Quaternary according to the age of most recent movement (CGS 2002). These classifications are described as follows:

- **Historic:** faults on which surface displacement has occurred within the past 200 years;
- **Holocene:** shows evidence of fault displacement within the past 11,000 years, but without historic record;
- **Late Quaternary:** shows evidence of fault displacement within the past 700,000 years, but may be younger due to a lack of overlying deposits that enable more accurate age estimates;
- **Quaternary:** shows evidence of displacement sometime during the past 1.6 million years; and
- **Pre-Quaternary:** without recognized displacement during the past 1.6 million years.

Faults are further distinguished as active, potentially active, or inactive (CGS 2002).

- **Active:** An active fault is a Historic or Holocene fault that has had surface displacement within the last 11,000 years;
- **Potentially Active:** A potentially active fault is a pre-Holocene Quaternary fault that has evidence of surface displacement between about 1.6 million and 11,000 years ago; and
- **Inactive:** An inactive fault is a pre-Quaternary fault that does not have evidence of surface displacement within the past 1.6 million years. The probability of fault rupture is considered low; however, this classification does not mean that inactive faults cannot, or will not, rupture.

While there are no known fault zones located within City limits, the City is located between two active strike-slip faults: the Newport-Inglewood fault zone and the Palos Verdes Fault. The nearest fault zone is the Newport-Inglewood Fault, located approximately two miles northeast of the City. Figure 5.7-1, *Regional Fault Zones*, illustrates the location of nearby fault zones surrounding the Planning Area.

The most significant historically active and potentially active fault zones that are capable of seismic ground shaking and which can impact Lawndale are discussed below.

Newport-Inglewood Fault

The Newport-Inglewood Fault is considered the second most active fault in California. It runs from the City of Inglewood through Huntington Beach and out into the Pacific Ocean. This fault is capable of producing earthquakes in the range of M 6.3 to M 7.5 (magnitude of 6.3 to 7.5 on the Richter Scale). The M 6.5 1933 Long Beach earthquake occurred on the Newport-Inglewood Fault, causing 120 deaths, the collapsing of unreinforced masonry buildings, and severe damage (United States Geologic Survey 2023b).

The Newport-Inglewood Fault is located approximately 2.25 miles northeast of the Planning Area (DOC 2023b).

San Andreas Fault

The San Andreas Fault is a 400-mile-long fault running from the Mexican border to a point offshore, west of San Francisco. Geologic studies show that over the past 1,400 to 1,500 years, large earthquakes have occurred at about 130-year intervals on the southern San Andreas Fault. As the last large earthquake on the southern San Andreas occurred in 1857, that section of the fault is considered a likely location for an earthquake within the next few decades (Michael Baker 2016). There is a 59 percent chance that an earthquake of M 6.7 (magnitude of 6.7 on the Richter Scale) or larger will occur on this fault in the next 30 years (Los Angeles County 2020).

The San Andreas fault is located approximately 45 miles north of the Planning Area.

Whittier-Elsinore Fault

The Whittier-Elsinore Fault is a right-lateral strike-slip fault with some reverse slip located along the eastern edge of the Los Angeles Basin (Southern California Earthquake Data Center 2023). The Whittier-Elsinore Fault is located along the southern base of the Puente Hills. Earthquakes with surface rupture on the Whittier Fault are estimated to have probable magnitudes ranging from M 6.0 to M 7.2 (magnitude of 6.0 to 7.2 on the Richter Scale). The Whittier fault joins the Chino Fault near Prado Dam where they merge into the Elsinore Fault. At the northern end, the fault splays into several faults, creating the Whittier-Elsinore Fault Zone (USGS 2023a).

The Whittier-Elsinore Fault is located approximately 20 miles northeast of the City (Department of Conservation 2023b).

Palos Verdes Fault Zone

The Palos Verdes fault zone is located off the coast of Redondo Beach and Torrance, along the northern front of the Palos Verdes Hills, and continues southward through the Palos Verdes peninsula and offshore, outside the San Pedro Bay. The Palos Verdes Fault is capable of an earthquake of M 6.0 to M 7.0 (magnitude of 6.0 to 7.0 on the Richter Scale). The issue of concern is the fault causing shaking and liquefaction within the region (Los Angeles County 2020).

The Palos Verdes fault zone is located approximately four miles southwest of the Planning Area.

Santa Monica Fault

The Santa Monica Fault consists of two subparallel faults that trend along the southern edge of the Santa Monica Mountains. These faults extend onshore from Pacific Palisades and continue through Santa Monica and Beverly Hills to Hollywood, where they merge into a single fault strand. These subparallel faults were referred to as the "Santa Monica fault zone." The Santa Monica fault zone consists of a north-dipping blind reverse fault and a subparallel fault in the hanging wall that reaches the surface; the blind fault was named the "Santa Monica Fault." The subparallel surface fault, which is the fault associated with the noted surficial scarps and shallow groundwater barriers, named the "Potrero Canyon Fault" (California Geological Survey 2018). This fault is capable of producing an earthquake of M 6.0 to 7.0 (magnitude of 6.0 to 7.0 on the Richter Scale) (Los Angeles County 2020).

The Santa Monica Fault is located approximately 11 miles northwest of the City. The Santa Monica Fault is not considered a significant ground surface rupture hazard east of Beverly Hills, indicating that it does not pose a major threat to the Planning Area.

Charnock Fault

The Charnock Fault trends northwest-southwest, approximately parallel to the trend of the Newport-Inglewood Fault. Review of available geologic literature indicates the Charnock Fault has displaced Quaternary to Late Quaternary units; however, no offset of late Pleistocene or Holocene age alluvial deposits have been reported (Camp Dresser & McKee Inc. 2001). Because no displacement of Holocene age alluvium has occurred, the Charnock fault is considered potentially active. The potential for surface rupture associated with the Charnock Fault is considered low.

The Charnock Fault is located approximately two miles northwest of the Planning Area.

SEISMIC HAZARDS

Seismic hazards include both rupture (surface and subsurface) along active faults and ground shaking, which can occur over wider areas. Ground shaking, produced by various tectonic phenomena, is the principal source of seismic hazards in areas devoid of active faults. All areas of the State are subject to some level of seismic ground shaking.

Several scales may be used to measure the strength or magnitude of an earthquake. Magnitude scales (ML) measure the energy released by earthquakes. The Richter scale, which represents magnitude at the earthquake epicenter, is an example of an ML. As the Richter scale is logarithmic, each whole number represents a 10-fold increase in magnitude over the preceding number. Table 5.7-1, *Richter Magnitudes and Effects*, represents effects that would be commonly associated with Richter Magnitudes.

Table 5.7-1
Richter Magnitudes and Effects

Magnitude	Effects
< 3.5	Typically not felt
3.5 – 5.4	Often felt but damage is rare
5.5 – 6.0	Damage is slight for well-built buildings
6.1 – 6.9	Destructive potential over ±60 miles of occupied area
7.0 – 7.9	"Major Earthquake" with the ability to cause damage over larger areas
≥ 8	"Great Earthquake" can cause damage over several hundred miles
Source: De Novo Planning, *City of Lawndale General Plan Existing Conditions Report*, 2023.	

Strong ground shaking from an earthquake can result in damage associated with landslides, ground lurching, structural damage, and liquefaction. Major faults in the regional area, which have caused earthquakes and those with the potential to cause earthquakes and ground shaking, include the San Andreas fault and Newport-Inglewood fault.

The Uniform California Earthquake Rupture Forecast, Version 3, or UCERF3, is the latest official earthquake rupture forecast for the State of California. It provides estimates of the likelihood and severity of potentially damaging earthquake ruptures in the long- and near-term. Combining this with ground motion models produces estimates of the severity of ground shaking that can be expected during a given period (seismic hazard), and of the threat to the built environment (seismic risk). This information is used to inform engineering design and building codes, planning for disaster, and evaluating whether earthquake insurance premiums are sufficient for the prospective losses.

UCERF3 was prepared by the Working Group on California Earthquake Probabilities (WGCEP), a collaboration between the United States Geological Survey (USGS), the California Geological Survey (CGS), and the Southern California Earthquake Center, with significant funding from the California Earthquake Authority. The UCERF3 Model represents the latest model from the WGCEP. Results for the Los Angeles region faults, which includes the Lawndale region, based on the UCERF3 are shown in Table 5.7-2, *Likelihood of Having One or More Earthquakes by Size in the Next 30 Years (Starting from 2014)*.

Table 5.7-2
Likelihood of Having One or More Earthquakes by Size in the Next 30 Years (Starting from 2014)

Magnitude (greater than or equal to)	Average repeat time (years)	30-year likelihood of one or more events	Readiness
5	1.4	100%	1.0
6	10	96%	1.0
6.7	40	60%	1.1
7	61	46%	1.2
7.5	109	31%	1.3
8	532	7%	1.3

Source: USGS, *UCERF3: A New Earthquake Forecast for California's Complex Fault System*, March 2015, https://pubs.usgs.gov/fs/2015/3009/pdf/fs2015-3009.pdf.

Note: Readiness indicates the factor by which probabilities are currently elevated, or lower, because of the length of time since the previous large earthquake. A factor of 1.0 indicates current earthquake likelihood relative to long-term likelihood is equal; a factor above 1.0 indicates elevated probabilities; and a factor below 1.0 indicates lower probabilities.

The USGS Earthquake Probabilities predicts the probabilities of earthquakes within Greater California, the Southern California/Los Angeles Region, and the Northern California/San Francisco Region. The USGS Earthquake Probabilities predicts the probability that an earthquake will occur in the Los Angeles region within the next 30 years is:

- 60 percent that an earthquake measuring magnitude 6.7 will occur;
- 46 percent that an earthquake measuring magnitude 7 will occur; and
- 31 percent that an earthquake measuring magnitude 7.5 will occur.

SEISMIC HAZARDS ZONES

Alquist-Priolo Fault Zone

An active earthquake fault, per California's Alquist-Priolo Act, is one that has ruptured within the Holocene Epoch (≈11,000 years). Based on this criterion, the CGS identifies Earthquake Fault Zones. These Earthquake Fault Zones are identified in Special Publication 42 (SP42), which is updated as new fault data become available. The SP42 lists all counties and cities within California that are affected by designated Earthquake Fault Zones. The Fault Zones are delineated on maps within SP42 (Earthquake Fault Zone Maps).

Southern California is a region of high seismic activity. Similar to most cities in the region, Lawndale is subject to risks associated with potentially destructive earthquakes. The Planning Area is located in the seismically active southern California region; however, there are no designated Alquist-Priolo fault zones within the Planning Area. Historically-active regional fault zones and their associated size and frequency are listed in Table 5.7-3, *Historically Active and Active Fault Zones in the Region*.

Table 5.7-3
Historically Active and Active Fault Zones in the Region

Fault	Maximum Moment Magnitude	Historical Seismicity (Last 150 years)	Slip Rate (mm/year)
San Andreas (Mojave section)	7.4	M 7.0 (1899)	30.0
Newport-Inglewood	7.1	M 6.4 (1933)	1.0
Sierra Madre (San Fernando section)	6.7	M 6.4 (1971)	2.0
Whittier-Elsinore	6.8	M 5.9 (1987)	2.5
Palos Verdes	7.3	--	3.0
San Gabriel	7.2	--	1.0
Verdugo	6.9	--	0.5
Santa Monica	6.6	--	1.0
Source: De Novo Planning, *City of Lawndale General Plan Existing Conditions Report*, 2023.			

Although there are no fault zones within the Planning Area, regional fault zones may have an impact on the City if the rupture is of a significant magnitude. There are numerous earthquake faults within 15 miles of the City. Of the faults in the region, the most active are the Palos Verdes fault, located to the south, and the Newport-Inglewood fault, located to the northeast.

Seismic Hazard Zones

The State Seismic Hazards Mapping Act (1990) addresses hazards along active faults. The City of Lawndale is predominantly within the Inglewood Quadrangle, as delineated by CGS. However, the southern region of the City, between 171st Street and Artesia Boulevard, is within the Torrance Quadrangle. Seismic hazard zones are currently mapped within the Inglewood and Torrance quadrangles, and include areas mapped for liquefaction and landslide hazards (Department of Conservation 2023a).

LIQUEFACTION

Liquefaction, which is primarily associated with loose, saturated materials, is most common in areas of sand and silt or on reclaimed lands. Cohesion between the loose materials that comprise the soil may be jeopardized during seismic events and the ground will take on liquid properties. Thus, liquefaction requires specific soil characteristics and seismic shaking.

Liquefaction zones are areas where historical occurrence of liquefaction, or local geological, geotechnical, and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required. As shown on Figure 5.7-2, *Potential Liquefaction Susceptibility*, there are no areas within the Planning Area designated as having the potential for liquefaction. There is a small pocket along the Dominguez Channel, located outside of the Planning Area (approximately 0.7 miles east of the City and 0.4 miles south of the Sphere of Influence), identified as having liquefaction potential.

Liquefaction may induce lateral spreading. Lateral spread refers to landslides that are a result of lateral displacement of gently sloping ground. Areas identified to have high liquefaction susceptibility as well as

sloping grounds are vulnerable to lateral spreading. The Planning Area is relatively flat and as discussed above, is not identified as having liquefaction potential. Therefore, the Planning Area would not be susceptible to lateral spreading.

OTHER GEOLOGIC HAZARDS

Soils

According to the Natural Resource Conservation Service (NRCS), there are five different soil types located in the Planning Area. Table 5.7-4, *Planning Area Soils*, and Figure 5.7-3, *Soil Survey*, present the soil types and associated acreages located in the Planning Area.

Table 5.7-4
Planning Area Soils

Soil Types	Total Acres
Urban land-Centinela-Typic Xerothents, fine substratum complex	1,098
Urban land- Aquic Xerorthents, fine substratum-Cropley complex	60
Urban land-Windfetch-Typical Haploxerolls complex	122
Urban land- Abaft-Marina Complex	176
Urban land-Marina Complex	118
Grand Total	**1,574***

Source: De Novo Planning, *City of Lawndale General Plan Existing Conditions Report*, 2023.
Note: * Includes all land within the Planning Area, including non-parcelized areas. This accounts for the difference between total acres identified in this table and in Table 3-1, *Existing General Plan Land Use Designations*.

Erosion

The U.S. NRCS delineates soil units and compiles soils data as part of the National Cooperative Soil Survey. The following description of erosion factors is provided by the NRCS Physical Properties Descriptions:

- Erosion factor K indicates the susceptibility of a soil to sheet and rill erosion by water. Values of K range from 0.02 to 0.69. Other factors being equal, the higher the value, the more susceptible the soil is to sheet and rill erosion by water. Erosion factor Kw indicates the erodibility of the whole soil, whereas Kf indicates the erodibility of the fine soils. The estimates are modified by the presence of rock fragments.

Soil erosion data for the City of Lawndale was obtained from the NRCS in 2022 (United States Department of Agriculture, Natural Resources Conservation Service 2022). As identified by the NRCS web soil survey, the erosion factor K within the Planning Area varies from 0.02 to 0.55, which is considered a low to high potential for erosion. Generally, erosion potential within the Planning Area increases to the south.

Expansive Soils

The NRCS provides a description of linear extensibility (also known as shrink-swell potential or expansive potential). The shrink-swell potential is low if the soil has a linear extensibility of less than three percent; moderate if three to six percent; high if six to nine percent; and very high if more than nine percent. If the linear extensibility is more than three, shrinking and swelling can cause damage to buildings, roads, and other structures and to plant roots; special design is commonly needed.

The linear extensibility of the soils within Lawndale ranges from 'Low' to 'Low to High.' Figure 5.7-4, *Shrink-Swell Potential of Soils*, illustrates the shrink-swell potential of soils in the Planning Area. The majority of the Planning Area has 'Low to Medium' expansive soils. The areas with 'Low to High' expansive soils are in proximity to Dominguez Channel, within the Sphere of Influence (SOI).

Landslides

CGS classifies landslides based on the type of material that failed and the type of movement that the failed material exhibited. Material types are broadly categorized as either rock or soil, or a combination of the two for complex movements. Landslide movements are categorized as falls, topples, spreads, slides, or flows.

Landslide potential is influenced by physical factors, such as slope, soil, vegetation, and precipitation. Landslides require a slope, and can occur naturally from seismic activity, excessive saturation, and wildfires, or from human-made conditions such as construction disturbance, vegetation removal, wildfires, etc. Figure 5.7-5, *Landslide Susceptibility*, illustrates the landslide potential (for non-seismically induced potential) in the vicinity of the Planning Area. The highest levels of susceptibility are located adjacent to Dominguez Channel within the SOI and some areas of the City adjacent to the I-405 freeway.

Earthquake Induced Landslides

Earthquake-Induced Landslide Zones are areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical, and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required. The California Seismic Hazard Mapping Program delineates the approximate boundaries of areas susceptible to earthquake-induced landslides and other slope failures (e.g., rockfalls). According to the Seismic Hazard Mapping Program, Lawndale does not have areas susceptible to earthquake-induced landslides and other slope failures (Department of Conservation 2023a).

Subsidence

Subsidence is the settlement of soils of very low density generally from either oxidation of organic material, or desiccation and shrinkage, or both, following drainage. Subsidence takes place gradually, usually over a period of several years. In California, large areas of land subsidence were first documented by USGS scientists in the first half of the 20th century. Most of this subsidence was a result of excessive groundwater pumping. Completion of California's State and Federal water projects that bring water from California's wet north to its dry south allowed some groundwater aquifers to recover, and subsidence decreased in these areas. There is no record of historic or current USGS-recorded subsidence within the Planning Area.

Collapsible Soils

Hydroconsolidation occurs when soil layers collapse, or settle, as water is added under loads. Natural deposits susceptible to hydroconsolidation are typically aeolian, alluvial, or colluvial materials, that have a high apparent strength when dry. The dry strength of the materials may be attributed to the clay and silt constituents in the soil and the presence of cementing agents (i.e., salts). Capillary tension may tend to bond soil grains. Once these soils are subjected to excessive moisture and foundation loads, the constituency including soluble salts or bonding agents is weakened or dissolved, capillary tensions are reduced and collapse occurs resulting in settlement. Existing alluvium within the Planning Area may be susceptible to collapse and excessive settlements, which could create the risk of hydroconsolidation if these soils were exposed to excessive moisture.

PALEONTOLOGICAL RESOURCES

The geologic units underlying the City of Lawndale record coastal and inland deposition during the Pleistocene Epoch (2.5 million years ago to 11,700 years ago). The Planning Area is broadly located within the Southern California/Northern Baja Coast region and it is composed of coastal and alluvial plains, marine terraces, and low hills. As part of the Cultural Resource Assessment, a paleontological records search was requested from the Natural History Museum of Los Angeles County (LACM). Table 5.7-5, *Geologic Units and Their Paleontological Potential,* shows the level of sensitivity of the underlying geologic units for paleontological resources. The City of Lawndale is underlain by two geologic units: Old alluvium and Old eolian deposits.

Table 5.7-5
Geologic Units and Their Paleontological Potential

Age	Geologic Unit	Fossils Present	Paleontological Sensitivity
Pleistocene	Old alluvium (Qoa)	Whale, horse, Columbian mammoth	High at surface and at depth
	Old eolian deposits (Qoe)		
Source: Duke Cultural Resources Management, *Cultural Resource Assessment*, 2023.			

Old, alluvium, undivided (Qoa)

Old alluvium underlies the majority of the City of Lawndale, including the Planning Area. It is composed of moderately well-consolidated, poorly sorted, permeable, slightly dissected gravel, sand, silt, and clay. These sediments were deposited on canyon floors by fluvial activity in the late to middle Pleistocene Epoch.

Old eolian deposits (Qoe)

Old eolian deposits underlie the northwest and southwest corners of the City of Lawndale. It is composed of poorly consolidated, dense to very dense, well-sorted, fine- to coarse-grained sand and silty sand. These sediments were deposited as eolian coastal dunes in the late to middle Pleistocene but the dune formation processes are now inactive.

Deposits from the Pleistocene Epoch have not produced any fossil localities within the Planning Area, but have produced two fossil localities within three miles:

- The "Mobile Oil Refinery" locality produced cetacean (whale) and Equus (horse) material from two miles southeast of the Planning Area and;
- Locality LACM 2035 produced Mammuthus columbi (Columbian mammoth) on 139th Street, one mile north of the Planning Area.

Due to fossil material being previously discovered in deposits from the Pleistocene Epoch in the vicinity of the Planning Area, both old alluvium and old eolian deposits have a high paleontological sensitivity at the surface and at depth.

5.7.3 REGULATORY SETTING

FEDERAL

Earthquake Hazards Reduction Act

The Earthquake Hazards Reduction Act of 1977 established the National Earthquake Hazards Reduction Program (NEHRP). Under the NEHRP, four Federal agencies have responsibility for long-term earthquake risk reduction: the USGS, the National Science Foundation, the Federal Emergency Management Agency (FEMA), and the National Institute of Standards and Technology. NEHRP's mission includes improved understanding, characterization, and prediction of hazards and vulnerability; improvements of building codes and land use practices; risk reduction through post-earthquake investigation and education; development and improvement of design and construction techniques; improvement of mitigation capacity; and accelerated application of research results.

STATE

Earthquake Fault Zoning Act (Alquist-Priolo Act)

The State of California Alquist-Priolo Earthquake Fault Zoning Act (1972) was established to mitigate the hazard of surface faulting to structures for human occupancy. Pursuant to the act, the State geologist has established regulatory zones (known as earthquake fault zones) around surface traces of active faults. Application for a development permit for any project within a delineated earthquake fault zone is required to be accompanied by a geologic report, prepared by a geologist registered in the State of California, that is directed to the problem of potential surface fault displacement through a project site.

Seismic Hazards Mapping Act

The Seismic Hazard Mapping Act (SHMA) was adopted by the State in 1990 to protect the public from the effects of non-surface fault rupture earthquake hazards, including strong ground shaking, liquefaction, seismically induced landslides, ground amplification, or other ground failure caused by earthquakes. The goal of the act is to minimize loss of life and property by identifying and mitigating seismic hazards. The CGS is the primary agency responsible for the implementation of the SHMA. The CGS prepares maps identifying seismic hazard zones and provides them to local governments, which include areas susceptible to amplified shaking, liquefaction, earthquake-induced landslides, and other ground failures. SHMA requires responsible agencies to only approve projects within these zones

following a site-specific investigation to determine if the hazard is present, and if so, the inclusion of appropriate mitigation(s). In addition, the SHMA requires real estate sellers and agents at the time of sale to disclose whether a property is within one of the designated seismic hazard zones.

California Building Standards Code (Title 24)

Title 24 of the California Code of Regulations (CCR) provides state regulations that govern the design and construction of buildings, associated facilities, and equipment. These regulations are also known as building standards (reference California Health and Safety Code Section 18909). Cities and counties are required by state law to enforce CCR Title 24, and may adopt ordinances making more restrictive requirements than provided by CCR Title 24 due to local climatic, geological, or topographical conditions.

Caltrans Seismic Design Criteria

The California Department of Transportation (Caltrans) has Seismic Design Criteria (SDC), which is an encyclopedia of new and currently practiced seismic design and analysis methodologies for the design of new bridges in California. The SDC adopts a performance-based approach specifying minimum levels of structural system performance, component performance, analysis, and design practices for ordinary standard bridges. The SDC has been developed with input from the Caltrans Offices of Structure Design, Earthquake Engineering and Design Support, and Materials and Foundations. Memo 20-1 Seismic Design Methodology (Caltrans 1999) outlines the bridge category and classification, seismic performance criteria, seismic design philosophy and approach, seismic demands and capacities on structural components, and seismic design practices that collectively make up Caltrans' seismic design.

LOCAL

County of Los Angeles 2020 All-Hazards Mitigation Plan

The Los Angeles County 2020 All-Hazards Mitigation Plan (AHMP) assesses risks posed by natural hazards and identifies a mitigation action plan for reducing the risks in Los Angeles County. The primary focus of the 2020 AHMP is preparation for natural hazards and secondary hazards that follow as a result of a natural hazard. In addition, potential climate change impacts are addressed in the plan as increasing surface temperatures will likely result in more droughts and subsequently the risk of wildfires. Therefore, climate change, dam failure, drought, earthquake, flood, landslide, tsunami, and wildfire are the main focuses in the 2020 AHMP.

City of Lawndale Local Hazard Mitigation Plan 2016

The City of Lawndale developed the 2016 Local Hazard Mitigation Plan (LHMP) in an effort to reduce future loss of life and property resulting from natural disasters and to provide increased resiliency for the City, allowing Lawndale to return to "the norm" sooner, with fewer impacts to people and infrastructure. The purpose of the Lawndale LHMP is to provide the City with a blueprint for hazard mitigation action planning. The plan identifies resources, information, and strategies for risk reduction, and provides a tool to measure the success of mitigation implementation on a continual basis.

City of Lawndale Municipal Code

Title 13, Public Services, includes Chapter 13.12, *Storm water and urban runoff pollution control*, and Chapter 13.16, *Standard urban stormwater mitigation plan and low impact development implementation*. Chapter 13.12 defines the illicit discharges and connections prohibited; controls pollutants from industrial sites; provides required best management practices (BMPs); regulates construction activity in regards to stormwater measures; and establishes fees for the services provided. Chapter 13.16 establishes the City's standard urban stormwater mitigation program (SUSMP) conditions and stormwater management program. The SUSMP is a compliance component under the municipal National Pollutant Discharge Elimination System (NPDES) permit. New development and redevelopment projects are required to comply with SUSMP conditions assigned by the City that consist of: (1) low impact development (LID) structural and non-structural best management practices (BMPs); (2) source control BMPs; and (3) structural and non-structural BMPs for specific types of uses. The City's stormwater management program/watershed management program is also incorporated into Chapter 13.16 and contains specific conditions and procedures for meeting planning and land development program and SUSMP requirements.

Lawndale Municipal Code, Chapter 15.04, *Building code*, adopts the 2022 California Building Code as amended by Title 26, Los Angeles County Building Code, as the City's building code, which regulates the erection, construction, enlargements, alteration, repair, moving, removal, conversion, demolition, occupancy, use, equipment, height, area, security, abatement, and maintenance of certain residential buildings or structures within the City. To protect lives and infrastructure in the City, the Building & Safety Division is responsible for compliance with building and zoning codes that mitigate geologic hazards and the Municipal Services Department is responsible for code enforcement.

Title 17, *Zoning*, Section 17.88.080, *Soils report*, requires a soils report where irrigated landscaped areas exceed ten thousand square feet or where difficult soil or landscaping conditions exist at the project site. The soils report shall describe the depth, composition, fertility, and landscaping suitability of the soil at the project site, and shall include recommendations for soil amendment, fertilizer, and other items as needed.

5.7.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to geology and soils. The issue presented in the Initial Study Environmental Checklist have been utilized as thresholds of significant in this section. Accordingly, a project may create a significant environmental impact if it would:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving;
    - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. Refer to Division of Mines and Geology Special Publication 42 (refer to Impact Statement GS-1);
    - Strong seismic ground shaking (refer to Impact Statement GS-1);

  - Seismic-related ground failure, including liquefaction (refer to Impact Statement GS-1); and
  - Landslides (refer to Impact Statement GS-1).
- Result in substantial soil erosion or the loss of topsoil (refer to Impact Statement GS-2);
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse (refer to Impact Statement GS-3);
- Be located on expansive soil, as defined in Tables 18-1-D of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property (refer to Impact Statement GS-4);
- Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water (refer to Impact Statement GS-5); and/or
- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature (refer to Impact Statement GS-6).

5.7.5 IMPACTS AND MITIGATION MEASURES

GS-1: Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides?

Impact Analysis: The Planning Area, like the rest of southern California, is situated within a seismically active region as the result of being located near the active margin between the North American and Pacific tectonic plates. Development associated with the General Plan Update could expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking.

As discussed in Section 5.7.2, *Environmental Setting*, there are no designated Alquist-Priolo fault zones within the Planning Area. While there are no major active faults within the Planning Area, major active and potentially active faults exist in the vicinity of the Planning Area as shown in Figure 5.7-1, including the Newport-Inglewood Fault, San Andreas Fault, and Palos Verdes Fault. Therefore, the Planning Area could experience considerable ground shaking generated by faults located near the City.

As shown in Figure 5.7-2, there are no areas within the Planning Area designated by the CGS as having the potential for liquefaction. Further, the City's LHMP does not identify the Planning Area as being located within an area that is susceptible to liquefaction. Additionally, as discussed above, there are no earthquake-induced landslide seismic hazard zones mapped within the Planning Area.

Future development projects would be required to comply with the provisions of the California Building Standards Code (CBSC), which requires development projects to perform geotechnical investigations in accordance with State law, engineer improvements to address potential seismic and ground failure issues, and use earthquake-resistant construction techniques to address potential earthquake loads

when constructing buildings and improvements. As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the CBSC, General Plan, Lawndale Municipal Code, and other regulations. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan Update Public Safety Element includes goals, policies and actions to address potential impacts associated with seismic activity. Policy PS-2.1 requires that geotechnical hazard data is incorporated into in future land use decision-making, site design, and construction standards. Policy PS-2.2 requires the enforcement of State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities. Policy PS-2.3 ensures that mitigation measures are monitored and enforced to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibits development in areas where seismic and geologic hazards cannot be mitigated. Policy PS-2.4 encourages the City to educate the community to mitigate potential injury and damage associated with earthquakes. Action PS-2a directs the City to review and update the City's geologic and seismic hazards maps at least annually. Action PS-2b ensures development proposals are reviewed to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind. Action PS-2c ensures adoption and implementation of the latest version of the building codes adopted by the State. Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Action PS-2e requires feasible mitigation measures for development projects to reduce the risk to the community from hazards related to geologic conditions and seismic activity.

Future development projects associated with implementation of the General Plan Update would be reviewed to identify and assess seismic safety issues and would be required to design and construct improvements in compliance with the applicable building codes and standards in place at the time to reduce the potential adverse effects associate with strong seismic ground shaking. With the implementation of the policies and actions in the General Plan, as well as applicable State and City codes, potential impacts associated with strong seismic ground shaking would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-2: **Geologic and Seismic Hazards.** A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Policy PS-2.1: **Geologic Hazard Identification.** Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

Policy PS-2.2: **Earthquake Protection.** Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

Policy PS-2.3: **Development Projects.** Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

Policy PS-2.4: **Seismic Hazard Education.** Continue to seek out opportunities to educate and encourage the community on ways to implement measures to mitigate potential injury and damage associated with earthquakes.

Action PS-2a: Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

Action PS-2b: Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

Action PS-2c: Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Action PS-2e: Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

GS-2: Result in substantial soil erosion or the loss of topsoil?

Impact Analysis: Implementation of the General Plan Update would provide for development and improvement projects that would involve some land clearing, mass grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. As noted previously, soil erosion data for the Planning Area was obtained from the NRCS. As identified by the NRCS web soil survey, the erosion factor K within the Planning Area varies widely. The NRCS identifies an erosion factor K within the Planning Area of 0.02 to 0.55, which is considered a low to high potential for erosion. Depending upon the location of the specific project site, construction activities, and soil conditions, construction-related erosion could result in the loss of a substantial amount of nonrenewable topsoil and could adversely affect water quality in nearby surface waters. Similarly, precipitation and irrigation of landscaping may result in runoff during project operations, which could result in the loss of nonrenewable topsoil and potentially affect water quality. However, the Planning

Area is primarily urbanized with limited pervious areas; new development would primarily occur through infill development and redevelopment of sites that are currently developed and do not contain significant amounts of pervious area. Due to the limited pervious areas that occur within the City, it is not anticipated that Project implementation would increase impervious areas resulting in increased runoff when compared to existing conditions.

As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the CBSC, General Plan, Lawndale Municipal Code, and other relevant regulations. In compliance with NPDES Permit regulations, the State of California requires that any construction activity disturbing one acre or more of soil comply with the Construction General Permit. The permit requires development and implementation of a stormwater pollution prevention and monitoring plan (SWPPP), which must include erosion-control and sediment-control BMPs that would meet or exceed measures required by the Construction General Permit to control stormwater quality degradation due to potential construction-related pollutants. The SWPPP would include project specific best management measures that are designed to control drainage and erosion.

The General Plan Update includes a range of policies and actions related to best management practices, NPDES requirements, and minimizing discharge of materials (including eroded soils) into the storm drain system. Proposed Resource Management Element Policy RM-6-2 encourages all landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation. Action RM-6a requires new development and redevelopment projects to implement BMPs to reduce soil erosion and pollutants in urban runoff. Proposed Public Safety Element Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Policy PS-5.4 encourages new developments that add substantial amounts of impervious surfaces to integrate LID BMPs to reduce stormwater runoff. Policy PS-5.6 directs the City to maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property. With the implementation of the policies and actions in the General Plan Update, as well as applicable State and City requirements, potential impacts associated with erosion and loss of topsoil would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-6.2: **Landscaping.** Encourage all public and private landscaping in new development and significantly altered redevelopment projects to be designed to reduce water demand, prevent erosion, decrease flooding, and reduce pollutants through the installation of irrigation systems, the selection of appropriate plant materials, and proper soil preparation.

Action RM-6a: To reduce soil erosion and pollutants in urban runoff, require new development and redevelopment projects to control stormwater runoff through implementation of Best Management Practices (BMPs) to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. Existing development shall control stormwater runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water. As specific development projects are implemented, project proponents will be required to consult with relevant agencies such as the U.S. Army Corps of Engineers (ACOE), Regional Water Quality Control Board (RWQCB), and the California Department of Fish and Game (CDFG). Also, ensure that projects of one acre or more complete a Storm Water Pollution Prevention Plan (SWPPP) pursuant to State of California, Los Angeles Regional Water Quality Control Board (RWQCB) and the City's MS4 permit (order no. R4-2012-0175 (NPDES No. CAS 004001).

PUBLIC SAFETY ELEMENT

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Policy PS-5.4: **Best Management Practices.** Encourage new developments that add substantial amounts of impervious surfaces to integrate low impact development Best Management Practices to reduce stormwater runoff.

Policy PS-5.6: **Local Storm Drainage Infrastructure.** Maintain and regularly assess the status of local storm drainage infrastructure to confirm that the system is functioning property.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

GS-3: Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Impact Analysis: Future development anticipated by the General Plan Update could result in the exposure of people and structures to conditions that have the potential for adverse effects associated with ground instability or failure. Refer to Impact Statement GS-1 for potential impacts related to liquefaction. The following discussion identifies the potential for landslides, lateral spreading, or collapse within the Planning Area:

Landslide

Figure 5.7-5 illustrates the landslide potential (for non-seismically induced potential) in the vicinity of the Planning Area. Due to the Planning Area's relatively flat topography, the majority of the Planning

Area has low susceptibility to landsliding, with increasing susceptibility associated with manufactured slopes near the I-405 and the Dominguez Channel.

Lateral Spreading

Lateral spreading refers to landslides that are a result of lateral displacement of gently sloping ground. Areas identified to have high liquefaction susceptibility as well as sloping grounds are vulnerable to lateral spreading. The Planning Area is relatively flat and as discussed above, is not identified as having liquefaction potential. Therefore, the Planning Area would not be susceptible to lateral spreading.

Subsidence

Soils with high shrink-swell potential can be particularly susceptible to subsidence during a loss of soil moisture. The Planning Area and surrounding area contain soils that range from having low shrink-swell potential to very high shrink-swell potential. The City of Lawndale does not have any historic or current USGS-recorded subsidence.

Collapse

Collapsible soils undergo a rearrangement of their grains and a loss of cementation, resulting in substantial and rapid settlement under relatively low loads. Collapsible soils occur predominantly at the base of mountain ranges, where Holocene-age alluvial fan and wash sediments have been deposited during rapid run-off events. Differential settlement of structures typically occurs when heavily irrigated landscape areas are near a building foundation. Examples of common problems associated with collapsible soils include tilting floors, cracking or separation in structures, sagging floors, and nonfunctional windows and doors. Existing alluvium within the Planning Area may be susceptible to collapse and excessive settlements, which could create the risk of hydroconsolidation if these soils were exposed to excessive moisture.

Conclusion

As discussed above, the Planning Area is not susceptible to lateral spreading, subsidence, or liquefaction. The potential for landslide within the Planning Area is low.

The General Plan Update includes policies and actions to address geologic conditions within the Planning Area. Public Safety Element Policy PS-2.1 requires that geotechnical hazard data be incorporated in future land use decision-making, site design, and construction standards. Policy PS-2.2 enforces State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities. Policy PS-2.3 requires mitigation measures be monitored and enforced to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibits development in areas where seismic and geologic hazards cannot be mitigated. Policy PS-2.4 encourages the City to educate the community to mitigate potential injury and damage associated with earthquakes. Action PS-2a directs the City to review and update the City's geologic and seismic hazards maps at least annually. Action PS-2b ensures development proposals are reviewed to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind. Action PS-2c ensures adoption and

implementation of the latest version of the building codes adopted by the State. Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Action PS-2e requires feasible mitigation on development projects to reduce the risk to the community from hazards related to geologic conditions and seismic activity.

As future development and infrastructure projects are considered by the City, each project would be evaluated for conformance with the CBSC, the General Plan Update policies and actions, Lawndale Municipal Code, and other regulations. Subsequent development and infrastructure projects requiring discretionary review would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Future development and improvement projects would be required to prepare site-specific geotechnical studies to identify geologic and soil conditions specific to the site and provide design recommendations consistent with the requirements of State and City codes. Implementation of CBSC and the Municipal Code requirements related to seismic and geologic conditions and the General Plan Update policies and actions would ensure that future development projects are evaluated for potential geologic and seismic risks and that potential risks are adequately addressed. With the implementation of the policies and actions in the General Plan Update, as well as applicable State and City codes, potential impacts associated with unstable geologic conditions would be reduced to less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-2: **Geologic and Seismic Hazards.** A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Policy PS-2.1: **Geologic Hazard Identification.** Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

Policy PS-2.2: **Earthquake Protection.** Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

Policy PS-2.3: **Development Projects.** Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

Policy PS-2.4: **Seismic Hazard Education.** Continue to seek out opportunities to educate and encourage the community on ways to implement measures to mitigate potential injury and damage associated with earthquakes.

Action PS-2a: Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

Action PS-2b: Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

Action PS-2c: Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Action PS-2e: Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

GS-4: Be located on expansive soil, as defined in Tables 18-1-D of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Impact Analysis: Expansive soil properties can cause substantial damage to building foundations, piles, pavements, underground utilities, and/or other improvements. Structural damage, such as warping and cracking of improvements, and rupture of underground utility lines, may occur if the expansive potential of soils is not considered during the design and construction of all improvements.

Figure 5.7-4 illustrates the shrink-swell potential of soils in the Planning Area. The majority of the Planning Area has 'Low to Medium' expansive soils. The areas with 'Low to High' expansive soils are in proximity to Dominguez Channel, within the SOI.

The proposed Public Safety Element of the General Plan Update includes policies and actions that are designed to protect the City from geologic hazards, including expansive soils. Policy PS-2.1 incorporates geotechnical hazard data in future land use decision-making, site design, and construction standards. Policy PS-2.2 enforces State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities. Policy PS-2.3 monitors and enforces mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibits development in areas where seismic and geologic hazards cannot be mitigated. Action PS-2a directs the City to review and update the City's geologic and seismic hazards maps at least annually. Action PS-2b ensures development proposals are reviewed to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by

natural forces such as earthquakes and wind. Action PS-2c ensures adoption and implementation of the latest version of the building codes adopted by the State. Action PS-2d requires surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers during review of discretionary development and redevelopment proposals, where appropriate. When potential geologic impacts are identified, project applicants are required to mitigate the impacts per the recommendations contained within the geologic survey. Action PS-2e reduces the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects.

As stated, future development and infrastructure projects considered by the City, would be evaluated for conformance with the CBSC, the General Plan Update policies and actions, Lawndale Municipal Code, and other regulations. Subsequent development and infrastructure projects requiring discretionary review would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Future development and improvement projects would be required to prepare site-specific geotechnical studies to identify geologic and soil conditions specific to the site, including the potential for expansive soils. A site-specific geotechnical investigation would identify the potential for damage related to expansive soils and non-uniformly compacted fill and engineered fill. If a risk is identified, design criteria and specification options may include removal of the problematic soils, and replacement, as needed, with properly conditioned and compacted fill material that is designed to withstand the forces exerted during the expected shrink-swell cycles and settlements. Design criteria and specifications set forth in the design-level geotechnical investigation would ensure impacts from problematic soils are minimized. Thus, implementation of CBSC and the Municipal Code requirements related to on-site soil conditions and the General Plan Update policies and actions would ensure that future development projects are evaluated for potential risks associated with development on expansive soils, and that potential risks are adequately addressed. Therefore, this impact is considered less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-2: **Geologic and Seismic Hazards.** A community protected from loss of life or injury and damage to property due to geologic and seismic hazards.

Policy PS-2.1: **Geologic Hazard Identification.** Continue to incorporate geotechnical hazard data in future land use decision-making, site design, and construction standards.

Policy PS-2.2: **Earthquake Protection.** Enforce State seismic design guidelines and all relevant building codes to reduce the risk of damage associated with seismic activity, with a special focus on creating resilient critical infrastructure and facilities.

Policy PS-2.3: **Development Projects.** Monitor and enforce mitigation measures to reduce risks for projects where seismic and geologic hazards can be mitigated and prohibit development in areas where seismic and geologic hazards cannot be mitigated.

Action PS-2a: Review and update (at least annually) the City's geologic and seismic hazards maps in concert with updates from the California Geologic Survey and local surveys.

Action PS-2b: Review development proposals to confirm compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind.

Action PS-2c: Adopt the latest version of the building codes adopted by the State of California and ensure implementation in all new construction and renovations.

Action PS-2d: During review of discretionary development and redevelopment proposals, require surveys of soil and geologic conditions by State licensed Engineering Geologists and Civil Engineers where appropriate. When potential geologic impacts are identified, require project applicants to mitigate the impacts per the recommendations contained within the geologic survey.

Action PS-2e: Reduce the risk to the community from hazards related to geologic conditions and seismic activity by requiring feasible mitigation of such impacts on development projects. Assess development proposals for potential hazards pursuant to the California Environmental Quality Act. Require measures to mitigate all identified significant public safety hazards.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

GS-5: Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

Impact Analysis: As described in Section 5.19, *Utilities and Service Systems*, wastewater service is provided to the Planning Area by the City and the Los Angeles County Sanitation Districts (LACSD). Local wastewater produced in the City connects to sewer mains maintained by the LACSD. LACSD owns, operates, and maintains sewer lines that form the backbone of the regional wastewater conveyance system. Future development within the Planning Area would be required to connect to the existing sewer system and would not involve the use of septic tanks or alternative wastewater disposal systems. As such, no impact would occur.

Proposed General Plan Update Goals, Policies, and Actions: There are no General Plan Update goals, policies, or actions specific to septic tanks or alternative waste water disposal systems.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

GS-6: Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Impact Analysis: The City of Lawndale is underlain by two geologic units: Old alluvium and Old eolian deposits. These two geologic units are considered to have a high paleontological sensitivity at surface and at depth. Although fossil localities have not been recorded within the Planning Area, deposits from the Pleistocene Epoch have produced two fossil localities within three miles of the Planning Area. Therefore, it is possible that undiscovered paleontological resources could be encountered during ground-disturbing activities. This is considered a potentially significant impact.

The paleontological resources research indicates that the geologic formations in the City are known to contain paleontological localities with rare, well-preserved fossil materials that offer important information about the plant or animal and/or its evolutionary history. Both formations have been determined to be highly sensitive for paleontological resources. These important resources are most often destroyed as a result of construction, such as excavation, trenching, and tunneling.

Only qualified, trained paleontologists with specific expertise in the type of fossils being evaluated can determine the scientific significance of paleontological resources. Fossils are considered to be significant if one or more of the following criteria apply (Scott 2003):

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein.
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas.
4. The fossils demonstrate unusual or spectacular circumstances in the history of life.
5. The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.
6. All identifiable vertebrate fossils are considered significant due to the rarity of their preservation.

As so defined, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important. Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and invertebrate animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important.

Damage to or destruction of a paleontological resource would be considered a potentially significant impact under local, State, or Federal criteria. The proposed General Plan Update Resource Management Element includes policies and actions to protect significant paleontological resources within the Planning Area. Policy RM-3.1 requires the protection areas containing paleontological resources. Action RM-3a requires the City assess development proposals for potential impacts to sensitive historic,

archaeological, and paleontological resources pursuant to CEQA. Action RM-3f requires an assessment of the potential for development proposals to significantly impact paleontological resources pursuant to CEQA. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation.

With implementation of the General Plan Update policies and actions, potential impacts to paleontological resources associated with future development anticipated by the General Plan Update would be reduced to less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

RESOURCE MANAGEMENT ELEMENT

Policy RM-3.1: **Preservation.** Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Action RM-3a: Continue to assess development proposals for potential impacts to sensitive historic, archaeological, tribal cultural, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Action RM-3f: The City shall require an assessment of the potential for development proposals to significantly impact paleontological resources pursuant to the California Environmental Quality Act Guidelines. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, require monitoring of rock units with high potential to contain significant nonrenewable paleontological resources, or require mitigation measures to mitigate the impacts, such as recovering the paleontological resources for preservation.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.7.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, identifies projected growth within the Planning Area and County with the potential to interact with the proposed Project to the extent that a significant cumulative effect relative to geology and soils may occur. The cumulative projects' regional geologic setting and regional seismicity would be similar; however, the local geologic setting, surficial geology, and subsurface soil conditions would vary according to the site location and specific conditions.

Would the project, combined with other related cumulative projects, directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Impact Analysis: There are no designated Alquist-Priolo fault zones within the Planning Area. Future development and cumulative development would be required to comply with CBSC, and each project within the City would be evaluated for conformance with the CBSC, General Plan, Lawndale Municipal Code, and other regulations. Therefore, the proposed Project would not contribute to cumulative impacts related to potential adverse effects involving rupture of a known earthquake fault and impacts in this regard are not cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking or seismic-related ground failure, including liquefaction?

Impact Analysis: The Project proposes a comprehensive update to the City's General Plan, including a revised Land Use Map. Buildout associated with the General Plan Update Land Use Map would allow for new or increased residential and non-residential development within specific areas of the City when compared to existing conditions, potentially exposing people to strong seismic ground shaking or seismic-related ground failure. The Planning Area is not located within a mapped liquefaction zone, as delineated by the CGS. Future development and cumulative development would generally experience similar ground shaking associated with seismic activity.

Future development within the Planning Area and cumulative projects would be required to conduct a site-specific geotechnical study to determine the geotechnical feasibility of the specific development being proposed at that time. Any recommendations presented in the geotechnical study would be required to be incorporated into the design and construction of the future development. The geotechnical study would include specific recommendations based on seismic design parameters for foundation design, retaining and screening walls, exterior flatwork, concrete mix design, corrosion, pavement design, and general earthwork and grading, among other factors.

Future development and cumulative development would be required to comply with all applicable regulations in the most recent CBSC, which includes design requirements to mitigate the effects of potential hazards associated with seismic ground shaking and liquefaction. The Lawndale Building and Safety Services Division would review construction plans for compliance with the CBSC and Lawndale

Municipal Code, as well as the geotechnical study's recommendations. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to geologic hazards. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on geologic hazards to a less-than-significant level. Therefore, the Project's incremental effects involving exposure of people and structures to potential substantial adverse effects involving strong seismic ground shaking or seismic-related ground failure, including liquefaction would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects result in substantial soil erosion or the loss of topsoil?

Impact Analysis: Future development sites and cumulative development sites within the City and surrounding areas may contain soils that have erosion potential. Implementation of the construction activities associated with Project implementation and cumulative development projects would involve some land clearing, mass grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. Similarly, precipitation and irrigation of landscaping may result in runoff during project operations, which could result in the loss of nonrenewable topsoil and potentially affect water quality. However, the Planning Area is primarily urbanized with limited pervious areas; new development would primarily occur through infill development and redevelopment of sites that are currently developed and do not contain significant amounts of pervious area. Due to the limited pervious areas that occur within the Planning Area, it is not anticipated that Project implementation would increase impervious areas resulting in increased runoff when compared to existing conditions.

Site specific geology and soil conditions would be evaluated on a project-by-project basis. However, all future residential development associated with the proposed Project and cumulative projects within the region would be required to comply with stormwater runoff and pollution control requirements required by the regional water quality control board and implemented by the specific jurisdiction in which the development occurs. Construction activities within the City would be required to comply with the Lawndale Municipal Code which implements erosion and siltation control measures of the Construction General Permit, reducing potential impacts associated with soil erosion or the loss of topsoil during construction activities. Additionally, future development and cumulative development would be required to comply with postconstruction runoff pollution reduction BMPs implemented through the SUSMP. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to stormwater runoff and other causes of soil erosion. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the

General Plan Update on soil erosion and loss of topsoil to a less-than-significant level. Thus, the Project's incremental effects involving substantial soil erosion or the loss of top soil would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse or be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Impact Analysis: Due to the generally flat topography within the City and surrounding area, the potential for lateral spreading within the Planning Area is considered to be low. Further, the Planning Area is not identified as having the potential for subsidence. Soils exposed to excessive moisture within the Planning Area could be at risk of hydroconsolidation and soils with layers of expansive clay could result in structural damage associated with expansive soils. The geotechnical and soil characteristics of future development associated with the Project and any cumulative development within the City would be evaluated on a project-by-project basis and appropriate mitigation measures would be required to reduce potential impacts associated with unstable geologic units or soils.

Future development associated with implementation of the proposed Project would be required to prepare a geotechnical study for the specific site being proposed for development. The Lawndale Building and Safety Services Division would review construction plans for compliance with the CBSC and City Municipal Code, as well as the geotechnical study's recommendations. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to geologic hazards. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on geologic hazards to a less-than-significant level. Therefore, the Project's incremental effects involving unstable geologic units or soils would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

Would the project, combined with other related cumulative projects, have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

As discussed above, future development within the Planning Area would be required to connect to the existing sewer system and would not involve the use of septic tanks or alternative wastewater disposal systems. As such, no impact would occur. Therefore, the Project's incremental effects involving soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: There are no General Plan Update goals, policies, or actions specific to septic tanks or alternative waste water disposal systems.

Mitigation Measures: No mitigation measures are required.

Level of Significance: No Impact.

Would the project, combined with other related cumulative projects directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Impact Analysis: The Planning Area has the potential to contain paleontological resources. As discussed above, compliance with the City's Municipal Code and implementation of General Plan Update policies and actions would reduce potential impacts to paleontological resources associated with future construction activities in the Planning Area to a less than significant level. There is also the potential for cumulative project sites within the region to have soils that contain paleontological resources. Construction activities associated with the cumulative projects have the potential to directly or indirectly destroy paleontological resources specific to those development sites. However, these potential impacts are site-specific and generally do not result in cumulative effects. Additionally, individual projects would undergo environmental review on a project-by-project basis pursuant to CEQA to evaluate potential impacts to paleontological resources. Where significant or potentially significant impacts are identified, implementation of all feasible site-specific mitigation would be required to avoid or reduce impacts. Further, future projects implemented under the General Plan Update would be required to be consistent with the General Plan Update policies and actions pertaining to paleontological resources. The polices and actions included within the General Plan Update and compliance with the existing regulatory environment would reduce the cumulative effect of the General Plan Update on paleontological resources to a less than significant level. Therefore, the Project's incremental effects involving paleontological resources would not be cumulatively considerable.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

5.7.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Geology and soils impacts associated with the implementation of the General Plan Update would be less than significant. No significant unavoidable geology and soils impacts would occur as a result of the General Plan Update.

Shrink-Swell Potential*

- Low
- Low to Medium
- Low to High

**Shrink-Swell potential of soils is determined by Linear Extensibility. Linear Extensibility refers to the change in length of an unconfined clod as moisture content is decreased from a moist to a dry state. Volume change is reported as a percent change for the whole soil. Shrink-swell potential is low if the soil has a linear extensibility of less than 3%, moderate if 3-6%, high if 6-9%, and very high if greater than 9%. In soil complexes such as the ones shown on this map, linear extensibility is measured and recorded for each soil component, thus creating a range of shrink-swell potentials for each soil unit.*

5.8 GREENHOUSE GAS EMISSIONS

5.8.1 PURPOSE

This section identifies the existing climate conditions, the current state of climate change science, and greenhouse gas (GHG) emissions sources within California and the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update. This section is primarily based upon greenhouse gas emissions analysis and modeling prepared by De Novo Planning Group and included as Appendix C, *Air Quality, Energy and Greenhouse Gas Emissions Modeling Data*.

5.8.2 ENVIRONMENTAL SETTING

GREENHOUSE GASES AND CLIMATE CHANGES LINKAGES

Various gases in the Earth's atmosphere, classified as atmospheric greenhouse gases (GHGs), play a critical role in determining the Earth's surface temperature. Solar radiation enters Earth's atmosphere from space, and a portion of the radiation is absorbed by the Earth's surface. The Earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation. This is called the greenhouse effect, and leads to global warming as well as an overall global climate change, which includes long-term shifts in temperatures and weather patterns.

Greenhouse gases, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that otherwise would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect. Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), ozone (O_3), water vapor (H_2O), N_2O, and chlorofluorocarbons (CFCs).

Gases in the atmosphere can contribute to the greenhouse effect both directly and indirectly. Direct effects occur when the gas itself absorbs radiation. Indirect radiative forcing occurs when chemical transformations of the substance produce other greenhouse gases, when a gas influences the atmospheric lifetimes of other gases, and/or when a gas affects atmospheric processes that alter the radiative balance of the earth (U.S. Environmental Protection Agency 2011).

Naturally occurring greenhouse gases include water vapor (H_2O), carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and ozone (O_3). Several classes of halogenated substances that contain fluorine, chlorine, or bromine are also greenhouse gases, but they are, for the most part, solely a product of industrial activities. There are also several gases that do not have a direct global warming effect but indirectly affect terrestrial and/or solar radiation absorption by influencing the formation or destruction of greenhouse gases, including tropospheric and stratospheric ozone. These gases include carbon monoxide (CO), oxides of nitrogen (NO_x), and non-CH_4 volatile organic compounds (NMVOCs). Aerosols, which are extremely small particles or liquid droplets, such as those produced by sulfur dioxide (SO_2) or elemental carbon emissions, can also affect the absorptive characteristics of the atmosphere (U.S. Environmental Protection Agency 2011).

Although the direct greenhouse gases CO_2, CH_4, and N_2O occur naturally in the atmosphere, human activities have changed their atmospheric concentrations. From the pre-industrial era (i.e., ending about 1750) to 2011, concentrations of these three greenhouse gases have increased globally by 40, 150, and 20 percent, respectively.

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. In California, the transportation sector is the largest emitter of GHGs, followed by the industrial sector.

As the name implies, global climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants, which are pollutants of regional and local concern, respectively. California produced approximately 418.2 million gross metric tons of carbon dioxide equivalents ($MMTCO_2e$) in 2019, meeting the annual Statewide target set by the California Air Resources Board (CARB), which required that California emissions be below 431 $MMTCO_2e$ by 2020 (California Air Resources Board 2021). To meet CARB's Statewide targets, California emissions must further be reduced to below 260 $MMTCO_2e$ by 2030.

Carbon dioxide equivalents are a measurement used to account for the fact that different GHGs have different potential to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential of a GHG, is also dependent on the lifetime, or persistence, of the gas molecule in the atmosphere. Expressing GHG emissions in carbon dioxide equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO_2 were being emitted.

Consumption of fossil fuels in the transportation sector was the single largest source of California's GHG emissions in 2019, accounting for 41 percent of total GHG emissions in the State (California Air Resources Board 2021). This category was followed by the industrial sector (24 percent), the electricity generation sector (including both in-State and out-of-State sources) (14 percent), the agriculture and forestry sector (7 percent), the residential energy consumption sector (8 percent), and the commercial energy consumption sector (6 percent).

EFFECTS OF GLOBAL CLIMATE CHANGE

The effects of increasing global temperature are far-reaching and extremely difficult to quantify. The scientific community continues to study the effects of global climate change. In general, increases in the ambient global temperature as a result of increased GHGs are anticipated to result in rising sea levels, which could threaten coastal areas through accelerated coastal erosion, threats to levees and inland water systems, and disruption to coastal wetlands and habitat.

If the temperature of the ocean warms, it is anticipated that the winter snow season would be shortened. Snowpack in the Sierra Nevada provides both water supply (runoff) and storage (within the snowpack before melting), which is a major source of water supply for the State. The snowpack portion of the supply could potentially decline by 50 percent to 75 percent by the end of the 21st century. This phenomenon could lead to significant challenges securing an adequate water supply for a growing State population. Further, the increased ocean temperature could result in increased moisture flux into the State; however, since this would likely increasingly come in the form of rain rather than snow in the high elevations,

increased precipitation could lead to increased potential and severity of flood events, placing more pressure on California's levee/flood control system.

Sea level has risen approximately seven inches during the last century and it is predicted to rise an additional 22 to 35 inches by 2100, depending on the future GHG emissions levels. If this occurs, resultant effects could include increased coastal flooding, saltwater intrusion, and disruption of wetlands. As the existing climate throughout California changes over time, mass migration of species, or failure of species to migrate in time to adapt to the perturbations in climate, could also result. According to the most recent California Climate Change Assessment (*California's Fourth Climate Change Assessment*), the impacts of global warming in California are anticipated to include, but are not limited to, the following.

Wildfires

In recent years, the area burned by wildfires has increased in parallel with increasing air temperatures. Wildfires have also been occurring at higher elevations in the Sierra Nevada mountains, a trend which is expected to continue under future climate change. Climate change will likely modify the vegetation in California, affecting the characteristics of fires on the land. Land use and development patterns also play an important role in future fire activity. Because of these complexities, projections of wildfire in future decades in California range from modest changes from historical conditions to relatively large increases in wildfire regimes depending on the time period for the projection and what interacting factors are included in the analysis.

Public Health

Extreme heat conditions are defined as weather that is much hotter than average for a particular time and place—and sometimes more humid, too. Extreme heat is not just a nuisance; it kills hundreds of Americans every year and causes many more to become seriously ill (U.S. Environmental Protection Agency 2016). Nineteen heat-related events occurred from 1999 to 2009 that had significant impacts on human health, resulting in about 11,000 excess hospitalizations. However, the National Weather Service issued Heat Advisories for only six of the events. Heat-Health Events (HHEs), which better predict risk to populations vulnerable to heat, will worsen drastically throughout the State: for example, by midcentury, the Central Valley is projected to experience average HHEs that are two weeks longer, and HHEs could occur four to ten times more often in the Northern Sierra region.

Higher temperatures are expected to increase the frequency, duration, and intensity of conditions conducive to air pollution formation. Climate change poses direct and indirect risks to public health, as people will experience earlier death and worsening illnesses. Air quality could be further compromised by increases in wildfires, which emit fine particulate matter that can travel long distances depending on wind conditions.

Energy Resources

Higher temperatures will increase annual electricity demand for homes, driven mainly by the increased use of air conditioning units. High demand is projected in inland and Southern California, and more moderate increases are projected in cooler coastal areas. However, the increased annual residential energy demand for electricity is expected to be offset by reduced use of natural gas for space heating. Increases in peak hourly demand during the hot months of the year could be more pronounced than

changes in annual demand. This is a critical finding for California's electric system, because generating capacity must match peak electricity demand.

It should also be noted that with the electrification of vehicles, there will also be a significant increase in residential energy use in the near future. Those increases are offset by the reduction of internal combustion use.

Water Supply

A vast network of man-made reservoirs and aqueducts capture and transport water throughout the State from northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snowpack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snowpack, increasing the risk of summer water shortages.

The State's water supplies are also at risk from rising sea levels. An influx of saltwater would degrade California's estuaries, wetlands, and groundwater aquifers. Saltwater intrusion caused by rising sea levels is a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta, a major State fresh water supply.

Current management practices for water supply and flood management in California may need to be revised for a changing climate. This is in part because such practices were designed for historical climatic conditions, which are changing and will continue to change during the rest of this century and beyond. As one example, the reduction in the Sierra Nevada snowpack, which provides natural water storage, will have implications throughout California's water management system. Even under the wetter climate projections, the loss of snowpack would pose challenges to water managers, hamper hydropower generation, and nearly eliminate all skiing and other snow-related recreational activities.

Agriculture

Increased GHG emissions are expected to cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products Statewide. Although higher carbon dioxide levels can stimulate plant production and increase plant water-use efficiency, California's farmers will face greater water demand for crops and a less reliable water supply as temperatures rise.

Plant growth tends to be slow at low temperatures, increasing with rising temperatures up to a threshold. However, faster growth can result in less-than-optimal development for many crops, so rising temperatures are likely to worsen the quantity and quality of yield for a number of California's agricultural products. Products likely to be most affected include wine grapes, fruits, and nuts, as well as milk due to the reduced quality of grazing food such as alfalfa.

Crop growth and development will be affected, as will the intensity and frequency of pest and disease outbreaks. Rising temperatures will likely aggravate ozone pollution, which makes plants more susceptible to disease and pests and interferes with plant growth.

In addition, continued climate change will likely shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants. Range expansion is expected in many species while range

contractions are less likely in rapidly evolving species with significant populations already established. Should range contractions occur, it is likely that new or different invasive species will fill the emerging gaps. Continued global warming is also likely to alter the abundance and types of many pests, lengthen pests' breeding season, and increase pathogen growth rates.

Forests and Landscapes

Climate change will make forests more susceptible to extreme wildfires. *California's Fourth Climate Change Assessment* found that by 2100, if greenhouse gas emissions continue to rise, the frequency of extreme wildfires burning over approximately 25,000 acres would increase by nearly 50 percent, and that average area burned Statewide would increase by 77 percent by the end of the century. In the areas that have the highest fire risk, wildfire insurance is estimated to see costs rise by 18 percent by 2055 and the amount of property insured would decrease.

Moreover, continued global warming will alter natural ecosystems and biological diversity within the State. For example, alpine and sub-alpine ecosystems are expected to decline by as much as 60 to 80 percent by the end of the century as a result of increasing temperatures. The productivity of the State's forests is also expected to decrease as a result of global warming.

Rising Sea Levels

The United States Geological Survey (USGS) estimates that, under mid to high sea-level rise scenarios, 31 to 67 percent of southern California beaches may completely erode by 2100 without large-scale human interventions (United States Geological Survey 2017). Statewide damages could reach nearly $17.9 billion from inundation of residential and commercial buildings under 50 centimeters (approximately 20 inches) of sea-level rise, which is close to the 95th percentile of potential sea-level rise by the middle of this century. A 100-year coastal flood, on top of this level of sea-level rise, would almost double the costs.

Rising sea levels, more intense coastal storms, and warmer water temperatures will increasingly threaten the State's coastal regions. Rising sea levels would inundate coastal areas with saltwater, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats.

5.8.3 REGULATORY SETTING

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: National ambient air quality standards (NAAQS) for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The U.S. Environmental Protection Agency (EPA) is responsible for administering the FCAA. The FCAA requires the EPA to set NAAQS for several problem air pollutants based on human health and welfare criteria. Two types of NAAQS were established: primary standards, which protect public health, and

secondary standards, which protect the public welfare from non-health-related adverse effects such as visibility reduction.

U.S. Environmental Protection Agency Endangerment Finding.

The U.S. Environmental Protection Agency's (EPA) authority to regulate GHG emissions stems from the U.S. Supreme Court decision in *Massachusetts v. EPA (2007)*. The Supreme Court ruled that GHGs meet the definition of air pollutants under the existing Clean Air Act and must be regulated if these gases could be reasonably anticipated to endanger public health or welfare. Responding to the Court's ruling, the EPA finalized an endangerment finding in December 2009. Based on scientific evidence it found that six GHGs (CO_2, CH_4, N_2O, hydrofluorocarbons [HFCs], perfluorocarbons [PFCs], and sulfur hexafluoride [SF6]) constitute a threat to public health and welfare. Thus, it is the Supreme Court's interpretation of the existing Act and the EPA's assessment of the scientific evidence that form the basis for the EPA's regulatory actions.

Energy Policy and Conservation Act

The Energy Policy and Conservation Act of 1975 sought to ensure that all vehicles sold in the U.S. would meet certain fuel economy goals. Through this Act, Congress established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the Act, the National Highway Traffic and Safety Administration, which is part of the U.S. Department of Transportation (USDOT), is responsible for establishing additional vehicle standards and for revising existing standards.

Compliance with Federal fuel economy standards is determined on the basis of each manufacturer's average fuel economy for the portion of its vehicles produced for sale in the U.S. The Corporate Average Fuel Economy (CAFE) program, which is administered by the EPA, was created to determine vehicle manufacturers' compliance with the fuel economy standards. The EPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.

Energy Policy Act of 1992 (EPAct)

The Energy Policy Act of 1992 (EPAct) was passed to reduce the country's dependence on foreign petroleum and improve air quality. EPAct includes several parts intended to build an inventory of alternative fuel vehicles (AFVs) in large, centrally fueled fleets in metropolitan areas. EPAct requires certain Federal, state, and local government and private fleets to purchase a percentage of light duty AFVs capable of running on alternative fuels each year. In addition, financial incentives are included in EPAct. Federal tax deductions will be allowed for businesses and individuals to cover the incremental cost of AFVs. States are also required by the act to consider a variety of incentive programs to help promote AFVs.

Energy Policy Act of 2005

The Energy Policy Act of 2005 was signed into law on August 8, 2005. Generally, the act provides for renewed and expanded tax credits for electricity generated by qualified energy sources, such as landfill gas; provides bond financing, tax incentives, grants, and loan guarantees for a clean renewable energy

and rural community electrification; and establishes a Federal purchase requirement for renewable energy.

Clean Power Plan and New Source Performance Standards for Electric Generating Units 2015

On October 23, 2015, the EPA published a final rule (effective December 22, 2015) establishing the carbon pollution emission guidelines for existing stationary sources: electric utility generating units (80 FR 64510–64660), also known as the Clean Power Plan. These guidelines prescribe how states must develop plans to reduce GHG emissions from existing fossil-fuel-fired electric generating units. The guidelines establish CO2 emission performance rates representing the best system of emission reduction for two subcategories of existing fossil-fuel-fired electric generating units: (1) fossil-fuel-fired electric utility steam-generating units and (2) stationary combustion turbines. Concurrently, the EPA published a final rule (effective October 23, 2015) establishing standards of performance for GHG emissions from new, modified, and reconstructed stationary sources: electric utility generating units (80 FR 64661–65120). The rule prescribes CO2 emission standards for newly constructed, modified, and reconstructed affected fossil-fuel-fired electric utility generating units. The U.S. Supreme Court stayed implementation of the Clean Power Plan pending resolution of several lawsuits. Additionally, in March 2017, the EPA Administrator was directed to review the Clean Power Plan in order to determine whether it is consistent with current executive policies concerning GHG emissions, climate change, and energy.

Intermodal Surface Transportation Efficiency Act (ISTEA)

ISTEA (49 U.S.C. Section 101 et seq.) promoted the development of intermodal transportation systems to maximize mobility as well as address national and local interests in air quality and energy. ISTEA contained factors that metropolitan planning organizations (MPOs), were to address in developing transportation plans and programs, including some energy-related factors. To meet the ISTEA requirements, MPOs adopted explicit policies defining the social, economic, energy, and environmental values that were to guide transportation decisions in that metropolitan area. The planning process was then to address these policies. Another requirement was to consider the consistency of transportation planning with Federal, state, and local energy goals. Through this requirement, energy consumption was expected to become a criterion, along with cost and other values that determine the best transportation solution.

The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU)

The Fixing America's Surface Transportation Act (FAST Act) went into effect on December 4, 2015, to provide long-term funding for surface transportation with a focus on improving mobility on America's highways, creating jobs and supporting economic growth, and accelerating project delivery and promoting innovation.

U.S. Federal Climate Change Policy

According to the EPA, "the United States government has established a comprehensive policy to address climate change" that includes slowing the growth of emissions; strengthening science, technology, and institutions; and enhancing international cooperation. To implement this policy, "the Federal government is using voluntary and incentive-based programs to reduce emissions and has established programs to promote climate technology and science." The Federal government's goal is to reduce net GHG emissions by 50 to 52 percent from 2005 levels in 2030 and reach net-zero emissions no later than 2050 (U.S.

Department of State 2021). In addition, the EPA administers multiple programs that encourage voluntary GHG reductions, including "ENERGY STAR", "Climate Leaders", and Methane Voluntary Programs. However, as of this writing, there are no adopted Federal plans, policies, regulations, or laws directly regulating GHG emissions.

Mandatory Greenhouse Gas Reporting Rule

On September 22, 2009, EPA issued a final rule for mandatory reporting of GHGs from large GHG emissions sources in the United States. In general, this national reporting requirement will provide EPA with accurate and timely GHG emissions data from facilities that emit 25,000 metric tons or more of CO_2 per year. This publicly available data will allow the reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future. Reporting is at the facility level, except that certain suppliers of fossil fuels and industrial greenhouse gases along with vehicle and engine manufacturers will report at the corporate level. An estimated 85 percent of the total U.S. GHG emissions, from approximately 10,000 facilities, are covered by this final rule.

Presidential Executive Order 13783

Presidential Executive Order 13783, Promoting Energy Independence and Economic Growth (March 28, 2017), orders all Federal agencies to apply cost-benefit analyses to regulations of GHG emissions and evaluations of the social cost of carbon, nitrous oxide, and methane.

STATE

California Air Resources Board

California Air Resources Board (CARB), a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both Federal and State air pollution control programs within California. In this capacity, CARB conducts research, sets state ambient air quality standards (California Ambient Air Quality Standards [CAAQS]), compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other toxic air contaminants (Title 13 California Code of Regulations [CCR], §2485). The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure generally does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given location with certain exemptions for equipment in which idling is a necessary function such as concrete trucks. While this measure primarily targets diesel particulate matter emissions, it has co-benefits of minimizing GHG emissions from unnecessary truck idling.

On July 26, 2007, CARB adopted emission standards for off-road diesel construction equipment of greater than 25 horsepower such as bulldozers, loaders, backhoes and forklifts, as well as many other self-

propelled off-road diesel vehicles. This regulation aims to reduce emissions by installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models. Additionally, in 2008, CARB approved the Truck and Bus regulation to reduce particulate matter and nitrogen oxide emissions from existing diesel vehicles operating in California (13 CCR, §2025, subsection (h)). While these regulations primarily target reductions in criteria air pollutant emission, they have co-benefits of minimizing GHG emissions due to improved engine efficiencies.

California Executive Orders S-3-05 and S-20-06, and Assembly Bill 32

On June 1, 2005, Governor Schwarzenegger signed EO S-3-05. The goal of this EO is to reduce California's GHG emissions to: 1) 2000 levels by 2010, 2) 1990 levels by the 2020 and 3) 80 percent below the 1990 levels by the year 2050. EO-S-20-06 establishes responsibilities and roles of the Secretary of Cal/EPA and State agencies in climate change.

In 2006, this goal was further reinforced with the passage of Assembly Bill 32 (AB 32), the Global Warming Solutions Act of 2006. AB 32 sets the same overall GHG emissions reduction goals while further mandating that CARB create a plan, which includes market mechanisms, and implement rules to achieve "real, quantifiable, cost-effective reductions of greenhouse gases." EO S-20-06 further directs State agencies to begin implementing AB 32, including the recommendations made by the State's Climate Action Team.

Climate Change Scoping Plan

On December 11, 2008, CARB adopted its *Climate Change Scoping Plan* (Scoping Plan), which functions as a roadmap of CARB's plans to achieve GHG reductions in California required by Assembly Bill (AB) 32 through subsequently enacted regulations. The Scoping Plan contains the main strategies California will implement to reduce carbon dioxide-equivalent (CO2e) emissions by 169 million metric tons (MMT), or approximately 30 percent, from the State's projected 2020 emissions level of 596 MMT of CO_2e under a business-as-usual scenario. (This is a reduction of 42 MMT CO_2e, or almost 10 percent, from 2002–2004 average emissions, but requires the reductions in the face of population and economic growth through 2020.) The Scoping Plan also breaks down the amount of GHG emissions reductions CARB recommends for each emissions sector of the State's GHG inventory. The Scoping Plan calls for the largest reductions in GHG emissions to be achieved by implementing the following measures and standards:

- Improved emissions standards for light-duty vehicles (estimated reductions of 31.7 MMT CO_2e);
- The Low-Carbon Fuel Standard (15.0 MMT CO_2e);
- Energy efficiency measures in buildings and appliances and the widespread development of combined heat and power systems (26.3 MMT CO_2e); and
- A renewable portfolio standard for electricity production (21.3 MMT CO_2e).

CARB updated the Scoping Plan in 2013 (*First Update to the Scoping Plan*) and again in 2017. The 2013 Update built upon the initial Scoping Plan with new strategies and recommendations, and also set the groundwork to reach the long-term goals set forth by the State. Successful implementation of existing programs (as identified in previous iterations of the Scoping Plan) has allowed California to meet the 2020 target. The 2017 Update expands the scope of the plan further by focusing on the strategy for achieving the State's 2030 GHG target of 40 percent emissions reductions below 1990 levels (to achieve the target

codified into law by SB 32), and substantially advances toward the State's 2050 climate goal to reduce GHG emissions by 80 percent below 1990 levels.

The 2017 Update relies on the preexisting programs paired with an extended, more stringent Cap-and-Trade Program, to deliver climate, air quality, and other benefits. The 2017 Update identifies new technologically feasible and cost-effective strategies to ensure that California meets its GHG reduction goals.

CARB adopted the 2022 Scoping Plan Update (2022 Scoping Plan) on December 15, 2022. The 2022 Scoping Plan Update assesses progress towards the SB 32 GHG reduction target of at least 40 percent below 1990 emissions by 2030, while laying out a path to achieving carbon neutrality no later than 2045 and a reduction in anthropogenic emissions by 85 percent below 1990 levels.

Executive Order S-13-08

EO S-13-08 was issued on November 14, 2008. The EO is intended to hasten California's response to the impacts of global climate change, particularly sea level rise, and directs State agencies to take specified actions to assess and plan for such impacts, including requesting the National Academy of Sciences to prepare a Sea Level Rise Assessment Report, directing the Business, Transportation, and Housing Agency to assess the vulnerability of the State's transportation systems to sea level rise, and requiring the Office of Planning and Research and the Natural Resources Agency to provide land use planning guidance related to sea level rise and other climate change impacts.

The order also required State agencies to develop adaptation strategies to respond to the impacts of global climate change that are predicted to occur over the next 50 to 100 years. The adaption strategies report summarizes key climate change impacts to the State for the following areas: public health; ocean and coastal resources; water supply and flood protection; agriculture; forestry; biodiversity and habitat; and transportation and energy infrastructure. The report recommends strategies and specific responsibilities related to water supply, planning and land use, public health, fire protection, and energy conservation.

Assembly Bill 1493

In response to AB 1493, CARB approved amendments to the California Code of Regulations (CCR) adding GHG emission standards to California's existing motor vehicle emission standards. Amendments to CCR Title 13 Sections 1900 (CCR 13 1900) and 1961 (CCR 13 1961), and adoption of Section 1961.1 (CCR 13 1961.1) require automobile manufacturers to meet fleet average GHG emission limits for all passenger cars, light-duty trucks within various weight criteria, and medium-duty passenger vehicle weight classes beginning with the 2009 model year. Emission limits are further reduced each model year through 2016. For passenger cars and light-duty trucks 3,750 pounds or less loaded vehicle weight (LVW), the 2016 GHG emission limits are approximately 37 percent lower than during the first year of the regulations in 2009. For medium-duty passenger vehicles and light-duty trucks 3,751 LVW to 8,500 pounds gross vehicle weight (GVW), GHG emissions are reduced approximately 24 percent between 2009 and 2016.

CARB requested a waiver of Federal preemption of California's Greenhouse Gas Emissions Standards. The intent of the waiver is to allow California to enact emissions standards to reduce carbon dioxide and other

greenhouse gas emissions from automobiles in accordance with the regulation amendments to the CCRs that fulfill the requirements of AB 1493. The EPA granted a waiver to California to implement its greenhouse gas emissions standards for cars.

Assembly Bill 1007

Assembly Bill 1007, (Pavley, Chapter 371, Statutes of 2005) directed the CEC to prepare a plan to increase the use of alternative fuels in California. As a result, the CEC prepared the State Alternative Fuels Plan in consultation with the State, Federal, and local agencies. The plan presents strategies and actions California must take to increase the use of alternative non-petroleum fuels in a manner that minimizes costs to California and maximizes the economic benefits of in-State production. The Plan assessed various alternative fuels and developed fuel portfolios to meet California's goals to reduce petroleum consumption, increase alternative fuels use, reduce greenhouse gas emissions, and increase in-State production of biofuels without causing a significant degradation of public health and environmental quality.

Bioenergy Action Plan – Executive Order #S-06-06

Executive Order (EO) #S-06-06 establishes targets for the use and production of biofuels and biopower and directs State agencies to work together to advance biomass programs in California while providing environmental protection and mitigation. The EO establishes the following target to increase the production and use of bioenergy, including ethanol and biodiesel fuels made from renewable resources: produce a minimum of 20 percent of its biofuels within California by 2010, 40 percent by 2020, and 75 percent by 2050. The EO also calls for the State to meet a target for use of biomass electricity.

Senate Bill 32

In 2016, the California State Legislature adopted Senate Bill (SB) 32 and its companion bill AB 197, and both were signed by Governor Brown (Office of Governor Edmund G. Brown Jr., 2016). SB 32 and AB 197 amend HSC Division 25.5, establish a new GHG reduction target of 40 percent below 1990 levels by 2030, and include provisions to ensure the benefits of State climate policies reach into disadvantaged communities.

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law. SB 743 was passed to promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses. SB 743 changes the way that public agencies evaluate the transportation impacts of projects under CEQA. The revisions to the State CEQA Guidelines establish new criteria for determining the significance of a project's transportation impacts that will more appropriately balance the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of GHGs. The 2017 Update to the Scoping Plan identified that slower VMT growth from more efficient land use development patterns would promote achievement of the State's climate goals.

The Office of Planning and Research (OPR) published the Technical Advisory on Evaluating Transportation Impacts in CEQA (December 2018) to provide recommendations for jurisdictions to apply VMT metrics

and thresholds compliant with SB 743. OPR's advisory includes recommendations pertaining to screening criteria, metrics, and significant impact thresholds. OPR's recommendations are not binding and lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence.

For land use and transportation projects, SB 743-compliant CEQA analysis became mandatory on July 1, 2020. More detail about SB 743 is provided in the setting section of Section 5.17, *Transportation*.

Executive Order B-48-18: Zero-Emission Vehicles

In January 2018, EO B-48-18 was signed into law and requires all State entities to work with the private sector to have at least five million zero-emission vehicles (ZEVs) on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This Executive Order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan (Governor's Interagency Working Group on Zero-Emission Vehicles 2016) to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential uses through the Low Carbon Fuel Standard Program, and recommend how to ensure affordability and accessibility for all drivers.

Assembly Bill 2076: California Strategy to Reduce Petroleum Dependence

In response to the requirements of Assembly Bill (AB) 2076 (Chapter 936, Statutes of 2000), the CEC and CARB developed a strategy to reduce petroleum dependence in California. The strategy, *Reducing California's Petroleum Dependence*, was adopted by the CEC and CARB in 2003. The strategy recommends that California reduce on-road gasoline and diesel fuel demand to 15 percent below 2003 demand levels by 2020 and maintain that level for the foreseeable future; the Governor and Legislature work to establish national fuel economy standards that double the fuel efficiency of new cars, light trucks, and sport utility vehicles (SUVs); and increase the use of non-petroleum fuels to 20 percent of on-road fuel consumption by 2020 and 30 percent by 2030.

Assembly Bill 2188: Solar Permitting Efficiency Act

Assembly Bill (AB) 2188, enacted in California in 2015, required local governments to adopt a solar ordinance by September 30, 2015 that creates a streamlined permitting process that conforms to the best practices for expeditious and efficient permitting of small residential rooftop solar systems. The act is designed to lower the cost of solar installations in California and further expand the accessibility of solar to more California homeowners. The bulk of the time and cost savings associated with a streamlined permitting process comes from the use of a standardized eligibility checklist and a simplified plan. This bill also shortens the number of days for those seeking Homeowner's Association (HOA) approval for a written denial of a proposed solar installation.

Governor's Low Carbon Fuel Standard (Executive Order #S-01-07)

Executive Order #S-01-07 establishes a statewide goal to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020 through establishment of a Low Carbon Fuel Standard. The Low Carbon Fuel Standard is incorporated into the State Alternative Fuels Plan and is one of the proposed discrete early action GHG reduction measures identified by the CARB pursuant to AB 32.

Senate Bill 97

Senate Bill (SB) 97 (Chapter 185, 2007) required OPR to develop recommended amendments to the State CEQA Guidelines for addressing greenhouse gas emissions. OPR prepared its recommended amendments to the State CEQA Guidelines to provide guidance to public agencies regarding the analysis and mitigation of greenhouse gas emissions and the effects of greenhouse gas emissions in draft CEQA documents. The Amendments became effective on March 18, 2010.

Senate Bill 375

SB 375 (Stats. 2008, ch. 728) (SB 375) was built on AB 32 (California's 2006 climate change law). SB 375's core provision is a requirement for regional transportation agencies to develop a Sustainable Communities Strategy (SCS) in order to reduce GHG emissions from passenger vehicles. The SCS is one component of the existing Regional Transportation Plan (RTP).

The SCS outlines the region's plan for combining transportation resources, such as roads and mass transit, with a realistic land use pattern, in order to meet a State target for reducing GHG emissions. The strategy must take into account the region's housing needs, transportation demands, and protection of resource and farmlands.

Additionally, SB 375 modified the State's Housing Element Law to achieve consistency between the land use pattern outlined in the SCS and the Regional Housing Needs Assessment allocation. The legislation also substantially improved cities' and counties' accountability for carrying out their housing element plans.

Finally, SB 375 amended CEQA (Pub. Resources Code, Section 21000 et seq.) to ease the environmental review of developments that help reduce the growth of GHG emissions.

Executive Order B-30-15

On April 29, 2015, Governor Brown issued EO B-30-15, which establishes a State GHG reduction target of 40 percent below 1990 levels by 2030. The new emission reduction target provides for a mid-term goal that would help the State to continue on course from reducing GHG emissions to 1990 levels by 2020 (per AB 32) to the ultimate goal of reducing emissions 80 percent under 1990 levels by 2050 (per EO S-03-05). This is in line with the scientifically established levels needed in the U.S. to limit global warming below two degrees Celsius – the warming threshold at which scientists say there will likely be major climate disruptions. EO B-30-15 also addresses the need for climate adaptation and directs State government to:

- Incorporate climate change impacts into the State's Five-Year Infrastructure Plan;

- Update the Safeguarding California Plan, the State climate adaptation strategy, to identify how climate change will affect California infrastructure and industry and what actions the State can take to reduce the risks posed by climate change;
- Factor climate change into State agencies' planning and investment decisions; and
- Implement measures under existing agency and departmental authority to reduce GHG emissions.

Advanced Clean Cars Program

In January 2012, CARB approved the Advanced Clean Cars program which combines the control of GHG emissions and criteria air pollutants, as well as requirements for greater numbers of zero-emission vehicles, into a single package of standards for vehicle model years 2017 through 2025. The new rules strengthen the GHG standard for 2017 models and beyond. This will be achieved through existing technologies, the use of stronger and lighter materials, and more efficient drivetrains and engines. The program's zero-emission vehicle regulation requires battery, fuel cell, and/or plug-in hybrid electric vehicles to account for up to 15 percent of California's new vehicle sales by 2025. The program also includes a clean fuels outlet regulation designed to support the commercialization of zero-emission hydrogen fuel cell vehicles planned by vehicle manufacturers by 2015 by requiring increased numbers of hydrogen fueling stations throughout the State. The program will have significant energy demand implications as battery, fuel cell, and/or plug-in hybrid electric vehicle sales increase overtime, creating new demand for electricity services both in residential and commercial buildings (e.g., charging stations) as well as demand for new EV and hydrogen fuel cell charging stations. The number of stations will grow as vehicle manufacturers sell more fuel cell vehicles. According to the CARB, by 2025, when the rules will be fully implemented, the Statewide fleet of new cars and light trucks will emit 34 percent fewer global warming gases and 75 percent fewer smog-forming emissions than the Statewide fleet in 2016.

California Building Energy Efficiency Standards

Title 24, Part 6 of the California Code of Regulations, known as the Building Energy Efficiency Standards (Standards), was established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. On January 1, 2010, the California Building Standards Commission adopted CALGreen and became the first state in the United States to adopt a statewide green building standards code.

The 2022 California Building Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations, Title 24, Part 6), commonly referred to as "Title 24," became effective on January 1, 2023. In general, Title 24 requires the design of building shells and building components to conserve energy. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods. The Standards are divided into three basic sets. First, there is a basic set of mandatory requirements that apply to all buildings. Second, there is a set of performance standards – the energy budgets – that vary by climate zone (of which there are 16 in California) and building type; thus, the Standards are tailored to local conditions. Finally, the third set constitutes an alternative to the performance standards, which is a set of prescriptive packages that are basically a recipe or a checklist compliance approach.

The CEC estimates that the 2022 Title 24 standards will reduce 10 million metric tons of GHG over 30 years (CEC 2021). When compared to the 2019 Title 24 standards, the 2022 update focuses on: encouraging electric heat pump technology and use; establishing electric-ready requirements when natural gas is installed; expanding solar photovoltaic (PV) system and battery storage standards; and strengthening ventilation standards to improve indoor air quality.

California Green Building Standards (CALGreen)

The 2022 California Green Building Standards Code (California Code of Regulations, Title 24, Part 11), commonly referred to as CALGreen, went into effect on January 1, 2023. CALGreen is the first-in-the-nation mandatory green buildings standards code. The California Building Standards Commission developed CALGreen in an effort to meet the State's landmark initiative Assembly Bill (AB) 32 goals, which established a comprehensive program of cost-effective reductions of greenhouse gas (GHG) emissions to 1990 levels by 2020. CALGreen was developed to (1) reduce GHG emissions from buildings; (2) promote environmentally responsible, cost-effective, and healthier places to live and work; (3) reduce energy and water consumption; and (4) respond to the environmental directives of the administration. CALGreen requires that new buildings employ water efficiency and conservation, increase building system efficiencies (e.g. lighting, heating/ventilation and air conditioning [HVAC], and plumbing fixtures), divert construction waste from landfills, and incorporate electric vehicles charging infrastructure. There is growing recognition among developers and retailers that sustainable construction is not prohibitively expensive, and that there is a significant cost-savings potential in green building practices and materials (U.S. Green Building Council 2022).

Executive Order B-55-18

EO B-55-18, issued by Governor Brown in September 2018, establishes a statewide goal to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net-negative emissions thereafter. The goal is an addition to the existing Statewide targets of reducing the State's GHG emissions.

Senate Bill 1078 (2002), Senate Bill 107 (2006), Executive Order S-14-08 (2008), Senate Bill 350 (2015), and Senate Bill 100 (2018)

SB 1078 established the Renewable Portfolio Standard (RPS) program, which required retail sellers of electricity to provide at least 20 percent of their supply from renewable sources by 2017. This goal has subsequently been accelerated several times. SB 107 changed the target date to 2010 and Executive Order S-14-08 expanded the State's RPS to 33 percent renewable power by 2020. SB 350 expanded the RPS by requiring retail seller and publicly owned utilities to procure 50 percent of their electricity from eligible renewable energy resources by 2030, with interim goals of 40 percent by 2024 and 45 percent by 2027. SB 100 accelerated and expanded the standards set forth in SB 350 by updating the RPS program to 50 percent eligible renewable energy resources by 2025 and 60 percent by 2030. In addition, SB 100 sets a 100 percent clean, zero carbon, and renewable energy policy for California's electricity system by 2045.

Assembly Bill 939, Assembly Bill 341, and Assembly Bill 1826

The Integrated Solid Waste Management Act of 1989 (AB 939) (California Public Resources Code Section 40050 et seq.) established an integrated waste management system that focuses on source reduction, recycling, composting, and land disposal of waste. AB 939 requires every city and county in California to

divert 50 percent of its waste from landfills whether through waste reduction, recycling, or other means. AB 341, which took effect on July 1, 2012, amended the California Integrated Waste Management Act of 1989 to set California's recycling goal of 75 percent by the year 2020. AB 1826 requires recycling of organic matter by businesses generating such wastes in amounts over certain thresholds. AB 1826 also requires that local jurisdictions implement an organic waste recycling program to divert organic waste generated by businesses and multi-family developments that consist of five or more units.

Senate Bill 1383

SB 1383, issued by Governor Brown in September 2016, set Statewide methane emissions reduction targets to reduce emissions of short-lived climate pollutants (SLCP). The SLCPs included under this bill – including methane, fluorinated gases, and black carbon – are GHGs that are much more potent than carbon dioxide and can have detrimental effects on human health and climate change. SB 1383 requires the CARB to adopt a strategy to reduce methane by 40 percent, hydrofluorocarbon gases by 40 percent, and anthropogenic black carbon by 50 percent below 2013 levels by 2030. The methane emission reduction goals include a 75 percent reduction in the level of statewide disposal of organic waste from 2014 levels by 2025.

Senate Bill 379

In 2015, SB 379 revised California Government Code Section 65302 et seq. to require that cities and counties update their safety elements to address climate adaptation and resiliency strategies applicable to their jurisdiction. The updates are required at the next update of their local hazard mitigation plan (LHMP) on or after January 1, 2017. Local jurisdictions without an LHMP must update their safety elements beginning on or before January 1, 2022. The safety element update must include a vulnerability assessment identifying the risks that climate change poses to the local jurisdiction, and feasible implementation strategies to protect the community.

Assembly Bill 1279

Assembly Bill 1279, passed in 2022, declares the State's objective to achieve net zero greenhouse gas emissions as soon as possible, but no later than 2045, and to achieve and maintain net negative greenhouse gas emissions thereafter. This is in addition to, and does not replace or supersede, Statewide greenhouse gas emissions reduction targets.

Cap-and-Trade Program

The Climate Change Scoping Plan identifies a Cap-and-Trade Program as a key strategy CARB would employ to help California meet its GHG reduction targets for 2020 and 2030, and ultimately achieve an 80 percent reduction from 1990 levels by 2050. Pursuant to its authority under HSC Division 25.5, CARB designed and adopted a California Cap-and-Trade Program to reduce GHG emissions from major sources (deemed "covered entities") by setting a firm cap on statewide GHG emissions and employing market mechanisms to achieve the State's emission-reduction mandate of returning to 1990 levels of emissions by 2020 and 40 percent below 1990 levels by 2030 (17 CCR §§95800 to 96023). Under the Cap-and-Trade Program, an overall limit is established for GHG emissions from capped sectors (e.g., electricity generation, petroleum refining, cement production, and large industrial facilities that emit more than 25,000 metric tons CO2e per year), caps decline over time, and facilities subject to the cap can trade

permits to emit GHGs. The Statewide cap for GHG emissions from the capped sectors commenced in 2013 and declines over time, achieving GHG emission reductions throughout the Program's duration (17 CCR §§95800 to 96023). On July 17, 2017 the California legislature passed AB 398, extending the Cap-and-Trade Program through 2030.

An inherent feature of the Cap-and-Trade Program is that it does not guarantee GHG emissions reductions in any discrete location or by any particular source. Rather, GHG emissions reductions are only guaranteed on a statewide basis.

If California's direct regulatory measures reduce GHG emissions more than expected, then the Cap-and-Trade Program would be responsible for relatively fewer emissions reductions. If California's direct regulatory measures reduce GHG emissions less than expected, then the Cap-and-Trade Program would be responsible for relatively more emissions reductions. In other words, the Cap-and-Trade Program functions similarly to an insurance policy for meeting California's GHG emissions reduction mandates.

LOCAL

South Coast Air Quality Management District

The South Coast Air Quality Management District (SCAQMD) adopted a Policy on Global Warming and Stratospheric Ozone Depletion in April 1990. The policy commits the SCAQMD to consider global impacts in rulemaking and in drafting revisions to the Air Quality Management Plan (AQMP). In March 1992, the SCAQMD Governing Board reaffirmed this policy and adopted amendments to the policy to include the following directives:

- Phase out the use and corresponding emissions of CFCs, methyl chloroform (1,1,1-trichloroethane or TCA), carbon tetrachloride, and halons by December 1995;
- Phase out the large quantity use and corresponding emissions of HCFCs by the year 2000;
- Develop recycling regulations for HCFCs (e.g., SCAQMD Rules 1411 and 1415);
- Develop an emissions inventory and control strategy for methyl bromide; and
- Support the adoption of a California GHG emission reduction goal.

The legislative and regulatory activity detailed above is expected to require significant development and implementation of energy efficient technologies and shifting of energy production to renewable sources.

SCAG's Connect SoCal: Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

Southern California Association of Governments (SCAG) is the metropolitan planning organization (MPO) for the region in which the City of Lawndale is located. In 2020, SCAG adopted Connect SoCal, the 2020-2045 RTP/SCS, which is an update to the previous 2016 RTP/SCS. The 2020 RTP/SCS considers the role of transportation in the broader context of economic, environmental, and quality-of-life goals for the future, identifying regional transportation strategies to address mobility needs. The 2020 RTP/SCS describes how the region can attain the GHG emission-reduction targets set by CARB by achieving a 19 percent reduction by 2035 compared to the 2005 level.

SCAG's 2020 RTP/SCS builds on the land use policies that were incorporated into the 2016 RTP/SCS, and provides specific strategies for successful implementation. These strategies include implementing the Sustainable Communities Program (SCP) – Housing and Sustainable Development (HSD) which will both accelerate housing production as well as enable implementation of the Sustainable Communities Strategy of Connect SoCal; encouraging use of active transportation, or human powered transportation such as bicycles, tricycles, wheelchairs, electric wheelchairs/scooters, skates, and skateboards; and supporting alternative fueled vehicles. The 2020 RTP/SCS overall land use pattern reinforces the trend of focusing new housing and employment in infill areas well served by transit.

In addition, the 2020 RTP/SCS includes goals and strategies to promote active transportation and improve transportation demand management (TDM). The 2020 RTP/SCS strategies support local planning and projects that serve short trips, increase access to transit, expand understanding and consideration of public health in the development of local plans and projects, and support improvements in sidewalk quality, local bike networks, and neighborhood mobility areas. The 2020 RTP/SCS proposes to better align active transportation investments with land use and transportation strategies, increase competitiveness of local agencies for Federal and State funding, and to expand the potential for all people to use active transportation.

South Coast Air Quality Management District Air Quality Management Plan

The South Coast Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP) is the regional blueprint for achieving air quality standards in the South Coast Air Basin, an area that includes Orange County and the non-desert portions of Los Angeles, Riverside and San Bernardino counties. Through a combination of regulatory and incentive approaches via partnerships at all levels of government, healthy air quality is within reach.

SCAQMD approved the Final 2022 AQMP on December 2, 2022. The Final 2022 AQMP builds upon measures already in place from previous AQMPs to reduce air pollution and meet the Federal ozone standard established by the U.S. EPA in 2015. It includes a variety of additional actions and strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emission emissions technologies, when cost-effective and feasible, and low NO_X technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other Clean Air Act measures to achieve the 2015 8-hour ozone standard.

South Bay Bicycle Master Plan: Draft Final Plan

The South Bay Bicycle Master Plan (August 2011) is intended to guide the development and maintenance of a comprehensive bicycle network and set of programs and policies throughout the cities of El Segundo, Gardena, Hermosa Beach, Lawndale, Manhattan Beach, Redondo Beach, and Torrance over a period of 20 years. The Plan recommends programs meant to promote and increase bicycle ridership for all levels of ability across the South Bay.

City of Lawndale Climate Action Plan

The City of Lawndale, in cooperation with the South Bay Cities Council of Governments, has developed a Climate Action Plan (CAP) to reduce GHG emissions within the City. The City's CAP serves as a guide for action by setting GHG emission reduction goals and establishing strategies and policies to achieve desired

outcomes over a 20-year period (2035). The CAP identifies community-wide strategies to conserve energy and reduce GHG emissions from a range of sources within the jurisdiction, including transportation, land use, energy generation and consumption, water, and waste.

5.8.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to climate change-related impacts:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (refer to Impact Statement GHG-1); or
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases (refer to Impact Statement GHG-1).

ANALYSIS APPROACH AND METHODOLOGY

Cumulative impacts are the collective impacts of one or more past, present, and future projects that, when combined, result in adverse changes to the environment. In determining the significance of a project's contribution to anticipated adverse future conditions, a lead agency should generally undertake a two-step analysis. The first question is whether the *combined* effects from *both* the proposed Project *and* other projects would be cumulatively significant. If the agency answers this inquiry in the affirmative, the second question is whether "the project's *incremental* effects are cumulatively considerable" and thus significant in and of themselves. The cumulative global project list for this issue (climate change) comprises anthropogenic (i.e., human-made) GHG emissions sources across the globe. No project alone would reasonably be expected to contribute to a noticeable incremental change to the global climate, but rather effects are shown to be caused by the cumulative emissions from across the globe. However, legislation and executive orders on the subject of climate change in California have established a statewide context and process for developing an enforceable statewide cap on GHG emissions. Given the nature of environmental consequences from GHGs and global climate change, CEQA requires that lead agencies consider evaluating the cumulative impacts of GHGs. Small contributions to this cumulative impact (from which significant effects are occurring and are expected to worsen over time) may be potentially considerable and, therefore, significant.

OPR recommends that lead agencies under CEQA create a plan to reduce GHG emissions that meets the goals of both CEQA and general plans. OPR states that the GHG emissions reduction plan can be either a stand-alone CAP or directly part of the general plan. The City of Lawndale, in cooperation with the South Bay Cities Council of Governments, developed a Climate Action Plan (CAP) in 2017 to reduce GHG emissions within the City of Lawndale. The City's CAP serves as a guide for action by setting GHG reduction goals and establishing strategies and policy to achieve desired outcomes.

Quantitative disclosure of the Project's GHG emissions is provided below. Additionally, an analysis of the proposed Project's consistency with the City of Lawndale CAP and the California Statewide 2030 GHG emissions target of 40 percent below 1990 levels by 2030 (as encapsulated by SB 32), as well as a qualitative analysis of the Project's consistency with the California statewide net zero target by 2045 (as encapsulated in AB 1279), is also provided.

5.8.5 IMPACTS AND MITIGATION MEASURES

GHG-1: Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impact Analysis: Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Implementation of the General Plan Update would contribute to increases of GHG emissions that are associated with global climate change. Estimated GHG emissions attributable to future development would be primarily associated with increases of CO_2 and other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O), from mobile sources and utility usage.

PROJECT GREENHOUSE GAS EMISSIONS

Construction Emissions

Potential future development associated with implementation of the General Plan Update would generate GHGs during the construction and operational phases of the Project. The proposed Project's primary source of construction-related GHGs would result from emissions of CO_2 associated with individual development projects' construction and worker vehicle trips; refer to Table 5.8-1, *Construction GHG Emissions (Metric Tons/Year)*. Additionally, site-specific development would likely require limited demolition and grading, and would also include site preparation, paving, building construction, and architectural coating phases. Construction was assumed to occur starting in year 2023 and ending in year 2045.[1] Since specific development projects are not currently proposed, default parameters were used for construction activities, except for the construction schedule, which was adjusted to reflect the buildout year of 2045. See Appendix C, *Air Quality, Energy and Greenhouse Gas Emissions Modeling Data*, for more detail.

Table 5.8-1
Construction GHG Emissions (Metric Tons/Year)

Year	Bio-CO_2	NBio-CO_2	Total CO_2	CH_4	N_2O	R	CO_2e
Maximum	0	35,703	35,703	1.53	2.66	50.7	36,584
Source: CalEEMod version 2022.1							

As shown in Table 5.8-1, Project construction-related activities would generate a maximum of approximately 36,584 $MTCO_2e$ of GHG emissions in a single year. Total GHG emissions construction-related activities would be approximately 677,483, over the entire course of construction (assumed to start in year 2023 and end in year 2045. See Appendix C, *Air Quality, Energy and Greenhouse Gas Emissions*

[1] Although construction associated with the Project is not anticipated to start until year 2025, year 2023 was used as a starting year for the purposes of modeling for the sake of a conservative analysis, since earlier construction years use less efficient on- and off-road construction equipment, compared with later years.

Modeling Data, for more detail. Once construction is complete, the generation of construction-related GHG emissions would cease.

Operational Emissions

The operational phase of future development associated with implementation of the proposed Project would generate GHGs primarily from the individual development's operational vehicle trips and building energy (electricity and natural gas) usage; refer to Table 5.8-2, *Operational GHG Emissions 2040 (Metric Tons/Year)*. Other sources of GHG emissions would be minimal.

Table 5.8-2
Operational GHG Emissions 2045 (Metric Tons/Year)

Category	Bio-CO_2	NBio-CO_2	Total CO_2	CH_4	N_2O	R	CO_2e
Area	0	511	511	0.02	0	0	513
Energy	0	80,808	80,808	8.31	0.56	0	81,184
Mobile	0	107,424	107,424	4.29	4.45	12.4	108,869
Waste	211	0	2,111	211	0	0	7,385
Water	529	3,213	3,742	54.7	1.34	0	5,509
Refrigerants	0	0	0	0	0	44.5	44.5
Total	**2,640**	**191,956**	**194,596**	**278**	**6.35**	**56.9**	**203,504**

Source: CalEEMod version 2022.1

As shown in Table 5.8-2, Project operational GHG emissions would total approximately 203,504 $MTCO_2e$ annually. The Lawndale General Plan Update includes goals, policies, and actions to reduce GHG emissions, as provided below. The proposed Project would provide for more residential, commercial, and mixed-use development in proximity to each other, as well as in proximity to transit. Further, Project implementation would provide for a denser urban environment with improved amenities that support active (non-motorized) transportation opportunities within the Planning Area. Accordingly, as discussed further below, the Project is consistent with plans and policies designed to achieve the State's GHG reduction goals. However, it cannot be guaranteed that construction and operational emissions would result in a less than significant impact with regards to GHG impacts, as discussed in further detail below.

CONSISTENCY WITH APPLICABLE GHG PLANS, POLICIES, OR REGULATIONS

Lawndale Climate Action Plan - Community GHG Emissions Inventory, Forecasts, and Targets

The following summarizes the Lawndale's CAP's quantification of baseline GHG emissions, the establishment of GHG emissions targets that demonstrate a level which the contribution of GHG emissions from activities covered by the CAP would not be cumulatively considerable, and forecasts for future year GHG emissions. These analyses and results are provided in the CAP and are briefly summarized below.

GHG Emissions Inventory

The first step towards reducing GHG emissions is estimating the baseline and future expected emissions. These estimates are categorized by sources – commercial and residential energy, on-road transportation,

solid waste, water, wastewater, and off-road sources. The City completed inventories for 2005, 2007, 2010, and 2012. The baseline year is 2005, which means that the future emissions reductions will be measured against emissions that occurred in 2005.

Table 5.8-3, *City of Lawndale Community-wide GHG Emissions by Sector from 2005 to 2012*, provides a summary of the City's 2005 (baseline) and 2012 community inventories. As shown in Table 5.8-3, the transportation sector is the largest contributor to emissions.

Table 5.8-3
City of Lawndale Community-wide GHG Emissions by Sector from 2005 to 2012

Sector	2005	2012	% Change 2005 to 2012
On-Road Transportation	66,334	71,769	8.2%
Residential Energy	31,749	31,330	-1.3%
Commercial Energy	20,664	16,856	-18.4%
Solid Waste	5,456	3,442	-36.9%
Water	5,214	3,223	-38.2%
Off-Road Equipment	1,012	108	-89.3%
Wastewater	120	91	-24.2%
Total	130,549	126,819	-2.9%
Source: South Bay Cities Council of Governments, *City of Lawndale Climate Action Plan*, December 2017.			

GHG Emissions Forecasts and Reduction Target

Emission estimates for future years are scenarios based on assumptions about the future. The 2020 Business As Usual 2020 BAU) scenario assumed that no new policies, plans, programs, or regulations designed to reduce GHG emissions will be adopted". The 2020 and 2035 Adjusted Business As Usual (ABAU) scenarios, in comparison, do take into account the expected reduction impacts resulting from Federal and State mandated laws such as higher vehicle fuel efficiency standards and increases in the percentage of renewable energy production.

In 2015, the City set GHG emission reduction goals consistent with the State's AB 32 GHG emission reduction targets. The City's target was calculated as a 15 percent decrease from 2005 levels by 2020 as recommended in the State AB 32 Scoping Plan. A longer-term goal was established for 2035 to reduce emissions by 49 percent below 2005 levels. These goals put the City on a path towards helping the State meet its long-term 2050 goal to reduce emissions by 80 percent below 1990 levels.

GHG Reduction Measures

The City of Lawndale CAP includes a large array of strategies to reduce GHG emissions. These strategies include:

- Land Use and Transportation: Facilitate pedestrian and neighborhood development and identify ways to reduce automobile emissions including supporting zero emission vehicle infrastructure, improving pedestrian and bicycle infrastructure, enhancing public transit service, and supporting reductions in single-occupancy vehicle use.
- Energy Efficiency: Emphasize energy efficiency retrofits for existing buildings, energy performance requirements for new construction, water efficient landscaping, financing programs that will allow home and business owners to obtain low-interest loans for implementing energy efficiency in their buildings.
- Solid Waste: Focus on increasing waste diversion and encouraging participation in recycling and composting throughout the community.
- Urban Greening: Contain measures that create "carbon sinks" as they store GHG emissions that are otherwise emitted into the atmosphere as well as support health of the community.
- Energy Generation and Storage: Demonstrate the City's commitment to support the implementation of clean, renewable energy while decreasing dependence on traditional, GHG emitting power sources.

Implementation and Monitoring

The City's CAP is a policy-level document that guides the implementation of the climate action plan's GHG reduction measures. On-going monitoring and reporting of GHG reduction impacts and their cost effectiveness will enable City staff to make regular adjustments to the CAP. The monitoring and implementation process should anticipate the possible need to adjust to unforeseen circumstances, incorporated innovative new technologies, and evolve with the advancing science of climate change. Measure-Tracking tools are ways for the City to monitor the reductions that result from the implementation of GHG reduction actions. The Climate Action Implementation Coordinator or the City Climate Action Team could be tasked to maintain records of reduction measure implementation; additionally, as funding is available, they could ensure that periodic updates to the emissions inventory are completed as a way to quantify GHG reductions. Conducting future inventories also allows the City to better assess their GHG emissions as better data and new methods for calculating reductions become available. Additionally, the City can continue to receive assistance from the SBCCOG for their implementation and monitoring efforts.

Project Consistency with City of Lawndale CAP

Proposed General Plan Update Resources Management Element Action RM-4a would require the City to implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts, as well as to develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions, and work with the SBCCOG and/or other local, regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

While the reduction of GHG emissions puts the City on the path to achieve its long-term emissions targets, since the CAP was developed in 2017, prior to AB 1279, the City would need additional actions to keep the City on a path that aligns with the State of California's longer-term goal for 2045.

2022 Scoping Plan Consistency

The goal to reduce GHG emissions to 1990 levels by 2020 (Executive Order S-3-05) was codified by the California Legislature as AB 32. In 2008, CARB approved a Scoping Plan as required by AB 32. The Scoping Plan has a range of GHG reduction actions which include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as a cap-and-trade system, and an AB 32 implementation fee to fund the program. The 2022 Scoping Plan identifies additional GHG reduction measures necessary to achieve the 2030 target, as well as to achieve the State's target of carbon neutrality by year 2045, as encapsulated by AB 1279. These measures build upon those identified in the previous Scoping Plan updates. Although a number of these measures are currently established as policies and measures, some measures have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions will be adopted subsequently as required to achieve Statewide GHG emissions targets.

Table 5.8-4, *Project Consistency with the 2022 Scoping Plan*, summarizes the Project's consistency with applicable policies and measures of the 2022 Scoping Plan. As indicated in Table 5.8-4, the Project would not conflict with any of the provisions of the 2022 Scoping Plan and would support four of the action categories through energy efficiency, water conservation, recycling, and landscaping.

Table 5.8-4
Project Consistency with the 2022 Scoping Plan

Sector/Source	Category/Description	Consistency Analysis
Area		
SCAQMD Rule 445 (Wood Burning Devices)	Restricts the installation of wood-burning devices in new development.	Mandatory Compliance. Approximately 15 percent of California's major anthropogenic sources of black carbon include fireplaces and woodstoves.[1] The Project would not include hearths (woodstove and fireplaces) as mandated by this rule.
Energy		
California Renewables Portfolio Standard, Senate Bill 350 (SB 350) and Senate Bill 100 (SB 100)	Increases the proportion of electricity from renewable sources to 33 percent renewable power by 2020. SB 350 requires 50 percent by 2030. SB 100 requires 44 percent by 2024, 52 percent by 2027, and 60 percent by 2030. It also requires the State Energy Resources Conservation and Development Commission to double the energy efficiency savings in electricity and natural gas final end uses of retail customers through energy efficiency and conservation.	No Conflict. The Project would utilize electricity provided by Southern California Edison (SCE), which is required to meet the 2020, 2030, 2045, and 2050 performance standards. In 2018, 31 percent of SCE's electricity came from renewable resources.[2] By 2030 SCE plans to achieve 80 percent carbon-free energy.[3]
All Electric Appliances for New Residential and Commercial Buildings (AB 197)	All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030.	Mandatory Compliance. Project-specific plans would be required to demonstrate that only all electric appliances would be installed for residential land uses starting in 2026, and for commercial uses starting in 2029, consistent with this requirement.
California Code of Regulations, Title 24, Building Standards Code	Requires compliance with energy efficiency standards for residential and nonresidential buildings.	Mandatory Compliance. Future development associated with Project implementation would be required to meet the applicable requirements of the adopted Title 24 Building Energy Efficiency Standards, including installation of rooftop solar panels and additional CALGreen requirements (see discussion under CALGreen Code requirements below).

Table 5.8-4 (continued)
Project Consistency with the 2022 Scoping Plan

Sector/Source	Category/Description	Consistency Analysis
California Green Building Standards (CALGreen) Code Requirements	All bathroom exhaust fans are required to be ENERGY STAR compliant.	Mandatory Compliance. Project-specific construction plans would be required to demonstrate that energy efficiency appliances, including bathroom exhaust fans, and equipment are ENERGY STAR compliant.
	HVAC system designs are required to meet American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) standards.	Mandatory Compliance. Project-specific construction plans would be required to demonstrate that the HVAC system meets the ASHRAE standards.
	Air filtration systems are required to meet a minimum efficiency reporting value (MERV) 8 or higher.	Mandatory Compliance. Specific development projects would be required to install air filtration systems (MERV 8 or higher) as part of its compliance with the adopted Title 24 Building Energy Efficiency Standards.
	Refrigerants used in newly installed HVAC systems shall not contain any chlorofluorocarbons.	Mandatory Compliance. Specific development projects would be required to meet this requirement as part of its compliance with the CALGreen Code.
	Parking spaces shall be designed for carpool or alternative fueled vehicles. Up to eight percent of total parking spaces is required for such vehicles.	Mandatory Compliance. Specific development projects would be required to meet this requirement as part of its compliance the CALGreen Code.
Mobile Sources		
Mobile Source Strategy (Cleaner Technology and Fuels)	Reduce GHGs and other pollutants from the transportation sector through transition to zero-emission and low-emission vehicles, cleaner transit systems, and reduction of vehicle miles traveled.	Consistent. The Project would be consistent with this strategy by supporting the use of zero-emission and low-emission vehicles; refer to CALGreen Code discussion above.
Senate Bill (SB) 375	SB 375 establishes mechanisms for the development of regional targets for reducing passenger vehicle GHG emissions. Under SB 375, CARB is required, in consultation with the State's Metropolitan Planning Organizations, to set regional GHG reduction targets for the passenger vehicle and light-duty truck sector for 2020 and 2035.	Consistent. As demonstrated in Table 5.8-5, the Project would comply with the Southern California Association of Governments (SCAG) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS), and therefore, the Project would be consistent with SB 375.

Table 5.8-4 (continued)
Project Consistency with the 2022 Scoping Plan

Sector/Source	Category/Description	Consistency Analysis
Water		
CCR, Title 24, Building Standards Code	Title 24 includes water efficiency requirements for new residential and non- residential uses.	Mandatory Compliance. Refer to the discussion under the adopted Title 24 Building Standards Code and CALGreen Code, above.
Water Conservation Act of 2009 (Senate Bill X7-7)	The Water Conservation Act of 2009 sets an overall goal of reducing per capita urban water use by 20 percent by December 31, 2020. Each urban retail water supplier shall develop water use targets to meet this goal. This is an implementing measure of the Water Sector of the AB 32 Scoping Plan. Reduction in water consumption directly reduces the energy necessary and the associated emissions to convene, treat, and distribute the water; it also reduces emissions from wastewater treatment.	Consistent. Refer to the discussion under the adopted Title 24 Building Standards Code and CALGreen Code, above. Also, refer to Section 5.10, *Hydrology and Water Quality*.
Solid Waste		
California Integrated Waste Management Act (IWMA) of 1989 and Assembly Bill (AB) 341	The IWMA mandates that State agencies develop and implement an integrated waste management plan which outlines the steps to divert at least 50 percent of solid waste from disposal facilities. AB 341 directs the California Department of Resources Recycling and Recovery (CalRecycle) to develop and adopt regulations for mandatory commercial recycling and sets a Statewide goal for 75 percent disposal reduction by the year 2020.	Mandatory Compliance. The Project would be required to comply with AB 341 which requires multifamily residential dwelling of five units or more to arrange for recycling services. This would reduce the overall amount of solid waste disposed of at landfills. The decrease in solid waste would in return decrease the amount of methane released from decomposing solid waste.

AB 1279 Consistency

Assembly Bill 1279, passed in 2022, declares the State's objective to achieve net zero greenhouse gas emissions as soon as possible, but no later than 2045, and to achieve and maintain net negative greenhouse gas emissions thereafter. This is in addition to, and does not replace or supersede, Statewide greenhouse gas emissions reduction targets. CARB's 2022 Scoping Plan is designed to ensure the State would meet the State's GHG emissions goals as encapsulated in AB 1279. As described above, the proposed Project would not conflict with any of the provisions of the 2022 Scoping Plan and would support four of the action categories through energy efficiency, water conservation, recycling, and landscaping However, although the Project would not conflict with the 2022 Scoping Plan, this is not sufficient to ensure that individual development projects associated with the proposed Project would be consistent with the net zero greenhouse gas emissions target encapsulated by AB 1279. Therefore, since full consistency between the proposed Project and AB 1279 cannot be ensured at this programmatic level of analysis, implementation of the proposed Project could result in a significant impact on the environment due to the release of GHGs.

SCAG RTP/SCS Consistency

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy [2020 RTP/SCS]). The 2020 RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The 2020 RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions, tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. SCAG's 2020 RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The 2020 RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for Federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The 2020 RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve State GHG emissions reduction goals and Federal Clean Air Act (FCAA) requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the 2020 RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the State. The Project's consistency with the 2020 RTP/SCS goals is analyzed in detail in Table 5.8-5, *Project Consistency with the 2020-2045 RTP/SCS*.

As depicted in Table 5.8-5, the Project would be consistent with the 2020 RTP/SCS through various polices. The General Plan Update's goals, policies, and actions would support development that is encouraged by the 2020 RTP/SCS to reduce VMT and expand multi-modal transportation options in order for the region to achieve GHG reductions from the land use and transportation sectors required by SB 375, which, in turn, advances the State's long-term climate policies. By furthering implementation of SB 375, the General Plan Update supports regional land use and transportation GHG reductions consistent with State regulatory requirements. Therefore, the Project would be consistent with the GHG reduction-related actions and strategies contained in the 2020 RTP/SCS.

Table 5.8-5
Project Consistency with the 2020-2045 RTP/SCS

SCAG Goals	Consistency Analysis
Goal 1: Encourage regional economic prosperity and global competitiveness.	Consistent. The proposed Project would provide for increased residential development at higher densities in proximity to areas served by transit, jobs and serves, which would promote economic prosperity and development of the Planning Area in an orderly and market-driven manner, consistent with local priorities.
Goal 2: Improve mobility, accessibility, reliability, and travel safety for people and goods.	Consistent. Although this Project is not a transportation improvement project, the Project would allow for infill development in locations near existing transit routes, goods and services. The availability of public transportation and the focus on increasing density relative to the existing public transportation, enables Project implementation to reduce VMT per service population, and associated transportation-related emissions, compared to existing conditions and the existing land use plan for the Planning Area.
Goal 3: Enhance the preservation, security, and resilience of the regional transportation system.	Not applicable. This is not a transportation improvement project and is therefore not applicable.
Goal 4: Increase person and goods movement and travel choices within the transportation system.	Not applicable. This is not a transportation improvement project and is therefore not applicable. However, the Project would not reduce person and goods movement and travel choices within the transportation system.
Goal 5: Reduce greenhouse gas emissions and improve air quality.	Consistent. The Planning Area is located within an urban area. The location of the Planning Area within an urbanized area served by existing transit, and implementation of the proposed General Plan Update land uses and associated development potential, would reduce VMT per employee and VMT per capita compared to existing conditions, which would reduce GHG and air quality emissions.
Goal 6: Support healthy and equitable communities	Consistent. The Project would provide for more residential and commercial development in proximity to each other, as well as in proximity to existing transit. Further, Project implementation would provide for a denser urban environment with improved amenities that support active (non-motorized) transportation opportunities, including walking and bicycling within the Planning Area. Additionally, the Project would reduce VMT per employee and VMT per capita compared to existing conditions, which would reduce GHG and air quality emissions. Therefore, overall, the Project would support the goal of supporting healthy and equitable communities.

Table 5.8-5 (continued)
Project Consistency with the 2020-2045 RTP/SCS

SCAG Goals	Consistency Analysis
Goal 7: Adapt to a changing climate and support an integrated regional development pattern and transportation network.	Not applicable. This is not a project-specific policy and is therefore not applicable.
Goal 8: Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	Not applicable. This is not a project-specific policy and is therefore not applicable.
Goal 9: Encourage development of diverse housing types in areas that are supported by multiple transportation options.	Consistent. Implementation of the General Plan Update would allow for a variety of housing types at varying densities, especially within the Hawthorne Boulevard Specific Plan area, which would be supported by a variety transportation options, including local bus routes.
Goal 10: Promote conservation of natural and agricultural lands and restoration of habitats.	Not applicable. The Planning Area is urbanized and fully developed. The Planning Area does not include any natural or agricultural lands.
Source: Southern California Association of Governments, Connect SoCal – The Regional Transportation Plan/Sustainable Communities Strategy, 2020.	

Compliance with applicable State standards would ensure consistency with State and regional GHG reduction planning efforts. The goals stated in the 2020 RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in Table 5.8-5, the proposed Project would be consistent with the stated goals of the 2020 RTP/SCS. Therefore, the proposed Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

Conclusion

In order to further reduce GHG emissions associated with buildout of the General Plan Update, the City has included numerous goals, policies and actions in the General Plan Update aimed at reducing GHG emissions and promoting sustainability in the Planning Area. The General Plan Update proposes goals, policies and actions that are specifically relevant to climate change and GHG emissions and energy consumption within the Planning Area. Specifically, the General Plan Update Resources Management Element includes Policy RM-4.1, which supports regional efforts, including those organized through the SCAQMD, SCAG, the SBCCOG, and CARB to implement the regional AQMP. Policy RM-4.3 aligns the City's local GHG reduction targets with the statewide GHG reduction targets of AB 32, and aligns the City's GHG reduction goal with the Statewide GHG reduction goal of Executive Order S-03-05. Policy RM-4.9 requires the City to consider and adopt new local policies and programs that would help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan. Additionally, Action RM-4a requires the City to Implement the local GHG reduction measures identified in the City of

Lawndale CAP, participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts, develop a Climate Action Team to support and guide the City's efforts to conserve energy and reduce emissions, and work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Furthermore, numerous policies and programs in the General Plan Update address sustainable development, which influence operational mobile, energy, and area-source emissions in the Planning Area. For example, the proposed Resource Management Element Policy RM-4.6 encourages and incentivizes higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. Additional policies and actions throughout the Land Use and Mobility Elements promote reductions in VMT through the mix and density of land uses, walkable neighborhood design, bicycle facilities and infrastructure, the expansion of trail networks, and public transportation facilities and infrastructure. Specifically, the proposed Land Use Element includes Policy LU-1.1 which promotes an appropriate land use plan that promotes efficient development and multiple transportation options. The proposed Mobility Element contains Policy M-3.1, which requires the City to apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities); Policy M-3.2, which requires the City to pursue multi-modal connectivity; Policy M-5.3, which requires new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage; Policy M-6.1, which requires the City to implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles; Policy M-6.2, which requires the City to coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities; Policy M-6.3, which requires the City to allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision. While these policies and actions would further assist the City in reducing GHG emissions, the associated reduction of GHG emissions are not quantifiable. Because of this, the City cannot state with certainty whether implementation of the General Plan Update would meet the 2030 and 2045 community emissions targets.

Overall, the proposed Project would be required to comply with regulations imposed by the State of California and the SCAQMD aimed at the reduction of air pollutant emissions, as described above. While compliance with relevant regulations and implementation of the proposed General Plan Updates' goals, policies and actions would reduce GHG emissions, the associated reductions of GHG emissions are not quantifiable. Therefore, it cannot be guaranteed that the implementation of the General Plan Update, as well as the individual development projects associated with implementation of the proposed Project, would generate emissions consistent with the State's long-term goals for reducing GHG emissions in the State of California, particularly the net-zero target as promulgated under AB 1279. As such, the City cannot state with certainty whether implementation of the General Plan Update would meet the State's community emissions target. The proposed Project would have a cumulatively significant and unavoidable adverse impact in regards to greenhouse gas emissions.

Proposed General Plan Update Goals, Policies, and Actions:

LAND USE ELEMENT

Policy LU-1.1: **Sustainable Land Use Pattern.** Provide an appropriate land use plan that promotes efficient development; fosters and enhances community livability and public health; sustains economic vitality; promotes efficient development and multiple transportation options; reduces pollution, greenhouse gas emissions, and the expenditure of energy and other resources; and ensures compatibility between uses consistent with the land use designations identified in this Element and Land Use Map (LU-1).

Policy LU-1.2 **Balance Jobs and Housing.** Balance levels of employment and housing within the community to provide more opportunities for Lawndale residents to work locally, reduce commute times, and improve air quality.

Policy LU-1.4: **Commercial Corridors.** Encourage development of well-maintained, functional, and appropriate commercial, retail, and employment opportunities in stand-alone and mixed-use formats, particularly along Hawthorne Boulevard, major arterials, and at major intersections where there is maximum visibility and access.

MOBILITY ELEMENT

Policy M-3.1: **Complete Streets for Roadway Projects.** Apply Complete Streets principles to all transportation improvements projects (e.g. safety, intelligent transportation systems, roads and intersections widening, transit facilities).

Policy M-3.2: **Multimodal Connectivity.** Link activity centers, employment centers, public facilities, and schools to transit and active transportation facilities, wherever feasible.

Policy M-5.1 **Transit Use.** Support programs encouraging public transit use by people living in, working in, or visiting Lawndale.

Policy M-5.2 **Improve Local Public Transit Services.** Work with Metro, Lawndale Beat Bus, and other local public transit providers to plan and improve local transit service and transit facilities, including bus stops, in the City.

Policy M-5.3: **Transit Facilities.** Require new developments to construct, when appropriate, transit facilities, including bus turn-outs, lighted bus shelters, and route information signage.

Action M-5a Continue on-going coordination with transit authorities toward the expansion of transit facilities.

Policy M-6.1: **Bicycle Master Plan.** Implement the South Bay Bicycle Master Plan within City limits to provide active transportation facilities that can serve as an alternative to automobiles, including the Plan's facility recommendations as shown in Figure M-2.

Policy M-6.2: **Local Travel Network.** Coordinate with the South Bay Cities Council of Governments to promote local micromobility modes by implementing the Local Travel Network plan and supporting efforts to integrate the network with adjacent cities, as shown in Figure M-3.

Policy M-6.3: **Hawthorne Boulevard Sidewalks.** Allow for modified sidewalk standards and encourage enhanced pedestrian amenities along Hawthorne Boulevard to reflect the corridors unique character and land use vision.

Policy M-6.4: **Sidewalk and Bikeway Gaps.** Create a connected and complete active transportation network by identifying and eliminating gaps in sidewalks and bikeways.

Policy M-6.5: **Bicycle/Pedestrian Facilities at New Developments.** Require new residential and non-residential developments in the City to provide safe and attractive bicycle and pedestrian facilities, such as secure bicycle parking, pedestrian-scale lighting, street furniture, landscaping, and other improvements.

Policy M-6.6: **Effects of New Technologies on Active Transportation.** Monitor the development of mobility new technologies and the potential effects on designing a transportation network that accommodates all modes and users.

Action M-6a As part of development review and specific plans, review any existing gaps in active transportation infrastructure that inhibit mobility.

Action M-6b Implement the South Bay Bicycle Master Plan when roadways are being rehabilitated or resurfaced, as funding allows.

Action M-6c Review and update the City's Municipal Code, as necessary to consider bicycle and pedestrian access as part of the site plan review for new development projects.

Policy M-9.2: **Transportation Demand Management.** Require transportation demand management (TDM) strategies as mitigation measures for new projects that exceed the City's thresholds Vehicle Miles Traveled impact thresholds.

Policy M-9.3 **Regional Coordination.** Encourage regional agencies such as Metro, South Coast Air Quality Management District (SCQAMD), and the South Bay Cities Council of Governments to promote TDM programs that reduce single occupancy vehicle travel.

Policy M-9.4 **New Development.** Work with developers to reduce greenhouse gas emissions and minimize congestion related to new development through improvements to the circulation system and on-site improvements that encourage public and active modes of travel.

Action M-9a Review and update the City's Municipal Code and related implementation documents, as necessary, to reflect TDM best practices.

Action M-9b Require developments that are approved based on TDM plans to incorporate monitoring and enforcement of TDM targets as part of those plans.

RESOURCE MANAGEMENT ELEMENT

Goal RM-4: **Air Quality and Greenhouse Gas Emissions.** Improved air quality in Lawndale and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.

Policy RM-4.1: **Regional Cooperation**. Support regional efforts, including those organized through the South Coast Air Quality Management District (SCAQMD), the Southern California Association of Governments (SCAG), the South Bay Cities Council of Governments (SBCCOG), and the California Air Resource Board (CARB) to implement the regional Air Quality Management Plan.

Policy RM-4.2: **Measurement and Enforcement**. Coordinate with the California Air Resources Board (CARB) and South Coast Air Quality Management District (SCAQMD) to support their ability to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.

Policy RM-4.3: **GHG Emissions.** Align the City's local GHG reduction targets with the statewide GHG reduction targets of Assembly Bill 32, and align the City's GHG reduction goal with the statewide GHG reduction goal of Executive Order S-03-05.

Policy RM-4.4: **Transportation Options**. Promote alternative modes of transportation to reduce vehicular emissions and improve air quality. *(See Mobility Element)*

Policy RM-4.5: **Walkability**. Encourage pedestrian-scale development and pedestrian-friendly design features to reduce vehicle emissions. *(See Mobility Element)*

Policy RM-4.6: **Land Use Planning.** Encourage and incentivize higher density and mixed-use development opportunities within designated areas of the City to lessen the impacts of traffic congestion on local air quality. *(See Land Use Element)*

Policy RM-4.7: **Sensitive Receptors.** Insulate sensitive receptors from areas of heightened air quality pollution by utilizing land use planning to buffer and protect residential areas.

Policy RM-4.8: **Mitigation.** Require the implementation of relevant mitigation measures for all future development upon identification of potential air quality impacts.

Policy RM-4.9: **GHG Reduction.** Consider and adopt new local policies and programs that will help to provide energy efficient alternatives to fossil fuel use and reduce consumption in order to reduce greenhouse gas emissions consistent with the local measures identified in the City of Lawndale Climate Action Plan.

Policy RM-4.10: **Public Engagement**. Promote regional air quality programs in order to inform the public on regional air quality concerns and encourage the engagement of all residents in future planning decisions related to air quality.

Action RM-4a: Implement the local GHG reduction measures identified in the City of Lawndale Climate Action Plan (CAP), participate in future updates of the SBCCOG Climate Action Plan, and perform on-going monitoring and reporting of GHG reduction impacts. Develop a Climate

Action Team to support and guide the City's efforts to conserve energy and reduce emissions. Work with the SBCCOG and/or other local, Regional, State, and Federal agencies or utility to obtain funding necessary to implement, monitor, and report the CAP measures.

Action RM-4b: As applicable, review new industrial and commercial development projects during the CEQA process for potential air quality impacts to residences and other sensitive receptors. Ensure that mitigation measures and best management practices are implemented to reduce significant emissions of criteria pollutants.

Action RM-4c: Review development, infrastructure, and planning projects for consistency with SCAQMD requirements during the CEQA review process. Require project applicants to prepare air quality analyses to address SCAQMD and General Plan requirements, as appropriate, which include analysis and identification of:

1. Air pollutant emissions associated with the project during construction, project operation, and cumulative conditions.
2. Potential exposure of sensitive receptors to toxic air contaminants.
3. Significant air quality impacts associated with the project for construction, project operation, and cumulative conditions.
4. Mitigation measures to reduce significant impacts to less than significant or the maximum extent feasible where impacts cannot be mitigated to less than significant.

Action RM-4d: Work with the South Coast Air Quality Management District, Southern California Association of Governments, the South Bay Cities Council of Governments, and the California Air Resource Board to implement programs aimed at improving regional air quality.

Action RM-4e: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations (CCR), Title 24 standards as well as the energy efficiency standards established by the Lawndale Municipal Code.

Action RM-4f: Provide the necessary facilities and infrastructure to facilitate the use of low or zero-emission vehicles such as electric vehicle charging facilities at key City facilities as operations necessitate and/or as funding becomes available.

Action RM-4g: Evaluate and consider multi-modal transportation benefits to all City employees, such as free or low-cost monthly public transportation (bus) passes. Encourage employer participation in similar programs. Encourage new transit/shuttle services and use.

Action RM-4h: Establish programs that encourage community car-sharing and carpooling.

Action RM-4i: Support the establishment and expansion of a regional network of electric vehicle charging stations and encourage the expanded use of electric vehicles.

Action RM-4j: Encourage multi-family residential and non-residential development to increase the use of higher-albedo materials for surfaces including roofs, parking areas, driveways, roads, and sidewalks. Encourage developments with parking lot areas to shade these areas with vegetation or solar panels when appropriate. Support various programs to plant and maintain trees, which can also contribute to a reduction of urban heat islands.

Action RM-4k: Future development projects will be required to demonstrate consistency with SCAQMD construction emission thresholds. Where emissions from individual projects exceed SCAQMD thresholds, the following actions should be incorporated as necessary to minimize impacts. These measures do not exclude the use of other, equally effective mitigation measures as determined by a project specific Air Quality Assessment.

- Require all off-road diesel equipment greater than 50 horsepower (hp) used for this Project to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a California Air Resources Board Certified Level 3 Diesel Particulate Filter (DPF) or equivalent. The DPF reduces diesel particulate matter and NO_X emissions during construction activities.
- Require a minimum of 50 percent of construction debris be diverted for recycling.
- Require building materials to contain a minimum 10 percent recycled content.
- Require materials such as paints, primers, sealants, coatings, and glues to have a low volatile organic compound concentration compared to conventional products. If low VOC materials are not available, architectural coating phasing should be extended sufficiently to reduce the daily emissions of VOCs.

Action RM-4l: Future development projects will be required to demonstrate consistency with SCAQMD's operational emission thresholds. For projects where operational emissions exceed regulatory thresholds, the following measures may be used to reduce impacts. Note the following measures are not all inclusive and developers have the option to add or substitute measures that are equally or more appropriate for the scope of the project.

- Develop a project specific TDM program for residents and/or employees that provides opportunities for carpool/vanpools.
- Provide onsite solar/renewable energy in excess of regulatory requirements.
- Require that owners/tenants of non-residential or multi-family residential developments use architectural coatings that are 10 grams per liter or less when repainting/repairing properties.
- Require drip irrigation and irrigation sensor units that prevent watering during rain storms.

- Ensure all parking areas are wired for capability of future EV charging and include EV charging stations that exceed regulatory requirements.

Goal RM-5: **Energy Resources.** A community that safely manages its energy resources.

Policy RM-5.1: **Compliance with State Legislation.** Comply with all State requirements regarding the generation of power and encourage energy providers to investigate the use or expansion of renewable sources of energy.

Policy RM-5.2: **Green Building Standards Code.** Ensure that new construction and major redevelopment complies with the most current version of the California Green Building Standards Code.

Policy RM-5.3: **Renewable Energy.** Promote the development and use of renewable energy resources to reduce dependency on fossil fuels.

Policy RM-5.4: **Energy-Efficient Materials.** Promote the use of energy-efficient materials, equipment, and design in public and private facilities and infrastructure.

Policy RM-5.5: **Energy Conservation.** Promote energy conservation and recycling by the public and private sectors.

Policy RM-5.6: **Energy Needs.** Collaborate with local service providers in determining and meeting the needs of the community for energy in clean, modern, and cost-effective ways.

Policy RM-5.7: **Business Community.** Support the decisions of the Lawndale business community as they select and implement the most appropriate, financially feasible, and responsible energy source for their individual operations.

Policy RM-5.8: **Public Education.** Promote public education programs that advocate for reducing energy consumption, and promote renewable sources of energy.

Policy RM-5.9: **Promote Energy Conservation in Existing Building Stock.** Promote energy conservation by residents and businesses in existing structures, in close coordination with other agencies and local energy providers.

Action RM-5a: Implement energy conservation measures in public buildings through the following actions:

a. Promote energy efficient buildings and site design for all new public buildings during the site development permit process; and

b. Install energy saving devices in new public buildings and retrofit existing public buildings.

Action RM-5b: During the development review process, encourage innovative building design, layout, and orientation techniques to minimize energy use by taking advantage of sun/shade patterns, prevailing winds, landscaping and building materials that control energy usage, and solar design.

Action RM-5c: Continue to review development projects to ensure that all new public and private development complies with the California Code of Regulations, Title 24 standards as well as the energy efficiency standards established by the General Plan and the Municipal Code.

Action RM-5d: Promote the CEC Building Energy Benchmarking Program (AB 802) on the City's website to help benchmark and monitor energy use for participating businesses seeking to increase energy efficiency and realize cost savings.

Action RM-5e: Identify and reduce government constraints to installation of renewable energy infrastructure and electric vehicle charging stations, as feasible, through incentives such as, streamlined permitting, and expedited inspection times.

Action RM-5f: Consider participation in a Community Choice Aggregation program, such as Clean Power Alliance, to help meet the City's energy objectives.

Action RM-5g: Use the City's website to promote existing incentivized programs such as Energy Upgrade California, financing programs such as Properly Assessed Clean Energy (PACE), and energy audits through State programs.

Action RM-5h: Partner with SBCCOG and relevant utilities on outreach events and to obtain educational content and promote on the City's website.

Mitigation Measures: There is no feasible mitigation available for this impact.

Level of Significance: Significant Unavoidable Impact.

5.8.6 CUMULATIVE IMPACTS

Section 4.0, *Basis of Cumulative Analysis*, establishes growth and development within Los Angeles County as anticipated by SCAG as having the potential to interact with the proposed Project to the extent that a significant cumulative effect may occur. The cumulative projects' setting for greenhouse gas emissions would be similar for the region and for projects within the City.

Would the Project, combined with other related cumulative projects, generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impact Analysis: The topic of GHG emissions is inherently a cumulative impact. Though significance thresholds can be developed by air districts, as well as State and Federal regulatory agencies, these thresholds and their related goals are ultimately designed to effect change at a global level. As demonstrated in the analysis provided above, it cannot be guaranteed that the proposed Project would be consistent with the 2045 GHG target for the State of California and would therefore have a significant and unavoidable impact, even with the implementation of General Plan Update goals, policies and actions.

Proposed General Plan Update Goals, Policies, and Actions: Refer to the General Plan goals, policies, and actions cited above.

Mitigation Measures: There is no feasible mitigation available for this impact.

Level of Significance: Significant Unavoidable Impact.

5.8.7 SIGNIFICANT UNAVOIDABLE IMPACTS

Implementation of the General Plan Update would result in significant unavoidable GHG impacts.

If the City approves the proposed General Plan Update, the City will be required to make findings in accordance with Section 15091 of CEQA and prepare a Statement of Overriding Considerations for consideration by the City's decisionmakers in accordance with Section 15093 of the CEQA Guidelines.

5.9 HAZARDS AND HAZARDOUS MATERIALS

5.9.1 PURPOSE

This section identifies existing hazards and hazardous materials sites within the Planning Area and provides an analysis of potential impacts associated with implementation of the General Plan Update.

For the purpose of this analysis, the term "hazardous material" refers to both hazardous substances and hazardous waste. A material is defined as "hazardous" if it appears on a list of hazardous materials prepared by a Federal, tribal, State, or local regulatory agency, or if it possesses characteristics defined as "hazardous" by such an agency. A "hazardous waste" is a solid waste that exhibits toxic or hazardous characteristics (i.e., ignitability, corrosivity, reactivity, and/or toxicity). Other hazards, such as potential airport-related safety hazards for people residing/working in the Planning Area, interference with an adopted emergency response plan, and exposure of people/structures to risk involving wildland fires, are also addressed in this section.

5.9.2 ENVIRONMENTAL SETTING

HAZARDOUS MATERIALS AND WASTE

Hazardous Materials

A hazardous material is a substance or combination of substances which, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may either (1) cause or significantly contribute to an increase in mortality or an increase in serious, irreversible, or incapacitating irreversible illness; or (2) pose a substantial present or potential hazard to human health and safety, or the environment when improperly treated, stored, transported, or disposed of. Hazardous materials are mainly present because of industries involving chemical byproducts from manufacturing, petrochemicals, and hazardous building materials.

Hazardous Waste

Hazardous waste is the subset of hazardous materials that have been abandoned, discarded, or recycled and is not properly contained, including contaminated soil or groundwater with concentrations of chemicals, infectious agents, or toxic elements sufficiently high to increase human mortality or to destroy the ecological environment. If a hazardous material is spilled and cannot be effectively picked up and used as a product, it is considered to be hazardous waste. If a hazardous material site is unused, and it is obvious there is no realistic intent to use the material, it is also considered to be a hazardous waste. Examples of hazardous materials include flammable and combustible materials, corrosives, explosives, oxidizers, poisons, materials that react violently with water, radioactive materials, and chemicals.

Transportation of Hazardous Materials

The transportation of hazardous materials within California is subject to various Federal, State, and local regulations. The City has no direct authority to regulate the transport of hazardous materials on State highways or rail lines. Transportation of hazardous materials by truck and rail is regulated by the U.S.

Department of Transportation (DOT). DOT regulations establish criteria for safe handling procedures. It is illegal to transport explosives or inhalation hazards on any public highway not designated for that purpose, unless the use of the highway is required to permit delivery, or the loading of such materials (California Vehicle Code Section 31602(b), 32104(a)). The California Highway Patrol (CHP) designates through routes to be used for the transportation of hazardous materials. Transportation of hazardous materials is restricted to these routes except in cases where additional travel is required from that route to deliver or receive hazardous materials to and from users.

HAZARDOUS SITES

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies, and developers to comply with the California Environmental Quality Act (CEQA) requirements in providing information about the location of hazardous materials release sites. Government Code Section 65962.5 requires the California Environmental Protection Agency (Cal EPA) to develop at least annually an updated Cortese List. The DTSC is responsible for a portion of the information contained in the Cortese List. Other State and local government agencies are required to provide additional hazardous material release information for the Cortese List.

The Cortese List is comprised of information from the following:

EnviroStor Data Management System

The California Department of Toxic Substances Control (DTSC) maintains the EnviroStor Data Management System, which provides information on hazardous waste facilities (both permitted and corrective action) as well as any available site cleanup information. This site cleanup information includes: Federal Superfund Sites (NPL), State Response Sites, Voluntary Cleanup Sites, School Cleanup Sites, Corrective Action Sites, Tiered Permit Sites, and Evaluation/Investigation Sites. The hazardous waste facilities include: Permitted–Operating, Post-Closure Permitted, and Historical Non-Operating.

There are four site locations with an address in the Planning Area listed in the EnviroStor database (DTSC 2023a). Of these, one site has a listed cleanup status of No Action (AM Transportation, 15309 Fonthill Avenue); one site has a listed cleanup status of No Further Action (Smith Elementary School, 14609 Grevillea Avenue); and two sites have a listed cleanup status of “Refer: 1248 Local Agency” (Cashman Property, 15201-15211 Hawthorne Boulevard; Classic Cleaners/South Bay Place, 4427 Redondo Beach Boulevard). A “No Action” determination is made for sites where a screening (e.g., Phase I Environmental Site Assessment) resulted in no “recognized environmental conditions” existing that would warrant further investigation. A “No Further Action” determination is made for sites where field sampling analysis demonstrated that the site poses no significant risk to human health or the environment. The two sites with a Referral status are described further below.

The first referral site is the location of the Cashman Property located at 15201-15211 Hawthorne Boulevard. The Cashman Property site was identified as of August 15, 2002 and is listed as “Evaluation” with cause of contamination not specified. The site has since been developed with a Smart & Final Extra and other retail/restaurant uses. The second referral site is the location of Classic Cleaners/South Bay Place located at 4427 Redondo Beach Boulevard. The Classic Cleaners/South Bay Place site was identified as of February 2, 2000 and is listed as “Evaluation” with cause of contamination not specified. Tenant

space was formerly occupied by a dry cleaner, which had received notification of the action. According to an SB 1248 Notification for the site dated January 27, 2000, a remedial action agreement with the responsible party was proposed and the Los Angeles County Fire Department (LACoFD) provided local oversight.

GeoTracker

GeoTracker is the California State Water Resource Control Board's (SWRCB's) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense, Site Cleanup Program).

There are 27 locations within the Planning Area that are listed in the GeoTracker database for Leaking Underground Storage Tanks (LUST). Table 5.9-1, *Geotracker Database Sites*, lists the site name for LUSTs in the Planning Area, and the status of each site. As shown in Table 5.9-1, the vast majority of LUST sites in the Planning Area have a status of Completed – Case Closed. However, three locations have open cases undergoing remediation.

Table 5.9-1

Solid Waste Information System (SWIS)

The Solid Waste Information System (SWIS) is a database of solid waste facilities that is maintained by California's Department of Resources Recycling and Recovery (CalRecycle). The SWIS database identifies active, planned and closed sites. There is one facility listed in the SWIS database located within the Planning Area (CalRecycle 2023). The facility is a Limited Volume Transfer Operation (Solid Waste Operation class) located at 4055 Marine Avenue, which is a facility for Los Angeles County's Road Maintenance Division. The site is active and handles mixed municipal, construction/demolition, and green materials waste generated by Los Angeles County operations.

HAZARDS FROM AIR TRAFFIC

In Los Angeles County, the Regional Planning Commission has the responsibility for acting as the Airport Land Use Commission (ALUC) and for coordinating the airport planning of public agencies within the County (Los Angeles County ALUC 2004). ALUC is required to adopt airport land use compatibility plans to protect and promote the safety and welfare of airport users and residents in the airport vicinity. Specifically, these plans seek to protect the public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public use airports. ALUC is also concerned with airport activities which may adversely affect adjacent areas and nearby land use which may interfere with airport operations.

There are several public, private, and military airports that operate within Los Angeles County. The nearest airports to Lawndale are the Hawthorne Municipal Airport and the Los Angeles International Airport (LAX). According to the Los Angeles County ALUC, Lawndale is not located within the Hawthorne Municipal Airport Influence Area or the LAX Airport Influence Area. Furthermore, the National Transportation Safety Board (NTSB) Aviation Accident Database does not identify any historical aircraft accidents in Lawndale (NTSB 2023).

Regional Airport Facilities

Los Angeles International Airport (LAX): LAX is located in the City of Los Angeles, approximately 2.5 miles northwest of the City of Lawndale. It is the primary international airport serving Los Angeles and its surrounding metropolitan area. LAX is owned by the City of Los Angeles and operated by the airport authority Los Angeles World Airports (LAWA). In 2004, the LAX Master Plan was adopted in order to

address the pressing need for modernization and improved levels of service, as well as the demand for increased security. The LAX Master Plan sets forth land use compatibility policies that are intended to ensure that future land uses in the surrounding area will be compatible with potential long-range aircraft activities at the airport, and that the public's exposure to safety hazards and noise impacts are minimized.

Hawthorne Municipal Airport: Hawthorne Municipal Airport, also known as Jack Northrop Field, is an FAA-designated general aviation reliever airport owned by the City of Hawthorne. The airport is located approximately 1.5 miles northeast of the City of Lawndale, adjacent to the 105 Freeway.

Compton/Woodly Airport: The Compton/Woodly Airport is a public use general aviation airport owned and operated by the County of Los Angeles. The airport is located approximately 5 miles east of Lawndale in the City of Compton.

Torrance Municipal Airport/Zamperini Field: Torrance Municipal Airport, also known as Zamperini Field, is a general aviation airport owned and operated by the City of Torrance. The airport is located approximately 4.5 miles south of Lawndale in the City of Torrance.

Santa Monica Airport: Santa Monica Municipal Airport is a general aviation airport in the City of Santa Monica, approximately 10 miles northwest of Lawndale.

Long Beach Airport (LGB): Long Beach Airport is located in the City of Long Beach. This airport is categorized as a primary commercial service airport by the National Plan of Integrated Airport Systems. The Long Beach Airport is approximately 11 miles southeast of Lawndale.

Hollywood Burbank Airport (BUR): Hollywood Burbank Airport is located in Burbank, California, northwest of downtown Los Angeles and approximately 21 miles north of Lawndale. It is limited to a small number of passenger airlines and serves the greater Los Angeles area, including the San Fernando and San Gabriel Valleys.

John Wayne Airport (SNA): John Wayne Airport is located to the southwest of the Planning Area, in the city of Santa Ana, in the northern part of Orange County. It offers limited international service. The National Plan of Integrated Airport Systems categorizes this airport as a primary commercial service airport, since it has over 10,000 passenger boardings per year. The John Wayne Airport is approximately 31 miles southeast of Lawndale.

OTHER POTENTIAL HAZARDS

Wildland Fire Hazards

The State has charged the California Department of Forestry and Fire Protection (CAL FIRE) with the identification of Fire Hazard Severity Zones (FHSZ) within State Responsibility Areas (SRA). In addition, CAL FIRE must recommend Very High Fire Hazard Severity Zones (VHFHSZ) identified within any Local Responsibility Areas (LRA). The FHSZ maps are used by the State Fire Marshall as a basis for the adoption of applicable building code standards. According to Los Angeles County's and CAL FIRE's FHSZ maps, there are no FHSZs in LRA or SRA within the Planning Area (Los Angeles County 2023; CAL FIRE 2023). This topic is discussed in detail in Section 5.20, *Wildfire* of this EIR.

Asbestos-Containing Materials (ACM)

Asbestos, a natural fiber used in the manufacturing of different building materials, has been identified as a human carcinogen. Most friable (i.e., easily broken or crushed) asbestos-containing materials (ACM) were banned in building materials by 1978. By 1989, most major manufacturers had voluntarily removed non-friable ACM (i.e., flooring, roofing, and mastics/sealants) from the market. These materials, however, were not banned completely. The Planning Area includes existing development from and prior to the 1960s; therefore, the presence of ACM is likely in some structures.

Lead-Based Paint

Lead-based paint has been identified by the Occupational Safety and Health Administration (OSHA), the Environmental Protection Agency (EPA), and the Department of Housing and Urban Development (HUD) as a potential health risk to humans, particularly children, based on its effects to the central nervous system, kidneys, and bloodstream. The risk of lead-based paint has been classified by HUD based upon the age and condition of the painted surface. The Planning Area includes existing development from and prior to the 1960s; therefore, the presence of lead-based paint is likely in some structures.

EMERGENCY RESPONSE

The General Plan Public Safety Element establishes goals and policies specific to emergency preparedness. The overall goal for emergency preparedness is to improve the ability of the City to respond effectively to natural and human-caused emergencies. This includes through implementation of plans and programs that directly relate to the goals of the Public Safety Element, such as the City of Lawndale all-hazards Emergency Operations Plan.

The City of Lawndale Emergency Operations Plan (EOP) was adopted in 2011 and updated in 2015. The EOP addresses the City's planned response to natural or human-caused disasters, provides an overview of operational concepts, and identifies components of the City's emergency/disaster management organization within the Standardized Emergency Management System (SEMS), the National Incident Management System (NIMS) and the Incident Command System (ICS). The EOP also describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support.

5.9.3 REGULATORY SETTING

FEDERAL

Aviation Act of 1958

The Federal Aviation Act resulted in the creation of the Federal Aviation Administration (FAA). The FAA is charged with the creation and maintenance of a National Airspace System.

Federal Aviation Regulations (CFR, Title 14)

The Federal Aviation Regulation establish regulations related to aircraft, aeronautics, and inspection and permitting.

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: National Ambient Air Quality Standards (NAAQS) for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

Clean Water Act

The Clean Water Act (CWA), which amended the Water Pollution Control Act (WPCA) of 1972, sets forth the Section 404 program to regulate the discharge of dredged and fill material into Waters of the United States and the Section 402 National Pollutant Discharge Elimination System (NPDES) to regulate the discharge of pollutants into Waters of the United States. The Section 401 Water Quality Certification program establishes a framework of water quality protection for activities requiring a variety of Federal permits and approvals (including CWA Section 404, CWA Section 402, Federal Energy Regulatory Commission Hydropower and Section 10 of the Rivers and Harbors Act).

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) introduced active Federal involvement to emergency response, site remediation, and spill prevention, most notably the Superfund program. The Act was intended to be comprehensive in encompassing both the prevention of, and response to, uncontrolled hazardous material releases. CERCLA deals with environmental response, providing mechanisms for reacting to emergencies and to chronic hazardous material releases. In addition to establishing procedures to prevent and remedy problems, it establishes a system for compensating appropriate individuals and assigning appropriate liability. It is designed to plan for and respond to failure in other regulatory programs and to remedy problems resulting from action taken before the era of comprehensive regulatory protection.

Environmental Protection Agency

The primary regulator of hazards and hazardous materials is the EPA, whose mission is to protect human health and the environment. The City of Lawndale is located within EPA Region 9, which includes Arizona, California, Hawaii, and New Mexico.

Hazardous Materials Transportation Act

The Hazardous Materials Transportation Act, as amended, is the statute regulating hazardous materials transportation in the United States. The purpose of the law is to provide adequate protection against the risks to life and property inherent in transporting hazardous materials in interstate commerce. This law gives the U.S. Department of Transportation (DOT) and other agencies the authority to issue and enforce rules and regulations governing the safe transportation of hazardous materials.

Natural Gas Pipeline Safety Act

The Natural Gas Pipeline Safety Act authorizes the U.S. Department of Transportation Office of Pipeline Safety to regulate pipeline transportation of natural (flammable, toxic, or corrosive) gas and other gases

as well as the transportation and storage of liquefied natural gas. The Office of Pipeline Safety regulates the design, construction, inspection, testing, operation, and maintenance of pipeline facilities. While the Federal government is primarily responsible for developing, issuing, and enforcing pipeline safety regulations, the pipeline safety statutes provide for State assumption of the intrastate regulatory, inspection, and enforcement responsibilities under an annual certification. To qualify for certification, a state must adopt the minimum Federal regulations and may adopt additional or more stringent regulations as long as they are not incompatible.

Resource Conservation and Recovery Act

This act established EPA's "cradle to grave" control (generation, transportation, treatment, storage and disposal) over hazardous materials and wastes. In California, the DTSC has RCRA authorization.

STATE

Airport Land Use Commission Law (Public Utilities Code Section 21670 et seq.)

The law, passed in 1967, authorized the creation of ALUCs in California. Per the Public Utilities Code, the purpose of an ALUC is to protect public health, safety, and welfare by encouraging orderly expansion of airports and the adoption of land use measures that minimizes exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses (Public Utilities Code Section 21670). Furthermore, each ALUC must prepare an Airport Land Use Compatibility Plan (ALUCP). Each ALUCP, which must be based on a twenty-year planning horizon, should focus on broadly defined noise and safety impacts.

Assembly Bill 337

Per AB 337, local fire prevention authorities and CAL FIRE are required to identify VHFHSZ in LRA. Standards related to brush clearance and the use of fire-resistant materials in FHSZ are also established.

California Code of Regulations

Title 3 of the California Code of Regulations (CCR) pertains to the application of pesticides and related chemicals. Parties applying regulated substances must continuously evaluate application equipment, the weather, the treated lands and all surrounding properties. Title 3 prohibits any application that would:

- Contaminate persons not involved in the application;
- Damage non-target crops or animals or any other public or private property; and
- Contaminate public or private property or create health hazards on said property.

Title 8 of the CCR establishes California Occupational Safety and Health Administration (Cal OSHA) requirements related to public and worker protection. Topics addressed in Title 8 include materials exposure limits, equipment requirements, protective clothing, hazardous materials, and accident prevention. Construction safety and exposure standards for lead and asbestos are set forth in Title 8.

Title 14 of the CCR establishes minimum standards for solid waste handling and disposal.

Title 17 of the CCR establishes regulations relating to the use and disturbance of materials containing naturally occurring asbestos.

Title 19 of the CCR establishes a variety of emergency fire response, fire prevention, and construction and construction materials standards.

Title 22 of the CCR sets forth definitions of hazardous waste and special waste. The section also identifies hazardous waste criteria and establishes regulations pertaining to the storage, transport, and disposal of hazardous waste.

Title 26 of the CCR is a combination of State regulations pertaining to hazardous materials and waste that are presented in other regulatory sections. Title 26 mandates specific management criteria related to hazardous materials identification, packaging, and disposal. In addition, Title 26 establishes requirements for hazardous materials transport, containment, treatment, and disposal. Finally, staff training standards are set forth in Title 26.

Title 27 of the CCR sets forth a variety of regulations relating to the construction, operation, and maintenance of the state's landfills. The title establishes a landfill classification system and categories of waste. Each class of landfill is constructed to contain specific types of waste (household, inert, special, and hazardous).

California Department of Transportation

Caltrans has adopted policy and guidelines relating to traffic noise as outlined in the Traffic Noise Analysis Protocol (Caltrans 2020). The noise abatement criteria specified in the protocol are the same as those specified by the Federal Highway Administration (FHWA).

California Government Code Section 65302

This section, which establishes standards for developing and updating General Plans, includes fire hazard assessment and Safety Element content requirements.

California Health and Safety Code

Division 11 of the Health and Safety Code establishes regulations related to a variety of explosive substances and devices, including high explosives and fireworks. Section 12000 et seq. establishes regulations related to explosives and explosive devices, including permitting, handling, storage, and transport (in quantities greater than 1,000 pounds).

Division 12 establishes requirements for buildings used by the public, including essential services buildings, earthquake hazard mitigation technologies, school buildings, and postsecondary buildings. Section 13000 et seq. establishes State fire regulations and broadly applicable regulations, such as standards for buildings and fire protection devices, in addition to regulations for specific land uses, such as childcare facilities and high-rise structures.

Division 20 establishes DTSC authority and sets forth hazardous waste and underground storage tank regulations. In addition, the division creates a state superfund framework that mirrors the Federal program.

Division 26 establishes California Air Resources Board (CARB) authority. The division designates CARB as the air pollution control agency per Federal regulations and charges the Board with meeting Clean Air Act requirements.

California Vehicle Code Section 31600 (Transportation of Explosives)

This code establishes requirements related to the transportation of explosives in quantities greater than 1,000 pounds, including licensing and route identification.

California Public Resources Code

The State's Fire Safety Regulations are set forth in Public Resources Code Section 4290, which include the establishment of SRA.

Public Resources Code Section 4291 sets forth defensible space requirements, which are applicable to anyone who "…owns, leases, controls, operates, or maintains a building or structure in, upon, or adjoining a mountainous area, forest-covered lands, brush-covered lands, grass-covered lands, or land that is covered with flammable material" (Section 4291(a)).

Food and Agriculture Code

Division 6 of the California Food and Agriculture Code establishes pesticide application regulations. The division establishes training standards for pilots conducting aerial applications as well as permitting and certification requirements.

State Oversight of Hazards and Hazardous Materials

The DTSC is primarily responsible for regulating the handling, use, and disposal of toxic materials. The SWRCB regulates discharge of potentially hazardous materials to waterways and aquifers and administers the basin plans for groundwater resources in the various regions of the state. The Regional Water Quality Control Board (RWQCB) oversees surface and groundwater. Programs intended to protect workers from exposure to hazardous materials and from accidental upset are covered under OSHA at the Federal and state level (Cal OSHA) and the California Department of Health Services (DHS) at the state level. Air quality is regulated through CARB and the South Coast Air Quality Management District (SCAQMD). The State Fire Marshal is responsible for the protection of life and property through the development and application of fire prevention engineering, education, and enforcement; CAL FIRE provides fire protection services for State and privately-owned wildlands.

Water Code

Division 7 of the California Water Code, commonly referred to as the Porter-Cologne Water Quality Control Act, created the SWRCB and the RWQCB. In addition, water quality responsibilities are established for the SWRCB and RWQCBs.

LOCAL

South Coast Air Quality Management District (SCAQMD) Rule 1403

The purpose of SCAQMD's Rule 1403 is to specify work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials (ACM). The requirements for demolition and renovation activities include asbestos surveying, notification, ACM removal procedures and time schedules, ACM handling and clean-up procedures, and storage, disposal, and landfilling requirements for asbestos-containing waste

materials (ACWM). All operators are required to maintain records, including waste shipment records, and are required to use appropriate warning labels, signs, and markings.

Certified Unified Program Agency

The Certified Unified Program Agencies (CUPA) consolidates, coordinates, and makes consistent hazardous materials and hazardous waste programs (program elements). The Los Angeles County Fire Department (LACoFD) Health Hazardous Materials Division is the CUPA within Los Angeles County, including the City of Lawndale (LACoFD 2023). The Health Hazardous Materials Division administers the following programs:

- Hazardous Waste Generator Program;
- Hazardous Materials Release Response Plans and Inventory Program;
- California Accidental Release Prevention Program;
- Aboveground Storage Tank Program; and
- Underground Storage Tank Program.

The mission of the LACoFD Health Hazardous Materials Division is to protect the public health and the environment throughout Los Angeles County from accidental releases and improper handling, storage, transportation, and disposal of hazardous materials and wastes through coordinated efforts of inspections, enforcement, site mitigation oversight, and emergency response. The Health Hazardous Materials Division provides 24-hour emergency services in response to hazardous materials spills or releases and abandonment.

Los Angeles County Department of Public Health, Environmental Health Division

The Los Angeles County Department of Public Health, Environmental Health Division is responsible for the enforcement and education of Federal, State, and local laws and regulations relating to environmental factors which affect public health and safety. The Environmental Health Division is made up of five branches, including District Surveillance and Enforcement, Specialized Surveillance and Enforcement, Environmental Protection, Toxicology and Environmental Assessment, and Division Support.

Los Angeles County Operational Area Emergency Response Plan

The purpose of the Los Angeles County Operational Area Emergency Response Plan (OAERP) is to increase cooperation and coordination between relevant governmental agencies and jurisdictions in order to increase efficiency and minimize losses in the event of an emergency or disaster. The OAERP established the Operational Area (OA) emergency organization, identifies departmental responsibilities, and specifies policies and general procedures for addressing emergencies impacting the OA. This Plan provides for the coordination of emergency operations plans of agencies and jurisdictions. The OAERP conforms to the requirements of the National Incident Management System (NIMS) and the California Standardized Emergency Management System (SEMS).

County of Los Angeles All-Hazard Mitigation Plan (AHMP)

The 2020 County of Los Angeles All-Hazard Mitigation Plan (AHMP) conforms to the requirements of Federal Emergency Management Agency (FEMA) Disaster Mitigation Act of 2000. The 2020 AHMP replaces the AHMP that was approved in 2014. The County developed the 2020 AHMP to cover mitigation responsibilities of County departments (including LACoFD). It helps ensure the most effective allocation of resources for the maximum benefit and protection of the public in time of emergency.

Los Angeles County Airport Comprehensive Land Use Plan

The Los Angeles County Airport Comprehensive Land Use Plan (ACLUP) was originally adopted in 1991 and revised in 2004. The purpose of the ACLUP is to protect the public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public use airports. The basic function of the County ACLUP is to promote compatibility between airports and the land uses that surround them. It establishes policies applicable to land use compatibility planning for the areas surrounding airports in the County.

City of Lawndale Local Hazard Mitigation Plan (LHMP)

The City adopted the LHMP in 2016 to assess natural hazard risk and incorporate mitigation strategies to reduce the potential impact from hazards. It complies with the Federal Disaster Mitigation Act (2000), and Federal Register 44 CFR Parts 201 and 206. The City's Emergency Preparedness Coordinator managed preparation of the LHMP in cooperation with the City's other departments, community stakeholders, partner jurisdictions, agencies and organizations, and members of the public.

City of Lawndale Emergency Operations Plan (EOP)

The City adopted the EOP in 2011, which was updated in 2015. The EOP addresses the City's planned response to natural or human-caused disasters, provides an overview of operational concepts, and identifies components of the City's emergency/disaster management organization within the Standardized Emergency Management System (SEMS), the National Incident Management System (NIMS) and the Incident Command System (ICS). The EOP also describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support.

City of Lawndale Municipal Code

Lawndale Municipal Code Chapter 2.44, *Disaster Council*, provides for the preparation and carrying out of plans for the protection of persons and property within the City in the event of an emergency; the direction of the emergency organization; and the coordination of the emergency functions of the City with all other public agencies, corporations, organizations and affected private persons.

Municipal Code Chapter 8.16*, Hazards Generally*, adopts and incorporates the General Hazards Ordinance of the County of Los Angeles (Los Angeles County Ordinance No. 96-0017) as the general hazards code of the City.

Municipal Code Chapter 8.28, *Solid Waste – Collection and Management*, establishes protocols for the proper collection and disposal of solid waste, including hazardous materials.

Municipal Code Chapter 10.50, *Truck Routes*, establishes designated truck routes for the primary use of commercial truck traffic through the City of Lawndale, specifically designated for use by licensed vehicles exceeding ten-thousand-pound gross weight.

Municipal Code Title 13, *Public Services*, addresses wastewater and storm drains within the City. Chapter 13.04, *Sanitary Sewers and Industrial Waste* Code, adopts Title 20, Division 2 of the Los Angeles County Code as the Sanitary Sewer and Industrial Waste Ordinance for the City of Lawndale. The ordinance regulates discharges of wastewater, including industrial waste discharges, into sanitary sewers within the City. Chapter 13.12, *Storm Water and Urban Runoff Pollution Control*, establishes stormwater runoff controls and best management practices (BMPs) to prevent and/or reduce the quantity of pollutants from being discharged into the Municipal Separate Storm Sewer System (MS4).

Municipal Code Title 15, *Buildings and Construction*, adopts various uniform building and construction codes and safety precautions, including the California Building Code, the California Residential Code, the California Plumbing Code, the California Electrical Code, the California Mechanical Code, and the California Green Building Standards Code. Chapter 15.20, *Fire Code*, adopts and incorporates the California Fire Code, as amended by Title 32 the Los Angeles County Fire Code, for the purpose of prescribing regulations governing the creation and maintenance of conditions dangerous to life and property due to hazards of fire and explosions. The Fire Code sets fire safety related building standards and practices to safeguard life and property.

Section 17.36.220, *Temporary Storage of Construction Materials*, and Section 17.36.230, *Temporary Storage- City Construction Materials and Other Public Agency Construction Materials*, regulate construction materials and equipment. Particularly, Section 17.36.220 requires construction activities to keep adjacent sidewalks, public streets, and, alleys, to be kept free of trash, dirt, debris, or other material for the duration of the construction, as well as sixty days following substantial completion of such construction. Section 17.36.230 allows property in any zone to be used for the storage of materials, equipment and/or for a contractor's temporary office for any city construction project and/or other public agency construction projects.

5.9.4 SIGNIFICANCE CRITERIA AND THRESHOLDS

Appendix G of the California Environmental Quality Act (CEQA) Guidelines contains the Initial Study Environmental Checklist, which includes questions related to hazards and hazardous materials. The issues presented in the Initial Study Environmental Checklist have been utilized as thresholds of significance in this section. Accordingly, a project may create a significant environmental impact if it would:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials (refer to Impact Statement HAZ-1);
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment (refer to Impact Statement HAZ-2);
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school (refer to Impact Statement HAZ-3);

- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment (refer to refer to Impact Statement HAZ-4);
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area (refer to Impact Statement HAZ-5);
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan (refer to Impact Statement HAZ-6); and/or
- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires (refer to Impact Statement (HAZ-7).

5.9.5 IMPACTS AND MITIGATION MEASURES

HAZ-1: Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Impact Analysis: Many types of businesses utilize various chemicals and hazardous materials, and their routine business operations involve chemicals that are manufactured, warehoused, or transported. Implementation of the General Plan Update would accommodate the future development of both residential and non-residential uses within the Planning Area. Increased development could result in an increase in the routine transport, use, and storage of hazardous materials in the City, potentially resulting in accidental releases. Risk of upset can involve scenarios that could adversely affect the public or the environment through accidental release of hazardous materials. Exposure of persons to hazardous materials could also occur through the operations of future developments associated with the improper handling of hazardous materials/wastes, particularly by untrained personnel; transportation accident; environmentally unsound disposal methods; or fire, explosion, or other emergencies. Typical incidents that could create a hazard involve accidental releases of hazardous materials including accidents during transport causing a “spill” of a hazardous materials and/or natural disasters causing the unauthorized release of a substance. Situated at the hub of a major arterial traffic network, the City of Lawndale is susceptible to hazardous materials spills. If not cleaned up immediately and completely, these and other types of incidents could cause contamination of soil, surface water, and groundwater, in addition to any toxic vapors that might be generated. Human exposure to contaminated soil or water could have potential health effects depending on a variety of factors, including the nature of the contaminant and the degree of exposure.

The use, transportation, and disposal of hazardous materials is regulated and monitored by local fire departments, CUPAs, Cal OSHA, and the DTSC consistent with the requirements of Federal, State, and local regulations and policies. Facilities that store hazardous materials on-site are required to maintain a Hazardous Materials Business Plan in accordance with State regulations. In the event of an accidental release of hazardous materials, the local CUPA (i.e., LACoFD Health Hazardous Materials Division) and emergency management agencies (e.g., Los Angeles County Sheriff’s Department and LACoFD) would respond. All future projects allowed under the General Plan Update would be required to comply with the provisions of Federal, State, and local requirements related to hazardous materials. As future

development and infrastructure projects are considered by the City, each project would be evaluated for potential impacts, specific to the project, associated with hazardous materials as required under CEQA.

In addition to the requirements associated with Federal, State, and local regulations, the General Plan Update includes policies and actions to address potential impacts associated with hazardous materials among other issues. Proposed Mobility Element Policy M-7.1 directs the City to maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads. Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 directs the City to coordinate with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Policy PS-3.6 promotes the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibits the parking of vehicles transporting hazardous materials on City streets. Policy PS-3.7 requires new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible. Policy PS-3.8 directs the City to coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail. Policy PS-3.9 encourages the City to educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c protects the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Action PS-3d directs the City to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home, and to provide informational materials about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

The proposed Resource Management Element Policy RM-2.3 promotes the proper disposal of hazardous waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal. These General Plan Update policies and actions would ensure that potential hazards are identified on a project site, that development is located in areas where potential exposure to hazards and hazardous materials can be mitigated to an acceptable level, and that business operations comply with Federal and

State regulations regarding the use, transport, storage, and disposal of hazardous materials. The General Plan Update also includes policies and actions to ensure that the City has adequate emergency response plans and measures to respond in the event of an accidental release of a hazardous substance. Policy PS-1.3 requires the implementation emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses. Policy PS-1.5 directs the City to support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1b directs the City to implement and update (as necessary) the City's EOP.

As described previously, hazardous materials regulations related to the use, handling, and transport of hazardous materials are codified in Titles 8, 22, and 26 of the CCR, and their enabling legislation set forth in the California Health and Safety Code. These laws were established at the State level to ensure compliance with Federal regulations to reduce the risk to human health and the environment from the routine use of hazardous substances. These regulations must be implemented by employers/businesses, as appropriate, and are monitored by the State (e.g., Cal OSHA in the workplace or DTSC for hazardous waste) and/or the County. The haulers and users of hazardous materials are listed with and regulated and monitored by the DTSC, LACoFD Health Hazardous Materials Division, and County of Los Angeles Department of Public Health, Environmental Health Division. Compliance with the requirements of Federal, State, and local laws and regulations regarding the use and storage of hazardous materials would ensure that risks resulting from the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes associated with implementation of the General Plan Update would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

MOBILITY ELEMENT

Policy M-7.1: **Local Truck Routes.** Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.3: **Hazardous Waste.** Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

PUBLIC SAFETY ELEMENT

Goal PS-1: **Emergency Operations.** A community prepared to provide effective response and recovery efforts in the event of an emergency.

Policy PS-1.1: **Citywide Safety.** Support projects, programs, policies, and regulations that help to mitigate potential impacts associated with natural and man-made hazards.

Policy PS-1.2: **Critical Facilities.** Coordinate with service providers to promote the resilience of critical facilities, lifeline services, and infrastructure, and plan for the use of critical facilities during post-disaster response and recovery.

Policy PS-1.3: **Emergency Preparedness and Response.** Continue to implement emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses.

Policy PS-1.4: **Local Hazard Mitigation.** Regularly maintain and update natural and man-made hazard information relevant to the Lawndale Local Hazard Mitigation Plan.

Policy PS-1.5: **Resources.** Support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies.

Policy PS-1.6: **Emergency Access.** Investigate and seek out opportunities to improve emergency access and circulation throughout the community.

Policy PS-1.7: **Public Safety Education.** Promote public safety education programs to educate on emergency preparedness, reduce accidents, injuries, and fires, and to train members of the public to respond to emergencies.

Policy PS-1.8: **Cooperation.** Collaborate with the school district, businesses, nonprofit organizations, and community members/groups to maintain safety throughout the City.

Action PS-1a: Regularly review and coordinate emergency response procedures with Los Angeles County and State emergency response procedures.

Action PS-1b: Continue to implement and update (when relevant) the City's Emergency Operations Plan.

Action PS-1c: Continue to implement and update (at least every five years) the City's Local Hazard Mitigation Plan.

Action PS-1d: Coordinate with local agencies and organizations to develop and distribute informational brochures and give presentations to civic groups and local schools to educate residents and businesses about appropriate actions to take during an emergency situation.

Action PS-1e: Investigate and pursue available funding sources to fund safety programs, provide services, upgrade/construct facilities, and purchase equipment.

Action PS-1f: Promote after school programs, volunteer programs, and Business and Neighborhood Watch programs to help maintain a safe environment.

Goal PS-3: **Hazardous Materials.** A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: **Compatible Land Uses.** Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: **Safe Residential Uses.** Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: **Emergency Operations.** Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: **Cleanup Sites.** Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: **Monitoring.** Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Policy PS-3.6: **Transportation.** Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

Policy PS-3.7: **Pipelines.** Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

Policy PS-3.8: **Rail Lines.** Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

Policy PS-3.9: **Public Education.** Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Action PS-3d: Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

Action PS-3e: Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HAZ-2: Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Impact Analysis:

Short-Term Construction-Related Accidental Release of Hazardous Materials

The General Plan Update would enable development of new residential and non-residential uses within the Planning Area. Construction activities associated with new development could result in upset and/or accident conditions involving the release of hazardous materials into the environment.

Demolition

Specific development projects have not been identified as part of the General Plan Update. However, future development accommodated through implementation of the General Plan Update could involve the demolition of existing structures and buildings as areas within the City are redeveloped. As discussed above, the Planning Area includes existing development from and prior to the 1960s; therefore, the presence of lead-based paint, ACM, and/or other contaminants, which are typically present in buildings and structures constructed prior to 1978, are likely present in some structures. All demolition that could result in the release of ACMs or lead-based paint would be conducted according to Federal and State regulations which govern the renovation and demolition of structures where ACMs and lead-based paint are present. The National Emission Standards for Hazardous Air Pollutants mandates that building owners conduct an asbestos survey to determine the presence of ACMs prior to the commencement of any remedial work, including demolition. In accordance with SCAQMD Rule 1403, if ACM material is found, abatement of asbestos would be required prior to any demolition activities. If paint is separated from building materials (chemically or physically) during demolition of the structures, the paint waste would be required to be evaluated independently from the building material by a qualified Environmental Professional in accordance with California Code of Regulations Title 8, Section 1532.1. If lead-based paint is found, abatement would be required to be completed by a qualified Lead Specialist prior to any demolition activities. Compliance with existing regulations related to ACM and lead-based paint would reduce potential impacts to a less than significant level.

Soil and Groundwater Contamination in Unknown Contaminated Sites

Future development accommodated through implementation of the General Plan Update could involve grading and excavation activities which could expose construction workers and the public to previously unknown hazardous substances present in the soil or groundwater. Exposure to contaminants could occur if the contaminants migrated to surrounding areas or if contaminated zones were disturbed at the contaminated location. Grading and excavation activities could also reveal previously unidentified underground storage tanks. Although underground storage tank removal activities could pose risks to workers and the public, potential risks would be minimized by managing the tank removal according to existing LACoFD Health Hazardous Materials Division standards. Potential impacts to groundwater would be dependent upon the type of contaminant, the amount released, and depth to groundwater at the time of the release.

The public could also be exposed to hazardous materials if new development or redevelopment were to be located on a current or historical hazardous material site. There are no active hazardous waste facilities cleanup sites within the Planning Area listed in the EnviroStor database. There are three open LUST sites undergoing remediation within the Planning Area. Future development associated with implementation of the General Plan Update would be reviewed at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities that may occur on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the regulatory agencies, such as DTSC and the Los Angeles RWQCB.

In addition to the requirements associated with Federal, State, and local regulations, the General Plan Update includes policies and actions to address potential impacts associated with potentially contaminated sites. Proposed Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Compliance with General Plan Update goals, policies, and actions, and existing regulations would reduce potential impacts involving the release of hazardous materials into the environment as a result of on-site contamination to a less than significant level.

Long-Term Operations-Related Accidental Release of Hazardous Materials

Long-term operational activities associated with new development could result in upset and/or accident conditions involving the release of hazardous materials into the environment. The General Plan Update does not propose site-specific development; thus, specific hazardous materials that could be accidentally released cannot be predicted at this time. Typical incidents that could occur due to the accidental release of hazardous materials include leaking underground storage tanks, spills during transport, pipeline rupture, inappropriate storage or use, and/or natural disasters.

If not cleaned up immediately and completely, these and other types of incidents could cause contamination of soil, surface water, and groundwater, in addition to any toxic fumes that might be generated. Depending on the nature and extent of the contamination, groundwater supplies could become unsuitable for use as a domestic water source. Human exposure to contaminated soil or water could have potential health effects depending on a variety of factors, including the nature of the contaminant and the degree of exposure.

The transport, storage, and handling of hazardous materials by developers, contractors, business owners, and others are required to comply with Federal, State, and local regulations during project construction and operation. Facilities that use hazardous materials are required to obtain permits from the EPA under the RCRA, which gives the EPA the authority to control the generation, transportation, treatment, storage, and disposal of hazardous waste. Additionally, the hazardous materials regulations included in Federal law govern the transportation of hazardous materials. Locally, the LACoFD Health Hazardous Materials Division is the CUPA for Los Angeles County and is responsible for consolidating, coordinating, and making consistent the administrative requirements, permits, inspections, and enforcement activities of State standards regarding the transportation, use, and disposal of hazardous materials in Los Angeles County, including the Planning Area.

The General Plan Update includes policies and actions to address potential accidental exposure of individuals as a consequence of unknown existing environmental contaminants. Proposed Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 coordinates with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Policy PS-3.6 promotes the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibits the parking of vehicles transporting hazardous materials on City streets. Policy PS-3.7 requires new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible. Policy PS-3.8 directs the City to coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail. Policy PS-3.9 encourages the City

to educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Action PS-3d directs the City to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home, and to provide informational materials about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline. Proposed Resource Management Element Policy RM-2.3 promotes the proper disposal of hazardous waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal. Mobility Element Policy M-7.1 directs the City to maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads. Compliance with all applicable Federal, State, and local laws related to the transport, storage, and handling of hazardous materials would reduce the likelihood and severity of accidents, and impacts involving the release of hazardous materials into the environment would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

MOBILITY ELEMENT

Policy M-7.1: **Local Truck Routes.** Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.3: **Hazardous Waste.** Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

PUBLIC SAFETY ELEMENT

Goal PS-3: **Hazardous Materials.** A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: **Compatible Land Uses.** Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: **Safe Residential Uses.** Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: **Emergency Operations.** Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: **Cleanup Sites.** Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: **Monitoring.** Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Policy PS-3.6: **Transportation.** Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

Policy PS-3.7: **Pipelines.** Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

Policy PS-3.8: **Rail Lines.** Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

Policy PS-3.9: **Public Education.** Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Action PS-3d: Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's

website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

Action PS-3e: Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HAZ-3: Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Impact Analysis: The Planning Area is served by a variety of preschools, elementary, middle, and high schools; refer to Section 5.15, *Public Services*, of this EIR. As noted above, future development under the General Plan Update could utilize, transport, store, or dispose of hazardous materials during construction or operation. Excavation and grading activities associated with future development could expose the public to unknown hazardous materials present in soil or groundwater, which would require remediation activities. Remediation, if any, would include potential transport of hazardous materials to an approved landfill facility. As a result, future development within the Planning Area could potentially emit or handle hazardous materials within one-quarter mile of an existing or proposed school.

CEQA Guidelines Section 15186, *School Facilities*, requires that school projects, as well as projects proposed to be located near schools, examine potential health impacts resulting from exposure to hazardous materials, wastes, and substances. Furthermore, permitting requirements for individual hazardous material handlers or emitters would require evaluation and notification where potential hazardous materials handling and emissions could occur in proximity to existing schools.

In addition to the requirements associated with Federal, State, and local regulations, the General Plan Update includes policies and actions to address potential impacts associated with hazardous materials. Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to or near potentially hazardous land uses. Policy PS-3.3 directs the City to coordinate with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Policy PS-3.6 promotes the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibits the parking of vehicles transporting hazardous materials on City streets. Policy PS-3.7 requires new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the

greatest extent possible. Policy PS-3.8 directs the City to coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail. Policy PS-3.9 educates residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Action PS-3d directs the City to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home, and to provide informational materials about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline. Mobility Element Action M-7a directs the City to review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City. Implementation of the safety procedures and regulations mandated by applicable Federal, State, and local laws and the General Plan Update policies and actions would ensure that potential risks resulting from the routine transportation, use, storage, or disposal of hazardous materials or hazardous wastes in proximity to a school associated with implementation of the General Plan Update would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

MOBILITY ELEMENT

Policy M-7.1: **Local Truck Routes.** Maintain a network of local truck routes to facilitate goods movement to regional roads and to discourage the use of residential roads.

Action M-7a: Review and update the City's designated truck routes as needed while considering the potential mobility conflicts and the location of sensitive land uses in the City.

RESOURCE MANAGEMENT ELEMENT

Policy RM-2.3: **Hazardous Waste.** Promote the proper disposal of hazardous waste, including paint, tires, medications, medical sharps, infectious waste, asbestos waste, construction waste, and electronic waste through education, monitoring, and enforcement of proper use, storage, handling, and disposal.

PUBLIC SAFETY ELEMENT

Goal PS-3: **Hazardous Materials.** A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: **Compatible Land Uses.** Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: **Safe Residential Uses.** Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: **Emergency Operations.** Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: **Cleanup Sites.** Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: **Monitoring.** Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Policy PS-3.6: **Transportation.** Promote the routing of vehicles transporting hazardous materials to transportation corridors posing the minimum risk to the public and prohibit the parking of vehicles transporting hazardous materials on City streets.

Policy PS-3.7: **Pipelines.** Require new pipelines or other similar facilities that would transport hazardous materials to avoid residential areas to the greatest extent possible.

Policy PS-3.8: **Rail Lines.** Coordinate with Metro and Burlington Northern and Santa Fe Rail (BNSF) on opportunities to maintain and improve the safety of the transport of hazardous materials by rail.

Policy PS-3.9: **Public Education.** Educate residents and businesses on how to reduce or eliminate the use of hazardous materials and products as well as appropriate disposal methods.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Action PS-3d: Continue to work with the Los Angeles County Public Works Department to implement and advertise the Household Hazardous Waste Collection Program to protect residents from dangers resulting from the use, transport, and disposal of hazardous materials used in the home. Provide informational materials at public locations and links on the City's website about the County's Household Hazardous Waste Collection program, collection facilities, drop-off centers, and the 24-hour Household Hazardous Waste hotline.

Action PS-3e: Continue to coordinate with the California Department of Conservation Division of Oil, Gas, and Geothermal Resources for any development proposed to occur near oil wells.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HAZ-4: Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Impact Analysis: There are no active hazardous waste facilities cleanup sites within the Planning Area listed in the EnviroStor database. There are three open LUST sites undergoing remediation within the Planning Area. Additionally, the Planning Area contains one active facility listed in the SWIS database, a Limited Volume Transfer Operation that handles mixed municipal, construction/demolition, and green materials waste. Future development associated with implementation of the General Plan Update would be evaluated at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities occurring on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the DTSC and the Los Angeles RWQCB prior to construction. These sites comprise the Cortese list, compiled pursuant to Government Code Section 65962.5.

Although site-specific development is not currently proposed, there is the potential that future development associated with implementation of the proposed Project could occur on a site included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 at that time. It is noted that for two of the three LUST sites currently undergoing remediation (16515 Hawthorne Boulevard and 16518 Hawthorne Boulevard), the proposed Project would change the parcels' underlying land use designation from Commercial to Hawthorne Boulevard Specific Plan (HBSP). The HBSP designation is anticipated to accommodate mixed-use development and has the potential to introduce residential uses to these sites. Future site-specific development would be reviewed at the project-level to determine whether any development sites are listed on a hazardous materials site. Any development activities that may occur on documented hazardous materials sites would be required to undergo remediation and cleanup under the supervision of the regulatory agencies, such as DTSC and the Los Angeles RWQCB. Development would be required to comply with the proposed General Plan Update, which includes policies and actions to address potential impacts associated with hazardous materials sites. Proposed Public Safety Element Policy PS-3.1 requires land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses. Policy PS-3.2 discourages the development of residential uses adjacent to

or near potentially hazardous land uses. Policy PS-3.3 directs the City to coordinate with Los Angeles County to review and update, as appropriate, the County's EOP Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City. Policy PS-3.4 requires that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe. Policy PS-3.5 directs the City to monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials. Action PS-3a requires, as part of the development review process, projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level. Action PS-3b requires the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD. Action PS-3c requires the protection of the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals. Compliance with General Plan Update goals, policies, and actions, and existing regulations would reduce potential impacts involving the hazardous materials sites.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-3: **Hazardous Materials.** A community protected from the harmful effects of hazardous materials, hazardous waste, and environmental contamination.

Policy PS-3.1: **Compatible Land Uses.** Require land uses involved in the production, storage, transportation, handling, or disposal of hazardous materials be located and operated in a way to reduce risk to neighboring land uses.

Policy PS-3.2: **Safe Residential Uses.** Discourage the development of residential uses adjacent to or near potentially hazardous land uses.

Policy PS-3.3: **Emergency Operations.** Coordinate with Los Angeles County to review and update, as appropriate, the County's Emergency Operations Plan Hazardous Materials Annex so that the Plan adequately addresses and responds to potential hazardous materials incidents within the City.

Policy PS-3.4: **Cleanup Sites.** Require that developers coordinate with the Los Angeles Department of Public Health, Environmental Health Division and the LACoFD to confirm that hazardous waste cleanup sites located within the City are remediated by the property owner in a manner that keeps the public safe.

Policy PS-3.5: **Monitoring.** Monitor through the planning and business permit processes the operations of businesses and individuals that handle hazardous materials.

Action PS-3a: As part of the development review process, require projects that result in significant risks associated with hazardous materials to include measures to address the risks and reduce the risks to an acceptable level.

Action PS-3b: Require the submittal of information regarding hazardous materials manufacturing, storage, use, transport, and/or disposal by existing and proposed businesses and developments to LACoFD.

Action PS-3c: Protect the community from hazards related to air pollution, hazardous materials, and ground and air transportation by requiring feasible mitigation to be incorporated into new development and redevelopment proposals to address safety impacts associated with those proposals.

Mitigation Measures: No mitigation measures are required

Level of Significance: Less Than Significant Impact.

HAZ-5: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Impact Analysis: There are no airports within the Planning Area. The closest airports to the Planning Area are the Hawthorne Municipal Airport, located approximately 1.5 miles to the northeast, and LAX, located approximately 2.5 miles to the northwest. According to the Los Angeles County ALUC, Lawndale is not located within the Hawthorne Municipal Airport Influence Area or the LAX Airport Influence Area. While the Planning Area is within two miles of a public use airport, it is not within the area identified in an airport land use plan as being adversely affected (i.e., within the Airport Influence Area). As such, impacts with regard to safety hazards to people residing or working in the Planning Area would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions: There are no General Plan Update goals, policies, or actions specific to airports.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

HAZ-6: Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Impact Analysis: The General Plan Update would allow a variety of new residential and non-residential development, which would result in increased jobs and population in the Planning Area. The County OAERP addresses the planned response to extraordinary situations associated with natural disasters and/or human caused incidents, including wildfires, and outlines mutual aid provisions within the Los Angeles County OA. The City's EOP addresses the City's planned response to natural or human-caused disasters and describes the organizational structures, roles, responsibilities, policies and protocols for providing emergency support. The EOP does not provide a specific evacuation route map, as evacuation

measures would be implemented based on the specific emergency and area affected. The General Plan Update incorporates the City's EOP by reference into the City of Lawndale's Public Safety Element.

The General Plan Update identifies major arterials as the primary routes for evacuation; however, evacuation routes would depend upon the emergency event and area affected. The General Plan Update includes policies and actions to address emergency response and evacuation. Proposed Public Safety Element Policy PS-1.3 requires the implementation emergency preparedness and response measures in coordination with Los Angeles County including periodic trainings with staff and/or participation in County trainings on emergency operations procedures and responses. Policy PS-1.5 encourages the support policies and programs that facilitate the availability of adequate resources to respond to health, fire, and police emergencies. Action PS-1b directs the City to implement and update (as necessary) the City's EOP.

The General Plan Update does not include any site-specific development. However, Project implementation would allow for increased development in the City, resulting in an increase in population. Although the Planning Area is highly urbanized and existing infrastructure, including roads, are generally in place, road and infrastructure improvements could occur to accommodate the new growth as further discussed in Section 5.17, *Transportation*. Future development within the Planning Area is not anticipated to result in the substantial modification of roadways surrounding specific development sites or the placement of any permanent physical barriers on adjacent roadways. There is the potential that traffic lanes located immediately adjacent to a development site may be temporarily closed or controlled by construction personnel during construction activities. However, any temporary construction activity would adhere to Municipal Code Section 17.36.220, *Temporary Storage of Construction Materials*, which requires sidewalks, public streets, and, alleys adjacent to construction sites to be kept free of debris or other materials that could interfere with circulation for the duration of construction activities, as well as sixty days following substantial completion of such construction. Additionally, the applicant of any proposed development would be required to submit appropriate plans for plan review to ensure compliance with zoning, building, and fire codes prior to the issuance of a building permit. LACoFD would review the proposed development for access requirements, minimum driveway widths, fire apparatus access roads, fire lanes, signage, access devices and gates, access walkways, among other requirements to ensure adequate emergency access would be provided to and within the site. The proposed development would be required to comply with all applicable Building and Fire Code requirements and would submit construction plans to the Fire Department's Engineering Building Plan Check Unit for review and approval prior to issuance of any building permit. Approval by the Fire Department would ensure that construction and operation of future projects associated with implementation of the General Plan Update would not impair or physically interfere with an adopted emergency response plan or emergency evacuation plan.

Primary access to all major roads would be maintained during construction of future developments within the Planning Area. As part of the site plan and design review process, future development projects would be reviewed for adequate infrastructure and access as well as consistency with adopted emergency and evacuation plans among many other environmental issues in order to ensure the safety of City residents and the physical environment. Therefore, impacts associated with adopted emergency response or evacuation plans would be less than significant.

Proposed General Plan Update Goals, Policies, and Actions:

PUBLIC SAFETY ELEMENT

Goal PS-1: **Emergency Operations.** A community prepared to provide effective response and recovery efforts in the event of an emergency.
